both the package and on the package design approval certificate);

- (b) Where multilateral approval is effected by validation according to 6.4.23.16, only the identification mark issued by the country of origin of the design or shipment shall be used. Where multilateral approval is effected by issue of certificates by successive countries, each certificate shall bear the appropriate identification mark and the package whose design was so approved shall bear all appropriate identification marks.

For example:

A/132/B(M)F-96

CH/28/B(M)F-96

would be the identification mark of a package which was originally approved by Austria and was subsequently approved, by separate certificate, by Switzerland. Additional identification marks would be tabulated in a similar manner on the package;

- (c) The revision of a certificate shall be indicated by a parenthetical expression following the identification mark on the certificate. For example, A/132/B(M)F-96 (Rev.2) would indicate revision 2 of the Austrian package design approval certificate; or A/132/B(M)F-96 (Rev.0) would indicate the original issuance of the Austrian package design approval certificate. For original issuances, the parenthetical entry is optional and other words such as "original issuance" may also be used in place of "Rev.0". Certificate revision numbers may only be issued by the country issuing the original approval certificate;
- (d) Additional symbols (as may be necessitated by national regulations) may be added in brackets to the end of the identification mark; for example, A/132/B(M)F-96(SP503);
- (e) It is not necessary to alter the identification mark on the packaging each time that a revision to the design certificate is made. Such re-marking shall be required only in those cases where the revision to the package design certificate involves a change in the letter type codes for the package design following the second stroke.

6.4.23.11 Each approval certificate issued by a competent authority for special form radioactive material or low dispersible radioactive material shall include the following information:

- (a) Type of certificate;
- (b) The competent authority identification mark;
- (c) The issue date and an expiry date;
- (d) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the special form radioactive material or low dispersible radioactive material is approved;
- (e) The identification of the special form radioactive material or low dispersible radioactive material;
- (f) A description of the special form radioactive material or low dispersible radioactive material;

- (g) Design specifications for the special form radioactive material or low dispersible radioactive material which may include references to drawings;
- (h) A specification of the radioactive contents which includes the activities involved and which may include the physical and chemical form;
- (i) A specification of the applicable quality assurance programme as required in 1.7.3;
- (j) Reference to information provided by the applicant relating to specific actions to be taken prior to shipment;
- (k) If deemed appropriate by the competent authority, reference to the identity of the applicant;
- (l) Signature and identification of the certifying official.

6.4.23.12 Each approval certificate issued by a competent authority for a special arrangement shall include the following information:

- (a) Type of certificate;
- (b) The competent authority identification mark;
- (c) The issue date and an expiry date;
- (d) Mode(s) of carriage;
- (e) Any restrictions on the modes of carriage, type of vehicle, container, and any necessary routing instructions;
- (f) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the special arrangement is approved;
- (g) The following statement:

"This certificate does not relieve the consignor from compliance with any requirement of the government of any country through or into which the package will be carried.";
- (h) References to certificates for alternative radioactive contents, other competent authority validation, or additional technical data or information, as deemed appropriate by the competent authority;
- (i) Description of the packaging by a reference to the drawings or a specification of the design. If deemed appropriate by the competent authority, a reproducible illustration, not larger than 21 cm by 30 cm, showing the make-up of the package shall also be provided, accompanied by a brief description of the packaging, including materials of manufacture, gross mass, general outside dimensions and appearance;
- (j) A specification of the authorized radioactive contents, including any restrictions on the radioactive contents which might not be obvious from the nature of the packaging. This shall include the physical and chemical forms, the activities involved (including those of the various isotopes, if appropriate), amounts in grams (for fissile material), and whether special form radioactive material or low dispersible radioactive material, if applicable;

- (k) Additionally, for packages containing fissile material:
  - (i) a detailed description of the authorized radioactive contents;
  - (ii) the value of the criticality safety index;
  - (iii) reference to the documentation that demonstrates the criticality safety of the contents;
  - (iv) any special features, on the basis of which the absence of water from certain void spaces has been assumed in the criticality assessment;
  - (v) any allowance (based on 6.4.11.4 (b)) for a change in neutron multiplication assumed in the criticality assessment as a result of actual irradiation experience; and
  - (vi) the ambient temperature range for which the special arrangement has been approved;
- (l) A detailed listing of any supplementary operational controls required for preparation, loading, carriage, unloading and handling of the consignment, including any special stowage provisions for the safe dissipation of heat;
- (m) If deemed appropriate by the competent authority, reasons for the special arrangement;
- (n) Description of the compensatory measures to be applied as a result of the shipment being under special arrangement;
- (o) Reference to information provided by the applicant relating to the use of the packaging or specific actions to be taken prior to the shipment;
- (p) A statement regarding the ambient conditions assumed for purposes of design if these are not in accordance with those specified in 6.4.8.4, 6.4.8.5, and 6.4.8.15, as applicable;
- (q) Any emergency arrangements deemed necessary by the competent authority;
- (r) A specification of the applicable quality assurance programme as required in 1.7.3;
- (s) If deemed appropriate by the competent authority, reference to the identity of the applicant and to the identity of the carrier;
- (t) Signature and identification of the certifying official.

## 6.4.23.13

Each approval certificate for a shipment issued by a competent authority shall include the following information:

- (a) Type of certificate;
- (b) The competent authority identification mark(s);
- (c) The issue date and an expiry date;
- (d) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the shipment is approved;

- (e) Any restrictions on the modes of carriage, type of vehicle, container, and any necessary routing instructions;
- (f) The following statement:  

"This certificate does not relieve the consignor from compliance with any requirement of the government of any country through or into which the package will be carried.";
- (g) A detailed listing of any supplementary operational controls required for preparation, loading, carriage, unloading and handling of the consignment, including any special stowage provisions for the safe dissipation of heat or maintenance of criticality safety;
- (h) Reference to information provided by the applicant relating to specific actions to be taken prior to shipment;
- (i) Reference to the applicable design approval certificate(s);
- (j) A specification of the actual radioactive contents, including any restrictions on the radioactive contents which might not be obvious from the nature of the packaging. This shall include the physical and chemical forms, the total activities involved (including those of the various isotopes, if appropriate), amounts in grams (for fissile material), and whether special form radioactive material or low dispersible radioactive material, if applicable;
- (k) Any emergency arrangements deemed necessary by the competent authority;
- (l) A specification of the applicable quality assurance programme as required in 1.7.3;
- (m) If deemed appropriate by the competent authority, reference to the identity of the applicant;
- (n) Signature and identification of the certifying official.

6.4.23.14 Each approval certificate of the design of a package issued by a competent authority shall include the following information:

- (a) Type of certificate;
- (b) The competent authority identification mark;
- (c) The issue date and an expiry date;
- (d) Any restriction on the modes of carriage, if appropriate;
- (e) List of applicable national and international regulations, including the edition of the IAEA Regulations for the Safe Transport of Radioactive Material under which the design is approved;
- (f) The following statement:  

"This certificate does not relieve the consignor from compliance with any requirement of the government of any country through or into which the package will be carried.";
- (g) References to certificates for alternative radioactive contents, other competent authority validation, or additional technical data or information, as deemed appropriate by the competent authority;

- (h) A statement authorizing shipment where shipment approval is required under 5.1.5.2.2, if deemed appropriate;
- (i) Identification of the packaging;
- (j) Description of the packaging by a reference to the drawings or specification of the design. If deemed appropriate by the competent authority, a reproducible illustration, not larger than 21 cm by 30 cm, showing the make-up of the package should also be provided, accompanied by a brief description of the packaging, including materials of manufacture, gross mass, general outside dimensions and appearance;
- (k) Specification of the design by reference to the drawings;
- (l) A specification of the authorized radioactive content, including any restrictions on the radioactive contents which might not be obvious from the nature of the packaging. This shall include the physical and chemical forms, the activities involved (including those of the various isotopes, if appropriate), amounts in grams (for fissile material), and whether special form radioactive material or low dispersible radioactive material, if applicable;
- (m) Additionally, for packages containing fissile material:
  - (i) a detailed description of the authorized radioactive contents;
  - (ii) the value of the criticality safety index;
  - (iii) reference to the documentation that demonstrates the criticality safety of the contents;
  - (iv) any special features, on the basis of which the absence of water from certain void spaces has been assumed in the criticality assessment;
  - (v) any allowance (based on 6.4.11.4 (b)) for a change in neutron multiplication assumed in the criticality assessment as a result of actual irradiation experience; and
  - (vi) the ambient temperature range for which the package design has been approved;
- (n) For Type B(M) packages, a statement specifying those requirements of 6.4.7.5, 6.4.8.4, 6.4.8.5 and 6.4.8.8 to 6.4.8.15 with which the package does not conform and any amplifying information which may be useful to other competent authorities;
- (o) A detailed listing of any supplementary operational controls required for preparation, loading, carriage, unloading and handling of the consignment, including any special stowage provisions for the safe dissipation of heat;
- (p) Reference to information provided by the applicant relating to the use of the packaging or specific actions to be taken prior to shipment;
- (q) A statement regarding the ambient conditions assumed for purposes of design if these are not in accordance with those specified in 6.4.8.4, 6.4.8.5 and 6.4.8.15, as applicable;
- (r) A specification of the applicable quality assurance programme as required in 1.7.3;

- (s) Any emergency arrangements deemed necessary by the competent authority;
- (t) If deemed appropriate by the competent authority, reference to the identity of the applicant;
- (u) Signature and identification of the certifying official.

6.4.23.15 The competent authority shall be informed of the serial number of each packaging manufactured to a design approved by them. The competent authority shall maintain a register of such serial numbers.

6.4.23.16 Multilateral approval may be by validation of the original certificate issued by the competent authority of the country of origin of the design or shipment. Such validation may take the form of an endorsement on the original certificate or the issuance of a separate endorsement, annex, supplement, etc., by the competent authority of the country through or into which the shipment is made.

## CHAPTER 6.5

REQUIREMENTS FOR THE CONSTRUCTION AND TESTING  
OF INTERMEDIATE BULK CONTAINERS (IBCs)

## 6.5.1 General requirements applicable to all types of IBCs

6.5.1.1 *Scope*

6.5.1.1.1 The requirements of this Chapter apply to intermediate bulk containers (IBCs) the use of which is expressly authorized for the carriage of certain dangerous goods according to the packing instructions indicated in Column (8) of Table A in Chapter 3.2. Portable tanks and tank-containers which meet the requirements of Chapter 6.7 or 6.8 respectively are not considered to be IBCs. IBCs which meet the requirements of this Chapter are not considered to be containers for the purposes of ADR. The letters IBC only will be used in the rest of the text to refer to intermediate bulk containers.

6.5.1.1.2 Exceptionally, IBCs and their service equipment not conforming strictly to the requirements herein, but having acceptable alternatives, may be considered by the competent authority for approval. In addition, in order to take into account progress in science and technology, the use of alternative arrangements which offer at least equivalent safety in use in respect of compatibility with the properties of the substances carried and equivalent or superior resistance to impact, loading and fire, may be considered by the competent authority.

6.5.1.1.3 The construction, equipment, testing, marking and operation of IBCs shall be subject to acceptance by the competent authority of the country in which the IBCs are approved.

6.5.1.1.4 Manufacturers and subsequent distributors of IBCs shall provide information regarding procedures to be followed and a description of the types and dimensions of closures (including required gaskets) and any other components needed to ensure that IBCs as presented for carriage are capable of passing the applicable performance tests of this Chapter.

6.5.1.2 *(Reserved)*

6.5.1.3 *(Reserved)*

## 6.5.1.4 Designatory code system for IBCs

6.5.1.4.1 The code shall consist of two Arabic numerals as specified in (a), followed by a capital letter(s) specified in (b), followed, when specified in an individual section, by an Arabic numeral indicating the category of IBC.

(a)

Type	For solids, filled or discharged		For liquids
	by gravity	under pressure of more than 10 kPa (0.1 bar)	
Rigid	11	21	31
Flexible	13	-	-

## (b) Materials

- A. Steel (all types and surface treatments)
- B. Aluminium
- C. Natural wood
- D. Plywood
- F. Reconstituted wood
- G. Fibreboard
- H. Plastics material
- L. Textile
- M. Paper, multiwall
- N. Metal (other than steel or aluminium).

6.5.1.4.2 For composite IBCs, two capital letters in Latin characters shall be used in sequence in the second position of the code. The first shall indicate the material of the inner receptacle of the IBC and the second that of the outer packaging of the IBC.

6.5.1.4.3 The following types and codes of IBC are assigned:

Material	Category	Code	Sub-section
<b>Metal</b>			
A. Steel	for solids, filled or discharged by gravity for solids, filled or discharged under pressure for liquids	11A 21A 31A	6.5.3.1
B. Aluminium	for solids, filled or discharged by gravity for solids, filled or discharged under pressure for liquids	11B 21B 31B	
N. Other than steel or aluminium	for solids, filled or discharged by gravity for solids, filled or discharged under pressure for liquids	11N 21N 31N	
<b>Flexible</b>			
H. Plastics	woven plastics without coating or liner woven plastics, coated woven plastics with liner woven plastics, coated and with liner plastics film	13H1 13H2 13H3 13H4 13H5	6.5.3.2
L. Textile	without coating or liner coated with liner coated and with liner	13L1 13L2 13L3 13L4	
M. Paper	multiwall multiwall, water resistant	13M1 13M2	
H. Rigid plastics	for solids, filled or discharged by gravity, fitted with structural equipment for solids, filled or discharged by gravity, freestanding for solids, filled or discharged under pressure, fitted with structural equipment for solids, filled or discharged under pressure, freestanding for liquids, fitted with structural equipment for liquids, freestanding	11H1 11H2 21H1 21H2 31H1 31H2	6.5.3.3

Material	Category	Code	Sub-section
HZ. Composite with plastics inner receptacle <sup>a</sup>	for solids, filled or discharged by gravity, with rigid plastics receptacle	11HZ1	6.5.3.4
	for solids, filled or discharged by gravity, with flexible plastics receptacle	11HZ2	
	for solids, filled or discharged under pressure, with rigid plastics receptacle	21HZ1	
	for solids, filled or discharged under pressure, with flexible plastics receptacle	21HZ2	
	for liquids, with rigid plastics receptacle	31HZ1	
	for liquids, with flexible plastics receptacle	31HZ2	
G. Fibreboard	for solids, filled or discharged by gravity	11G	6.5.3.5
<b>Wooden</b>			
C. Natural wood	for solids, filled or discharged by gravity with inner liner	11C	6.5.3.6
D. Plywood	for solids, filled or discharged by gravity, with inner liner	11D	
F. Reconstituted wood	for solids, filled or discharged by gravity, with inner liner	11F	

<sup>a</sup> The code shall be completed by replacing the letter Z by a capital letter in accordance with 6.5.1.4.1 (b) to indicate the nature of the material used for the outer casing.

6.5.1.4.4 The letter "W" may follow the IBC code. The letter "W" signifies that the IBC, although of the same type indicated by the code, is manufactured to a specification different from those in 6.5.3 and is considered equivalent in accordance with the requirements in 6.5.1.1.2.

#### 6.5.1.5 Construction requirements

6.5.1.5.1 IBCs shall be resistant to or adequately protected from deterioration due to the external environment.

6.5.1.5.2 IBCs shall be so constructed and closed that none of the contents can escape under normal conditions of carriage including the effect of vibration, or by changes in temperature, humidity or pressure.

6.5.1.5.3 IBCs and their closures shall be constructed of materials compatible with their contents, or be protected internally, so that they are not liable:

- (a) To be attacked by the contents so as to make their use dangerous;
- (b) To cause the contents to react or decompose, or form harmful or dangerous compounds with the IBCs.

6.5.1.5.4 Gaskets, where used, shall be made of materials not subject to attack by the contents of the IBCs.

6.5.1.5.5 All service equipment shall be so positioned or protected as to minimize the risk of escape of the contents owing to damage during handling and carriage.

6.5.1.5.6 IBCs, their attachments and their service and structural equipment shall be designed to withstand, without loss of contents, the internal pressure of the contents and the stresses of normal handling and carriage. IBCs intended for stacking shall be designed for stacking. Any lifting or securing features of IBCs shall be of sufficient strength to withstand the normal

conditions of handling and carriage without gross distortion or failure and shall be so positioned that no undue stress is caused in any part of the IBC.

6.5.1.5.7 Where an IBC consists of a body within a framework it shall be so constructed that:

- (a) The body does not chafe or rub against the framework so as to cause material damage to the body;
- (b) The body is retained within the framework at all times;
- (c) The items of equipment are fixed in such a way that they cannot be damaged if the connections between body and frame allow relative expansion or movement.

6.5.1.5.8 Where a bottom discharge valve is fitted, it shall be capable of being made secure in the closed position and the whole discharge system shall be suitably protected from damage. Valves having lever closures shall be able to be secured against accidental opening and the open or closed position shall be readily apparent. For IBCs containing liquids, a secondary means of sealing the discharge aperture shall also be provided, e.g. a blank flange or equivalent device.

6.5.1.5.9 Each IBC shall be capable of passing the relevant performance tests.

#### 6.5.1.6 *Testing, certification and inspection*

6.5.1.6.1 *Quality assurance:* the IBCs shall be manufactured and tested under a quality assurance programme which satisfies the competent authority, in order to ensure that each manufactured IBC meets the requirements of this Chapter.

6.5.1.6.2 *Test requirements:* IBCs shall be subject to design type tests and, if applicable, to initial and periodic tests in accordance with 6.5.4.14.

6.5.1.6.3 *Certification:* in respect of each design type of IBC a certificate and mark (as in 6.5.2) shall be issued attesting that the design type, including its equipment, meets the test requirements.

6.5.1.6.4 *Inspection:* every metal, rigid plastics and composite IBC shall be inspected to the satisfaction of the competent authority

- (a) before it is put into service, and thereafter at intervals not exceeding five years, with regard to:
  - (i) conformity to design type including marking;
  - (ii) internal and external condition;
  - (iii) proper functioning of service equipment.

Thermal insulation, if any, need be removed only to the extent necessary for a proper examination of the body of the IBC.

- (b) at intervals of not more than two and a half years, with regard to:
  - (i) external condition;
  - (ii) proper functioning of service equipment.

Thermal insulation, if any, need be removed only to the extent necessary for a proper examination of the body of the IBC.

A report of each inspection shall be kept by the owner of the IBC at least until the next inspection. The report shall include the results of the inspection and shall identify the party performing the inspection (see also the marking requirements in 6.5.2.2.1).

6.5.1.6.5 When an IBC is impaired as a result of impact (e.g. accident) or any other cause, it shall be repaired or otherwise maintained (see definition of "*Routine maintenance of IBCs*" in 1.2.1), so as to conform to the design type. The bodies of rigid plastics IBCs and the inner receptacles of composite IBCs that are impaired shall be replaced.

6.5.1.6.6 *Repaired IBCs*

6.5.1.6.6.1 In addition to any other testing and inspection requirements in ADR, an IBC shall be subjected to the full testing and inspection requirements set out in 6.5.4.14.3 and 6.5.1.6.4 (a), and the required reports shall be prepared, whenever it is repaired.

6.5.1.6.6.2 The Party performing the tests and inspections after the repair shall durably mark the IBC near the manufacturer's UN design type marking to show:

- (a) the State in which the tests and inspections were carried out;
- (b) the name or authorized symbol of the party performing the tests and inspections; and
- (c) the date (month, year) of the tests and inspections.

6.5.1.6.6.3 Test and inspections performed in accordance with 6.5.1.6.6.1 may be considered to satisfy the requirements for the two and a half and five year periodic tests and inspections.

6.5.1.6.7 The competent authority may at any time require proof, by tests in accordance with this Chapter, that IBCs meet the requirements of the design type tests.

6.5.2 **Marking**

6.5.2.1 *Primary marking*

6.5.2.1.1 Each IBC manufactured and intended for use according to ADR shall bear markings which are durable, legible and placed in a location so as to be readily visible. Letters, numerals and symbols shall be at least 12 mm high and shall show:

- (a) The United Nations packaging symbol:

For metal IBCs on which the marking is stamped or embossed, the capital letters "UN" may be applied instead of the symbol;

- (b) The code designating the type of IBC according to 6.5.1.4;
- (c) A capital letter designating the packing group(s) for which the design type has been approved:
  - (i) X for packing groups I, II and III (IBCs for solids only);

- (ii) Y for packing groups II and III;
- (iii) Z for packing group III only;
- (d) The month and year (last two digits) of manufacture;
- (e) The State authorizing the allocation of the mark; indicated by the distinguishing sign for motor vehicles in international traffic <sup>1</sup>;
- (f) The name or symbol of the manufacturer and other identification of the IBC as specified by the competent authority;
- (g) The stacking test load in kg. For IBCs not designed for stacking, the figure "0" shall be shown;
- (h) The maximum permissible gross mass in kg.

The primary marking required above shall be applied in the sequence of the subparagraphs below. The marking required by 6.5.2.2 and any further marking authorized by a competent authority shall still enable the parts of the mark to be correctly identified.

Each element of the marking applied in accordance with (a) to (h) and with 6.5.2.2 shall be clearly separated, e.g. by a slash or space, so as to be easily identifiable.

*Examples of markings for various types of IBC in accordance with (a) to (h) above:*

	<p>11A/Y/02 89 NL/Mulder 007 5500/1500</p>	<p>For a metal IBC for solids discharged for instance by gravity and made from steel/for packing groups II and III/ manufactured in February 1989/authorized by the Netherlands/manufactured by Mulder and of a design type to which the competent authority has allocated serial number 007/the stacking test load in kg/the maximum permissible gross mass in kg.</p>
	<p>13H3/Z/03 89 F/Meunier 1713 0/1500</p>	<p>For a flexible IBC for solids discharged for instance by gravity and made from woven plastics with a liner/not designed to be stacked.</p>
	<p>31H1/Y/04 89 GB/9099 10800/1200</p>	<p>For a rigid plastics IBC for liquids made from plastics with structural equipment withstanding the stack load.</p>
	<p>31HA1/Y/05 91 D/Muller 1683 10800/1200</p>	<p>For a composite IBC for liquids with a rigid plastics inner receptacle and a steel outer casing.</p>
	<p>11C/X/01 93 S/Aurigny 9876 3000/910</p>	<p>For a wooden IBC for solids with an inner liner authorized for packing group I solids.</p>

<sup>1</sup> *Distinguishing sign for motor vehicles in international traffic prescribed in Vienna Convention on Road Traffic (1968).*

### 6.5.2.2 *Additional marking*

6.5.2.2.1 Each IBC shall bear the markings required in 6.5.2.1 and, in addition, the following information which may appear on a corrosion-resistant plate permanently attached in a place readily accessible for inspection:

Additional marking	Category of IBC				
	Metal	Rigid plastics	Composite	Fibreboard	Wooden
Capacity in litres <sup>a</sup> at 20 °C	X	X	X		
Tare mass in kg <sup>a</sup>	X	X	X	X	X
Test (gauge) pressure, in kPa or bar <sup>a</sup> , if applicable		X	X		
Maximum filling / discharge pressure in kPa or bar <sup>a</sup> , if applicable	X	X	X		
Body material and its minimum thickness in mm	X				
Date of last leakproofness test, if applicable (month and year)	X	X	X		
Date of last inspection (month and year)	X	X	X		
Serial number of the manufacturer	X				

<sup>a</sup> *The unit used shall be indicated.*

6.5.2.2.2 In addition to the markings required in 6.5.2.1, flexible IBCs may bear a pictogram indicating recommended lifting methods.

6.5.2.2.3 The inner receptacle of composite IBCs shall be marked with at least the following information:

- (a) The name or symbol of the manufacturer and other identification of the IBC as specified by the competent authority as in 6.5.2.1.1 (f);
- (b) The date of manufacture, as in 6.5.2.1.1 (d);
- (c) The distinguishing sign of the State authorizing the allocation of the mark, as in 6.5.2.1.1 (e).

6.5.2.2.4 Where a composite IBCs is designed in such a manner that the outer casing is intended to be dismantled for carriage when empty (such as for return of the IBC for reuse to the original consignor), each of the parts intended to be detached when so dismantled shall be marked with the month and year of manufacture and the name or symbol of the manufacturer and other identification of the IBC as specified by the competent authority (see 6.5.2.1.1 (f)).

### 6.5.2.3 *Conformity to design type*

The marking indicates that IBCs correspond to a successfully tested design type and that the requirements referred to in the certificate have been met.

### 6.5.3 Specific requirements for IBCs

#### 6.5.3.1 *Specific requirements for metal IBCs*

6.5.3.1.1 These requirements apply to metal IBCs intended for the carriage of solids and liquids. There are three categories of metal IBCs:

- (a) those for solids which are filled or discharged by gravity (11A, 11B, 11N);
- (b) those for solids which are filled or discharged at a gauge pressure greater than 10 kPa (0.1 bar) (21A, 21B, 21N); and
- (c) those for liquids (31A, 31B, 31N).

6.5.3.1.2 Bodies shall be made of suitable ductile metal in which the weldability has been fully demonstrated. Welds shall be skilfully made and afford complete safety. Low-temperature performance of the material shall be taken into account when appropriate.

6.5.3.1.3 Care shall be taken to avoid damage by galvanic action due to the juxtaposition of dissimilar metals.

6.5.3.1.4 Aluminium IBCs intended for the carriage of flammable liquids shall have no movable parts, such as covers, closures, etc., made of unprotected steel liable to rust, which might cause a dangerous reaction by coming into frictional or percussive contact with the aluminium.

6.5.3.1.5 Metal IBCs shall be made of metals which meet the following requirements:

- (a) for steel the elongation at fracture, in %, shall not be less than  $\frac{10000}{R_m}$  with an absolute minimum of 20 %;

where  $R_m$  = guaranteed minimum tensile strength of the steel to be used, in  $N/mm^2$ ;

- (b) for aluminium and its alloy the elongation at fracture, in %, shall not be less than  $\frac{10000}{6R_m}$  with an absolute minimum of 8 %.

Specimens used to determine the elongation at fracture shall be taken transversely to the direction of rolling and be so secured that:

$$L_o = 5d \quad \text{or}$$

$$L_o = 5.65\sqrt{A}$$

where:  $L_o$  = gauge length of the specimen before the test  
 $d$  = diameter  
 $A$  = cross-sectional area of test specimen.

6.5.3.1.6 *Minimum wall thickness:*

- (a) for a reference steel having a product of  $R_m \times A_0 = 10\,000$ , the wall thickness shall not be less than:

Capacity (C) in litres	Wall thickness (T) in mm			
	Types 11A, 11B, 11N		Types 21A, 21B, 21N, 31A, 31B, 31N	
	Unprotected	Protected	Unprotected	Protected
$C \leq 1000$	2.0	1.5	2.5	2.0
$1000 < C \leq 2000$	$T = C/2000 + 1.5$	$T = C/2000 + 1.0$	$T = C/2000 + 2.0$	$T = C/2000 + 1.5$
$2000 < C \leq 3000$	$T = C/2000 + 1.5$	$T = C/2000 + 1.0$	$T = C/1000 + 1.0$	$T = C/2000 + 1.5$

where:  $A_0$  = minimum elongation (as a percentage) of the reference steel to be used on fracture under tensile stress (see 6.5.3.1.5);

- (b) for metals other than the reference steel described in (a), the minimum wall thickness is given by the following equivalence formula:

$$e_1 = \frac{21.4 \times e_0}{\sqrt[3]{R_{m1} \times A_1}}$$

where:  $e_1$  = required equivalent wall thickness of the metal to be used (in mm);

$e_0$  = required minimum wall thickness for the reference steel (in mm);

$R_{m1}$  = guaranteed minimum tensile strength of the metal to be used (in  $N/mm^2$ ) (see (c));

$A_1$  = minimum elongation (as a percentage) of the metal to be used on fracture under tensile stress (see 6.5.3.1.5).

However, in no case shall the wall thickness be less than 1.5 mm.

- (c) For purposes of the calculation described in (b), the guaranteed minimum tensile strength of the metal to be used ( $R_{m1}$ ) shall be the minimum value according to national or international material standards. However, for austenitic steels, the specified value for  $R_m$  according to the material standards may be increased by up to 15% when a greater value is attested in the material inspection certificate. When no material standard exists for the material in question, the value of  $R_m$  shall be the minimum value attested in the material inspection certificate.

6.5.3.1.7 **Pressure-relief requirements:** IBCs for liquids shall be capable of releasing a sufficient amount of vapour in the event of fire engulfment to ensure that no rupture of the body will occur. This can be achieved by conventional pressure relief devices or by other constructional means. The start-to-discharge pressure shall not be higher than 65 kPa (0.65 bar) and no lower than the total gauge pressure experienced in the IBC (i.e. the vapour pressure of the filling substance plus the partial pressure of the air or other inert gases, minus 100 kPa (1 bar)) at 55 °C, determined on the basis of a maximum degree of filling as defined in 4.1.1.4. The required relief devices shall be fitted in the vapour space.

### 6.5.3.2 *Specific requirements for flexible IBCs*

6.5.3.2.1 These requirements apply to flexible IBCs of the following types:

13H1	woven plastics without coating or liner
13H2	woven-plastics, coated
13H3	woven plastics with liner
13H4	woven plastics, coated and with liner
13H5	plastics film
13L1	textile without coating or liner
13L2	textile, coated
13L3	textile with liner
13L4	textile, coated and with liner
13M1	paper, multiwall
13M2	paper, multiwall, water resistant

Flexible IBCs are intended for the carriage of solids only.

6.5.3.2.2 Bodies shall be manufactured from suitable materials. The strength of the material and the construction of the flexible IBC shall be appropriate to its capacity and its intended use.

6.5.3.2.3 All materials used in the construction of flexible IBCs of types 13M1 and 13M2 shall, after complete immersion in water for not less than 24 hours, retain at least 85% of the tensile strength as measured originally on the material conditioned to equilibrium at 67% relative humidity or less.

6.5.3.2.4 Seams shall be formed by stitching, heat sealing, gluing or any equivalent method. All stitched seam-ends shall be secured.

6.5.3.2.5 Flexible IBCs shall provide adequate resistance to ageing and to degradation caused by ultraviolet radiation or the climatic conditions, or by the substance contained, thereby rendering them appropriate to their intended use.

6.5.3.2.6 For flexible plastics IBCs where protection against ultraviolet radiation is required, it shall be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives shall be compatible with the contents and remain effective throughout the life of the body. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, re-testing may be waived if changes in the carbon black content, the pigment content or the inhibitor content do not adversely affect the physical properties of the material of construction.

6.5.3.2.7 Additives may be incorporated into the material of the body to improve the resistance to ageing or to serve other purposes, provided that these do not adversely affect the physical or chemical properties of the material.

6.5.3.2.8 No material recovered from used receptacles shall be used in the manufacture of IBC bodies. Production residues or scrap from the same manufacturing process may, however, be used. Component parts such as fittings and pallet bases may also be used provided such components have not in any way been damaged in previous use.

6.5.3.2.9 When filled, the ratio of height to width shall be not more than 2:1.

6.5.3.2.10 The liner shall be made of a suitable material. The strength of the material used and the construction of the liner shall be appropriate to the capacity of the IBC and the intended use. Joins and closures shall be siftproof and capable of withstanding pressures and impacts liable to occur under normal conditions of handling and carriage.

### 6.5.3.3 *Specific requirements for rigid plastics IBCs*

6.5.3.3.1 These requirements apply to rigid plastics IBCs for the carriage of solids or liquids. Rigid plastics IBCs are of the following types:

- 11H1 fitted with structural equipment designed to withstand the whole load when IBCs are stacked, for solids which are filled or discharged by gravity
- 11H2 freestanding, for solids which are filled or discharged by gravity
- 21H1 fitted with structural equipment designed to withstand the whole load when IBCs are stacked, for solids which are filled or discharged under pressure
- 21H2 freestanding, for solids which are filled or discharged under pressure
- 31H1 fitted with structural equipment designed to withstand the whole load when IBCs are stacked, for liquids
- 31H2 freestanding, for liquids.

6.5.3.3.2 The body shall be manufactured from suitable plastics material of known specifications and be of adequate strength in relation to its capacity and its intended use. The material shall be adequately resistant to ageing and to degradation caused by the substance contained or, where relevant, by ultraviolet radiation. Low temperature performance shall be taken into account when appropriate. Any permeation of the substance contained shall not constitute a danger under normal conditions of carriage.

6.5.3.3.3 Where protection against ultraviolet radiation is required, it shall be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives shall be compatible with the contents and remain effective throughout the life of the body. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, re-testing may be waived if changes in the carbon black content, the pigment content or the inhibitor content do not adversely affect the physical properties of the material of construction.

6.5.3.3.4 Additives may be incorporated in the material of the body to improve the resistance to ageing or to serve other purposes, provided that these do not adversely affect the physical or chemical properties of the material.

6.5.3.3.5 No used material other than production residues or regrind from the same manufacturing process may be used in the manufacture of rigid plastics IBCs.

### 6.5.3.4 *Specific requirements for composite IBCs with plastics inner receptacles*

6.5.3.4.1 These requirements apply to composite IBCs for the carriage of solids and liquids of the following types:

- 11HZ1 Composite IBCs with a rigid plastics inner receptacle, for solids filled or discharged by gravity
- 11HZ2 Composite IBCs with a flexible plastics inner receptacle, for solids filled or discharged by gravity
- 21HZ1 Composite IBCs with a rigid plastics inner receptacle, for solids filled or discharged under pressure
- 21HZ2 Composite IBCs with a flexible plastics inner receptacle, for solids filled or discharged under pressure
- 31HZ1 Composite IBCs with a rigid plastics inner receptacle, for liquids
- 31HZ2 Composite IBCs with a flexible plastics inner receptacle, for liquids.

This code shall be completed by replacing the letter Z by a capital letter in accordance with 6.5.1.4.1 (b) to indicate the nature of the material used for the outer casing.

- 6.5.3.4.2 The inner receptacle is not intended to perform a containment function without its outer casing. A "rigid" inner receptacle is a receptacle which retains its general shape when empty without closures in place and without benefit of the outer casing. Any inner receptacle that is not "rigid" is considered to be "flexible".
- 6.5.3.4.3 The outer casing normally consists of rigid material formed so as to protect the inner receptacle from physical damage during handling and carriage but is not intended to perform the containment function. It includes the base pallet where appropriate.
- 6.5.3.4.4 A composite IBC with a fully enclosing outer casing shall be so designed that the integrity of the inner receptacle may be readily assessed following the leakproofness and hydraulic pressure tests.
- 6.5.3.4.5 IBCs of type 31HZ2 shall be limited to a capacity of not more than 1 250 litres.
- 6.5.3.4.6 The inner receptacle shall be manufactured from suitable plastics material of known specifications and be of adequate strength in relation to its capacity and its intended use. The material shall be adequately resistant to ageing and to degradation caused by the substance contained or, where relevant, by ultraviolet radiation. Low temperature performance shall be taken into account when appropriate. Any permeation of the substance contained shall not constitute a danger under normal conditions of carriage.
- 6.5.3.4.7 Where protection against ultraviolet radiation is required, it shall be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives shall be compatible with the contents and remain effective throughout the life of the inner receptacle. Where use is made of carbon black, pigments or inhibitors, other than those used in the manufacture of the tested design type, retesting may be waived if changes in carbon black content, the pigment content or the inhibitor content do not adversely affect the physical properties of the material of construction.
- 6.5.3.4.8 Additives may be incorporated in the material of the inner receptacle to improve the resistance to ageing or to serve other purposes, provided that these do not adversely affect the physical or chemical properties of the material.
- 6.5.3.4.9 No used material other than production residues or regrind from the same manufacturing process may be used in the manufacture of inner receptacles.
- 6.5.3.4.10 The inner receptacle of IBCs type 31HZ2 shall consist of at least three plies of film.
- 6.5.3.4.11 The strength of the material and the construction of the outer casing shall be appropriate to the capacity of the composite IBC and its intended use.
- 6.5.3.4.12 The outer casing shall be free of any projection that might damage the inner receptacle.
- 6.5.3.4.13 Metal outer casings shall be constructed of a suitable metal of adequate thickness.
- 6.5.3.4.14 Outer casings of natural wood shall be of well seasoned wood, commercially dry and free from defects that would materially lessen the strength of any part of the casing. The tops and bottoms may be made of water resistant reconstituted wood such as hardboard, particle board or other suitable type.
- 6.5.3.4.15 Outer casings of plywood shall be made of well seasoned rotary cut, sliced or sawn veneer, commercially dry and free from defects that would materially lessen the strength of the casing. All adjacent plies shall be glued with water resistant adhesive. Other suitable materials may be used with plywood for the construction of casings. Casings shall be firmly nailed or secured to corner posts or ends or be assembled by equally suitable devices.

- 6.5.3.4.16 The walls of outer casings of reconstituted wood shall be made of water resistant reconstituted wood such as hardboard, particle board or other suitable type. Other parts of the casings may be made of other suitable material.
- 6.5.3.4.17 For fibreboard outer casings, strong and good quality solid or double-faced corrugated fibreboard (single or multiwall) shall be used appropriate to the capacity of the casing and to its intended use. The water resistance of the outer surface shall be such that the increase in mass, as determined in a test carried out over 30 minutes by the Cobb method of determining water absorption, is not greater than 155 g/m<sup>2</sup> (see ISO 535:1991). It shall have proper bending qualities. Fibreboard shall be cut, creased without scoring, and slotted so as to permit assembly without cracking, surface breaks or undue bending. The fluting of corrugated fibreboard shall be firmly glued to the facings.
- 6.5.3.4.18 The ends of fibreboard outer casings may have a wooden frame or be entirely of wood. Reinforcements of wooden battens may be used.
- 6.5.3.4.19 Manufacturing joints in the fibreboard outer casing shall be taped, lapped and glued, or lapped and stitched with metal staples. Lapped joints shall have an appropriate overlap. Where closing is effected by gluing or taping, a water resistant adhesive shall be used.
- 6.5.3.4.2. Where the outer casing is of plastics material, the relevant requirements of 6.5.3.4.6 to 6.5.3.4.9 apply, on the understanding that, in this case, the requirements applicable to the inner receptacle are applicable to the outer casing of composite IBCs.
- 6.5.3.4.21 The outer casing of an IBC type 31HZ2 shall enclose the inner receptacle on all sides.
- 6.5.3.4.22 Any integral pallet base forming part of an IBC or any detachable pallet shall be suitable for mechanical handling with the IBC filled to its maximum permissible gross mass.
- 6.5.3.4.23 The pallet or integral base shall be designed so as to avoid any protrusion of the base of the IBC that might be liable to damage in handling.
- 6.5.3.4.24 The outer casing shall be secured to any detachable pallet to ensure stability in handling and carriage. Where a detachable pallet is used, its top surface shall be free from sharp protrusions that might damage the IBC.
- 6.5.3.4.25 Strengthening devices such as timber supports to increase stacking performance may be used but shall be external to the inner receptacle.
- 6.5.3.4.26 Where IBCs are intended for stacking, the bearing surface shall be such as to distribute the load in a safe manner. Such IBCs shall be designed so that the load is not supported by the inner receptacle.
- 6.5.3.5 *Specific requirements for fibreboard IBCs***
- 6.5.3.5.1 These requirements apply to fibreboard IBCs for the carriage of solids which are filled or discharged by gravity. Fibreboard IBCs are of the following type: 11G.
- 6.5.3.5.2 Fibreboard IBCs shall not incorporate top lifting devices.
- 6.5.3.5.3 The body shall be made of strong and good quality solid or double-faced corrugated fibreboard (single or multiwall), appropriate to the capacity of the IBC and to its intended use. The water resistance of the outer surface shall be such that the increase in mass, as determined in a test carried out over a period of 30 minutes by the Cobb method of determining water absorption, is not greater than 155 g/m<sup>2</sup> (see ISO 535:1991). It shall have proper bending qualities. Fibreboard shall be cut, creased without scoring, and slotted so as

to permit assembly without cracking, surface breaks or undue bending. The fluting or corrugated fibreboard shall be firmly glued to the facings.

- 6.5.3.5.4 The walls, including top and bottom, shall have a minimum puncture resistance of 15 J measured according to ISO 3036:1975.
- 6.5.3.5.5 Manufacturing joins in the body of IBCs shall be made with an appropriate overlap and shall be taped, glued, stitched with metal staples or fastened by other means at least equally effective. Where joins are effected by gluing or taping, a water resistant adhesive shall be used. Metal staples shall pass completely through all pieces to be fastened and be formed or protected so that any inner liner cannot be abraded or punctured by them.
- 6.5.3.5.6 The liner shall be made of a suitable material. The strength of the material used and the construction of the liner shall be appropriate to the capacity of the IBC and the intended use. Joins and closures shall be siftproof and capable of withstanding pressures and impacts liable to occur under normal conditions of handling and carriage.
- 6.5.3.5.7 Any integral pallet base forming part of an IBC or any detachable pallet shall be suitable for mechanical handling with the IBC filled to its maximum permissible gross mass.
- 6.5.3.5.8 The pallet or integral base shall be designed so as to avoid any protrusion of the base of the IBC that might be liable to damage in handling.
- 6.5.3.5.9 The body shall be secured to any detachable pallet to ensure stability in handling and carriage. Where a detachable pallet is used, its top surface shall be free from sharp protrusions that might damage the IBC.
- 6.5.3.5.10 Strengthening devices such as timber supports to increase stacking performance may be used but shall be external to the liner.
- 6.5.3.5.11 Where IBCs are intended for stacking, the bearing surface shall be such as to distribute the load in a safe manner.
- 6.5.3.6 *Specific requirements for wooden IBCs***
- 6.5.3.6.1 These requirements apply to wooden IBCs for the carriage of solids which are filled or discharged by gravity. Wooden IBCs are of the following types:
- |     |                                      |
|-----|--------------------------------------|
| 11C | Natural wood with inner liner        |
| 11D | Plywood with inner liner             |
| 11F | Reconstituted wood with inner liner. |
- 6.5.3.6.2 Wooden IBCs shall not incorporate top lifting devices.
- 6.5.3.6.3 The strength of the materials used and the method of construction of the body shall be appropriate to the capacity and intended use of the IBC.
- 6.5.3.6.4 Natural wood shall be well seasoned, commercially dry and free from defects that would materially lessen the strength of any part of the IBC. Each part of the IBC shall consist of one piece or be equivalent thereto. Parts are considered equivalent to one piece when a suitable method of glued assembly is used (as for instance Lindermann joint, tongue and groove joint, ship lap or rabbet joint); or butt joint with at least two corrugated metal fasteners at each joint, or when other methods at least equally effective are used.
- 6.5.3.6.5 Bodies of plywood shall be at least 3-ply. They shall be made of well seasoned rotary cut, sliced or sawn veneer, commercially dry and free from defects that would materially lessen

the strength of the body. All adjacent plies shall be glued with water resistant adhesive. Other suitable materials may be used with plywood for the construction of the body.

- 6.5.3.6.6 Bodies of reconstituted wood shall be made of water resistant reconstituted wood such as hardboard, particle board or other suitable type.
- 6.5.3.6.7 IBCs shall be firmly nailed or secured to corner posts or ends or be assembled by equally suitable devices.
- 6.5.3.6.8 The liner shall be made of a suitable material. The strength of the material used and the construction of the liner shall be appropriate to the capacity of the IBC and the intended use. Joints and closures shall be siftproof and capable of withstanding pressures and impacts liable to occur under normal conditions of handling and carriage.
- 6.5.3.6.9 Any integral pallet base forming part of an IBC or any detachable pallet shall be suitable for mechanical handling with the IBC filled to its maximum permissible gross mass.
- 6.5.3.6.10 The pallet or integral base shall be designed so as to avoid any protrusion of the base of the IBC that might be liable to damage in handling.
- 6.5.3.6.11 The body shall be secured to any detachable pallet to ensure stability in handling and carriage. Where a detachable pallet is used, its top surface shall be free from sharp protrusions that might damage the IBC.
- 6.5.3.6.12 Strengthening devices such as timber supports to increase stacking performance may be used but shall be external to the liner.
- 6.5.3.6.13 Where IBCs are intended for stacking, the bearing surface shall be such as to distribute the load in a safe manner.

#### 6.5.4 Test requirements for IBCs

##### 6.5.4.1 *Performance and frequency of tests*

- 6.5.4.1.1 The design type of each IBC shall be tested in accordance with procedures established and approved by the competent authority for each IBC design type before such an IBC is used. An IBC design type is defined by the design, size, material and thickness, manner of construction and means of filling and discharging but may include various surface treatments. It also includes IBCs which differ from the design type only in their lesser external dimensions.
- 6.5.4.1.2 Tests shall be carried out on IBCs prepared for carriage. IBCs shall be filled as indicated in the relevant sections. The substances to be carried in the IBCs may be replaced by other substances except where this would invalidate the results of the tests. For solids, when another substance is used it shall have the same physical characteristics (mass, grain size, etc.) as the substance to be carried. It is permissible to use additives, such as bags of lead shot, to achieve the requisite total package mass, so long as they are placed so that the test results are not affected.
- 6.5.4.1.3 In the drop tests for liquids, when another substance is used, its relative density and viscosity shall be similar to those of the substance to be carried. Water may also be used for the liquid drop test under the following conditions:
  - (a) where the substances to be carried have a relative density not exceeding 1.2, the drop heights shall be those shown in the table in 6.5.4.9.4;

- (b) where the substances to be carried have a relative density exceeding 1.2, the drop heights shall be calculated on the basis of the relative density (d) of the substance to be carried rounded up to the first decimal as follows:

Packing group I	Packing group II	Packing group III
$d \times 1.5$ m	$d \times 1.0$ m	$d \times 0.67$ m

#### 6.5.4.2 *Design type tests*

- 6.5.4.2.1 One IBC of each design type, size, wall thickness and manner of construction shall be submitted to the tests listed in the order shown in 6.5.4.3.5 and as set out in 6.5.4.5 to 6.5.4.12. These design type tests shall be carried out as required by the competent authority.
- 6.5.4.2.2 The competent authority may permit the selective testing of IBCs which differ only in minor respects from a tested type, e.g. with small reductions in external dimensions.
- 6.5.4.2.3 If detachable pallets are used in the tests, the test report issued in accordance with 6.5.4.13 shall include a technical description of the pallets used.

#### 6.5.4.3 *Preparation of IBCs for testing*

- 6.5.4.3.1 Paper and fibreboard IBCs and composite IBCs with fibreboard outer casings shall be conditioned for at least 24 hours in an atmosphere having a controlled temperature and relative humidity (r.h.). There are three options, one of which shall be chosen. The preferred atmosphere is  $23 \pm 2$  °C and  $50 \% \pm 2 \%$  r.h. The two other options are  $20 \pm 2$  °C and  $65 \% \pm 2 \%$  r.h.; or  $27 \pm 2$  °C and  $65 \% \pm 2 \%$  r.h.  
*NOTE: Average values shall fall within these limits. Short-term fluctuations and measurement limitations may cause individual measurements to vary by up to  $\pm 5$  % relative humidity without significant impairment of test reproducibility.*
- 6.5.4.3.2 Additional steps shall be taken to ascertain that the plastics material used in the manufacture of rigid plastics IBCs (types 31H1 and 31H2) and composite IBCs (types 31HZ1 and 31HZ2) complies respectively with the requirements in 6.5.3.3.2 to 6.5.3.3.4 and 6.5.3.4.6 to 6.5.3.4.9.
- 6.5.4.3.3 To prove there is sufficient chemical compatibility with the contained goods, the sample IBC shall be subjected to a preliminary storage for six months, during which the samples shall remain filled with the substances they are intended to contain or with substances which are known to have at least as severe a stress-cracking, weakening or molecular degradation influence on the plastics materials in question, and after which the samples shall be submitted to the applicable tests listed in the table in 6.5.4.3.5.
- 6.5.4.3.4 Where the satisfactory behaviour of the plastics material has been established by other means, the above compatibility test may be dispensed with. Such procedures shall be at least equivalent to the above compatibility test and recognized by the competent authority.

6.5.4.3.5 *Design type tests required and sequential order*

Type of IBC	Bottom lift	Top lift <sup>a</sup>	Stacking <sup>b</sup>	Leak-proofness	Hydraulic pressure	Drop	Tear	Topple	Righting <sup>c</sup>
Metal: 11A, 11B, 11N, 21A, 21B, 21N, 31A, 31B, 31N	1st <sup>a</sup>	2nd	3rd	-	-	4th <sup>e</sup>	-	-	-
Flexible <sup>d</sup>	-	x <sup>c</sup>	x	-	-	x	x	x	x
Rigid plastics: 11H1, 11H2, 21H1, 21H2, 31H1, 31H2	1st <sup>a</sup>	2nd	3rd	-	-	4th	-	-	-
Composite: 11HZ1, 11HZ2, 21HZ1, 21HZ2, 31HZ1, 31HZ2	1st <sup>a</sup>	2nd	3rd	-	-	4th <sup>e</sup>	-	-	-
Fibreboard	1st	-	2nd	-	-	3rd	-	-	-
Wooden	1st	-	2nd	-	-	3rd	-	-	-

<sup>a</sup> When IBCs are designed for this method of handling.

<sup>b</sup> When IBCs are designed to be stacked.

<sup>c</sup> When IBCs are designed to be lifted from the top or the side.

<sup>d</sup> Required test indicated by x; an IBC which has passed one test may be used for other tests, in any order.

<sup>e</sup> Another IBC of the same design may be used for the drop test.

6.5.4.4 *Bottom lift test*6.5.4.4.1 *Applicability*

For all fibreboard and wooden IBCs, and for all types of IBC which are fitted with means of lifting from the base, as a design type test.

6.5.4.4.2 *Preparation of the IBC for test*

The IBC shall be filled. A load shall be added and evenly distributed. The mass of the filled IBC and the load shall be 1.25 times the maximum permissible gross mass.

6.5.4.4.3 *Method of testing*

The IBC shall be raised and lowered twice by a lift truck with the forks centrally positioned and spaced at three quarters of the dimension of the side of entry (unless the points of entry are fixed). The forks shall penetrate to three quarters of the direction of entry. The test shall be repeated from each possible direction of entry.

6.5.4.4.4 *Criteria for passing the test*

No permanent deformation which renders the IBC, including the base pallet, if any, unsafe for carriage and no loss of contents.

**6.5.4.5** *Top lift test***6.5.4.5.1** *Applicability*

For all types of IBC which are designed to be lifted from the top and for flexible IBCs designed to be lifted from the top or the side, as a design type test.

**6.5.4.5.2** *Preparation of the IBC for test*

Metal, rigid plastics and composite IBCs shall be filled. A load shall be added and evenly distributed. The mass of the filled IBC and the load shall be twice the maximum permissible gross mass. Flexible IBCs shall be filled to six times their maximum permissible load, the load being evenly distributed.

**6.5.4.5.3** *Methods of testing*

Metal and flexible IBCs shall be lifted in the manner for which they are designed until clear of the floor and maintained in that position for a period of five minutes.

Rigid plastics and composite IBCs shall be lifted:

- (a) by each pair of diagonally opposite lifting devices, so that the hoisting forces are applied vertically, for a period of five minutes; and
- (b) by each pair of diagonally opposite lifting devices, so that the hoisting forces are applied toward the centre at 45° to the vertical, for a period of five minutes.

**6.5.4.5.4** Other methods of top lift testing and preparation at least equally effective may be used for flexible IBCs.

**6.5.4.5.5** *Criteria for passing the test*

- (a) Metal, rigid plastics and composite IBCs: no permanent deformation which renders the IBC, including the base pallet, if any, unsafe for carriage and no loss of contents.
- (b) Flexible IBCs: no damage to the IBC or its lifting devices which renders the IBC unsafe for carriage or handling.

**6.5.4.6** *Stacking test***6.5.4.6.1** *Applicability*

For all types of IBC which are designed to be stacked on each other, as a design type test.

**6.5.4.6.2** *Preparation of the IBC for test*

The IBC shall be filled to its maximum permissible gross mass. If the specific gravity of the product being used for testing makes this impracticable, the IBC shall additionally be loaded so that it is tested at its maximum permissible gross mass the load being evenly distributed.

**6.5.4.6.3** *Method of testing*

- (a) The IBC shall be placed on its base on level hard ground and subjected to a uniformly distributed superimposed test load (see 6.5.4.6.4). IBCs shall be subjected to the test load for a period of at least:

- (i) 5 minutes, for metal IBCs;
  - (ii) 28 days at 40 °C, for rigid plastics IBCs of types 11H2, 21H2 and 31H2 and for composite IBCs with outer casings of plastics material which bear the stacking load (i.e., types 11HH1, 11HH2, 21HH1, 21HH2, 31HH1 and 31HH2);
  - (iii) 24 hours, for all other types of IBCs;
- (b) The load shall be applied by one of the following methods:
- (i) one or more IBCs of the same type filled to the maximum permissible gross mass stacked on the test IBC;
  - (ii) appropriate weights loaded on to either a flat plate or a reproduction of the base of the IBC, which is stacked on the test IBC.

#### 6.5.4.6.4 *Calculation of superimposed test load*

The load to be placed on the IBC shall be 1.8 times the combined maximum permissible gross mass of the number of similar IBCs that may be stacked on top of the IBC during carriage.

#### 6.5.4.6.5 *Criteria for passing the test*

- (a) All types of IBC other than flexible IBCs: no permanent deformation which renders the IBC including the base pallet, if any, unsafe for carriage and no loss of contents.
- (b) Flexible IBCs: no deterioration of the body which renders the IBC unsafe for carriage and no loss of contents.

#### 6.5.4.7 *Leakproofness test*

##### 6.5.4.7.1 *Applicability*

For those types of IBC used for liquids or for solids filled or discharged under pressure, as a design type test and periodic test.

##### 6.5.4.7.2 *Preparation of the IBC for test*

The test shall be carried out before the fitting of any thermal insulation equipment. Vented closures shall either be replaced by similar non-vented closures or the vent shall be sealed.

##### 6.5.4.7.3 *Method of testing and pressure to be applied*

The test shall be carried out for a period of at least 10 minutes using air at a gauge pressure of not less than 20 kPa (0.2 bar). The air tightness of the IBC shall be determined by a suitable method such as by air-pressure differential test or by immersing the IBC in water or, for metal IBCs, by coating the seams and joints with a soap solution. In the case of immersing a correction factor shall be applied for the hydrostatic pressure. Other methods at least equally effective may be used.

##### 6.5.4.7.4 *Criterion for passing the test*

No leakage of air.

6.5.4.8 *Internal pressure (hydraulic) test*

6.5.4.8.1 *Applicability*

For those types of IBCs used for liquids or for solids filled or discharged under pressure, as a design type test.

6.5.4.8.2 *Preparation of the IBC for test*

The test shall be carried out before the fitting of any thermal insulation equipment. Pressure-relief devices shall be removed and their apertures plugged, or shall be rendered inoperative.

6.5.4.8.3 *Method of testing*

The test shall be carried out for a period of at least 10 minutes applying a hydraulic pressure not less than that indicated in 6.5.4.8.4. The IBCs shall not be mechanically restrained during the test.

6.5.4.8.4 *Pressures to be applied*

6.5.4.8.4.1 *Metal IBCs:*

- (a) For IBCs of types 21A, 21B and 21N, for packing group I solids, a 250 kPa (2.5 bar) gauge pressure;
- (b) For IBCs of types 21A, 21B, 21N, 31A, 31B and 31N, for packing groups II or III substances, a 200 kPa (2 bar) gauge pressure;
- (c) In addition, for IBCs of types 31A, 31B and 31N, a 65kPa (0.65 bar) gauge pressure. This test shall be performed before the 200 kPa (2 bar) test.

6.5.4.8.4.2 *Rigid plastics and composite IBCs:*

- (a) For IBCs of types 21H1, 21H2, 21HZ1 and 21HZ2: 75 kPa (0.75 bar) (gauge);
- (b) For IBCs of types 31H1, 31H2, 31HZ1 and 31HZ2: whichever is the greater of two values, the first as determined by one of the following methods:
  - (i) the total gauge pressure measured in the IBC (i.e. the vapour pressure of the filling substance and the partial pressure of the air or other inert gases, minus 100 kPa) at 55 °C multiplied by a safety factor of 1.5; this total gauge pressure shall be determined on the basis of a maximum degree of filling in accordance with 4.1.1.4 and a filling temperature of 15 °C;
  - (ii) 1.75 times the vapour pressure at 50 °C of the substance to be carried minus 100 kPa, but with a minimum test pressure of 100 kPa;
  - (iii) 1.5 times the vapour pressure at 55 °C of the substance to be carried minus 100 kPa, but with a minimum test pressure of 100 kPa;

and the second as determined by the following method:

- (iv) twice the static pressure of the substance to be carried, with a minimum of twice the static pressure of water;

#### 6.5.4.8.5 *Criteria for passing the test(s):*

- (a) For IBCs of types 21A, 21B, 21N, 31A, 31B and 31N, when subjected to the test pressure specified in 6.5.4.8.4.1 (a) or (b): no leakage;
- (b) For IBCs of types 31A, 31B and 31N, when subjected to the test pressure specified in 6.5.4.8.4.1 (c): no permanent deformation which renders the IBC unsafe for carriage and no leakage;
- (c) For rigid plastics and composite IBCs: no permanent deformation which would render the IBC unsafe for carriage and no leakage.

#### 6.5.4.9 *Drop test*

##### 6.5.4.9.1 *Applicability*

For all types of IBCs, as a design type test.

##### 6.5.4.9.2 *Preparation of the IBC for test*

- (a) Metal IBCs: the IBC shall be filled to not less than 95 % of its capacity for solids or 98% for liquids in accordance with the design type. Pressure-relief devices shall be removed and their apertures plugged, or shall be rendered inoperative;
- (b) Flexible IBCs: the IBC shall be filled to not less than 95% of its capacity and to its maximum permissible gross mass, the contents being evenly distributed;
- (c) Rigid plastics and composite IBCs: the IBC shall be filled to not less than 95 % of its capacity for solids or 98 % for liquids in accordance with the design type. Arrangements provided for pressure relief may be removed and plugged or rendered inoperative. Testing of IBCs shall be carried out when the temperature of the test sample and its contents has been reduced to minus 18 °C or lower. Where test samples of composite IBCs are prepared in this way the conditioning specified in 6.5.4.3.1 may be waived. Test liquids shall be kept in the liquid state, if necessary by the addition of anti-freeze. This conditioning may be disregarded if the materials in question are of sufficient ductility and tensile strength at low temperatures;
- (d) Fibreboard and wooden IBCs: The IBC shall be filled to not less than 95% of its capacity in accordance with the design type.

##### 6.5.4.9.3 *Method of testing*

The IBC shall be dropped on its base onto a rigid, non-resilient, smooth, flat and horizontal surface in such a manner as to ensure that the point of impact is that part of the base of the IBC considered to be the most vulnerable. IBCs of 0.45 m<sup>3</sup> or less capacity shall also be dropped:

- (a) Metal IBCs: on the most vulnerable part other than the part of the base tested in the first drop;
- (b) Flexible IBCs: on the most vulnerable side;
- (c) Rigid plastics, composite, fibreboard and wooden IBCs: flat on a side, flat on the top and on a corner.

The same or different IBCs may be used for each drop.

6.5.4.9.4 *Drop height*

Packing group I	Packing group II	Packing group III
1.8 m	1.2 m	0.8 m

6.5.4.9.5 *Criteria for passing the test(s):*

- (a) Metal IBCs: no loss of contents;
- (b) Flexible IBCs: no loss of contents. A slight discharge, e.g. from closures or stitch holes, upon impact shall not be considered to be a failure of the IBC provided that no further leakage occurs after the IBC has been raised clear of the ground;
- (c) Rigid plastics, composite, fibreboard and wooden IBCs: no loss of contents. A slight discharge from a closure upon impact shall not be considered to be a failure of the IBC provided that no further leakage occurs.

6.5.4.10 *Tear test*6.5.4.10.1 *Applicability*

For all types of flexible IBCs, as a design type test.

6.5.4.10.2 *Preparation of the IBC for test*

The IBC shall be filled to not less than 95% of its capacity and to its maximum permissible gross mass, the contents being evenly distributed.

6.5.4.10.3 *Method of testing*

Once the IBC is placed on the ground, a 100 mm knife score, completely penetrating the wall of a wide face, is made at a 45° angle to the principal axis of the IBC, halfway between the bottom surface and the top level of the contents. The IBC shall then be subjected to a uniformly distributed superimposed load equivalent to twice the maximum permissible gross mass. The load shall be applied for at least five minutes. An IBC which is designed to be lifted from the top or the side shall then, after removal of the superimposed load, be lifted clear of the floor and maintained in that position for a period of five minutes.

6.5.4.10.4 *Criteria for passing the test*

The cut shall not propagate more than 25% of its original length.

6.5.4.11 *Topple test*6.5.4.11.1 *Applicability*

For all types of flexible IBC, as a design type test.

6.5.4.11.2 *Preparation of the IBC for test*

The IBC shall be filled to not less than 95% of its capacity and to its maximum permissible gross mass, the contents being evenly distributed.

6.5.4.11.3 *Method of testing*

The IBC shall be caused to topple on to any part of its top on to a rigid, non-resilient, smooth, flat and horizontal surface.

6.5.4.11.4 *Topple height*

Packing group I	Packing group II	Packing group III
1.8 m	1.2 m	0.8 m

6.5.4.11.5 *Criteria for passing the test*

No loss of contents. A slight discharge, e.g. from closures or stitch holes, upon impact shall not be considered to be a failure of the IBC provided that no further leakage occurs.

6.5.4.12 *Righting test*

6.5.4.12.1 *Applicability*

For all flexible IBCs designed to be lifted from the top or side, as a design type test.

6.5.4.12.2 *Preparation of the IBC for test*

The IBC shall be filled to not less than 95% of its capacity and to its maximum permissible gross mass, the contents being evenly distributed.

6.5.4.12.3 *Method of testing*

The IBC, lying on its side, shall be lifted at a speed of at least 0.1 m/s to upright position, clear of the floor, by one lifting device or by two lifting devices when four are provided.

6.5.4.12.4 *Criteria for passing the test*

No damage to the IBC or its lifting devices which renders the IBC unsafe for carriage or handling.

6.5.4.13 *Test report*

6.5.4.13.1 A test report containing at least the following particulars shall be drawn up and shall be made available to the users of the IBC:

1. Name and address of the test facility;
2. Name and address of applicant (where appropriate);
3. A unique test report identification;
4. Date of the test report;
5. Manufacturer of the IBC;
6. Description of the IBC design type (e.g. dimensions, materials, closures, thickness, etc.) including method of manufacture (e.g. blow moulding) and which may include drawing(s) and/or photograph(s);
7. Maximum capacity;
8. Characteristics of test contents, e.g. viscosity and relative density for liquids and particle size for solids;
9. Test descriptions and results;
10. The test report shall be signed with the name and status of the signatory.

6.5.4.13.2 The test report shall contain statements that the IBC prepared as for carriage was tested in accordance with the appropriate requirements of this Chapter and that the use of other packaging methods or components may render it invalid. A copy of the test report shall be available to the competent authority.

**6.5.4.14 *Testing of individual metal, rigid plastics and composite IBCs***

6.5.4.14.1 These tests shall be carried out as required by the competent authority.

6.5.4.14.2 Each IBC shall correspond in all respects to its design type.

6.5.4.14.3 Each metal, rigid plastics and composite IBC for liquids, or for solids which are filled or discharged under pressure, shall be subjected to the leakproofness test, as an initial test (i.e. before the IBC is first used for carriage), after repair, and at intervals of not more than two and a half years.

6.5.4.14.4 The results of tests and the identity of the party performing the tests shall be recorded in test reports to be kept by the owner of the IBC at least until the date of the next test.

**CHAPTER 6.6****REQUIREMENTS FOR THE CONSTRUCTION AND TESTING  
OF LARGE PACKAGINGS****6.6.1 General**

6.6.1.1 The requirements of this Chapter do not apply to:

- packagings for Class 2, except large packagings for articles, including aerosols;
- packagings for Class 6.2, except large packagings for clinical waste of UN No. 3291;
- Class 7 packages containing radioactive material.

6.6.1.2 Large packagings shall be manufactured and tested under a quality assurance programme which satisfies the competent authority in order to ensure that each manufactured packaging meets the requirements of this Chapter.

6.6.1.3 The specific requirements for large packagings in 6.6.4 are based on large packagings currently used. In order to take into account progress in science and technology, there is no objection to the use of large packagings having specifications different from those in 6.6.4 provided they are equally effective, acceptable to the competent authority and able successfully to withstand the tests described in 6.6.5. Methods of testing other than those described in ADR are acceptable provided they are equivalent and are recognized by the competent authority.

6.6.1.4 Manufacturers and subsequent distributors of packagings shall provide information regarding procedures to be followed and a description of the types and dimensions of closures (including required gaskets) and any other components needed to ensure that packages as presented for carriage are capable of passing the applicable performance tests of this Chapter.

**6.6.2 Code for designating types of large packagings**

6.6.2.1 The code used for large packagings consist of:

(a) Two Arabic numerals:

50 for rigid large packagings; or  
51 for flexible large packagings; and

(b) A capital letter in Latin character indicating the nature of the material, e.g. wood, steel etc. The capital letters used shall be those shown in 6.1.2.6.

6.6.2.2 The letter "W" may follow the Large Packaging code. The letter "W" signifies that the large packaging, although of the same type indicated by the code, is manufactured to a specification different from those in 6.6.4 and is considered equivalent in accordance with the requirements in 6.6.1.3.

### 6.6.3 Marking

#### 6.6.3.1 Primary marking

Each large packaging manufactured and intended for use in accordance with the provisions of ADR shall bear durable and legible markings showing:

- (a) The United Nations packaging symbol

For metal large packagings on which the marking is stamped or embossed, the capital letters "UN" may be applied instead of the symbol;

- (b) The number "50" designating a large rigid packaging or "51" for flexible large packagings, followed by the material type in accordance with 6.5.1.4.1 (b);
- (c) A capital letter designating the packing group(s) for which the design type has been approved:
- X for packing groups I, II and III  
Y for packing groups II and III  
Z for packing group III only;
- (d) The month and year (last two digits) of manufacture;
- (e) The State authorizing the allocation of the mark; indicated by the distinguishing sign for motor vehicles in international traffic <sup>1</sup>;
- (f) The name or symbol of the manufacturer and other identification of the large packagings as specified by the competent authority;
- (g) The stacking test load in kg. For large packagings not designed for stacking the figure "0" shall be shown;
- (h) The maximum permissible gross mass in kilograms.

The primary marking required above shall be applied in the sequence of the sub-paragraphs.

Each element of the marking applied in accordance with (a) to (h) shall be clearly separated, e.g. by a slash or space, so as to be easily identifiable.

#### 6.6.3.2 Examples of the marking:

50A/X/05 96/N/PQRS  
2500/1000

For a large steel packaging suitable for stacking; stacking load: 2 500 kg; maximum gross mass: 1 000 kg.

50H/Y/04 95/D/ABCD 987  
0/800

For a large plastics packaging not suitable for stacking; maximum gross mass: 800 kg.

51H/Z/0697/S/1999  
0/500

For a large flexible packaging not suitable for stacking; maximum gross mass: 500 kg.

<sup>1</sup> Distinguishing sign for motor vehicles in international traffic prescribed in the Vienna Convention on Road Traffic (1968).

**6.6.4 Specific requirements for large packagings****6.6.4.1 *Specific requirements for metal large packagings***

- 50A steel
- 50B aluminium
- 50N metal (other than steel or aluminium)

6.6.4.1.1 The large packaging shall be made of suitable ductile metal in which the weldability has been fully demonstrated. Welds shall be skilfully made and afford complete safety. Low-temperature performance shall be taken into account when appropriate.

6.6.4.1.2 Care shall be taken to avoid damage by galvanic action due to the juxtaposition of dissimilar metals.

**6.6.4.2 *Specific requirements for flexible material large packagings***

- 51H flexible plastics
- 51M flexible paper

6.6.4.2.1 The large packaging shall be manufactured from suitable materials. The strength of the material and the construction of the flexible large packagings shall be appropriate to its capacity and its intended use.

6.6.4.2.2 All materials used in the construction of flexible large packagings of types 51M shall, after complete immersion in water for not less than 24 hours, retain at least 85% of the tensile strength as measured originally on the material conditioned to equilibrium at 67% relative humidity or less.

6.6.4.2.3 Seams shall be formed by stitching, heat sealing, glueing or any equivalent method. All stitched seam-ends shall be secured.

6.6.4.2.4 Flexible large packagings shall provide adequate resistance to ageing and to degradation caused by ultraviolet radiation or the climatic conditions, or by the substance contained, thereby rendering them appropriate to their intended use.

6.6.4.2.5 For plastics flexible large packagings where protection against ultraviolet radiation is required, it shall be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives shall be compatible with the contents and remain effective throughout the life of the large packaging. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, re-testing may be waived if changes in the carbon black content, the pigment content or the inhibitor content do not adversely affect the physical properties of the material of construction.

6.6.4.2.6 Additives may be incorporated into the material of the large packaging to improve the resistance to ageing or to serve other purposes, provided that these do not adversely affect the physical or chemical properties of the material.

6.6.4.2.7 When filled, the ratio of height to width shall be not more than 2:1.

**6.6.4.3      *Specific requirements for plastics large packagings***

50H rigid plastics

6.6.4.3.1      The large packaging shall be manufactured from suitable plastics material of known specifications and be of adequate strength in relation to its capacity and its intended use. The material shall be adequately resistant to ageing and to degradation caused by the substance contained or, where relevant, by ultraviolet radiation. Low temperature performance shall be taken into account when appropriate. Any permeation of the substance contained shall not constitute a danger under normal conditions of carriage.

6.6.4.3.2      Where protection against ultraviolet radiation is required, it shall be provided by the addition of carbon black or other suitable pigments or inhibitors. These additives shall be compatible with the contents and remain effective throughout the life of the outer packaging. Where use is made of carbon black, pigments or inhibitors other than those used in the manufacture of the tested design type, re-testing may be waived if changes in the carbon black content, the pigment content or the inhibitor content do not adversely affect the physical properties of the material of construction.

6.6.4.3.3      Additives may be incorporated in the material of the large packaging to improve the resistance to ageing or to serve other purposes, provided that these do not adversely affect the physical or chemical properties of the material.

**6.6.4.4      *Specific requirements for fibreboard large packagings***

50G rigid fibreboard

6.6.4.4.1      Strong and good quality solid or double-faced corrugated fibreboard (single or multiwall) shall be used, appropriate to the capacity of the large packagings and to their intended use. The water resistance of the outer surface shall be such that the increase in mass, as determined in a test carried out over a period of 30 minutes by the Cobb method of determining water absorption, is not greater than  $155 \text{ g/m}^2$  - see ISO 535:1991. It shall have proper bending qualities. Fibreboard shall be cut, creased without scoring, and slotted so as to permit assembly without cracking, surface breaks or undue bending. The fluting or corrugated fibreboard shall be firmly glued to the facings.

6.6.4.4.2      The walls, including top and bottom, shall have a minimum puncture resistance of 15 J measured according to ISO 3036:1975.

6.6.4.4.3      Manufacturing joins in the outer packaging of large packagings shall be made with an appropriate overlap and shall be taped, glued, stitched with metal staples or fastened by other means at least equally effective. Where joins are effected by gluing or taping, a water resistant adhesive shall be used. Metal staples shall pass completely through all pieces to be fastened and be formed or protected so that any inner liner cannot be abraded or punctured by them.

6.6.4.4.4      Any integral pallet base forming part of a large packaging or any detachable pallet shall be suitable for mechanical handling with the large packaging filled to its maximum permissible gross mass.

6.6.4.4.5      The pallet or integral base shall be designed so as to avoid any protrusion of the base of the large packaging that might be liable to damage in handling.

6.6.4.4.6      The body shall be secured to any detachable pallet to ensure stability in handling and carriage. Where a detachable pallet is used, its top surface shall be free from sharp protrusions that might damage the large packaging.

- 6.6.4.4.7 Strengthening devices such as timber supports to increase stacking performance may be used but shall be external to the liner.
- 6.6.4.4.8 Where large packagings are intended for stacking, the bearing surface shall be such as to distribute the load in a safe manner.
- 6.6.4.5 *Specific requirements for wooden large packagings*
- 50C natural wood  
50D plywood  
50F reconstituted wood
- 6.6.4.5.1 The strength of the materials used and the method of construction shall be appropriate to the capacity and intended use of the large packagings.
- 6.6.4.5.2 Natural wood shall be well seasoned, commercially dry and free from defects that would materially lessen the strength of any part of the large packagings. Each part of the large packagings shall consist of one piece or be equivalent thereto. Parts are considered equivalent to one piece when a suitable method of glued assembly is used as for instance Lindermann joint, tongue and groove joint, ship lap or rabbet joint; or butt joint with at least two corrugated metal fasteners at each joint, or when other methods at least equally effective are used.
- 6.6.4.5.3 Large packagings of plywood shall be at least 3-ply. They shall be made of well seasoned rotary cut, sliced or sawn veneer, commercially dry and free from defects that would materially lessen the strength of the large packaging. All adjacent plies shall be glued with water resistant adhesive. Other suitable materials may be used with plywood for the construction of the large packaging.
- 6.6.4.5.4 Large packagings of reconstituted wood shall be made of water resistant reconstituted wood such as hardboard, particle board or other suitable type.
- 6.6.4.5.5 Large packagings shall be firmly nailed or secured to corner posts or ends or be assembled by equally suitable devices.
- 6.6.4.5.6 Any integral pallet base forming part of a large packaging or any detachable pallet shall be suitable for mechanical handling with the large packaging filled to its maximum permissible gross mass.
- 6.6.4.5.7 The pallet or integral base shall be designed so as to avoid any protrusion of the base of the large packaging that might be liable to damage in handling.
- 6.6.4.5.8 The body shall be secured to any detachable pallet to ensure stability in handling and carriage. Where a detachable pallet is used, its top surface shall be free from sharp protrusions that might damage the large packaging.
- 6.6.4.5.9 Strengthening devices such as timber supports to increase stacking performance may be used but shall be external to the liner.
- 6.6.4.5.10 Where large packagings are intended for stacking, the bearing surface shall be such as to distribute the load in a safe manner.

**6.6.5 Test requirements for large packagings****6.6.5.1 Performance and frequency of test**

6.6.5.1.1 The design type of each large packaging shall be tested as provided in 6.6.5.3 in accordance with procedures established and approved by the competent authority.

6.6.5.1.2 Tests shall be successfully performed on each large packaging design type before such a packaging is used. A large packaging design type is defined by the design, size, material and thickness, manner of construction and packing, but may include various surface treatments. It also includes large packagings which differ from the design type only in their lesser design height.

6.6.5.1.3 Tests shall be repeated on production samples at intervals established by the competent authority. For such tests on fibreboard large packagings, preparation at ambient conditions is considered equivalent to the provisions of 6.6.5.2.3.

6.6.5.1.4 Tests shall also be repeated after each modification which alters the design, material or manner of construction of large packagings.

6.6.5.1.5 The competent authority may permit the selective testing of large packagings that differ only in minor respects from a tested type, e.g. smaller sizes of inner packagings or inner packagings of lower net mass; and large packagings which are produced with small reductions in external dimension(s).

6.6.5.1.6 Where a large packaging has been successfully tested with different types of inner packagings, a variety of such different inner packagings may also be assembled in this large packaging. In addition, provided an equivalent level of performance is maintained, the following variations in inner packagings are allowed without further testing of the package:

- (a) Inner packagings of equivalent or smaller size may be used provided:
  - (i) The inner packagings are of similar design to the tested inner packagings (e.g. shape - round, rectangular, etc);
  - (ii) The material of construction of the inner packagings (glass, plastics, metal, etc.) offers resistance to impact and stacking forces equal to or greater than that of the originally tested inner packaging;
  - (iii) The inner packagings have the same or smaller openings and the closure is of similar design (e.g. screw cap, friction lid, etc);
  - (iv) Sufficient additional cushioning material is used to take up void spaces and to prevent significant movement of the inner packagings; and
  - (v) Inner packagings are oriented within the large packagings in the same manner as in the tested package;
- (b) A lesser number of the tested inner packagings, or of the alternative types of inner packagings identified in (a) above, may be used provided sufficient cushioning is added to fill the void space(s) and to prevent significant movement of the inner packagings.

6.6.5.1.7 The competent authority may at any time require proof, by tests in accordance with this section, that serially-produced large packagings meet the requirements of the design type tests.

- 6.6.5.1.8 Provided the validity of the test results is not affected and with the approval of the competent authority, several tests may be made on one sample.

**6.6.5.2** *Preparation for testing*

- 6.6.5.2.1 Tests shall be carried out on large packagings prepared as for carriage including the inner packagings or articles used. Inner packagings shall be filled to not less than 98% of their maximum capacity for liquids or 95% for solids. For large packagings where the inner packagings are designed to carry liquids and solids, separate testing is required for both liquid and solid contents. The substances in the inner packagings or the articles to be carried in the large packagings may be replaced by other material or articles except where this would invalidate the results of the tests. When other inner packagings or articles are used they shall have the same physical characteristics (mass, etc) as the inner packagings or articles to be carried. It is permissible to use additives, such as bags of lead shot, to achieve the requisite total package mass, so long as they are placed so that the test results are not affected.

- 6.6.5.2.2 Large packagings made of plastics materials and large packagings containing inner packagings of plastic materials - other than bags intended to contain solids or articles - shall be drop tested when the temperature of the test sample and its contents has been reduced to  $-18\text{ }^{\circ}\text{C}$  or lower. This conditioning may be disregarded if the materials in question are of sufficient ductility and tensile strength at low temperatures. Where test sample are prepared in this way, the conditioning in 6.6.5.2.3 may be waived. Test liquids shall be kept in the liquid state by the addition of anti-freeze if necessary.

- 6.6.5.2.3 Large packagings of fibreboard shall be conditioned for at least 24 hours in an atmosphere having a controlled temperature and relative humidity (r.h.). There are three options, one of which shall be chosen.

The preferred atmosphere is  $23\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  and  $50\% \pm 2\%$  r.h. The two other options are:  $20\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  and  $65\% \pm 2\%$  r.h.; or  $27\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  and  $65\% \pm 2\%$  r.h.

*NOTE: Average values shall fall within these limits. Short term fluctuations and measurement limitations may cause individual measurements to vary by up to  $\pm 5\%$  relative humidity without significant impairment of test reproducibility.*

**6.6.5.3** *Test requirements*

6.6.5.3.1 *Bottom lift test*

6.6.5.3.1.1 *Applicability*

For all types of large packagings which are fitted with means of lifting from the base, as a design type test.

6.6.5.3.1.2 *Preparation of large packaging for test*

The large packaging shall be loaded to 1.25 times its maximum permissible gross mass, the load being evenly distributed.

6.6.5.3.1.3 *Method of testing*

The large packaging shall be raised and lowered twice by a lift truck with the forks centrally positioned and spaced at three quarters of the dimension of the side of entry (unless the points of entry are fixed). The forks shall penetrate to three quarters of the direction of entry. The test shall be repeated from each possible direction of entry.

6.6.5.3.1.4 Criteria for passing the test

No permanent deformation which renders the large packaging unsafe for carriage and no loss of contents.

6.6.5.3.2 *Top lift test*

6.6.5.3.2.1 Applicability

For types of large packagings which are intended to be lifted from the top and fitted with means of lifting, as a design type test.

6.6.5.3.2.2 Preparation of large packaging for test

The large packaging shall be loaded to twice its maximum permissible gross mass. A flexible large packaging shall be loaded to six times its maximum permissible gross mass, the load being evenly distributed.

6.6.5.3.2.3 Method of testing

The large packaging shall be lifted in the manner for which it is designed until clear of the floor and maintained in that position for a period of five minutes.

6.6.5.3.2.4 Criteria for passing the test

No permanent deformation which renders the large packaging unsafe for carriage and no loss of contents.

6.6.5.3.3 *Stacking test*

6.6.5.3.3.1 Applicability

For all types of large packagings which are designed to be stacked on each other, as a design type test.

6.6.5.3.3.2 Preparation of large packaging for test

The large packaging shall be filled to its maximum permissible gross mass.

6.6.5.3.3.3 Method of testing

The large packaging shall be placed on its base on level hard ground and subjected to a uniformly distributed superimposed test load (see 6.6.5.3.3.4) for a period of at least five minutes, large packagings of wood, fibreboard and plastics materials for a period of 24 h.

6.6.5.3.3.4 Calculation of superimposed test load

The load to be placed on the large packagings shall be 1.8 times the combined maximum permissible gross mass of the number of similar large packagings that may be stacked on top of the large packagings during carriage.

6.6.5.3.3.5 Criteria for passing the test

No permanent deformation which renders the large packaging unsafe for carriage and no loss of contents.

6.6.5.3.4 *Drop test*

## 6.6.5.3.4.1 Applicability

For all types of large packagings as a design type test.

## 6.6.5.3.4.2 Preparation of large packaging for testing

The large packaging shall be filled in accordance with 6.6.5.2.1

## 6.6.5.3.4.3 Method of testing

The large packaging shall be dropped onto a rigid, non-resilient, smooth, flat and horizontal surface, in such a manner as to ensure that the point of impact is that part of the base of the large packaging considered to be the most vulnerable.

## 6.6.5.3.4.4 Drop height

Packing group I	Packing group II	Packing group III
1.8 m	1.2 m	0.8 m

*NOTE: Large packagings for substances and articles of Class 1, self-reactive substances of Class 4.1 and organic peroxides of Class 5.2 shall be tested at the packing group II performance level.*

## 6.6.5.3.4.5 Criteria for passing the test

6.6.5.3.4.5.1 The large packaging shall not exhibit any damage liable to affect safety during carriage. There shall be no leakage of the filling substance from inner packaging(s) or article(s).

6.6.5.3.4.5.2 No rupture is permitted in large packagings for articles of Class 1 which would permit the spillage of loose explosive substances or articles from the large packaging.

6.6.5.3.4.5.3 Where a large packaging undergoes a drop test, the sample passes the test if the entire contents are retained even if the closure is no longer sift-proof.

6.6.5.4 *Certification and test report*

6.6.5.4.1 In respect of each design type of large packaging a certificate and mark (as in 6.6.3) shall be issued attesting that the design type including its equipment meets the test requirements.

6.6.5.4.2 A test report containing at least the following particulars shall be drawn up and shall be made available to the users of the large packaging:

1. Name and address of the test facility;
2. Name and address of applicant (where appropriate);
3. A unique test report identification;
4. Date of the test report;
5. Manufacturer of the large packaging;
6. Description of the large packaging design type (e.g. dimensions, materials, closures, thickness, etc) and/or photograph(s);
7. Maximum capacity/maximum permissible gross mass;

8. Characteristics of test contents, e.g. types and descriptions of inner packagings or articles used;
9. Test descriptions and results;
10. The test report shall be signed with the name and status of the signatory.

6.6.5.4.3

The test report shall contain statements that the large packaging prepared as for carriage was tested in accordance with the appropriate provisions of this Chapter and that the use of other packaging methods or components may render it invalid. A copy of the test report shall be available to the competent authority.

## CHAPTER 6.7

**REQUIREMENTS FOR THE DESIGN, CONSTRUCTION,  
INSPECTION AND TESTING OF PORTABLE TANKS AND  
UN CERTIFIED MULTIPLE-ELEMENT GAS CONTAINERS (MEGCs)**

**NOTE:** *For fixed tanks (tank-vehicles), demountable tanks and tank-containers and tank swap bodies, with shells made of metallic materials, and battery-vehicles and multiple element gas containers (MEGCs), see Chapter 6.8; for fibre-reinforced plastics tanks, see Chapter 6.9; for vacuum operated waste tanks, see Chapter 6.10.*

**6.7.1 Application and general requirements**

6.7.1.1 The requirements of this Chapter apply to portable tanks intended for the carriage of dangerous goods of Classes 2, 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.2, 7, 8 and 9, and to MEGCs intended for the carriage of non-refrigerated gases of Class 2, by all modes of carriage. In addition to the requirements of this Chapter, unless otherwise specified, the applicable requirements of the International Convention for Safe Containers (CSC) 1972, as amended, shall be fulfilled by any multimodal portable tank or MEGC which meets the definition of a "container" within the terms of that Convention. Additional requirements may apply to offshore portable tanks or MEGCs that are handled in open seas.

6.7.1.2 In recognition of scientific and technological advances, the technical requirements of this Chapter may be varied by alternative arrangements. These alternative arrangements shall offer a level of safety not less than that given by the requirements of this Chapter with respect to the compatibility with substances carried and the ability of the portable tank or MEGC to withstand impact, loading and fire conditions. For international carriage, alternative arrangement portable tanks or MEGCs shall be approved by the applicable competent authorities.

6.7.1.3 When a substance is not assigned a portable tank instruction (T1 to T23, T50 or T75) in Column (10) of Table A of in Chapter 3.2, interim approval for carriage may be issued by the competent authority of the country of origin. The approval shall be included in the documentation of the consignment and contain as a minimum the information normally provided in the portable tank instructions and the conditions under which the substance shall be carried.

**6.7.2 Requirements for the design, construction, inspection and testing of portable tanks intended for the carriage of substances of Classes 3 to 9**

**6.7.2.1 Definitions**

For the purposes of this section:

*Alternative arrangement* means an approval granted by the competent authority for a portable tank or MEGC that has been designed, constructed or tested to technical requirements or testing methods other than those specified in this Chapter:

*Portable tank* means a multimodal tank having a capacity of more than 450 litres used for the carriage of substances of Classes 3 to 9. The portable tank includes a shell fitted with service equipment and structural equipment necessary for the carriage of dangerous substances. The portable tank shall be capable of being filled and discharged without the removal of its structural equipment. It shall possess stabilizing members external to the shell, and shall be capable of being lifted when full. It shall be designed primarily to be loaded onto a transport vehicle or ship and shall be equipped with skids, mountings or accessories to

facilitate mechanical handling. Tank-vehicles, tank-wagons, non-metallic tanks and intermediate bulk containers (IBCs) are not considered to fall within the definition for portable tanks;

*Shell* means the part of the portable tank which retains the substance intended for carriage (tank proper), including openings and their closures, but does not include service equipment or external structural equipment;

*Service equipment* means measuring instruments and filling, discharge, venting, safety, heating, cooling and insulating devices;

*Structural equipment* means the reinforcing, fastening, protective and stabilizing members external to the shell;

*Maximum allowable working pressure (MAWP)* means a pressure that shall be not less than the highest of the following pressures measured at the top of the shell while in operating position:

- (a) The maximum effective gauge pressure allowed in the shell during filling or discharge; or
- (b) The maximum effective gauge pressure to which the shell is designed which shall be not less than the sum of:
  - (i) the absolute vapour pressure (in bar) of the substance at 65 °C, minus 1 bar; and
  - (ii) the partial pressure (in bar) of air or other gases in the ullage space being determined by a maximum ullage temperature of 65 °C and a liquid expansion due to an increase in mean bulk temperature of  $t_r - t_f$  ( $t_f$  = filling temperature, usually 15 °C;  $t_r$  = maximum mean bulk temperature, 50 °C);

*Design pressure* means the pressure to be used in calculations required by a recognized pressure vessel code. The design pressure shall be not less than the highest of the following pressures:

- (a) The maximum effective gauge pressure allowed in the shell during filling or discharge; or
- (b) The sum of:
  - (i) the absolute vapour pressure (in bar) of the substance at 65 °C, minus 1 bar;
  - (ii) the partial pressure (in bar) of air or other gases in the ullage space being determined by a maximum ullage temperature of 65 °C and a liquid expansion due to an increase in mean bulk temperature of  $t_r - t_f$  ( $t_f$  = filling temperature usually 15 °C;  $t_r$  = maximum mean bulk temperature, 50 °C); and
  - (iii) a head pressure determined on the basis of the dynamic forces specified in 6.7.2.2.12, but not less than 0.35 bar; or
- (c) Two thirds of the minimum test pressure specified in the applicable portable tank instruction in 4.2.5.2.6;

*Test pressure* means the maximum gauge pressure at the top of the shell during the hydraulic pressure test equal to not less than 1.5 times the design pressure. The minimum test pressure

for portable tanks intended for specific substances is specified in the applicable portable tank instruction in 4.2.5.2.6;

*Leakproofness test* means a test using gas subjecting the shell and its service equipment to an effective internal pressure of not less than 25% of the MAWP;

*Maximum permissible gross mass (MPGM)* means the sum of the tare mass of the portable tank and the heaviest load authorized for carriage;

*Reference steel* means a steel with a tensile strength of 370 N/mm<sup>2</sup> and an elongation at fracture of 27%;

*Mild steel* means a steel with a guaranteed minimum tensile strength of 360 N/mm<sup>2</sup> to 440 N/mm<sup>2</sup> and a guaranteed minimum elongation at fracture conforming to 6.7.2.3.3.3;

*Design temperature range* for the shell shall be -40 °C to 50 °C for substances carried under ambient conditions. For substances handled under elevated temperature conditions the design temperature shall be not less than the maximum temperature of the substance during filling, discharge or carriage. More severe design temperatures shall be considered for portable tanks subjected to severe climatic conditions.

## 6.7.2.2 *General design and construction requirements*

6.7.2.2.1 Shells shall be designed and constructed in accordance with the requirements of a pressure vessel code recognized by the competent authority. Shells shall be made of metallic materials suitable for forming. The materials shall in principle conform to national or international material standards. For welded shells only a material whose weldability has been fully demonstrated shall be used. Welds shall be skilfully made and afford complete safety. When the manufacturing process or the materials make it necessary, the shells shall be suitably heat-treated to guarantee adequate toughness in the weld and in the heat affected zones. In choosing the material, the design temperature range shall be taken into account with respect to risk of brittle fracture, to stress corrosion cracking and to resistance to impact. When fine grain steel is used, the guaranteed value of the yield strength shall be not more than 460 N/mm<sup>2</sup> and the guaranteed value of the upper limit of the tensile strength shall be not more than 725 N/mm<sup>2</sup> according to the material specification. Aluminium may only be used as a construction material when indicated in a portable tank special provision assigned to a specific substance in Column (11) of Table A of Chapter 3.2 or when approved by the competent authority. When aluminium is authorized, it shall be insulated to prevent significant loss of physical properties when subjected to a heat load of 110 kW/m<sup>2</sup> for a period of not less than 30 minutes. The insulation shall remain effective at all temperatures less than 649 °C and shall be jacketed with a material with a melting point of not less than 700 °C. Portable tank materials shall be suitable for the external environment in which they may be carried.

6.7.2.2.2 Portable tank shells, fittings, and pipework shall be constructed from materials which are:

- (a) Substantially immune to attack by the substance(s) intended to be carried; or
- (b) Properly passivated or neutralized by chemical reaction; or
- (c) Lined with corrosion-resistant material directly bonded to the shell or attached by equivalent means.

6.7.2.2.3 Gaskets shall be made of materials not subject to attack by the substance(s) intended to be carried.

- 6.7.2.2.4 When shells are lined, the lining shall be substantially immune to attack by the substance(s) intended to be carried, homogeneous, non porous, free from perforations, sufficiently elastic and compatible with the thermal expansion characteristics of the shell. The lining of every shell, shell fittings and piping shall be continuous, and shall extend around the face of any flange. Where external fittings are welded to the tank, the lining shall be continuous through the fitting and around the face of external flanges.
- 6.7.2.2.5 Joints and seams in the lining shall be made by fusing the material together or by other equally effective means.
- 6.7.2.2.6 Contact between dissimilar metals which could result in damage by galvanic action shall be avoided.
- 6.7.2.2.7 The materials of the portable tank, including any devices, gaskets, linings and accessories, shall not adversely affect the substance(s) intended to be carried in the portable tank.
- 6.7.2.2.8 Portable tanks shall be designed and constructed with supports to provide a secure base during carriage and with suitable lifting and tie-down attachments.
- 6.7.2.2.9 Portable tanks shall be designed to withstand, without loss of contents, at least the internal pressure due to the contents, and the static, dynamic and thermal loads during normal conditions of handling and carriage. The design shall demonstrate that the effects of fatigue, caused by repeated application of these loads through the expected life of the portable tank, have been taken into account.
- 6.7.2.2.10 A shell which is to be equipped with a vacuum-relief device shall be designed to withstand, without permanent deformation, an external pressure of not less than 0.21 bar above the internal pressure. The vacuum-relief device shall be set to relieve at a vacuum setting not greater than minus (-) 0.21 bar unless the shell is designed for a higher external over pressure, in which case the vacuum-relief pressure of the device to be fitted shall be not greater than the tank design vacuum pressure. A shell that is not to be fitted with a vacuum-relief device shall be designed to withstand, without permanent deformation an external pressure of not less than 0.4 bar above the internal pressure.
- 6.7.2.2.11 Vacuum-relief devices used on portable tanks intended for the carriage of substances meeting the flash-point criteria of Class 3, including elevated temperature substances carried at or above their flash-point, shall prevent the immediate passage of flame into the shell, or the portable tank shall have a shell capable of withstanding, without leakage an internal explosion resulting from the passage of flame into the shell.
- 6.7.2.2.12 Portable tanks and their fastenings shall, under the maximum permissible load, be capable of absorbing the following separately applied static forces:
- (a) In the direction of travel: twice the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>1</sup>;
  - (b) Horizontally at right angles to the direction of travel: the MPGM (when the direction of travel is not clearly determined, the forces shall be equal to twice the MPGM) multiplied by the acceleration due to gravity ( $g$ )<sup>1</sup>;
  - (c) Vertically upwards: the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>1</sup>; and
  - (d) Vertically downwards: twice the MPGM (total loading including the effect of gravity) multiplied by the acceleration due to gravity ( $g$ )<sup>1</sup>.

<sup>1</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

- 6.7.2.2.13 Under each of the forces in 6.7.2.2.12, the safety factor to be observed shall be as follows:
- (a) For metals having a clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed yield strength; or
  - (b) For metals with no clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed 0.2% proof strength and, for austenitic steels, the 1% proof strength.

6.7.2.2.14 The values of yield strength or proof strength shall be the values according to national or international material standards. When austenitic steels are used, the specified minimum values of yield strength or proof strength according to the material standards may be increased by up to 15% when these greater values are attested in the material inspection certificate. When no material standard exists for the metal in question, the value of yield strength or proof strength used shall be approved by the competent authority.

6.7.2.2.15 Portable tanks shall be capable of being electrically earthed when intended for the carriage of substances meeting the flash-point criteria of Class 3 including elevated temperature substances carried at or above their flash-point. Measures shall be taken to prevent dangerous electrostatic discharge.

6.7.2.2.16 When required for certain substances by the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 or by a portable tank special provision indicated in Column (11) of Table A of Chapter 3.2 and described in 4.2.5.3, portable tanks shall be provided with additional protection, which may take the form of additional shell thickness or a higher test pressure, the additional shell thickness or higher test pressure being determined in the light of the inherent risks associated with the carriage of the substances concerned.

### 6.7.2.3 *Design criteria*

6.7.2.3.1 Shells shall be of a design capable of being stress-analysed mathematically or experimentally by resistance strain gauges, or by other methods approved by the competent authority.

6.7.2.3.2 Shells shall be designed and constructed to withstand a hydraulic test pressure not less than 1.5 times the design pressure. Specific requirements are laid down for certain substances in the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 or by a portable tank special provision indicated in Column (11) of Table A of Chapter 3.2 and described in 4.2.5.3. Attention is drawn to the minimum shell thickness requirements specified in 6.7.2.4.1 to 6.7.2.4.10.

6.7.2.3.3 For metals exhibiting a clearly defined yield point or characterized by a guaranteed proof strength (0.2% proof strength, generally, or 1% proof strength for austenitic steels) the primary membrane stress  $\sigma$  (sigma) in the shell shall not exceed 0.75 Re or 0.50 Rm, whichever is lower, at the test pressure, where:

Re = yield strength in N/mm<sup>2</sup>, or 0.2% proof strength or, for austenitic steels, 1% proof strength;

Rm = minimum tensile strength in N/mm<sup>2</sup>.

6.7.2.3.3.1 The values of Re and Rm to be used shall be the specified minimum values according to national or international material standards. When austenitic steels are used, the specified minimum values for Re and Rm according to the material standards may be increased by up to 15% when greater values are attested in the material inspection certificate. When no material standard exists for the metal in question, the values of Re and Rm used shall be approved by the competent authority or its authorized body.

- 6.7.2.3.3.2 Steels which have a  $R_e/R_m$  ratio of more than 0.85 are not allowed for the construction of welded shells. The values of  $R_e$  and  $R_m$  to be used in determining this ratio shall be the values specified in the material inspection certificate.
- 6.7.2.3.3.3 Steels used in the construction of shells shall have an elongation at fracture, in %, of not less than  $10\,000/R_m$  with an absolute minimum of 16% for fine grain steels and 20% for other steels. Aluminium and aluminium alloys used in the construction of shells shall have an elongation at fracture, in %, of not less than  $10\,000/6R_m$  with an absolute minimum of 12%.
- 6.7.2.3.3.4 For the purpose of determining actual values for materials, it shall be noted that for sheet metal, the axis of the tensile test specimen shall be at right angles (transversely) to the direction of rolling. The permanent elongation at fracture shall be measured on test specimens of rectangular cross sections in accordance with ISO 6892:1998 using a 50 mm gauge length.
- 6.7.2.4 *Minimum shell thickness***
- 6.7.2.4.1 The minimum shell thickness shall be the greater thickness based on:
- (a) The minimum thickness determined in accordance with the requirements of 6.7.2.4.2 to 6.7.2.4.10;
  - (b) The minimum thickness determined in accordance with the recognized pressure vessel code including the requirements in 6.7.2.3; and
  - (c) The minimum thickness specified in the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 or by a portable tank special provision indicated in Column (11) of Table A of Chapter 3.2 and described in 4.2.5.3.
- 6.7.2.4.2 The cylindrical portions, ends (heads) and manhole covers of shells not more than 1.80 m in diameter shall be not less than 5 mm thick in the reference steel or of equivalent thickness in the metal to be used. Shells more than 1.80 m in diameter shall be not less than 6 mm thick in the reference steel or of equivalent thickness in the metal to be used, except that for powdered or granular solid substances of packing group II or III the minimum thickness requirement may be reduced to not less than 5 mm thick in the reference steel or of equivalent thickness in the metal to be used.
- 6.7.2.4.3 When additional protection against shell damage is provided, portable tanks with test pressures less than 2.65 bar may have the minimum shell thickness reduced, in proportion to the protection provided, as approved by the competent authority. However, shells not more than 1.80 m in diameter shall be not less than 3 mm thick in the reference steel or of equivalent thickness in the metal to be used. Shells more than 1.80 m in diameter shall be not less than 4 mm thick in the reference steel or of equivalent thickness in the metal to be used.
- 6.7.2.4.4 The cylindrical portions, ends (heads) and manhole covers of all shells shall be not less than 3 mm thick regardless of the material of construction.
- 6.7.2.4.5 The additional protection referred to in 6.7.2.4.3 may be provided by overall external structural protection, such as suitable "sandwich" construction with the outer sheathing (jacket) secured to the shell, double wall construction or by enclosing the shell in a complete framework with longitudinal and transverse structural members.

6.7.2.4.6 The equivalent thickness of a metal other than the thickness prescribed for the reference steel in 6.7.2.4.2 shall be determined using the following formula:

$$e_1 = \frac{21.4e_0}{\sqrt[3]{Rm_1 \times A_1}}$$

where:

- $e_1$  = required equivalent thickness (in mm) of the metal to be used;
- $e_0$  = minimum thickness (in mm) of the reference steel specified in the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 or by a portable tank special provision indicated in Column (11) of Table A of Chapter 3.2 and described in 4.2.5.3;
- $Rm_1$  = guaranteed minimum tensile strength (in  $N/mm^2$ ) of the metal to be used (see 6.7.2.3.3);
- $A_1$  = guaranteed minimum elongation at fracture (in %) of the metal to be used according to national or international standards.

6.7.2.4.7 When in the applicable portable tank instruction in 4.2.5.2.6, a minimum thickness of 8 mm or 10 mm is specified, it shall be noted that these thicknesses are based on the properties of the reference steel and a shell diameter of 1.80 m. When a metal other than mild steel (see 6.7.2.1) is used or the shell has a diameter of more than 1.80 m, the thickness shall be determined using the following formula:

$$e_1 = \frac{21.4e_0 d_1}{1.8 \sqrt[3]{Rm_1 \times A_1}}$$

where:

- $e_1$  = required equivalent thickness (in mm) of the metal to be used;
- $e_0$  = minimum thickness (in mm) of the reference steel specified in the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 or by a portable tank special provision indicated in Column (11) of Table A of Chapter 3.2 and described in 4.2.5.3;
- $d_1$  = diameter of the shell (in m), but not less than 1.80 m;
- $Rm_1$  = guaranteed minimum tensile strength (in  $N/mm^2$ ) of the metal to be used (see 6.7.2.3.3);
- $A_1$  = guaranteed minimum elongation at fracture (in %) of the metal to be used according to national or international standards.

6.7.2.4.8 In no case shall the wall thickness be less than that prescribed in 6.7.2.4.2, 6.7.2.4.3 and 6.7.2.4.4. All parts of the shell shall have a minimum thickness as determined by 6.7.2.4.2 to 6.7.2.4.4. This thickness shall be exclusive of any corrosion allowance.

6.7.2.4.9 When mild steel is used (see 6.7.2.1), calculation using the formula in 6.7.2.4.6 is not required.

6.7.2.4.10 There shall be no sudden change of plate thickness at the attachment of the ends (heads) to the cylindrical portion of the shell.

**6.7.2.5 Service equipment**

- 6.7.2.5.1 Service equipment shall be so arranged as to be protected against the risk of being wrenched off or damaged during handling and carriage. When the connection between the frame and the shell allows relative movement between the sub-assemblies, the equipment shall be so fastened as to permit such movement without risk of damage to working parts. The external discharge fittings (pipe sockets, shut-off devices), the internal stop-valve and its seating shall be protected against the danger of being wrenched off by external forces (for example using shear sections). The filling and discharge devices (including flanges or threaded plugs) and any protective caps shall be capable of being secured against unintended opening.
- 6.7.2.5.2 All openings in the shell, intended for filling or discharging the portable tank shall be fitted with a manually operated stop-valve located as close to the shell as reasonably practicable. Other openings, except for openings leading to venting or pressure-relief devices, shall be equipped with either a stop-valve or another suitable means of closure located as close to the shell as reasonably practicable.
- 6.7.2.5.3 All portable tanks shall be fitted with a manhole or other inspection openings of a suitable size to allow for internal inspection and adequate access for maintenance and repair of the interior. Compartmented portable tanks shall have a manhole or other inspection openings for each compartment.
- 6.7.2.5.4 As far as reasonably practicable, external fittings shall be grouped together. For insulated portable tanks, top fittings shall be surrounded by a spill collection reservoir with suitable drains.
- 6.7.2.5.5 Each connection to a portable tank shall be clearly marked to indicate its function.
- 6.7.2.5.6 Each stop-valve or other means of closure shall be designed and constructed to a rated pressure not less than the MAWP of the shell taking into account the temperatures expected during carriage. All stop-valves with screwed spindles shall close by a clockwise motion of the handwheel. For other stop-valves the position (open and closed) and direction of closure shall be clearly indicated. All stop-valves shall be designed to prevent unintentional opening.
- 6.7.2.5.7 No moving parts, such as covers, components of closures, etc., shall be made of unprotected corrodible steel when they are liable to come into frictional or percussive contact with aluminium portable tanks intended for the carriage of substances meeting the flash-point criteria of Class 3 including elevated temperature substances carried at or above their flash-point.
- 6.7.2.5.8 Piping shall be designed, constructed and installed so as to avoid the risk of damage due to thermal expansion and contraction, mechanical shock and vibration. All piping shall be of a suitable metallic material. Welded pipe joints shall be used wherever possible.
- 6.7.2.5.9 Joints in copper tubing shall be brazed or have an equally strong metal union. The melting point of brazing materials shall be no lower than 525 °C. The joints shall not decrease the strength of the tubing as may happen when cutting threads.
- 6.7.2.5.10 The burst pressure of all piping and pipe fittings shall be not less than the highest of four times the MAWP of the shell or four times the pressure to which it may be subjected in service by the action of a pump or other device (except pressure-relief devices).
- 6.7.2.5.11 Ductile metals shall be used in the construction of valves and accessories.

**6.7.2.6 Bottom openings**

6.7.2.6.1 Certain substances shall not be carried in portable tanks with bottom openings. When the applicable portable tank instruction identified in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6 indicates that bottom openings are prohibited there shall be no openings below the liquid level of the shell when it is filled to its maximum permissible filling limit. When an existing opening is closed it shall be accomplished by internally and externally welding one plate to the shell.

6.7.2.6.2 Bottom discharge outlets for portable tanks carrying certain solid, crystallizable or highly viscous substances shall be equipped with not less than two serially fitted and mutually independent shut-off devices. The design of the equipment shall be to the satisfaction of the competent authority or its authorized body and shall include:

- (a) An external stop-valve fitted as close to the shell as reasonably practicable; and
- (b) A liquid tight closure at the end of the discharge pipe, which may be a bolted blank flange or a screw cap.

6.7.2.6.3 Every bottom discharge outlet, except as provided in 6.7.2.6.2, shall be equipped with three serially fitted and mutually independent shut-off devices. The design of the equipment shall be to the satisfaction of the competent authority or its authorized body and include:

- (a) A self-closing internal stop-valve, that is a stop-valve within the shell or within a welded flange or its companion flange, such that:
  - (i) The control devices for the operation of the valve are designed so as to prevent any unintended opening through impact or other inadvertent act;
  - (ii) The valve may be operable from above or below;
  - (iii) If possible, the setting of the valve (open or closed) shall be capable of being verified from the ground;
  - (iv) Except for portable tanks having a capacity of not more than 1 000 litres, it shall be possible to close the valve from an accessible position of the portable tank that is remote from the valve itself; and
  - (v) The valve shall continue to be effective in the event of damage to the external device for controlling the operation of the valve;
- (b) An external stop-valve fitted as close to the shell as reasonably practicable; and
- (c) A liquid tight closure at the end of the discharge pipe, which may be a bolted blank flange or a screw cap.

6.7.2.6.4 For a lined shell, the internal stop-valve required by 6.7.2.6.3 (a) may be replaced by an additional external stop-valve. The manufacturer shall satisfy the requirements of the competent authority or its authorized body.

**6.7.2.7 Safety-relief devices**

6.7.2.7.1 All portable tanks shall be fitted with at least one pressure-relief device. All relief devices shall be designed, constructed and marked to the satisfaction of the competent authority or its authorized body.

### 6.7.2.8 *Pressure-relief devices*

6.7.2.8.1 Every portable tank with a capacity not less than 1 900 litres and every independent compartment of a portable tank with a similar capacity, shall be provided with one or more pressure-relief devices of the spring-loaded type and may in addition have a frangible disc or fusible element in parallel with the spring-loaded devices except when prohibited by reference to 6.7.2.8.3 in the applicable portable tank instruction in 4.2.5.2.6. The pressure-relief devices shall have sufficient capacity to prevent rupture of the shell due to over pressurization or vacuum resulting from filling, discharging, or from heating of the contents.

6.7.2.8.2 Pressure-relief devices shall be designed to prevent the entry of foreign matter, the leakage of liquid and the development of any dangerous excess pressure.

6.7.2.8.3 When required for certain substances by the applicable portable tank instruction indicated in Column (10) of Table A of Chapter 3.2 and described in 4.2.5.2.6, portable tanks shall have a pressure-relief device approved by the competent authority. Unless a portable tank in dedicated service is fitted with an approved relief device constructed of materials compatible with the substance carried, the relief device shall comprise a frangible disc preceding a spring-loaded pressure-relief device. When a frangible disc is inserted in series with the required pressure-relief device, the space between the frangible disc and the pressure-relief device shall be provided with a pressure gauge or suitable tell-tale indicator for the detection of disc rupture, pinholing, or leakage which could cause a malfunction of the pressure-relief system. The frangible disc shall rupture at a nominal pressure 10% above the start to discharge pressure of the relief device.

6.7.2.8.4 Every portable tank with a capacity less than 1 900 litres shall be fitted with a pressure-relief device which may be a frangible disc when this disc complies with the requirements of 6.7.2.11.1. When no spring-loaded pressure-relief device is used, the frangible disc shall be set to rupture at a nominal pressure equal to the test pressure.

6.7.2.8.5 When the shell is fitted for pressure discharge, the inlet line shall be provided with a suitable pressure-relief device set to operate at a pressure not higher than the MAWP of the shell, and a stop-valve shall be fitted as close to the shell as reasonably practicable.

### 6.7.2.9 *Setting of pressure-relief devices*

6.7.2.9.1 It shall be noted that the pressure-relief devices shall operate only in conditions of excessive rise in temperature, since the shell shall not be subject to undue fluctuations of pressure during normal conditions of carriage (see 6.7.2.12.2).

6.7.2.9.2 The required pressure-relief device shall be set to start-to-discharge at a nominal pressure of five-sixths of the test pressure for shells having a test pressure of not more than 4.5 bar and 110% of two-thirds of the test pressure for shells having a test pressure of more than 4.5 bar. After discharge the device shall close at a pressure not more than 10% below the pressure at which the discharge starts. The device shall remain closed at all lower pressures. This requirement does not prevent the use of vacuum-relief or combination pressure-relief and vacuum-relief devices.

### 6.7.2.10 *Fusible elements*

6.7.2.10.1 Fusible elements shall operate at a temperature between 110 °C and 149 °C on condition that the pressure in the shell at the fusing temperature will be not more than the test pressure. They shall be placed at the top of the shell with their inlets in the vapour space and in no case shall they be shielded from external heat. Fusible elements shall not be utilized on portable tanks with a test pressure which exceeds 2.65 bar. Fusible elements used on portable

tanks intended for the carriage of elevated temperature substances shall be designed to operate at a temperature higher than the maximum temperature that will be experienced during carriage and shall be to the satisfaction of the competent authority or its authorized body.

#### 6.7.2.11 *Frangible discs*

6.7.2.11.1 Except as specified in 6.7.2.8.3, frangible discs shall be set to rupture at a nominal pressure equal to the test pressure throughout the design temperature range. Particular attention shall be given to the requirements of 6.7.2.5.1 and 6.7.2.8.3 if frangible discs are used.

6.7.2.11.2 Frangible discs shall be appropriate for the vacuum pressures which may be produced in the portable tank.

#### 6.7.2.12 *Capacity of pressure-relief devices*

6.7.2.12.1 The spring-loaded pressure-relief device required by 6.7.2.8.1 shall have a minimum cross sectional flow area equivalent to an orifice of 31.75 mm diameter. Vacuum-relief devices, when used, shall have a cross sectional flow area not less than 284 mm<sup>2</sup>.

6.7.2.12.2 The combined delivery capacity of the relief devices in condition of complete fire engulfment of the portable tank shall be sufficient to limit the pressure in the shell to 20% above the start-to-discharge pressure of the pressure limiting device. Emergency pressure-relief devices may be used to achieve the full relief capacity prescribed. These devices may be fusible, spring loaded or frangible disc components, or a combination of spring-loaded and frangible disc devices. The total required capacity of the relief devices may be determined using the formula in 6.7.2.12.2.1 or the table in 6.7.2.12.2.3.

6.7.2.12.2.1 To determine the total required capacity of the relief devices, which shall be regarded as being the sum of the individual capacities of all the contributing devices, the following formula shall be used:

$$Q = 12.4 \frac{FA^{0.82}}{LC} \sqrt{\frac{ZT}{M}}$$

where:

Q = minimum required rate of discharge in cubic metres of air per second (m<sup>3</sup>/s) at standard conditions: 1 bar and 0 °C (273 K);

F = is a coefficient with the following value:

for uninsulated shells: F = 1;

for insulated shells: F = U(649 - t)/13.6 but in no case is less than 0.25

where:

U = thermal conductance of the insulation, in kW.m<sup>-2</sup>.K<sup>-1</sup>, at 38 °C;

t = actual temperature of the substance during filling (in °C); when this temperature is unknown, let t = 15 °C;

The value of F given above for insulated shells may be taken provided that the insulation is in accordance with 6.7.2.12.2.4;

- A = total external surface area of shell in  $m^2$ ;
- Z = the gas compressibility factor in the accumulating condition (when this factor is unknown, let Z = 1.0);
- T = absolute temperature in Kelvin ( $^{\circ}C + 273$ ) above the pressure-relief devices in the accumulating condition;
- L = the latent heat of vaporization of the liquid, in kJ/kg, in the accumulating condition;
- M = molecular mass of the discharged gas;
- C = a constant which is derived from one of the following formulae as a function of the ratio k of specific heats:

$$k = \frac{c_p}{c_v}$$

where:

$c_p$  is the specific heat at constant pressure; and  
 $c_v$  is the specific heat at constant volume.

When  $k > 1$ :

$$C = \sqrt{k \left( \frac{2}{k+1} \right)^{\frac{k+1}{k-1}}}$$

When  $k = 1$  or  $k$  is unknown:

$$C = \frac{1}{\sqrt{e}} = 0.607$$

where  $e$  is the mathematical constant 2.7183

C may also be taken from the following table:

k	C	k	C	k	C
1.00	0.607	1.26	0.660	1.52	0.704
1.02	0.611	1.28	0.664	1.54	0.707
1.04	0.615	1.30	0.667	1.56	0.710
1.06	0.620	1.32	0.671	1.58	0.713
1.08	0.624	1.34	0.674	1.60	0.716
1.10	0.628	1.36	0.678	1.62	0.719
1.12	0.633	1.38	0.681	1.64	0.722
1.14	0.637	1.40	0.685	1.66	0.725
1.16	0.641	1.42	0.688	1.68	0.728
1.18	0.645	1.44	0.691	1.70	0.731
1.20	0.649	1.46	0.695	2.00	0.770
1.22	0.652	1.48	0.698	2.20	0.793
1.24	0.656	1.50	0.701		

- 6.7.2.12.2.2 As an alternative to the formula above, shells designed for the carriage of liquids may have their relief devices sized in accordance with the table in 6.7.2.12.2.3. This table assumes an insulation value of  $F = 1$  and shall be adjusted accordingly when the shell is insulated. Other values used in determining this table are:

$$\begin{array}{rcl} M & = & 86.7 \\ L & = & 334.94 \text{ kJ/kg} \\ Z & = & 1 \end{array} \qquad \begin{array}{rcl} T & = & 394 \text{ K} \\ C & = & 0.607 \end{array}$$

- 6.7.2.12.2.3 Minimum required rate of discharge,  $Q$ , in cubic metres per air per second at 1 bar and 0 °C (273 K)

A Exposed area (square metres)	Q (Cubic metres of air per second)	A Exposed area (square metres)	Q (Cubic metres of air per second)
2	0.230	37.5	2.539
3	0.320	40	2.677
4	0.405	42.5	2.814
5	0.487	45	2.949
6	0.565	47.5	3.082
7	0.641	50	3.215
8	0.715	52.5	3.346
9	0.788	55	3.476
10	0.859	57.5	3.605
12	0.998	60	3.733
14	1.132	62.5	3.860
16	1.263	65	3.987
18	1.391	67.5	4.112
20	1.517	70	4.236
22.5	1.670	75	4.483
25	1.821	80	4.726
27.5	1.969	85	4.967
30	2.115	90	5.206
32.5	2.258	95	5.442
35	2.400	100	5.676

- 6.7.2.12.2.4 Insulation systems, used for the purpose of reducing venting capacity, shall be approved by the competent authority or its authorized body. In all cases, insulation systems approved for this purpose shall:

- (a) Remain effective at all temperatures up to 649 °C; and
- (b) Be jacketed with a material having a melting point of 700 °C or greater.

**6.7.2.13**      *Marking of pressure-relief devices*

6.7.2.13.1      Every pressure-relief device shall be clearly and permanently marked with the following particulars:

- (a)    The pressure (in bar or kPa) or temperature (in °C) at which it is set to discharge;
- (b)    The allowable tolerance at the discharge pressure for spring-loaded devices;
- (c)    The reference temperature corresponding to the rated pressure for frangible discs;
- (d)    The allowable temperature tolerance for fusible elements; and
- (e)    The rated flow capacity of the device in standard cubic metres of air per second (m<sup>3</sup>/s);

When practicable, the following information shall also be shown:

- (f)    The manufacturer's name and relevant catalogue number of the device.

6.7.2.13.2      The rated flow capacity marked on the pressure-relief devices shall be determined according to ISO 4126-1:1991.

**6.7.2.14**      *Connections to pressure-relief devices*

6.7.2.14.1      Connections to pressure-relief devices shall be of sufficient size to enable the required discharge to pass unrestricted to the safety device. No stop-valve shall be installed between the shell and the pressure-relief devices except where duplicate devices are provided for maintenance or other reasons and the stop-valves serving the devices actually in use are locked open or the stop-valves are interlocked so that at least one of the duplicate devices is always in use. There shall be no obstruction in an opening leading to a vent or pressure-relief device which might restrict or cut-off the flow from the shell to that device. Vents or pipes from the pressure-relief device outlets, when used, shall deliver the relieved vapour or liquid to the atmosphere in conditions of minimum back-pressure on the relieving devices.

**6.7.2.15**      *Siting of pressure-relief devices*

6.7.2.15.1      Each pressure-relief device inlet shall be situated on top of the shell in a position as near the longitudinal and transverse centre of the shell as reasonably practicable. All pressure-relief device inlets shall under maximum filling conditions be situated in the vapour space of the shell and the devices shall be so arranged as to ensure the escaping vapour is discharged unrestrictedly. For flammable substances, the escaping vapour shall be directed away from the shell in such a manner that it cannot impinge upon the shell. Protective devices which deflect the flow of vapour are permissible provided the required relief-device capacity is not reduced.

6.7.2.15.2      Arrangements shall be made to prevent access to the pressure-relief devices by unauthorized persons and to protect the devices from damage caused by the portable tank overturning.

**6.7.2.16**      *Gauging devices*

6.7.2.16.1      Glass level-gauges and gauges made of other fragile material, which are in direct communication with the contents of the tank shall not be used.

**6.7.2.17** *Portable tank supports, frameworks, lifting and tie-down attachments*

6.7.2.17.1 Portable tanks shall be designed and constructed with a support structure to provide a secure base during carriage. The forces specified in 6.7.2.2.12 and the safety factor specified in 6.7.2.2.13 shall be considered in this aspect of the design. Skids, frameworks, cradles or other similar structures are acceptable.

6.7.2.17.2 The combined stresses caused by portable tank mountings (e.g. cradles, framework, etc.) and portable tank lifting and tie-down attachments shall not cause excessive stress in any portion of the shell. Permanent lifting and tie-down attachments shall be fitted to all portable tanks. Preferably they shall be fitted to the portable tank supports but may be secured to reinforcing plates located on the shell at the points of support.

6.7.2.17.3 In the design of supports and frameworks the effects of environmental corrosion shall be taken into account.

6.7.2.17.4 Forklift pockets shall be capable of being closed off. The means of closing forklift pockets shall be a permanent part of the framework or permanently attached to the framework. Single compartment portable tanks with a length less than 3.65 m need not have closed off forklift pockets provided that:

- (a) The shell including all the fittings are well protected from being hit by the forklift blades; and
- (b) The distance between the centres of the forklift pockets is at least half of the maximum length of the portable tank.

6.7.2.17.5 When portable tanks are not protected during carriage, according to 4.2.1.2, the shells and service equipment shall be protected against damage to the shell and service equipment resulting from lateral or longitudinal impact or overturning. External fittings shall be protected so as to preclude the release of the shell contents upon impact or overturning of the portable tank on its fittings. Examples of protection include:

- (a) Protection against lateral impact which may consist of longitudinal bars protecting the shell on both sides at the level of the median line;
- (b) Protection of the portable tank against overturning which may consist of reinforcement rings or bars fixed across the frame;
- (c) Protection against rear impact which may consist of a bumper or frame;
- (d) Protection of the shell against damage from impact or overturning by use of an ISO frame in accordance with ISO 1496-3:1995.

**6.7.2.18** *Design approval*

6.7.2.18.1 The competent authority or its authorized body shall issue a design approval certificate for any new design of a portable tank. This certificate shall attest that a portable tank has been surveyed by that authority, is suitable for its intended purpose and meets the requirements of this Chapter and where appropriate, the provisions for substances provided in Chapter 4.2 and in Table A of Chapter 3.2. When a series of portable tanks are manufactured without change in the design, the certificate shall be valid for the entire series. The certificate shall refer to the prototype test report, the substances or group of substances allowed to be carried, the materials of construction of the shell and lining (when applicable) and an approval number. The approval number shall consist of the distinguishing sign or mark of the State in whose territory the approval was granted, i.e. the distinguishing sign for use in international

traffic as prescribed by the Convention on Road Traffic, Vienna 1968, and a registration number. Any alternative arrangements according to 6.7.1.2 shall be indicated on the certificate. A design approval may serve for the approval of smaller portable tanks made of materials of the same kind and thickness, by the same fabrication techniques and with identical supports, equivalent closures and other appurtenances.

6.7.2.18.2 The prototype test report for the design approval shall include at least the following:

- (a) The results of the applicable framework test specified in ISO 1496-3:1995;
- (b) The results of the initial inspection and test according to 6.7.2.19.3; and
- (c) The results of the impact test in 6.7.2.19.1, when applicable.

**6.7.2.19** *Inspection and testing*

6.7.2.19.1 For portable tanks meeting the definition of container in the CSC, a prototype representing each design shall be subjected to an impact test. The prototype portable tank shall be shown to be capable of absorbing the forces resulting from an impact not less than 4 times (4 g) the MPGM of the fully loaded portable tank at a duration typical of the mechanical shocks experienced in rail transport. The following is a listing of standards describing methods acceptable for performing the impact test:

Association of American Railroads,  
Manual of Standards and Recommended Practices,  
Specifications for Acceptability of Tank Containers (AAR.600), 1992

Canadian Standards Association (CSA),  
Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods (B620-1987)

Deutsche Bahn AG  
Zentralbereich Technik, Minden  
Portable tanks, longitudinal dynamic impact test

Société Nationale des Chemins de Fer Français  
C.N.E.S.T. 002-1966.  
Tank containers, longitudinal external stresses and dynamic impact tests

Spoornet, South Africa  
Engineering Development Centre (EDC)  
Testing of ISO Tank Containers  
Method EDC/TES/023/000/1991-06

6.7.2.19.2 The shell and items of equipment of each portable tank shall be inspected and tested before being put into service for the first time (initial inspection and test) and thereafter at not more than five-year intervals (5 year periodic inspection and test) with an intermediate periodic inspection and test (2.5 year periodic inspection and test) midway between the 5 year periodic inspections and tests. The 2.5 year inspection and test may be performed within 3 months of the specified date. An exceptional inspection and test shall be performed regardless of the date of the last periodic inspection and test when necessary according to 6.7.2.19.7.

6.7.2.19.3 The initial inspection and test of a portable tank shall include a check of the design characteristics, an internal and external examination of the portable tank and its fittings with due regard to the substances to be carried, and a pressure test. Before the portable tank is placed into service, a leakproofness test and a check of the satisfactory operation of all

service equipment shall also be performed. When the shell and its fittings have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.

- 6.7.2.19.4 The 5-year periodic inspection and test shall include an internal and external examination and, as a general rule, a hydraulic pressure test. Sheathing, thermal insulation and the like shall be removed only to the extent required for reliable appraisal of the condition of the portable tank. When the shell and equipment have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.
- 6.7.2.19.5 The intermediate 2.5 year periodic inspection and test shall at least include an internal and external examination of the portable tank and its fittings with due regard to the substances intended to be carried, a leakproofness test and a check of the satisfactory operation of all service equipment. Sheathing, thermal insulation and the like shall be removed only to the extent required for reliable appraisal of the condition of the portable tank. For portable tanks intended for the carriage of a single substance, the 2.5 year internal examination may be waived or substituted by other test methods or inspection procedures specified by the competent authority or its authorized body.
- 6.7.2.19.6 A portable tank may not be filled and offered for carriage after the date of expiry of the last 5 year or 2.5 year periodic inspection and test as required by 6.7.2.19.2. However, a portable tank filled prior to the date of expiry of the last periodic inspection and test may be carried for a period not to exceed three months beyond the date of expiry of the last periodic test or inspection. In addition, a portable tank may be carried after the date of expiry of the last periodic test and inspection:
- (a) After emptying but before cleaning, for purposes of performing the next required test or inspection prior to refilling; and
  - (b) Unless otherwise approved by the competent authority, for a period not to exceed six months beyond the date of expiry of the last periodic test or inspection, in order to allow the return of dangerous goods for proper disposal or recycling. Reference to this exemption shall be mentioned in the transport document.
- 6.7.2.19.7 The exceptional inspection and test is necessary when the portable tank shows evidence of damaged or corroded areas, or leakage, or other conditions that indicate a deficiency that could affect the integrity of the portable tank. The extent of the exceptional inspection and test shall depend on the amount of damage or deterioration of the portable tank. It shall include at least the 2.5 year inspection and test according to 6.7.2.19.5.
- 6.7.2.19.8 The internal and external examinations shall ensure that:
- (a) The shell is inspected for pitting, corrosion, or abrasions, dents, distortions, defects in welds or any other conditions, including leakage, that might render the portable tank unsafe for carriage;
  - (b) The piping, valves, heating/cooling system, and gaskets are inspected for corroded areas, defects, or any other conditions, including leakage, that might render the portable tank unsafe for filling, discharge or carriage;
  - (c) Devices for tightening manhole covers are operative and there is no leakage at manhole covers or gaskets;
  - (d) Missing or loose bolts or nuts on any flanged connection or blank flange are replaced or tightened;

- (e) All emergency devices and valves are free from corrosion, distortion and any damage or defect that could prevent their normal operation. Remote closure devices and self-closing stop-valves shall be operated to demonstrate proper operation;
- (f) Linings, if any, are inspected in accordance with criteria outlined by the lining manufacturer;
- (g) Required markings on the portable tank are legible and in accordance with the applicable requirements; and
- (h) The framework, supports and arrangements for lifting the portable tank are in a satisfactory condition.

6.7.2.19.9 The inspections and tests in 6.7.2.19.1, 6.7.2.19.3, 6.7.2.19.4, 6.7.2.19.5 and 6.7.2.19.7 shall be performed or witnessed by an expert approved by the competent authority or its authorized body. When the pressure test is a part of the inspection and test, the test pressure shall be the one indicated on the data plate of the portable tank. While under pressure, the portable tank shall be inspected for any leaks in the shell, piping or equipment.

6.7.2.19.10 In all cases when cutting, burning or welding operations on the shell have been effected, that work shall be to the approval of the competent authority or its authorized body taking into account the pressure vessel code used for the construction of the shell. A pressure test to the original test pressure shall be performed after the work is completed.

6.7.2.19.11 When evidence of any unsafe condition is discovered, the portable tank shall not be returned to service until it has been corrected and the test is repeated and passed.

#### 6.7.2.20 *Marking*

6.7.2.20.1 Every portable tank shall be fitted with a corrosion resistant metal plate permanently attached to the portable tank in a conspicuous place readily accessible for inspection. When for reasons of portable tank arrangements the plate cannot be permanently attached to the shell, the shell shall be marked with at least the information required by the pressure vessel code. As a minimum at least the following information shall be marked on the plate by stamping or by any other similar method.

Country of manufacture			
U	Approval	Approval	For Alternative Arrangements (see 6.7.1.2)
N	country	number	"AA"
Manufacturer's name or mark			
Manufacturer's serial number			
Authorized body for the design approval			
Owner's registration number			
Year of manufacture

Test pressure _____ bar/kPa (gauge pressure) <sup>2</sup>			
MAWP _____ bar/kPa (gauge pressure) <sup>2</sup>			
External design pressure <sup>3</sup> _____ bar/kPa (gauge pressure) <sup>2</sup>			
Design temperature range _____ °C to _____ °C			
Water capacity at 20 °C _____ litres			
Water capacity of each compartment at 20 °C _____ litres			
Initial pressure test date and witness identification			

<sup>2</sup> The unit used shall be marked.

<sup>3</sup> See 6.7.2.2.10.

MAWP for heating/cooling system \_\_\_\_\_ bar/kPa (gauge pressure) <sup>2</sup>  
 Shell material(s) and material standard reference(s)  
 Equivalent thickness in reference steel \_\_\_\_\_ mm  
 Lining material (when applicable)  
 Date and type of most recent periodic test(s)  
 Month \_\_\_\_\_ Year \_\_\_\_\_ Test pressure \_\_\_\_\_ bar/kPa (gauge pressure) <sup>2</sup>  
 Stamp of expert who performed or witnessed the most recent test

6.7.2.20.2 The following particulars shall be marked either on the portable tank itself or on a metal plate firmly secured to the portable tank:

Name of the operator  
 Name of substance(s) being carried and maximum mean bulk temperature when higher than 50 °C  
 Maximum permissible gross mass (MPGM) \_\_\_\_\_ kg  
 Unladen (tare) mass \_\_\_\_\_ kg

*NOTE: For the identification of the substances being carried, see also Part 5.*

6.7.2.20.3 If a portable tank is designed and approved for handling in open seas, the words "OFFSHORE PORTABLE TANK" shall be marked on the identification plate.

6.7.3 **Requirements for the design, construction, inspection and testing of portable tanks intended for the carriage of non-refrigerated liquefied gases**

#### 6.7.3.1 *Definitions*

For the purposes of this section:

*Alternative arrangement* means an approval granted by the competent authority for a portable tank or MEGC that has been designed, constructed or tested to technical requirements or testing methods other than those specified in this Chapter;

*Portable tank* means a multimodal tank having a capacity of more than 450 litres used for the carriage of non-refrigerated liquefied gases of Class 2. The portable tank includes a shell fitted with service equipment and structural equipment necessary for the carriage of gases. The portable tank shall be capable of being filled and discharged without the removal of its structural equipment. It shall possess stabilizing members external to the shell, and shall be capable of being lifted when full. It shall be designed primarily to be loaded onto a transport vehicle or ship and shall be equipped with skids, mountings or accessories to facilitate mechanical handling. Tank-vehicles, tank-wagons, non-metallic tanks, intermediate bulk containers (IBCs), gas cylinders and large receptacles are not considered to fall within the definition for portable tanks;

*Shell* means the part of the portable tank which retains the non-refrigerated liquefied gas intended for carriage (tank proper), including openings and their closures, but does not include service equipment or external structural equipment;

*Service equipment* means measuring instruments and filling, discharge, venting, safety and insulating devices;

*Structural equipment* means the reinforcing, fastening, protective and stabilizing members external to the shell;

<sup>2</sup> *The unit used shall be marked.*

*Maximum allowable working pressure (MAWP)* means a pressure that shall be not less than the highest of the following pressures measured at the top of the shell while in operating position, but in no case less than 7 bar:

- (a) The maximum effective gauge pressure allowed in the shell during filling or discharge; or
- (b) The maximum effective gauge pressure to which the shell is designed, which shall be:
  - (i) for a non-refrigerated liquefied gas listed in the portable tank instruction T50 in 4.2.5.2.6, the MAWP (in bar) given in T50 portable tank instruction for that gas;
  - (ii) for other non-refrigerated liquefied gases, not less than the sum of:
    - the absolute vapour pressure (in bar) of the non-refrigerated liquefied gas at the design reference temperature minus 1 bar; and
    - the partial pressure (in bar) of air or other gases in the ullage space being determined by the design reference temperature and the liquid phase expansion due to an increase of the mean bulk temperature of  $t_r$  -  $t_r$  ( $t_r$  = filling temperature, usually 15 °C,  $t_r$  = maximum mean bulk temperature, 50 °C);

*Design pressure* means the pressure to be used in calculations required by a recognized pressure vessel code. The design pressure shall be not less than the highest of the following pressures:

- (a) The maximum effective gauge pressure allowed in the shell during filling or discharge; or
- (b) The sum of:
  - (i) the maximum effective gauge pressure to which the shell is designed as defined in (b) of the MAWP definition (see above); and
  - (ii) a head pressure determined on the basis of the dynamic forces specified in 6.7.3.2.9, but not less than 0.35 bar;

*Test pressure* means the maximum gauge pressure at the top of the shell during the pressure test;

*Leakproofness test* means a test using gas subjecting the shell and its service equipment to an effective internal pressure of not less than 25% of the MAWP;

*Maximum permissible gross mass (MPGM)* means the sum of the tare mass of the portable tank and the heaviest load authorized for carriage;

*Reference steel* means a steel with a tensile strength of 370 N/mm<sup>2</sup> and an elongation at fracture of 27%;

*Mild steel* means a steel with a guaranteed minimum tensile strength of 360 N/mm<sup>2</sup> to 440 N/mm<sup>2</sup> and a guaranteed minimum elongation at fracture conforming to 6.7.3.3.3;

*Design temperature range* for the shell shall be  $-40\text{ }^{\circ}\text{C}$  to  $50\text{ }^{\circ}\text{C}$  for non-refrigerated liquefied gases carried under ambient conditions. More severe design temperatures shall be considered for portable tanks subjected to severe climatic conditions;

*Design reference temperature* means the temperature at which the vapour pressure of the contents is determined for the purpose of calculating the MAWP. The design reference temperature shall be less than the critical temperature of the non-refrigerated liquefied gas intended to be carried to ensure that the gas at all times is liquefied. This value for each portable tank type is as follows:

- (a) Shell with a diameter of 1.5 metres or less:  $65\text{ }^{\circ}\text{C}$ ;
- (b) Shell with a diameter of more than 1.5 metres:
  - (i) without insulation or sun shield:  $60\text{ }^{\circ}\text{C}$ ;
  - (ii) with sun shield (see 6.7.3.2.12):  $55\text{ }^{\circ}\text{C}$ ; and
  - (iii) with insulation (see 6.7.3.2.12) :  $50\text{ }^{\circ}\text{C}$ ;

*Filling density* means the average mass of non-refrigerated liquefied gas per litre of shell capacity (kg/l). The filling density is given in portable tank instruction T50 in 4.2.5.2.6.

### 6.7.3.2 *General design and construction requirements*

6.7.3.2.1 Shells shall be designed and constructed in accordance with the requirements of a pressure vessel code recognized by the competent authority. Shells shall be made of steel suitable for forming. The materials shall in principle conform to national or international material standards. For welded shells, only a material whose weldability has been fully demonstrated shall be used. Welds shall be skilfully made and afford complete safety. When the manufacturing process or the materials make it necessary, the shells shall be suitability heat-treated to guarantee adequate toughness in the weld and in the heat affected zones. In choosing the material the design temperature range shall be taken into account with respect to risk of brittle fracture, to stress corrosion cracking and to resistance to impact. When fine grain steel is used, the guaranteed value of the yield strength shall be not more than  $460\text{ N/mm}^2$  and the guaranteed value of the upper limit of the tensile strength shall be not more than  $725\text{ N/mm}^2$  according to the material specification. Portable tank materials shall be suitable for the external environment in which they may be carried.

6.7.3.2.2 Portable tank shells, fittings and pipework shall be constructed of materials which are:

- (a) Substantially immune to attack by the non-refrigerated liquefied gas(es) intended to be carried; or
- (b) Properly passivated or neutralized by chemical reaction.

6.7.3.2.3 Gaskets shall be made of materials compatible with the non-refrigerated liquefied gas(es) intended to be carried.

6.7.3.2.4 Contact between dissimilar metals which could result in damage by galvanic action shall be avoided.

6.7.3.2.5 The materials of the portable tank, including any devices, gaskets, and accessories, shall not adversely affect the non-refrigerated liquefied gas(es) intended for carriage in the portable tank.

- 6.7.3.2.6 Portable tanks shall be designed and constructed with supports to provide a secure base during carriage and with suitable lifting and tie-down attachments.
- 6.7.3.2.7 Portable tanks shall be designed to withstand, without loss of contents, at least the internal pressure due to the contents, and the static, dynamic and thermal loads during normal conditions of handling and carriage. The design shall demonstrate that the effects of fatigue, caused by repeated application of these loads through the expected life of the portable tank, have been taken into account.
- 6.7.3.2.8 Shells shall be designed to withstand an external pressure of at least 0.4 bar (gauge pressure) above the internal pressure without permanent deformation. When the shell is to be subjected to a significant vacuum before filling or during discharge it shall be designed to withstand an external pressure of at least 0.9 bar (gauge pressure) above the internal pressure and shall be proven at that pressure.
- 6.7.3.2.9 Portable tanks and their fastenings shall, under the maximum permissible load, be capable of absorbing the following separately applied static forces:
- (a) In the direction of travel: twice the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>4</sup>;
  - (b) Horizontally at right angles to the direction of travel: the MPGM (when the direction of travel is not clearly determined, the forces shall be equal to twice the MPGM) multiplied by the acceleration due to gravity ( $g$ )<sup>4</sup>;
  - (c) Vertically upwards: the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>4</sup>; and
  - (d) Vertically downwards: twice the MPGM (total loading including the effect of gravity) multiplied by the acceleration due to gravity ( $g$ )<sup>4</sup>.
- 6.7.3.2.10 Under each of the forces in 6.7.3.2.9, the safety factor to be observed shall be as follows:
- (a) For steels having a clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed yield strength; or
  - (b) For steels with no clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed 0.2% proof strength and, for austenitic steels, the 1% proof strength.
- 6.7.3.2.11 The values of yield strength or proof strength shall be the values according to national or international material standards. When austenitic steels are used, the specified minimum values of yield strength and proof strength according to the material standards may be increased by up to 15% when these greater values are attested in the material inspection certificate. When no material standard exists for the steel in question, the value of yield strength or proof strength used shall be approved by the competent authority.
- 6.7.3.2.12 When the shells intended for the carriage of non-refrigerated liquefied gases are equipped with thermal insulation, the thermal insulation systems shall satisfy the following requirements:
- (a) It shall consist of a shield covering not less than the upper third but not more than the upper half of the surface of the shell and separated from the shell by an air space about 40 mm across;

<sup>4</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

- (b) It shall consist of a complete cladding of adequate thickness of insulating materials protected so as to prevent the ingress of moisture and damage under normal conditions of carriage and so as to provide a thermal conductance of not more than  $0.67 \text{ (W.m}^{-2}.\text{K}^{-1}\text{)}$ ;
- (c) When the protective covering is so closed as to be gas-tight, a device shall be provided to prevent any dangerous pressure from developing in the insulating layer in the event of inadequate gas tightness of the shell or of its items of equipment; and
- (d) The thermal insulation shall not inhibit access to the fittings and discharge devices.

6.7.3.2.13 Portable tanks intended for the carriage of flammable non-refrigerated liquefied gases shall be capable of being electrically earthed.

### 6.7.3.3 *Design criteria*

6.7.3.3.1 Shells shall be of a circular cross-section.

6.7.3.3.2 Shells shall be designed and constructed to withstand a test pressure not less than 1.3 times the design pressure. The shell design shall take into account the minimum MAWP values provided in portable tank instruction T50 in 4.2.5.2.6 for each non-refrigerated liquefied gas intended for carriage. Attention is drawn to the minimum shell thickness requirements for these shells specified in 6.7.3.4.

6.7.3.3.3 For steels exhibiting a clearly defined yield point or characterized by a guaranteed proof strength (0.2% proof strength, generally, or 1% proof strength for austenitic steels) the primary membrane stress  $\sigma$  (sigma) in the shell shall not exceed  $0.75 \text{ Re}$  or  $0.50 \text{ Rm}$ , whichever is lower, at the test pressure, where:

$\text{Re} =$  yield strength in  $\text{N/mm}^2$ , or 0.2% proof strength or, for austenitic steels, 1% proof stress;

$\text{Rm} =$  minimum tensile strength in  $\text{N/mm}^2$ .

6.7.3.3.3.1 The values of  $\text{Re}$  and  $\text{Rm}$  to be used shall be the specified minimum values according to national or international material standards. When austenitic steels are used, the specified minimum values for  $\text{Re}$  and  $\text{Rm}$  according to the material standards may be increased by up to 15% when these greater values are attested in the material inspection certificate. When no material standard exists for the steel in question, the values of  $\text{Re}$  and  $\text{Rm}$  used shall be approved by the competent authority or its authorized body.

6.7.3.3.3.2 Steels which have a  $\text{Re/Rm}$  ratio of more than 0.85 are not allowed for the construction of welded shells. The values of  $\text{Re}$  and  $\text{Rm}$  to be used in determining this ratio shall be the values specified in the material inspection certificate.

6.7.3.3.3.3 Steels used in the construction of shells shall have an elongation at fracture, in %, of not less than  $10\,000/\text{Rm}$  with an absolute minimum of 16% for fine grain steels and 20% for other steels.

6.7.3.3.3.4 For the purpose of determining actual values for materials, it shall be noted that for sheet metal, the axis of the tensile test specimen shall be at right angles (transversely) to the direction of rolling. The permanent elongation at fracture shall be measured on test specimens of rectangular cross sections in accordance with ISO 6892:1998 using a 50 mm gauge length.

#### 6.7.3.4 *Minimum shell thickness*

6.7.3.4.1 The minimum shell thickness shall be the greater thickness based on:

- (a) The minimum thickness determined in accordance with the requirements in 6.7.3.4; and
- (b) The minimum thickness determined in accordance with the recognized pressure vessel code including the requirements in 6.7.3.3.

6.7.3.4.2 The cylindrical portions, ends (heads) and manhole covers of shells of not more than 1.80 m in diameter shall be not less than 5 mm thick in the reference steel or of equivalent thickness in the steel to be used. Shells of more than 1.80 m in diameter shall be not less than 6 mm thick in the reference steel or of equivalent thickness in the steel to be used.

6.7.3.4.3 The cylindrical portions, ends (heads) and manhole covers of all shells shall be not less than 4 mm thick regardless of the material of construction.

6.7.3.4.4 The equivalent thickness of a steel other than the thickness prescribed for the reference steel in 6.7.3.4.2 shall be determined using the following formula:

$$e_1 = \frac{21,4e_0}{\sqrt[3]{Rm_1 \times A_1}}$$

where:

- $e_1$  = required equivalent thickness (in mm) of the steel to be used;
- $e_0$  = minimum thickness (in mm) for the reference steel specified in 6.7.3.4.2;
- $Rm_1$  = guaranteed minimum tensile strength (in N/mm<sup>2</sup>) of the steel to be used (see 6.7.3.3.3);
- $A_1$  = guaranteed minimum elongation at fracture (in %) of the steel to be used according to national or international standards.

6.7.3.4.5 In no case shall the wall thickness be less than that prescribed in 6.7.3.4.1 to 6.7.3.4.3. All parts of the shell shall have a minimum thickness as determined by 6.7.3.4.1 to 6.7.3.4.3. This thickness shall be exclusive of any corrosion allowance.

6.7.3.4.6 When mild steel is used (see 6.7.3.1), calculation using the formula in 6.7.3.4.4 is not required.

6.7.3.4.7 There shall be no sudden change of plate thickness at the attachment of the ends (heads) to the cylindrical portion of the shell.

#### 6.7.3.5 *Service equipment*

6.7.3.5.1 Service equipment shall be so arranged as to be protected against the risk of being wrenched off or damaged during handling and carriage. When the connection between the frame and the shell allows relative movement between the sub-assemblies, the equipment shall be so fastened as to permit such movement without risk of damage to working parts. The external discharge fittings (pipe sockets, shut-off devices), the internal stop-valve and its seating shall be protected against the danger of being wrenched off by external forces (for example using shear sections). The filling and discharge devices (including flanges or threaded plugs) and any protective caps shall be capable of being secured against unintended opening.

- 6.7.3.5.2 All openings with a diameter of more than 1.5 mm in shells of portable tanks, except openings for pressure-relief devices, inspection openings and closed bleed holes, shall be fitted with at least three mutually independent shut-off devices in series, the first being an internal stop-valve, excess flow valve or equivalent device, the second being an external stop-valve and the third being a blank flange or equivalent device.
- 6.7.3.5.2.1 When a portable tank is fitted with an excess flow valve, the excess flow valve shall be so fitted that its seating is inside the shell or inside a welded flange or, when fitted externally, its mountings shall be designed so that in the event of impact its effectiveness shall be maintained. The excess flow valves shall be selected and fitted so as to close automatically when the rated flow specified by the manufacturer is reached. Connections and accessories leading to or from such a valve shall have a capacity for a flow more than the rated flow of the excess flow valve.
- 6.7.3.5.3 For filling and discharge openings, the first shut-off device shall be an internal stop-valve and the second shall be a stop-valve placed in an accessible position on each discharge and filling pipe.
- 6.7.3.5.4 For filling and discharge bottom openings of portable tanks intended for the carriage of flammable and/or toxic non-refrigerated liquefied gases the internal stop-valve shall be a quick closing safety device which closes automatically in the event of unintended movement of the portable tank during filling or discharge or fire engulfment. Except for portable tanks having a capacity of not more than 1 000 litres, it shall be possible to operate this device by remote control.
- 6.7.3.5.5 In addition to filling, discharge and gas pressure equalizing orifices, shells may have openings in which gauges, thermometers and manometers can be fitted. Connections for such instruments shall be made by suitable welded nozzles or pockets and not be screwed connections through the shell.
- 6.7.3.5.6 All portable tanks shall be fitted with manholes or other inspection openings of suitable size to allow for internal inspection and adequate access for maintenance and repair of the interior.
- 6.7.3.5.7 External fittings shall be grouped together so far as reasonably practicable.
- 6.7.3.5.8 Each connection on a portable tank shall be clearly marked to indicate its function.
- 6.7.3.5.9 Each stop-valve or other means of closure shall be designed and constructed to a rated pressure not less than the MAWP of the shell taking into account the temperatures expected during carriage. All stop-valves with a screwed spindle shall close by a clockwise motion of the handwheel. For other stop-valves the position (open and closed) and direction of closure shall be clearly indicated. All stop-valves shall be designed to prevent unintentional opening.
- 6.7.3.5.10 Piping shall be designed, constructed and installed so as to avoid the risk of damage due to thermal expansion and contraction, mechanical shock and vibration. All piping shall be of suitable metallic material. Welded pipe joints shall be used wherever possible.
- 6.7.3.5.11 Joints in copper tubing shall be brazed or have an equally strong metal union. The melting point of brazing materials shall be no lower than 525 °C. The joints shall not decrease the strength of tubing as may happen when cutting threads.
- 6.7.3.5.12 The burst pressure of all piping and pipe fittings shall be not less than the highest of four times the MAWP of the shell or four times the pressure to which it may be subjected in service by the action of a pump or other device (except pressure-relief devices).

6.7.3.5.13 Ductile metals shall be used in the construction of valves and accessories.

**6.7.3.6 Bottom openings**

6.7.3.6.1 Certain non-refrigerated liquefied gases shall not be carried in portable tanks with bottom openings when portable tank instruction T50 in 4.2.5.2.6 indicates that bottom openings are not allowed. There shall be no openings below the liquid level of the shell when it is filled to its maximum permissible filling limit.

**6.7.3.7 Pressure-relief devices**

6.7.3.7.1 Portable tanks shall be provided with one or more spring-loaded pressure-relief devices. The pressure-relief devices shall open automatically at a pressure not less than the MAWP and be fully open at a pressure equal to 110% of the MAWP. These devices shall, after discharge, close at a pressure not lower than 10% below the pressure at which discharge starts and shall remain closed at all lower pressures. The pressure-relief devices shall be of a type that will resist dynamic forces including liquid surge. Frangible discs not in series with a spring-loaded pressure-relief device are not permitted.

6.7.3.7.2 Pressure-relief devices shall be designed to prevent the entry of foreign matter, the leakage of gas and the development of any dangerous excess pressure.

6.7.3.7.3 Portable tanks intended for the carriage of certain non-refrigerated liquefied gases identified in portable tank instruction T50 in 4.2.5.2.6 shall have a pressure-relief device approved by the competent authority. Unless a portable tank in dedicated service is fitted with an approved relief device constructed of materials compatible with the load, such device shall comprise a frangible disc preceding a spring-loaded device. The space between the frangible disc and the device shall be provided with a pressure gauge or a suitable tell-tale indicator. This arrangement permits the detection of disc rupture, pinholing or leakage which could cause a malfunction of the pressure-relief device. The frangible discs shall rupture at a nominal pressure 10% above the start-to-discharge pressure of the relief device.

6.7.3.7.4 In the case of multi-purpose portable tanks, the pressure-relief devices shall open at a pressure indicated in 6.7.3.7.1 for the gas having the highest maximum allowable pressure of the gases allowed to be carried in the portable tank.

**6.7.3.8 Capacity of relief devices**

6.7.3.8.1 The combined delivery capacity of the relief devices shall be sufficient that, in the event of total fire engulfment, the pressure (including accumulation) inside the shell does not exceed 120% of the MAWP. Spring-loaded relief devices shall be used to achieve the full relief capacity prescribed. In the case of multi-purpose tanks, the combined delivery capacity of the pressure-relief devices shall be taken for the gas which requires the highest delivery capacity of the gases allowed to be carried in portable tanks.

6.7.3.8.1.1 To determine the total required capacity of the relief devices, which shall be regarded as being the sum of the individual capacities of the several devices, the following formulae<sup>1</sup> shall be used:

<sup>5</sup> This formula applies only to non-refrigerated liquefied gases which have critical temperatures well above the temperature at the accumulating condition. For gases which have critical temperatures near or below the temperature at the accumulating condition, the calculation of the pressure-relief device delivery capacity shall consider further thermodynamic properties of the gas (see for example CGA S-1.2-1995).

$$Q = 12.4 \frac{FA^{0.82}}{LC} \sqrt{\frac{ZT}{M}}$$

where:

Q = minimum required rate of discharge in cubic metres of air per second ( $m^3/s$ ) at standard conditions: 1 bar and 0 °C (273 K);

F = is a coefficient with the following value:

for uninsulated shells:  $F = 1$ ;

for insulated shells:  $F = U(649-t)/13.6$  but in no case is less than 0.25

where:

U = thermal conductance of the insulation, in  $Kw.m^{-2}.K^{-1}$ , at 38 °C;

t = actual temperature of the non-refrigerated liquefied gas during filling (°C); when this temperature is unknown, let  $t=15$  °C;

The value of F given above for insulated shells may be taken provided that the insulation is in accordance with 6.7.3.8.1.2;

where:

A = total external surface area of shell in square metres;

Z = the gas compressibility factor in the accumulating condition (when this factor is unknown, let  $Z=1.0$ );

T = absolute temperature in Kelvin ( $^{\circ}C + 273$ ) above the pressure relief devices in the accumulating condition;

L = the latent heat of vaporization of the liquid, in kJ/kg, in the accumulating condition;

M = molecular mass of the discharged gas;

C = a constant which is derived from one of the following formulae as a function of the ratio k of specific heats

$$k = \frac{c_p}{c_v}$$

where

$c_p$  is the specific heat at constant pressure; and

$c_v$  is the specific heat at constant volume.

when  $k > 1$ :

$$C = \sqrt{k \left( \frac{2}{k+1} \right)^{\frac{k+1}{k-1}}}$$

when  $k = 1$  or  $k$  is unknown:

$$C = \frac{1}{\sqrt{e}} = 0.607$$

where  $e$  is the mathematical constant 2.7183

$C$  may also be taken from the following table:

k	C	k	C	k	C
1.00	0.607	1.26	0.660	1.52	0.704
1.02	0.611	1.28	0.664	1.54	0.707
1.04	0.615	1.30	0.667	1.56	0.710
1.06	0.620	1.32	0.671	1.58	0.713
1.08	0.624	1.34	0.674	1.60	0.716
1.10	0.628	1.36	0.678	1.62	0.719
1.12	0.633	1.38	0.681	1.64	0.722
1.14	0.637	1.40	0.685	1.66	0.725
1.16	0.641	1.42	0.688	1.68	0.728
1.18	0.645	1.44	0.691	1.70	0.731
1.20	0.649	1.46	0.695	2.00	0.770
1.22	0.652	1.48	0.698	2.20	0.793
1.24	0.656	1.50	0.701		

6.7.3.8.1.2 Insulation systems, used for the purpose of reducing the venting capacity, shall be approved by the competent authority or its authorized body. In all cases, insulation systems approved for this purpose shall:

- (a) Remain effective at all temperatures up to 649 °C; and
- (b) Be jacketed with a material having a melting point of 700 °C or greater.

### 6.7.3.9 *Marking of pressure-relief devices*

6.7.3.9.1 Every pressure-relief device shall be plainly and permanently marked with the following particulars:

- (a) The pressure (in bar or kPa) at which it is set to discharge;
- (b) The allowable tolerance at the discharge pressure for spring-loaded devices;
- (c) The reference temperature corresponding to the rated pressure for frangible discs; and
- (d) The rated flow capacity of the device in standard cubic metres of air per second (m<sup>3</sup>/s).

When practicable, the following information shall also be shown:

- (e) The manufacturer's name and relevant catalogue number of the device.

6.7.3.9.2 The rated flow capacity marked on the pressure-relief devices shall be determined according to ISO 4126-1:1991.

**6.7.3.10**      *Connections to pressure-relief devices*

- 6.7.3.10.1      Connections to pressure-relief devices shall be of sufficient size to enable the required discharge to pass unrestricted to the safety device. No stop-valve shall be installed between the shell and the pressure-relief devices except when duplicate devices are provided for maintenance or other reasons and the stop-valves serving the devices actually in use are locked open or the stop-valves are interlocked so that at least one of the duplicate devices is always operable and capable of meeting the requirements of 6.7.3.8. There shall be no obstruction in an opening leading to a vent or pressure-relief device which might restrict or cut-off the flow from the shell to that device. Vents from the pressure-relief devices, when used, shall deliver the relieved vapour or liquid to the atmosphere in conditions of minimum back-pressure on the relieving device.

**6.7.3.11**      *Siting of pressure-relief devices*

- 6.7.3.11.1      Each pressure-relief device inlet shall be situated on top of the shell in a position as near the longitudinal and transverse centre of the shell as reasonably practicable. All pressure relief device inlets shall under maximum filling conditions be situated in the vapour space of the shell and the devices shall be so arranged as to ensure that the escaping vapour is discharged unrestrictedly. For flammable non-refrigerated liquefied gases, the escaping vapour shall be directed away from the shell in such a manner that it cannot impinge upon the shell. Protective devices which deflect the flow of vapour are permissible provided the required relief-device capacity is not reduced.
- 6.7.3.11.2      Arrangements shall be made to prevent access to the pressure-relief devices by unauthorized persons and to protect the devices from damage caused by the portable tank overturning.

**6.7.3.12**      *Gauging devices*

- 6.7.3.12.1      Unless a portable tank is intended to be filled by weight it shall be equipped with one or more gauging devices. Glass level-gauges and gauges made of other fragile material, which are in direct communication with the contents of the shell shall not be used.

**6.7.3.13**      *Portable tank supports, frameworks, lifting and tie-down attachments*

- 6.7.3.13.1      Portable tanks shall be designed and constructed with a support structure to provide a secure base during carriage. The forces specified in 6.7.3.2.9 and the safety factor specified in 6.7.3.2.10 shall be considered in this aspect of the design. Skids, frameworks, cradles or other similar structures are acceptable.
- 6.7.3.13.2      The combined stresses caused by portable tank mountings (e.g. cradles, frameworks, etc.) and portable tank lifting and tie-down attachments shall not cause excessive stress in any portion of the shell. Permanent lifting and tie-down attachments shall be fitted to all portable tanks. Preferably they shall be fitted to the portable tank supports but may be secured to reinforcing plates located on the shell at the points of support.
- 6.7.3.13.3      In the design of supports and frameworks the effects of environmental corrosion shall be taken into account.
- 6.7.3.13.4      Forklift pockets shall be capable of being closed off. The means of closing forklift pockets shall be a permanent part of the framework or permanently attached to the framework. Single compartment portable tanks with a length less than 3.65 m need not have closed off forklift pockets provided that:
- (a)      The shell and all the fittings are well protected from being hit by the forklift blades; and

- (b) The distance between the centres of the forklift pockets is at least half of the maximum length of the portable tank.

6.7.3.13.5 When portable tanks are not protected during carriage, according to 4.2.2.3, the shells and service equipment shall be protected against damage to the shell and service equipment resulting from lateral or longitudinal impact or overturning. External fittings shall be protected so as to preclude the release of the shell contents upon impact or overturning of the portable tank on its fittings. Examples of protection include:

- (a) Protection against lateral impact which may consist of longitudinal bars protecting the shell on both sides at the level of the median line;
- (b) Protection of the portable tank against overturning which may consist of reinforcement rings or bars fixed across the frame;
- (c) Protection against rear impact which may consist of a bumper or frame;
- (d) Protection of the shell against damage from impact or overturning by use of an ISO frame in accordance with ISO 1496-3:1995.

#### 6.7.3.14 *Design approval*

6.7.3.14.1 The competent authority or its authorized body shall issue a design approval certificate for any new design of a portable tank. This certificate shall attest that a portable tank has been surveyed by that authority, is suitable for its intended purpose and meets the requirements of this Chapter and where appropriate the provisions for gases provided in portable tank instruction T50 in 4.2.5.2.6. When a series of portable tanks are manufactured without change in the design, the certificate shall be valid for the entire series. The certificate shall refer to the prototype test report, the gases allowed to be carried, the materials of construction of the shell and an approval number. The approval number shall consist of the distinguishing sign or mark of the State in whose territory the approval was granted, i.e. the distinguishing sign for use in international traffic, as prescribed by the Convention on Road Traffic, Vienna 1968, and a registration number. Any alternative arrangements according to 6.7.1.2 shall be indicated on the certificate. A design approval may serve for the approval of smaller portable tanks made of materials of the same kind and thickness, by the same fabrication techniques and with identical supports, equivalent closures and other appurtenances.

6.7.3.14.2 The prototype test report for the design approval shall include at least the following:

- (a) The results of the applicable framework test specified in ISO 1496-3:1995;
- (b) The results of the initial inspection and test in 6.7.3.15.3; and
- (c) The results of the impact test in 6.7.3.15.1, when applicable.

#### 6.7.3.15 *Inspection and testing*

6.7.3.15.1 For portable tanks meeting the definition of container in the CSC, a prototype representing each design shall be subjected to an impact test. The prototype portable tank shall be shown to be capable of absorbing the forces resulting from an impact not less than 4 times (4 g) the MPGM of the fully loaded portable tank at a duration typical of the mechanical shocks experienced in rail transport. The following is a listing of standards describing methods acceptable for performing the impact test:

Association of American Railroads,  
Manual of Standards and Recommended Practices,  
Specifications for Acceptability of Tank Containers (AAR.600), 1992

Canadian Standards Association (CSA),  
Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods  
(B620-1987)

Deutsche Bahn AG  
Zentralbereich Technik, Minden  
Portable tanks, longitudinal dynamic impact test

Société Nationale des Chemins de Fer Français  
C.N.E.S.T. 002-1966.  
Tank containers, longitudinal external stresses and dynamic impact tests

Spoornet, South Africa  
Engineering Development Centre (EDC)  
Testing of ISO Tank Containers  
Method EDC/TES/023/000/1991-06

- 6.7.3.15.2 The shell and items of equipment of each portable tank shall be inspected and tested before being put into service for the first time (initial inspection and test) and thereafter at not more than five-year intervals (5 year periodic inspection and test) with an intermediate periodic inspection and test (2.5 year periodic inspection and test) midway between the 5 year periodic inspections and tests. The 2.5 year inspection and test may be performed within 3 months of the specified date. An exceptional inspection and test shall be performed regardless of the last periodic inspection and test when necessary according to 6.7.3.15.7.
- 6.7.3.15.3 The initial inspection and test of a portable tank shall include a check of the design characteristics, an internal and external examination of the portable tank and its fittings with due regard to the non-refrigerated liquefied gases to be carried, and a pressure test referring to the test pressures according to 6.7.3.3.2. The pressure test may be performed as a hydraulic test or by using another liquid or gas with the agreement of the competent authority or its authorized body. Before the portable tank is placed into service, a leakproofness test and a test of the satisfactory operation of all service equipment shall also be performed. When the shell and its fittings have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test. All welds subject to full stress level in the shell shall be inspected during the initial test by radiographic, ultrasonic, or another suitable non-destructive test method. This does not apply to the jacket.
- 6.7.3.15.4 The 5 year periodic inspection and test shall include an internal and external examination and, as a general rule, a hydraulic pressure test. Sheathing, thermal insulation and the like shall be removed only to the extent required for reliable appraisal of the condition of the portable tank. When the shell and equipment have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.
- 6.7.3.15.5 The intermediate 2.5 year periodic inspection and test shall at least include an internal and external examination of the portable tank and its fittings with due regard to the non-refrigerated liquefied gases intended to be carried, a leakproofness test and a check of the satisfactory operation of all service equipment. Sheathing thermal insulation and the like shall be removed only to the extent required for reliable appraisal of the condition of the portable tank. For portable tanks intended for the carriage of a single non-refrigerated liquefied gas, the 2.5 year internal examination may be waived or substituted by other test methods or inspection procedures specified by the competent authority or its authorized body.

- 6.7.3.15.6 A portable tank may not be filled and offered for carriage after the date of expiry of the last 5 year or 2.5 year periodic inspection and test as required by 6.7.3.15.2. However a portable tank filled prior to the date of expiry of the last periodic inspection and test may be carried for a period not to exceed three months beyond the date of expiry of the last periodic test or inspection. In addition, a portable tank may be carried after the date of expiry of the last periodic test and inspection:
- (a) After emptying but before cleaning, for purposes of performing the next required test or inspection prior to refilling; and
  - (b) Unless otherwise approved by the competent authority, for a period not to exceed six months beyond the date of expiry of the last periodic test or inspection, in order to allow the return of dangerous goods for proper disposal or recycling. Reference to this exemption shall be mentioned in the transport document.
- 6.7.3.15.7 The exceptional inspection and test is necessary when the portable tank shows evidence of damaged or corroded areas, or leakage, or other conditions that indicate a deficiency that could affect the integrity of the portable tank. The extent of the exceptional inspection and test shall depend on the amount of damage or deterioration of the portable tank. It shall include at least the 2.5 year inspection and test according to 6.7.3.15.5.
- 6.7.3.15.8 The internal and external examinations shall ensure that:
- (a) The shell is inspected for pitting, corrosion, or abrasions, dents, distortions, defects in welds or any other conditions, including leakage, that might render the portable tank unsafe for carriage;
  - (b) The piping, valves, and gaskets are inspected for corroded areas, defects, or any other conditions, including leakage, that might render the portable tank unsafe for filling, discharge or carriage;
  - (c) Devices for tightening manhole covers are operative and there is no leakage at manhole covers or gaskets;
  - (d) Missing or loose bolts or nuts on any flanged connection or blank flange are replaced or tightened;
  - (e) All emergency devices and valves are free from corrosion, distortion and any damage or defect that could prevent their normal operation. Remote closure devices and self-closing stop-valves shall be operated to demonstrate proper operation;
  - (f) Required markings on the portable tank are legible and in accordance with the applicable requirements; and
  - (g) The framework, the supports and the arrangements for lifting the portable tank are in satisfactory condition.
- 6.7.3.15.9 The inspections and tests in 6.7.3.15.1, 6.7.3.15.3, 6.7.3.15.4, 6.7.3.15.5 and 6.7.3.15.7 shall be performed or witnessed by an expert approved by the competent authority or its authorized body. When the pressure test is a part of the inspection and test, the test pressure shall be the one indicated on the data plate of the portable tank. While under pressure, the portable tank shall be inspected for any leaks in the shell, piping or equipment.
- 6.7.3.15.10 In all cases when cutting, burning or welding operations on the shell have been effected, that work shall be to the approval of the competent authority or its authorized body taking into

account the pressure vessel code used for the construction of the shell. A pressure test to the original test pressure shall be performed after the work is completed.

- 6.7.3.15.11 When evidence of any unsafe condition is discovered, the portable tank shall not be returned to service until it has been corrected and the pressure test is repeated and passed.

**6.7.3.16 Marking**

- 6.7.3.16.1 Every portable tank shall be fitted with a corrosion resistant metal plate permanently attached to the portable tank in a conspicuous place readily accessible for inspection. When for reasons of portable tank arrangements, the plate cannot be permanently attached to the shell, the shell shall be marked with at least the information required by the pressure vessel code. As a minimum at least the following information shall be marked on the plate by stamping or by any other similar method:

Country of manufacture  
 U Approval Approval For Alternative Arrangements (see 6.7.1.2)  
 N country number "AA"  
 Manufacturer's name or mark  
 Manufacturer's serial number  
 Authorized body for the design approval  
 Owner's registration number  
 Year of manufacture  
 Pressure vessel code to which the shell is designed  
 Test pressure \_\_\_\_\_ bar/kPa (gauge pressure)<sup>6</sup>  
 MAWP \_\_\_\_\_ bar/kPa (gauge pressure)<sup>6</sup>  
 External design pressure<sup>7</sup> \_\_\_\_\_ bar/kPa (gauge pressure)<sup>6</sup>  
 Design temperature range \_\_\_\_\_ °C to \_\_\_\_\_ °C  
 Design reference temperature \_\_\_\_\_ °C  
 Water capacity at 20°C \_\_\_\_\_ litres  
 Initial pressure test date and witness identification  
 Shell material(s) and material standard reference(s)  
 Equivalent thickness in reference steel \_\_\_\_\_ mm  
 Date and type of most recent periodic test(s)  
 Month \_\_\_\_\_ Year \_\_\_\_\_ Test pressure \_\_\_\_\_ bar/kPa (gauge pressure)<sup>6</sup>  
 Stamp of expert who performed or witnessed the most recent test

- 6.7.3.16.2 The following information shall be marked either on the portable tank itself or on a metal plate firmly secured to the portable tank:

Name of the operator  
 Name of non-refrigerated liquefied gas(es) permitted for carriage  
 Maximum permissible load mass for each non-refrigerated liquefied gas permitted \_\_\_\_\_ kg  
 Maximum permissible gross mass (MPGM) \_\_\_\_\_ kg  
 Unladen (tare) mass \_\_\_\_\_ kg

*NOTE: For the identification of the non-refrigerated liquefied gases being carried, see also Part 5.*

- 6.7.3.16.3 If a portable tank is designed and approved for handling in open seas, the words "OFFSHORE PORTABLE TANK" shall be marked on the identification plate.

<sup>6</sup> The unit used shall be marked.

<sup>7</sup> See 6.7.3.2.8.

## 6.7.4 Requirements for the design, construction, inspection and testing of portable tanks intended for the carriage of refrigerated liquefied gases

### 6.7.4.1 Definitions

For the purposes of this section:

*Alternative arrangement* means an approval granted by the competent authority for a portable tank or MEGC that has been designed, constructed or tested to technical requirements or testing methods other than those specified in this Chapter;

*Portable tank* means a thermally insulated multimodal tank having a capacity of more than 450 litres fitted with service equipment and structural equipment necessary for the carriage of refrigerated liquefied gases. The portable tank shall be capable of being filled and discharged without the removal of its structural equipment. It shall possess stabilizing members external to the tank, and shall be capable of being lifted when full. It shall be designed primarily to be loaded onto a transport vehicle or ship and shall be equipped with skids, mountings or accessories to facilitate mechanical handling. Tank-vehicles, tank-wagons, non-metallic tanks, intermediate bulk containers (IBCs), gas cylinders and large receptacles are not considered to fall within the definition for portable tanks;

*Tank* means a construction which normally consists of either :

- (a) A jacket and one or more inner shells where the space between the shell(s) and the jacket is exhausted of air (vacuum insulation) and may incorporate a thermal insulation system; or
- (b) A jacket and an inner shell with an intermediate layer of solid thermally insulating material (e.g. solid foam);

*Shell* means the part of the portable tank which retains the refrigerated liquefied gas intended for carriage, including openings and their closures, but does not include service equipment or external structural equipment;

*Jacket* means the outer insulation cover or cladding which may be part of the insulation system;

*Service equipment* means measuring instruments and filling, discharge, venting, safety, pressurizing, cooling and thermal insulation devices;

*Structural equipment* means the reinforcing, fastening, protective and stabilizing members external to the shell;

*Maximum allowable working pressure (MAWP)* means the maximum effective gauge pressure permissible at the top of the shell of a loaded portable tank in its operating position including the highest effective pressure during filling and discharge;

*Test pressure* means the maximum gauge pressure at the top of the shell during the pressure test;

*Leakproofness test* means a test using gas subjecting the shell and its service equipment, to an effective internal pressure not less than 90% of the MAWP;

*Maximum permissible gross mass (MPGM)* means the sum of the tare mass of the portable tank and the heaviest load authorized for carriage;

*Holding time* means the time that will elapse from the establishment of the initial filling condition until the pressure has risen due to heat influx to the lowest set pressure of the pressure limiting device(s);

*Reference steel* means a steel with a tensile strength of 370 N/mm<sup>2</sup> and an elongation at fracture of 27%;

*Minimum design temperature* means the temperature which is used for the design and construction of the shell not higher than the lowest (coldest) temperature (service temperature) of the contents during normal conditions of filling, discharge and carriage.

#### 6.7.4.2 *General design and construction requirements*

- 6.7.4.2.1 Shells shall be designed and constructed in accordance with the requirements of a pressure vessel code recognized by the competent authority. Shells and jackets shall be made of metallic materials suitable for forming. Jackets shall be made of steel. Non-metallic materials may be used for the attachments and supports between the shell and jacket, provided their material properties at the minimum design temperature are proven to be sufficient. The materials shall in principle conform to national or international material standards. For welded shells and jackets only materials whose weldability has been fully demonstrated shall be used. Welds shall be skilfully made and afford complete safety. When the manufacturing process or the materials make it necessary, the shell shall be suitably heat treated to guarantee adequate toughness in the weld and in the heat affected zones. In choosing the material, the minimum design temperature shall be taken into account with respect to risk of brittle fracture, to hydrogen embrittlement, to stress corrosion cracking and to resistance to impact. When fine grain steel is used, the guaranteed value of the yield strength shall be not more than 460 N/mm<sup>2</sup> and the guaranteed value of the upper limit of the tensile strength shall be not more than 725 N/mm<sup>2</sup> in accordance with the material specifications. Portable tank materials shall be suitable for the external environment in which they may be carried.
- 6.7.4.2.2 Any part of a portable tank, including fittings, gaskets and pipe-work, which can be expected normally to come into contact with the refrigerated liquefied gas carried shall be compatible with that refrigerated liquefied gas.
- 6.7.4.2.3 Contact between dissimilar metals which could result in damage by galvanic action shall be avoided.
- 6.7.4.2.4 The thermal insulation system shall include a complete covering of the shell(s) with effective insulating materials. External insulation shall be protected by a jacket so as to prevent the ingress of moisture and other damage under normal carriage conditions.
- 6.7.4.2.5 When a jacket is so closed as to be gas-tight, a device shall be provided to prevent any dangerous pressure from developing in the insulation space.
- 6.7.4.2.6 Portable tanks intended for the carriage of refrigerated liquefied gases having a boiling point below minus (-) 182 °C at atmospheric pressure shall not include materials which may react with oxygen or oxygen enriched atmospheres in a dangerous manner, when located in parts of the thermal insulation when there is a risk of contact with oxygen or with oxygen enriched fluid.
- 6.7.4.2.7 Insulating materials shall not deteriorate unduly in service.
- 6.7.4.2.8 A reference holding time shall be determined for each refrigerated liquefied gas intended for carriage in a portable tank.

- 6.7.4.2.8.1 The reference holding time shall be determined by a method recognized by the competent authority on the basis of the following:
- (a) The effectiveness of the insulation system, determined in accordance with 6.7.4.2.8.2;
  - (b) The lowest set pressure of the pressure limiting device(s);
  - (c) The initial filling conditions;
  - (d) An assumed ambient temperature of 30 °C;
  - (e) The physical properties of the individual refrigerated liquefied gas intended to be carried.

6.7.4.2.8.2 The effectiveness of the insulation system (heat influx in watts) shall be determined by type testing the portable tank in accordance with a procedure recognized by the competent authority. This test shall consist of either:

- (a) A constant pressure test (for example at atmospheric pressure) when the loss of refrigerated liquefied gas is measured over a period of time; or
- (b) A closed system test when the rise in pressure in the shell is measured over a period of time.

When performing the constant pressure test, variations in atmospheric pressure shall be taken into account. When performing either tests corrections shall be made for any variation of the ambient temperature from the assumed ambient temperature reference value of 30 °C.

*NOTE: For the determination of the actual holding time before each journey, refer to 4.2.3.7.*

- 6.7.4.2.9 The jacket of a vacuum-insulated double-wall tank shall have either an external design pressure not less than 100 kPa (1 bar) (gauge pressure) calculated in accordance with a recognized technical code or a calculated critical collapsing pressure of not less than 200 kPa (2 bar) (gauge pressure). Internal and external reinforcements may be included in calculating the ability of the jacket to resist the external pressure.
- 6.7.4.2.10 Portable tanks shall be designed and constructed with supports to provide a secure base during carriage and with suitable lifting and tie-down attachments.
- 6.7.4.2.11 Portable tanks shall be designed to withstand, without loss of contents, at least the internal pressure due to the contents, and the static, dynamic and thermal loads during normal conditions of handling and carriage. The design shall demonstrate that the effects of fatigue, caused by repeated application of these loads through the expected life of the portable tank, have been taken into account.
- 6.7.4.2.12 Portable tanks and their fastenings under the maximum permissible load shall be capable of absorbing the following separately applied static forces:
- (a) In the direction of travel: twice the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>8</sup>;

<sup>8</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

- (b) Horizontally at right angles to the direction of travel: the MPGM (when the direction of travel is not clearly determined, the forces shall be equal to twice the MPGM) multiplied by the acceleration due to gravity ( $g$ )<sup>8</sup>;
- (c) Vertically upwards: the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>8</sup>; and
- (d) Vertically downwards: twice the MPGM (total loading including the effect of gravity) multiplied by the acceleration due to gravity ( $g$ )<sup>8</sup>.

6.7.4.2.13 Under each of the forces in 6.7.4.2.12, the safety factor to be observed shall be as follows:

- (a) For materials having a clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed yield strength; and
- (b) For materials with no clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed 0.2% proof strength or, in case of austenitic steels, the 1% proof strength.

6.7.4.2.14 The values of yield strength or proof strength shall be the values according to national or international material standards. When austenitic steels are used, the specified minimum values according to the material standards may be increased by up to 15% when greater values are attested in the material inspection certificate. When no material standard exists for the metal in question, or when non-metallic materials are used the values of yield strength or proof strength shall be approved by the competent authority.

6.7.4.2.15 Portable tanks intended for the carriage of flammable refrigerated liquefied gases shall be capable of being electrically earthed.

### 6.7.4.3 *Design criteria*

6.7.4.3.1 Shells shall be of a circular cross section.

6.7.4.3.2 Shells shall be designed and constructed to withstand a test pressure not less than 1.3 times the MAWP. For shells with vacuum insulation the test pressure shall not be less than 1.3 times the sum of the MAWP and 100 kPa (1 bar). In no case shall the test pressure be less than 300 kPa (3 bar) (gauge pressure). Attention is drawn to the minimum shell thickness requirements, specified in 6.7.4.4.2 to 6.7.4.4.7.

6.7.4.3.3 For metals exhibiting a clearly defined yield point or characterized by a guaranteed proof strength (0.2% proof strength, generally, or 1% proof strength for austenitic steels) the primary membrane stress  $\sigma$  (sigma) in the shell shall not exceed 0.75 Re or 0.50 Rm, whichever is lower, at the test pressure, where:

Re = yield strength in N/mm<sup>2</sup>, or 0.2% proof strength or, for austenitic steels, 1% proof strength;

Rm = minimum tensile strength in N/mm<sup>2</sup>.

6.7.4.3.3.1 The values of Re and Rm to be used shall be the specified minimum values according to national or international material standards. When austenitic steels are used, the specified minimum values for Re and Rm according to the material standards may be increased by up to 15% when greater values are attested in the material inspection certificate. When no material standard exists for the metal in question, the values of Re and Rm used shall be approved by the competent authority or its authorized body.

<sup>8</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

- 6.7.4.3.3.2 Steels which have a  $R_e/R_m$  ratio of more than 0.85 are not allowed for the construction of welded shells. The values of  $R_e$  and  $R_m$  to be used in determining this ratio shall be the values specified in the material inspection certificate.
- 6.7.4.3.3.3 Steels used in the construction of shells shall have an elongation at fracture, in %, of not less than  $10\,000/R_m$  with an absolute minimum of 16% for fine grain steels and 20% for other steels. Aluminium and aluminium alloys used in the construction of shells shall have an elongation at fracture, in %, of not less than  $10\,000/6R_m$  with an absolute minimum of 12%.
- 6.7.4.3.3.4 For the purpose of determining actual values for materials, it shall be noted that for sheet metal, the axis of the tensile test specimen shall be at right angles (transversely) to the direction of rolling. The permanent elongation at fracture shall be measured on test specimens of rectangular cross sections in accordance with ISO 6892:1988 using a 50 mm gauge length.
- 6.7.4.4 Minimum shell thickness**
- 6.7.4.4.1 The minimum shell thickness shall be the greater thickness based on:
- The minimum thickness determined in accordance with the requirements in 6.7.4.4.2 to 6.7.4.4.7; or
  - The minimum thickness determined in accordance with the recognized pressure vessel code including the requirements in 6.7.4.3.
- 6.7.4.4.2 Shells of not more than 1.80 m in diameter shall be not less than 5 mm thick in the reference steel or of equivalent thickness in the metal to be used. Shells of more than 1.80 m in diameter shall be not less than 6 mm thick in the reference steel or of equivalent thickness in the metal to be used.
- 6.7.4.4.3 Shells of vacuum-insulated tanks of not more than 1.80 m in diameter shall be not less than 3 mm thick in the reference steel or of equivalent thickness in the metal to be used. Such shells of more than 1.80 m in diameter shall be not less than 4 mm thick in the reference steel or of equivalent thickness in the metal to be used.
- 6.7.4.4.4 For vacuum-insulated tanks, the aggregate thickness of the jacket and the shell shall correspond to the minimum thickness prescribed in 6.7.4.4.2, the thickness of the shell itself being not less than the minimum thickness prescribed in 6.7.4.4.3.
- 6.7.4.4.5 Shells shall be not less than 3 mm thick regardless of the material of construction.
- 6.7.4.4.6 The equivalent thickness of a metal other than the thickness prescribed for the reference steel in 6.7.4.4.2 and 6.7.4.4.3 shall be determined using the following formula:

$$e_1 = \frac{21.4e_0}{\sqrt[3]{R_{m_1} \times A_1}}$$

where:

- $e_1$  = required equivalent thickness (in mm) of the metal to be used;
- $e_0$  = minimum thickness (in mm) of the reference steel specified in 6.7.4.4.2 and 6.7.4.4.3;

$R_{m1}$  = guaranteed minimum tensile strength (in  $N/mm^2$ ) of the metal to be used (see 6.7.4.3.3);

$A_1$  = guaranteed minimum elongation at fracture (in %) of the metal to be used according to national or international standards.

6.7.4.4.7 In no case shall the wall thickness be less than that prescribed in 6.7.4.4.1 to 6.7.4.4.5. All parts of the shell shall have a minimum thickness as determined by 6.7.4.4.1 to 6.7.4.4.6. This thickness shall be exclusive of any corrosion allowance.

6.7.4.4.8 There shall be no sudden change of plate thickness at the attachment of the ends (heads) to the cylindrical portion of the shell.

#### 6.7.4.5 *Service equipment*

6.7.4.5.1 Service equipment shall be so arranged as to be protected against the risk of being wrenched off or damaged during handling and carriage. When the connection between the frame and the tank or the jacket and the shell allows relative movement, the equipment shall be so fastened as to permit such movement without risk of damage to working parts. The external discharge fittings (pipe sockets, shut-off devices), the stop-valve and its seating shall be protected against the danger of being wrenched off by external forces (for example using shear sections). The filling and discharge devices (including flanges or threaded plugs) and any protective caps shall be capable of being secured against unintended opening.

6.7.4.5.2 Each filling and discharge opening in portable tanks used for the carriage of flammable refrigerated liquefied gases shall be fitted with at least three mutually independent shut-off devices in series, the first being a stop-valve situated as close as reasonably practicable to the jacket, the second being a stop-valve and the third being a blank flange or equivalent device. The shut-off device closest to the jacket shall be a quick closing device, which closes automatically in the event of unintended movement of the portable tank during filling or discharge or fire engulfment. This device shall also be possible to operate by remote control.

6.7.4.5.3 Each filling and discharge opening in portable tanks used for the carriage of non-flammable refrigerated liquefied gases shall be fitted with at least two mutually independent shut-off devices in series, the first being a stop-valve situated as close as reasonably practicable to the jacket, the second a blank flange or equivalent device.

6.7.4.5.4 For sections of piping which can be closed at both ends and where liquid product can be trapped, a method of automatic pressure relief shall be provided to prevent excess pressure build-up within the piping.

6.7.4.5.5 Vacuum insulated tanks need not have an opening for inspection.

6.7.4.5.6 External fittings shall be grouped together so far as reasonably practicable.

6.7.4.5.7 Each connection on a portable tank shall be clearly marked to indicate its function.

6.7.4.5.8 Each stop-valve or other means of closure shall be designed and constructed to a rated pressure not less than the MAWP of the shell taking into account the temperature expected during carriage. All stop-valves with a screwed spindle shall be closed by a clockwise motion of the handwheel. In the case of other stop-valves the position (open and closed) and direction of closure shall be clearly indicated. All stop-valves shall be designed to prevent unintentional opening.

- 6.7.4.5.9 When pressure-building units are used, the liquid and vapour connections to that unit shall be provided with a valve as close to the jacket as reasonably practicable to prevent the loss of contents in case of damage to the pressure-building unit.
- 6.7.4.5.10 Piping shall be designed, constructed and installed so as to avoid the risk of damage due to thermal expansion and contraction, mechanical shock and vibration. All piping shall be of a suitable material. To prevent leakage due to fire, only steel piping and welded joints shall be used between the jacket and the connection to the first closure of any outlet. The method of attaching the closure to this connection shall be to the satisfaction of the competent authority or its authorized body. Elsewhere pipe joints shall be welded when necessary.
- 6.7.4.5.11 Joints in copper tubing shall be brazed or have an equally strong metal union. The melting point of brazing materials shall be no lower than 525 °C. The joints shall not decrease the strength of the tubing as may happen when cutting threads.
- 6.7.4.5.12 The materials of construction of valves and accessories shall have satisfactory properties at the lowest operating temperature of the portable tank.
- 6.7.4.5.13 The burst pressure of all piping and pipe fittings shall be not less than the highest of four times the MAWP of the shell or four times the pressure to which it may be subjected in service by the action of a pump or other device (except pressure-relief devices).
- 6.7.4.6 *Pressure-relief devices*
- 6.7.4.6.1 Every shell shall be provided with not less than two independent spring-loaded pressure-relief devices. The pressure-relief devices shall open automatically at a pressure not less than the MAWP and be fully open a pressure equal to 110% of the MAWP. These devices shall, after discharge, close at a pressure not lower than 10% below the pressure at which discharge starts and shall remain closed at all lower pressures. The pressure-relief devices shall be of the type that will resist dynamic forces including surge.
- 6.7.4.6.2 Shells for non-flammable refrigerated liquefied gases and hydrogen may in addition have frangible discs in parallel with the spring-loaded devices as specified in 6.7.4.7.2 and 6.7.4.7.3.
- 6.7.4.6.3 Pressure-relief devices shall be designed to prevent the entry of foreign matter, the leakage of gas and the development of any dangerous excess pressure.
- 6.7.4.6.4 Pressure-relief devices shall be approved by the competent authority or its authorized body.
- 6.7.4.7 *Capacity and setting of pressure-relief devices*
- 6.7.4.7.1 In the case of the loss of vacuum in a vacuum-insulated tank or of loss of 20% of the insulation of a tank insulated with solid materials, the combined capacity of all pressure-relief devices installed shall be sufficient so that the pressure (including accumulation) inside the shell does not exceed 120% of the MAWP.
- 6.7.4.7.2 For non-flammable refrigerated liquefied gases (except oxygen) and hydrogen, this capacity may be achieved by the use of frangible discs in parallel with the required safety-relief devices. Frangible discs shall rupture at nominal pressure equal to the test pressure of the shell.
- 6.7.4.7.3 Under the circumstances described in 6.7.4.7.1 and 6.7.4.7.2 together with complete fire engulfment the combined capacity of all pressure-relief devices installed shall be sufficient to limit the pressure in the shell to the test pressure.

6.7.4.7.4 The required capacity of the relief devices shall be calculated in accordance with a well-established technical code recognized by the competent authority<sup>9</sup>.

**6.7.4.8 *Marking of pressure-relief devices***

6.7.4.8.1 Every pressure-relief device shall be plainly and permanently marked with the following particulars:

- (a) The pressure (in bar or kPa) at which it is set to discharge;
- (b) The allowable tolerance at the discharge pressure for spring-loaded devices;
- (c) The reference temperature corresponding to the rated pressure for frangible discs; and
- (d) The rated flow capacity of the device in standard cubic meters of air per second (m<sup>3</sup>/s).

When practicable, the following information shall also be shown:

- (e) The manufacturer's name and relevant catalogue number of the device.

6.7.4.8.2 The rated flow capacity marked on the pressure-relief devices shall be determined according to ISO 4126-1:1991.

**6.7.4.9 *Connections to pressure-relief devices***

6.7.4.9.1 Connections to pressure-relief devices shall be of sufficient size to enable the required discharge to pass unrestricted to the safety device. No stop-valve shall be installed between the shell and the pressure-relief devices except when duplicate devices are provided for maintenance or other reasons and the stop-valves serving the devices actually in use are locked open or the stop-valves are interlocked so that the requirements of 6.7.4.7 are always fulfilled. There shall be no obstruction in an opening leading to a vent or pressure-relief device which might restrict or cut-off the flow from the shell to that device. Pipework to vent the vapour or liquid from the outlet of the pressure-relief devices, when used, shall deliver the relieved vapour or liquid to the atmosphere in conditions of minimum back-pressure on the relieving device.

**6.7.4.10 *Siting of pressure-relief devices***

6.7.4.10.1 Each pressure-relief device inlet shall be situated on top of the shell in a position as near the longitudinal and transverse centre of the shell as reasonably practicable. All pressure-relief device inlets shall under maximum filling conditions be situated in the vapour space of the shell and the devices shall be so arranged as to ensure that the escaping vapour is discharged unrestrictedly. For refrigerated liquefied gases, the escaping vapour shall be directed away from the tank and in such a manner that it cannot impinge upon the tank. Protective devices which deflect the flow of vapour are permissible provided the required relief-device capacity is not reduced.

6.7.4.10.2 Arrangements shall be made to prevent access to the devices by unauthorized persons and to protect the devices from damage caused by the portable tank overturning.

---

<sup>9</sup> See for example CGA Pamphlet S-1.2-1995.

**6.7.4.11 Gauging devices**

6.7.4.11.1 Unless a portable tank is intended to be filled by weight, it shall be equipped with one or more gauging devices. Glass level-gauges and gauges made of other fragile material, which are in direct communication with the contents of the shell shall not be used.

6.7.4.11.2 A connection for a vacuum gauge shall be provided in the jacket of a vacuum-insulated portable tank.

**6.7.4.12 Portable tank supports, frameworks, lifting and tie-down attachments**

6.7.4.12.1 Portable tanks shall be designed and constructed with a support structure to provide a secure base during carriage. The forces specified in 6.7.4.2.12 and the safety factor specified in 6.7.4.2.13 shall be considered in this aspect of the design. Skids, frameworks, cradles or other similar structures are acceptable.

6.7.4.12.2 The combined stresses caused by portable tank mountings (e.g. cradles, frameworks, etc.) and portable tank lifting and tie-down attachments shall not cause excessive stress in any portion of the tank. Permanent lifting and tie-down attachments shall be fitted to all portable tanks. Preferably they shall be fitted to the portable tank supports but may be secured to reinforcing plates located on the tank at the points of support.

6.7.4.12.3 In the design of supports and frameworks the effects of environmental corrosion shall be taken into account.

6.7.4.12.4 Forklift pockets shall be capable of being closed off. The means of closing forklift pockets shall be a permanent part of the framework or permanently attached to the framework. Single compartment portable tanks with a length less than 3.65 m need not have closed off forklift pockets provided that:

- (a) The tank and all the fittings are well protected from being hit by the forklift blades; and
- (b) The distance between the centres of the forklift pockets is at least half of the maximum length of the portable tank.

6.7.4.12.5 When portable tanks are not protected during carriage, according to 4.2.3.3, the shells and service equipment shall be protected against damage to the shell and service equipment resulting from lateral or longitudinal impact or overturning. External fittings shall be protected so as to preclude the release of the shell contents upon impact or overturning of the portable tank on its fittings. Examples of protection include:

- (a) Protection against lateral impact which may consist of longitudinal bars protecting the shell on both sides at the level of the median line;
- (b) Protection of the portable tank against overturning which may consist of reinforcement rings or bars fixed across the frame;
- (c) Protection against rear impact which may consist of a bumper or frame;
- (d) Protection of the shell against damage from impact or overturning by use of an ISO frame in accordance with ISO 1496-3:1995;
- (e) Protection of the portable tank from impact or overturning by a vacuum insulation jacket.

### 6.7.4.13 *Design approval*

6.7.4.13.1 The competent authority or its authorized body shall issue a design approval certificate for any new design of a portable tank. This certificate shall attest that a portable tank has been surveyed by that authority, is suitable for its intended purpose and meets the requirements of this Chapter. When a series of portable tanks are manufactured without change in the design, the certificate shall be valid for the entire series. The certificate shall refer to the prototype test report, the refrigerated liquefied gases allowed to be carried, the materials of construction of the shell and jacket and an approval number. The approval number shall consist of the distinguishing sign or mark of the State in whose territory the approval was granted, i.e. the distinguishing sign for use in international traffic, as prescribed by the Convention on Road Traffic, Vienna 1968, and a registration number. Any alternative arrangements according to 6.7.1.2 shall be indicated on the certificate. A design approval may serve for the approval of smaller portable tanks made of materials of the same kind and thickness, by the same fabrication techniques and with identical supports, equivalent closures and other appurtenances.

6.7.4.13.2 The prototype test report for the design approval shall include at least the following:

- (a) The results of the applicable frame-work test specified in ISO 1496-3:1995;
- (b) The results of the initial inspection and test in 6.7.4.14.3; and
- (c) The results of the impact test in 6.7.4.14.1, when applicable.

### 6.7.4.14 *Inspection and testing*

6.7.4.14.1 For portable tanks meeting the definition of container in the CSC, a prototype representing each design shall be subjected to an impact test. The prototype portable tank shall be shown to be capable of absorbing the forces resulting from an impact not less than 4 times (4 g) the MPGM of the fully loaded portable tank at a duration typical of the mechanical shocks experienced in rail transport. The following is a listing of standards describing methods acceptable for performing the impact test:

Association of American Railroads,  
Manual of Standards and Recommended Practices,  
Specifications for Acceptability of Tank Containers (AAR.600), 1992

Canadian Standards Association (CSA),  
Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods (B620-1987)

Deutsche Bahn AG  
Zentralbereich Technik, Minden  
Portable tanks, longitudinal dynamic impact test

Société Nationale des Chemins de Fer Français  
C.N.E.S.T. 002-1966.  
Tank containers, longitudinal external stresses and dynamic impact tests

Spoornet, South Africa  
Engineering Development Centre (EDC)  
Testing of ISO Tank Containers  
Method EDC/EST/023/000/1991-06

- 6.7.4.14.2 The tank and items of equipment of each portable tank shall be inspected and tested before being put into service for the first time (initial inspection and test) and thereafter at not more than five-year intervals (5 year periodic inspection and test) with an intermediate periodic inspection and test (2.5 year periodic inspection and test) midway between the 5 year periodic inspections and tests. The 2.5 year inspection and test may be performed within 3 months of the specified date. An exceptional inspection and test shall be performed regardless of the last periodic inspection and test when necessary according to 6.7.4.14.7.
- 6.7.4.14.3 The initial inspection and test of a portable tank shall include a check of the design characteristics, an internal and external examination of the portable tank shell and its fittings with due regard to the refrigerated liquefied gases to be carried, and a pressure test referring to the test pressures according to 6.7.4.3.2. The pressure test may be performed as a hydraulic test or by using another liquid or gas with the agreement of the competent authority or its authorized body. Before the portable tank is placed into service, a leakproofness test and a check of the satisfactory operation of all service equipment shall also be performed. When the shell and its fittings have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test. All welds subject to full stress level shall be inspected during the initial test by radiographic, ultrasonic, or another suitable non-destructive-test method. This does not apply to the jacket.
- 6.7.4.14.4 The 5 and 2.5 year periodic inspection and test shall include an external examination of the portable tank and its fittings with due regard to the refrigerated liquefied gases carried, a leakproofness test, a check of the satisfactory operation of all service equipment and a vacuum reading, when applicable. In the case of non-vacuum insulated tanks, the jacket and insulation shall be removed during a 2.5 year and a 5 year periodic inspection but only to the extent necessary for a reliable appraisal.
- 6.7.4.14.5 In addition, at the 5 year periodic inspection and test of non-vacuum insulated tanks the jacket and insulation shall be removed, but only to the extent necessary for a reliable appraisal.
- 6.7.4.14.6 A portable tank may not be filled and offered for carriage after the date of expiry of the last 5 year or 2.5 year periodic inspection and test as required by 6.7.4.14.2. However a portable tank filled prior to the date of expiry of the last periodic inspection and test may be carried for a period not to exceed three months beyond the date of expiry of the last periodic test or inspection. In addition, a portable tank may be carried after the date of expiry of the last periodic test and inspection:
- (a) After emptying but before cleaning, for purposes of performing the next required test or inspection prior to refilling; and
  - (b) Unless otherwise approved by the competent authority, for a period not to exceed six months beyond the date of expiry of the last periodic test or inspection, in order to allow the return of dangerous goods for proper disposal or recycling. Reference to this exemption shall be mentioned in the transport document.
- 6.7.4.14.7 The exceptional inspection and test is necessary when the portable tank shows evidence of damaged or corroded areas, leakage, or any other conditions that indicate a deficiency that could affect the integrity of the portable tank. The extent of the exceptional inspection and test shall depend on the amount of damage or deterioration of the portable tank. It shall include at least the 2.5 year inspection and test according to 6.7.4.14.4.
- 6.7.4.14.8 The internal examination during the initial inspection and test shall ensure that the shell is inspected for pitting, corrosion, or abrasions, dents, distortions, defects in welds or any other conditions, that might render the portable tank unsafe for carriage.

6.7.4.14.9 The external examination shall ensure that:

- (a) The external piping, valves, pressurizing/cooling systems when applicable and gaskets are inspected for corroded areas, defects, or any other conditions, including leakage, that might render the portable tank unsafe for filling, discharge or carriage;
- (b) There is no leakage at any manhole covers or gaskets;
- (c) Missing or loose bolts or nuts on any flanged connection or blank flange are replaced or tightened;
- (d) All emergency devices and valves are free from corrosion, distortion and any damage or defect that could prevent their normal operation. Remote closure devices and self-closing stop-valves shall be operated to demonstrate proper operation;
- (e) Required markings on the portable tank are legible and in accordance with the applicable requirements; and
- (f) The framework, the supports and the arrangements for lifting the portable tank are in satisfactory condition.

6.7.4.14.10 The inspections and tests in 6.7.4.14.1, 6.7.4.14.3, 6.7.4.14.4, 6.7.4.14.5 and 6.7.4.14.7 shall be performed or witnessed by an expert approved by the competent authority or its authorized body. When the pressure test is a part of the inspection and test, the test pressure shall be the one indicated on the data plate of the portable tank. While under pressure, the portable tank shall be inspected for any leaks in the shell, piping or equipment.

6.7.4.14.11 In all cases when cutting, burning or welding operations on the shell of a portable tank have been effected, that work shall be to the approval of the competent authority or its authorized body taking into account the pressure vessel code used for the construction of the shell. A pressure test to the original test pressure shall be performed after the work is completed.

6.7.4.14.12 When evidence of any unsafe condition is discovered, the portable tank shall not be returned to service until it has been corrected and the test is repeated and passed.

#### 6.7.4.15 *Marking*

6.7.4.15.1 Every portable tank shall be fitted with a corrosion resistant metal plate permanently attached to the portable tank in a conspicuous place readily accessible for inspection. When for reasons of portable tank arrangements, the plate cannot be permanently attached to the shell, the shell shall be marked with at least the information required by the pressure vessel code. As a minimum at least the following information shall be marked on the plate by stamping or by any other similar method:

Country of manufacture			
U	Approval	Approval	For Alternative Arrangements (see 6.7.1.2)
N	country	number	"AA"
Manufacturer's name or mark			
Manufacturer's serial number			
Authorized body for the design approval			
Owner's registration number			
Year of manufacture			
Pressure vessel code to which the tank is designed			
Test pressure _____ bar/kPa (gauge pressure) <sup>10</sup>			

<sup>10</sup> *The unit used shall be marked.*

MAWP \_\_\_\_\_ bar/kPa (gauge pressure)<sup>10</sup>  
 Minimum design temperature \_\_\_\_\_ °C  
 Water capacity at 20 °C \_\_\_\_\_ litres  
 Initial pressure test date and witness identification  
 Shell material(s) and material standard reference(s)  
 Equivalent thickness in reference steel \_\_\_\_\_ mm  
 Date and type of most recent periodic test(s)  
 Month \_\_\_\_\_ Year \_\_\_\_\_ Test pressure \_\_\_\_\_ bar/kPa (gauge pressure)<sup>10</sup>  
 Stamp of expert who performed or witnessed the most recent test  
 The name, in full, of the gas(es) for whose carriage the portable tank is approved  
 Either "thermally insulated" or "vacuum insulated" \_\_\_\_\_  
 Effectiveness of the insulation system (heat influx) \_\_\_\_\_ Watts (W)  
 Reference holding time \_\_\_\_\_ days (or hours) and initial  
 pressure \_\_\_\_\_ bar/kPa (gauge pressure)<sup>10</sup> and degree of filling \_\_\_\_\_ in kg for  
 each refrigerated liquefied gas permitted for carriage.

6.7.4.15.2 The following particulars shall be durably marked either on the portable tank itself or on a metal plate firmly secured to the portable tank.

Name of the owner and the operator  
 Name of the refrigerated liquefied gas being carried (and minimum mean bulk temperature)  
 Maximum permissible gross mass (MPGM) \_\_\_\_\_ kg  
 Unladen (tare) mass \_\_\_\_\_ kg  
 Actual holding time for gas being carried \_\_\_\_\_ days (or hours)

*NOTE: For the identification of the refrigerated liquefied gas(es) being carried, see also Part 5.*

6.7.4.15.3 If a portable tank is designed and approved for handling in open seas, the words "OFFSHORE PORTABLE TANK" shall be marked on the identification plate.

**6.7.5 Requirements for the design, construction, inspection and testing of UN certified multiple-element gas containers (MEGCs) intended for the carriage of non-refrigerated gases**

**6.7.5.1 Definitions**

For the purposes of this section:

*Alternative arrangement* means an approval granted by the competent authority for a portable tank or MEGC that has been designed, constructed or tested to technical requirements or testing methods other than those specified in this Chapter;

*Elements* are cylinders, tubes or bundles of cylinders;

*Leakproofness test* means a test using gas subjecting the elements and the service equipment of the MEGC to an effective internal pressure of not less than 20% of the test pressure;

*Manifold* means an assembly of piping and valves connecting the filling and/or discharge openings of the elements;

*Maximum permissible gross mass (MPGM)* means the sum of the tare mass of the MEGC and the heaviest load authorized for carriage;

<sup>10</sup> The unit used shall be marked.

*UN certified Multiple-element gas containers (MEGCs)* are multimodal assemblies of cylinders, tubes and bundles of cylinders which are interconnected by a manifold and which are assembled within a framework. The MEGC includes service equipment and structural equipment necessary for the carriage of gases;

*Service equipment* means measuring instruments and filling, discharge, venting and safety devices;

*Structural equipment* means the reinforcing, fastening, protective and stabilizing members external to the elements.

## 6.7.5.2 *General design and construction requirements*

- 6.7.5.2.1 The MEGC shall be capable of being filled and discharged without the removal of its structural equipment. It shall possess stabilizing members external to the elements to provide structural integrity for handling and carriage. MEGCs shall be designed and constructed with supports to provide a secure base during carriage and with lifting and tie-down attachments which are adequate for lifting the MEGC including when loaded to its maximum permissible gross mass. The MEGC shall be designed to be loaded onto a transport unit or ship and shall be equipped with skids, mountings or accessories to facilitate mechanical handling.
- 6.7.5.2.2 MEGCs shall be designed, manufactured and equipped in such a way as to withstand all conditions to which they will be subjected during normal conditions of handling and carriage. The design shall take into account the effects of dynamic loading and fatigue.
- 6.7.5.2.3 Elements of an MEGC shall be made of seamless steel and be constructed and tested according to 6.2.5. All of the elements in an MEGC shall be of the same design type.
- 6.7.5.2.4 Elements of MEGCs, fittings and pipework shall be:
- (a) compatible with the substances intended to be carried (see ISO 11114-1:1997 and ISO 11114-2:2000); or
  - (b) properly passivated or neutralized by chemical reaction.
- 6.7.5.2.5 Contact between dissimilar metals which could result in damage by galvanic action shall be avoided.
- 6.7.5.2.6 The materials of the MEGC, including any devices, gaskets, and accessories, shall not adversely affect the gas(es) intended for carriage in the MEGC.
- 6.7.5.2.7 MEGCs shall be designed to withstand, without loss of contents, at least the internal pressure due to the contents, and the static, dynamic and thermal loads during normal conditions of handling and carriage. The design shall demonstrate that the effects of fatigue, caused by repeated application of these loads through the expected life of the multiple-element gas container, have been taken into account.
- 6.7.5.2.8 MEGCs and their fastenings shall, under the maximum permissible load, be capable of withstanding the following separately applied static forces:
- (a) in the direction of travel: twice the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>11</sup>;

<sup>11</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

- (b) horizontally at right angles to the direction of travel: the MPGM (when the direction of travel is not clearly determined, the forces shall be equal to twice the MPGM) multiplied by the acceleration due to gravity ( $g$ )<sup>11</sup>;
- (c) vertically upwards: the MPGM multiplied by the acceleration due to gravity ( $g$ )<sup>11</sup>; and
- (d) vertically downwards: twice the MPGM (total loading including the effect of gravity) multiplied by the acceleration due to gravity ( $g$ )<sup>11</sup>.

6.7.5.2.9 Under the forces defined in 6.7.5.2.8, the stress at the most severely stressed point of the elements shall not exceed the values given in either the relevant standards of 6.2.5.2 or, if the elements are not designed, constructed and tested according to those standards, in the technical code or standard recognised or approved by the competent authority of the country of use (see 6.2.3).

6.7.5.2.10 Under each of the forces in 6.7.5.2.8, the safety factor for the framework and fastenings to be observed shall be as follows:

- (a) for steels having a clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed yield strength; or
- (b) for steels with no clearly defined yield point, a safety factor of 1.5 in relation to the guaranteed 0.2% proof strength and, for austenitic steels, the 1% proof strength.

6.7.5.2.11 MEGCs intended for the carriage of flammable gases shall be capable of being electrically earthed.

6.7.5.2.12 The elements shall be secured in a manner that prevents undesired movement in relation to the structure and the concentration of harmful localized stresses.

### 6.7.5.3 *Service equipment*

6.7.5.3.1 Service equipment shall be configured or designed to prevent damage that could result in the release of the pressure receptacle contents during normal conditions of handling and carriage. When the connection between the frame and the elements allows relative movement between the sub-assemblies, the equipment shall be so fastened as to permit such movement without damage to working parts. The manifolds, the discharge fittings (pipe sockets, shut-off devices), and the stop-valves shall be protected from being wrenched off by external forces. Manifold piping leading to shut-off valves shall be sufficiently flexible to protect the valves and the piping from shearing, or releasing the pressure receptacle contents. The filling and discharge devices (including flanges or threaded plugs) and any protective caps shall be capable of being secured against unintended opening.

6.7.5.3.2 Each element intended for the carriage of toxic gases (gases of groups T, TF, TC, TO, TFC and TOC) shall be fitted with a valve. The manifold for liquefied toxic gases (gases of classification codes 2T, 2TF, 2TC, 2TO, 2TFC and 2TOC) shall be so designed that the elements can be filled separately and be kept isolated by a valve capable of being sealed. For the carriage of flammable gases (gases of groups F, TF and TFC), the elements shall be isolated by a valve into assemblies of not more than 3 000 litres.

6.7.5.3.3 For filling and discharge openings of the MEGC, two valves in series shall be placed in an accessible position on each discharge and filling pipe. One of the valves may be a non-return valve. The filling and discharge devices may be fitted to a manifold. For sections of piping which can be closed at both ends and where a liquid product can be trapped, a pressure-relief

<sup>11</sup> For calculation purposes  $g = 9.81 \text{ m/s}^2$ .

valve shall be provided to prevent excessive pressure build-up. The main isolation valves on an MEGC shall be clearly marked to indicate their directions of closure. Each stop-valve or other means of closure shall be designed and constructed to withstand a pressure equal to or greater than 1.5 times the test pressure of the MEGC. All stop-valves with screwed spindles shall close by a clockwise motion of the handwheel. For other stop-valves, the position (open and closed) and direction of closure shall be clearly indicated. All stop-valves shall be designed and positioned to prevent unintentional opening. Ductile metals shall be used in the construction of valves or accessories.

6.7.5.3.4 Piping shall be designed, constructed and installed so as to avoid damage due to expansion and contraction, mechanical shock and vibration. Joints in tubing shall be brazed or have an equally strong metal union. The melting point of brazing materials shall be no lower than 525 °C. The rated pressure of the service equipment and of the manifold shall be not less than two thirds of the test pressure of the elements.

#### 6.7.5.4 *Pressure-relief devices*

6.7.5.4.1 One or more pressure relief devices shall be fitted on MEGCs used for the carriage of UN No. 1013 carbon dioxide and UN No. 1070 nitrous oxide. MEGCs for other gases shall be fitted with pressure relief devices as specified by the competent authority for the country of use.

6.7.5.4.2 When pressure relief devices are fitted, every element or group of elements of an MEGC that can be isolated shall then be fitted with one or more pressure relief devices. Pressure relief devices shall be of a type that will resist dynamic forces including liquid surge and shall be designed to prevent the entry of foreign matter, the leakage of gas and the development of any dangerous excess pressure.

6.7.5.4.3 MEGCs used for the carriage of certain non-refrigerated gases identified in portable tank instruction T50 in 4.2.5.2.6 may have a pressure-relief device as required by the competent authority of the country of use. Unless an MEGC in dedicated service is fitted with an approved pressure relief device constructed of materials compatible with the gas carried, such a device shall comprise a frangible disc preceding a spring-loaded device. The space between the frangible disc and the spring-loaded device may be equipped with a pressure gauge or a suitable telltale indicator. This arrangement permits the detection of disc rupture, pinholing or leakage which could cause a malfunction of the pressure relief device. The frangible disc shall rupture at a nominal pressure 10% above the start-to-discharge pressure of the spring-loaded device.

6.7.5.4.4 In the case of multi-purpose MEGCs used for the carriage of low-pressure liquefied gases, the pressure-relief devices shall open at a pressure as specified in 6.7.3.7.1 for the gas having the highest maximum allowable working pressure of the gases allowed to be carried in the MEGC.

#### 6.7.5.5 *Capacity of pressure relief devices*

6.7.5.5.1 The combined delivery capacity of the pressure relief devices when fitted shall be sufficient that, in the event of total fire engulfment of the MEGC, the pressure (including accumulation) inside the elements does not exceed 120% of the set pressure of the pressure relief device. The formula provided in CGA S-1.2-1995 shall be used to determine the minimum total flow capacity for the system of pressure relief devices. CGA S-1.1-1994 may be used to determine the relief capacity of individual elements. Spring-loaded pressure relief devices may be used to achieve the full relief capacity prescribed in the case of low pressure liquefied gases. In the case of multi-purpose MEGCs, the combined delivery capacity of the pressure-relief devices shall be taken for the gas which requires the highest delivery capacity of the gases allowed to be carried in the MEGC.

6.7.5.5.2 To determine the total required capacity of the pressure relief devices installed on the elements for the carriage of liquefied gases, the thermodynamic properties of the gas shall be considered (see, for example, CGA S-1.2-1995 for low pressure liquefied gases and CGA S-1.1-1994 for high pressure liquefied gases).

**6.7.5.6 *Marking of pressure-relief devices***

6.7.5.6.1 Spring loaded pressure relief devices shall be clearly and permanently marked with the following:

- (a) the pressure (in bar or kPa) at which it is set to discharge;
- (b) the allowable tolerance at the discharge pressure;
- (c) the rated flow capacity of the device in standard cubic metres of air per second (m<sup>3</sup>/s);

When practicable, the following information shall also be shown:

- (d) the manufacturer's name and relevant catalogue number.

6.7.5.6.2 The rated flow capacity marked on frangible discs shall be determined according to CGA S-1.1-1994.

6.7.5.6.3 The rated flow capacity marked on spring loaded pressure relief devices for low pressure liquefied gases shall be determined according to ISO 4126-1:1991.

**6.7.5.7 *Connections to pressure-relief devices***

6.7.5.7.1 Connections to pressure-relief devices shall be of sufficient size to enable the required discharge to pass unrestricted to the pressure relief device. No stop-valve shall be installed between the element and the pressure-relief devices, except when duplicate devices are provided for maintenance or other reasons, and the stop-valves serving the devices actually in use are locked open, or the stop-valves are interlocked so that at least one of the duplicate devices is always operable and capable of meeting the requirements of 6.7.5.5. There shall be no obstruction in an opening leading to or leaving from a vent or pressure-relief device which might restrict or cut-off the flow from the element to that device. The opening through all piping and fittings shall have at least the same flow area as the inlet of the pressure relief device to which it is connected. The nominal size of the discharge piping shall be at least as large as that of the pressure relief device outlet. Vents from the pressure-relief devices, when used, shall deliver the relieved vapour or liquid to the atmosphere in conditions of minimum back-pressure on the relieving device.

**6.7.5.8 *Siting of pressure-relief devices***

6.7.5.8.1 Each pressure relief device shall, under maximum filling conditions, be in communication with the vapour space of the elements for the carriage of liquefied gases. The devices, when fitted, shall be so arranged as to ensure that the escaping vapour is discharged upwards and unrestrictedly as to prevent any impingement of escaping gas or liquid upon the MEGC, its elements or personnel. For flammable and oxidizing gases, the escaping gas shall be directed away from the element in such a manner that it cannot impinge upon the other elements. Heat resistant protective devices which deflect the flow of gas are permissible provided the required pressure relief device capacity is not reduced.

6.7.5.8.2 Arrangements shall be made to prevent access to the pressure-relief devices by unauthorized persons and to protect the devices from damage caused by the MEGC overturning.

**6.7.5.9 Gauging devices**

6.7.5.9.1 When an MEGC is intended to be filled by mass, it shall be equipped with one or more gauging devices. Level-gauges made of glass or other fragile material shall not be used.

**6.7.5.10 MEGC supports, frameworks, lifting and tie-down attachments**

6.7.5.10.1 MEGCs shall be designed and constructed with a support structure to provide a secure base during carriage. The forces specified in 6.7.5.2.8 and the safety factor specified in 6.7.5.2.10 shall be considered in this aspect of the design. Skids, frameworks, cradles or other similar structures are acceptable.

6.7.5.10.2 The combined stresses caused by element mountings (e.g. cradles, frameworks, etc.) and MEGC lifting and tie-down attachments shall not cause excessive stress in any element. Permanent lifting and tie-down attachments shall be fitted to all MEGCs. In no case shall mountings or attachments be welded onto the elements.

6.7.5.10.3 In the design of supports and frameworks, the effects of environmental corrosion shall be taken into account.

6.7.5.10.4 When MEGCs are not protected during carriage, according to 4.2.5.3, the elements and service equipment shall be protected against damage resulting from lateral or longitudinal impact or overturning. External fittings shall be protected so as to preclude the release of the elements' contents upon impact or overturning of the MEGC on its fittings. Particular attention shall be paid to the protection of the manifold. Examples of protection include:

- (a) protection against lateral impact which may consist of longitudinal bars;
- (b) protection against overturning which may consist of reinforcement rings or bars fixed across the frame;
- (c) protection against rear impact which may consist of a bumper or frame;
- (d) protection of the elements and service equipment against damage from impact or overturning by use of an ISO frame in accordance with the relevant provisions of ISO 1496-3:1995.

**6.7.5.11 Design approval**

6.7.5.11.1 The competent authority or its authorized body shall issue a design approval certificate for any new design of an MEGC. This certificate shall attest that the MEGC has been surveyed by that authority, is suitable for its intended purpose and meets the requirements of this Chapter, the applicable provisions for gases of Chapter 4.1 and of packing instruction P200. When a series of MEGCs are manufactured without change in the design, the certificate shall be valid for the entire series. The certificate shall refer to the prototype test report, the materials of construction of the manifold, the standards to which the elements are made and an approval number. The approval number shall consist of the distinguishing sign or mark of the country granting the approval, i.e. the distinguishing sign for use in international traffic, as prescribed by the Convention on Road Traffic, Vienna 1968, and a registration number. Any alternative arrangements according to 6.7.1.2 shall be indicated on the certificate. A design approval may serve for the approval of smaller MEGCs made of materials of the same type and thickness, by the same fabrication techniques and with identical supports, equivalent closures and other appurtenances.

6.7.5.11.2 The prototype test report for the design approval shall include at least the following:

- (a) the results of the applicable framework test specified in ISO1496-3:1995;
- (b) the results of the initial inspection and test specified in 6.7.5.12.3;
- (c) the results of the impact test specified in 6.7.5.12.1; and
- (d) certification documents verifying that the cylinders and tubes comply with the applicable standards.

**6.7.5.12** *Inspection and testing*

6.7.5.12.1 For MEGCs meeting the definition of container in the CSC, a prototype representing each design shall be subjected to an impact test. The prototype MEGC shall be shown to be capable of absorbing the forces resulting from an impact not less than 4 times (4 g) the MPGM of the fully loaded MEGC at a duration typical of the mechanical shocks experienced in rail transport. The following is a listing of standards describing methods acceptable for performing the impact test:

Association of American Railroads,  
Manual of Standards and Recommended Practices,  
Specifications for Acceptability of Tank Containers (AAR.600), 1992

Canadian Standards Association (CSA),  
Highway Tanks and Portable Tanks for the Transportation of Dangerous Goods  
(B620-1987)

Deutsche Bahn AG  
Zentralbereich Technik, Minden  
Transportable tanks, longitudinal dynamic impact test

Société Nationale des Chemins de Fer Français  
C.N.E.S.T. 002-1966.  
Tank containers, longitudinal external stresses and dynamic impact tests

Spoornet, South Africa  
Engineering Development Centre (EDC)  
Testing of ISO Tank Containers  
Method EDC/TES/023/000/1991-06.

6.7.5.12.2 The elements and items of equipment of each MEGC shall be inspected and tested before being put into service for the first time (initial inspection and test). Thereafter, MEGCs shall be inspected at no more than five-year intervals (5 year periodic inspection). An exceptional inspection and test shall be performed, regardless of the last periodic inspection and test, when necessary according to 6.7.5.12.5.

6.7.5.12.3 The initial inspection and test of an MEGC shall include a check of the design characteristics, an external examination of the MEGC and its fittings with due regard to the gases to be carried, and a pressure test performed at the test pressures according to packing instruction P200 of 4.1.4.1. The pressure test of the manifold may be performed as a hydraulic test or by using another liquid or gas with the agreement of the competent authority or its authorized body. Before the MEGC is placed into service, a leakproofness test and a test of the satisfactory operation of all service equipment shall also be performed. When the elements and their fittings have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.

- 6.7.5.12.4 The 5-year periodic inspection and test shall include an external examination of the structure, the elements and the service equipment in accordance with 6.7.5.12.6. The elements and the piping shall be tested at the periodicity specified in packing instruction P200 and in accordance with the provisions described in 6.2.1.5. When the elements and equipment have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.
- 6.7.5.12.5 An exceptional inspection and test is necessary when the MEGC shows evidence of damaged or corroded areas, leakage, or other conditions that indicate a deficiency that could affect the integrity of the MEGC. The extent of the exceptional inspection and test shall depend on the amount of damage or deterioration of the MEGC. It shall include at least the examinations required under 6.7.5.12.6.
- 6.7.5.12.6 The examinations shall ensure that:
- (a) the elements are inspected externally for pitting, corrosion, abrasions, dents, distortions, defects in welds or any other conditions, including leakage, that might render the MEGC unsafe for carriage;
  - (b) the piping, valves, and gaskets are inspected for corroded areas, defects, and other conditions, including leakage, that might render the MEGC unsafe for filling, discharge or carriage;
  - (c) missing or loose bolts or nuts on any flanged connection or blank flange are replaced or tightened;
  - (d) all emergency devices and valves are free from corrosion, distortion and any damage or defect that could prevent their normal operation. Remote closure devices and self-closing stop-valves shall be operated to demonstrate proper operation;
  - (e) required markings on the MEGC are legible and in accordance with the applicable requirements; and
  - (f) the framework, the supports and the arrangements for lifting the MEGC are in satisfactory condition.
- 6.7.5.12.7 The inspections and tests in 6.7.5.12.1, 6.7.5.12.3, 6.7.5.12.4 and 6.7.5.12.5 shall be performed or witnessed by a body authorized by the competent authority. When the pressure test is a part of the inspection and test, the test pressure shall be the one indicated on the data plate of the MEGC. While under pressure, the MEGC shall be inspected for any leaks in the elements, piping or equipment.
- 6.7.5.12.8 When evidence of any unsafe condition is discovered, the MEGC shall not be returned to service until it has been corrected and the applicable tests and verifications are passed.
- 6.7.5.13 **Marking**
- 6.7.5.13.1 Every MEGC shall be fitted with a corrosion resistant metal plate permanently attached to the MEGC in a conspicuous place readily accessible for inspection. The elements shall be marked in accordance with Chapter 6.2. At least the following information shall be marked on the plate by stamping or by any other similar method:

Country of manufacture  
 U Approval Approval For Alternative Arrangements (see 6.7.1.2)  
 N country number "AA"  
 Manufacturer's name or mark  
 Manufacturer's serial number  
 Authorized body for the design approval  
 Year of manufacture  
 Test pressure: \_\_\_\_\_ bar gauge  
 Design temperature range \_\_\_\_\_ °C to \_\_\_\_\_ °C  
 Number of elements \_\_\_\_\_  
 Total water capacity \_\_\_\_\_ litres  
 Initial pressure test date and identification of the authorized body  
 Date and type of most recent periodic tests  
 Month \_\_\_\_\_ Year \_\_\_\_\_  
 Stamp of the authorized body which performed or witnessed the most recent test

*NOTE: No metal plate may be fixed to the elements.*

6.7.5.13.2 The following information shall be marked on a metal plate firmly secured to the MEGC:

Name of the operator  
 Maximum permissible load mass \_\_\_\_\_ kg  
 Working pressure at 15°C: \_\_\_\_\_ bar gauge  
 Maximum permissible gross mass (MPGM) \_\_\_\_\_ kg  
 Unladen (tare) mass \_\_\_\_\_ kg

## CHAPTER 6.8

### REQUIREMENTS FOR THE CONSTRUCTION, EQUIPMENT, TYPE APPROVAL, INSPECTIONS AND TESTS, AND MARKING OF FIXED TANKS (TANK-VEHICLES), DEMOUNTABLE TANKS AND TANK-CONTAINERS AND TANK SWAP BODIES, WITH SHELLS MADE OF METALLIC MATERIALS, AND BATTERY-VEHICLES AND MULTIPLE ELEMENT GAS CONTAINERS (MEGCs)

**NOTE:** For portable tanks see Chapter 6.7, for fibre-reinforced plastics tanks see Chapter 6.9, for vacuum operated waste tanks see Chapter 6.10.

#### 6.8.1 Scope

6.8.1.1 The requirements across the whole width of the page apply both to fixed tanks (tank-vehicles), to demountable tanks and battery-vehicles, and to tank-containers, tank swap bodies and MEGCs. Those contained in a single column apply only:

- to fixed tanks (tank-vehicles), to demountable tanks and battery-vehicles (left hand column);
- to tank-containers, tank swap bodies and MEGCs (right hand column).

6.8.1.2 These requirements shall apply to

fixed tanks (tank-vehicles), demountable tanks and battery-vehicles		tank-containers, tank swap bodies and MEGCs
---	--	---

used for the carriage of gaseous, liquid, powdery or granular substances.

6.8.1.3 Section 6.8.2 sets out the requirements applicable to fixed tanks (tank-vehicles), to demountable tanks, tank-containers, tank swap bodies intended for the carriage of substances of all classes and battery-vehicles and MEGCs for gases of Class 2. Sections 6.8.3 to 6.8.5 contain special requirements supplementing or modifying the requirements of section 6.8.2.

6.8.1.4 For provisions concerning use of these tanks, see Chapter 4.3.

#### 6.8.2 Requirements applicable to all classes

##### 6.8.2.1 Construction

###### *Basic principles*

6.8.2.1.1 Shells, their attachments and their service and structural equipment shall be designed to withstand without loss of contents (other than quantities of gas escaping through any degassing vents):

- static and dynamic stresses in normal conditions of carriage as defined in 6.8.2.1.2 and 6.8.2.1.13;
- prescribed minimum stresses as defined in 6.8.2.1.15.

- 6.8.2.1.2 The tanks and their fastenings shall be capable of absorbing, under the maximum permissible load, the forces exerted by:
- in the direction of travel: twice the total mass;
  - at right angles to the direction of travel: the total mass;
  - vertically upwards: the total mass;
  - vertically downwards: twice the total mass.
- Tank-containers and their fastenings shall, under the maximum permissible load be capable of absorbing the forces equal to those exerted by:
- in the direction of travel: twice the total mass;
  - horizontally at right angles to the direction of travel: the total mass; (where the direction of travel is not clearly determined, twice the total mass in each direction);
  - vertically upwards: the total mass;
  - vertically downwards: twice the total mass.
- 6.8.2.1.3 The walls of the shells shall have at least the thickness specified in  
6.8.2.1.17 to 6.8.2.1.21 | 6.8.2.1.17 to 6.8.2.1.20.
- 6.8.2.1.4 Shells shall be designed and constructed in accordance with the requirements of a technical code recognized by the competent authority, in which the material is chosen and the shell thickness determined taking into account maximum and minimum filling and working temperatures, but the following minimum requirements of 6.8.2.1.6 to 6.8.2.1.26 shall be met.
- 6.8.2.1.5 Tanks intended to contain certain dangerous substances shall be provided with additional protection. This may take the form of additional thickness of the shell (increased calculation pressure) determined in the light of the dangers inherent in the substances concerned or of a protective device (see the special provisions of 6.8.4).
- 6.8.2.1.6 Welds shall be skilfully made and shall afford the fullest safety. The execution and checking of welds shall comply with the requirements of 6.8.2.1.23.
- 6.8.2.1.7 Measures shall be taken to protect shells against the risk of deformation as a result of a negative internal pressure. Shells, other than shells according to 6.8.2.2.6, designed to be equipped with vacuum valves shall be able to withstand, without permanent deformation, an external pressure of not less than 21 kPa (0.21 bar) above the internal pressure. The vacuum valves shall be set to relieve at a vacuum setting not greater than the tank's design vacuum pressure. Shells, which are not designed to be equipped with a vacuum valve shall be able to withstand, without permanent deformation an external pressure of not less than 40 kPa (0.4 bar) above the internal pressure.
- Materials for shells*
- 6.8.2.1.8 Shells shall be made of suitable metallic materials which, unless other temperature ranges are prescribed in the various classes, shall be resistant to brittle fracture and to stress corrosion cracking between -20 °C and +50 °C.
- 6.8.2.1.9 The materials of shells or of their protective linings which are in contact with the contents shall not contain substances liable to react dangerously (see "Dangerous reaction" in 1.2.1) with the contents, to form dangerous compounds, or substantially to weaken the material.

If contact between the substance carried and the material used for the construction of the shell entails a progressive decrease in the shell thickness, this thickness shall be increased at manufacture by an appropriate amount. This additional thickness to allow for corrosion shall not be taken into consideration in calculating the shell thickness.

- 6.8.2.1.10 For welded shells only materials of faultless weldability whose adequate impact strength at an ambient temperature of  $-20\text{ }^{\circ}\text{C}$  can be guaranteed, particularly in the weld seams and the zones adjacent thereto, shall be used.

If fine-grained steel is used, the guaranteed value of the yield strength  $R_e$  shall not exceed  $460\text{ N/mm}^2$  and the guaranteed value of the upper limit of tensile strength  $R_m$  shall not exceed  $725\text{ N/mm}^2$ , in accordance with the specifications of the material.

- 6.8.2.1.11 Ratios of  $R_e/R_m$  exceeding 0.85 are not allowed for steels used in the construction of welded tanks.

$R_e$  = apparent yield strength for steels having a clearly-defined yield point or  
guaranteed 0.2% proof strength for steels with no clearly-defined yield point  
(1% for austenitic steels)

$R_m$  = tensile strength.

The values specified in the inspection certificate for the material shall be taken as a basis in determining this ratio in each case.

- 6.8.2.1.12 For steel, the elongation at fracture, in % shall be not less than

$$\frac{10\ 000}{\text{determined tensile strength in N/mm}^2}$$

but in any case for fine-grained steels it shall be not less than 16% and not less than 20% for other steels.

For aluminium alloys the elongation at fracture shall be not less than 12%<sup>1</sup>.

#### *Calculation of the shell thickness*

- 6.8.2.1.13 The pressure on which the shell thickness is based shall not be less than the calculation pressure, but the stresses referred to in 6.8.2.1.1 shall also be taken into account, and, if necessary, the following stresses:

In the case of vehicles in which the tank constitutes a stressed self-supporting member, the shell shall be designed to withstand the stresses thus imposed in addition to stresses from other sources.

<sup>1</sup> In the case of sheet metal the axis of the tensile test-piece shall be at right angles to the direction of rolling. The permanent elongation at fracture shall be measured on test-pieces of circular cross-section in which the gauge length  $l$  is equal to five times the diameter  $d$  ( $l = 5d$ ); if test-pieces of rectangular section are used, the gauge length shall be calculated by the formula

$$l = 5,65 \sqrt{F_0},$$

where  $F_0$  indicates the initial cross-section area of the test-piece.

Under these stresses, the stress at the most severely stressed point of the shell and its fastenings shall not exceed the value  $\sigma$  defined in 6.8.2.1.16.

Under each of these stresses the safety factors to be observed shall be the following:

- for metals having a clearly-defined yield point: a safety factor of 1.5 in relation to the apparent yield strength; or
- for metals with no clearly-defined yield point: a safety factor of 1.5 in relation to the guaranteed 0.2% proof strength (1% maximum elongation for austenitic steels).

6.8.2.1.14 The calculation pressure is in the second part of the code (see 4.3.4.1) according to Column (12) of Table A of Chapter 3.2.

When "G" appears, the following requirements shall apply:

- (a) Gravity-discharge shells intended for the carriage of substances having a vapour pressure not exceeding 110 kPa (1.1 bar) (absolute pressure) at 50 °C shall be designed for a calculation pressure of twice the static pressure of the substance to be carried but not less than twice the static pressure of water.
- (b) Pressure-filled or pressure-discharge shells intended for the carriage of substances having a vapour pressure not exceeding 110 kPa (1.1 bar) (absolute pressure) at 50 °C shall be designed for a calculation pressure equal to 1.3 times the filling or discharge pressure.

When the numerical value of the minimum calculation pressure is given (gauge pressure) the shell shall be designed for this pressure which shall not be less than 1.3 times the filling or discharge pressure. The following minimum requirements shall apply in these cases:

- (c) Shells intended for the carriage of substances having a vapour pressure of more than 110 kPa (1.1 bar) but not more than 175 kPa (1.75 bar) (absolute pressure) at 50 °C shall, whatever their filling or discharge system, be designed for a calculation pressure of not less than 150 kPa (1.5 bar) gauge pressure or 1.3 times the filling or discharge pressure, whichever is the higher.
- (d) Shells intended for the carriage of substances having a vapour pressure of more than 175 kPa (1.75 bar) (absolute pressure) at 50 °C shall, whatever their filling or discharge system, be designed for a calculation pressure equal to 1.3 times the filling or discharge pressure but not less than 0.4 MPa (4 bar) (gauge pressure).

6.8.2.1.15 At the test pressure, the stress  $\sigma$  at the most severely stressed point of the shell shall not exceed the material-dependent limits prescribed below. Allowance shall be made for any weakening due to the welds.

6.8.2.1.16 For all metals and alloys, the stress  $\sigma$  at the test pressure shall be lower than the smaller of the values given by the following formulae:

$$\sigma \leq 0.75 Re \text{ or } \sigma \leq 0.5 Rm$$

where

Re = apparent yield strength for steels having a clearly-defined yield point or  
guaranteed 0.2% proof strength for steels with no clearly-defined yield point  
(1% for austenitic steels)

Rm = tensile strength.

The values of Re and Rm to be used shall be specified minimum values according to material standards. If no material standard exists for the metal or alloy in question, the values of Re and Rm used shall be approved by the competent authority or by a body designated by that authority.

When austenitic steels are used, the specified minimum values according to the material standards may be exceeded by up to 15% if these higher values are attested in the inspection certificate. The minimum values shall, however, not be exceeded when the formula given in 6.8.2.1.18 is applied.

**Minimum shell thickness**

6.8.2.1.17 The shell thickness shall not be less than the greater of the values determined by the following formulae:

$$e = \frac{P_T D}{2 \sigma \lambda}$$

$$e = \frac{P_C D}{2 \sigma}$$

where:

e = minimum shell thickness in mm

P<sub>T</sub> = test pressure in MPa

P<sub>C</sub> = calculation pressure in MPa as specified in 6.8.2.1.14

D = internal diameter of shell in mm

σ = permissible stress, as defined in 6.8.2.1.16, in N/mm<sup>2</sup>

λ = a coefficient not exceeding or equal to 1, allowing for any weakening due to welds, and linked to the inspection methods defined in 6.8.2.1.23.

The thickness shall in no case be less than that defined in

6.8.2.1.18 to 6.8.2.1.21.

6.8.2.1.18 to 6.8.2.1.20.

- 6.8.2.1.18 Shells of circular cross-section<sup>2</sup> not more than 1.80 m in diameter other than those referred to in 6.8.2.1.21, shall not be less than 5 mm thick if of mild steel<sup>3</sup>, or of equivalent thickness if of another metal.
- Where the diameter is more than 1.80 m, this thickness shall be increased to 6 mm except in the case of shells intended for the carriage of powdery or granular substances, if the shell is of mild steel<sup>3</sup> or to an equivalent thickness if of another metal.
- Shells shall be not less than 5 mm thick if of mild steel<sup>3</sup> (in conformity with the requirements of 6.8.2.1.11 and 6.8.2.1.12) or of equivalent thickness if of another metal. Where the diameter is more than 1.80 m, this thickness shall be increased to 6 mm except in the case of tanks intended for the carriage of powdery or granular substances, if the shell is of mild steel<sup>3</sup> or to an equivalent thickness if of another metal.
- Whatever the metal used, the shell thickness shall in no case be less than 3 mm.

"Equivalent thickness" means the thickness obtained by the following formula<sup>4</sup>:

$$e_1 = \frac{464e_0}{\sqrt[3]{R_{m1}A_1}}$$

- 6.8.2.1.19 Where protection of the tank against damage through lateral impact or overturning is provided according to 6.8.2.1.20, the competent authority may allow the aforesaid minimum thicknesses to be reduced in proportion to the protection provided; however, the said thicknesses shall not be less than 3 mm in the case of mild steel<sup>3</sup>, or than an equivalent thickness in the case of other materials, for shells not more than 1.80 m in diameter. For shells with a diameter exceeding 1.80 m the aforesaid
- Where protection of the tank against damage is provided according to 6.8.2.1.20, the competent authority may allow the aforesaid minimum thicknesses to be reduced in proportion to the protection provided; however, the said thicknesses shall be not less than 3 mm in the case of mild steel<sup>3</sup>, or than an equivalent thickness in the case of other materials, for shells not more than 1.80 m in diameter. For shells of a diameter exceeding 1.80 m this minimum thickness shall be increased to 4 mm in the case of

<sup>2</sup> For shells not of a circular cross-section, for example box-shaped or elliptical shells, the indicated diameters shall correspond to those calculated on the basis of a circular cross-section of the same area. For such shapes of cross-section the radius of convexity of the shell wall shall not exceed 2 000 mm at the sides or 3 000 mm at the top and bottom.

<sup>3</sup> For the definitions of "mild steel" and "reference steel" see 1.2.1.

<sup>4</sup> This formula is derived from the general formula:

$$e_1 = e_0 \sqrt[3]{\left(\frac{R_{m0}A_0}{R_{m1}A_1}\right)^2}$$

where

- $e_1$  = minimum shell thickness for the metal chosen, in mm;
- $e_0$  = minimum shell thickness for mild steel, in mm, according to 6.8.2.1.18 and 6.8.2.1.19;
- $R_{m0}$  = 370 (tensile strength for reference steel, see definition 1.2.1, in N/mm<sup>2</sup>);
- $A_0$  = 27 (elongation at fracture for reference steel, in %);
- $R_{m1}$  = minimum tensile strength of the metal chosen, in N/mm<sup>2</sup>; and
- $A_1$  = minimum elongation at fracture of the metal chosen under tensile stress, in %.

minimum thickness shall be increased to 4 mm in the case of mild steel<sup>3</sup> and to an equivalent thickness in the case of other metals.

Equivalent thickness means the thickness given by the formula in 6.8.2.1.18.

Except in cases for which 6.8.2.1.21 provide, the thickness of shells with protection against damage in accordance with 6.8.2.1.20 (a) or (b) shall not be less than the values given in the table below.

mild steel<sup>3</sup>, and to an equivalent thickness in the case of other metals.

Equivalent thickness means the thickness given by the formula in 6.8.2.1.18.

The thickness of shells with protection against damage in accordance with 6.8.2.1.20 shall not be less than the values given in the table below.

		Diameter of shell	
		≤ 1.80 m	> 1.80 m
Minimum thickness of shells	Stainless austenitic steels	2.5 mm	3 mm
	Other steels	3 mm	4 mm
	Aluminium alloys	4 mm	5 mm
	Pure aluminium of 99.80%	6 mm	8 mm

## 6.8.2.1.20

For tanks built after 1 January 1990, there is protection against damage as referred to in 6.8.2.1.19 when the following measures or equivalent measures are adopted:

(a) For tanks intended for the carriage of powdery or granular substances, the protection against damage shall satisfy the competent authority.

(b) For tanks intended for the carriage of other substances, there is protection against damage when:

1. For shells with a circular or elliptical cross-section having a maximum radius of curvature of 2 m, the shell is equipped with strengthening members comprising partitions, surge-plates or external or internal rings, so placed that at least one of the following conditions is met:

The protection referred to in 6.8.2.1.19 may consist of:

- overall external structural protection as in "sandwich" construction where the sheathing is secured to the shell; or
- a structure in which the shell is supported by a complete skeleton including longitudinal and transverse structural members; or
- double-wall construction.

Where the tanks are made with double walls, the space between being evacuated of air, the aggregate thickness of the outer metal wall and the shell wall shall correspond to the minimum wall thickness prescribed in 6.8.2.1.18, the thickness of the wall of the shell itself being not less than the minimum thickness prescribed in 6.8.2.1.19.

Where tanks are made with double walls with an intermediate layer of solid materials at least 50 mm thick, the outer wall shall have a thickness of not less than 0.5 mm if it

<sup>3</sup>

For the definitions of "mild steel" and "reference steel" see 1.2.1.

- Distance between two adjacent strengthening elements of not more than 1.75 m.
- Volume contained between two partitions or surge-plates of not more than 7 500 l.

The vertical cross-section of a ring, with the associated coupling, shall have a section modulus of at least 10 cm<sup>3</sup>.

External rings shall not have projecting edges with a radius of less than 2.5 mm.

Partitions and surge-plates shall conform to the requirements of 6.8.2.1.22.

The thickness of the partitions and surge-plates shall in no case be less than that of the shell.

2. For tanks made with double walls, the space between being evacuated of air, the aggregate thickness of the outer metal wall and the shell wall corresponds to the wall thickness prescribed in 6.8.2.1.18, and the thickness of the wall of the shell itself is not less than the minimum thickness prescribed in 6.8.2.1.19.
3. For tanks made with double walls having an intermediate layer of solid materials at least 50 mm thick, the outer wall has a thickness of at least 0.5 mm of mild steel<sup>3</sup> or at least 2 mm of a plastics material reinforced with glass fibre. Solid foam (with an impact absorption capacity like that, for example, of polyurethane foam) may be used as the intermediate layer of solid material.
4. Shells of forms other than in 1, especially box-shaped shells, are provided, all round the mid-point of

is made of mild steel<sup>3</sup> or at least 2 mm if it is made of a plastics material reinforced with glass fibre. Solid foam with an impact absorption capacity such as that, for example, of polyurethane foam, may be used as the intermediate layer of solid material.

<sup>3</sup> For the definitions of "mild steel" and "reference steel" see 1.2.1.

their vertical height and over at least 30% of their height with a protection designed in such a way as to offer specific resilience at least equal to that of a shell constructed in mild steel <sup>3</sup> of a thickness of 5 mm (for a shell diameter not exceeding 1.80 m) or 6 mm (for a shell diameter exceeding 1.80 m). The protection shall be applied in a durable manner to the outside of the shell.

This requirement shall be considered to have been met without further proof of the specific resilience when the protection involves the welding of a plate of the same material as the shell to the area to be strengthened, so that the minimum wall thickness is in accordance with 6.8.2.1.18.

This protection is dependent upon the possible stresses exerted on mild steel <sup>3</sup> shells in the event of an accident, where the ends and walls have a thickness of at least 5 mm for a diameter not exceeding 1.80 m or at least 6 mm for a diameter exceeding 1.80 m. If another metal is used, the equivalent thickness shall be obtained in accordance with the formula in 6.8.2.1.18.

For demountable tanks this protection is not required when they are protected on all sides by the drop sides of the carrying vehicle.

6.8.2.1.21 The thickness of shells designed in accordance with 6.8.2.1.14 (a) which either are of not more than 5 000 litres capacity or are divided into leakproof compartments of not more than 5 000 litres unit capacity may be adjusted to a level which, unless prescribed otherwise in 6.8.3 or 6.8.4, shall however not be less than the appropriate value shown in the following table:

<sup>3</sup> For the definitions of "mild steel" and "reference steel" see 1.2.1.

Maximum radius of curvature of shell (m)	Capacity of shell or shell compartment (m <sup>3</sup> )	Minimum thickness (mm)
		Mild steel
≤ 2	≤ 5.0	3
2 - 3	≤ 3.5	3
	> 3.5 but ≤ 5.0	4

Where a metal other than mild steel<sup>3</sup> is used, the thickness shall be determined by the equivalence formula given in 6.8.2.1.18 and shall not be less than the values given in the following table:

	Maximum radius of curvature of shell (m)	≤ 2	2-3	2-3
	Capacity of shell or shell compartment (m <sup>3</sup> )	≤ 5.0	≤ 3.5	> 3.5 but ≤ 5.0
Minimum thickness of shell	Austenitic stainless steels	2.5 mm	2.5 mm	3 mm
	Other steels	3 mm	3 mm	4 mm
	Aluminium alloys	4 mm	4 mm	5 mm
	Pure aluminium at 99.80%	6 mm	6 mm	8 mm

The thickness of the partitions and surge-plates shall in no case be less than that of the shell.

- 6.8.2.1.22 Surge-plates and partitions shall be dished, with a depth of dish of not less than 10 cm, or shall be corrugated, profiled or otherwise reinforced to give equivalent strength. The area of the surge plate shall be at least 70% of the cross-sectional area of the tank in which the surge-plate is fitted.

<sup>3</sup> For the definitions of "mild steel" and "reference steel" see 1.2.1.

**Welding and inspection of welds**

- 6.8.2.1.23 The manufacturer's qualification for performing welding operations shall be one recognized by the competent authority. Welding shall be performed by skilled welders using a welding process whose effectiveness (including any heat treatments required) has been demonstrated by test. Non-destructive tests shall be carried out by radiography or by ultrasound and must confirm that the quality of the welding is appropriate to the stresses.

The following checks shall be carried out in accordance with the value of the coefficient  $\lambda$  used in determining the thickness of the shell in 6.8.2.1.17:

- $\lambda = 0.8$ : the weld beads shall so far as possible be inspected visually on both faces and shall be subjected to a non-destructive spot check with particular attention to connections;
- $\lambda = 0.9$ : all longitudinal beads throughout their length, all connections, 25% of circular beads, and welds for the assembly of large-diameter items of equipment shall be subjected to non-destructive checks. Beads shall be checked visually on both sides as far as possible;
- $\lambda = 1$ : all beads shall be subjected to non-destructive checks and are so far as possible inspected visually on both sides. A weld test-piece shall be taken.

Where the competent authority has doubts regarding the quality of weld beads, it may require additional checks.

**Other construction requirements**

- 6.8.2.1.24 The protective lining shall be so designed that its leakproofness remains intact, whatever the deformation liable to occur in normal conditions of carriage (see 6.8.2.1.2).
- 6.8.2.1.25 The thermal insulation shall be so designed as not to hinder access to, or the operation of, filling and discharge devices and safety valves.
- 6.8.2.1.26 If shells intended for the carriage of flammable liquids having a flash-point of not more than 61°C are fitted with non-metallic protective linings (inner layers), the shells and the protective linings shall be so designed that no danger of ignition from electrostatic charges can occur.
- |   |  |
|---|--|
| <p>6.8.2.1.27 Shells intended for the carriage of liquids having a flash-point of not more than 61 C or for the carriage of flammable gases, or of UN No.1361 carbon or UN No.1361 carbon black, packing group II, shall be linked to the chassis by means of at least one good electrical connection. Any metal contact capable of causing electrochemical corrosion shall be avoided. Shells shall be provided with at least one earth fitting clearly marked with the symbol "⚡", capable of being electrically connected.</p> | <p>All parts of a tank-container intended for the carriage of liquids having a flash-point of not more than 61 C, flammable gases, or UN No.1361 carbon or UN No.1361 carbon black, packing group II, shall be capable of being electrically earthed. Any metal contact capable of causing electrochemical corrosion shall be avoided.</p> |
|---|--|

6.8.2.1.28 *Protection of fittings mounted on the upper part of the tank*

The fittings and accessories mounted on the upper part of the tank shall be protected against damage caused by overturning. This protection may take the form of strengthening rings, protective canopies or transverse or longitudinal members so shaped that effective protection is given.

6.8.2.2 *Items of equipment*

6.8.2.2.1 Suitable non-metallic materials may be used to manufacture service and structural equipment.

The items of equipment shall be so arranged as to be protected against the risk of being wrenched off or damaged during carriage or handling. They shall exhibit a suitable degree of safety comparable to that of the shells themselves, and shall in particular:

- be compatible with the substances carried; and
- meet the requirements of 6.8.2.1.1.

As many operating parts as possible shall be served by the smallest possible number of openings in the shell. The leakproofness of the service equipment including the closure (cover) of the inspection openings shall be ensured even in the event of overturning of the tank, taking into account the forces generated by an impact (such as acceleration and dynamic pressure). Limited release of the tank contents due to a pressure peak during the impact is however allowed.

The leakproofness of the service equipment shall be ensured even in the event of the overturning of the tank-container.

The gaskets shall be made of a material compatible with the substance carried and shall be replaced as soon as their effectiveness is impaired, for example as a result of ageing.

Gaskets ensuring the leakproofness of fittings requiring manipulation during normal use of tanks shall be so designed and arranged that manipulation of the fittings incorporating them does not damage them.

6.8.2.2.2 Each bottom-filling or bottom-discharge opening in tanks which are referred to, in Column (12) of Table A of Chapter 3.2, with a tank code including the letter "A" in its third part (see 4.3.4.1.1) shall be equipped with at least two mutually independent closures, mounted in series, comprising

- an external stop-valve with piping made of a malleable metal material and
- a closing device at the end of each pipe which may be a screw-threaded plug, a blank flange or an equivalent device.

Each bottom-filling or bottom-discharge opening in tanks which are referred to, in Column (12) of Table A of Chapter 3.2, with a tank code including the letter "B" in its third part (see 4.3.3.1.1 or 4.3.4.1.1) shall be equipped with at least three mutually independent closures, mounted in series, comprising

- an internal stop-valve, i.e. a stop-valve mounted inside the shell or in a welded flange or companion flange;
  - an external stop-valve or an equivalent device<sup>5</sup>
- one at the end of each pipe                      | as near as possible to the shell

and

- a closing device at the end of each pipe, which may be a screw-threaded plug, a blank flange or an equivalent device.

However, in the case of tanks intended for the carriage of certain crystallizable or highly viscous substances and shells fitted with an ebonite or thermoplastic coating, the internal stop-valve may be replaced by an external stop-valve provided with additional protection.

The internal stop-valve shall be operable either from above or from below. Its setting - open or closed - shall so far as possible in each case be capable of being verified from the ground. Internal stop-valve control devices shall be so designed as to prevent any unintended opening through impact or an inadvertent act.

The internal shut-off device shall continue to be effective in the event of damage to the external control device.

In order to avoid any loss of contents in the event of damage to the external fittings (pipes, lateral shut-off devices), the internal stop-valve and its seating shall be protected against the danger of being wrenched off by external stresses or shall be so designed as to resist them. The filling and discharge devices (including flanges or threaded plugs) and protective caps (if any) shall be capable of being secured against any unintended opening.

The position and/or direction of closure of shut-off devices shall be clearly apparent.

All openings of tanks which are referred to in Column (12) of Table A of Chapter 3.2, by a tank code including letter "C" or "D" in its third part (see 4.3.3.1.1 and 4.3.4.1.1) shall be situated above the surface level of the liquid. These tanks shall have no pipes or pipe connections below the surface level of the liquid. The cleaning openings (fist-holes) are, however, permitted in the lower part of the shell for tanks referred to by a tank code including letter "C" in its third part. This opening shall be capable of being sealed by a flange so closed as to be leakproof and whose design shall be approved by the competent authority or by a body designated by that authority.

6.8.2.2.3 Unless otherwise prescribed in the provisions of 6.8.4, tanks may have valves to avoid an unacceptable negative internal pressure, without intervening bursting discs.

6.8.2.2.4 The shell or each of its compartments shall be provided with an opening large enough to permit inspection.

<sup>5</sup> *In the case of tank-containers of less than 1 m<sup>3</sup> capacity, the external stop-valve or other equivalent device may be replaced by a blank flange.*

6.8.2.2.5 (Reserved)

6.8.2.2.6 Tanks intended for the carriage of liquids having a vapour pressure of not more than 110 kPa (1.1 bar) (absolute) at 50 °C shall have a venting system and a safety device to prevent the contents from spilling out if the tank overturns; otherwise they shall conform to 6.8.2.2.7 or 6.8.2.2.8.

6.8.2.2.7 Tanks intended for the carriage of liquids having a vapour pressure of more than 110 kPa (1.1 bar) but not exceeding 175 kPa (1.75 bar) (absolute) at 50 °C shall have a safety valve set at not less than 150 kPa (1.5 bar) (gauge pressure) and which shall be fully open at a pressure not exceeding the test pressure; otherwise they shall conform to 6.8.2.2.8.

6.8.2.2.8 Tanks intended for the carriage of liquids having a vapour pressure of more than 175 kPa (1.75 bar) but not exceeding 300 kPa (3 bar) (absolute) at 50° C shall have a safety valve set at not less than 300 kPa (3 bar) gauge pressure and which shall be fully open at a pressure not exceeding the test pressure; otherwise they shall be hermetically closed<sup>6</sup>.

6.8.2.2.9 Movable parts such as covers, closures, etc., which are liable to come into frictional or percussive contact with aluminium shells intended for the carriage of flammable liquids having a flash-point of not more than 61 °C or for the carriage of flammable gases shall not be made of unprotected corrodible steel.

### 6.8.2.3 Type approval

6.8.2.3.1 The competent authority or a body designated by that authority shall issue in respect of each new type of tank-vehicle, demountable tank, tank-container, tank swap body, battery-vehicle or MEGC a certificate attesting that the type, including fastenings, which it has inspected is suitable for the purpose for which it is intended and meets the construction requirements of 6.8.2.1, the equipment requirements of 6.8.2.2 and the special conditions for the classes of substances carried.

The certificate shall show:

- the results of the test;
- an approval number for the type;

The approval number shall consist of the distinguishing sign<sup>7</sup> of the State in whose territory the approval was granted and a registration number.

- the tank code in accordance with 4.3.3.1.1 or 4.3.4.1.1;
- special construction (TC), equipment (TE) and type approval (TA) requirements of 6.8.4 applicable to the type;
- if required, the substances and/or group of substances for the carriage of which the tank has been approved. These shall be shown with their chemical name or the corresponding collective entry (see 2.1.1.2), together with their classification (Class, classification code and packing group). With the exception of substances of Class 2

<sup>6</sup> For the definition of "hermetically closed tank" see 1.2.1.

<sup>7</sup> Distinguishing sign for use in international traffic prescribed by the Convention on Road Traffic (Vienna, 1968).

and those listed in 4.3.4.1.3, the listing of approved substances may be dispensed with. In such cases, groups of substances permitted on the basis of the tank code shown in the rationalised approach in 4.3.4.1.2 shall be accepted for carriage taking into account any relevant special provision.

The substances referred to in the certificate or the groups of substances approved according to the rationalised approach shall, in general, be compatible with the characteristics of the tank. A reservation shall be included in the certificate if it was not possible to investigate this compatibility exhaustively when the type approval was issued.

- 6.8.2.3.2 If the tanks, battery-vehicles or MECGs are manufactured in series without modification this approval shall be valid for the tanks, battery-vehicles or MECGs manufactured in series or according to the prototype.

A type approval may however serve for the approval of tanks with limited variations of the design that either reduce the loads and stresses on the tanks (e.g. reduced pressure, reduced mass, reduced volume) or increase the safety of the structure (e.g. increased shell thickness, more surge-plates, decreased diameter of openings). The limited variations shall be clearly described in the type approval certificate.

#### 6.8.2.4 *Inspections and tests*

- 6.8.2.4.1 Shells and their equipment shall either together or separately undergo an initial inspection before being put into service. This inspection shall include:

- a check of conformity to the approved type;
- a check of the design characteristics <sup>8</sup>
- an examination of the internal and external conditions;
- a hydraulic pressure test <sup>9</sup> at the test pressure indicated on the plate prescribed in 6.8.2.5.1; and
- a leakproofness test and a check of satisfactory operation of the equipment.

Except in the case of Class 2, the test pressure for the hydraulic pressure test depends on the calculation pressure and shall be at least equal to the pressure indicated below:

Calculation pressure (bar)	Test pressure (bar)
G <sup>10</sup>	G <sup>10</sup>
1.5	1.5
2.65	2.65
4	4
10	4
15	4
21	10 (4) <sup>11</sup>

<sup>8</sup> The check of the design characteristics shall also include, for shells requiring a test pressure of 1 MPa (10 bar) or higher, the taking of weld test-pieces (work samples) in accordance with 6.8.2.1.23 and the tests prescribed in 6.8.5.

<sup>9</sup> In special cases and with the agreement of the expert approved by the competent authority, the hydraulic pressure test may be replaced by a pressure test using another liquid or gas, where such an operation does not present any danger.

<sup>10</sup> G = minimum calculation pressure according to the general requirements of 6.8.2.1.14 (see 4.3.4.1).

<sup>11</sup> Minimum test pressure for UN No. 1744 bromine or UN No. 1744 bromine solution.

The minimum test pressures for Class 2 are given in the table of gases and gas mixtures in 4.3.3.2.5.

The hydraulic pressure test shall be carried out on the shell as a whole and separately on each compartment of compartmented shells.

The test shall be carried out on each compartment at a pressure at least equal to 1.3 times the maximum working pressure.

The hydraulic pressure test shall be carried out before the installation of a thermal insulation as may be necessary.

If the shells and their equipment are tested separately, they shall be jointly subjected to a leakproofness test after assembly in accordance with 6.8.2.4.3.

The leakproofness test shall be carried out separately on each compartment of compartmented shells.

6.8.2.4.2 Shells and their equipment shall undergo periodic inspections at fixed intervals. The periodic inspections shall include: an external and internal examination and, as a general rule, a hydraulic pressure test<sup>9</sup> (for the test pressure for the shells and compartments if applicable, see 6.8.2.4.1).

Sheathing for thermal or other insulation shall be removed only to the extent required for reliable appraisal of the characteristics of the shell.

In the case of tanks intended for the carriage of powdery or granular substances, and with the agreement of the expert approved by the competent authority, the periodic hydraulic pressure test may be omitted and replaced by leakproofness tests in accordance with 6.8.2.4.3.

The maximum intervals for inspection shall be six years. | The maximum intervals for inspections shall be five years.

6.8.2.4.3 In addition, a leakproofness test of the shell with its equipment and a check of the satisfactory operation of all the equipment shall be carried out

at least every three years. | at least every two and a half years.

For this purpose the tank shall be subjected to an effective internal pressure at least equal to the maximum working pressure. For tanks intended for the carriage of liquids, when a gas is used for the leakproofness test it shall be carried out at a pressure at least equal to 25% of the maximum working pressure. In all cases, it shall not be less than 20 kPa (0.2 bar) (gauge pressure).

For tanks equipped with venting systems and a safety device to prevent the contents spilling out if the tank overturns, the pressure test shall be equal to the static pressure of the filling substance.

<sup>9</sup> In special cases and with the agreement of the expert approved by the competent authority, the hydraulic pressure test may be replaced by a pressure test using another liquid or gas, where such an operation does not present any danger.

The leakproofness test shall be carried out separately on each compartment of compartmented shells.

6.8.2.4.4 When the safety of the tank or of its equipment may have been impaired as a result of repairs, alterations or accident, an exceptional check shall be carried out.

6.8.2.4.5 The tests, inspections and checks in accordance with 6.8.2.4.1 to 6.8.2.4.4 shall be carried out by the expert approved by the competent authority. Certificates shall be issued showing the results of these operations. These certificates shall refer to the list of the substances permitted for carriage in this tank or to the tank code in accordance with 6.8.2.3.

#### 6.8.2.5 *Marking*

6.8.2.5.1 Every tank shall be fitted with a corrosion-resistant metal plate permanently attached to the tank in a place readily accessible for inspection. The following particulars at least shall be marked on the plate by stamping or by any other similar method. These particulars may be engraved directly on the walls of the shell itself, if the walls are so reinforced that the strength of the shell is not impaired<sup>12</sup>:

- approval number;
- manufacturer's name or mark;
- manufacturer's serial number;
- year of manufacture;
- test pressure (gauge pressure);
- capacity -in the case of multiple-element shells, the capacity of each element;
- design temperature (only if above +50 °C or below -20 °C);
- date (month and year) of initial test and most recent periodic test in accordance with 6.8.2.4.1 and 6.8.2.4.2;
- stamp of the expert who carried out the tests;
- material of the shell and reference to materials standards, if available and, where appropriate, the protective lining;
- test pressure on the shell as a whole and test pressure by compartment in MPa or bar (gauge pressure) where the pressure by compartment is less than the pressure on the shell.

In addition, the maximum working pressure allowed shall be inscribed on pressure-filled or pressure-discharge tanks.

<sup>12</sup> Add the units of measurement after the numerical values.

- 6.8.2.5.2 The following particulars shall be inscribed on the tank-vehicle itself or on a plate <sup>12</sup>:
- name of owner or operator;
  - unladen mass; and
  - maximum permissible mass.
- These particulars shall not be required in the case of a vehicle carrying demountable tanks.
- The tank code according to 4.3.4.1.1 shall be inscribed on the demountable tank itself or on a plate.
- The following particulars shall be inscribed either on the tank-container itself or on a plate <sup>12</sup>:
- names of owner and of operator;
  - capacity of the shell;
  - tare;
  - maximum permissible laden mass;
  - proper shipping name of substance carried <sup>13</sup>;
  - tank code according to 4.3.4.1.1.

**6.8.2.6 Requirements for tanks which are designed, constructed and tested according to standards**

The requirements of Chapter 6.8 are considered to have been complied with if the following standard is applied:

Applicable paragraphs	Reference	Title of document
6.8.2.4 6.8.3.4	EN 12972:2001 (with the exception of annexes D and E)	Tanks for transport of dangerous goods - testing, inspection and marking of metallic tanks.

**6.8.2.7 Requirements for tanks which are not designed, constructed and tested according to standards**

Tanks which are not designed, constructed and tested in accordance with the standards set out in 6.8.2.6 shall be designed, constructed and tested in accordance with the requirements of a technical code recognized by the competent authority. They shall, however, comply with the minimum requirements of 6.8.2.

**6.8.3 Special requirements applicable to Class 2**

**6.8.3.1 Construction of shells**

6.8.3.1.1 Shells intended for the carriage of compressed or liquefied gases or dissolved gases shall be made of steel. In the case of weldless shells, by derogation from 6.8.2.1.12 a minimum elongation at fracture of 14% and also a stress  $\sigma$  lower than or equal to limits hereafter given according to the material may be accepted:

- (a) When the ratio  $Re/Rm$  (of the minimum guaranteed characteristics after heat treatment) is higher than 0.66 without exceeding 0.85:

$$\sigma \leq 0.75 Re;$$

<sup>12</sup> Add the units of measurement after the numerical values.

<sup>13</sup> A collective description covering a group of substances of a similar nature and equally compatible with the characteristics of the tank may be given instead of the name.

- (b) When the ratio  $R_e/R_m$  (of the minimum guaranteed characteristics after heat treatment) is higher than 0.85:

$$\sigma \leq 0.5 R_m.$$

6.8.3.1.2 The requirements of 6.8.5 apply to the materials and construction of welded shells.

6.8.3.1.3 *(Reserved)*

***Construction of battery-vehicles and MEGCs***

6.8.3.1.4 Cylinders, tubes, pressure drums and bundles of cylinders, as elements of a battery-vehicle or MEGC, shall be constructed in accordance with Chapter 6.2.

*NOTE 1: Bundles of cylinders which are not elements of a battery-vehicle or of a MEGC shall be subject to the requirements of Chapter 6.2.*

*NOTE 2: Tanks as elements of battery-vehicles and MEGCs shall be constructed in accordance with 6.8.2.1 and 6.8.3.1.*

*NOTE 3: Demountable tanks<sup>14</sup> are not to be considered elements of battery-vehicles or MEGCs.*

6.8.3.1.5 Elements and their fastenings shall be capable of absorbing under the maximum permissible load the forces defined in 6.8.2.1.2. Under each force the stress at the most severely stressed point of the element and its fastenings shall not exceed the value defined in 6.2.3.1 for cylinders, tubes, pressure drums and bundles of cylinders and for tanks the value of  $\sigma$  defined in 6.8.2.1.16.

**6.8.3.2 *Items of equipment***

6.8.3.2.1 The discharge pipes of tanks shall be capable of being closed by blank flanges or some other equally reliable device. For tanks intended for the carriage of refrigerated liquefied gases, these blank flanges or other equally reliable devices may be fitted with pressure-release openings of a maximum diameter of 1.5 mm.

6.8.3.2.2 Shells intended for the carriage of liquefied gases may be provided with, in addition to the openings prescribed in 6.8.2.2.2 and 6.8.2.2.4, openings for the fitting of gauges, thermometers, manometers and with bleed holes, as required for their operation and safety.

6.8.3.2.3 Filling and discharge openings of tanks

| with a capacity greater than 1 m<sup>3</sup>

intended for the carriage of liquefied flammable and/or toxic gases shall be equipped with an instant-closing internal safety device which closes automatically in the event of an unintended movement of the shell or of fire. It shall also be possible to operate the closing device by remote control.

6.8.3.2.4 All openings, other than those accommodating safety valves and closed bleed holes, of tanks intended for the carriage of liquefied flammable and/or toxic gases shall, if their nominal diameter is more than 1.5 mm, shall be equipped with an internal shut-off device.

<sup>14</sup> For the definition of "demountable tank" see 1.2.1.

- 6.8.3.2.5 Notwithstanding the requirements of 6.8.2.2.2, 6.8.3.2.3 and 6.8.3.2.4, tanks intended for the carriage of refrigerated liquefied gases may be equipped with external devices in place of internal devices if the external devices afford protection against external damage at least equivalent to that afforded by the wall of the shell.
- 6.8.3.2.6 If the tanks are equipped with gauges in direct contact with the substance carried, the gauges shall not be made of a transparent material. If there are thermometers, they shall not project directly into the gas or liquid through the shell.
- 6.8.3.2.7 Filling and discharge openings situated in the upper part of tanks shall be equipped with, in addition to what is prescribed in 6.8.3.2.3, a second, external, closing device. This device shall be capable of being closed by a blank flange or some other equally reliable device.
- 6.8.3.2.8 Safety valves shall meet the requirements of 6.8.3.2.9 to 6.8.3.2.12 below:
- 6.8.3.2.9 Tanks intended for the carriage of compressed or liquefied gases or dissolved gases, may be fitted with spring-loaded safety valves. These valves shall be capable of opening automatically under a pressure between 0.9 and 1.0 times the test pressure of the tank to which they are fitted. They shall be of such a type as to resist dynamic stresses, including liquid surge. The use of dead weight or counter weight valves is prohibited. The required capacity of the safety valves shall be calculated in accordance with the formula contained in 6.7.3.8.1.1.
- 6.8.3.2.10 Where tanks are intended for carriage by sea, the requirements of 6.8.3.2.9 shall not prohibit the fitting of safety valves conforming to the IMDG Code.
- 6.8.3.2.11 Tanks intended for the carriage of refrigerated liquefied gases shall be equipped with two independent safety valves, each so designed as to allow the gases formed by evaporation during normal operation to escape from the tank in such a way that the pressure does not at any time exceed by more than 10% the working pressure indicated on the tank.
- One of the two safety valves may be replaced by a bursting disc which shall be such as to burst at the test pressure.
- In the event of loss of the vacuum in a double-walled tank, or of destruction of 20% of the insulation of a single-walled tank, the safety valve and the bursting disc shall permit an outflow such that the pressure in the shell cannot exceed the test pressure.
- 6.8.3.2.12 The safety valves of tanks intended for the carriage of refrigerated liquefied gases shall be capable of opening at the working pressure indicated on the tank. They shall be so designed as to function faultlessly even at their lowest working temperature. The reliability of their operation at that temperature shall be established and checked either by testing each valve or by testing a specimen valve of each design-type.
- 6.8.3.2.13 The valves of demountable tanks that can be rolled shall be provided with protective caps. |

**Thermal insulation**

6.8.3.2.14 If tanks intended for the carriage of liquefied gases are equipped with thermal insulation, such insulation shall consist of either:

- a sun shield covering not less than the upper third but not more than the upper half of the tank surface and separated from the shell by an air space at least 4 cm across; or
- a complete cladding, of adequate thickness, of insulating materials.

6.8.3.2.15 Tanks intended for the carriage of refrigerated liquefied gases shall be thermally insulated. Thermal insulation shall be ensured by means of a continuous sheathing. If the space between the shell and the sheathing is under vacuum (vacuum insulation), the protective sheathing shall be so designed as to withstand without deformation an external pressure of at least 100 kPa (1 bar) (gauge pressure). By derogation from the definition of "calculation pressure" in 1.2.1, external and internal reinforcing devices may be taken into account in the calculations. If the sheathing is so closed as to be gas-tight, a device shall be provided to prevent any dangerous pressure from developing in the insulating layer in the event of inadequate gas-tightness of the shell or of its items of equipment. The device shall prevent the infiltration of moisture into the heat-insulating sheath.

6.8.3.2.16 Tanks intended for the carriage of liquefied gases having a boiling point below  $-182^{\circ}\text{C}$  at atmospheric pressure shall not include any combustible material either in the thermal insulation or in the means of attachment.

The means of attachment for vacuum insulated tanks may, with the approval of the competent authority, contain plastics substances between the shell and the sheathing.

6.8.3.2.17 By derogation from the requirements of 6.8.2.2.4 shells intended for the carriage of refrigerated liquefied gases need not have an inspection opening.

Items of equipment for battery-vehicles and MEGCs

6.8.3.2.18 The manifold shall be designed for service in a temperature range of  $-20^{\circ}\text{C}$  to  $+50^{\circ}\text{C}$ .

The manifold shall be designed, constructed and installed so as to avoid the risk of damage due to thermal expansion and contraction, mechanical shock and vibration. All piping shall be of suitable metallic material. Welded pipe joints shall be used wherever possible.

Joints in copper tubing shall be brazed or have an equally strong metal union. The melting point of brazing materials shall be no lower than  $525^{\circ}\text{C}$ . The joints shall not decrease the strength of tubing as may happen when cutting threads.

6.8.3.2.19 Except for UN No.1001 acetylene, dissolved, the permissible maximum stress  $\sigma$  of the manifolding arrangement at the test pressure of the receptacles shall not exceed 75% of the guaranteed yield strength of the material.

The necessary wall thickness of the manifolding arrangement for the carriage of UN No.1001 acetylene, dissolved shall be calculated according to an approved code of practice.

**NOTE:** For the yield strength, see 6.8.2.1.11.

The basic requirements of this paragraph shall be deemed to have been complied with if the following standards are applied: (*Reserved*).

- 6.8.3.2.20 By derogation from the requirements of 6.8.3.2.3, 6.8.3.2.4 and 6.8.3.2.7, for cylinders, tubes, pressure drums and bundles of cylinders (frames) forming a battery-vehicle or MEGC, the required closing devices may be provided for within the manifolding arrangement.
- 6.8.3.2.21 If one of the elements is equipped with a safety valve and shut-off devices are provided between the elements, every element shall be so equipped.
- 6.8.3.2.22 The filling and discharge devices may be affixed to a manifold.
- 6.8.3.2.23 Each element, including each individual cylinder of a bundle, intended for the carriage of toxic gases, shall be capable of being isolated by a shut-off valve.
- 6.8.3.2.24 Battery-vehicles or MEGCs intended for the carriage of toxic gases shall not have safety valves, unless the safety valves are preceded by a bursting disc. In the latter case, the arrangement of the bursting disc and safety valve shall be satisfactory to the competent authority.
- 6.8.3.2.25 When battery-vehicles or MEGCs are intended for carriage by sea, the requirements of 6.8.3.2.24 shall not prohibit the fitting of safety valves conforming to the IMDG Code.
- 6.8.3.2.26 Receptacles which are elements of a battery-vehicle or MEGC intended for the carriage of flammable gases shall be combined in groups of not more than 5 000 litres which are capable of being isolated by a shut-off valve.

Each element of a battery-vehicle or MEGC intended for the carriage of flammable gases, when consisting of tanks conforming to this Chapter, shall be capable of being isolated by a shut-off valve.

### 6.8.3.3 *Type approval*

No special requirements.

### 6.8.3.4 *Inspections and tests*

- 6.8.3.4.1 The materials of every welded shell with the exception of cylinders, tubes, pressure drums and cylinders as part of bundles of cylinders which are elements of a battery-vehicle or of a MEGC shall be tested according to the method described in 6.8.5.
- 6.8.3.4.2 The basic requirements for the test pressure are given in 4.3.3.2.1 to 4.3.3.2.4 and the minimum test pressures are given in the table of gases and gas mixtures in 4.3.3.2.5.
- 6.8.3.4.3 The first hydraulic pressure test shall be carried out before thermal insulation is placed in position.
- 6.8.3.4.4 The capacity of each shell intended for the carriage of compressed gases filled by mass, liquefied gases or dissolved gases shall be determined, under the supervision of an expert approved by the competent authority, by weighing or volumetric measurement of the quantity of water which fills the shell; the measurement of shell capacity shall be accurate to within 1%. Determination by a calculation based on the dimensions of the shell is not permitted. The maximum filling masses allowed in accordance with packing instruction P200 or P203 in 4.1.4.1 as well as 4.3.3.2.2 and 4.3.3.2.3 shall be prescribed by an approved expert.
- 6.8.3.4.5 Checking of the welds shall be carried out in accordance with the  $\lambda=1$  requirements of 6.8.2.1.23.

6.8.3.4.6 By derogation from the requirements of 6.8.2.4, the periodic inspections, including the hydraulic pressure test, shall take place:

- a) Every 3 years | Every 2½ years

in the case of tanks intended for the carriage of UN No.1008 boron trifluoride, UN No. 1017 chlorine, UN No. 1048 hydrogen bromide, anhydrous, UN No. 1050 hydrogen chloride, anhydrous, UN No. 1053 hydrogen sulphide, UN No. 1067 dinitrogen tetroxide (nitrogen dioxide), UN No. 1076 phosgene or UN No. 1079 sulphur dioxide;

- b) After 6 years | After 8 years

of service and thereafter every 12 years in the case of tanks intended for the carriage of refrigerated liquefied gases.

A leakproofness test shall be performed by an approved expert 6 years after each periodic inspection.	A leakproofness test may be performed, at the request of the competent authority, between any two successive inspections.
---	---

6.8.3.4.7 In the case of vacuum-insulated tanks, the hydraulic-pressure test and the check of the internal condition may, with the consent of the approved expert, be replaced by a leakproofness test and measurement of the vacuum.

6.8.3.4.8 If, at the time of periodic inspections, openings have been made in shells intended for the carriage of refrigerated liquefied gases, the method by which they are hermetically closed before the shells are returned to service shall be approved by the approved expert and shall ensure the integrity of the shell.

6.8.3.4.9 Leakproofness tests of tanks intended for the carriage of compressed, liquefied gases or dissolved gases shall be performed at a pressure of not less than 0.4 MPa (4 bar) and not more than 0.8 MPa (8 bar) (gauge pressure).

*Inspections and tests for battery-vehicles and MEGCs*

6.8.3.4.10 The elements and items of equipment of each battery-vehicle or MEGC shall be inspected and tested either together or separately before being put into service for the first time (initial inspection and test). Thereafter battery-vehicles or MEGCs the elements of which are receptacles shall be inspected at not more than five-year intervals. Battery-vehicles and MEGCs the elements of which are tanks shall be inspected according to 6.8.3.4.6. An exceptional inspection and test shall be performed regardless of the last periodic inspection and test when necessary according to 6.8.3.4.14.

6.8.3.4.11 The initial inspection shall include:

- a check of conformity to the approved type;
- a check of the design characteristics;
- an examination of the internal and external conditions;
- a hydraulic pressure test <sup>15</sup> at the test pressure indicated on the plate prescribed in 6.8.3.5.10

<sup>15</sup> In special cases and with the agreement of the expert approved by the competent authority, the hydraulic pressure test may be replaced by a pressure test using another liquid or gas, where such an operation does not present any danger.

- a leakproofness test at the maximum working pressure; and
- a check of satisfactory operation of the equipment.

When the elements and their fittings have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.

- 6.8.3.4.12 Cylinders, tubes and pressure drums and cylinders as part of bundles of cylinders shall be tested according to packing instruction P200 or P203 in 4.1.4.1.

The test pressure of the manifold of the battery-vehicle or MEGC shall be the same as that of the elements of the battery-vehicle or MEGC. The pressure test of the manifold may be performed as a hydraulic test or by using another liquid or gas with the agreement of the competent authority or its authorised body. By derogation from this requirement, the test pressure for the manifold of battery-vehicle or MEGC shall not be less than 300 bar for UN No. 1001 acetylene, dissolved.

- 6.8.3.4.13 The periodic inspection shall include a leakproofness test at the maximum working pressure and an external examination of the structure, the elements and the service equipment without disassembling. The elements and the piping shall be tested at the periodicity defined in packing instruction P200 of 4.1.4.1 and in accordance with the requirements of 6.2.1.5. When the elements and equipment have been pressure-tested separately, they shall be subjected together after assembly to a leakproofness test.

- 6.8.3.4.14 An exceptional inspection and test is necessary when the battery-vehicle or MEGC shows evidence of damaged or corroded areas, or leakage, or any other conditions, that indicate a deficiency that could affect the integrity of the battery-vehicle or MEGC. The extent of the exceptional inspection and test and, if deemed necessary, the disassembling of elements shall depend on the amount of damage or deterioration of the battery-vehicle or MEGC. It shall include at least the examinations required under 6.8.3.4.15

- 6.8.3.4.15 The examinations shall ensure that:

- (a) the elements are inspected externally for pitting, corrosion, or abrasions, dents, distortions, defects in welds or any other conditions, including leakage, that might render the battery-vehicles or MEGCs unsafe for transport;
- (b) the piping, valves, and gaskets are inspected for corroded areas, defects, and other conditions, including leakage, that might render battery-vehicles or MEGCs unsafe for filling, discharge or transport;
- (c) missing or loose bolts or nuts on any flanged connection or blank flange are replaced or tightened;
- (d) all emergency devices and valves are free from corrosion, distortion and any damage or defect that could prevent their normal operation. Remote closure devices and self-closing stop-valves shall be operated to demonstrate proper operation;
- (e) required markings on the battery-vehicles or MEGCs are legible and in accordance with the applicable requirements; and
- (f) any framework, supports and arrangements for lifting the battery-vehicles or MEGCs are in satisfactory condition.

- 6.8.3.4.16 The tests, inspections and checks in accordance with 6.8.3.4.10 to 6.8.3.4.15 shall be carried out by the expert approved by the competent authority. Certificates shall be issued showing the results of these operations.

These certificates shall refer to the list of the substances permitted for carriage in this battery-vehicle or MEGC in accordance with 6.8.2.3.1.

### 6.8.3.5 *Marking*

6.8.3.5.1 The following additional particulars shall be marked by stamping or by any other similar method on the plate prescribed in 6.8.2.5.1, or directly on the walls of the shell itself if the walls are so reinforced that the strength of the tank is not impaired.

6.8.3.5.2 On tanks intended for the carriage of only one substance:

- the proper shipping name of the gas and, in addition for gases classified under an n.o.s. entry, the technical name<sup>16</sup>

This indication shall be supplemented:

- in the case of tanks intended for the carriage of compressed gases filled by volume (pressure), by an indication of the maximum filling pressure at 15 °C permitted for the tank; and
- in the case of tanks intended for the carriage of compressed gases filled by mass, and of liquefied gases, refrigerated liquefied gases or dissolved gases by an indication of the maximum permissible load mass in kg and of the filling temperature if below -20 °C.

6.8.3.5.3 On multipurpose tanks:

- the proper shipping names of the gases and, in addition for gases classified under an n.o.s. entry, the technical name of the gases<sup>16</sup> for whose carriage the tank is approved.

These particulars shall be supplemented by an indication of the maximum permissible load mass in kg for each gas.

6.8.3.5.4 On tanks intended for the carriage of refrigerated liquefied gases:

- the maximum working pressure allowed.

6.8.3.5.5 On tanks equipped with thermal insulation:

- the inscription "thermally insulated" or "thermally insulated by vacuum".

6.8.3.5.6 In addition to the particulars prescribed in 6.8.2.5.2, the following shall be inscribed on the tank itself or on a plate: | the tank-container itself or on a plate:

<sup>16</sup> Instead of the proper shipping name of the n.o.s. entry followed by the technical name, the use of one of the following names is permitted:

- for UN No. 1078 refrigerant gas, n.o.s: mixture F1, mixture F2, mixture F3;
- for UN No. 1060 methylacetylene and propadiene mixtures, stabilized: mixture P1, mixture P2;
- for UN No. 1965 hydrocarbon gas mixture, liquefied, n.o.s: mixture A, mixture A01, mixture A02, mixture A0, mixture A1, mixture B1, mixture B2, mixture B, mixture C. The names customary in the trade and mentioned in 2.2.2.3, Classification code 2F, UN No. 1965, Note 1 may be used only as a complement.

- (a) - the tank code according to the certificate (see 6.8.2.3.1) with the actual test pressure of the tank;
  - the inscription: "minimum filling temperature allowed :...";
- (b) where the tank is intended for the carriage of one substance only:
  - the proper shipping name of the gas and, in addition for gases classified under an n.o.s. entry, the technical name<sup>16</sup>,
    - for compressed gases which are filled by mass, and for liquefied gases, refrigerated liquefied gases or dissolved gases, the maximum permissible load mass in kg;
- (c) where the tank is a multipurpose tank:
  - the proper shipping name of the gas and, for gases classified under an n.o.s. entry, the technical name<sup>16</sup> of all gases to whose carriage the tank is assigned
    - with an indication of the maximum permissible load mass in kg for each of them;
- (d) where the shell is equipped with thermal insulation:
  - the inscription "thermally insulated" (or "thermally insulated by vacuum"), in an official language of the country of registration and also, if that language is not English, French or German, in English, French or German, unless any agreements concluded between the countries concerned in the transport operation provide otherwise.

6.8.3.5.7 (Reserved)

6.8.3.5.8 These particulars shall not be required in the case of a vehicle carrying demountable tanks.

6.8.3.5.9 (Reserved)

<sup>16</sup> Instead of the proper shipping name of the n.o.s. entry followed by the technical name, the use of one of the following names is permitted:

- for UN No. 1078 refrigerant gas, n.o.s: mixture F1, mixture F2, mixture F3;
- for UN No. 1060 methylacetylene and propadiene mixtures, stabilized: mixture P1, mixture P2;
- for UN No. 1965 hydrocarbon gas mixture, liquefied, n.o.s: mixture A, mixture A01, mixture A02, mixture A0, mixture A1, mixture B1, mixture B2, mixture B, mixture C. The names customary in the trade and mentioned in 2.2.2.3, Classification code 2F, UN No. 1965, Note 1 may be used only as a complement.

**Marking of battery-vehicles and MEGCs**

6.8.3.5.10 Every battery-vehicle and every MEGC shall be fitted with a corrosion-resistant metal plate permanently attached in a place readily accessible for inspection. The following particulars at least shall be marked on the plate by stamping or by any other similar method<sup>17</sup>

- approval number;
- manufacturer's name or mark;
- manufacturer's serial number;
- year of manufacture;
- test pressure (gauge pressure)
- design temperature (only if above +50 °C or below -20 °C);
- date (month and year) of initial test and most recent periodic test in accordance with 6.8.3.4.10 to 6.8.3.4.13;
- stamp of the expert who carried out the tests.

6.8.3.5.11 The following particulars shall be inscribed on the battery-vehicle itself or on a plate<sup>17</sup>:

- names of owner or of operator;
  - number of elements;
  - total capacity of the elements;
- and for battery-vehicles filled by mass:
- unladen mass;
  - maximum permissible mass.

The following particulars shall be inscribed either on the MEGC itself or on a plate<sup>17</sup>:

- names of owner and of operator;
  - number of elements;
  - total capacity of the elements;
  - maximum permissible laden mass;
  - proper shipping name of substance carried<sup>18</sup>;
- and for MEGCs filled by mass:
- tare.

6.8.3.5.12 The frame of a battery-vehicle or MEGC shall bear near the filling point a plate specifying:

- the maximum filling pressure<sup>17</sup> at 15 °C allowed for elements intended for compressed gases;

<sup>17</sup> Add the units of measurements after the numerical values.

<sup>18</sup> A collective description covering a group of substances of a similar nature and equally compatible with the characteristics of the tank may be given instead of the name.

- the proper shipping name of the gas in accordance with Chapter 3.2 and, in addition for gases classified under an n.o.s. entry, the technical name <sup>16</sup>;

and, in addition, in the case of liquefied gases:

- the permissible maximum load per element <sup>17</sup>.

6.8.3.5.13 Cylinders, tubes and pressure drums, and cylinders as part of bundles of cylinders, shall be marked according to 6.2.1.7. These receptacles need not be labelled individually with the danger labels as required in Chapter 5.2.

Battery-vehicles and MEGCs shall be placarded and marked according to Chapter 5.3.

6.8.3.6 *Requirements for battery-vehicles and MEGCs which are designed, constructed and tested according to standards*

*(Reserved)*

6.8.3.7 *Requirements for battery-vehicles and MEGCs which are not designed, constructed and tested according to standards*

Battery-vehicles and MEGCs which are not designed, constructed and tested in accordance with the standards set out in 6.8.3.6 shall be designed, constructed and tested in accordance with the requirements of a technical code recognized by the competent authority. They shall, however, comply with the minimum requirements of 6.8.3.

#### 6.8.4 Special provisions

*NOTE 1: For liquids having a flash-point of not more than 61 °C and for flammable gases, see also 6.8.2.1.26, 6.8.2.1.27 and 6.8.2.2.9.*

*NOTE 2: For requirements for tanks subjected to a pressure test of not less than 1 MPa (10 bar) or for tanks intended for the carriage of refrigerated liquefied gases, see 6.8.5.*

When they are shown under an entry in Column (13) of Table A of Chapter 3.2, the following special provisions apply:

##### (a) Construction (TC)

TC1 The requirements of 6.8.5 are applicable to the materials and construction of these shells.

TC2 Shells, and their items of equipment, shall be made of aluminium not less than 99.5% pure or of suitable steel not liable to cause hydrogen peroxide to decompose.

<sup>16</sup> *Instead of the proper shipping name of the n.o.s. entry followed by the technical name, the use of one of the following names is permitted:*

- *for UN No. 1078 refrigerant gas, n.o.s.: mixture F1, mixture F2, mixture F3;*
- *for UN No. 1060 methylacetylene and propadiene mixtures, stabilized: mixture P1, mixture P2;*
- *for UN No. 1965 hydrocarbon gas mixture, liquefied, n.o.s.: mixture A, mixture A01, mixture A02, mixture A0, mixture A1, mixture B1, mixture B2, mixture B, mixture C. The names customary in the trade and mentioned in 2.2.2.3, Classification code 2F, UN No. 1965, Note 1 may be used only as a complement.*

<sup>17</sup> *Add the units of measurements after the numerical values.*

Where shells are made of aluminium not less than 99.5% pure, the wall thickness need not exceed 15 mm, even where calculation in accordance with 6.8.2.1.17 gives a higher value.

- TC3 The shells shall be made of austenitic steel.
- TC4 Shells shall be provided with an enamel or equivalent protective lining if the material of the shell is attacked by UN No. 3250 chloroacetic acid.
- TC5 Shells shall be provided with a lead lining not less than 5 mm thick or an equivalent lining.
- TC6 Where the use of aluminium is necessary for tanks, such tanks shall be made of aluminium not less than 99.5% pure; the wall thickness need not exceed 15 mm even where calculation in accordance with 6.8.2.1.17 gives a higher value.
- TC7 The effective minimum thickness of the shell shall not be less than 3 mm.

(b) **Items of equipment (TE)**

- TE1 If tanks, battery-vehicles or MEGCs are fitted with safety valves, a bursting disc shall be placed before the valves. The arrangement of the bursting disc and safety valve shall be such as to satisfy the competent authority. A pressure gauge or another suitable indicator shall be provided in the space between the bursting disc and the safety valve, to enable detection of any rupture, perforation or leakage of the disc which may disrupt the action of the safety valve.
- TE2 *(Reserved)*
- TE3 Tanks shall in addition meet the following requirements. The heating device shall not penetrate into, but shall be exterior to the shell. However, a pipe used for extracting the phosphorus may be equipped with a heating jacket. The device heating the jacket shall be so regulated as to prevent the temperature of the phosphorus from exceeding the filling temperature of the shell. Other piping shall enter the shell in its upper part; openings shall be situated above the highest permissible level of the phosphorus and be capable of being completely enclosed under lockable caps. The tank shall be equipped with a gauging system for verifying the level of the phosphorus and, if water is used as a protective agent, with a fixed gauge mark showing the highest permissible level of the water.
- TE4 Shells shall be equipped with thermal insulation made of materials which are not readily flammable.
- TE5 If shells are equipped with thermal insulation, such insulation shall be made of materials which are not readily flammable.
- TE6 Tanks may be equipped with valves opening automatically inwards or outwards under the effect of a difference of pressure of between 20 kPa and 30 kPa (0.2 bar and 0.3 bar).
- TE7 The shell-discharge system shall be equipped with two mutually independent shut-off devices mounted in series, the first taking the form of a quick-closing internal stop-valve of an approved type and the second that of an external stop-valve, one at each end of the discharge pipe. A blank flange, or another device providing the same measure of security, shall also be fitted at the outlet of each external stop-valve. The

internal stop-valve shall be such that if the pipe is wrenched off the stop-valve will remain integral with the shell and in the closed position.

- TE8** The connections to the external pipe-sockets of tanks shall be made of materials not liable to cause decomposition of hydrogen peroxide.
- TE9** Tanks shall be fitted in their upper part with a shut-off device preventing any build-up of excess pressure inside the shell due to the decomposition of the substances carried, any leakage of liquid, and any entry of foreign matter into the shell.
- TE10** The shut-off devices of tanks shall be so designed as to preclude obstruction of the devices by solidified ammonium nitrate during carriage. Where tanks are sheathed in thermally-insulating material, the material shall be of an inorganic nature and entirely free from combustible matter.
- TE11** Shells and their service equipment shall be so designed as to prevent the entry of foreign matter, leakage of liquid or any building up of dangerous excess pressure inside the shell due to the decomposition of the substances carried.
- TE12** Tanks shall be equipped with thermal insulation complying with the requirements of 6.8.3.2.14. If the SADT of the organic peroxide in the tank is 55 °C or less, or the tank is constructed of aluminium, the shell shall be completely insulated. The sun shield and any part of the tank not covered by it, or the outer sheathing of a complete lagging, shall be painted white or finished in bright metal. The paint shall be cleaned before each transport journey and renewed in case of yellowing or deterioration. The thermal insulation shall be free from combustible matter. Tanks shall be fitted with temperature sensing devices.

Tanks shall be fitted with safety valves and emergency pressure-relief devices. Vacuum-relief devices may also be used. Emergency pressure-relief devices shall operate at pressures determined according to both the properties of the organic peroxide and the construction characteristics of the tank. Fusible elements shall not be permitted in the body of the shell.

Tanks shall be fitted with spring-loaded safety valves to prevent significant pressure build-up within the shell of the decomposition products and vapours released at a temperature of 50 °C. The capacity and start-to-discharge pressure of the safety-valve(s) shall be based on the results of the tests specified in special provision TA2. The start-to-discharge pressure shall however in no case be such that liquid could escape from the valve(s) if the tank were overturned.

The emergency-relief devices may be of the spring-loaded or frangible types designed to vent all the decomposition products and vapours evolved during a period of not less than one hour of complete fire-engulfment as calculated by the following formula:

$$q = 70961 \times F \times A^{0.82}$$

where:

q = heat absorption [W]  
 A = wetted area [m<sup>2</sup>]  
 F = insulation factor

F = 1 for non-insulated tanks, or

$$F = \frac{U(923 - T_{PO})}{47032} \text{ for insulated tanks}$$

where:

K = heat conductivity of insulation layer [ $\text{W}\cdot\text{m}^{-1}\cdot\text{K}^{-1}$ ]

L = thickness of insulation layer [m]

U =  $K/L$  = heat transfer coefficient of the insulation [ $\text{W}\cdot\text{m}^{-2}\cdot\text{K}^{-1}$ ]

$T_{PO}$  = temperature of peroxide at relieving conditions [K]

The start-to-discharge pressure of the emergency-relief device(s) shall be higher than that above specified and based on the results of the tests referred to in special provision TA2. The emergency-relief devices shall be dimensioned in such a way that the maximum pressure in the tank never exceeds the test pressure of the tank.

*NOTE: An example of a method to determine the size of emergency-relief devices is given in Appendix 5 of the Manual of Tests and Criteria.*

For tanks equipped with thermal insulation consisting of a complete cladding, the capacity and setting of the emergency-relief device(s) shall be determined assuming a loss of insulation from 1% of the surface area.

Vacuum-relief devices and spring-loaded safety valves of tanks shall be provided with flame arresters unless the substances to be carried and their decomposition products are non-combustible. Due attention shall be paid to the reduction of the relief capacity caused by the flame arrester.

- TE13** Tanks shall be thermally insulated and fitted with a heating device on the outside.
- TE14** Tanks shall be equipped with thermal insulation. They may also be equipped with pressure-release devices opening automatically inwards or outwards under the effect of a difference of pressure of between 20 kPa and 30 kPa (0.2 bar and 0.3 bar). The thermal insulation directly in contact with the shell shall have an ignition temperature at least 50 °C higher than the maximum temperature for which the tank was designed.
- TE15** Tanks fitted with vacuum valves which open at a negative pressure of not less than 21 kPa (0.21 bar) shall be considered as being hermetically closed.
- TE16** (Reserved)
- TE17** (Reserved)
- TE18** Tanks intended for the carriage of substances filled at a temperature higher than 190 °C shall be equipped with deflectors placed at right angles to the upper filling openings, so as to avoid a sudden localized increase in wall temperature during filling.

**TE19** Fittings and accessories mounted in the upper part of the tank shall be either:

- inserted in a recessed housing; or
- equipped with an internal safety valve; or
- shielded by a cap, or by transverse and/or longitudinal members, or by other equally effective devices, so profiled that in the event of overturning the fittings and accessories will not be damaged.

Fittings and accessories mounted in the lower part of the tank:

Pipe-sockets, lateral shut-off devices, and all discharge devices shall either be recessed by at least 200 mm from the extreme outer edge of the tank or be protected by a rail having a coefficient of inertia of not less than 20 cm<sup>3</sup> transversally to the direction of travel; their ground clearance shall be not less than 300 mm with the tank full.

Fittings and accessories mounted on the rear face of the tank shall be protected by the bumper prescribed in 9.7.6. Their height above the ground shall be such that they are adequately protected by the bumper

**TE20** Notwithstanding the other tank-codes which are permitted in the hierarchy of tanks of the rationalized approach in 4.3.4.1.2, tanks shall be equipped with a safety valve.

**TE21** The closures shall be protected with lockable caps.

**(c) Type approval (TA)**

**TA1** Tanks shall not be approved for the carriage of organic substances.

**TA2** This substance may be carried in fixed or demountable tanks or tank-containers under the conditions laid down by the competent authority of the country of origin, if, on the basis of the tests mentioned below, the competent authority is satisfied that such a transport operation can be carried out safely. If the country of origin is not party to ADR, these conditions shall be recognized by the competent authority of the first ADR country reached by the consignment.

For the type approval tests shall be undertaken:

- to prove the compatibility of all materials normally in contact with the substance during carriage;

- to provide data to facilitate the design of the emergency pressure-relief devices and safety valves taking into account the design characteristics of the tank; and
- to establish any special requirements necessary for the safe carriage of the substance.

The test results shall be included in the report for the type approval.

(d) **Tests (TT)**

- TT1 Tanks of pure aluminium need to be subjected to the initial and periodic hydraulic pressure tests at a pressure of only 250 kPa (2.5 bar) (gauge pressure).
- TT2 The condition of the lining of shells shall be inspected every year by an expert approved by the competent authority, who shall inspect the inside of the shell.
- TT3 By derogation from the requirements of 6.8.2.4.2, periodic inspections shall take place at least every eight years and shall include a thickness check using suitable instruments. For such tanks, the leakproofness test and check for which provision is made in 6.8.2.4.3 shall be carried out at least every four years.
- TT4 *(Reserved)*
- TT5 The hydraulic pressure tests shall take place at least every  

3 years.		2½ years.
----------	--	-----------
- TT6 The periodic tests, including the hydraulic pressure test, shall be carried out at least every 3 years.
- TT7 Notwithstanding the requirements of 6.8.2.4.2, the periodic internal inspection may be replaced by a programme approved by the competent authority.

(e) **Marking (TM)**

*NOTE: These particulars shall be in an official language of the country of approval, and also, if that language is not English, French or German, in English, French or German, unless any agreements concluded between the countries concerned in the transport operation provide otherwise.*

- TM1 Tanks shall bear in addition to the particulars prescribed in 6.8.2.5.2, the words: **"Do not open during carriage. Liable to spontaneous combustion"** (see also the Note above).
- TM2 Tanks shall bear in addition to the particulars prescribed in 6.8.2.5.2, the words: **"Do not open during carriage. Gives off flammable gases on contact with water"** (see also the Note above).
- TM3 Tanks shall also bear, on the plate prescribed in 6.8.2.5.1, the proper shipping names of the approved substances and the maximum permissible load of the tank in kg.
- TM4 For tanks the following additional particulars shall be marked by stamping or by any other similar method on the plate prescribed in 6.8.2.5.2 or directly on the shell itself, if the walls are so reinforced that the strength of the tank is not impaired: the chemical name with the approved concentration of the substance concerned.

**TM5** Tanks shall bear, in addition to the particulars referred to in 6.8.2.5.1 the date (month, year) of the most recent inspection of the internal condition of the shell.

**TM6** *(Reserved)*

**TM7** The trefoil symbol, as described in 5.2.1.7.6, shall be marked by stamping or any other equivalent method on the plate described in 6.8.2.5.1. This trefoil may be engraved directly on the walls of the shell itself, if the walls are so reinforced that the strength of the shell is not impaired.

**6.8.5** Requirements concerning the materials and construction of fixed welded tanks, demountable welded tanks, and welded shells of tank-containers for which a test pressure of not less than 1 MPa (10 bar) is required, and of fixed welded tanks, demountable welded tanks and welded shells of tank-containers intended for the carriage of refrigerated liquefied gases of Class 2

**6.8.5.1** *Materials and shells*

**6.8.5.1.1** (a) Shells intended for the carriage of:

- compressed, liquefied gases or dissolved gases of Class 2;
- UN Nos. 1366, 1370, 1380, 2003, 2005, 2445, 2845, 2870, 3049, 3050, 3051, 3052, 3053, 3076, 3194 and 3203 of Class 4.2; and
- UN No. 1052 hydrogen fluoride, anhydrous and UN No.1790 hydrofluoric acid with more than 85% hydrogen fluoride of Class 8

shall be made of steel.

(b) Shells constructed of fine-grained steels for the carriage of:

- corrosive gases of Class 2 and UN No. 2073 ammonia solution; and
- UN No. 1052 hydrogen fluoride, anhydrous and UN No.1790 hydrofluoric acid with more than 85% hydrogen fluoride of Class 8

shall be heat-treated for thermal stress relief.

(c) Shells intended for the carriage of refrigerated liquefied gases of Class 2, shall be made of steel, aluminium, aluminium alloy, copper or copper alloy (e.g. brass). However, shells made of copper or copper alloy shall be allowed only for gases containing no acetylene; ethylene, however, may contain not more than 0.005% acetylene.

(d) Only materials appropriate to the lowest and highest working temperatures of the shells and of their fittings and accessories may be used.

**6.8.5.1.2** The following materials shall be allowed for the manufacture of shells:

- (a) steels not subject to brittle fracture at the lowest working temperature (see 6.8.5.2.1):
- mild steels (except for refrigerated liquefied gases of Class 2);
  - fine-grained steels, down to a temperature of -60 °C;

- nickel steels (with a nickel content of 0.5 to 9%), down to a temperature of  $-196^{\circ}\text{C}$ , depending on the nickel content;
- austenitic chrome-nickel steels, down to a temperature of  $-270^{\circ}\text{C}$ ;

- (b) aluminium not less than 99.5% pure or aluminium alloys (see 6.8.5.2.2);
- (c) deoxidized copper not less than 99.9% pure, or copper alloys having a copper content of over 56% (see 6.8.5.2.3).

6.8.5.1.3 (a) Shells made of steel, aluminium or aluminium alloys shall be either seamless or welded.

- (b) Shells made of austenitic steel, copper or copper alloy may be hard-soldered.

6.8.5.1.4 The fittings and accessories may either be screwed to the shells or be secured thereto as follows:

- (a) shells made of steel, aluminium or aluminium alloy: by welding;
- (b) shells made of austenitic steel, of copper or of copper alloy: by welding or hard-soldering.

6.8.5.1.5 The construction of shells and their attachment to the vehicle, to the underframe or in the container frame shall be such as to preclude with certainty any such reduction in the temperature of the load-bearing components as would be likely to render them brittle. The means of attachment of shells shall themselves be so designed that even when the shell is at its lowest working temperature they still possess the necessary mechanical properties.

## 6.8.5.2 *Test requirements*

### 6.8.5.2.1 *Steel shells*

The materials used for the manufacture of shells and the weld beads shall, at their lowest working temperature, but at least at  $-20^{\circ}\text{C}$ , meet at least the following requirements as to impact strength:

- The tests shall be carried out with test-pieces having a V-shaped notch;
- The minimum impact strength (see 6.8.5.3.1 to 6.8.5.3.3) for test-pieces with the longitudinal axis at right angles to the direction of rolling and a V-shaped notch (conforming to ISO R 148) perpendicular to the plate surface, shall be  $34\text{ J/cm}^2$  for mild steel (which, because of existing ISO standards, may be tested with test-pieces having the longitudinal axis in the direction of rolling); fine-grained steel; ferritic alloy steel  $\text{Ni} < 5\%$ , ferritic alloy steel  $5\% \leq \text{Ni} \leq 9\%$ ; or austenitic Cr - Ni steel;
- In the case of austenitic steels, only the weld bead need be subjected to an impact-strength test;
- For working temperatures below  $-196^{\circ}\text{C}$  the impact-strength test is not performed at the lowest working temperature, but at  $-196^{\circ}\text{C}$ .

### 6.8.5.2.2 *Shells made of aluminium or aluminium alloy*

The seams of shells shall meet the requirements laid down by the competent authority.

6.8.5.2.3 *Shells made of copper or copper alloy*

It is not necessary to carry out tests to determine whether the impact strength is adequate.

6.8.5.3 *Impact-strength tests*

6.8.5.3.1 For sheets less than 10 mm but not less than 5 mm thick, test-pieces having a cross-section of 10 mm x e mm, where "e" represents the thickness of the sheet, shall be used. Machining to 7.5 mm or 5 mm is permitted if it is necessary. The minimum value of 34 J/cm<sup>2</sup> shall be required in every case.

*NOTE: No impact-strength test shall be carried out on sheets less than 5 mm thick, or on their weld seams.*

6.8.5.3.2 (a) For the purpose of testing sheets, the impact strength shall be determined on three test-pieces. Test-pieces shall be taken at right angles to the direction of rolling; however, for mild steel they may be taken in the direction of rolling.

(b) For testing weld seams the test-pieces shall be taken as follows:

when  $e \leq 10$  mm:

three test-pieces with the notch at the centre of the weld;

three test-pieces with the notch in the centre of the heat affected zone (the V-notch to cross the fusion boundary at the centre of the specimen);

when  $10 \text{ mm} < e \leq 20 \text{ mm}$ :

three test-pieces from the centre of the weld;

three test-pieces from the heat affected zone (the V-notch to cross the fusion boundary at the centre of the specimen);

Center of the weld

Heat affected zone

when  $e > 20$  mm

two sets of three test-pieces, one set on the upper face, one set on the lower face at each of the points indicated below (the V-notch to cross the fusion boundary at the centre of the specimen for those taken from the heat affected zone)

Center of the weld

Heat affected zone

- 6.8.5.3.3
- For sheets, the average of the three tests shall meet the minimum value of  $34 \text{ J/cm}^2$  indicated in 6.8.5.2.1; not more than one of the individual values may be below the minimum value and then not below  $24 \text{ J/cm}^2$ .
  - For welds, the average value obtained from the three test-pieces taken at the centre of the weld shall not be below the minimum value of  $34 \text{ J/cm}^2$ ; not more than one of the individual values may be below the minimum value and then not below  $24 \text{ J/cm}^2$ .
  - For the heat affected zone (the V-notch to cross the fusion boundary at the centre of the specimen) the value obtained from not more than one of the three test-pieces may be below the minimum value of  $34 \text{ J/cm}^2$ , though not below  $24 \text{ J/cm}^2$ .

6.8.5.3.4 If the requirements prescribed in 6.8.5.3.3 are not met, one retest only may be done if:

- the average value of the first three tests is below the minimum value of  $34 \text{ J/cm}^2$ , or

- (b) more than one of the individual values is less than the minimum value of  $34 \text{ J/cm}^2$  but not below  $24 \text{ J/cm}^2$ .

6.8.5.3.5 In a repeated impact test on sheets or welds, none of the individual values may be below  $34 \text{ J/cm}^2$ . The average value of all the results of the original test and of the retest should be equal to or more than the minimum of  $34 \text{ J/cm}^2$ .

On a repeated impact strength test on the heat-affected zone, none of the individual values may be below  $34 \text{ J/cm}^2$ .

6.8.5.4 *Reference to standards*

The requirements of 6.8.5.2 and 6.8.5.3 shall be deemed to have been complied with if the following relevant standards have been applied:

EN 1252-1:1998 Cryogenic vessels - Materials - Part 1: Toughness requirements for temperature below  $-80 \text{ }^\circ\text{C}$ .

EN 1252-2: 2001 Cryogenic vessels - Materials - Part 2: Toughness requirements for temperature between  $-80 \text{ }^\circ\text{C}$  and  $-20 \text{ }^\circ\text{C}$ .

## CHAPTER 6.9

**REQUIREMENTS FOR THE DESIGN, CONSTRUCTION, EQUIPMENT, TYPE APPROVAL, TESTING AND MARKING OF FIBRE-REINFORCED PLASTICS (FRP) FIXED TANKS (TANK-VEHICLES), DEMOUNTABLE TANKS, TANK-CONTAINERS AND TANK SWAP BODIES**

**NOTE:** *For portable tanks see Chapter 6.7; for fixed tanks (tank-vehicles), demountable tanks and tank-containers and tank swap bodies, with shells made of metallic materials, and battery-vehicles and multiple element gas containers (MEGCs) see Chapter 6.8; for vacuum operated waste tanks see Chapter 6.10.*

**6.9.1 General**

6.9.1.1 FRP tanks shall be designed, manufactured and tested in accordance with a quality assurance programme recognized by the competent authority; in particular, lamination work and welding of thermoplastic liners shall only be carried out by qualified personnel in accordance with a procedure recognized by the competent authority.

6.9.1.2 For the design and testing of FRP tanks, the provisions of 6.8.2.1.1, 6.8.2.1.7, 6.8.2.1.13, 6.8.2.1.14 (a) and (b), 6.8.2.1.25, 6.8.2.1.27, 6.8.2.1.28 and 6.8.2.2.3 shall also apply.

6.9.1.3 Heating elements shall not be used for FRP tanks.

6.9.1.4 For the stability of tank-vehicles, the requirements of 9.7.5.1 shall apply.

**6.9.2 Construction**

6.9.2.1 Shells shall be made of suitable materials, which shall be compatible with the substances to be carried in a service temperature range of between -40°C and +50°C, unless temperature ranges are specified for specific climatic conditions by the competent authority of the country where the transport operation is performed.

6.9.2.2 Shells shall consist of the following three elements :

- internal liner,
- structural layer,
- external layer.

6.9.2.2.1 The internal liner is the inner shell wall zone designed as the primary barrier to provide for the long-term chemical resistance in relation to the substances to be carried, to prevent any dangerous reaction with the contents or the formation of dangerous compounds and any substantial weakening of the structural layer owing to the diffusion of products through the internal liner.

The internal liner may either be a FRP liner or a thermoplastic liner.

6.9.2.2.2 FRP liners shall consist of:

- (a) surface layer ("gel-coat"): adequate resin rich surface layer, reinforced with a veil, compatible with the resin and contents. This layer shall have a fibre mass content of not more than 30 % and have a thickness between 0.25 and 0.60 mm;

- (b) strengthening layer(s): layer or several layers with a minimum thickness of 2 mm, containing a minimum of 900 g/m<sup>2</sup> of glass mat or chopped fibres with a mass content in glass of not less than 30% unless equivalent safety is demonstrated for a lower glass content.

6.9.2.2.3 Thermoplastic liners shall consist of thermoplastic sheet material as referred to in 6.9.2.3.4, welded together in the required shape, to which the structural layers are bonded. Durable bonding between liners and the structural layer shall be achieved by the use of an appropriate adhesive.

*NOTE: For the carriage of flammable liquids the internal layer may require additional measures in accordance with 6.9.2.14, in order to prevent the accumulation of electrical charges.*

6.9.2.2.4 The structural layer of the shell is the zone specially designed according to 6.9.2.4 to 6.9.2.6 to withstand the mechanical stresses. This part normally consists of several fibre reinforced layers in determined orientations.

6.9.2.2.5 The external layer is the part of the shell which is directly exposed to the atmosphere. It shall consist of a resin rich layer with a thickness of at least 0.2 mm. For a thickness larger than 0.5 mm, a mat shall be used. This layer shall have a mass content in glass of less than 30% and shall be capable of withstanding exterior conditions, in particular the occasional contact with the substance to be carried. The resin shall contain fillers or additives to provide protection against deterioration of the structural layer of the shell by ultra-violet radiation.

### 6.9.2.3 *Raw materials*

6.9.2.3.1 All materials used for the manufacture of FRP tanks shall be of known origin and specifications.

#### 6.9.2.3.2 *Resins*

The processing of the resin mixture shall be carried out in strict compliance with the recommendations of the supplier. This concerns mainly the use of hardeners, initiators and accelerators. These resins can be:

- unsaturated polyester resins;
- vinyl ester resins;
- epoxy resins;
- phenolic resins.

The heat distortion temperature (HDT) of the resin, determined in accordance with ISO 75-1:1993 shall be at least 20°C higher than the maximum service temperature of the tank, but shall in any case not be lower than 70 °C.

#### 6.9.2.3.3 *Reinforcement fibres*

The reinforcement material of the structural layers shall be a suitable grade of fibres such as glass fibres of type E or ECR according to ISO 2078:1993. For the internal surface liner, glass fibres of type C according to ISO 2078:1993 may be used. Thermoplastic veils may only be used for the internal liner when their compatibility with the intended contents has been demonstrated.

#### 6.9.2.3.4 *Thermoplastic liner material*

Thermoplastic liners, such as unplasticized polyvinyl chloride (PVC-U), polypropylene (PP), polyvinylidene fluoride (PVDF), polytetrafluoroethylene (PTFE), etc. may be used as lining materials.

#### 6.9.2.3.5 *Additives*

Additives necessary for the treatment of the resin, such as catalysts, accelerators, hardeners and thixotropic substances as well as materials used to improve the tank, such as fillers, colours, pigments etc. shall not cause weakening of the material, taking into account lifetime and temperature expectancy of the design.

#### 6.9.2.4 Shells, their attachments and their service and structural equipment shall be designed to withstand without loss of contents (other than quantities of gas escaping through any degassing vents) during the design lifetime:

- the static and dynamic loads in normal conditions of carriage;
- the prescribed minimum loads as defined in 6.9.2.5 to 6.9.2.10.

#### 6.9.2.5 At the pressures as indicated in 6.8.2.1.14 (a) and (b), and under the static gravity forces caused by the contents with maximum density specified for the design and at maximum filling degree, the design stress $\sigma$ in longitudinal and circumferential direction of any layer of the shell shall not exceed the following value:

$$\sigma \leq \frac{R_m}{K}$$

where:

$R_m$  = the value of tensile strength given by taking the mean value of the test results minus twice the standard deviation of the test results. The tests shall be carried out, in accordance with the requirements of EN 61:1977, on not less than six samples representative of the design type and construction method;

$K$  =  $S \times K_0 \times K_1 \times K_2 \times K_3$

where

$K$  shall have a minimum value of 4, and

$S$  = the safety coefficient. For the general design, if the tanks are referred to in Column (12) of Table A of Chapter 3.2 by a tank code including the letter "G" in its second part (see 4.3.4.1.1), the value for  $S$  shall be equal to or more than 1.5. For tanks intended for the carriage of substances which require an increased safety level, i.e. if the tanks are referred to in Column (12) of Table A of Chapter 3.2 by a tank code including the number "4" in its second part (see 4.3.4.1.1), the value of  $S$  shall be multiplied by a factor of two, unless the shell is provided with protection against damage consisting of a complete metal skeleton including longitudinal and transverse structural members;

$K_0 =$  a factor related to the deterioration in the material properties due to creep and ageing and as a result of the chemical action of the substances to be carried. It shall be determined by the formula:

$$K_0 = \frac{1}{\alpha\beta}$$

where " $\alpha$ " is the creep factor and " $\beta$ " is the ageing factor determined in accordance with EN 978:1997 after performance of the test according to EN 977:1997. Alternatively, a conservative value of  $K_0 = 2$  may be applied. In order to determine  $\alpha$  and  $\beta$  the initial deflection shall correspond to  $2\sigma$ ;

$K_1 =$  a factor related to the service temperature and the thermal properties of the resin, determined by the following equation, with a minimum value of 1:

$$K_1 = 1.25 - 0.0125 (\text{HDT} - 70)$$

where HDT is the heat distortion temperature of the resin, in °C;

$K_2 =$  a factor related to the fatigue of the material; the value of  $K_2 = 1.75$  shall be used unless otherwise agreed with the competent authority. For the dynamic design as outlined in 6.9.2.6 the value of  $K_2 = 1.1$  shall be used;

$K_3 =$  a factor related to curing and has the following values:

- 1.1 where curing is carried out in accordance with an approved and documented process;
- 1.5 in other cases.

- 6.9.2.6 At the dynamic stresses, as indicated in 6.8.2.1.2 the design stress shall not exceed the value specified in 6.9.2.5, divided by the factor  $\alpha$ .
- 6.9.2.7 At any of the stresses as defined in 6.9.2.5 and 6.9.2.6, the resulting elongation in any direction shall not exceed 0.2 % or one tenth of the elongation at fracture of the resin, whichever is lower.
- 6.9.2.8 At the specified test pressure, which shall not be less than the relevant calculation pressure as specified in 6.8.2.1.14 (a) and (b) the maximum strain in the shell shall not be greater than the elongation at fracture of the resin.
- 6.9.2.9 The shell shall be capable of withstanding the ball drop test according to 6.9.4.3.3 without any visible internal or external defects.
- 6.9.2.10 The overlay laminates used in the joints, including the end joints, the joints of the surge plates and the partitions with the shell shall be capable of withstanding the static and dynamic stresses mentioned above. In order to avoid concentrations of stresses in the overlay lamination, the applied taper shall not be steeper than 1:6.

The shear strength between the overlay laminate and the tank components to which it is bonded shall not be less than:

$$\tau = \frac{Q}{l} \leq \frac{\tau_R}{K}$$

where:

- $\tau_R$  is the bending shear strength according to EN 63:1977 with a minimum of  $\tau_R = 10 \text{ N/mm}^2$ , if no measured values are available;
- Q is the load per unit width that the joint shall carry under the static and dynamic loads;
- K is the factor calculated in accordance with 6.9.2.5 for the static and dynamic stresses;
- l is the length of the overlay laminate.

- 6.9.2.11 Openings in the shell shall be reinforced to provide at least the same safety factors against the static and dynamic stresses as specified in 6.9.2.5 and 6.9.2.6 as that for the shell itself. The number of openings shall be minimized. The axis ratio of oval-shaped openings shall be not more than 2.
- 6.9.2.12 For the design of flanges and pipework attached to the shell, handling forces and the fastening of bolts shall also be taken into account.
- 6.9.2.13 The tank shall be designed to withstand, without significant leakage, the effects of a full engulfment in fire for 30 minutes as specified by the test requirements in 6.9.4.3.4. Testing may be waived with the agreement of the competent authority, where sufficient proof can be provided by tests with comparable tank designs.
- 6.9.2.14 ***Special requirements for the transport of substances with a flash-point of not more than 61 °C***

FRP tanks used for the carriage of substances with a flash-point of not more than 61 °C shall be constructed so as to ensure the elimination of static electricity from the various component parts so as to avoid the accumulation of dangerous charges.

  - 6.9.2.14.1 The electrical surface resistance of the inside and outside of the shell as established by measurements shall not be higher than  $10^9$  ohms. This may be achieved by the use of additives in the resin or interlaminar conducting sheets, such as metal or carbon network.
  - 6.9.2.14.2 The discharge resistance to earth as established by measurements shall not be higher than  $10^7$  ohms.
  - 6.9.2.14.3 All components of the shell shall be electrically connected to each other and to the metal parts of the service and structural equipment of the tank and to the vehicle. The electrical resistance between components and equipment in contact with each other shall not exceed 10 ohms.
  - 6.9.2.14.4 The electrical surface-resistance and discharge resistance shall be measured initially on each manufactured tank or a specimen of the shell in accordance with a procedure recognized by the competent authority.
  - 6.9.2.14.5 The discharge resistance to earth of each tank shall be measured as part of the periodic inspection in accordance with a procedure recognized by the competent authority.

### 6.9.3 Items of equipment

6.9.3.1 The requirements of 6.8.2.2.1, 6.8.2.2.2 and 6.8.2.2.4 to 6.8.2.2.8 shall apply.

6.9.3.2 In addition, when they are shown under an entry in Column (13) of Table A of Chapter 3.2, the special provisions of 6.8.4 (b) (TE) shall also apply.

### 6.9.4 Type testing and approval

6.9.4.1 For any design of a FRP tank type, its materials and a representative prototype shall be subjected to the design type testing as outlined below.

#### 6.9.4.2 *Material testing*

6.9.4.2.1 The elongation at fracture according to EN 61:1977 and the heat distortion temperature according to ISO 75-1:1993 shall be determined for the resins to be used.

6.9.4.2.2 The following characteristics shall be determined for samples cut out of the shell. Samples manufactured in parallel may only be used, if it is not possible to use cutouts from the shell. Prior to testing, any liner shall be removed.

The tests shall cover:

- Thickness of the laminates of the central shell wall and the ends;
- Mass content and composition of glass, orientation and arrangement of reinforcement layers;
- Tensile strength, elongation at fracture and modulus of elasticity according to EN 61:1977 in the direction of stresses. In addition, the elongation at fracture of the resin shall be established by means of ultrasound;
- Bending strength and deflection established by the bending creep test according to EN 63:1977 for a period of 1000 hours using a sample with a minimum width of 50 mm and a support distance of at least 20 times the wall thickness. In addition, the creep factor  $\alpha$  and the ageing factor  $\beta$  shall be determined by this test and according to EN 978:1997.

6.9.4.2.3 The interlaminar shear strength of the joints shall be measured by testing representative samples in the tensile test according to EN 61:1977.

6.9.4.2.4 The chemical compatibility of the shell with the substances to be carried shall be demonstrated by one of the following methods with the agreement of the competent authority. This demonstration shall account for all aspects of the compatibility of the materials of the shell and its equipment with the substances to be carried, including chemical deterioration of the shell, initiation of critical reactions of the contents and dangerous reactions between both.

- In order to establish any deterioration of the shell, representative samples taken from the shell, including any internal liners with welds, shall be subjected to the chemical compatibility test according to EN 977:1997 for a period of 1 000 hours at 50°C. Compared with a virgin sample, the loss of strength and elasticity modulus measured by the bending test according to EN 978:1997 shall not exceed 25 %. Cracks, bubbles, pitting effects as well as separation of layers and liners and roughness shall not be acceptable.

- Certified and documented data of positive experiences on the compatibility of the filling substances in question with the materials of the shell with which they come into contact at given temperatures, times and any other relevant service conditions.
- Technical data published in relevant literature, standards or other sources, acceptable to the competent authority.

#### 6.9.4.3 *Type testing*

A representative prototype tank shall be subjected to tests as specified below. For this purpose service equipment may be replaced by other items if necessary.

6.9.4.3.1 The prototype shall be inspected for compliance with the design type specification. This shall include an internal and external visual inspection and measurement of the main dimensions.

6.9.4.3.2 The prototype, equipped with strain gauges at all locations where a comparison with the design calculation is required, shall be subjected to the following loads and the strains shall be recorded:

- Filled with water to the maximum filling degree. The measuring results shall be used to calibrate the design calculation according to 6.9.2.5;
- Filled with water to the maximum filling degree and subjected to accelerations in all three directions by means of driving and braking exercises with the prototype attached to a vehicle. For comparison with the design calculation according to 6.9.2.6 the strains recorded shall be extrapolated in relation to the quotient of the accelerations required in 6.8.2.1.2 and measured;
- Filled with water and subjected to the specified test pressure. Under this load, the shell shall exhibit no visual damage or leakage.

6.9.4.3.3 The prototype shall be subjected to the ball drop test according to EN 976-1:1997, No. 6.6. No visible damage inside or outside the tank shall occur.

6.9.4.3.4 The prototype with its service and structural equipment in place and filled to 80% of its maximum capacity with water, shall be exposed to a full engulfment in fire for 30 minutes, caused by an open heating oil pool fire or any other type of fire with the same effect. The dimensions of the pool shall exceed those of the tank by at least 50 cm to each side and the distance between fuel level and tank shall be between 50 cm and 80 cm. The rest of the tank below liquid level, including openings and closures, shall remain leakproof except for drips.

#### 6.9.4.4 *Type approval*

6.9.4.4.1 The competent authority or a body designated by that authority shall issue in respect of each new type of tank an approval attesting that the design is suitable for the purpose for which it is intended and meets the construction and equipment requirements of this chapter as well as the special provisions applicable to the substances to be carried.

6.9.4.4.2 The approval shall be based on the calculation and the test report, including all material and prototype test results and its comparison with the design calculation, and shall refer to the design type specification and the quality assurance programme.

6.9.4.4.3 The approval shall include the substances or group of substances for which compatibility with the shell is provided. Their chemical names or the corresponding collective entry (see 2.1.1.2), and their class and classification code shall be indicated.

- 6.9.4.4.4 In addition, it shall include design and threshold values (such as life-time, service temperature range, working and test pressures, material data) specified and all precautions to be taken for the manufacture, testing, type approval, marking and use of any tank, manufactured in accordance with the approved design type.
- 6.9.5 Inspections**
- 6.9.5.1 For every tank, manufactured in conformity with the approved design, material tests and inspections shall be performed as specified below.
- 6.9.5.1.1 The material tests according to 6.9.4.2.2, except for the tensile test and for a reduction of the testing time for the bending creep test to 100 hours shall be performed with samples taken from the shell. Samples manufactured in parallel may only be used, if no cutouts from the shell are possible. The approved design values shall be met.
- 6.9.5.1.2 Shells and their equipment shall either together or separately undergo an initial inspection before being put into service. This inspection shall include:
- a check of conformity to the approved design;
  - a check of the design characteristics;
  - an internal and external examination;
  - a hydraulic pressure test at the test pressure indicated on the plate prescribed in 6.8.2.5.1;
  - a check of operation of the equipment;
  - a leakproofness test, if the shell and its equipment have been pressure tested separately.
- 6.9.5.2 For the periodic inspection of tanks the requirements of 6.8.2.4.2 to 6.8.2.4.4 shall apply.
- 6.9.5.3 The inspections and tests in accordance with 6.9.5.1 and 6.9.5.2 shall be carried out by the expert approved by the competent authority. Certificates shall be issued showing the results of these operations. These certificates shall refer to the list of the substances permitted for carriage in this shell in accordance with 6.9.4.4.
- 6.9.6 Marking**
- 6.9.6.1 The requirements of 6.8.2.5 shall apply to the marking of FRP tanks, with the following amendments:
- the tank plate may also be laminated to the shell or be made of suitable plastics materials;
  - the design temperature range shall always be marked.
- 6.9.6.2 In addition, when they are shown under an entry in Column (13) of Table A of Chapter 3.2, the special provisions of 6.8.4 (e) (TM) shall also apply.

## CHAPTER 6.10

## REQUIREMENTS FOR THE CONSTRUCTION, EQUIPMENT, TYPE APPROVAL, INSPECTION AND MARKING OF VACUUM-OPERATED WASTE TANKS

**NOTE 1:** For portable tanks see Chapter 6.7; for fixed tanks (tank-vehicles), demountable tanks and tank containers and tank swap bodies, with shells made of metallic materials, and battery-vehicles and multiple element gas containers (MEGCs) see Chapter 6.8; for fibre-reinforced plastic tanks see Chapter 6.9.

**NOTE 2:** This Chapter applies to fixed tanks, demountable tanks, tank-containers and tank swap bodies.

### 6.10.1 General

#### 6.10.1.1 Definition

**NOTE:** A tank which fully complies with the requirements of Chapter 6.8 is not considered to be a "vacuum-operated waste tank".

6.10.1.1.1 The term "protected area" means the areas located as follows:

- (a) The lower part of the tank in a zone which extends over a 60° angle on either side of the lower generating line;
- (b) The top part of the tank in a zone which extends over a 30° angle on either side of the top generating line;
- (c) On the end front of the tank on motor vehicles;
- (d) On the rear end of the tank inside the protection volume formed by the device stipulated in 9.7.6.

#### 6.10.1.2 Scope

6.10.1.2.1 The special requirements of 6.10.2 to 6.10.4 complete or modify Chapter 6.8 and are applied to vacuum-operated waste tanks.

Vacuum-operated waste tanks may be equipped with openable ends, if the requirements of Chapter 4.3 allow bottom discharge of the substances to be carried (indicated by letters "A" or "B" in Part 3 of the tank code given in Column (12) of Table A of Chapter 3.2, in accordance with 4.3.4.1.1).

Vacuum-operated waste tanks shall comply with all requirements of Chapter 6.8, with the exception of requirements overtaken by a special provision in this Chapter. However the requirements of 6.8.2.1.19, 6.8.2.1.20, and 6.8.2.1.21 shall not apply.

### 6.10.2 Construction

6.10.2.1 Tanks shall be designed for a calculation pressure equal to 1.3 times the filling or discharge pressure but not less than 400 kPa (4 bar) (gauge pressure). For the carriage of substances for which a higher calculation pressure of the tank is specified in Chapter 6.8, this higher pressure shall apply.

6.10.2.2 Tanks shall be designed to withstand a negative internal pressure of 100 kPa (1 bar).

### 6.10.3 Items of equipment

- 6.10.3.1 The items of equipment shall be so arranged as to be protected against the risk of being wrenched off or damaged during carriage or handling. This requirement can be fulfilled by placing the items of equipment in a so called "protected area" (see 6.10.1.1.1).
- 6.10.3.2 The bottom discharge of shells may be constituted by external piping with a stop-valve fitted as close to the shell as practicable and a second closure which may be a blank flange or other equivalent device.
- 6.10.3.3 The position and closing direction of the stop-valve(s) connected to the shell, or to any compartment in the case of compartmented shells, shall be unambiguous, and be able to be checked from the ground.
- 6.10.3.4 In order to avoid any loss of contents in the event of damage to the external filling and discharge fittings (pipes, lateral shut-off devices), the internal stop-valve, or the first external stop-valve (where applicable), and its seatings shall be protected against the danger of being wrenched off by external stresses or shall be so designed as to withstand them. The filling and discharge devices (including flanges or threaded plugs) and protective caps (if any) shall be capable of being secured against any unintended opening.
- 6.10.3.5 The tanks may be equipped with openable ends. Openable ends shall comply with the following conditions:
- (a) The ends shall be designed to be secured leaktight when closed;
  - (b) Unintentional opening shall not be possible;
  - (c) Where the opening mechanism is power operated the end shall remain securely closed in the event of a power failure;
  - (d) A safety or breakseal device shall be incorporated to ensure that the openable end cannot be opened when there is still a residual over pressure in the tank. This requirement does not apply to openable ends which are power-operated, where the movement is positively controlled. In this case the controls shall be of the dead-man type and be so positioned that the operator can observe the movement of the openable end at all times and is not endangered during opening and closing of the openable end; and
  - (e) Provisions shall be made to protect the openable end and prevent it from being forced open during a roll-over of the vehicle, tank-container or tank swap body.
- 6.10.3.6 Vacuum-operated waste tanks which are fitted with an internal piston to assist in the cleaning of the tank or discharging shall be provided with stop-devices to prevent the piston in every operational position being ejected from the tank when a force equivalent to the maximum allowed working pressure of the tank is applied to the piston. The maximum allowed working pressure for tanks or compartments with pneumatic operated piston shall not exceed 100 kPa (1.0 bar). The internal piston shall be constructed in a manner and of materials which will not cause an ignition source when the piston is moved.

The internal piston may be used as a compartment provided it is secured in position. Where any of the means by which the internal piston is secured is external to the tank, it shall be placed in a position not liable to accidental damage.

6.10.3.7 The tanks may be equipped with suction booms if:

- (a) the boom is fitted with an internal or external stop-valve fixed directly to the shell, or directly to a bend that is welded to the shell;
- (b) the stop-valve mentioned in (a) is so arranged that carriage with the valve in an open position is prevented; and
- (c) the boom is constructed in such a way that the tank will not leak as a result of accidental impact on the boom.

6.10.3.8 The tanks shall be fitted with the following additional service equipment:

- (a) The outlet of a pump/exhauster unit shall be so arranged as to ensure that any flammable or toxic vapours are diverted to a place where they will not cause a danger;
- (b) A device to prevent immediate passage of flame shall be fitted to both the inlet and outlet of a vacuum pump/exhauster unit which may create sparks and which is fitted on a tank used for the carriage of flammable wastes;
- (c) Pumps which can deliver a positive pressure shall have a safety device fitted in the pipework which can be pressurised. The safety device shall be set to discharge at a pressure not exceeding the maximum working pressure of the tank;
- (d) A stop-valve shall be fitted between the shell, or the outlet of the overfill prevention device fitted to the shell, and the pipework connecting the shell to the pump/exhauster unit;
- (e) The tank shall be fitted with a suitable pressure/vacuum manometer which shall be mounted in a position where it can be easily read by the person operating the pump/exhauster unit. A distinguishing line shall be marked on the scale to indicate the maximum working pressure of the tank;
- (f) The tank, or in case of compartmented tanks, every compartment, shall be equipped with a level indicating device. Sight glasses may be used as level indicating devices provided:
  - (i) they form a part of the tank wall and have a resistance to the pressure comparable to that of the tank; or they are fitted external to the tank;
  - (ii) the top and bottom connections to the tank are equipped with shut-off valves fixed directly to the shell and so arranged that carriage with the valves in an open position is prevented;
  - (iii) are suitable for operation at the maximum allowed working pressure of the tank; and
  - (iv) are placed in a position where they will not be liable to accidental damage.

6.10.3.9 Shells of vacuum-operated waste tanks shall have a safety valve preceded by a bursting disc.

#### 6.10.4 Inspection

Vacuum-operated waste tanks shall be subject to an internal and external examination at least every three years for fixed and demountable tanks and at least every two and a half years for tank-containers and tank swap bodies.

1245

## **PART 7**

**Provisions concerning the conditions of  
carriage, loading, unloading  
and handling**

## CHAPTER 7.1

## GENERAL PROVISIONS

- 7.1.1 The carriage of dangerous goods is subject to the mandatory use of a particular type of carriage in accordance with the provisions of this Chapter and Chapter 7.2 for carriage in packages, Chapter 7.3 for carriage in bulk and Chapter 7.4 for carriage in tanks. In addition, the provisions of Chapter 7.5 concerning loading, unloading and handling shall be observed.

Columns (16), (17) and (18) of Table A of Chapter 3.2 show the particular provisions of this Part that apply to specific dangerous goods.

- 7.1.2 In addition to the provisions of this Part, vehicles used for the carriage of dangerous goods shall, as regards their design, construction and, if appropriate, their approval, conform to the relevant requirements of Part 9.

- 7.1.3 Large containers, portable tanks and tank-containers which meet the definition of "container" given in the CSC (1972), as amended, or in UIC leaflets<sup>1</sup> 590 (status at 01.01.1979, 10<sup>th</sup> edition, including amendments Nos. 1 to 4), 591 (status at 01.01.1998, 2<sup>nd</sup> edition), 592-2 (status at 01.07.1996, 5<sup>th</sup> edition), 592-3 (status at 01.01.1998, 2<sup>nd</sup> edition) and 592-4 (status at 01.07.1995, new edition) may not be used to carry dangerous goods unless the large container or the frame of the portable tank or tank-container satisfies the provisions of the CSC or of UIC leaflets 590, 591 and 592-2 to 592-4.

- 7.1.4 A large container may be presented for carriage only if it is structurally serviceable.

"Structurally serviceable" means that the container is free from major defects in its structural components, e.g. top and bottom side rails, doorsill and header, floor cross members, corner posts, and corner fittings. "Major defects" are dents or bends in structural members greater than 19 mm in depth, regardless of length; cracks or breaks in structural members; more than one splice or an improper splice (e.g. a lapped splice) in top or bottom end rails or door headers or more than two splices in any one top or bottom side rail or any splice in a door sill or corner post; door hinges and hardware that are seized, twisted, broken, missing or otherwise inoperative; non-closing gaskets and seals; any distortion of the overall configuration sufficient to prevent proper alignment of handling equipment, mounting and securing on a chassis or vehicle.

In addition, deterioration in any component of the container, such as rusted metal in side walls or disintegrated fibreglass is unacceptable, regardless of the material of construction. Normal wear, including oxidization (rust), slight dents and scratches and other damage that do not affect serviceability or weather-tightness are, however, acceptable.

Prior to loading the container shall also be checked to ensure that it is free from any residue of a previous load and that the interior floor and walls are free from protrusions.

- 7.1.5 Large containers shall meet the requirements concerning the body of the vehicle laid down in this Part and, if appropriate, those laid down in Part 9 for the load in question; the body of the vehicle need not then satisfy those provisions.

However, large containers carried on vehicles whose platforms have insulation and heat-resistant qualities which satisfy those requirements need not then satisfy the said requirements.

<sup>1</sup> UIC leaflets are published by the Union Internationale des chemins de fer, Service Publications - 16, rue Jean Rey - F - 75015 Paris.

This provision also applies to small containers for the carriage of explosive substances and articles of Class 1.

- 7.1.6 Subject to the provisions of the last part of the first sentence of 7.1.5, the fact that dangerous goods are contained in one or more containers shall not affect the conditions to be met by the vehicle by reason of the nature and quantities of the dangerous goods carried.

**CHAPTER 7.2****PROVISIONS CONCERNING CARRIAGE IN PACKAGES**

7.2.1 Unless otherwise provided in 7.2.2 to 7.2.4, packages may be loaded:

- (a) in closed vehicles or in closed containers; or
- (b) in sheeted vehicles or in sheeted containers; or
- (c) in open vehicles or in open containers.

7.2.2 Packages comprising packagings made of materials sensitive to moisture shall be loaded on to closed or on to sheeted vehicles or into closed or sheeted containers.

7.2.3 *(Reserved)*

7.2.4 When they are shown under an entry in Column (16) of Table A of Chapter 3.2, the following special provisions apply:

- V1 Packages shall be loaded on to closed or sheeted vehicles or into closed or sheeted containers.
- V2 (1) Packages shall only be loaded on to EX/II or EX/III vehicles which satisfy the relevant requirements of Part 9. The choice of vehicle depends on the quantity to be carried, which is limited per transport unit in accordance with the provisions concerning loading (see 7.5.5.2).
- (2) Trailers, except semi-trailers, which satisfy the requirements for EX/II or EX/III vehicles may be drawn by motor vehicles which do not satisfy those requirements.

For carriage in containers, see also 7.1.3 to 7.1.6.

Where substances or articles of Class 1 in quantities requiring a transport unit made up of EX/III vehicle(s) are being carried in containers to or from harbour areas, rail terminals or airports of arrival or departure as part of a multimodal journey, a transport unit made up of EX/II vehicle(s) may be used instead, provided that the containers being carried comply with the appropriate requirements of the IMDG Code, the RID or the ICAO Technical Instructions.

- V3 For free-flowing powdery substances and for fireworks the floor of a container shall have a non-metallic surface or covering.
- V4 *(Reserved)*
- V5 Packages may not be carried in small containers.
- V6 Flexible IBCs shall be carried in closed vehicles or in closed containers, in sheeted vehicles or in sheeted containers. The sheet shall be of an impermeable and non-combustible material.
- V7 If packages are carried in a closed vehicle or in a closed container, the vehicle or container shall be provided with adequate ventilation.

- V8 (1) Substances stabilized by temperature control shall be forwarded in such manner that the control temperatures indicated in 2.2.41.1.17 and 2.2.41.4 or in 2.2.52.1.16 and 2.2.52.4, as appropriate, are never exceeded.
- (2) The means of temperature control chosen for the transport operation depends on a number of factors such as:
- the control temperature(s) of the substance(s) to be carried;
  - the difference between the control temperature and the expected ambient temperature;
  - the effectiveness of the thermal insulation;
  - the duration of the transport operation; and
  - the safety margin to be allowed for delays en route.
- (3) Suitable methods to prevent the control temperature from being exceeded are listed below, in ascending order of effectiveness:
- R1 Thermal insulation, provided that the initial temperature of the substance(s) is sufficiently below the control temperature;
- R2 Thermal insulation and coolant system, provided that:
- an adequate quantity of non-flammable coolant (e.g. liquid nitrogen or solid carbon dioxide), allowing a reasonable margin for possible delay, is carried or a means of replenishment is assured;
  - liquid oxygen or air is not used as coolant;
  - there is a uniform cooling effect even when most of the coolant has been consumed; and
  - the need to ventilate the transport unit before entering is clearly indicated by a warning on the door(s);
- R3 Thermal insulation and single mechanical refrigeration, provided that for substances with a flash-point lower than the sum of the emergency temperature plus 5 °C explosion-proof electrical fittings, EEx IIB T3, are used within the cooling compartment to prevent ignition of flammable vapours from the substances;
- R4 Thermal insulation and combined mechanical refrigeration system and coolant system, provided that:
- the two systems are independent of one another; and
  - the requirements of methods R2 and R3 above are met;
- R5 Thermal insulation and dual mechanical refrigeration system, provided that:
- apart from the integral power supply unit, the two systems are independent of one another;

- each system alone is capable of maintaining adequate temperature control; and
  - for substances with a flash-point lower than the sum of the emergency temperature plus 5 °C explosion-proof electrical fittings, EEx IIB T3, are used within the cooling compartment to prevent ignition of flammable vapours from the substances.
- (4) Methods R4 and R5 may be used for all organic peroxides and self-reactive substances.

Method R3 may be used for organic peroxides and self-reactive substances of Types C, D, E and F and, when the maximum ambient temperature to be expected during carriage does not exceed the control temperature by more than 10 °C, for organic peroxides and self-reactive substances of Type B.

Method R2 may be used for organic peroxides and self-reactive substances of Types C, D, E and F when the maximum ambient temperature to be expected during carriage does not exceed the control temperature by more than 30 °C.

Method R1 may be used for organic peroxides and self-reactive substances of Types C, D, E and F when the maximum ambient temperature to be expected during carriage is at least 10 °C below the control temperature.

- (5) Where substances are required to be carried in insulated, refrigerated or mechanically-refrigerated vehicles or containers, these vehicles or containers shall satisfy the requirements of Chapter 9.6.
- (6) If substances are contained in protective packagings filled with a coolant, they shall be loaded in closed or sheeted vehicles or closed or sheeted containers. If the vehicles or containers used are closed they shall be adequately ventilated. Sheeted vehicles and containers shall be fitted with sideboards and a tailboard. The sheets of these vehicles and containers shall be of an impermeable and non-combustible material.
- (7) Any control and temperature sensing devices in the refrigeration system shall be readily accessible and all electrical connections shall be weatherproof. The temperature of the air inside the transport unit shall be measured by two independent sensors and the output shall be recorded so that any change in temperature is readily detectable. When substances having a control temperature of less than +25 °C are carried, the transport unit shall be equipped with visible and audible alarms, powered independently of the refrigeration system and set to operate at or below the control temperature.
- (8) A back-up refrigeration system or spare parts shall be available.

*NOTE: This provision V8 does not apply to substances referred to in 3.1.2.6 when substances are stabilized by the addition of chemical inhibitors such that the SADT is greater than 50 °C. In this latter case, temperature control may be required under conditions of carriage where the temperature may exceed 55 °C.*

V9 (Reserved)

V10 IBCs shall be carried in closed or sheeted vehicles or closed or sheeted containers.

- V11 IBCs other than metal or rigid plastics IBCs shall be carried in closed or sheeted vehicles or closed or sheeted containers.
- V12 IBCs of type 31HZ2 shall be carried in closed vehicles or containers.
- V13 When packed in 5H1, 5L1 or 5 M1 bags, shall be carried in closed vehicles or containers.

## CHAPTER 7.3

## PROVISIONS CONCERNING CARRIAGE IN BULK

7.3.1 Goods may not be carried in bulk in vehicles or containers unless a special provision, identified by the code VV, explicitly authorizing this mode of carriage is indicated in Column (17) of Table A of Chapter 3.2 for these goods and unless the conditions of this special provision are satisfied.

Nevertheless, empty packagings, uncleaned may be carried in bulk if this mode of carriage is not explicitly prohibited by other provisions of ADR.

*NOTE: For carriage in tanks, see Chapters 4.2 and 4.3.*

7.3.2 Suitable measures shall be taken for all carriage in bulk to ensure that none of the contents can escape.

7.3.3 When they are shown under an entry in Column (17) of Table A of Chapter 3.2, the following special provisions apply:

VV1 Carriage in bulk in closed or sheeted vehicles, in closed containers or in large sheeted containers is permitted.

VV2 Carriage in bulk is permitted in closed vehicles with a metal body, closed metal containers and in sheeted vehicles and sheeted large containers covered with a non-combustible sheet and having a metal body or having floor and walls protected from the load.

VV3 Carriage in bulk is permitted in sheeted vehicles and sheeted large containers with adequate ventilation.

VV4 Carriage in bulk is permitted in closed or sheeted vehicles with a metal body, and in closed metal containers or in sheeted large metal containers. For UN Nos. 2008, 2009, 2210, 2545, 2546, 2881, 3189 and 3190, only carriage in bulk of solid waste is permitted.

VV5 Carriage in bulk is permitted in specially equipped vehicles and containers.

The openings used for loading and unloading shall be capable of being closed hermetically.

VV6 *(Reserved)*

VV7 Carriage in bulk in closed or sheeted vehicles, in closed containers or in large sheeted containers is permitted only if the substance is in pieces.

VV8 Carriage in bulk is permitted, as a full load, in closed vehicles, closed containers or sheeted vehicles or large containers covered with an impermeable, non-combustible sheet.

Vehicles and containers shall be so constructed either that the substances contained cannot come into contact with wood or any other combustible material, or that the entire surface of the floor and walls, if made of wood or another combustible material has been provided with an impermeable surfacing resistant to combustion or has been coated with sodium silicate or a similar substance.

- VV9a Carriage in bulk is permitted, as a full load, in sheeted vehicles, closed containers or in sheeted large containers with complete walls.

For substances of Class 8, the body of the vehicle or container shall be equipped with a suitable and sufficiently stout inner lining.

- VV9b Carriage in bulk of full loads (if Class 8, only for wastes) is permitted in closed containers or in sheeted large containers with complete walls. For wastes of Class 8, containers shall be equipped with a suitable and sufficiently stout inner lining.

- VV10 Carriage in bulk is permitted, as a full load, in sheeted vehicles, closed containers or sheeted large containers with complete walls.

The body of vehicles or containers shall be leakproof or rendered leakproof, for example by means of a suitable and sufficiently stout inner lining.

- VV11 Carriage in bulk is permitted in specially equipped vehicles and containers in a manner which avoids risks to humans, animals and the environment, e.g. by loading the wastes in bags or by airtight connections.

- VV12 Substances for which carriage in tank-vehicles, in portable tanks or in tank-containers is unsuitable because of the high temperature and density of the substance may be carried in special vehicles or containers in accordance with standards specified by the competent authority of the country of origin. If the country of origin is not a contracting party to ADR, the conditions laid down shall be recognized by the competent authority of the first country contracting party to ADR reached by the consignment.

- VV13 Carriage in bulk is permitted in specially equipped vehicles or containers in accordance with standards specified by the competent authority of the country of origin. If the country of origin is not a contracting party to ADR, the conditions laid down shall be recognized by the competent authority of the first country contracting party to ADR reached by the consignment.

- VV14 (1) Used batteries may be carried in bulk in specially equipped vehicles or containers. Large plastics containers shall not be permitted. Small plastics containers shall be capable of withstanding, when fully loaded, a drop from a height of 0.8 m onto a hard surface at -18 °C, without breakage.

- (2) The load compartments of vehicles or containers shall be of steel resistant to the corrosive substances contained in the batteries. Less resistant steels may be used when there is a sufficiently great wall thickness or a plastics lining/layer resistant to the corrosive substances.

The design of the load compartments of vehicles or containers shall take account of any residual currents and impact from the batteries.

*NOTE: Steel exhibiting a maximum rate of progressive reduction of 0.1 mm per year under the effects of the corrosive substances may be considered as resistant.*

- (3) It shall be ensured by means of constructional measures that there will be no leakage of corrosive substances from the load compartments of vehicles or containers during carriage. Open load compartments shall be covered. The cover shall be resistant to the corrosive substances.

- (4) Before loading, the load compartments of vehicles or containers, including their equipment, shall be inspected for damage. Vehicles or containers with damaged load compartments shall not be loaded.

The load compartments of vehicles or containers shall not be loaded above the top of their walls.

- (5) No batteries containing different substances and no other goods liable to react dangerously with each other shall be present in the load compartments of vehicles or containers (see "*Dangerous reaction*" in 1.2.1).

During carriage no dangerous residue of the corrosive substances contained in the batteries shall adhere to the outer surface of the load compartments of vehicles or containers.

**CHAPTER 7.4****PROVISIONS CONCERNING CARRIAGE IN TANKS**

7.4.1 Dangerous goods may not be carried in tanks unless a code is indicated in Columns (10) or (12) of Table A of Chapter 3.2 or unless a competent authority approval is granted as detailed in 6.7.1.3. The carriage shall be in accordance with the provisions of Chapters 4.2 or 4.3, and the vehicles, whether they be tank-vehicles (with a fixed or demountable tank), battery-vehicles or vehicles carrying tank-containers or portable tanks, shall satisfy the relevant requirements of Chapters 9.1, 9.2 and 9.7.2 concerning the vehicle to be used, as indicated in Column (14) of Table A of Chapter 3.2.

7.4.2 The vehicles designated by the codes FL, OX or AT in 9.1.1.2 shall be used as follows:

- Where a FL vehicle is prescribed, only an FL vehicle may be used;
- Where a OX vehicle is prescribed, only an OX vehicle may be used;
- Where a AT vehicle is prescribed, AT, FL and OX vehicles may be used.

**CHAPTER 7.5****PROVISIONS CONCERNING LOADING, UNLOADING AND HANDLING****7.5.1 General provisions concerning loading, unloading and handling**

- 7.5.1.1 The vehicle and its driver, upon arrival at the loading and unloading sites, shall comply with the regulatory provisions (especially those concerning safety, cleanliness and satisfactory operation of the vehicle equipment used in loading and unloading).
- 7.5.1.2 The loading shall not be carried out if an examination of the documents and a visual inspection of the vehicle and its equipment show that the vehicle or the driver do not comply with the regulatory provisions.
- 7.5.1.3 The unloading shall not be carried out, if the above-mentioned inspections reveal deficiencies that might affect the safety of the unloading.
- 7.5.1.4 In accordance with the special provisions of 7.3.3 or 7.5.11, in conformity with Columns (17) and (18) of Table A of Chapter 3.2, certain dangerous goods shall only be forwarded as a "full load" (see definition in 1.2.1). In such a case, the competent authorities may require the vehicle or large container used for such carriage to be loaded at only one point and unloaded at only one point.

**7.5.2 Mixed loading prohibition**

- 7.5.2.1 Packages bearing different danger labels shall not be loaded together in the same vehicle or container unless mixed loading is permitted according to the following Table based on the danger labels they bear.

*NOTE: In accordance with 5.4.1.4.2, separate transport documents shall be drawn up for consignments that cannot be loaded together in the same vehicle or container.*

X Mixed loading permitted.

<sup>a</sup> Mixed loading permitted with 1.4S substances and articles.

<sup>b</sup> Mixed loading permitted between goods of Class 1 and life-saving appliances of Class 9 (UN Nos. 2990, 3072 and 3268).

<sup>c</sup> Mixed loading permitted between air bag inflators, or air bag modules, or seat-belt pretensioners of Division 1.4, compatibility group G, (UN No. 0503) and air bag inflators or air bag modules or seat-belt pretensioners of Class 9 (UN No. 3268).

<sup>d</sup> Mixed loading permitted between blasting explosives (except UN No. 0083 explosive, blasting, type C) and ammonium nitrate and inorganic nitrates of Class 5.1 (UN Nos. 1942 and 2067) provided the aggregate is treated as blasting explosives under Class 1 for the purposes of placarding, segregation, stowage and maximum permissible load.

## 7.5.2.2

Packages containing substances or articles of Class 1, bearing a label conforming to models Nos. 1, 1.4, 1.5 or 1.6 which are assigned to different compatibility groups shall not be loaded together in the same vehicle or container, unless mixed loading is permitted in accordance with the following Table for the corresponding compatibility groups.

Compatibility Group	A	B	C	D	E	F	G	H	J	L	N	S
A	X											
B		X		<sup>a</sup>								X
C			X	X	X		X				<sup>b c</sup>	X
D		<sup>a</sup>	X	X	X		X				<sup>b c</sup>	X
E			X	X	X		X				<sup>b c</sup>	X

J									X			X
L										<sup>d</sup>		
N			<sup>b c</sup>	<sup>b c</sup>	<sup>b c</sup>						<sup>b</sup>	X
S		X	X	X	X	X	x	X	X		X	X

X Mixed loading permitted.

<sup>a</sup> Packages containing articles of compatibility group B and substances and articles of compatibility group D may be loaded together on one vehicle provided they are carried in separate containers or compartments of a design approved by the competent authority or a body designated by it, such that there is no danger of transmission of detonation from the articles of compatibility group B to the substances or articles of compatibility group D.

<sup>b</sup> Different types of articles of division 1.6, compatibility group N, may be carried together as articles of division 1.6, compatibility group N, only when it is proven by testing or analogy that there is no additional risk of sympathetic detonation between the articles. Otherwise they should be treated as hazard division 1.1.

<sup>c</sup> When articles of compatibility group N are carried with substances or articles of compatibility groups C, D or E, the articles of compatibility group N should be considered as having the characteristics of compatibility group D.

<sup>d</sup> Packages containing substances and articles of Compatibility Group L may be loaded together on one vehicle or in one container with packages containing the same type of substances and articles of that compatibility group.

**7.5.2.3** For the purpose of the application of the prohibitions of mixed loading on one vehicle, no account shall be taken of substances contained in closed containers with complete sides. Nevertheless, the mixed loading prohibitions laid down in 7.5.2.1 concerning mixed loading of packages bearing labels conforming to models Nos. 1, 1.4, 1.5 or 1.6 with other packages, and in 7.5.2.2 concerning mixed loading of explosives of different compatibility groups shall also apply between dangerous goods contained in a container and the other dangerous goods loaded on the same vehicle, whether or not the latter goods are enclosed in one or more other containers.

**7.5.3** *(Reserved)*

**7.5.4** **Precautions with respect to foodstuffs, other articles of consumption and animal feeds**

If special provision CV28 is indicated for a substance or article in Column (18) of Table A of Chapter 3.2, precautions with respect to foodstuffs, other articles of consumption and animal feeds shall be taken as follows.

Packages as well as uncleaned empty packagings, including large packagings and intermediate bulk containers (IBCs), bearing labels conforming to models Nos. 6.1 or 6.2 and those bearing labels conforming to model No.9 containing goods of UN Nos. 2212, 2315, 2590, 3151, 3152 or 3245, shall not be stacked on or loaded in immediate proximity to packages known to contain foodstuffs, other articles of consumption or animal feeds in vehicles, in containers and at places of loading, unloading or transhipment.

When these packages, bearing the said labels, are loaded in immediate proximity of packages known to contain foodstuffs, other articles of consumption or animal feeds, they shall be kept apart from the latter:

- (a) by complete partitions which should be as high as the packages bearing the said labels;
- (b) by packages not bearing labels conforming to models Nos. 6.1, 6.2 or 9 or packages bearing labels conforming to model No.9 but not containing goods of UN Nos. 2212, 2315, 2590, 3151, 3152 or 3245; or
- (c) by a space of at least 0.8 m;

unless the packages bearing the said labels are provided with an additional packaging or are completely covered (e.g. by a sheeting, a fibreboard cover or other measures).

**7.5.5** **Limitation of the quantities carried**

**7.5.5.1** If the provisions below or the additional provisions of 7.5.11 require a limitation of the quantity of specific goods that can be carried, in accordance with the information in Column (7) of Table A of Chapter 3.2, the fact that dangerous goods are contained in one or more containers shall not affect the mass limitations per transport unit laid down by these provisions.

**7.5.5.2** *Limitations with respect to explosive substances and articles*

**7.5.5.2.1** *Substances and quantities carried*

The total net mass in kg of explosive substance (or in the case of explosive articles, the total net mass of explosive substance contained in all the articles combined) which may be carried on one transport unit shall be limited as indicated in the table below (see also 7.5.2.2 as regards the prohibition of mixed loading):

Maximum permissible net mass in kg of explosive in Class 1 goods per transport unit

Transport Unit	Division	1.1		1.2	1.3	1.4		1.5 and 1.6	Empty uncleaned packagings
	Compatibility group	1.1A	Other than 1.1A			Other than 1.4S	1.4S		
EX/II <sup>a</sup>		6.25	1 000	3 000	5 000	15 000	Unlimited	5 000	Unlimited
EX/III <sup>a</sup>		18.75	16 000	16 000	16 000	16 000	Unlimited	16 000	Unlimited

<sup>a</sup> For the description of EX/II and EX/III vehicles see Part 9.

7.5.5.2.2 Where substances and articles of different divisions of Class 1 are loaded on one transport unit in conformity with the prohibitions of mixed loading contained in 7.5.2.2, the load as a whole shall be treated as if it belonged to the most dangerous division (in the order 1.1, 1.5, 1.2, 1.3, 1.6, 1.4). However, the net mass of explosives of compatibility group S shall not count towards the limitation of quantities carried.

Where substances classified as 1.5D are carried on one transport unit together with substances or articles of division 1.2, the entire load shall be treated for carriage as if it belonged to division 1.1.

#### 7.5.5.3 Limitations with respect to organic peroxides and self-reactive substances

The quantity of organic peroxides of Class 5.2 and self-reactive substances of Class 4.1 that can be carried in a single transport unit is limited as follows:

Organic peroxide or self-reactive substance	Substances of Type B without temperature control	Substances of Type C without temperature control	Substances of Type D, E or F without temperature control	Substances of Type B with temperature control	Substances of Type C with temperature control	Substances of Type D, E or F with temperature control
Maximum quantity per transport unit	1 000 kg <sup>a</sup>	10 000 kg	20 000 kg	1 000 kg <sup>b</sup>	5 000 kg <sup>c</sup>	20 000 kg

<sup>a</sup> 5 000 kg if the loading space is ventilated at the top and if the transport unit is insulated with heat-resistant material (see 9.3.4).

<sup>b</sup> 5 000 kg if the transport unit is insulated with a heat-resistant material (see 9.3.4)

<sup>c</sup> 10 000 kg if the transport unit is insulated with a heat-resistant material (see 9.3.4)

When substances are carried together in one transport unit, the limits given above shall not be exceeded and the total contents shall not exceed 20 000kg.

#### 7.5.6 (Reserved)

#### 7.5.7 Handling and stowage

7.5.7.1 The various components of a load comprising dangerous goods shall be properly stowed on the vehicle or in the container and secured by appropriate means to prevent them from being significantly displaced in relation to each other and to the walls of the vehicle or container. The load may be protected, for example, by the use of side wall fastening straps, sliding slatboards and adjustable brackets, air bags and anti-slide locking devices. The load is also sufficiently protected within the meaning of the first sentence if each layer of the whole loading space is completely filled with packages.

7.5.7.2 The provisions of 7.5.7.1 also apply to the loading, stowage and unloading of containers on to and from vehicles.

7.5.7.3 The driver or any other member of the crew may not open a package containing dangerous goods.

**7.5.8 Cleaning after unloading**

7.5.8.1 If, when a vehicle or container which has contained packaged dangerous goods is unloaded, some of the contents are found to have escaped, the vehicle or container shall be cleaned as soon as possible and in any case before reloading.

If it is not possible to do the cleaning locally, the vehicle or container shall be carried, with due regard to adequate safety, to the nearest suitable place where cleaning can be carried out.

Carriage is adequately safe if suitable measures have been taken to prevent the uncontrolled release of the dangerous goods that have escaped.

7.5.8.2 Vehicles or containers which have been loaded with dangerous goods in bulk shall be properly cleaned before reloading unless the new load consists of the same dangerous goods as the preceding load.

**7.5.9 Prohibition of smoking**

Smoking shall be prohibited during handling operations in the vicinity of vehicles or containers and inside the vehicles or containers.

**7.5.10 Precautions against electrostatic charges**

In the case of substances with a flash-point of 61 °C or below, a good electrical connection from the chassis of the vehicle, the portable tank or the tank-container to earth shall be established before tanks are filled or emptied. In addition, the rate of filling shall be limited.

**7.5.11 Additional provisions applicable to certain classes or specific goods**

In addition to the provisions of sections 7.5.1 to 7.5.10, the following provisions shall apply when they are shown under an entry indicated in Column (18) of Table A of Chapter 3.2.

- CV1 (1) The following operations are prohibited:
- (a) Loading or unloading goods in a public place in a built-up area without special permission from the competent authorities;
  - (b) Loading or unloading goods in a public place elsewhere than in a built-up area without prior notice thereof having been given to the competent authorities, unless these operations are urgently necessary for reasons of safety.
- (2) If, for any reason, handling operations have to be carried out in a public place, then substances and articles of different kinds shall be separated according to the labels.
- CV2 (1) Before loading, the loading surface of the vehicle or container shall be thoroughly cleaned.

- (2) The use of fire or naked flame shall be prohibited on vehicles and containers carrying goods, in their vicinity and during the loading and unloading of these goods.

CV3 See 7.5.5.2.

CV4 Substances and articles of compatibility group L shall only be carried as a full load.

CV5 to  
CV8 (*Reserved*)

CV9 Packages shall not be thrown or subjected to impact.

Receptacles shall be so stowed in the vehicle or container that they cannot overturn or fall.

CV10 Cylinders as defined in 1.2.1, shall be laid parallel to or at right angles to the longitudinal axis of the vehicle or container; however, those situated near the forward transverse wall shall be laid at right angles to the said axis.

Short cylinders of large diameter (about 30 cm and over) may be stowed longitudinally with their valve-protecting devices directed towards the middle of the vehicle or container.

Cylinders which are sufficiently stable or are carried in suitable devices effectively preventing them from overturning may be placed upright.

Cylinders which are laid flat shall be securely and appropriately wedged, attached or secured so that they cannot shift.

CV11 Receptacles shall always be placed in the position for which they were designed and be protected against any possibility of being damaged by other packages.

CV12 When pallets loaded with articles are stacked, each tier of pallets shall be evenly distributed over the lower tier, if necessary by the interposition of a material of adequate strength.

CV13 If any substances have leaked and been spilled in a vehicle or container, it may not be re-used until after it has been thoroughly cleaned and, if necessary, disinfected or decontaminated. Any other goods and articles carried in the same vehicle or container shall be examined for possible contamination.

CV14 Goods shall be shielded from direct sunlight and heat during carriage.

Packages shall be stored only in cool, well-ventilated places away from heat sources.

CV15 See 7.5.5.3.

CV16 to  
CV19 (*Reserved*)

CV20 The provisions of Chapter 5.3 and special provisions V1 and V8(5) and (6) of Chapter 7.2 shall not apply provided that the substance is packaged in accordance with packing method OP1 or OP2 of packing instruction P520 in 4.1.4.1, as required, and the total quantity of substances to which this derogation applies per transport unit is limited to 10 kg.

CV21 The transport unit shall be thoroughly inspected prior to loading.

Before carriage, the carrier shall be informed:

- about the operation of the refrigeration system, including a list of the suppliers of coolant available en route;
- procedures to be followed in the event of loss of temperature control.

In the case of temperature control in accordance with methods R2 or R4 of special provision V8(3) of Chapter 7.2, a sufficient quantity of non-flammable refrigerant (e.g. liquid nitrogen or dry ice), including a reasonable margin for possible delays, shall be carried unless a means of replenishment is assured.

Packages shall be so stowed as to be readily accessible.

The specified control temperature shall be maintained during the whole transport operation, including loading and unloading, as well as any intermediate stops.

CV22 Packages shall be loaded so that a free circulation of air within the loading space provides a uniform temperature of the load. If the contents of one vehicle or large container exceed 5 000 kg of flammable solids and/or organic peroxides, the load shall be divided into stacks of not more than 5 000 kg separated by air spaces of at least 0.05 m.

CV23 When handling packages, special measures shall be taken to ensure that they do not come into contact with water.

CV24 Before loading, vehicles and containers shall be thoroughly cleaned and in particular be free of any combustible debris (straw, hay, paper, etc.).

The use of readily flammable materials for stowing packages is prohibited.

CV25 (1) Packages shall be so stowed that they are readily accessible.

(2) When packages are to be carried at an ambient temperature of not more than 15 °C or refrigerated, the temperature shall be maintained when unloading or during storage.

(3) Packages shall be stored only in cool places away from sources of heat.

CV26 The wooden parts of a vehicle or container which have come into contact with these substances shall be removed and burnt.

- CV27 (1) Packages shall be so stowed that they are readily accessible.
- (2) When packages are to be carried refrigerated, the functioning of the cooling chain shall be ensured when unloading or during storage.
- (3) Packages shall only be stored in cool places away from sources of heat.

CV28 See 7.5.4.

CV29 to  
CV32 (Reserved)

CV33 **NOTE 1:** "Critical group" means a group of members of the public which is reasonably homogeneous with respect to its exposure for a given radiation source and given exposure pathway and is typical of individual receiving the highest effective dose by the given exposure pathway from the given source.

**NOTE 2:** "Members of the public" means in a general sense, any individuals in the population except when subject to occupational or medical exposure.

**NOTE 3:** "Workers" are any persons who work, whether full time, part-time or temporarily, for an employer and who have recognised rights and duties in relation to occupational radiation protection.

(1) Segregation

(1.1) Packages, overpacks, containers and tanks shall be segregated during carriage:

- (a) from areas where persons other than those referred to in paragraph (c) have regular access;
- (i) in accordance with Table A below; or
- (ii) by a distance calculated to ensure members of the critical group in that area receive less than 1mSv per year;

and

- (b) from undeveloped photographic film and mailbags, in accordance with Table B below;

**NOTE:** Mailbags shall be assumed to contain undeveloped film and plates and therefore be separated from radioactive material in the same way.

and

- (c) from workers in regularly occupied working areas either;
- (i) in accordance with Table A below; or
- (ii) by a distance calculated to ensure that workers in that area receive less than 5mSv per year;

*NOTE: Workers subject to individual monitoring for the purpose of radiation protection shall not be considered for the purpose of segregation.*

and

(d) from other dangerous goods in accordance with 7.5.2.1.

**Table A: Minimum distances between packages of category II-YELLOW or of category III-YELLOW and persons**

Sum of transport indexes not more than	Exposure time per year (hours)			
	Areas where members of the public have regular access		Regularly occupied working areas	
	50	250	50	250
	Segregation distance in metres, no shielding material intervening, from:			
2	1	3	0.5	1
4	1.5	4	0.5	1.5
8	2.5	6	1.0	2.5
12	3	7.5	1.0	3
20	4	9.5	1.5	4
30	5	12	2	5
40	5.5	13.5	2.5	5.5
50	6.5	15.5	3	6.5

- (1.2) Category II-YELLOW or III-YELLOW packages or overpacks shall not be carried in compartments occupied by passengers, except those exclusively reserved for couriers specially authorized to accompany such packages or overpacks.
- (1.3) No persons other than the driver and the other members of the crew shall be permitted in vehicles carrying packages, overpacks or containers bearing category II-YELLOW or III-YELLOW labels.
- (1.4) Radioactive material shall be sufficiently segregated from undeveloped photographic film. The basis for determining segregation distances for this purpose shall be that the radiation exposure of undeveloped photographic film due to the carriage of radioactive material be limited to 0.1 mSv per consignment of such film (see Table B below).

**Table B: Minimum distances between packages of category II-YELLOW or of category III-YELLOW and packages bearing the word "FOTO", or mailbags**

Total number of packages not more than		Sum of transport indexes not more than	Journey or storage duration, in hours							
Category			1	2	4	10	24	48	120	240
III-yellow	II-yellow	Minimum distances in metres								
		0.2	0.5	0.5	0.5	0.5	1	1	2	3
		0.5	0.5	0.5	0.5	1	1	2	3	5
	1	1	0.5	0.5	1	1	2	3	5	7
	2	2	0.5	1	1	1.5	3	4	7	9
	4	4	1	1	1.5	3	4	6	9	13
	8	8	1	1.5	2	4	6	8	13	18
1	10	10	1	2	3	4	7	9	14	20
2	20	20	1.5	3	4	6	9	13	20	30
3	30	30	2	3	5	7	11	16	25	35
4	40	40	3	4	5	8	13	18	30	40
5	50	50	3	4	6	9	14	20	32	45

(2) *Activity limits*

The total activity in a vehicle, for carriage of LSA material or SCO in Industrial Packages Type 1 (Type IP-1), Type 2 (Type IP-2), Type 3 (Type IP-3) or unpackaged, shall not exceed the limits shown in Table C below.

**Table C: Vehicle activity limits for LSA material and SCO in industrial packages or unpackaged**

Nature of material or object	Activity limit for vehicle
LSA-I	No limit
LSA-II and LSA-III non-combustible solids	No limit
LSA-II and LSA-III combustible solids, and all liquids and gases	100 A <sub>2</sub>
SCO	100 A <sub>2</sub>

(3) *Stowage during carriage and storage in transit*

(3.1) Consignments shall be securely stowed.

(3.2) Provided that its average surface heat flux does not exceed 15 W/m<sup>2</sup> and that the immediately surrounding cargo is not in bags, a package or overpack may be carried or stored among packaged general cargo without any special stowage provisions except as may be specifically required by the competent authority in an applicable approval certificate.

(3.3) Loading of containers and accumulation of packages, overpacks and containers shall be controlled as follows:

- (a) Except under the condition of exclusive use, the total number of packages, overpacks and containers aboard a single vehicle shall be so limited that the total sum of the transport indexes aboard the vehicle does not exceed the values shown in Table D below. For consignments of LSA-I material there shall be no limit on the sum of the transport indexes;
- (b) Where a consignment is carried under exclusive use, there shall be no limit on the sum of the transport indexes aboard a single vehicle;
- (c) The radiation level under routine conditions of carriage shall not exceed 2 mSv/h at any point on, and 0.1 mSv/h at 2 m from, the external surface of the vehicle;
- (d) The total sum of the criticality safety indexes in a container and aboard a vehicle shall not exceed the values shown in Table E below.

**Table D: Transport Index limits for containers and vehicles not under exclusive use**

Type of container or vehicle	Limit on total sum of transport indexes in a container or aboard a vehicle
Small container	50
Large container	50
Vehicle	50

**Table E: Criticality Safety Index for containers and vehicles containing fissile material**

Type of container or vehicle	Limit on total sum of criticality safety indexes	
	Not under exclusive use	Under exclusive use
Small container	50	n.a.
Large container	50	100
Vehicle	50	100

(3.4) Any package or overpack having either a transport index greater than 10, or any consignment having a criticality safety index greater than 50, shall be carried only under exclusive use.

(3.5) For consignments under exclusive use, the radiation level shall not exceed:

- (a) 10 mSv/h at any point on the external surface of any package or overpack, and may only exceed 2 mSv/h provided that:

- (i) the vehicle is equipped with an enclosure which, during routine conditions of carriage, prevents the access of unauthorized persons to the interior of the enclosure;
    - (ii) provisions are made to secure the package or overpack so that its position within the vehicle enclosure remains fixed during routine conditions of carriage, and
    - (iii) there is no loading or unloading during the shipment;
  - (b) 2 mSv/h at any point on the outer surfaces of the vehicle, including the upper and lower surfaces, or, in the case of an open vehicle, at any point on the vertical planes projected from the outer edges of the vehicle, on the upper surface of the load, and on the lower external surface of the vehicle; and
  - (c) 0.1 mSv/h at any point 2 m from the vertical planes represented by the outer lateral surfaces of the vehicle, or, if the load is carried in an open vehicle, at any point 2 m from the vertical planes projected from the outer edges of the vehicle.
- (4) *Segregation of packages containing fissile material during carriage and storage in transit*
- (4.1) The number of packages, overpacks and containers containing fissile material stored in transit in any one storage area shall be so limited that the total sum of the criticality safety indexes in any group of such packages, overpacks or containers does not exceed 50. Groups of such packages, overpacks and containers shall be stored so as to maintain a spacing of at least 6 m from other groups of such packages, overpacks or containers.
  - (4.2) Where the total sum of the criticality safety indexes on board a vehicle or in a container exceeds 50, as permitted in Table E above, storage shall be such as to maintain a spacing of at least 6 m from other groups of packages, overpacks or containers containing fissile material or other vehicles carrying radioactive material.
- (5) *Damaged or leaking packages, contaminated packagings*
- (5.1) If it is evident that a package is damaged or leaking, or if it is suspected that the package may have leaked or been damaged, access to the package shall be restricted and a qualified person shall, as soon as possible, assess the extent of contamination and the resultant radiation level of the package. The scope of the assessment shall include the package, the vehicle, the adjacent loading and unloading areas, and, if necessary, all other material which has been carried in the vehicle.

When necessary, additional steps for the protection of persons property and the environment, in accordance with provisions established by the competent authority, shall be taken to overcome and minimize the consequences of such leakage or damage.

- (5.2) Packages damaged or leaking radioactive contents in excess of allowable limits for normal conditions of carriage may be removed to an acceptable interim location under supervision, but shall not be forwarded until repaired or reconditioned and decontaminated.
- (5.3) A vehicle and equipment used regularly for the carriage of radioactive material shall be periodically checked to determine the level of contamination. The frequency of such checks shall be related to the likelihood of contamination and the extent to which radioactive material is carried.
- (5.4) Except as provided in paragraph (5.5), any vehicle, or equipment or part thereof which has become contaminated above the limits specified in 4.1.9.1.2 in the course of carriage of radioactive material, or which shows a radiation level in excess of  $5 \mu\text{Sv/h}$  at the surface, shall be decontaminated as soon as possible by a qualified person and shall not be re-used unless the non-fixed contamination does not exceed the limits specified in 4.1.9.1.2, and the radiation level resulting from the fixed contamination on surfaces after decontamination is less than  $5 \mu\text{Sv/h}$  at the surface.
- (5.5) An overpack, container, tank, intermediate bulk container or vehicle dedicated to the carriage of radioactive material under exclusive use shall be excepted from the requirements of the previous paragraph (5.4) and in 4.1.9.1.4 solely with regard to its internal surfaces and only for as long as it remains under that specific exclusive use.
- (6) *Other provisions*

Where a consignment is undeliverable, the consignment shall be placed in a safe location and the competent authority shall be informed as soon as possible and a request made for instructions on further action.

---

1270

**ANNEX B**

**PROVISIONS CONCERNING TRANSPORT EQUIPMENT  
AND TRANSPORT OPERATIONS**

---

1271

## **PART 8**

# **Requirements for vehicle crews, equipment, operation and documentation**

**CHAPTER 8.1****GENERAL REQUIREMENTS CONCERNING TRANSPORT UNITS  
AND EQUIPMENT ON BOARD****8.1.1 Transport units**

A transport unit loaded with dangerous goods may in no case include more than one trailer (or semi-trailer).

**8.1.2 Documents to be carried on the transport unit**

8.1.2.1 In addition to the documents required under other regulations, the following documents shall be carried on the transport unit:

- (a) The transport documents prescribed in 5.4.1, covering all the dangerous goods carried and, when appropriate, the container packing certificate prescribed in 5.4.2;
- (b) The instructions in writing prescribed in 5.4.3, relating to all the dangerous goods carried;
- (c) A copy of the main text of the special agreement(s) concluded in accordance with Chapter 1.5, if carriage is carried out on the basis of such agreement(s).

8.1.2.2 Where the provisions of ADR require the following documents to be drawn up, they shall likewise be carried on the transport unit:

- (a) The certificate of approval referred to in 9.1.2 for each transport unit or element thereof;
- (b) The driver's training certificate prescribed in 8.2.1;
- (c) The permit authorizing the transport operation, as prescribed in 5.4.1.2.1 (c), 5.4.1.2.3.3, 2.2.41.1.13 and 2.2.52.1.8.

8.1.2.3 The instructions in writing prescribed in 5.4.3 shall be kept in a readily identifiable form in the driver's cab. The carrier shall ensure that the drivers concerned understand and are capable of carrying out these instructions properly.

8.1.2.4 Instructions in writing which are not applicable to the goods which are on board the vehicle shall be kept separate from pertinent documents in such a way as to prevent confusion.

**8.1.3 Placarding and marking**

Transport units carrying dangerous goods shall be placarded and marked in conformity with Chapter 5.3.

**8.1.4 Fire-fighting equipment**

8.1.4.1 The following provisions apply to transport units carrying dangerous goods other than those referred to in 8.1.4.2:

- (a) Every transport unit shall be equipped with at least one portable fire extinguisher for the inflammability classes<sup>1</sup> A, B and C, with a minimum capacity of 2 kg dry powder (or an equivalent capacity for any other suitable extinguishing agent) suitable for fighting a fire in the engine or cab of the transport unit;
- (b) Additional equipment is required as follows:
  - (i) for transport units with a maximum permissible mass of more than 7.5 tonnes, one or more portable fire extinguishers for the inflammability classes<sup>1</sup> A, B and C, with a minimum total capacity of 12 kg dry powder (or an equivalent capacity for any other suitable extinguishing agent), of which at least one shall have a minimum capacity of 6 kg;
  - (ii) for transport units with a maximum permissible mass of more than 3.5 tonnes up to and including 7.5 tonnes, one or more portable fire extinguishers for the inflammability classes<sup>1</sup> A, B and C, with a minimum total capacity of 8 kg dry powder (or an equivalent capacity for any other suitable extinguishing agent), of which at least one shall have a minimum capacity of 6 kg;
  - (iii) for transport units with a maximum permissible mass of up to and including 3.5 tonnes, one or more portable fire extinguishers for the inflammability classes<sup>1</sup> A, B and C with a minimum total capacity of 4 kg dry powder (or an equivalent capacity for any other suitable extinguishing agent);
- (c) The capacity of the fire extinguisher(s) required under (a) may be deducted from the minimum total capacity of the extinguishers required under (b).

8.1.4.2 Transport units carrying dangerous goods in accordance with 1.1.3.6 shall be equipped with one portable fire extinguisher for the inflammability classes<sup>1</sup> A, B and C, with a minimum capacity of 2 kg dry powder (or an equivalent capacity for any other suitable extinguishing agent).

8.1.4.3 The extinguishing agent shall be suitable for use on a vehicle and shall comply with the relevant requirements of EN 3 Portable fire extinguishers, Parts 1 to 6 (EN 3-1:1996, EN 3-2:1996, EN 3-3:1994, EN 3-4:1996, EN 3-5:1996, EN 3-6:1995).

If the vehicle is equipped with a fixed fire extinguisher, automatic or easily brought into action for fighting a fire in the engine, the portable extinguisher need not be suitable for fighting a fire in the engine. The extinguishing agents shall be such that they are not liable to release toxic gases into the driver's cab or under the influence of the heat of the fire.

8.1.4.4 The portable fire extinguishers conforming to the provisions of 8.1.4.1 or 8.1.4.2 shall be fitted with a seal verifying that they have not been used.

In addition, they shall bear a mark of compliance with a standard recognized by a competent authority and an inscription at least indicating the date (month, year) of the next recurrent inspection or of the maximum permissible period of use, as applicable.

The fire extinguishers shall be subjected to periodic inspections in accordance with authorized national standards in order to guarantee their functional safety.

<sup>1</sup> For the definition of the inflammability classes, see Standard EN 2:1992 Classification of fires.

- 8.1.4.5 The fire extinguishers shall be installed on the transport units in a way that they are easily accessible to the vehicle crew. The installation shall be carried out in such a way that the fire extinguishers shall be protected against effects of the weather so that their operational safety is not affected.

**8.1.5 Miscellaneous equipment**

Every transport unit carrying dangerous goods shall be equipped with:

- (a) The following general purpose safety equipment:
- For each vehicle, at least one chock of a size suited to the weight of the vehicle and to the diameter of the wheels;
  - Two self-standing warning signs (e.g. reflective cones or triangles or flashing amber lights which are independent from the electrical equipment of the vehicle);
  - A suitable warning vest or warning clothing (e.g. as described in European Standard EN 471) for each member of the vehicle crew;
  - A pocket lamp (see also 8.3.4) for each member of the vehicle crew;
- (b) A respiratory protective device in conformity with additional requirement S7 (see Chapter 8.5) if this additional requirement applies according to the indication in Column (19) of Table A of Chapter 3.2;
- (c) The personal protection and the equipment necessary to take the additional and/or special actions referred to in the instructions in writing set out in 5.4.3.

**CHAPTER 8.2****REQUIREMENTS CONCERNING THE TRAINING OF THE VEHICLE CREW****8.2.1 General requirements concerning the training of drivers**

- 8.2.1.1 Drivers of vehicles with a permissible maximum mass exceeding 3.5 tonnes carrying dangerous goods, drivers of vehicles referred to in 8.2.1.3 and drivers of other vehicles referred to in 8.2.1.4 shall hold a certificate issued by the competent authority or by any organization recognized by that authority stating that they have participated in a training course and passed an examination on the particular requirements that have to be met during carriage of dangerous goods.
- 8.2.1.2 Drivers of vehicles specified in 8.2.1.1 shall attend a basic training course. Training shall be given in the form of a course approved by the competent authority. Its main objectives are to make drivers aware of hazards arising in the carriage of dangerous goods and to give them basic information indispensable for minimizing the likelihood of an incident taking place and, if it does, to enable them to take measures which may prove necessary for their own safety and that of the public and the environment, for limiting the effects of an incident. This training, which shall include individual practical exercises, shall act as the basis of training for all categories of drivers covering at least the subjects defined in 8.2.2.3.2.
- 8.2.1.3 Drivers of vehicles carrying dangerous goods in fixed tanks or demountable tanks with a capacity exceeding 1 m<sup>3</sup>, drivers of battery-vehicles with a total capacity exceeding 1 m<sup>3</sup> and drivers of vehicles carrying dangerous goods in tank-containers, portable tanks or MEGCs with an individual capacity exceeding 3 m<sup>3</sup> on a transport unit, shall attend a specialization training course for carriage in tanks covering at least the subjects defined in 8.2.2.3.3.
- 8.2.1.4 Irrespective of the permissible maximum mass of the vehicle, drivers of vehicles carrying substances or articles of Class 1 (see additional requirement S1 in Chapter 8.5) or certain radioactive material (see special provisions S11 and S12 in Chapter 8.5) shall attend specialization training courses covering at least the subjects defined in 8.2.2.3.4 or 8.2.2.3.5.
- 8.2.1.5 By means of appropriate endorsements on his certificate made every five years by the competent authority or by any organization recognized by that authority, a vehicle driver shall be able to show that he has in the year before the date of expiry of his certificate completed a refresher training course and has passed corresponding examinations. The new period of validity shall begin with the date of expiry of the certificate.
- 8.2.1.6 Initial or refresher basic training courses and initial or refresher specialization training courses may be given in the form of comprehensive courses, conducted integrally, on the same occasion and by the same training organization.
- 8.2.1.7 Initial training courses, refresher courses, practical exercises, examinations and the role of competent authorities shall comply with the provisions of 8.2.2.
- 8.2.1.8 All training certificates conforming to the requirements of this section and issued in accordance with the model shown in 8.2.2.8.3 by the competent authority of a Contracting Party or by any organization recognized by that authority shall be accepted during their period of validity by the competent authorities of other Contracting Parties.
- 8.2.1.9 The certificate shall be prepared in the language or one of the languages of the country of the competent authority which issued the certificate or recognized the issuing organization and, if this language is not English, French or German, also in English, French or German, except

where otherwise provided by agreements concluded between the countries concerned with the transport operation.

## **8.2.2 Special requirements concerning the training of drivers**

8.2.2.1 The necessary knowledge and skills shall be imparted by training covering theoretical courses and practical exercises. The knowledge shall be tested in an examination.

8.2.2.2 The training provider shall ensure that the training instructors have a good knowledge of, and take into consideration, recent developments in regulations and training requirements relating to the carriage of dangerous goods. The training shall be practice-related. The training programme shall conform with the approval, on the subjects set out in 8.2.2.3.2 to 8.2.2.3.5. The initial training and refresher training shall also include individual practical exercises (see 8.2.2.4.5).

### **8.2.2.3 *Structure of training***

8.2.2.3.1 Initial and refresher training shall be given in the form of a basic course and, when applicable, specialization courses.

8.2.2.3.2 Subjects to be covered by the basic course will be, at least:

- (a) General requirements governing the carriage of dangerous goods;
- (b) Main types of hazard;
- (c) Information on environmental protection in the control of the transfer of wastes;
- (d) Preventive and safety measures appropriate to the various types of hazard;
- (e) What to do after an accident (first aid, road safety, basic knowledge about the use of protective equipment, etc.);
- (f) Marking, labelling, placarding and orange-coloured plate marking;
- (g) What a driver should and should not do during the carriage of dangerous goods;
- (h) Purpose and the method of operation of technical equipment on vehicles;
- (i) Prohibitions on mixed loading in the same vehicle or container;
- (j) Precautions to be taken during loading and unloading of dangerous goods;
- (k) General information concerning civil liability;
- (l) Information on multimodal transport operations;
- (m) Handling and stowage of packages.

8.2.2.3.3 Special subjects to be covered by the specialization course for carriage in tanks shall be, at least:

- (a) Behaviour of vehicles on the road, including movements of the load;
- (b) Specific requirements of the vehicles;
- (c) General theoretical knowledge of the various and different filling and discharge systems;

- (d) Specific additional provisions applicable to the use of those vehicles (certificates of approval, approval marking, placarding and orange-coloured plate marking, etc.).

8.2.2.3.4 Special subjects to be covered by the specialization course for the carriage of substances and articles of Class 1 shall be, at least:

- (a) Specific hazards related to explosive and pyrotechnical substances and articles;  
 (b) Specific requirements concerning mixed loading of substances and articles of Class 1.

8.2.2.3.5 Special subjects to be covered by the specialization course for the carriage of radioactive material of Class 7 shall be, at least:

- (a) Specific hazards related to ionizing radiation;  
 (b) Specific requirements concerning packing, handling, mixed loading and stowage of radioactive material;  
 (c) Special measures to be taken in the event of an accident involving radioactive material.

#### 8.2.2.4 *Initial training programme*

8.2.2.4.1 The minimum duration of the theoretical element of each initial course or part of the comprehensive course shall be as follows:

Basic course	18 teaching units <sup>1</sup>
Specialization course for carriage in tanks	12 teaching units <sup>1</sup>
Specialization course for carriage of substances and articles of Class 1	8 teaching units
Specialization course for carriage of radioactive material of Class 7	8 teaching units

8.2.2.4.2 The total duration of the comprehensive course may be determined by the competent authority, who shall maintain the duration of the basic course and the specialization course for tanks, but may supplement it with shortened specialization courses for Classes 1 and 7.

8.2.2.4.3 Teaching units are intended to last 45 minutes.

8.2.2.4.4 Normally, not more than eight teaching units are permitted on each day of the course.

8.2.2.4.5 The individual practical exercises shall take place in connection with the theoretical training, and shall at least cover first aid, fire-fighting and what to do in case of an incident or accident.

#### 8.2.2.5 *Refresher training programme*

8.2.2.5.1 Refresher training courses undertaken at regular intervals serve the purpose of bringing the drivers' knowledge up to date; they shall cover new technical, legal and substance-related developments.

<sup>1</sup> Additional teaching units are required for practical exercises referred to in 8.2.2.4.5 below which will vary depending on the number of drivers under instruction.

- 8.2.2.5.2 Refresher courses shall have been completed before the period referred to in 8.2.1.5 has expired.
- 8.2.2.5.3 The duration of each refresher course shall be of at least one day.
- 8.2.2.5.4 Normally, not more than eight teaching units shall be permitted on each day of the course.
- 8.2.2.6 *Approval of training***
- 8.2.2.6.1 The training courses shall be subject to approval by the competent authority.
- 8.2.2.6.2 Approval shall only be given with regard to applications submitted in writing.
- 8.2.2.6.3 The following documents shall be attached to the application for approval:
- (a) A detailed training programme specifying the subjects taught and indicating the time schedule and planned teaching methods;
  - (b) Qualifications and fields of activities of the teaching personnel;
  - (c) Information on the premises where the courses take place and on the teaching materials as well as on the facilities for the practical exercises;
  - (d) Conditions of participation in the courses, such as number of participants.
- 8.2.2.6.4 The competent authority shall organize the supervision of training and examinations.
- 8.2.2.6.5 Approval shall be granted in writing by the competent authority subject to the following conditions:
- (a) The training shall be given in conformity with the application documents;
  - (b) The competent authority shall be granted the right to send authorized persons to be present at the training courses and examinations;
  - (c) The competent authority shall be advised in time of the dates and the places of the individual training courses;
  - (d) The approval may be withdrawn if the conditions of approval are not complied with.
- 8.2.2.6.6 The approval document shall indicate whether the courses concerned are basic or specialization courses, initial or refresher courses.
- 8.2.2.6.7 If the training body, after a training course has been given approval, intends to make any alterations with respect to such details as were relevant to the approval, it shall seek permission in advance from the competent authority. This applies in particular to changes concerning the training programme.
- 8.2.2.7 *Examinations***
- 8.2.2.7.1 *Examinations for the initial basic course*
- 8.2.2.7.1.1 After completion of the basic training, including the practical exercises, an examination shall be held on the basic course.

- 8.2.2.7.1.2 In the examination, the candidate has to prove that he has the knowledge, insight and skill for the practice of professional driver of vehicles carrying dangerous goods as provided in the basic training course.
- 8.2.2.7.1.3 For this purpose the competent authority, or the examination body approved by that authority, shall prepare a catalogue of questions which refer to the items summarized in 8.2.2.3.2. Questions in the examination shall be drawn from this catalogue. The candidates shall not have any knowledge of the questions selected from the catalogue prior to the examination.
- 8.2.2.7.1.4 A single examination for comprehensive courses may be held.
- 8.2.2.7.1.5 Each competent authority shall supervise the modalities of the examination.
- 8.2.2.7.1.6 The examination shall take the form of a written examination or a combination of a written and oral examination. Each candidate shall be asked at least 25 written questions. The duration of the examination shall be at least 45 minutes. The questions may be of a varying degree of difficulty and be allocated a different weighting.
- 8.2.2.7.2 *Examinations for initial specialization courses for carriage in tanks or for carriage of explosive substances and articles or radioactive material*
- 8.2.2.7.2.1 After having sat the examination on the basic course and after having attended the specialization course for carriage in tanks or for the carriage of explosive or radioactive material, the candidate shall be allowed to take part in the corresponding examination.
- 8.2.2.7.2.2 This examination shall be held and supervised on the same basis as in 8.2.2.7.1.
- 8.2.2.7.2.3 At least 15 questions shall be asked with respect to each specialization course.
- 8.2.2.7.3 *Examinations for refresher courses*
- 8.2.2.7.3.1 After having undertaken a refresher training course the candidate shall be allowed to take part in the corresponding examination.
- 8.2.2.7.3.2 The examination shall be held and supervised on the same basis as set out in 8.2.2.7.1.
- 8.2.2.7.3.3 At least 15 questions shall be asked with respect to the refresher training course.
- 8.2.2.8 *Certificate of driver's training*
- 8.2.2.8.1 According to 8.2.1.8, the certificate shall be issued:
- (a) After completion of a basic training course, provided the candidate has successfully passed the examination in accordance with 8.2.2.7.1;
  - (b) If applicable, after completion of a specialization course for carriage in tanks or carriage of explosive substances or articles or of radioactive material, or after having acquired the knowledge referred to in special provisions S1 and S11 in Chapter 8.5, provided the candidate has successfully passed an examination in accordance with 8.2.2.7.2.
- 8.2.2.8.2 The certificate shall be renewed if the candidate furnishes proof of his participation in a refresher course in accordance with 8.2.1.5 and if he has successfully passed an examination in accordance with 8.2.2.7.3.

- 8.2.2.8.3 The certificate shall have the layout of the model below. It is recommended that the format shall be the same as the European national driving permit, namely A7 (105 mm x 74 mm), or a double sheet that can be folded to that format.

<sup>5</sup> Strike out what does not apply.

**8.2.3 Training of all persons, other than the drivers referred to in 8.2.1, involved in the carriage of dangerous goods by road**

Persons whose duties concern the carriage of dangerous goods by road shall have received training in the requirements governing the carriage of such goods appropriate to their responsibilities and duties according to Chapter 1.3. This requirement shall apply to individuals such as personnel who are employed by the road vehicle operator or the consignor, personnel who load or unload dangerous goods, personnel in freight forwarding or shipping agencies and drivers not referred to in 8.2.1.

**CHAPTER 8.3**

**MISCELLANEOUS REQUIREMENTS TO BE COMPLIED  
WITH BY THE VEHICLE CREW**

**8.3.1 Passengers**

Apart from members of the vehicle crew, no passengers may be carried in transport units carrying dangerous goods.

**8.3.2 Use of fire-fighting appliances**

The crew of the vehicle shall know how to use the fire-fighting appliances.

**8.3.3 Prohibition on opening packages**

A driver or a driver's assistant may not open a package containing dangerous goods.

**8.3.4 Portable lighting apparatus**

A vehicle may not be entered by persons carrying lighting apparatus comprising a flame. In addition, the lighting apparatus used shall not exhibit any metal surface liable to produce sparks.

**8.3.5 Prohibition on smoking**

Smoking shall be prohibited during handling operations in the vicinity of vehicles and inside the vehicles.

**8.3.6 Running the engine during loading or unloading**

Except where the engine has to be used to drive the pumps or other appliances for loading or unloading the vehicle and the laws of the country in which the vehicle is operating permit such use, the engine shall be shut off during loading and unloading operations.

**8.3.7 Use of the parking brake**

No transport unit carrying dangerous goods may be parked without the parking brakes being applied.

**CHAPTER 8.4****REQUIREMENTS CONCERNING THE SUPERVISION OF VEHICLES**

Vehicles carrying dangerous goods in the quantities shown in special provisions S1 (6) and S14 to S21 of Chapter 8.5 for a given substance according to Column (19) of Table A of Chapter 3.2 shall be supervised or alternatively may be parked, unsupervised, in a secure depot or secure factory premises. If such facilities are not available, the vehicle, after having been properly secured, may be parked in an isolated position meeting the requirements of (a), (b) or (c) below:

- (a) A vehicle park supervised by an attendant who has been notified of the nature of the load and the whereabouts of the driver;
- (b) A public or private vehicle park where the vehicle is not likely to suffer damage from other vehicles; or
- (c) A suitable open space separated from the public highway and from dwellings, where the public does not normally pass or assemble;

The parking facilities permitted in (b) shall be used only if those described in (a) are not available, and those described in (c) may be used only if facilities described in (a) and (b) are not available.

**CHAPTER 8.5****ADDITIONAL REQUIREMENTS RELATING TO PARTICULAR CLASSES OR SUBSTANCES**

In addition to the requirements of Chapters 8.1 to 8.4, when reference is made to them in Column (19) of Table A of Chapter 3.2, the following requirements shall apply to the carriage of the substances or articles concerned. In the event of conflict with the requirements of Chapters 8.1 to 8.4, the requirements of this Chapter shall take precedence.

**S1: Additional requirements concerning the carriage of explosive substances and articles (Class 1)****(1) *Special training of drivers***

- (a) Irrespective of the permissible maximum mass of the vehicle, the requirements of 8.2.1 shall apply to drivers of vehicles carrying substances or articles of Class 1;
- (b) Drivers of vehicles carrying substances or articles of Class 1 shall attend a specialization training course covering at least the subjects defined in 8.2.2.3.4;
- (c) If, according to other regulations applicable in the country of a Contracting Party, a driver has followed equivalent training under a different regime or for a different purpose, covering the subjects referred to in (b), the specialization course may be totally or partially dispensed with.

**(2) *Approved official***

If the national regulations so provide, the competent authority of a country contracting party to ADR may require an approved official to be carried in the vehicle at the carrier's expense.

**(3) *Prohibition of fire and naked flame***

The use of fire or naked flame shall be prohibited on vehicles carrying substances and articles of Class 1, in their vicinity and during the loading and unloading of these substances and articles.

**(4) *Places of loading and unloading***

- (a) Loading or unloading of substances and articles of Class 1 shall not take place in a public place in a built-up area without special permission from the competent authorities;
- (b) Loading or unloading of substances and articles of Class 1 in a public space elsewhere than in a built-up area without prior notice thereof having been given to the competent authorities shall be prohibited, unless operations are urgently necessary for reasons of safety;
- (c) If, for any reason, handling operations have to be carried out in a public place, then substances and articles of different kinds shall be separated according to the labels;

- (d) When vehicles carrying substances and articles of Class 1 are obliged to stop for loading or unloading operations in a public place, a distance of at least 50 m shall be maintained between the stationary vehicles.

(5) *Convoys*

- (a) When vehicles carrying substances and articles of Class 1 travel in convoy, a distance of not less than 50 m shall be maintained between each transport unit and the next;
- (b) The competent authority may lay down rules for the order or composition of convoys.

(6) *Supervision of vehicles*

The requirements of Chapter 8.4 shall be applicable only when substances and articles of Class 1 having a total mass of explosive substance of more than 50 kg are carried in a vehicle.

In addition, these substances and articles shall be supervised at all times in order to prevent any malicious act and to alert the driver and the competent authorities in the event of loss or fire.

Empty uncleaned packagings are exempted.

**S2: Additional requirements concerning the carriage of flammable liquids or gases**

(1) *Portable lamps*

Closed vehicles carrying liquids having a flash-point of not more than 61 °C or flammable substances or article of Class 2, shall not be entered by persons carrying lighting apparatus other than portable lamps so designed and constructed that they cannot ignite any flammable vapours or gases which may have penetrated into the interior of the vehicle.

(2) *Operation of combustion heaters during loading or unloading*

The operation of combustion heaters of vehicles of type FL (see Part 9) is forbidden during loading and unloading and at loading sites.

(3) *Precautions against electrostatic charges*

In the case of vehicles of type FL (see Part 9), a good electrical connection from the vehicle chassis to earth shall be established before tanks are filled or emptied. In addition, the rate of filling shall be limited.

**S3: Special provisions concerning the carriage of infectious substances**

For transport units carrying dangerous substances of Class 6.2, the requirements of 8.1.4.1 (b) and 8.3.4 shall not apply.

**S4: Additional requirements concerning carriage under controlled temperatures**

Maintenance of the prescribed temperature is essential for safe carriage. In general, there shall be:

- thorough inspection of the transport unit prior to loading;
- instructions to the carrier about the operation of the refrigeration system, including a list of the suppliers of coolant available en route;
- procedures to be followed in the event of loss of control;
- regular monitoring of operating temperatures; and
- availability of a back-up refrigeration system or spare parts.

The temperature of the air space within the transport unit shall be measured by two independent sensors and the output shall be so recorded that temperature changes are readily detectable.

The temperature shall be checked every four to six hours and logged.

If the control temperature is exceeded during carriage, an alert procedure shall be initiated involving any necessary repairs to the refrigeration equipment or an increase in the cooling capacity (e.g. by adding liquid or solid coolant). There shall also be frequent checking of the temperature and preparations for implementation of the emergency procedures. If the emergency temperature (see also 2.2.41.1.17 and 2.2.52.1.15 to 2.2.52.1.18) is reached, the emergency procedures shall be set in operation.

*NOTE: This provision S4 does not apply to substances referred to in 3.1.2.6 when substances are stabilized by the addition of chemical inhibitors such that the SADT is greater than 50 °C. In this latter case, temperature control may be required under conditions of carriage where the temperature may exceed 55 °C.*

**S5: Special provisions common to the carriage of radioactive material of Class 7 in excepted packages (UN Nos. 2908, 2909, 2910 and 2911) only**

The requirements of the instructions in writing of 8.1.2.1 (b) and of 8.2.1, 8.3.1 and 8.3.4 shall not apply.

**S6: Special provisions common to the carriage of radioactive material of Class 7 other than in excepted packages**

The provisions of 8.3.1 shall not apply to vehicles carrying only packages, overpacks or containers bearing category I-WHITE labels.

The provisions of 8.3.4 shall not apply provided there is no subsidiary risk.

**Other additional requirements or special provisions****S7: When gases or articles designated with letters T, TO, TF, TC, TFC, TOC are being carried, each member of the vehicle crew shall be provided with a respiratory protective device enabling them to escape (e.g. escape hood or mask with a combined gas/particle cartridge A1B1E1K1-P1 or A2B2E2K2-P2, as described in European standard EN 141).**

- S8:** When a transport unit is loaded with more than 2 000 kg of these substances, stops for service requirements shall as far as possible not be made near inhabited places or frequented places. A longer stop near such places is permissible only with the consent of the competent authorities.
- S9:** During the carriage of these substances, stops for service requirements shall as far as possible not be made near inhabited places or frequented places. A longer stop near such places is permissible only with the consent of the competent authorities.
- S10:** During the period April to October, when a vehicle is stationary, the packages shall, if the legislation of the country in which the vehicle is halted so requires, be effectively protected against the action of the sun, e.g. by means of sheets placed not less than 20 cm above the load.
- S11:**
- (1) Irrespective of the permissible maximum mass of the vehicle, the requirements of 8.2.1 shall apply.
  - (2) Drivers shall attend a specialization training course covering at least the subjects defined in 8.2.2.3.5.
  - (3) If, according to other regulations applicable in the country of a Contracting Party, a driver has followed equivalent training under a different regime or for a different purpose covering the subjects referred to in (2), the specialization course may be totally or partially dispensed with.
- S12:** If the total number of packages containing radioactive material carried does not exceed 10, and the sum of the carriage indices does not exceed 3, special provision S11 need not be applied. However, drivers shall then receive appropriate training, commensurate with and appropriate to their duties, which provides them with an awareness of the radiation hazards involved in the carriage of radioactive material. Such awareness training shall be confirmed by a certificate provided by their employer.
- S13:** When a consignment cannot be delivered, it shall be placed in a safe place; the competent authority should be informed as soon as possible and requested for instructions on how to proceed.
- S14:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of these substances in the vehicle exceeds 100 kg.
- S15:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply to substances of hazard group 4 whatever their mass and to substances of hazard group 3 when the total mass of such substances in the vehicle exceeds 100 kg. However, the provisions of Chapter 8.4 need not be applied when the loaded compartment is locked and the packages carried are otherwise protected against any illicit unloading.
- S16:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of these substances in the vehicle exceeds 500 kg.
- In addition, vehicles carrying more than 500 kg of these substances shall be subject at all times to supervision to prevent any malicious act and to alert the driver and competent authorities in the event of loss or fire.
- S17:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of these substances in the vehicle exceeds 1 000 kg.

- S18:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of such substances in the vehicle exceeds 2 000 kg.
- S19:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of such substances in the vehicle exceeds 5 000 kg.
- S20:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply when the total mass of these substances in the vehicle exceeds 10 000 kg.
- S21:** The provisions of Chapter 8.4 concerning the supervision of vehicles shall apply to all material, in whatever mass. In addition, these goods shall be subject at all times to supervision to prevent any malicious act and to alert the driver and the competent authorities in the event of loss or fire. However, the provisions of Chapter 8.4 need not be applied where:
- (a) The loaded compartment is locked or the packages carried are otherwise protected against illicit unloading; and
  - (b) The dose rate does not exceed  $5\mu\text{Sv/h}$  at any accessible point on the outer surface of the vehicle.

## **PART 9**

# **Requirements concerning the construction and approval of vehicles**

## CHAPTER 9.1

GENERAL REQUIREMENTS CONCERNING THE CONSTRUCTION  
AND APPROVAL OF VEHICLES

## 9.1.1 General provisions

9.1.1.1 *Scope*

The provisions of part 9 shall apply to vehicles of categories N and O, as defined in Annex 7 of the Consolidated Resolution on the Construction of Vehicles (R.E.3),<sup>1</sup> intended for the carriage of dangerous goods.

## 9.1.1.2 For the purposes of Part 9:

"Vehicle": means any vehicle, whether complete (e.g. one stage built vans, lorries, tractors, trailers), incomplete (e.g. chassis, chassis-cab, trailer-chassis) or, completed (e.g. chassis-cab fitted with a bodywork), intended for the carriage of dangerous goods by road;

"Base vehicle": means a chassis-cab vehicle, a tractor for semi-trailer, a trailer-chassis or a trailer with a self-supporting body intended for the carriage of dangerous goods, to which the requirements of Chapter 9.2 apply;

"EX/II vehicle" or

"EX/III vehicle": means a vehicle intended for the carriage of explosives substances and articles (Class 1);

"FL vehicle": means a vehicle intended for the carriage of liquids having a flash-point of not more than 61°C (with the exception of diesel fuel complying with standard EN 590: 1993, gas oil, and heating oil (light) – UN No. 1202 - with a flash-point as specified in standard EN 590: 1993) or flammable gases, in tank-containers, portable tanks or MEGCs of more than 3 m<sup>3</sup> capacity, fixed tanks or demountable tanks of more than 1 m<sup>3</sup> capacity or a battery-vehicle of more than 1 m<sup>3</sup> capacity intended for the carriage of flammable gases;

"OX vehicle": means a vehicle intended for the carriage of hydrogen peroxide, stabilized or hydrogen peroxide, aqueous solution stabilized with more than 60 per cent hydrogen peroxide (Class 5.1, UN No. 2015) in tank-containers or portable tanks of more than 3 m<sup>3</sup> capacity, fixed tanks or demountable tanks of more than 1 m<sup>3</sup> capacity;

"AT vehicle": means a vehicle, other than FL or OX, intended for the carriage of dangerous goods in tank-containers, portable tanks or MEGCs of more than 3 m<sup>3</sup> capacity, fixed tanks or demountable tanks of more than 1 m<sup>3</sup> capacity or a battery vehicle of more than 1 m<sup>3</sup> capacity other than an FL vehicle.

## 9.1.1.3 Vehicles carrying dangerous goods shall comply with the construction requirements for which this Part provides.

<sup>1</sup> Document of the United Nations Economic Commission for Europe, TRANS/WP.29/78/rev.1, as amended.

## 9.1.2 Approval of EX/II, EX/III, FL, OX and AT vehicles

*NOTE: No special certificates of approval shall be required for vehicles other than EX/II, EX/III, FL, OX and AT vehicles, apart from those required by the general safety regulations normally applicable to vehicles in the country of origin.*

### 9.1.2.1 Single approval

9.1.2.1.1 EX/II, EX/III, FL, OX and AT vehicles shall be subject to an annual technical inspection in their country of registration to make sure that they conform to the relevant provisions of this Part, and to the general safety regulations (concerning brakes, lighting, etc.) in force in their country of registration; if these vehicles are trailers or semi-trailers coupled behind a drawing vehicle, the drawing vehicle shall be subject to technical inspection for the same purposes.

When vehicles are required to be fitted with an endurance braking system, the manufacturer of the vehicle or his duly accredited representative shall issue a declaration of conformity with the provisions of 9.2.3.3. This declaration shall be presented at the first technical inspection.

*NOTE: For transitional provisions, see also 1.6.5.1.*

9.1.2.1.2 Conformity of EX/II, EX/III, FL, OX and AT vehicles with the requirements of this Part is subject to a certificate of approval issued by the competent authority of the country of registration for each vehicle whose inspection yields satisfactory results. It shall be drawn up in the language or one of the languages of the country issuing it. It shall conform to the model shown in 9.1.2.1.5. The title of the certificate of approval and any remarks under item 11 shall be drawn up in the language or one of the languages of the country issuing it and also, if that language is not English, French or German, in English, French or German.

9.1.2.1.3 A certificate of approval issued by the competent authorities of one Contracting Party for a vehicle registered in the territory of that Contracting Party shall be accepted, so long as its validity continues, by the competent authorities of the other Contracting Parties.

9.1.2.1.4 The validity of a certificate of approval shall expire not later than one year after the date of the technical inspection of the vehicle preceding the issue of the certificate. The next approval term shall, however, be related to the last nominal expiry date, if the technical inspection is performed within one month before or after that date. However, in the case of tanks subject to compulsory periodic inspection this provision shall not mean that tightness (leakproofness) tests, hydraulic pressure tests or internal inspections of tanks have to be carried out at intervals shorter than those laid down in Chapters 6.8 and 6.9.

9.1.2.1.5 The certificate of approval shall have the same layout as the model below. Its dimensions shall be 210 mm × 297 mm (format A4). Both front and back may be used. The colour shall be white, with a pink diagonal stripe. The approval certificate for a vacuum-operated waste tank-vehicle shall bear the following remark: "vacuum-operated waste tank-vehicle".

**CERTIFICATE OF APPROVAL FOR VEHICLES  
CARRYING CERTAIN DANGEROUS GOODS**

This certificate testifies that the vehicle specified below fulfils the conditions prescribed by the European Agreement concerning the International Carriage of Dangerous Goods by Road (ADR).

<b>1. Certificate No.:</b>	<b>2. Vehicle manufacturer:</b>	<b>3. Vehicle Identification No.:</b>	<b>4. Registration number (if any):</b>
<b>5. Name and business address of carrier, operator or owner:</b>			
<b>6. Description of vehicle: <sup>1</sup></b>			
<b>7. Vehicle designation(s) according to 9.1.1.2 of ADR: <sup>2</sup></b>			
EX/II	EX/III	FL	OX                      AT
<b>8. Endurance braking system: <sup>3</sup></b>			
<input type="checkbox"/> Not applicable <input type="checkbox"/> The effectiveness according to 9.2.3.3 of ADR is sufficient for a total mass of the transport unit of ___ t <sup>4</sup>			
<b>9. Description of the fixed tank(s)/battery-vehicle (if any):</b>			
9.1 Manufacturer of the tank:			
9.2 Approval number of the tank/battery-vehicle:			
9.3 Tank manufacturer's serial number/identification of elements of battery-vehicle:			
9.4 Year of manufacture:			
9.5 Tank code according to 4.3.3.1 or 4.3.4.1 of ADR:			
9.6 Special provisions according to 6.8.4 of ADR (if applicable):			
<b>10. Dangerous goods authorised for carriage:</b>			
The vehicle fulfils the conditions required for the carriage of dangerous goods assigned to the vehicle designation(s) in No. 7.			
10.1 In the case of an EX/II or EX/III vehicle <sup>3</sup> <input type="checkbox"/> goods of Class 1 including compatibility group J <input type="checkbox"/> goods of Class 1 excluding compatibility group J			
10.2 In the case of a tank-vehicle/battery-vehicle <sup>3</sup>			
<input type="checkbox"/> only the substances permitted under the tank code and any special provisions specified in No. 9 may be carried <sup>5</sup> or <input type="checkbox"/> only the following substances (Class, UN number, and if necessary packing group and proper shipping name) may be carried:			
Only substances which are not liable to react dangerously with the materials of the shell, gaskets, equipment and protective linings (if applicable) may be carried.			
<b>11. Remarks:</b>			
<b>12. Valid until:</b>		Stamp of issuing service	
		Place, Date, Signature	

<sup>1</sup> According to the definitions for power-driven vehicles and for trailers of categories N and O as defined in Annex 7 of the Consolidated Resolution on the Construction of Vehicles (R.E.3) or in Directive 97/27/EC.

<sup>2</sup> Strike out what is not appropriate.

<sup>3</sup> Mark the appropriate.

<sup>4</sup> Enter appropriate value. A value of 44t will not limit the "registration / in-service maximum permissible mass" indicated in the registration document(s).

<sup>5</sup> Substances assigned to the tank code specified in No. 9 or to another tank code permitted under the hierarchy in 4.3.3.1.2 or 4.3.4.1.2, taking account of the special provision(s), if any.

13. Extensions of validity	
Validity extended until	Stamp of issuing service, place, date, signature:

**NOTE:** This certificate shall be returned to the issuing service when the vehicle is taken out of service; if the vehicle is transferred to another carrier, operator or owner, as specified in No. 5; on expiry of the validity of the certificate; and if there is a material change in one or more essential characteristics of the vehicle.

9.1.2.1.6 Certificates of approval conforming to the requirements of ADR in force up to 30 June 2001 may continue to be used until 31 December 2003.

9.1.2.2 *Type approval*

9.1.2.2.1 At the request of the manufacturer or his duly accredited representative, base vehicles of new motor vehicles and their trailers which are subject to approval according to 9.1.2.1 may be type approved by a competent authority in accordance with ECE Regulation No. 105<sup>2</sup> or Directive 98/91/EC<sup>3</sup> provided that the requirements of the said Regulation or the said Directive correspond to those of Chapter 9.2 of this part. This type approval, granted by one Contracting Party, shall be accepted by the other Contracting Parties as ensuring the conformity of the base vehicle when the approval of the complete or completed vehicle is obtained, provided that no modification of the base vehicle alters its validity.

9.1.2.2.2 When the base vehicle has been type-approved, compliance with 9.2.4.7.2, shall be verified on the completed vehicle.

---

<sup>2</sup> Regulation No. 105 (Uniform provisions concerning the approval of vehicles intended for the carriage of dangerous goods with regard to their specific constructional features).

<sup>3</sup> Directive 98/91/EC of the European Parliament and of the Council of 14 December 1998 relating to motor vehicles and their trailers intended for the transport of dangerous goods by road and amending Directive 70/156/EEC relating to the type approval of motor vehicles and their trailers (Official Journal of the European Communities No. L 011 of 16.01.1999, p. 0025 – 0036).

**CHAPTER 9.2**

**REQUIREMENTS CONCERNING THE CONSTRUCTION  
OF BASE VEHICLES**

9.2.1 Base vehicles of EX/II, EX/III, FL, OX and AT vehicles shall comply with the requirements of this Chapter, according to the table below.

For vehicles other than of EX/II, EX/III, FL, OX and AT:

- the requirements of 9.2.3.1 are applicable to all vehicles first registered after 30 June 1997;
- the requirements of 9.2.5 are applicable to all motor vehicles with a maximum mass exceeding 12 tonnes registered after 31 December 1987.

Emergency braking devices for trailers	X					
9.2.3.2.1						
9.2.3.2.2		X				

**9.2.2 Electrical equipment****9.2.2.1 General provisions**

The electrical installation as a whole shall meet the provisions of 9.2.2.2 to 9.2.2.6 in accordance with the table of 9.2.1.

**9.2.2.2 Wiring**

9.2.2.2.1 The size of conductors shall be large enough to avoid overheating. Conductors shall be adequately insulated. All circuits shall be protected by fuses or automatic circuit breakers, except for the following:

- from the battery to the cold start and stopping systems of the engine;
- from the battery to the alternator;
- from the alternator to the fuse or circuit breaker box;
- from the battery to the starter motor;
- from the battery to the power control housing of the endurance braking system (see 9.2.3.3), if this system is electrical or electromagnetic;
- from the battery to the electrical lifting mechanism for lifting the bogie axle.

The above unprotected circuits shall be as short as possible.

9.2.2.2.2 Cables shall be securely fastened and positioned in such a way that the conductors are adequately protected against mechanical and thermal stresses.

**9.2.2.3 Battery master switch**

9.2.2.3.1 A switch for breaking the electrical circuits shall be placed as close to the battery as practicable.

9.2.2.3.2 A control device to facilitate the disconnecting and reconnecting functions of the switch shall be installed in the driver's cab. It shall be readily accessible to the driver and be distinctively marked. It shall be protected against inadvertent operation by either adding a protective cover, by using a dual movement control device or by other suitable means. Additional control devices may be installed provided they are distinctively marked and protected against inadvertent operation.

9.2.2.3.3 The switch shall have a casing with protection degree IP 65 in accordance with IEC Standard 529.

9.2.2.3.4 The cable connections on the switch shall have protection degree IP 54. However, this does not apply if these connections are contained in a housing which may be the battery box. In this case it is sufficient to insulate the connections against short circuits, for example with a rubber cap.

#### 9.2.2.4 *Batteries*

The battery terminals shall be electrically insulated or covered by the insulating battery box cover. If the batteries are not located under the engine bonnet, they shall be fitted in a vented box.

#### 9.2.2.5 *Permanently energized circuits*

- 9.2.2.5.1 (a) Those parts of the electrical installation including the leads which shall remain energized when the battery master switch is open, shall be suitable for use in hazardous areas. Such equipment shall meet the general requirements of IEC 60079, parts 0 and 14<sup>1</sup> and the additional requirements applicable from IEC 60079, parts 1, 2, 5, 6, 7, 11, 15 or 18<sup>2</sup>;
- (b) For the application of IEC 60079 part 14<sup>1</sup>, the following classification shall be used:

Permanently energized electrical equipment including the leads which is not subject to 9.2.2.3 and 9.2.2.4 shall meet the requirements for Zone 1 for electrical equipment in general or meet the requirements for Zone 2 for electrical equipment situated in the driver's cab. The requirements for explosion group IIC, temperature class T6 shall be met.

However, for permanently energized electrical equipment installed in an environment where the temperature caused by non-electrical equipment situated in that environment exceeds the T6 temperature limit, the temperature classification of the permanently energized electrical equipment shall be at least that of the T4 temperature class.

- 9.2.2.5.2 Bypass connections to the battery master switch for electrical equipment which must remain energized when the battery master switch is open shall be protected against overheating by suitable means, such as a fuse, a circuit breaker or a safety barrier (current limiter).

#### 9.2.2.6 *Provisions concerning that part of the electrical installation situated to the rear of the driver's cab*

The whole installation shall be so designed, constructed and protected such that it cannot provoke any ignition or short-circuit under normal conditions of use of vehicles and that these risks can be minimized in the event of an impact or deformation. In particular:

##### 9.2.2.6.1 *Wiring*

The wiring located to the rear of the driver's cab shall be protected against impact, abrasion and chafing during normal vehicle operation. Examples of appropriate protection are given in figures 1, 2, 3 and 4 below. However, the sensor cables of anti-lock braking devices do not need additional protection.

<sup>1</sup> *The requirements of IEC 60079 part 14 do not take precedence over the requirement of this Part.*

<sup>2</sup> *As an alternative, the general requirements of EN 50014 and the additional requirements of EN 50015, 50016, 50017, 50018, 50019, 50020, 50021 or 50028 may be used*

FIGURES

Figure N°1

Figure N°2

Figure N°3

Figure N°4

#### 9.2.2.6.2 *Lighting*

Lamp bulbs with a screw cap shall not be used.

#### 9.2.2.6.3 *Electrical connections*

Electrical connections between motor vehicles and trailers shall have a protection degree IP54 in accordance with IEC standard 529 and be designed to prevent accidental disconnection. Examples of appropriate connections are given in ISO 12 098:1994 and ISO 7638:1985.

### 9.2.3 **Braking equipment**

#### 9.2.3.1 *General provisions*

Motor vehicles and trailers intended for use as transport units for dangerous goods shall fulfil all relevant technical requirements of ECE Regulation No.13<sup>3</sup> or Directive 71/320/EEC<sup>4</sup>, as amended, in accordance with the dates of application specified therein. EX/III, FL, OX and AT vehicles shall fulfil the requirements of ECE Regulation No.13<sup>5</sup>, Annex 5.

#### 9.2.3.2 *Emergency braking devices for trailers*

9.2.3.2.1 Trailers shall be equipped with an effective system for braking or restraining them if they become detached from the motor vehicle towing them.

9.2.3.2.2 Trailers shall be fitted with an effective braking device which acts on all the wheels, is actuated by the drawing vehicle's service-brake control and automatically stops the trailer in the event of breakage of the coupling.

*NOTE: The use of trailers equipped only with an inertia braking system shall be limited to a maximum load of 50 kg net explosive mass.*

### 9.2.4 **Prevention of fire risks**

#### 9.2.4.1 *General provisions*

The following technical provisions shall apply in accordance with the table of 9.2.1.

#### 9.2.4.2 *Vehicle cab*

9.2.4.2.1 Only material not readily flammable shall be used in the construction of the driver's cab. This provision will be deemed to be met if, in accordance with the procedure specified in ISO standard 3795:1989, samples of the following cab components have a burn rate not exceeding 100 mm/min: seat cushions, seat backs, safety belts, head lining, opening roofs, armrests, all trim panels including door, front, rear, and side panels, compartment shelves, head restraints, floor coverings, sun visors, curtains, shades, wheel housing covers, engine compartment covers, mattress covers and any other interior materials, including padding and

<sup>3</sup> ECE Regulation No. 13 (Uniform provisions concerning the approval of vehicles of categories M, N and O with regard to braking).

<sup>4</sup> Directive 71/320/EEC (originally published in the Official Journal of the European Communities No. L202 of 6.9.1971).

<sup>5</sup> ECE Regulation No. 13 (Uniform provisions concerning the approval of vehicles of categories M, N and O with regard to braking) or the corresponding provisions of Directive 71/320/EEC (originally published in the Official Journal of the European Communities No. L 202 of 6.9.1971), as amended.

crash-deployed elements, that are designed to absorb energy on contact by occupants in the event of a crash.

- 9.2.4.2.2 Unless the driver's cab is made of materials which are not readily flammable, a shield made of metal or other suitable material of the same width as the tank shall be fitted at the rear of the cab. Any windows in the rear of the cab or in the shield shall be hermetically closed and made of fire-resistant safety glass with fire-resistant frames. Furthermore, there shall be a clear space of not less than 15 cm between the tank and the cab or the shield.

9.2.4.3 ***Fuel tanks***

The fuel tanks for supplying the engine of the vehicle shall meet the following requirements:

- (a) In the event of any leakage, the fuel shall drain to the ground without coming into contact with hot parts of the vehicle or the load;
- (b) Fuel tanks containing petrol shall be equipped with an effective flame trap at the filler opening or with a closure enabling the opening to be kept hermetically sealed.

9.2.4.4 ***Engine***

The engine propelling the vehicle shall be so equipped and situated to avoid any danger to the load through heating or ignition. In the case of EX/II and EX/III vehicles the engine shall be of compression-ignition construction.

9.2.4.5 ***Exhaust system***

The exhaust system as well as the exhaust pipes shall be so directed or protected to avoid any danger to the load through heating or ignition. Parts of the exhaust system situated directly below the fuel tank (diesel) shall have a clearance of at least 100 mm or be protected by a thermal shield.

9.2.4.6 ***Vehicle endurance braking***

Vehicles equipped with endurance braking systems emitting high temperatures placed behind the rear wall of the driver's cab shall be equipped with a thermal shield securely fixed and located between this system and the tank or load so as to avoid any heating, even local, of the tank wall or the load.

In addition, the thermal shield shall protect the braking system against any outflow or leakage, even accidental, of the load. For instance, a protection including a twin-shell shield shall be considered satisfactory.

9.2.4.7 ***Combustion heaters***

9.2.4.7.1 ***(Reserved)***

- 9.2.4.7.2 The combustion heaters and their exhaust gas routing shall be designed, located, protected or covered so as to prevent any unacceptable risk of heating or ignition of the load. This requirement shall be considered as fulfilled if the fuel tank and the exhaust system of the appliance conform to provisions similar to those prescribed for fuel tanks and exhaust systems of vehicles in 9.2.4.3 and 9.2.4.5 respectively.

9.2.4.7.3 The combustion heaters shall be put out of operation by at least the following methods:

- (a) Intentional manual switching off from the driver's cab;
- (b) Stopping of the vehicle engine; in this case the heating device may be restarted manually by the driver;
- (c) Start up of a feed pump on the motor vehicle for the dangerous goods carried.

9.2.4.7.4 After running is permitted after the combustion heaters have been put out of operation. For the methods of 9.2.4.7.3 (b) and (c) the supply of combustion air shall be interrupted by suitable measures after an afterrunning cycle of not more than 40 seconds. Only heaters shall be used for which proof has been furnished that the heat exchanger is resistant to the reduced afterrunning cycle of 40 seconds for the time of their normal use.

9.2.4.7.5 The combustion heater shall be switched on manually. Programming devices shall be prohibited.

9.2.4.7.6 Combustion heaters with gaseous fuels are not permitted.

#### 9.2.5 Speed limitation device

Motor vehicles (rigid vehicles and tractors for semi-trailers) with a maximum mass exceeding 12 tonnes, shall be equipped with a speed limitation device according to the technical requirements of ECE Regulation No. 89<sup>6</sup>, as amended. The device shall be set in such a way that the speed cannot exceed 90 km/h, bearing in mind the technological tolerance of the device.

#### 9.2.6 Coupling devices of trailers

Coupling devices of trailers shall comply with the technical requirements of ECE Regulation No. 55<sup>7</sup> or Directive 94/20/EC<sup>8</sup>, as amended, in accordance with the dates of application specified therein.

<sup>6</sup> ECE Regulations No. 89: uniform provisions concerning the approval of:

- I. Vehicles with regard to limitation of their maximum speed;
- II. Vehicles with regard to the installation of a speed limitation device (SLD) of an approved type;
- III. Speed limitation devices (SLD).

*As an alternative, the corresponding provisions of directive 92/6/EEC of the Council of 10 February 1992 (originally published in the Official Journal of the European Communities No. L 057 of 02.03.1992) and directive 92/24/EEC of the Council of 31 March 1992 (originally published in the Official Journal of the European Communities No. L 129 of 14.05.1992), as amended, may apply provided that they have been amended in accordance with the latest amended form of ECE Regulation No. 89 applicable at the time of the vehicle approval.*

<sup>7</sup> ECE Regulation No. 55 (Uniform provisions concerning the approval of mechanical coupling components of combinations of vehicles).

<sup>8</sup> Directive 94/20/EC of the European parliament and of the Council of 30 of May 1994 (originally published in the Official Journal of the European Communities No. L 195 of 29.07.1994).

**CHAPTER 9.3****ADDITIONAL REQUIREMENTS CONCERNING COMPLETE OR COMPLETED  
EX/II OR EX/III VEHICLES****9.3.1 Materials to be used in the construction of vehicle bodies**

No materials likely to form dangerous compounds with the explosive substances carried shall be used in the construction of the body.

**9.3.2 Combustion heaters**

Combustion heaters shall not be installed in load compartments of EX/II and EX/III vehicles.

Combustion heaters shall meet the requirements of 9.2.4.7.1, 9.2.4.7.2, 9.2.4.7.5, 9.2.4.7.6 and the following:

- (a) The switch may be installed outside the driver's cab;
- (b) The device may be switched off from outside the load compartment; and
- (c) It is not necessary to prove that the heat exchanger is resistant to the reduced after running cycle.

No fuel tanks, power sources, combustion air or heating air intakes as well as exhaust tube outlets required for the operation of the combustion heater shall be installed in the load compartment. It shall be ensured that the heating air outlet cannot be blocked by cargo. The temperature to which packages are heated shall not exceed 50 °C.

**9.3.3 EX/II vehicles**

The vehicles shall be designed, constructed and equipped so that the explosives are protected from external hazards and the weather. They shall be either closed or sheeted. Sheeting shall be resistant to tearing and be of impermeable material, not readily flammable. It shall be tautened so as to cover the vehicle on all sides, with an overlap of not less than 20 cm down the sides of the vehicle, and be kept in position by a lockable device.

The load carrying compartment of closed vehicles shall not have windows and all openings shall have lockable, close-fitting doors or covers.

**9.3.4 EX/III vehicles**

These vehicles shall be closed. The loading surface, including the front wall, shall be continuous. The insulating and heat resisting properties of the body shall be at least equivalent to those of a partition consisting of a metal outer wall lined with a layer of fire-proofed wood of 10 mm thickness; or the body shall be of a construction which shall ensure that no flame penetration of the wall or hot spots of more than 120 °C on the inner wall surface will occur within 15 minutes from the start of a fire resulting from the operation of the vehicle, such as a tyre fire. All the doors shall be capable of being locked. They shall be so placed and constructed as to overlap the joints.

**9.3.5 Load compartment and engine**

The engine shall be placed forward of the front wall of the load compartment; it may nevertheless be placed under the load compartment, provided this is done in such a way that any excess heat does not constitute a hazard to the load by raising the temperature on the inner surface of the load compartment above 80 °C.

**9.3.6 Load compartment and exhaust system**

The exhaust system of EX/II and EX/III vehicles or others parts of these complete or completed vehicles shall be so constructed and situated that any excess heat shall not constitute a hazard to the load by raising the temperature on the inner surface of the load compartment above 80 °C.

**9.3.7 Electrical equipment**

- 9.3.7.1 The electrical installation on EX/III vehicles shall meet the requirements of 9.2.2.2, 9.2.2.3, 9.2.2.4, 9.2.2.5.2 and 9.2.2.6.
- 9.3.7.2 The rated voltage of the electrical system shall not exceed 24V.
- 9.3.7.3 The electrical installation in the load compartment shall be dust-protected (at least IP54 or equivalent) or, in the case of Compatibility Group J, at least IP65 (e.g. flame-proof Eex d).

**CHAPTER 9.4****ADDITIONAL REQUIREMENTS CONCERNING THE CONSTRUCTION OF THE BODIES OF COMPLETE OR COMPLETED VEHICLES INTENDED FOR THE CARRIAGE OF DANGEROUS GOODS IN PACKAGES (OTHER THAN EX/II AND EX/III VEHICLES)**

- 9.4.1 Combustion heaters shall meet the following requirements:
- (a) The switch may be installed outside the driver's cab;
  - (b) The device may be switched off from outside the load compartment; and
  - (c) It is not necessary to prove that the heat exchanger is resistant to the reduced after running cycle.
- 9.4.2 If the vehicle is intended for the carriage of dangerous goods for which a label conforming to models Nos. 1, 1.4, 1.5, 1.6, 3, 4.1, 4.3, 5.1 or 5.2 is prescribed, no fuel tanks, power sources, combustion air or heating air intakes as well as exhaust tube outlets required for the operation of the combustion heater shall be installed in the load compartment. It shall be ensured that the heating air outlet cannot be blocked by cargo. The temperature to which packages are heated shall not exceed 50° C. Heating devices installed inside the load compartments shall be designed so as to prevent the ignition of an explosive atmosphere under operating conditions.
- 9.4.3 Additional requirements concerning the construction of the bodies of vehicles intended for the carriage of given dangerous goods or specific packagings may be included in Part 7, Chapter 7.2 in accordance with the indications in Column (16) of Table A of Chapter 3.2, for a given substance.

**CHAPTER 9.5****ADDITIONAL REQUIREMENTS CONCERNING THE CONSTRUCTION OF  
THE BODIES OF COMPLETE OR COMPLETED VEHICLES INTENDED  
FOR THE CARRIAGE OF DANGEROUS SOLIDS IN BULK**

- 9.5.1 Combustion heaters shall meet the following requirements:
- (a) The switch may be installed outside the driver's cab;
  - (b) The device may be switched off from outside the load compartment; and
  - (c) It is not necessary to prove that the heat exchanger is resistant to the reduced after running cycle.
- 9.5.2 If the vehicle is intended for the carriage of dangerous goods for which a label conforming to models Nos. 4.1, 4.3 or 5.1 is prescribed, no fuel tanks, power sources, combustion air or heating air intakes as well as exhaust tube outlets required for the operation of the combustion heater shall be installed in the load compartment. It shall be ensured that the heating air outlet cannot be blocked by cargo. The temperature to which the load is heated shall not exceed 50 °C. Heating devices installed inside the load compartments shall be designed so as to prevent the ignition of an explosive atmosphere under operating conditions.
- 9.5.3 Additional requirements concerning the construction of the bodies of vehicles intended for the carriage of dangerous solids in bulk may appear in Part 7, Chapter 7.3 in accordance with the indications in Column (17) of Table A of Chapter 3.2, for a given substance.

## CHAPTER 9.6

**ADDITIONAL REQUIREMENTS CONCERNING COMPLETE OR COMPLETED VEHICLES  
INTENDED FOR THE CARRIAGE OF TEMPERATURE CONTROLLED SUBSTANCES**

- 9.6.1 Insulated, refrigerated and mechanically-refrigerated vehicles intended for the carriage of temperature controlled substances shall conform to the following conditions:
- (a) the vehicle shall be such and so equipped as regards its insulation and means of refrigeration, that the control temperature prescribed in 2.2.41.1.17 and 2.2.52.1.16 and in 2.2.41.4 and 2.2.52.4 for the substance to be carried is not exceeded. The overall heat transfer coefficient shall be not more than  $0.4 \text{ W/m}^2\text{K}$ ;
  - (b) the vehicle shall be so equipped that vapours from the substances or the coolant carried cannot penetrate into the driver's cab;
  - (c) a suitable device shall be provided enabling the temperature prevailing in the loading space to be determined at any time from the cab;
  - (d) the loading space shall be provided with vents or ventilating valves if there is any risk of a dangerous excess pressure arising therein. Care shall be taken where necessary to ensure that refrigeration is not impaired by the vents or ventilating valves;
  - (e) the refrigerant shall not be flammable; and
  - (f) the refrigerating appliance of a mechanically refrigerated vehicle shall be capable of operating independently of the engine used to propel the vehicle.
- 9.6.2. Suitable methods (see V8(3)) to prevent the control temperature from being exceeded are listed in Chapter 7.2 (R1 to R5). Depending on the method used, additional provisions concerning the construction of vehicle bodies may be included in Chapter 7.2.

**CHAPTER 9.7****ADDITIONAL REQUIREMENTS CONCERNING FIXED TANKS (TANK-VEHICLES)  
BATTERY-VEHICLES AND COMPLETE OR COMPLETED VEHICLES USED FOR  
THE CARRIAGE OF DANGEROUS GOODS IN DEMOUNTABLE TANKS WITH  
A CAPACITY GREATER THAN 1 M<sup>3</sup> OR IN TANK-CONTAINERS, PORTABLE  
TANKS OR MEGCs OF A CAPACITY GREATER THAN 3 M<sup>3</sup>  
(FL, OX AND AT VEHICLES)****9.7.1 General provisions**

9.7.1.1 In addition to the vehicle proper, or the units of running gear used in its stead, a tank-vehicle comprises one or more shells, their items of equipment and the fittings for attaching them to the vehicle or to the running-gear units.

9.7.1.2 Once the demountable tank has been attached to the carrier vehicle, the entire unit shall meet the requirements prescribed for tank-vehicles.

**9.7.2 Requirements concerning tanks**

9.7.2.1 Fixed tanks or demountable tanks made of metal shall meet the relevant requirements of Chapter 6.8.

9.7.2.2 Elements of battery-vehicles and of MEGCs shall meet the relevant requirements of Chapter 6.2 in the case of cylinders, tubes, pressure drums and bundles of cylinders and the requirements of Chapter 6.8 in the case of tanks.

9.7.2.3 Tank-containers made of metal shall meet the requirements of Chapter 6.8, portable tanks shall meet the requirements of Chapter 6.7 or, if applicable, those of the IMDG Code (see 1.1.4.2).

9.7.2.4 Tanks made of fibre-reinforced plastics material shall meet the requirements of Chapter 6.9.

9.7.2.5 Vacuum-operated waste tank-vehicles shall meet the requirements of Chapter 6.10.

**9.7.3 Fastenings**

Fastenings shall be designed to withstand static and dynamic stresses in normal conditions of carriage, and minimum stresses as defined in 6.8.2.1.2, 6.8.2.1.11 to 6.8.2.1.15 and 6.8.2.1.16 in the case of tank-vehicles, battery-vehicles, and vehicles carrying demountable tanks.

**9.7.4 Earthing of FL vehicles**

Tanks made of metal or of fibre-reinforced plastics material of FL tank-vehicles and battery elements of FL battery-vehicles shall be linked to the chassis by means of at least one good electrical connection. Any metal contact capable of causing electrochemical corrosion shall be avoided.

*NOTE: See also 6.9.1.2 and 6.9.2.14.3.*

## 9.7.5 Stability of tank-vehicles

9.7.5.1 The overall width of the ground-level bearing surface (distance between the outer points of contact with the ground of the right-hand tyre and the left-hand tyre of the same axle) shall be at least equal to 90% of the height of the centre of gravity of the laden tank-vehicle. In an articulated vehicle the mass on the axles of the load-carrying unit of the laden semi-trailer shall not exceed 60% of the nominal total laden mass of the complete articulated vehicle.

9.7.5.2 In addition, tank-vehicles with fixed tanks with a capacity of more than 3 m<sup>3</sup> intended for the carriage of dangerous goods in the liquid or molten state tested with a pressure of less than 4 bar, shall comply with the technical requirements of ECE Regulation No. 111<sup>1</sup> for lateral stability, as amended, in accordance with the dates of application specified therein. The requirements are applicable to tank-vehicles which are first registered as from 1 July 2003.

## 9.7.6 Rear protection of vehicles

A bumper sufficiently resistant to rear impact shall be fitted over the full width of the tank at the rear of the vehicle. There shall be a clearance of at least 100 mm between the rear wall of the tank and the rear of the bumper (this clearance being measured from the rearmost point of the tank wall or from projecting fittings or accessories in contact with the substance being carried). Vehicles with a tilting shell for the carriage of powdery or granular substances and a vacuum-operated waste tank with a tilting shell with rear discharge do not require a bumper if the rear fittings of the shell are provided with a means of protection which protects the shell in the same way as a bumper.

*NOTE 1: This provision does not apply to vehicles used for the carriage of dangerous goods in tank-containers, MEGCs or portable tanks.*

*NOTE 2: For the protection of tanks against damage by lateral impact or overturning, see 6.8.2.1.20 and 6.8.2.1.21 or, for portable tanks, 6.7.2.4.3 and 6.7.2.4.5.*

## 9.7.7 Combustion heaters

9.7.7.1 Combustion heaters shall meet the requirements of 9.2.4.7.1, 9.2.4.7.2, 9.2.4.7.5 and the following:

- (a) The switch may be installed outside the driver's cab;
- (b) The device may be switched off from outside the load compartment; and
- (c) It is not necessary to prove that the heat exchanger is resistant to the reduced afterrunning cycle.

In addition for FL vehicles, they shall meet the requirements of 9.2.4.7.3 and 9.2.4.7.4.

9.7.7.2 If the vehicle is intended for the carriage of dangerous goods for which a label conforming to models Nos. 3, 4.1, 4.3, 5.1 or 5.2 is prescribed, no fuel tanks, power sources, combustion air or heating air intakes as well as exhaust tube outlets required for the operation of the combustion heater shall be installed in the load compartment. It shall be ensured that the heating air outlet cannot be blocked by cargo. The temperature to which the load is heated shall not exceed 50 °C. Heating devices installed inside the load compartments shall be designed so as to prevent the ignition of an explosive atmosphere under operating conditions.

<sup>1</sup> ECE Regulation No. 111: Uniform provisions concerning the approval of tank-vehicles of categories N and O with regard to rollover stability.

**9.7.8 Electrical equipment**

9.7.8.1 The electrical installation on FL vehicles for which an approval according to 9.1.2 is required shall meet the requirements of 9.2.2.2, 9.2.2.3, 9.2.2.4, 9.2.2.5.1 and 9.2.2.6.

However additions to or modifications of the electrical installations of the vehicle shall meet the requirements for the electrical apparatus of the relevant group and temperature class according to the substances to be carried.

*NOTE: For transitional provisions, see also 1.6.6.*

9.7.8.2 Electrical equipment on FL vehicles, situated in areas where an explosive atmosphere is, or may be expected to be, present in such quantities as to require special precautions, shall be suitable for use in a hazardous area. Such equipment shall meet the general requirements of IEC 60079 parts 0 and 14 and the additional requirements applicable from IEC 60079 parts 1, 2, 5, 6, 7, 11 or 18<sup>2</sup>. The requirements for the electrical apparatus of the relevant group and temperature class according to the substances to be carried shall be met.

For the application of IEC 60079 part 14<sup>2</sup>, the following classification shall be used:

**ZONE 0**

Inside tank compartments, fittings for filling and discharge and vapour recovery lines.

**ZONE 1**

Inside cabinets for equipment used for filling and discharge and within 0.5 m of venting devices and pressure relief safety valves.

9.7.8.3 Permanently energized electrical equipment, including the leads, which is situated outside Zones 0 and 1 shall meet the requirements for Zone 1 for electrical equipment in general or meet the requirements for Zone 2 according to IEC 60079 part 14<sup>2</sup> for electrical equipment situated in the driver's cab. The requirements for the relevant group of electrical apparatus according to the substances to be carried shall be met.

---

<sup>2</sup> As an alternative, the general requirements of EN 50014 and the additional requirements of EN 50015, 50016, 50017, 50018, 50019, 50020 or 50028 may be used.

Τα Τεύχη I και II δεν μπορούν να πωληθούν ανεξάρτητα

#### ΠΡΟΛΟΓΟΣ

Το παρακάτω κείμενο περιλαμβάνει, εκτός από τη Συμφωνία και Πρωτόκολλο Υπογραφής, τα Παραρτήματα με τη μορφή με την οποία τέθηκαν σε ισχύ την 29 Ιουλίου 1968, καθώς και τις τροποποιήσεις αυτών, μέχρι της 1ης Ιανουαρίου 1995.

**ΕΥΡΩΠΑΪΚΗ ΣΥΜΦΩΝΙΑ ΓΙΑ ΤΗ ΔΙΕΘΝΗ ΜΕΤΑΦΟΡΑ  
ΕΠΙΚΙΝΔΥΝΩΝ ΕΜΠΟΡΕΥΜΑΤΩΝ ΟΔΙΚΩΣ (ADR)**

**ΤΑ ΣΥΜΒΑΛΛΟΜΕΝΑ ΜΕΡΗ,**

**ΕΠΙΘΥΜΟΥΝΤΑ** να αυξήσουν την ασφάλεια της διεθνούς οδικής μεταφοράς,

**ΣΥΜΦΩΝΗΣΑΝ** τα παρακάτω:

**Άρθρο 1**

Για την εφαρμογή της παρούσας Συμφωνίας,

- (α) με τον όρο "οχήμα" νοούνται τα αυτοκίνητα, αρθρωτά οχήματα, συρόμενα οχήματα και επικαθήμενα οχήματα, όπως ορίζεται στο άρθρο 4 της Σύμβασης Περί Οδικής Κυκλοφορίας της 19ης Σεπτεμβρίου 1949, εκτός των οχημάτων που ανήκουν ή τελούν υπό τις διαταγές των ενόπλων δυνάμεων του Συμβαλλόμενου Μέρους,
- (β) με τον όρο "επικίνδυνα εμπορεύματα" νοούνται οι ύλες και τα είδη των οποίων η διεθνής οδική μεταφορά απαγορεύεται από, ή επιτρέπεται μόνον υπό ορισμένους όρους από τα Παραρτήματα Α και Β,
- (γ) με τον όρο "διεθνής μεταφορά" νοείται οποιαδήποτε επιχείρηση μεταφοράς, εκτελούμενη στην εδαφική περιοχή (επικράτεια) δύο τουλάχιστον Συμβαλλόμενων Μερών με οχήματα που ορίζονται στη πιο πάνω παράγραφο (α).

**Άρθρο 2**

1. Υπό την επιφύλαξη των διατάξεων του άρθρου 4, παράγραφος 3, επικίνδυνα εμπορεύματα η μεταφορά των οποίων αποκλείεται από το Παράρτημα Α δεν θα γίνονται δεκτά για διεθνή μεταφορά.
2. Η διεθνής μεταφορά άλλων επικίνδυνων εμπορευμάτων θα εξουσιοδοτείται υπό την επιφύλαξη της τηρήσεως των:
  - (α) όρων του Παραρτήματος Α για τα στο θέμα εμπορεύματα, ειδικότερα όσον αφορά τη συνεργασία και επικετοποίησή του και των
  - (β) όρων του Παραρτήματος Β, ειδικότερα όσον αφορά τη κατασκευή, εξοπλισμό και λειτουργία του οχήματος του μεταφέροντος τα στο θέμα εμπορεύματα, υπό την επιφύλαξη των διατάξεων του άρθρου 4, παράγραφος 2.

**Άρθρο 3**

Τα Παραρτήματα της παρούσας Συμφωνίας θα αποτελούν αναπόσπαστο τμήμα αυτής.

**Άρθρο 4**

1. Κάθε Συμβαλλόμενο Μέρος θα έχει το δικαίωμα να ρυθμίζει ή απαγορεύει, για λόγους εκτός της ασφαλείας διαρκούς της μεταφοράς, την εισαγωγή επικίνδυνων εμπορευμάτων στην εδαφική του περιοχή (επικράτεια).
2. Οχήματα σε υπηρεσία στην επικράτεια του Συμβαλλόμενου Μέρους όταν τεθεί σε ισχύ η παρούσα Συμφωνία ή τιθέμενα σε υπηρεσία στην επικράτεια αυτή εντός δύο μηνών από της θέσεώς της σε ισχύ θα επιτρέπεται για χρονική περίοδο τριών ετών από της θέσεώς της σε ισχύ, να εκτελούν τη διεθνή μεταφορά επικίνδυνων εμπορευμάτων ακόμη και εάν η κατασκευή και ο εξοπλισμός τους δεν είναι ολωσδιόλου σύμφωνα με τις διατάξεις του Παραρτήματος Β για την στο θέμα επιχείρηση μεταφοράς. Δυνάμει ειδικών άρθρων του Παραρτήματος Β, όμως, η περίοδος αυτή μπορεί να μειωθεί.
3. Τα Συμβαλλόμενα Μέρη θα έχουν το δικαίωμα να κανονίζουν, με ειδικές διμερείς ή πολυμερείς συμφωνίες, όπως ορισμένα από τα επικίνδυνα εμπορεύματα τα οποία σύμφωνα με τη παρούσα Συμφωνία αποκλείονται από όλες τις διεθνείς μεταφορές μπορούν, υπό την επιφύλαξη ορισμένων όρων, να γίνονται δεκτά για διεθνή μεταφορά στις επικράτειές τους, ή όπως επικίνδυνα εμπορεύματα τα οποία σύμφωνα με τη παρούσα Συμφωνία γίνονται δεκτά για διεθνή μεταφορά μόνον υπό ειδικούς όρους μπορούν να γίνονται δεκτά για διεθνή μεταφορά στις επικράτειές τους υπό όρους λιγότερο αυστηρούς από εκείνους των Παραρτημάτων της παρούσας Συμφωνίας. Οι διμερείς ή πολυμερείς ειδικές συμφωνίες οι αναφερόμενες στη παρούσα παράγραφο θα ανακοινώνονται στο Γενικό Γραμματέα των Ηνωμένων Εθνών, ο οποίος θα ανακοινώνει αυτές στα Συμβαλλόμενα Μέρη τα οποία δεν έχουν υπογράψει τις συμφωνίες αυτές.

**Άρθρο 5**

Οι επιχειρήσεις μεταφοράς στις οποίες η παρούσα Συμφωνία έχει εφαρμογή θα παραμένουν υπό την επιφύλαξη των εθνικών ή διεθνών κανονισμών που ισχύουν γενικά στην οδική κυκλοφορία, στη διεθνή οδική μεταφορά και στο διεθνές εμπόριο.

**Άρθρο 6**

1. Χώρες - μέλη της Οικονομικής Επιτροπής για την Ευρώπη και χώρες που έγιναν δεκτές στην Επιτροπή με συμβουλευτική ιδιότητα κατά τη παράγραφο 8 των όρων παραπομπής της Επιτροπής μπορούν να γίνουν Συμβαλλόμενα Μέρη της παρούσας Συμφωνίας
  - (α) υπογράφοντας αυτήν,
  - (β) επικυρώνοντας αυτήν μετά την υπογραφή της υπό την επιφύλαξη της επικυρώσεως,
  - (γ) προσχωρώντας σ' αυτήν.
2. Χώρες που μπορούν να μετάσχουν σε ορισμένες δραστηριότητες της Οικονομικής Επιτροπής για την Ευρώπη σύμφωνα με τη παράγραφο II των όρων

παραπομπής της Επιτροπής μπορούν να γίνουν Συμβαλλόμενα Μέρη της παρούσας Συμφωνίας με τη προσχώρησή τους σ' αυτή αφού τεθεί σε ισχύ.

3. Η Συμφωνία θα είναι ανοικτή για υπογραφή μέχρι της 15ης Δεκεμβρίου 1957. Μετά θα είναι ανοικτή για προσχώρηση.
4. Επικύρωση ή προσχώρηση θα πραγματοποιείται με την κατάθεση εγγράφου στο Γενικό Γραμματέα των Ηνωμένων Εθνών.

#### Άρθρο 7

1. Η παρούσα Συμφωνία θα τεθεί σε ισχύ ένα μήνα μετά την ημερομηνία κατά την οποία ο αριθμός των χωρών των αναφερομένων στο άρθρο 6, παράγραφος 1, οι οποίες υπέγραψαν αυτή χωρίς επιφύλαξη επικυρώσεως ή οι οποίες κατέθεσαν τα έγγραφα επικυρώσεως ή προσχωρήσεως του ανέλθει συνολικά σε πέντε. Όμως, τα Παραρτήματα αυτής δεν θα έχουν εφαρμογή μέχρι έξι μήνες από της θέσεως σε ισχύ της Συμφωνίας.

2. Για οποιαδήποτε χώρα που επικυρώνει ή προσχωρεί στη παρούσα Συμφωνία μετά την υπογραφήν αυτής χωρίς επιφύλαξη επικυρώσεως ή την κατάθεση των εγγράφων επικυρώσεως ή προσχωρήσεως των πέντε χωρών των αναφερόμενων στο άρθρο 6, παράγραφος 1, η παρούσα Συμφωνία θα τεθεί σε ισχύ ένα μήνα αφότου ή χώρα αυτή καταθέσει το έγγραφο της επικυρώσεως ή προσχωρήσεως και τα Παραρτήματα αυτής θα έχουν εφαρμογή για τη χώρα αυτή είτε την αυτήν ημερομηνίαν, εάν είναι ήδη σε ισχύ μέχρι της ημερομηνίας αυτής, είτε, εάν δεν είναι σε ισχύ μέχρι της ημερομηνίας αυτής, την ημερομηνία κατά την οποία θα ισχύουν σύμφωνα με τις διατάξεις της παραγράφου 1 του παρόντος άρθρου.

#### Άρθρο 8

1. Οποιοδήποτε Συμβαλλόμενο Μέρος μπορεί να καταγγείλει τη παρούσα Συμφωνία ειδοποιώντας σχετικά τον Γενικό Γραμματέα των Ηνωμένων Εθνών.
2. Η καταγγελία θα τίθεται σε ισχύ δώδεκα μήνες μετά την παραλαβή από τον Γενικό Γραμματέα της γνωστοποίησεως της καταγγελίας.

#### Άρθρο 9

1. Η παρούσα Συμφωνία θα παύσει να ισχύει εάν, αφού τεθεί σε ισχύ, ο αριθμός των Συμβαλλόμενων Μερών είναι μικρότερος των πέντε κατά τη διάρκεια δώδεκα συναπτών μηνών.

2. Στη περίπτωση που θα συναφθεί παγκόσμια συμφωνία για τη ρύθμιση της μεταφοράς επικίνδυνων εμπορευμάτων, οποιαδήποτε διάταξη της παρούσας Συμφωνίας είναι αντίθετη προς οποιαδήποτε διάταξη της παγκόσμιας αυτής συμφωνίας, από της ημερομηνίας κατά την οποία η τελευταία θα τεθεί σε ισχύ, θα παύει αυτομάτως να έχει εφαρμογή στις σχέσεις μεταξύ των Συμβαλλόμενων της παρούσας Συμφωνίας Μερών που γίνονται συμβαλλόμενα μέρη της παγκόσμιας συμφωνίας και αυτομάτως θα αντικαθίστανται από τη σχετική διάταξη της παγκόσμιας αυτής συμφωνίας.

**Άρθρο 10**

1. Οποιαδήποτε χώρα μπορεί, κατά την υπογραφή της παρούσας Συμφωνίας χωρίς επιφύλαξη επικυρώσεως ή την κατάθεση του εγγράφου της επικυρώσεως ή προσχωρήσεως ή οποτεδήποτε μετέπειτα, να δηλώσει με γνωστοποίηση απευθυνόμενη στο Γενικό Γραμματέα των Ηνωμένων Εθνών ότι η παρούσα Συμφωνία θα επεκταθεί σε όλες ή οποιεσδήποτε από τις επικράτειες για τις διεθνείς σχέσεις των οποίων είναι υπεύθυνη. Η Συμφωνία και τα Παραρτήματα αυτής θα επεκτείνονται στην επικράτεια ή επικράτειες που κατονομάζονται στη γνωστοποίηση ένα μήνα μετά τη παραλαβή αυτής από τον Γενικό Γραμματέα.

2. Οποιαδήποτε χώρα που προέβη σε δήλωση, σύμφωνα με τη παράγραφο 1 του παρόντος άρθρου, ότι επεκτείνει την παρούσα Συμφωνία σε οποιαδήποτε επικράτεια για τις διεθνείς σχέσεις της οποίας είναι υπεύθυνη, μπορεί να καταγγείλει τη Συμφωνία χωριστά για την επικράτεια αυτή σύμφωνα με τις διατάξεις του Άρθρου 8.

**Άρθρο 11**

1. Οποιαδήποτε διαφορά μεταξύ δύο ή περισσότερων Συμβαλλόμενων Μερών σχετική με την ερμηνεία ή την εφαρμογή της παρούσας Συμφωνίας θα τακτοποιείται εφόσον είναι δυνατόν με μεταξύ τους διαπραγματεύσεις.

2. Οποιαδήποτε διαφορά που δεν τακτοποιείται με διαπραγμάτευση θα παραπέμπεται σε διαιτησία εάν οποιοδήποτε από τα έχοντα τη διαφορά Συμβαλλόμενο Μέρος το ζητήσει και κατά συνέπεια θα παραπέμπεται σε ένα ή περισσότερους διαιτητές που θα επιλέγονται κατόπιν συμφωνίας των εχόντων τη διαφορά Μερών. Εάν εντός τριών μηνών από της ημερομηνίας της αιτήσεως διαιτησίας τα έχοντα τη διαφορά Μέρη αδυνατούν να συμφωνήσουν στην επιλογή διαιτητού ή διαιτητών, οποιοδήποτε των Μερών αυτών μπορεί να ζητήσει από τον Γραμματέα των Ηνωμένων Εθνών να διορίσει ένα διαιτητή στον οποίο θα παραπεμφθεί η διαφορά για την έκδοση αποφάσεως.

3. Η απόφαση του διαιτητή ή διαιτητών των διορισθέντων σύμφωνα με τη παράγραφο 2 του παρόντος άρθρου θα είναι δεσμευτική για τα έχοντα τη διαφορά Συμβαλλόμενα Μέρη.

**Άρθρο 12**

1. Κάθε Συμβαλλόμενο Μέρος μπορεί, κατά την υπογραφή, επικύρωση, ή προσχώρηση στην παρούσα Συμφωνία, να δηλώσει ότι δεν θεωρεί εαυτό δεσμευμένο από το άρθρο 11. Άλλα Συμβαλλόμενα Μέρη δεν θα δεσμεύονται από το άρθρο 11 σε σχέση με οποιοδήποτε Συμβαλλόμενο Μέρος το οποίο διατύπωσε τέτοια επιφύλαξη.

2. Οποιοδήποτε Συμβαλλόμενο Μέρος που διατύπωσε την επιφύλαξη που προβλέπεται στη παράγραφο 1 του παρόντος άρθρου μπορεί οποτεδήποτε να αποσύρει την επιφύλαξη αυτή γνωστοποιώντας σχετικά στον Γενικό Γραμματέα των Ηνωμένων Εθνών.

### Άρθρο 13

1. Μετά τη τριετή ισχύ της παρούσας Συμφωνίας, οποιοδήποτε Συμβαλλόμενο Μέρος μπορεί, με γνωστοποίηση προς τον Γενικό Γραμματέα των Ηνωμένων Εθνών, να ζητήσει όπως συγκληθεί διάσκεψη προς τον σκοπό της αναθεώρησης του κειμένου της Συμφωνίας. Ο Γενικός Γραμματέας οφείλει να γνωστοποιήσει σ' όλα τα Συμβαλλόμενα Μέρη την αίτηση και διάσκεψη αναθεώρησης θα συγκληθεί από τον Γενικό Γραμματέα εάν, εντός περιόδου τεσσάρων μηνών από της ημερομηνίας της γνωστοποίησης από τον Γενικό Γραμματέα, όχι λιγότερα του ενός τετάρτου των Συμβαλλόμενων Μερών γνωστοποιήσουν εις αυτόν ότι συμφωνούν με την αίτηση.

2. Εάν διάσκεψη συγκληθεί σύμφωνα με τη παράγραφο 1 του παρόντος άρθρου, ο Γενικός Γραμματέας οφείλει να γνωστοποιήσει αυτό σ' όλα τα Συμβαλλόμενα Μέρη και να προσκαλέσει αυτά να υποβάλουν εντός περιόδου τριών μηνών τις προτάσεις που μπορεί να επιθυμούν να συζητηθούν στη Διάσκεψη. Ο Γενικός Γραμματέας οφείλει να κυκλοφορήσει σ' όλα τα Συμβαλλόμενα Μέρη τη προσωρινή ημερήσια διάταξη της διασκέψεως, μαζί με τα κείμενα των προτάσεων αυτών, τρεις μήνες τουλάχιστο προ της ημερομηνίας της διεξαγωγής της διασκέψεως.

3. Ο Γενικός Γραμματέας οφείλει να προσκαλέσει σε διάσκεψη, συγκληθείσα σύμφωνα με το παρόν άρθρο, όλες τις χώρες τις αναφερόμενες στο άρθρο 6, παράγραφος 1 και χώρες που γίνηκαν Συμβαλλόμενα Μέρη δυνάμει του άρθρου 6, παράγραφος 2.

### Άρθρο 14<sup>1/</sup>

1. Ανεξάρτητα της διαδικασίας αναθεώρησης της προβλεπόμενης από το άρθρο 13, Συμβαλλόμενο Μέρος μπορεί να προτείνει μία ή περισσότερες τροποποιήσεις των Παραρτημάτων της παρούσας Συμφωνίας. Προς τον σκοπόν αυτόν οφείλει να διαβιβάσει το κείμενο αυτών στον Γενικό Γραμματέα των Ηνωμένων Εθνών. Ο Γενικός Γραμματέας μπορεί επίσης να προτείνει τροποποιήσεις των Παραρτημάτων της παρούσας Συμφωνίας προς τον σκοπό της εξασφάλισης συμφωνίας (αρμονίας) μεταξύ των Παραρτημάτων αυτών και λοιπών διεθνών συμφωνιών σχετικών με την μεταφοράν επικίνδυνων εμπορευμάτων.

2. Ο Γενικός Γραμματέας οφείλει να διαβιβάσει οποιαδήποτε πρόταση που υποβλήθηκε σύμφωνα με τη παράγραφο 1 του παρόντος άρθρου σ' όλα τα Συμβαλλόμενα Μέρη και να πληροφορήσει σχετικά τις λοιπές χώρες τις αναφερόμενες στο άρθρο 6, παράγραφος 1.

3. Οποιαδήποτε προταθείσα τροποποίηση των Παραρτημάτων θα θεωρείται ότι έγινε δεκτή εάν, εντός τριών μηνών από της ημερομηνίας κατά την οποία ο Γενικός Γραμματέας την κυκλοφορήσει, το ένα τρίτο τουλάχιστο των Συμβαλλόμενων Μερών, ή πέντε τούτων εάν το ένα τρίτο υπερβαίνει τον αριθμό αυτό, έχει δώσει στο Γενικό Γραμματέα γραπτή γνωστοποίηση της αντιρρήσεώς του προς την προταθείσα τροποποίηση. Εάν η τροποποίηση θεωρηθεί ότι έγινε δεκτή, θα τεθεί σε ισχύ για όλα τα Συμβαλλόμενα Μέρη, στη λήξη συμπληρωματικής περιόδου τριών μηνών, εκτός από τις παρακάτω περιπτώσεις:

- α) Σε περιπτώσεις όπου παρόμοιες τροποποιήσεις έγιναν ή ενδέχεται να γίνουν στις λοιπές διεθνείς συμφωνίες τις αναφερόμενες στη παράγραφο 1 του παρόντος άρθρου, η τροποποίηση θα τεθεί σε ισχύ στη λήξη περιόδου η διάρκεια της οποίας θα καθορισθεί από τον Γενικό Γραμματέα κατά τρόπο ώστε να επιτραπεί, οπουδήποτε είναι δυνατό, η ταυτόχρονη θέση σε ισχύ της τροποποίησης και εκείνων που έγιναν ή ενδέχεται να γίνουν στις λοιπές αυτές συμφωνίες, η περίοδος αυτή, δεν θα είναι μικρότερης διάρκειας από ένα μήνα.
- β) Το Συμβαλλόμενο Μέρος που υποβάλει την προτεινόμενη τροποποίηση μπορεί να ορίσει στην πρότασή του, για το σκοπό της θέσεως σε ισχύ της τροποποίησης, εάν τυχόν αυτή γίνει δεκτή, μία περίοδο διάρκειας μεγαλύτερης από τρεις μήνες.

4. Ο Γενικός Γραμματέας οφείλει, το ταχύτερο δυνατό, να γνωστοποιήσει σ' όλα τα Συμβαλλόμενα Μέρη και σ' όλες τις χώρες τις αναφερόμενες στο άρθρο 6, παράγραφος 1, οποιαδήποτε αντίρρηση σε προτεινόμενη τροποποίηση που μπορεί να ληφθεί από τα Συμβαλλόμενα Μέρη.

5. Εάν η προτεινόμενη τροποποίηση των Παραρτημάτων δεν θεωρείται ότι έγινε δεκτή, αλλά εάν τουλάχιστον ένα Συμβαλλόμενο Μέρος, εκτός του Συμβαλλόμενου Μέρους που πρότείνει την τροποποίηση έχει δώσει στον Γενικό Γραμματέα γραπτή γνωστοποίηση της συμφωνίας του με την πρόταση, συνέλευσης όλων των Συμβαλλόμενων Μερών και όλων των χωρών των αναφερομένων στο άρθρο 6, παράγραφος 1, θα συγκληθεί από τον Γενικό Γραμματέα εντός τριών μηνών από της λήξεως της περιόδου των τριών μηνών εντός της οποίας, συμφώνως προς την παράγραφο 3 του παρόντος άρθρου, γνωστοποίηση πρέπει να δοθεί της αντιρρήσεως προς την τροποποίηση. Ο Γενικός Γραμματέας μπορεί επίσης να προσκαλέσει στη συνέλευση αυτή εκπροσώπους των:

- (α) διακρατικών οργανισμών που ενδιαφέρονται για ζητήματα μεταφοράς,
- (β) διεθνών μη-κρατικών οργανισμών οι δραστηριότητες των οποίων σχετίζονται απ' ευθείας με τη μεταφορά επικίνδυνων εμπορευμάτων στις επικράτειες των Συμβαλλόμενων Μερών.

6. Τροποποίηση που υιοθετήθηκε από περισσότερα του μισού του συνολικού αριθμού των Συμβαλλόμενων Μερών σε συνέλευση συγκληθείσα σύμφωνα με τη παράγραφο 5 του παρόντος άρθρου θα τίθεται σε ισχύ για όλα τα Συμβαλλόμενα Μέρη σύμφωνα με τη διαδικασία τη συμφωνηθείσα στη Συνέλευση αυτή από τη πλειοψηφία των παριστάμενων στη Συνέλευση Συμβαλλόμενων Μερών.

**Άρθρο 15**

Επιπροσθέτως των γνωστοποιήσεων των προβλεπόμενων από το άρθρα 13 και 14 ο Γενικός Γραμματέας των Ηνωμένων Εθνών οφείλει να γνωστοποιήσει στις χώρες τις αναφερόμενες στο άρθρο 6, παράγραφος 1 και στις χώρες που έγιναν Συμβαλλόμενα Μέρη δυνάμει του άρθρου 6, παράγραφος 2,

- (α) τις υπογραφές, επικυρώσεις και προσχωρήσεις σύμφωνα με το άρθρο 6,
- (β) τις ημερομηνίες στις οποίες η παρούσα Συμφωνία και τα Παραρτήματα αυτής τέθηκαν σε ισχύ σύμφωνα με το άρθρο 7,
- (γ) τις καταγγελίες σύμφωνα με το άρθρο 8,
- (δ) τη λήξη της Συμφωνίας σύμφωνα με το άρθρο 9,
- (ε) κοινοποιήσεις και καταγγελίες που λήφθηκαν σύμφωνα με το άρθρο 10,
- (στ) δηλώσεις και γνωστοποιήσεις που λήφθηκαν σύμφωνα με το άρθρο 12, παράγραφοι 1 και 2,
- (ζ) την αποδοχή και την ημερομηνία θέσεως σε ισχύ των τροποποιήσεων σύμφωνα με το άρθρο 14, παράγραφοι 3 και 6.

**Άρθρο 16**

1. Το Πρωτόκολλο Υπογραφής της παρούσας Συμφωνίας θα έχει την αυτή ισχύ, αποτέλεσμα και διάρκεια όπως η Συμφωνία, της οποίας θα θεωρείται σαν αναπόσπαστο τμήμα.

2. Ουδμία θα επιτρέπεται επιφύλαξη για τη παρούσα Συμφωνία, πλην εκείνων που διατυπώθηκαν στο Πρωτόκολλο Υπογραφής και εκείνων που έγιναν σύμφωνα με το άρθρο 12.

**Άρθρο 17**

Μετά την 15ην Δεκεμβρίου 1957, το πρωτότυπο της παρούσας Συμφωνίας θα κατατεθεί στον Γενικό Γραμματέα των Ηνωμένων Εθνών, ο οποίος οφείλει να διαβιβάσει επικυρωμένα αληθή αντίγραφα αυτού σε κάθε μία από τις χώρες που αναφέρονται στο άρθρο 6, παράγραφος 1.

**ΣΕ ΠΙΣΤΩΣΗ ΤΩΝ ΟΠΟΙΩΝ** οι υπογεγραμμένοι, εξουσιοδοτημένοι δεόντως προς τούτο, υπέγραψαν την παρούσα Συμφωνία.

**ΚΑΤΑΡΤΙΣΤΗΚΕ** στη Γενεύη, σήμερα την τριακοστή Σεπτεμβρίου Χίλια Εννιακόσια Πενήντα Επτά, σε ένα αντίγραφο στην Αγγλική και Γαλλική γλώσσα για το κείμενο της κυρίας Συμφωνίας και στη Γαλλική γλώσσα για τα Παραρτήματα, κάθε δε κείμενο είναι εξ ίσου αυθεντικό κείμενο της κυρίας Συμφωνίας.

Ο Γενικός Γραμματέας των Ηνωμένων Εθνών παρακαλείται να ετοιμάσει μετάφραση των Παραρτημάτων στην Αγγλική γλώσσα και επισυνάψει αυτήν στα επικυρωμένα αληθή αντίγραφα τα αναφερόμενα στο άρθρο 17.

**ΠΡΩΤΟΚΟΛΛΟ ΥΠΟΓΡΑΦΗΣ**

## ΠΡΩΤΟΚΟΛΛΟ ΥΠΟΓΡΑΦΗΣ

### ΤΗΣ ΕΥΡΩΠΑΪΚΗΣ ΣΥΜΦΩΝΙΑΣ ΓΙΑ ΤΗ ΔΙΕΘΝΗ ΜΕΤΑΦΟΡΑ ΕΠΙΚΙΝΔΥΝΩΝ ΕΜΠΟΡΕΥΜΑΤΩΝ ΟΔΙΚΩΣ (ADR)

Προβαίνοντας στην υπογραφή της Ευρωπαϊκής Συμφωνίας για τη Διεθνή Οδική Μεταφορά Επικίνδυνων Εμπορευμάτων (ADR) ο υπογεγραμμένος, δεόντως εξουσιοδοτημένος,

1. **ΘΕΩΡΩΝΤΑΣ** ότι οι όροι οι διέποντες την θαλάσσια μεταφορά επικίνδυνων εμπορευμάτων προς ή από το Ηνωμένο Βασίλειο διαφέρουν βασικά από εκείνους που περιέχονται στο Παράρτημα Α της ADR και ότι είναι αδύνατο να τροποποιηθούν ώστε να συμφωνούν με το τελευταίο στο εγγύς μέλλον,

**ΛΑΜΒΑΝΟΝΤΑΣ ΥΠΟΨΗ** την υπόσχεση τη δοθείσα από το ΗΝΩΜΕΝΟ ΒΑΣΙΛΕΙΟ να υποβάλει σαν τροποποίηση του πιο πάνω αναφερθέντος Παραρτήματος Α ειδικό παράρτημα περιέχον ειδικές διατάξεις για οδική - θαλάσσια μεταφορά επικίνδυνων εμπορευμάτων μεταξύ της Ηπείρου και του Ηνωμένου Βασιλείου,

**ΣΥΜΦΩΝΗΣΑ** ότι, μέχρι της θέσεως σε ισχύ του πιο πάνω αναφερθέντος ειδικού παραρτήματος, επικίνδυνα εμπορεύματα μεταφερόμενα δυνάμει της ADR προς ή από το Ηνωμένο Βασίλειο, θα συμμορφούνται προς τις διατάξεις του Παραρτήματος Α της ADR καθώς και προς τους όρους του Ηνωμένου Βασιλείου για τη θαλάσσια μεταφορά επικίνδυνων εμπορευμάτων,

2. **ΛΑΜΒΑΝΩ ΣΗΜΕΙΩΣΗ** της δηλώσεως του αντιπροσώπου της Γαλλίας κατά την οποία η Κυβέρνησις της Γαλλικής Δημοκρατίας επιφυλάσσει του δικαιώματος, κατά παρέκβαση των διατάξεων του άρθρου 4, παράγραφος 2, να αρνηθεί να επιτρέψει όπως οχήματα σε υπηρεσία στην επικράτεια άλλου Συμβαλλόμενου Μέρους, οποιαδήποτε κι αν ήταν η ημερομηνία που τέθηκαν σε υπηρεσία, χρησιμοποιηθούν για τη μεταφορά επικίνδυνων προϊόντων στη Γαλλική επικράτεια, εκτός εάν τα οχήματα αυτά πληρούν είτε τους για τη μεταφορά αυτή όρους του Παραρτήματος Β είτε τους για τη μεταφορά των στο θέμα εμπορευμάτων όρους του Γαλλικού Κανονισμού που διέπει την οδική μεταφορά επικίνδυνων εμπορευμάτων,
3. **ΠΡΟΤΕΙΝΩ** όπως, προ της υποβολής σύμφωνα προς το άρθρο 14, παράγραφος 1, ή άρθρο 13, παράγραφος 2, οι προτεινόμενες τροποποιήσεις της παρούσας Συμφωνίας ή των Παραρτημάτων αυτής συζητηθούν κατ' αρχήν, εφόσον είναι δυνατόν, σε συνεδριάσεις εμπειρογνομώνων των Συμβαλλόμενων Μερών και εάν χρειασθεί, των λοιπών χωρών των αναφερομένων, στο άρθρο 6, παράγραφος 1, της Συμφωνίας και των διεθνών οργανισμών των αναφερόμενων στο άρθρο 14, παράγραφο 5, της Συμφωνίας.

## Μέρος I. ΟΡΙΣΜΟΙ ΚΑΙ ΓΕΝΙΚΕΣ ΔΙΑΤΑΞΕΙΣ

## ΟΡΙΣΜΟΙ

2000 (1) Για την εφαρμογή του παρόντος Παραρτήματος:

- με τον όρο "αρμόδια αρχή" νοείται η αρχή που διορίστηκε σαν αρμόδια αρχή σε κάθε χώρα και για κάθε ειδική περίπτωση από τη Κυβέρνηση,
- με τον όρο "εύθραυστο κόλο" νοείται κόλο περιέχον εύθραυστο δοχείο (π.χ. δοχείο κατασκευασμένο από γυαλί, πορσελάνη, πηλό ή παρόμοια υλικά) που δεν κλείνεται σε συσκευασία με αποτελεσματική προστασία όλων των πλευρών του σε περίπτωση κρούσεως (βλέπε επίσης περιθωριακό 2001(5)),
- με τον όρο "αέριο" νοείται αέριο ή ατμός,
- με τον όρο "επικίνδυνες ύλες", όταν χρησιμοποιείται μόνος, νοούνται οι ύλες και τα είδη που ορίστηκαν σαν ύλες και είδη αυτής της Οδηγίας,
- με τον όρο "μεταφορά χύμα" νοείται η μεταφορά στερεάς ύλης χωρίς συσκευασία,
- ο όρος "RID" σημαίνει Κανονισμούς που διέπουν τη διεθνή μεταφορά επικίνδυνων εμπορευμάτων σιδηροδρομικώς οι οποίοι αποτελούν το Παράρτημα I της COTIF - Σύμβαση σχετική με τη διεθνή μεταφορά σιδηροδρομικώς, Προσθήκη Β - Ενιαίοι κανόνες σχετικοί με το σύμβολο για διεθνείς μεταφορές σιδηροδρομικώς (CIM).

(2) Για την εφαρμογή του παρόντος Παραρτήματος, οι δεξαμενές (βλέπε ορισμούς Παραρτήματος Β) δεν τοποθετούνται στην αυτή βάση με τα δοχεία, του όρου "δοχείο" χρησιμοποιούμενου υπό την περιοριστική αυτού έννοια. Διατάξεις σχετικές με τα δοχεία έχουν εφαρμογή σε σταθερές δεξαμενές, συστοιχίες δοχείων, αφαιρετές δεξαμενές και εμπορευματοκιβώτια-δεξαμενές μόνον εάν αυτό συνομολογείται ρητά.

(3) Με τον όρο "πλήρες φορτίο" νοείται οποιοδήποτε φορτίο προερχόμενο από έναν αποστολέα, για το οποίο φορτίο επιφυλάσσεται αποκλειστικά η χρήση οχήματος ή μεγάλου εμπορευματοκιβωτίου και όλες οι εργασίες για τη φόρτωση και εκφόρτωση του οποίου διεξάγονται σύμφωνα με τις οδηγίες του αποστολέα ή του παραλήπτη.

(4) Για τους σκοπούς αυτής της Οδηγίας, "εγγραφή ε.α.ο. (εκτός άλλως ορίζεται)" νοείται μία συλλογική εγγραφή η οποία αποδίδεται σε ύλες, μείγματα, διαλύματα ή είδη εάν:

- (a) δεν αναφέρονται ονομαστικά στα περιεχόμενα των καταλόγων των υλών, και
- (b) παρουσιάζουν χημικές, φυσικές και/ή επικίνδυνες ιδιότητες αναλογούσες στην Κλάση, το είδος, το γράμμα και το όνομα της εγγραφής ε.α.ο.

(5) Τα απόβλητα είναι ύλες, διαλύματα, μείγματα ή είδη για τα οποία δεν προβλέπεται απ' ευθείας χρήση αλλά μεταφέρονται για επανεπεξεργασία, απόθεση, εξάλειψη διά αποτεφρώσεως ή άλλες μεθόδους διάθεσης.

## Ορισμοί και γενικές διατάξεις

2001 (1) Οι εξής μονάδες μετρήσεως<sup>1/</sup> εφαρμόζονται στο παρόν Παράρτημα και στο Παράρτημα Β:

Μέτρηση	Μονάδα SI <sup>2/</sup>	Δεκτές εναλλακτικές μονάδες	Συσχέτιση μεταξύ μονάδων
Μήκος	m (metre)	--	--
Επιφάνεια	m <sup>2</sup> (square metre)	--	--
Όγκος	m <sup>3</sup> (cubic metre)	l <sup>3/</sup> (litre)	1 l = 10 <sup>-3</sup> m <sup>3</sup>
Χρόνος	s (second)	min (minute)	1 min = 60 s
		h (hour)	1 h = 3 600 s
		d (day)	1 d = 86 400 s
		g (gramme)	1 g = 10 <sup>-3</sup> kg
Μάζα	kg (kilogramme)	t (ton)	1 t = 10 <sup>3</sup> kg
		kg/l	1 kg/l = 10 <sup>3</sup> kg/m <sup>3</sup>
Πυκνότη. Μάζας	kg/m <sup>3</sup>	kg/l	1 kg/l = 10 <sup>3</sup> kg/m <sup>3</sup>
Θερμοκρασία	K (kelvin)	°C (degree Celsius)	0 °C = 273.15 K
Διαφορά θερμοκρασίας	K (kelvin)	°C "	1 °C = 1 K
Δύναμη	N (newton)	--	1 N = 1 kgXm/s <sup>2</sup>
Πίεση	Pa (pascal)	bar (bar)	1 bar = 10 <sup>5</sup> Pa
		1 Pa	= 1 N/m <sup>2</sup>
Τάση	N/m <sup>2</sup>	N/mm <sup>2</sup> 1 N/mm <sup>2</sup> = 1 MPa	
Έργο )	J (joule)	kWh (kilowatt hour)	1 kWh = 3.6 MJ
Ενέργεια )		1 J	= 1 N.m = 1 W.s
Ποσότητα ) θερμότητας)	W (watt)	eV (electronvolt)	1 eV = 0.1602X10 <sup>-18</sup> J
Ηλεκτρ. Ισχύς		--	1 W = 1 J/s = 1 NXm/s
Κινηματικό ιξώδες	m <sup>2</sup> /s	mm <sup>2</sup> /s	1 mm <sup>2</sup> /s = 10 <sup>-6</sup> m <sup>2</sup> /s
Δυναμικό ιξώδες	PaXs	mPaXs	1 mPaXs = 10 <sup>-3</sup> PaXs
Δραστηκότητα <sup>4/</sup>	Bq (becquerel)		
Ισοδύναμο δόσης <sup>5/</sup>	Sv (sievert)		

<sup>1/</sup> Οι εξής στρογγυλοποιημένοι αριθμοί χρησιμοποιούνται για την μετατροπή των μέχρι τούδε χρησιμοποιουμένων μονάδων σε μονάδες SI

Δύναμη

$$1 \text{ kg} = 9.807 \text{ N}$$

$$1 \text{ N} = 0.102 \text{ kg } \ell$$

Τάση

$$1 \text{ kg/mm}^2 = 9.807 \text{ N/mm}^2$$

$$1 \text{ N/mm}^2 = 0.102 \text{ kg/mm}^2$$

[Συνέχεια Υποσημειώσεων στη σελίδα 3]

## Ορισμοί και γενικές διατάξεις

**2001** Τα δεκαδικά πολλαπλάσια και υπο-πολλαπλάσια μιας μονάδος μπορούν να σχηματίζονται με (συνέχ.) προθέματα που θα έχουν τις εξής σημασίες και θα τοποθετούνται προ του ονόματος της μονάδος:

<u>Συντελεστής</u>			<u>Πρόθεμα</u>	<u>Σύμβολο</u>
1 000 000 000 000 000 000	= $10^{18}$	πεντάκις εκ.	exa	E
1 000 000 000 000 000	= $10^{15}$	τετράκις εκ.	peta	P
1 000 000 000 000	= $10^{12}$	τρεις εκ.	tera	T
1 000 000 000	= $10^9$	δύς εκ.	giga	G
1 000 000	= $10^6$	εκατομύριο	mega	M
1 000	= $10^3$	χίλια	kilo	k
100	= $10^2$	εκατό	hecto	h
10	= $10^1$	δέκα	deca	da
0.1	= $10^{-1}$	δέκατο	deci	d
0.01	= $10^{-2}$	Εκατοστό	centi	c
0.001	= $10^{-3}$	χιλιοστό	milli	m
0.000 001	= $10^{-6}$	εκατομυρ/στό	micro	μ
0.000 000 001	= $10^{-9}$	δύς εκ/στό	nano	n
0.000 000 000 001	= $10^{-12}$	τρεις εκ/στό	pico	p
0.000 000 000 000 001	= $10^{-15}$	τετράκις εκ/στό	femto	f
0.000 000 000 000 000 001	= $10^{-18}$	πεντάκις εκ/στό	atto	a

**ΠΑΡΑΤΗΡΗΣΗ:**  $10^9$  (δισεκατομύριο) χρησιμοποιείται από τα Ηνωμένα Έθνη. Ανάλογο δε είναι το δισεκατομμυριοστό ( $10^{-9}$ ).

[Συνέχεια Υποσημειώσεων από τη σελίδα 2]

Πίεση

1 Pa	= $1 \text{ N/m}^2 = 10^{-3} \text{ bar}$	= $1.02 \times 10^{-3} \text{ kg/cm}^2$	= $0.75 \times 10^{-2} \text{ torr}$
1 bar	= $10^5 \text{ Pa}$	= $1.02 \text{ kg/cm}^2$	= 750 torr
1 kg/cm <sup>2</sup>	= $9.807 \times 10^4 \text{ Pa}$	= 0.9807 bar	= 736 torr
1 torr	= $1.33 \times 10^2 \text{ Pa}$	= $1.33 \times 10^{-3} \text{ bar}$	= $1.36 \times 10^{-3} \text{ kg/cm}^2$

Ενέργεια, Έργο, Ποσότητα θερμότητας

1 J	= 1 Nm	= $0.278 \times 10^{-6} \text{ kWh}$	= 0.102 kgm	= $0.239 \times 10^{-3} \text{ kcal}$
1 kWh	= $3.6 \times 10^6 \text{ J}$	= $367 \times 10^3 \text{ kgm}$	= 860 kcal	
1 kgm	= 9.807 J	= $2.72 \times 10^{-6} \text{ kWh}$	= $2.34 \times 10^{-3} \text{ kcal}$

[Συνέχεια Υποσημειώσεων στη σελίδα 4]

## Ορισμοί και γενικές διατάξεις

2001 (2) 'Όπου χρησιμοποιείται η λέξη "βάρος" στο παρόν Παράρτημα και στο Παράρτημα Β, (συνεχ.) σημαίνει "μάζα".

(3) 'Όποτε το βάρος ενός κόλου αναφέρεται στο παρόν Παράρτημα και στο Παράρτημα Β, νοείται η μικτή μάζα, εκτός αν δηλώνεται άλλως. Η μάζα των εμπορευματοκιβώτια ή των δεξαμενών για την μεταφορά των εμπορευμάτων δεν περιλαμβάνεται στην μικτή μάζα.

(4) Αν δεν δηλώνεται ρητά κάτι διαφορετικό, το σύμβολο "%" στο παρόν Παράρτημα και στο Παράρτημα Β αντιστοιχεί:

(a) Στην περίπτωση μειγμάτων στερεών ή υγρών, επίσης στην περίπτωση διαλυμάτων ή στερεών που έχουν διαβραχεί με υγρό: ποσοστό μάζας βάσει της συνολικής μάζας του μείγματος, του διαλύματος ή του διαποτισμένου στερεού.

(b) Στην περίπτωση συμπιεσμένων αερίων μειγμάτων: ποσοστό κατ'όγκον βάσει του συνολικού όγκου του αερίωδου μείγματος. Στην περίπτωση μειγμάτων υγροποιημένων αερίων και αερίων διαλυμένων υπό πίεση: ποσοστό κατά βάρος βάσει του συνολικού βάρους του μείγματος.

(5) Πίεσεις κάθε είδους σχετικές με τα δοχεία (όπως πίεση δοκιμασίας, εσωτερική πίεση, πίεση ανοίγματος βαλβίδας ασφαλείας), σημειώνονται πάντα σαν πιέσεις θλιβομέτρου (πίεσεις μεγαλύτερες από την ατμοσφαιρική πίεση). Ωστόσο, η πίεση ατμού των ουσιών εκφράζεται πάντα σε απόλυτη πίεση.

(6) 'Όπου το παρόν Παράρτημα Β καθορίζει βαθμό πληρώσεως δοχείων ή δεξαμενών, ο βαθμός αυτός πληρώσεως αναφέρεται πάντα σε θερμοκρασία 15° C των ουσιών, εκτός αν σημειώνεται κάποια άλλη θερμοκρασία.

(7) Εύθραυστα δοχεία ασφαλισμένα, είτε μόνα τους είτε σε ομάδες, με αποσβεστικά υλικά (κτυπημάτων) σε μεγάλο δοχείο με ισχυρά τοιχώματα, δεν θεωρούνται εύθραυστα δοχεία, εάν και εφ' όσον το γερό δοχείο είναι στεγανό και με τέτοιο τρόπο σχεδιασμένο και μελετημένο ώστε σε περίπτωση θραύσης ή διαρροής των εύθραυστων δοχείων να μην μπορεί το περιεχόμενο τους να διαφύγει από το γερό δοχείο και η μηχανική αντοχή του τελευταίου να μην μπορεί να εξασθενήσει από διάβρωση κατά την διάρκεια της μεταφοράς.

(8) Θεσπίζεται ο εξής τύπος μετατροπής (μετασηματισμού) κατά προσέγγιση μέχρις ότου οι μονάδες SI ενσωματωθούν εντελώς και σε όλα τα κείμενα του παρόντος Παραρτήματος και του Παραρτήματος Β:

$$1 \text{ kg/mm}^2 = 10 \text{ N/mm}^2$$

$$1 \text{ kg/cm}^2 = 1 \text{ bar}$$

[Συνέχεια Υποσημειώσεων από τη σελίδα 3]

<sup>2</sup> Το διεθνές σύστημα μονάδων (SI) είναι αποτέλεσμα αποφάσεων που ελήφθησαν στην Γενική Συνδιάσκεψη Μέτρων και Σταθμών (Διεύθυνση: Pavillon de Breteuil, Parc de St-Cloud, F-92 310 Sevres).

<sup>3</sup> Η συντομογραφία "L" για το λίτρο μπορεί επίσης να χρησιμοποιείται αντί της συντομογραφίας "l" όταν δεν υπάρχει στη γραφομηχανή διαφορά ανάμεσα στον αριθμό "1" και το γράμμα "l".

<sup>4</sup> Για λόγους σαφήνειας, η ένταση ραδιενέργειας μπορεί επίσης να σημειώνεται, μέσα σε παρένθεση, σε Ci (curie) (η σχέση ανάμεσα στις μονάδες είναι: 1 Ci = 3.7 x 10<sup>10</sup> Bq). Από τον τύπο μετατροπής μπορούν αν εξαχθούν στρογγυλεμένες τιμές.

<sup>5</sup> Για λόγους σαφήνειας, το ισοδύναμο δόσης μπορεί επίσης να σημειώνεται, σε παρένθεση, σε rem (η σχέση ανάμεσα στις μονάδες είναι: 1 rem = 0.01 Sv).

## Ορισμοί και γενικές διατάξεις

## ΓΕΝΙΚΕΣ ΔΙΑΤΑΞΕΙΣ

2002 (1) Το παρόν Παράρτημα καθορίζει τα επικίνδυνα εμπορεύματα τα οποία εξαιρούνται της διεθνούς οδικής μεταφοράς και τα επικίνδυνα εμπορεύματα τα οποία γίνονται δεκτά για τέτοια μεταφορά υπό ορισμένους όρους. Ομαδοποιεί τα επικίνδυνα εμπορεύματα σε περιοριστικές και μη-περιοριστικές Κλάσεις. Εκ των επικίνδυνων εμπορευμάτων των καλυπτόμενων από τους τίτλους των περιοριστικών Κλάσεων (Κλάσεις 1, 2 και 7), εκείνα που απαριθμούνται στα άρθρα τα σχετικά με τις Κλάσεις αυτές (περιθώρια 2101, 2201, και 2701) γίνονται δεκτά για μεταφορά υπό όρους οριζόμενους στα άρθρα αυτά, και άλλα εξαιρούνται από τη μεταφορά. Μερικά από τα επικίνδυνα εμπορεύματα τα καλυπτόμενα από τους τίτλους των μη-περιοριστικών Κλάσεων (Κλάσεις 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.2, 8 και 9), με σημειώσεις που παραθέτονται στα άρθρα τα σχετικά με τις διάφορες Κλάσεις, εξαιρούνται από τη μεταφορά. Εκ των λοιπών εμπορευμάτων των καλυπτόμενων από τους τίτλους των μη-περιοριστικών Κλάσεων, εκείνα που αναφέρονται ή ορίζονται στα άρθρα τα σχετικά με τις Κλάσεις αυτές (περιθώρια 2301, 2401, 2431, 2471, 2501, 2551, 2601, 2651, 2801 και 2901) γίνονται δεκτά για μεταφορά μόνον υπό όρους οριζόμενους εις τα άρθρα αυτά, και εκείνα που δεν αναφέρονται ή ορίζονται εις αυτά δεν θεωρούνται ότι είναι επικίνδυνα εμπορεύματα για τους σκοπούς της παρούσας Συμφωνίας και γίνονται δεκτά για μεταφορά χωρίς οποιουδήποτε ειδικού όρους.

(2) Οι Κλάσεις του Παραρτήματος αυτού είναι οι παρακάτω:

Κλάση 1	Εκρηκτικές ύλες και είδη	Περιοριστική
Κλάση 2	Αέρια: πεπιεσμένα, υγροποιημένα, ή διαλυμένα υπό πίεση	Περιοριστική
Κλάση 3	Εύφλεκτα υγρά	Μη-περιοριστική
Κλάση 4.1	Εύφλεκτα στερεά	Μη-περιοριστική
Κλάση 4.2	Ύλες υποκειμένες σε αυτόματο ή αυτογενή ανάφλεξη	Μη-περιοριστική
Κλάση 4.3	Ύλες που βγάζουν εύφλεκτα αέρια σε επαφή με το νερό	Μη-περιοριστική
Κλάση 5.1	Οξειδωτικές ύλες	Μη-περιοριστική
Κλάση 5.2	Οργανικά υπεροξειδία	Μη-περιοριστική
Κλάση 6.1	Τοξικές ύλες	Μη-περιοριστική
Κλάση 6.2	Μολυσματικές ύλες	Μη-περιοριστική
Κλάση 7	Ραδιενεργείς ύλες	Περιοριστική
Κλάση 8	Διαβρωτικές ύλες	Μη-περιοριστική
Κλάση 9	Διάφορες επικίνδυνες ύλες και είδη	Μη-περιοριστική

(3) Κάθε μεταφορά εμπορευμάτων διεπομένη από το παρόν Παράρτημα θα πρέπει να συνοδεύεται και από τα δύο παρακάτω έγγραφα:

## Ορισμοί και γενικές διατάξεις

2002  
(συνεχ.)

(a) ένα έγγραφο μεταφοράς το οποίο θα περιέχει τουλάχιστον τις παρακάτω πληροφορίες (για την Κλάση 7, βλέπε επίσης και το περιθωριακό 2709):

- μία περιγραφή των εμπορευμάτων συμπεριλαμβανομένου και του αριθμού αναγνώρισης της ύλης (όπου αυτή είναι διαθέσιμη)<sup>6</sup>
- την Κλάση<sup>6</sup>
- τον αριθμό είδους μαζί με το σχετικό τυχόν γράμμα<sup>6</sup>
- τα αρχικά ADR ή RID<sup>6</sup>
- τον αριθμό και μία περιγραφή των κόλων ή των IBC
- την συνολική ποσότητα των επικινδυνών εμπορευμάτων (σε όγκο ή μικτή μάζα ή καθαρή μάζα και επιπρόσθετα, στην περίπτωση εκρηκτικών υλών και ειδών της Κλάσης 1, σε συνολική καθαρή μάζα εκρηκτικών περιεχομένων).

**ΣΗΜΕΙΩΣΗ 1:** Αυτή η πληροφορία δεν απαιτείται στην περίπτωση μη καθαρισμένων, άδειων συσκευασιών, εμπορευματοκιβωτίων ή δεξαμενών.

**ΣΗΜΕΙΩΣΗ 2:** Στην περίπτωση εφαρμογής του περιθωριακού 10 011, οι ποσότητες μεταφερόμενων επικινδύνων εμπορευμάτων ανά μονάδα μεταφοράς θα εκφράζονται σε μικτή μάζα.

- το όνομα και τη διεύθυνση του αποστολέα
- το όνομα και τη διεύθυνση του(ων) παραλήπτη(ων)
- μία δήλωση όπως απαιτείται από τους όρους κάθε ειδικής συμφωνίας.

Το έγγραφο που περιέχει αυτές τις πληροφορίες μπορεί να είναι εκείνο που απαιτείται από άλλες ισχύουσες διατάξεις για άλλο τρόπο μεταφοράς. Ο αποστολέας οφείλει να γνωστοποιήσει γραπτώς τις σχετικές πληροφορίες στον μεταφορέα.

Οι λεπτομέρειες που θα καταχωρούνται στο έγγραφο μεταφοράς θα είναι συντεταγμένες στην επίσημη γλώσσα της προωθούσας (τα εμπορεύματα) χώρας, και επίσης, εάν η γλώσσα αυτή δεν είναι η Αγγλική, ή η Γαλλική, ή η Γερμανική, στην Αγγλική, Γαλλική ή Γερμανική, εκτός εάν, τυχόν, δασμολόγια (TARIFFS) διεθνούς οδικής μεταφοράς, ή συμφωνίες συναφθείσες μεταξύ των ενδιαφερομένων για την επιχείρηση της μεταφοράς χωρών, προβλέπουν αλλιώς.

(b) οδηγίες που θα εφαρμοσθούν σε περίπτωση ατυχήματος (βλέπε Παράρτημα Β, περιθωριακό 10385), (εκτός εάν εξαιρείται σύμφωνα με το περιθωριακό 10 011).

(4) Εάν λόγω του μεγέθους του φορτίου μια αποστολή δεν μπορεί να φορτωθεί ολόκληρη σε ένα μεταφορικό μέσο, τουλάχιστο τόσα χωριστά, ή αντίγραφα του ενός εγγράφου, θα εκδίδονται όσα και τα φορτωθέντα μεταφορικά μέσα. Επί πλέον, σ' όλες τις περιπτώσεις, χωριστά έγγραφα μεταφοράς θα εκδίδονται για αποστολές ή τμήματα αποστολών τα οποία δεν μπορούν να φορτωθούν μαζί στο αυτό όχημα λόγω των απαγορεύσεων του Παραρτήματος Β.

<sup>6</sup> Αυτές και άλλες λεπτομέρειες μπορούν να βρεθούν στο τμήμα 2.Β "Λεπτομέρειες του εγγράφου μεταφοράς" για κάθε Κλάση ή στα προγράμματα της Κλάσης 7.

## Ορισμοί και γενικές διατάξεις

**2002** (5) Εξωτερικές συσκευασίες συμπληρωματικές εκείνων που ορίζει το παρόν Παράρτημα (συνεχ.) μπορούν να χρησιμοποιούνται υπό τον όρον ότι δεν αντίκεινται στο πνεύμα των διατάξεων του παρόντος Παραρτήματος των σχετικών με τις εξωτερικές συσκευασίες. Εάν τέτοιες πρόσθετες συσκευασίες χρησιμοποιηθούν, οι προβλεπόμενες ενδείξεις και ετικέτες θα εφαρμοσθούν σ' αυτές.

(6) Εάν η μικτή συσκευασία διαφόρων επικίνδυνων υλών, μεταξύ των, ή με άλλα εμπορεύματα επιτρέπεται από τις διατάξεις της παραγράφου Α.3 των ισχυουσών για τις διάφορες Κλάσεις διατάξεων, οι εσωτερικές συσκευασίες οι περιέχουσες διάφορες επικίνδυνες ύλες θα χωρίζονται προσεκτικά και αποτελεσματικά ή μια από την άλλη στις συλλογικές συσκευασίες εάν ενδέχεται να προκύψουν επικίνδυνες αντενέργειες, όπως η παραγωγή επικίνδυνης θερμότητας, η ανάφλεξη, ο σχηματισμός μεγμάτων που είναι ευαίσθητα στην τριβή ή κρούση, και η απελευθέρωση εύφλεκτων ή τοξικών αερίων, ως αποτέλεσμα βλάβης (ζημίας) ή καταστροφής των εσωτερικών συσκευασιών. Ειδικότερα, εάν εύθραυστα δοχεία χρησιμοποιηθούν και συγκεκριμένα εάν τα ρηθέντα δοχεία περιέχουν υγρά, ο κίνδυνος σχηματισμού επικίνδυνων μεγμάτων θα αποφεύγεται και προς τον σκοπόν αυτόν θα λαμβάνονται όλα τα κατάλληλα μέτρα, όπως η χρήση κατάλληλου αποσβεστικού υλικού σε επαρκή ποσότητα, η ασφάλεια των δοχείων με δεύτερη, γερή συσκευασία, και η υποδιαίρεση των συλλογικών συσκευασιών σε πολλά διαμερίσματα. Για τις μικτές συσκευασίες υλών της Κλάσης 7, βλέπε περιθωριακό 3711 της Προσθήκης Α7.

(7) Εάν μικτή συσκευασία χρησιμοποιηθεί, οι διατάξεις του παρόντος Παραρτήματος οι σχετικές με τις λεπτομέρειες στο έγγραφο μεταφοράς θα ισχύουν σε σχέση με κάθε μία από τα διάφορα είδη των επικίνδυνων υλών που περιέχονται στο συλλογικό κόλο, και το συλλογικό κόλο θα φέρουν όλες τις επιγραφές και όλες τις ετικέτες κινδύνου τις προβλεπόμενες στο παρόν Παράρτημα για τις επικίνδυνες ύλες που το συλλογικό κόλο περιέχει.

(8) Οι παρακάτω διατάξεις θα εφαρμόζονται σε ύλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα<sup>7)</sup>) που δεν αναφέρονται ονομαστικά στον κατάλογο υλών των διαφόρων Κλάσεων:

**ΣΗΜΕΙΩΣΗ 1:** *Διαλύματα και μείγματα που περιέχουν δύο ή περισσότερα συστατικά. Αυτά τα συστατικά μπορεί να είναι είτε ύλες αυτής της Οδηγίας είτε ύλες που δεν είναι υποκείμενες στις διατάξεις αυτής της Οδηγίας.*

**ΣΗΜΕΙΩΣΗ 2:** *Διαλύματα και μείγματα που περιέχουν ένα ή περισσότερα συστατικά μία περιοριστικής Κλάσης δεν θα γίνονται δεκτά για μεταφορά εκτός εάν τα συστατικά αυτά έχουν καταχωρηθεί ονομαστικά στον κατάλογο των υλών της περιοριστικής Κλάσης.*

**ΣΗΜΕΙΩΣΗ 3:** *Διαλύματα και μείγματα με ειδική ένταση ραδιενέργειας που υπερβαίνει τα 70 kBq/kg (2nCi/g) είναι ύλες της Κλάσης 7 [βλέπε περιθωριακό 2700 (1)].*

(a) Ένα διάλυμα ή μείγμα που περιέχει μία επικίνδυνη ύλη καταχωρημένη ονομαστικά σ' αυτήν την Οδηγία μαζί με μία ή περισσότερες μη επικίνδυνες ύλες, πρέπει να θεωρούνται ως η επικίνδυνη ύλη, η καταχωρημένη ονομαστικά, εκτός εάν:

1. Το διάλυμα ή το μείγμα είναι συγκεκριμένα καταχωρημένο ονομαστικά κάπου αλλού σ' αυτήν την Οδηγία, ή
2. Είναι προφανές από το είδος για την επικίνδυνη ύλη ότι αυτό είναι εφαρμόσιμο μόνο για την καθαρή ή την τεχνικά καθαρή ύλη, ή
3. Η Κλάση, φυσική κατάσταση ή ομάδα συσκευασίας (γράμμα), του διαλύματος ή μείγματος είναι διαφορετική από εκείνη της επικίνδυνης ύλης.

<sup>7)</sup> Βλέπε περιθωριακό 2000 (5).

### Ορισμοί και γενικές διατάξεις

2002  
(συνεχ.)

Για τέτοια διαλύματα και μείγματα, ή λέξη "διάλυμα" ή "μείγμα" θα προστίθεται ως τμήμα του ονόματος στο έγγραφο μεταφοράς για λόγους σαφήνειας στην περιγραφή, για παράδειγμα, "διάλυμα ασετόνης".

Εάν η Κλάση, φυσική κατάσταση ή ομάδα συσκευασίας είναι διαφορετικές από εκείνη της καθαρής ύλης, το διάλυμα ή μείγμα θα κατατάσσεται σε μία κατάλληλη εγγραφή ε.α.ο., ανάλογα τον βαθμό κινδύνου.

(b) Ύλες που έχουν περισσότερα από ένα χαρακτηριστικά κινδύνου και διαλύματα και μείγματα που περιέχουν δύο ή περισσότερα συστατικά υποκείμενα σ' αυτήν την Οδηγία θα κατατάσσονται υπό ένα είδος και γράμμα της κατάλληλης Κλάσης σε συμφωνία με τα χαρακτηριστικά κινδύνου τους. Αυτή η κατάταξη σύμφωνα με τα χαρακτηριστικά κινδύνου θα εκτελείται ως ακολούθως:

1.1 Τα φυσικά και χημικά χαρακτηριστικά και οι φυσιολογικές ιδιότητες θα καθορίζονται με μέτρηση ή υπολογισμό και θα κατατάσσονται σύμφωνα με τα κριτήρια των διαφόρων Κλάσεων.

1.2 Εάν αυτός ο καθορισμός δεν είναι δυνατός χωρίς δυσανάλογο κόστος ή προσπάθεια (όπως για ορισμένα είδη αποβλήτων), τα διαλύματα ή μείγματα θα τοποθετούνται στην Κλάση του συστατικού που παρουσιάζει τον υπερισχύοντα κίνδυνο.

2. Εάν μία ύλη παρουσιάζει περισσότερα από ένα χαρακτηριστικά κινδύνου ή εάν ένα μείγμα ή διάλυμα περιέχει περισσότερα από ένα συστατικά των Κλάσεων ή ομάδων των υλών που παρατίθενται παρακάτω, θα κατατάσσεται στην Κλάση ή στην ομάδα υλών που παρουσιάζει τον υπερισχύοντα κίνδυνο.

2.1 Εάν δεν υπάρχει υπερισχύων κίνδυνος, η κατάταξη θα βασίζεται στην ακόλουθη σειρά προτεραιότητας:

- ύλες και είδη της Κλάσης 1
- ύλες και είδη της Κλάσης 2
- αυτο-αντιδρούσες και σχετικές ύλες και εκρηκτικές ύλες σε μη εκρηκτική κατάσταση (βρεγμένες ή αδρανοποιημένες εκρηκτικές ύλες) της Κλάσης 4.1
- πυροφορικές ύλες της Κλάσης 4.2
- ύλες της Κλάσης 5.2
- ύλες και είδη της Κλάσης 2
- ύλες της Κλάσης 6.1 ή Κλάσης 3 οι οποίες, στην βάση της διά της αναπνοής τοξικότητάς τους, κατατάσσονται υπό το γράμμα (a) των διαφόρων ειδών (εξαιρουμένων των υλών, διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που ικανοποιούν τα κριτήρια κατάταξης της Κλάσης 8 και έχουν μία διά της αναπνοής τοξικότητα της σκόνης και αχλύος (LC<sub>50</sub>) στο φάσμα της ομάδας (a) και μία διά του στόματος ή διά του δέρματος τοξικότητα μόνο στο φάσμα της ομάδας (c) ή λιγότερο, όπως ύλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) θα κατατάσσονται στην Κλάση 8).
- μολυσματικές ύλες της Κλάσης 6.2.

## Ορισμοί και γενικές διατάξεις

2002  
(συνεχ.)

- 2.2 Εάν τα χαρακτηριστικά κινδύνου εμπίπτουν σε περισσότερες από μία Κλάσεις ή ομάδες υλών που δεν αναφέρθηκαν στον 2.1, οι ύλες, μείγματα ή διαλύματα θα κατατάσσονται στην Κλάση ή τις ομάδες υλών που παρουσιάζουν τον υπερισχύοντα κίνδυνο.
- 2.3 Εάν δεν υπάρχει υπερισχύων κίνδυνος, ή ύλη, διάλυμα ή μείγμα θα κατατάσσεται ως ακολούθως:
- 2.3.1 Κατάταξη σε μία Κλάση θα πραγματοποιείται στην βάση των διαφόρων χαρακτηριστικών κινδύνου ή συστατικών σε συμφωνία με τον παρακάτω Πίνακα<sup>B</sup>. Για τις Κλάσεις 3, 4.1, 4.2, 4.3, 5.1, 6.1, 8 και 9, θα υπολογίζεται ο βαθμός κινδύνου που σημειώνεται από τα γράμματα (a), (b) ή (c) των διαφόρων ειδών [βλέπε περιθωριακά 2300 (3), 2400 (3), 2430 (3), 2470 (3), 2500 (3), 2600 (1), 2800 (1) και 2900].

**ΣΗΜΕΙΩΣΗ:** Παράδειγμα επεξηγηματικό της χρήσης του Πίνακα<sup>B</sup>:

Περιγραφή του Μείγματος:

Μείγμα που αποτελείται από ένα εύφλεκτο υγρό καταχωρημένο υπό την Κλάση 3, γράμμα (c), μία τοξική ύλη καταχωρημένη υπό την Κλάση 6.1, γράμμα (b) και διαβρωτική ύλη καταχωρημένη υπό την Κλάση 8, γράμμα (a).

Διαδικασία:

Η τομή της γραμμής 3(c) με την στήλη 6.1(b) δίνει 6.1(b). Η τομή της γραμμής 6.1(b) με την στήλη 8(a) δίνει 8(a). Αυτό το μείγμα κατατάσσεται συνεπώς υπό την Κλάση 8, γράμμα (a).

<sup>B</sup>

Ο Πίνακας παρουσιάζεται στις σελίδες 10 και 11.

2002

SOL = Στερεός υλικός και μίγματα  
 LIQ = Υγρά υλικά, μίγματα και διαλύματα  
 DERMAL = Από τον δερματικό τομέα  
 ORAL = Από τον στόμαχο τομέα  
 INHAL = Από την αναπνευστική τομέα

2002 Υποσημειώσεις του Πίνακα  
(συνεχ.)

*1/* Αυτά τα μείγματα και διαλύματα μπορούν να έχουν εφικτικές ιδιότητες, στην περίπτωση αυτή δεν θα γίνονται δεκτά για μεταφορά παρά μόνο εάν ικανοποιούν τις απαιτήσεις της Κλάσης 1.

*2/* Διαλύματα ή μείγματα που περιέχουν ύλες της Κλάσης 3, περιθωριακό 2301, 6°, 12° ή 13° θα τοποθετούνται σ' αυτή την Κλάση υπό αυτά τα είδη.

*3/* Διαλύματα ή μείγματα που περιέχουν ύλες της Κλάσης 6.1, περιθωριακό 2601, 1° έως 3° θα τοποθετούνται σ' αυτή την Κλάση υπό αυτά τα είδη.

*4/* Διαλύματα ή μείγματα που περιέχουν ύλες της Κλάσης 8, περιθωριακό 2801, 6°, 14° και 15° θα τοποθετούνται σ' αυτή την Κλάση υπό αυτά τα είδη.

*5/* Κατάζή σε μία Κλάση και ένα γράμμα ενός είδους μπορεί να βασίζεται στην διαδικασία δοκιμής (βλέπε Προσθήκη Α.3).

*6/* Διαλύματα ή μείγματα που περιέχουν ύλες της Κλάσης 9, περιθωριακό 2901, 2°(b), θα τοποθετούνται σ' αυτή την Κλάση υπό αυτά τα είδη, αρκεί να μην περιέχουν επίσης ύλες που σημειώνονται στις παραπάνω υποσημειώσεις *1/* έως *4/*. Εάν περιέχουν τέτοιες ύλες τότε θα κατατάσσονται αντίστοιχα.

*7/* Δεν υπάρχει σήμερα κανένα κριτήριο δοκιμής για τον καθαρισμό του βαθμού κινδύνου (ομάδα συσκευασίας) για υγρά της Κλάσης 5.1. Ο βαθμός κινδύνου (ομάδα συσκευασίας) γι' αυτές τις ύλες μπορεί να καθοριστεί μόνο με τη σύγκριση με ύλες που έχουν καταταχθεί ανά όνομα υπό κάποιο είδος και μία ομάδα που ορίζεται από τα γράμματα (a), (b) ή (c).

*8/* Κλάση 6.1 για φωτοφάρμακα.

## Ορισμοί και γενικές διατάξεις

2002  
(συνέχ.)

- 2.3.2 Η κατάταξη υπό μία εγγραφή ε.α.ο. ή ένα είδος μίας Κλάσης που καθορίζεται σύμφωνα με το 2.3.1 στη βάση των χαρακτηριστικών κινδύνου των διαφόρων συστατικών του διαλύματος ή του μείγματος. Η κατάταξη υπό μία γενική εγγραφή ε.α.ο. επιτρέπεται μόνο όταν η κατάταξη υπό μία ορισμένη εγγραφή ε.α.ο. δεν είναι δυνατή.

**ΣΗΜΕΙΩΣΗ:** Παραδείγματα για την κατάταξη μειγμάτων και διαλυμάτων υπό Κλάσεις και είδη:

Ένα διάλυμα φαινόλης της Κλάσης 6.1, 14° (b), σε βενζόλιο της Κλάσης 3, 3° (b) κατατάσσεται στην Κλάση 3, 3° (b). αυτό το διάλυμα κατατάσσεται υπό την εγγραφή 1992 εύφλεκτα υγρά, τοξικά, ε.α.ο.

Ένα στερεό μείγμα αρσενικό άλας νατρίου της Κλάσης 6.1, 51° (b) και υδροξείδιο νατρίου της Κλάσης 8, 41° (b) κατατάσσεται υπό την εγγραφή 1557 αρσενική ένωση, στερεά, ε.α.ο. στην Κλάση 6, 51° (b).

Ένα διάλυμα ακατέργαστου ή διυλισμένου ναφθαλινίου της Κλάσης 4.1, 6° (c) σε βενζίνη της Κλάσης 3, 3° (b), κατατάσσεται υπό την εγγραφή 3295 υδρογονάνθρακες, υγροί, ε.α.ο. στην Κλάση 3, 3° (b).

*Ορισμοί και γενικές διατάξεις*

20b (12) Ραδιενεργείς ύλες των οποίων η συγκεκριμένη ένταση ραδιενέργειας υπερβαίνει τα 70 kBq/kg (2 nCi/g) και οι οποίες

- (a) ικανοποιούν τα κριτήρια για μεταφορά υπό το Πρόγραμμα 1 της Κλάσης 7 και
- (b) έχουν επικίνδυνες ιδιότητες που καλύπτονται από τον τίτλο κάθε άλλης Κλάσης ή άλλων Κλάσεων,

θα αποκλείονται της μεταφοράς εάν καλύπτονται από τον τίτλο μίας περιοριστικής Κλάσης στην οποία δεν αναφέρονται.

(13) Ραδιενεργείς ύλες των οποίων η συγκεκριμένη ένταση ραδιενέργειας υπερβαίνει τα 70 kBq/kg (2 nCi/g) και οι οποίες

- (a) ικανοποιούν τα κριτήρια για μεταφορά υπό το Πρόγραμμα 1 της Κλάσης 7 και
- (b) έχουν επικίνδυνες ιδιότητες που καλύπτονται από τον τίτλο κάθε άλλης Κλάσης ή άλλων Κλάσεων,

επιπρόσθετα της ικανοποίησης των απαιτήσεων του Προγράμματος 1 της Κλάσης 7, θα υπόκεινται στους παρακάτω όρους μεταφοράς:

- (i) στην περιοριστική Κλάση, εάν μία από τις ενεχόμενες Κλάσεις είναι περιοριστική Κλάση, και η ύλη αναφέρεται σ' αυτή,

ή

- (ii) στην Κλάση που αντιστοιχεί στον υπερισχύοντα κίνδυνο που εκτίθεται από την ύλη κατά τη μεταφορά, εάν καμία από τις ενεχόμενες Κλάσεις δεν είναι περιοριστική Κλάση.

(14) Για τους σκοπούς αυτής της Οδηγίας, ύλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) οι οποίες δεν μπορούν να καταταχθούν στις Κλάσεις 1 έως 8 ή 9, 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup>, αλλά οι οποίες μπορούν να καταταχθούν στην Κλάση 9, 11<sup>ο</sup> ή 12<sup>ο</sup>, στη βάση των μεθόδων και κριτηρίων των δοκιμών σύμφωνα με την Προσθήκη Α.3, τμήμα Ζ, περιθωριακά 3390 έως 3396, θα θεωρούνται ότι μολύνουν το υδρόβιο περιβάλλον. Διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) για τα οποία οι τιμές της κατάταξης σύμφωνα με τα κριτήρια κατάταξης δεν είναι διαθέσιμες, θα θεωρούνται ότι μολύνουν το υδρόβιο περιβάλλον εάν το  $LC_{50}$ <sup>9/</sup> υπολογιζόμενο σύμφωνα με τον παρακάτω τύπο:

$$LC_{50} = \frac{LC_{50} \text{ της μολύνουσας ύλης} \times 100}{\text{ποσοστό της μολύνουσας ύλης (κατά βάρος)}}$$

είναι ίσο ή μικρότερο από:

- (a) 1 mg/l,
- (b) 10 mg/l εάν η μολύνουσα ύλη δεν αποσυντίθεται εύκολα ή, εάν αποσυντεθημένη έχει  $\log P_{ow} \geq 3.0$ .

**ΣΗΜΕΙΩΣΗ:** Για ύλες των Κλάσεων 1 έως 8 και Κλάσεων 9, 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup>, οι οποίες μολύνουν το υδρόβιο περιβάλλον σύμφωνα με τα κριτήρια της Προσθήκης Α.3, τμήμα Ζ, περιθωριακά 3390 έως 3396, δεν εφαρμόζονται επιπρόσθετοι όροι μεταφοράς.

<sup>9/</sup>

Σύμφωνα με τον ορισμό που περιέχεται στο περιθωριακό 3396.

*Ορισμοί και γενικές διατάξεις*

206 (1) Το παρόν Παράρτημα περιέχει για κάθε Κλάση πλην της Κλάσης 7:

(a) κατάλογο των επικίνδυνων υλών των αποτελούντων την Κλάση, και όπου έχει εφαρμογή, υπό μορφή περιθωριακού έχοντος αριθμό λήγοντα στο γράμμα "a", τις εξαιρέσεις τις επιτρεπόμενες από τις διατάξεις αυτής της Οδηγίας για μερικές από τις ύλες αυτές εάν συμμορφώνονται προς ορισμένους όρους,

(b) διατάξεις υποδιαριθμούμενες όπως παρακάτω:

## A. Κόλα

1. Γενικοί όροι συσκευασίας
2. Ειδικοί όροι συσκευασίας
3. Μικτή συσκευασία
4. Ενδείξεις και ετικέτες κινδύνου επάνω στα κόλα

## B. Λεπτομέρειες (στοιχεία) του εγγράφου μεταφοράς

## C. Κενές συσκευασίες

## D. (όπου ενδείκνυται) Άλλες διατάξεις

(2) Διατάξεις σχετικές με:

- την αποστολή χύμα, μέσα σε εμπορευματοκιβώτια και σε δεξαμενές,
- τη μέθοδο διεκπεραίωσης (προωθήσεως) και περιορισμούς στη προώθηση,
- απαγορεύσεις στη μικτή φόρτωση και τον
- εξοπλισμό μεταφοράς

μπορούν να βρεθούν στο Παράρτημα Β και στις προσθήκες του, που περιέχουν επίσης σχετικές διατάξεις εφαρμοζόμενες ειδικά στην οδική μεταφορά.

(3) Για την Κλάση 7, οι διατάξεις συνοψίζονται υπό μορφή προγραμμάτων που περιέχουν τους παρακάτω τίτλους:

1. Ύλες
2. Συσκευασία κόλου
3. Ανώτατο επίπεδο ακτινοβολίας κόλου
4. Μόλυνση στα κόλα, στα οχήματα, στα εμπορευματοκιβώτια, στις δεξαμενές και στις υπερ-συσκευασίες
5. Απολύμανση και χρήση οχημάτων, εξοπλισμού ή τμήματά τους.
6. Μικτή συσκευασία
7. Μικτή φόρτωση
8. Ενδείξεις και ετικέτες κινδύνου επάνω στα κόλα, εμπορευματοκιβώτια, δεξαμενές και υπερ-συσκευασίες

*Ορισμοί και γενικές διατάξεις*

- 20 (συνεχ.) 9. Ενδείξεις και επικείμετες κινδύνου σε οχήματα εκτός των οχημάτων-δεξαμενών
10. Έγγραφα μεταφοράς
11. Αποθήκευση και προώθηση
12. Μεταφορά κόλων, εμπορευματοκιβωτίων, δεξαμενών και υπερ-συσκευασιών
13. Άλλες διατάξεις

(4) Οι Προσθήκες του Παραρτήματος αυτού περιέχουν:

*Προσθήκη Α.1:* Όροι σταθερότητας και ασφάλειας σχετικά με τις εκρηκτικές ύλες και είδη, τα νιτρικά μείγματα νιτροκυτταρίνης, αυτο-αντιδρούσες ύλες και οργανικά υπεροξειδία, μαζί με λεξιλόγιο ονομάτων στο περιθωριακό 2101.

*Προσθήκη Α.2:* Διατάξεις σχετικές με τη φύση (προέλευση) των εκ κράματος αλουμινίου δοχείων για ορισμένα αέρια της Κλάσης 2, διατάξεις σχετικές με τα υλικά και την κατασκευή δοχείων, προοριζόμενων για τη μεταφορά βαθιά - κατεψυγμένων υγροποιημένων αερίων της Κλάσης 2, και διατάξεις σχετικές με δοκιμές σε διανεμητές αεροζόλ και μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέρια υπό πίεση της Κλάσης 2, 10° και 11°.

*Προσθήκη Α.3:* Δοκιμές (έλεγχοι) σχετικές με εύφλεκτα υγρά των Κλάσεων 3, 6.1 και 8, δοκιμή προσδιορισμού ρευστότητας, δοκιμές σχετικές με εύφλεκτα στερεά της Κλάσης 4.1, δοκιμές σχετικές με ύλες της Κλάσης 4.2 υποκείμενες σε αυτογενή ανάφλεξη, δοκιμή σχετική με τις ύλες της Κλάσης 4.3 η οποίες βγάζουν εύφλεκτα αέρια σε επαφή με το νερό, δοκιμή σχετική με οξειδωτικά στερεά της Κλάσης 5.1, δοκιμές για τον προσδιορισμό της οικοτοξικότητας, της διατήρησης και της βιοσυσσώρευσης των υλών στο υδρόβιο περιβάλλον προς ταξινόμηση στην Κλάση 9.

*Προσθήκη Α.5:* Γενικές συνθήκες συσκευασίας, είδη συσκευασιών, απαιτήσεις εφαρμόσιμες στις συσκευασίες, απαιτήσεις δοκιμών για τις συσκευασίες.

*Προσθήκη Α.6:* Γενικές συνθήκες για την χρήση ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), ειδών IBC, απαιτήσεων σχετικών με την κατασκευή IBC και προδιαγραφές δοκιμών των IBC.

*Προσθήκη Α.7:* Διατάξεις σχετικές με ραδιενεργές ύλες της Κλάσης 7.

*Προσθήκη Α.9:* Διατάξεις σχετικές με τις επικείμετες κινδύνου, και την επεξήγηση των συμβόλων.

Οι Προσθήκες Α.4 και Α.8 είναι υπό επιφύλαξη.

2004

2005 Όπου οι διατάξεις οι σχετικές με τη μεταφορά "πλήρους φορτίου" έχουν εφαρμογή, οι αρμόδιες αρχές ενδέχεται να απαιτήσουν όπως το όχημα ή μεγάλο εμπορευματοκιβώτιο το χρησιμοποιούμενο για τη σχετική επιχείρηση μεταφοράς φορτωθεί μόνο σε ένα σημείο και εκφορτωθεί μόνο σε ένα σημείο.

2006 (1) Εάν το όχημα που εκτελεί μεταφορά που υπόκειται στις διατάξεις αυτής της Οδηγίας μεταφερθεί σε τμήμα του ταξιδιού όχι με οδική έλξη, τότε οποιοσδήποτε εθνικές ή διεθνείς διατάξεις οι οποίες, στο αναφερόμενο τμήμα, διέπουν την μεταφορά επικίνδυνων εμπορευμάτων με τον τρόπο της μεταφοράς τον χρησιμοποιηθέντα για τη μεταφορά του οχήματος της οδού, θα έχουν και μόνο εφαρμογή για το αναφερόμενο τμήμα του ταξιδιού.

(2) Στις περιπτώσεις όπου η μεταφορά που υπόκειται στις διατάξεις αυτής της Οδηγίας υπόκειται επίσης στο σύνολο ή σε μέρος του οδικού ταξιδιού στις διατάξεις μιας διεθνούς σύμβασης η οποία καθορίζει την μεταφορά επικίνδυνων εμπορευμάτων με κάποιο τρόπο

*Ορισμοί και γενικές διατάξεις*

**200** μεταφοράς εκτός της οδικής μεταφοράς δυνάμει διατάξεων που εκτείνουν την εφαρμοσιμότητα (συνεχ.) της σύμβασης αυτής σε ορισμένες υπηρεσίες μηχανοκίνητων οχημάτων, τότε οι διατάξεις αυτής της διεθνούς σύμβασης θα εφαρμόζονται στο εν λόγω ταξίδι συγχρόνως με εκείνες αυτής της Οδηγίας οι οποίες δεν είναι ασύμβατες με εκείνες, οι υπόλοιπες διατάξεις αυτής της Οδηγίας δεν θα εφαρμόζονται κατά την διάρκεια του εν λόγω ταξιδιού.

**2007** Κόλα, συμπεριλαμβανομένων των ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), τα οποία δεν καλύπτουν πλήρως τις απαιτήσεις αυτής της Οδηγίας για συσκευασία, μικτή συσκευασία και ετικετοποίηση αλλά είναι συμμορφωμένα με τις απαιτήσεις για θαλάσσια ή αεροπορική μεταφορά επικινδύνων εμπορευμάτων<sup>10/</sup> θα γίνεται αποδεκτή για μεταφορά εάν είτε προηγουμένως είτε στη συνέχεια του οδικού ταξιδιού είχε αποτελέσει αντικείμενο θαλάσσιας ή αεροπορικής μεταφοράς υπό τις παρακάτω προϋποθέσεις:

- (a) Εάν τα κόλα δεν φέρουν ετικέτα σύμφωνη μ' αυτήν την Οδηγία, πρέπει να φέρουν ετικέτα σύμφωνη με τις διατάξεις της θαλάσσιας ή της αεροπορικής μεταφοράς<sup>10/</sup>
- (b) Οι διατάξεις για θαλάσσια ή αεροπορική μεταφορά<sup>10/</sup> πρέπει να είναι εφαρμοστέες και για μικτές συσκευασίες εντός ενός κόλου.
- (c) Επιπρόσθετα στις λεπτομέρειες που ορίζονται απ' αυτήν την Οδηγία, οι λέξεις "Μεταφορά υπό το Περιθωριακό 2007 της ADR" πρέπει να αναγράφονται στο έγγραφο μεταφοράς.

**2008-  
2009**

**2010** Προς τον σκοπό της διεξαγωγής των απαραίτητων δοκιμών (ελέγχων) προς τροποποίηση των διατάξεων του παρόντος Παραρτήματος για να εφαρμοσθούν στις τεχνολογικές και βιομηχανικές αναπτύξεις, οι αρμόδιες αρχές των Κρατών Μελών μπορούν να συμφωνήσουν απ' ευθείας μεταξύ τους να εξουσιοδοτήσουν ορισμένες επιχειρήσεις μεταφοράς στις εδαφικές τους περιοχές (επικράτειες) με προσωρινή ανάκληση των διατάξεων του παρόντος Παραρτήματος. Η περίοδος ισχύος της προσωρινής ανάκλησης δεν μπορεί να υπερβαίνει τα πέντε χρόνια από την ημέρα που ετέθη σε ισχύ. Η προσωρινή ανάκληση λήγει αυτομάτως την ημερομηνία κατά την οποία ετέθη σε ισχύ η σχετική τροποποίηση του Παραρτήματος αυτού.

**2011-  
2009**

<sup>10/</sup> Αυτές οι απαιτήσεις καθορίζονται στον Διεθνή Κώδικα για τη Θαλάσσια Μεταφορά Επικινδύνων Εμπορευμάτων (IMDG) που εκδίδεται από τον Διεθνή Οργανισμό Θαλάσσιων Μεταφορών (IMO), που εδρεύει στο Λονδίνο και στις Τεχνικές Οδηγίες για της Ασφαλή Μεταφορά Επικινδύνων Εμπορευμάτων Αεροπορικής που εκδίδεται από τον Διεθνή Οργανισμό Πολιτικής Αεροπορίας (ICAO), που εδρεύει στο Μόντρεαλ.

**Μέρος ΙΙ. ΚΑΤΑΛΟΓΟΣ ΥΛΩΝ ΚΑΙ ΕΙΔΙΚΕΣ ΔΙΑΤΑΞΕΙΣ  
ΓΙΑ ΤΙΣ ΔΙΑΦΟΡΕΣ ΚΛΑΣΕΙΣ**

**ΚΛΑΣΗ 1. ΕΚΡΗΚΤΙΚΕΣ ΥΛΕΣ ΚΑΙ ΕΙΔΗ**

**1. Κατάλογος υλών και ειδών**

**2100 (1)** Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της Κλάσης 1, μόνον εκείνα που αναφέρονται στο περιθωριακό 2101 ή καταχωρούνται σε μία ε.α.ο. καταχώρηση στο περιθωριακό 2101 θα γίνονται δεκτά για μεταφορά. Αυτές οι ύλες και τα είδη θα γίνονται δεκτά για μεταφορά μόνον υπό τους όρους που τίθενται στα περιθωριακά 2100 (2) έως 2116, Προσθήκη Α.1 και Παράρτημα Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας.

(2) Η κλάση 1 περιλαμβάνει:

- (a) Εκρηκτικές ύλες: στερεές ή υγρές ύλες (ή μείγματα υλών) ικανές με χημική αντίδραση να παράγουν αέρια σε τέτοια θερμοκρασία και πίεση και σε τέτοια ταχύτητα ώστε να προκαλέσουν ζημιά στον περιβάλλοντα χώρο.

Πυροτεχνικές ύλες: ύλες ή μείγματα υλών σχεδιασμένα να παράγουν θερμότητα, φως, ήχο, αέριο ή καπνό ή έναν συνδυασμό αυτών ως αποτέλεσμα μη-εκρηκτικών αυτοσυντηρούμενων εξώθερμων χημικών αντιδράσεων.

**ΣΗΜΕΙΩΣΗ 1:** Εκρηκτικές ύλες οι οποίες είναι υπερβολικά ευαίσθητες ή υπόκεινται σε αυτόματη αντίδραση δεν θα γίνονται δεκτές για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Ύλες οι οποίες δεν είναι από μόνες τους εκρηκτικές αλλά οι οποίες μπορούν να σχηματίσουν ένα εκρηκτικό μείγμα αερίου, ατμού ή σκόνης δεν είναι ύλες της Κλάσης 1.

**ΣΗΜΕΙΩΣΗ 3:** Επίσης δεν συμπεριλαμβάνονται στην Κλάση 1: εκρηκτικά βρεγμένα με νερό ή αλκοόλη των οποίων η περιεκτικότητα σε νερό ή αλκοόλη υπερβαίνει τα όρια που υποδεικνύονται στο περιθωριακό 2101 και εκείνα που περιέχουν πλαστικοποιητές - αυτά τα εκρηκτικά καταχωρούνται στην Κλάση 4.1 (περιθωριακό 2401, 21°, 22° και 24°) - και εκείνα τα εκρηκτικά τα οποία, με βάση τον βασικό τους κίνδυνο, καταχωρούνται στην Κλάση 5.2.

- (b) Εκρηκτικά είδη: είδη που περιέχουν μία ή περισσότερες εκρηκτικές ύλες και ή πυροτεχνικές ύλες.

**ΣΗΜΕΙΩΣΗ:** Συσκευές που περιέχουν εκρηκτικές και ή πυροτεχνικές ύλες σε τέτοια μικρή ποσότητα ή τέτοιου χαρακτήρα ώστε η ακούσια ή τυχαία ανάφλεξη ή πυροδότηση τους κατά τη διάρκεια της μεταφοράς να μην προκαλεί οποιαδήποτε εκδήλωση εκτίναξης, φωτιάς, καπνού, θερμότητας ή υψηλού θορύβου εξωτερικά της συσκευής δεν υπόκεινται στις απαιτήσεις της Κλάσης 1.

- (c) Ύλες και είδη που δεν αναφέρονται στα (a) ή (b) παραπάνω που κατασκευάζονται με σκοπό την παραγωγή διασκευαστικού εφέ με έκρηξη ή πυροτεχνικού εφέ.

(3) Εκρηκτικές ύλες και είδη θα πρέπει να έχουν καταχωρηθεί σε μία ονομασία στο περιθωριακό 2101 σε συμφωνία με τις μεθόδους ελέγχου για τον προσδιορισμό των εκρηκτικών ιδιοτήτων και τις διαδικασίες ταξινόμησης που τίθενται στην Προσθήκη Α.1 και θα πρέπει να ικανοποιούν τους όρους που αρμόζουν σ' εκείνη την ονομασία ή θα πρέπει να καταχωρούνται σε μία ε.α.ο. καταχώρηση στο περιθωριακό 2101 σε συμφωνία με αυτές τις μεθόδους ελέγχου και τις διαδικασίες ταξινόμησης.

*Ορισμοί και γενικές διατάξεις*

**2.1.4.** Καταχώρηση υλών και ειδών που δεν αναφέρονται με την ονομασία τους σε μία ε.α.ο. (συνεχ.) καταχώρηση θα πρέπει να γίνεται από την αρμόδια αρχή της χώρας προέλευσης.

Υλες και είδη που καταχωρούνται σε μία ε.α.ο. καταχώρηση θα πρέπει να μεταφέρονται μόνον με την έγκριση της αρμόδιας αρχής της χώρας προέλευσης και υπό τους όρους που επιβάλλονται από εκείνη την αρχή.

Εάν η χώρα προέλευσης δεν είναι Κράτος Μέλος, τα όρια που επιβάλλονται θα πρέπει να αναγνωρίζονται από την αρμόδια αρχή του πρώτου Κράτους Μέλους που προσεγγίζεται από την αποστολή.

Η έγκριση θα πρέπει να δίνεται γραπτά.

(4) Υλες και είδη της Κλάσης I, άλλα από κενές συσκευασίες, ακαθάριστες, της 51<sup>ο</sup>, θα πρέπει να έχουν καταχωρηθεί σε μια υποδιαίρεση σε συμφωνία με την παράγραφο (6) και σε μία ομάδα συμβατότητας σε συμφωνία με την παράγραφο (7). Η υποδιαίρεση θα πρέπει να βασίζεται στα αποτελέσματα των ελέγχων που περιγράφονται στην Προσθήκη Α.1 και να ταιριάζει στους ορισμούς στην παράγραφο (6). Η ομάδα συμβατότητας θα πρέπει να προσδιορίζεται σε συμφωνία με τους ορισμούς στην παράγραφο (7). Ο κωδικός ταξινόμησης θα πρέπει να συνίσταται από τον αριθμό υποδιαίρεσης και το γράμμα της ομάδας συμβατότητας.

(5) Υλες και είδη της Κλάσης I καταχωρούνται στην ομάδα συσκευασίας II (βλέπε Προσθήκη Α.5).

(6) Ορισμός των υποδιαίρεσεων

- 1.1 Υλες και είδη που έχουν κίνδυνο έκρηξης μάζας. (Έκρηξη μάζας είναι μία έκρηξη που προσβάλλει σχεδόν όλο το φορτίο σχεδόν ακαριαία).
- 1.2 Υλες και είδη που έχουν κίνδυνο εκτίναξης αλλά όχι κίνδυνο έκρηξης μάζας.
- 1.3 Υλες και είδη που έχουν κίνδυνο φωτιάς και είτε μικρότερο κίνδυνο έκρηξης είτε μικρότερο κίνδυνο εκτίναξης είτε και τα δύο, αλλά όχι κίνδυνο έκρηξης μάζας.
  - (a) η ανάφλεξη των οποίων δημιουργεί σημαντική εκπέμπουσα θερμότητα, ή
  - (b) που καίγονται η μία μετά την άλλη, παράγοντας μικρότερες εκρήξεις ή εκτινάξεις ή και τα δύο.
- 1.4 Υλες και είδη που παρουσιάζουν μόνον έναν μικρό κίνδυνο έκρηξης σε περίπτωση ανάφλεξης ή πυροδότησης κατά τη διάρκεια της μεταφοράς. Τα αποτελέσματα περιορίζονται κατά πολύ στο κόλο και δεν αναμένεται εκτίναξη θραυσμάτων σημαντικού μεγέθους ή εύρους. Μία εξωτερική φωτιά δεν θα πρέπει να προκαλεί ουσιαστικά ακαριαία έκρηξη σχεδόν όλου του περιεχομένου του κόλου.
- 1.5 Πολύ λίγο ευαίσθητες ύλες με κίνδυνο έκρηξης μάζας που είναι τόσο λίγο ευαίσθητες ώστε υπάρχει πολύ μικρή πιθανότητα πυροδότησης ή μετάβασης από την καύση στην έκρηξη υπό κανονικούς όρους μεταφοράς. Ως ελάχιστη απαίτηση δεν πρέπει να εκρήγνυνται στον έλεγχο εξωτερικής φωτιάς.
- 1.6 Εξαιρετικά μη-ευαίσθητα είδη που δεν έχουν κίνδυνο έκρηξης μάζας. Τα είδη περιέχουν μόνον εξαιρετικά μη-ευαίσθητες εκρηκτικές ύλες και εμφανίζουν αμελητέα πιθανότητα τυχαίας πυροδότησης ή εξάπλωσης.

*Ορισμοί και γενικές διατάξεις*21  
(συνεχ.)**ΣΗΜΕΙΩΣΗ:** Ο κίνδυνος από είδη της Υποδιαίρεσης 1.6 περιορίζεται στην έκρηξη ενός μόνου είδους.

- (7) Ορισμός ομάδων συμβατότητας υλών και ειδών:
- A Κύρια εκρηκτική ύλη
  - B Είδος που περιέχει μία κύρια εκρηκτική ύλη και που δεν έχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Μερικά είδη, τέτοια όπως πυροκροτητές για ανατινάξεις, συνδεσμολογίες πυροκροτητών για ανατινάξεις και εγχυτές, τύπου φυσίγγιου, περιλαμβάνονται, παρ' όλο που δεν περιέχουν κύρια εκρηκτικά.
  - C Προωθητική εκρηκτική ύλη ή άλλη αναφλεγόμενη εκρηκτική ύλη ή είδος που περιέχει τέτοια εκρηκτική ύλη
  - D Δευτερεύουσα εκρηκτική ύλη ή μαύρη πυρίτιδα ή είδος που περιέχει μία δευτερεύουσα εκρηκτική ύλη, σε κάθε περίπτωση χωρίς μέσον πυροδότησης και χωρίς προωθητική γόμωση, ή είδος που περιέχει μία κύρια εκρηκτική ύλη και που έχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά
  - E Είδος που περιέχει μία δευτερεύουσα εκρηκτική ύλη, χωρίς μέσον πυροδότησης, με προωθητική γόμωση (άλλο από είδος που περιέχει ένα άφλεκτο υγρό ή τζέλ ή υπερβολικά υγρά)
  - F Είδος που περιέχει μία δευτερεύουσα εκρηκτική ύλη με δικό του μέσον πυροδότησης, με προωθητική γόμωση (άλλο από είδος που περιέχει ένα άφλεκτο υγρό ή τζέλ ή υπερβολικά υγρά) ή χωρίς προωθητική γόμωση
  - G Πυροτεχνική ύλη, ή είδος που περιέχει μία πυροτεχνική ύλη, ή είδος που περιέχει και μία εκρηκτική ύλη και μία φωτιστική, εμπρηστική, δακρυγόνα ή καπνογόνα ύλη (άλλο αποενεργοποιημένο με νερό ή της παρουσίας υπερβολικών υγρών, φωσφιδία, μία πυροφορική ύλη, ένα εύφλεκτο υγρό ή τζέλ ή υπερβολικά υγρά)
  - H Είδος που περιέχει και μία εκρηκτική ύλη και λευκό φωσφόρο
  - J Είδος που περιέχει και μία εκρηκτική ύλη και ένα άφλεκτο υγρό ή τζέλ
  - K Είδος που περιέχει και μία εκρηκτική ύλη και έναν τóξικό χημικό παράγοντα
  - L Εκρηκτική ύλη ή είδος που περιέχει μία εκρηκτική ύλη και που παρουσιάζει έναν ειδικό κίνδυνο (π.χ. λόγω ενεργοποίησης με νερό ή της παρουσίας υπερβολικών υγρών, φωσφιδία ή μίας πυροφορικής ύλης) που καθιστά αναγκαία την απομόνωση κάθε τύπου
  - N Είδη που περιέχουν μόνον εξαιρετικά μη-ευαίσθητες εκρηκτικές ύλες
  - S Ύλη ή είδος έτσι συσκευασμένο ή σχεδιασμένο ώστε οποιαδήποτε επικίνδυνα αποτελέσματα που εμφανίζονται από τυχαία λειτουργία, περιορίζονται μέσα στο κόλο εκτός εάν το κόλο έχει αλλοιωθεί από φωτιά, στην οποία περίπτωση όλα τα αποτελέσματα έκρηξης ή εκτίναξης περιορίζονται στο βαθμό που δεν δυσχεραίνουν σημαντικά ή παρεμποδίζουν τις προσπάθειες για ενέργειες πυρόσβεσης ή άλλες ενέργειες κινδύνου στην άμεσα γύρω περιοχή του κόλου.

**Ορισμοί και γενικές διατάξεις**2100  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 1:** Κάθε ύλη ή είδος, συσκευασμένο σε μία καθορισμένη συσκευασία, μπορεί να καταχωρείται σε μία ομάδα συμβατότητας μόνον. Εφ' όσον το κριτήριο της ομάδας συμβατότητας S είναι εμπειρικό, η καταχώρηση σ' αυτήν την ομάδα συνδέεται αναγκαστικά με τους ελέγχους για καταχώρηση ενός κωδικού ταξινόμησης.

**ΣΗΜΕΙΩΣΗ 2:** Είδη των ομάδων συμβατότητας D ή E μπορούν να τοποθετούνται ή να συσκευάζονται μαζί με το δικό τους μέσον πυροδότησης υπό την προϋπόθεση ότι τέτοιο μέσον έχει τουλάχιστον δύο αποτελεσματικά προστατευτικά χαρακτηριστικά σχεδιασμένα να αποτρέπουν μία έκρηξη σε περίπτωση τυχαίας λειτουργίας του μέσου πυροδότησης. Τέτοια κόλα θα πρέπει να καταχωρούνται στις ομάδες συμβατότητας D ή E.

**ΣΗΜΕΙΩΣΗ 3:** Είδη των ομάδων συμβατότητας D ή E μπορούν να συσκευάζονται μαζί με το δικό τους μέσον πυροδότησης, που δεν έχει δύο αποτελεσματικά προστατευτικά χαρακτηριστικά (δηλ. μέσον πυροδότησης καταχωρημένο στην ομάδα συμβατότητας B), υπό την προϋπόθεση ότι είναι σύμφωνα με τις απαιτήσεις του περιθωριακού 2104 (6). Τέτοια κόλα θα πρέπει να καταχωρούνται στις ομάδες συμβατότητας D ή E.

**ΣΗΜΕΙΩΣΗ 4:** Είδη μπορούν να τοποθετούνται ή να συσκευάζονται μαζί με το δικό τους μέσον ανάφλεξης υπό την προϋπόθεση ότι το μέσον ανάφλεξης δεν μπορεί να λειτουργήσει κατά τη διάρκεια κανονικών συνθηκών μεταφοράς.

**ΣΗΜΕΙΩΣΗ 5:** Είδη των ομάδων συμβατότητας C, D και E μπορούν να συσκευάζονται μαζί. Τέτοια κόλα θα πρέπει να καταχωρούνται στην ομάδα συμβατότητας E.

(8) Ύλες της ομάδας συμβατότητας A και είδη της ομάδας συμβατότητας K, σε συμφωνία με την παράγραφο (7), θα πρέπει να μην γίνονται δεκτά για μεταφορά.

(9) Για τους σκοπούς των απαιτήσεων αυτής της Κλάσης και με απόκλιση από το περιθωριακό 3510 (3), ο όρος "κόλο" θα πρέπει επίσης να περιλαμβάνει ένα ασυσκευαστο είδος εφ' όσον εκείνο το είδος γίνεται δεκτό για μεταφορά ασυσκευαστο.

**2101** Οι ύλες και τα είδη της Κλάσης 1 που θα γίνονται δεκτά για μεταφορά αναφέρονται στον Πίνακα 1 παρακάτω. Εκρηκτικές ύλες και είδη που αναφέρονται στο περιθωριακό 3170 μπορούν να καταχωρούνται στις διάφορες ονομασίες στο περιθωριακό 2101 μόνον εάν οι ιδιότητες, η σύνθεση, η δομή και η προβλεπόμενη χρήση τους αντιστοιχούν σε μία από τις περιγραφές που περιέχονται στην Προσθήκη A.1.

## Κλάση 1

## 2. Όροι μεταφοράς

## A. Κόλα

## I. Γενικοί όροι συσκευασίας

2102 (1) Οι εξωτερικές συσκευασίες θα πρέπει να συμφωνούν με τις απαιτήσεις της Προσθήκης Α.5.

(2) Σε συμφωνία με τις διατάξεις των περιθωριακών 2100 (5) και 3511, συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X" θα πρέπει να χρησιμοποιούνται για ύλες και είδη της Κλάσης 1.

(3) Οι απαιτήσεις του περιθωριακού 3500 (2), θα πρέπει να ισχύουν για τα μέρη των συσκευασιών που είναι σε άμεση επαφή με το περιεχόμενο.

(4) Καρφιά, συνδετήρες και άλλα μέσα κλεισίματος κατασκευασμένα από μέταλλο που δεν έχουν προστατευτική επικάλυψη δεν θα πρέπει να εισχωρούν στο εσωτερικό της εξωτερικής συσκευασίας εκτός εάν η εσωτερική συσκευασία προστατεύει επαρκώς τις εκρηκτικές ύλες και τα είδη έναντι της επαφής με το μέταλλο.

(5) Η συσκευή κλεισίματος των δοχείων που περιέχουν υγρά εκρηκτικά θα πρέπει να εξασφαλίζει διπλή προστασία έναντι διαρροής.

(6) Εσωτερικές συσκευασίες, εξαρτήματα και προστατευτικά υλικά και η θέση των εκρηκτικών υλών ή ειδών στα κόλα θα πρέπει να είναι τέτοια ώστε καμία επικίνδυνη μετακίνηση να μην μπορεί να συμβεί μέσα στα κόλα κατά τη διάρκεια της μεταφοράς.

(7) Εκεί που σημαντική εσωτερική πίεση είναι πιθανόν να αναπτυχθεί στα δοχεία, τέτοια δοχεία θα πρέπει να είναι έτσι κατασκευασμένα ώστε έκρηξη να μην είναι δυνατή εξ αιτίας αύξησης στην εσωτερική πίεση από εσωτερικά ή εξωτερικά αίτια.

(8) Τα προστατευτικά υλικά θα πρέπει να ταιριάζουν στη φύση του περιεχομένου. Συγκεκριμένα, πρέπει να είναι απορροφητικά εάν το περιεχόμενο είναι υγρό ή μπορεί να αποβάλλει υγρό.

## 2. Ειδικό όροι συσκευασίας

2103 (1) Ύλες και είδη θα πρέπει να είναι συσκευασμένα όπως υποδεικνύεται στο περιθωριακό 2101, Πίνακας 1, στήλες 4 και 5, και όπως τίθεται με λεπτομέρεια στις παραγράφους (5), Πίνακας 2 και (6), Πίνακας 3.

(2) Εάν το σώμα των χαλύβδινων βαρελιών είναι διπλής ραφής, μέτρα θα πρέπει να λαμβάνονται για την παρεμπόδιση της εισόδου των εκρηκτικών υλών μέσα στις εσοχές των ραφών. Η συσκευή κλεισίματος των χαλύβδινων ή αλουμινένιων βαρελιών θα πρέπει να περιλαμβάνει μία κατάλληλη φλάντζα. Εάν η συσκευή κλεισίματος περιλαμβάνει έναν σπειρωτό κοχλία, η είσοδος των εκρηκτικών υλών μέσα στον σπειρωτό κοχλία δεν θα πρέπει να είναι δυνατή.

(3) Εάν κιβώτια με μεταλλική επένδυση χρησιμοποιούνται για τη συσκευασία εκρηκτικών υλών, αυτά τα κιβώτια θα πρέπει να είναι φτιαγμένα με τέτοιον τρόπο ώστε η μεταφερόμενη εκρηκτική ύλη να μην μπορεί να μπει μεταξύ της επένδυσης και των πλευρών ή τον πυθμένα του κιβωτίου.

(4) Μόνον τσέρκια από σκληρό ξύλο θα πρέπει να επιτρέπονται για ξύλινα βαρέλια προοριζόμενα για τη μεταφορά εκρηκτικών υλών.

(5) Πλαστικές συσκευασίες δεν θα πρέπει να υπόκεινται στην πρόκληση ή την συσσώρευση αρκετού στατικού ηλεκτρισμού ώστε μία αποφόρτιση να μπορούσε να προκαλέσει στο συσκευασμένο εκρηκτικό ανάφλεξη ή στο συσκευασμένο είδος λειτουργία.

## Κλάση 1

27  
(συμπλ.)

## (6) Πίνακας : Μέθοδοι συσκευασίας

**ΣΗΜΕΙΩΣΗ:** Για τις μεθόδους συσκευασίας που πρέπει να χρησιμοποιούνται για τις διάφορες ύλες και είδη, βλέπε περιθωριακό 2101, Πίνακα 1, στήλη 4.

## (7) Πίνακας 3: Ειδικές απαιτήσεις συσκευασίας

**ΣΗΜΕΙΩΣΗ:** Για τις ειδικές απαιτήσεις συσκευασίας που ισχύουν για τις διάφορες ύλες και είδη, βλέπε περιθωριακό 2101, Πίνακα 1, στήλη 5.

No.	Απαίτηση
1	Οι υδατοδιαλυτές ύλες πρέπει να είναι συσκευασμένες σε αδιάβροχα δοχεία.
2	Τα κόλα πρέπει να είναι ελεύθερα μολύβδου.
7	Τα μεταλλικά βαρέλια πρέπει να είναι έτσι κατασκευασμένα ώστε έκρηξη να μην είναι δυνατή λόγω αύξησης στην εσωτερική πίεση από εσωτερικά ή εξωτερικά αίτια.
8	Το εσωτερικό των μεταλλικών συσκευασιών θα πρέπει να είναι γαλβανισμένο, βαμμένο ή αλλιώς προστατευμένο. Γυμνός χάλυβας δεν θα πρέπει να έρχεται σ' επαφή με το προωθητικό.
9	Τα βαρέλια ή μηπίτνια από χάλυβα πρέπει να είναι φτιαγμένα χωρίς θυλάκια ή ρωγμές στις οποίες η ύλη θα μπορούσε να αποκλειστεί ή να παραμείνει.
10	Τα μεταλλικά δοχεία πρέπει να είναι έτσι κατασκευασμένα ώστε να μειώνεται ο κίνδυνος έκρηξης, εξ αιτίας αύξησης στην εσωτερική πίεση από εσωτερικά ή εξωτερικά αίτια.
11	Οι εσωτερικές συσκευασίες πρέπει να είναι ερμητικά κλειστές.
12	Τα εξωτερικά κιβώτια από φυσικό ξύλο πρέπει να είναι εφοδιασμένα με επικασσιτερωμένη επένδυση που έχει ένα ερμητικά κλειστό καπάκι.
13	Οι ανοιχτές άκρες των εσωτερικών συσκευασιών πρέπει να είναι εφοδιασμένες με επικαλυμμένα πώματα ή η εξωτερική συσκευασία πρέπει να είναι επικαλυμμένη.
21	Δεν μπορούν να συσκευάζονται περισσότερες από 10 εσωτερικές συσκευασίες σε μία ενδιάμεση συσκευασία.
22	Οι εσωτερικές ή ενδιάμεσες συσκευασίες πρέπει να διαχωρίζονται από την εξωτερική συσκευασία με κενό τουλάχιστον 25 mm με τη χρήση διαχωριστήρων (σανίδες) ή προστατευτικό υλικό, π.χ. πριονίδι.
23	Οι εσωτερικές συσκευασίες πρέπει να διαχωρίζονται από την εξωτερική συσκευασία με κενό όχι μικρότερο από 25 mm γεμάτο με προστατευτικό υλικό, π.χ. πριονίδι, ξυλοβάμβακα.
24	Είδη σε μεταλλικές εσωτερικές συσκευασίες πρέπει να ασφαλιζονται με προστατευτικό υλικό και στις δύο άκρες.
28	Οι μεταλλικές εσωτερικές συσκευασίες πρέπει να είναι επικαλυμμένες με προστατευτικό υλικό.
30	Οι μορφοποιημένες γομώσεις πρέπει να είναι έτσι συσκευασμένες ώστε να παρεμποδίζεται η επαφή μεταξύ τους.
31	Τα κωνικά κοιλώματα των μορφοποιημένων γομώσεων πρέπει να βλέπουν προς τα μέσα κατά ζευγάρια ή ομάδες για την ελαχιστοποίηση της (προωθητικής) δράσης της μορφοποιημένης γόμωσης σε περίπτωση τυχαίας πυροδότησης.
32	Εκτός εάν οι άκρες του είδους είναι σφραγισμένες, πλαστικοί σάκοι θα πρέπει να χρησιμοποιούνται ως εσωτερική συσκευασία.
33	Οι άκρες του εκρηκτικού καλωδίου πρέπει να σφραγίζονται και να δένονται σφιχτά.
34	Οι άκρες του εκρηκτικού καλωδίου πρέπει να σφραγίζονται. Τα κενά πρέπει να γεμίζονται με προστατευτικό υλικό.
35	Οι συσκευασίες θα πρέπει να σφραγίζονται έναντι της εισόδου νερού.
36	Τα είδη πρέπει να προστατεύονται με προστατευτικό για την παρεμπόδιση οποιασδήποτε επαφής μεταξύ τους.

No.	Απαίτηση
37	Οι χράνες Βεντούρι των πυραύλων (πυροτεχνήματα) πρέπει να είναι παωματισμένες και τα μέσα ανάφλεξης πλήρως προστατευμένα.
38	Οι πυροσωλήνες θα πρέπει να διαχωρίζονται ο ένας από τον άλλο στην εσωτερική συσκευασία.
41	Οι εγγυτές πρέπει να συσκευάζονται με απορροφητικά των κρούσεων στρώματα από τσόχα, χαρτί ή πλαστικό για την αποφυγή εξάπλωσης μέσα στην εξωτερική συσκευασία.
42	Οι εξωτερικές πλαστικές συσκευασίες θα πρέπει να ενισχύονται με μέταλλο στις γωνίες και τις ακμές.
43	Τα είδη πρέπει να διαχωρίζονται για την αποφυγή επαφής μεταξύ τους και να τηρούνται μακριά από τον πυθμένα, τα τοιχώματα και το καπάκι της εξωτερικής συσκευασίας, π.χ. με προστατευτικό υλικό.
44	Όπου τα είδη περιέχονται σε γεμιστήρες για εφοδιασμό σε αυτόματες μονάδες, ο γεμιστήρας μπορεί να αντικαταστήσει την εσωτερική συσκευασία υπό την προϋπόθεση ότι χρησιμοποιείται αρκετό προστατευτικό υλικό.
45	Οι επικασσιτερωμένες εσωτερικές συσκευασίες πρέπει να ασφαλιζονται.
46	Τα είδη πρέπει να τυλιγούνται ένα-ένα σε συρρικνωμένα φύλλα φάϊμπερ ή να εισάγονται σε σωλήνες από φύλλο φάϊμπερ.
47	Απορροφητικό προστατευτικό υλικό πρέπει να εισάγεται.
48	Μεγάλα είδη χωρίς προωθητική γόμωση και χωρίς μέσον ανάφλεξης ή πυροδότησης μπορούν να μεταφέρονται ασυσκευάστα.
49	Μεγάλα είδη χωρίς το μέσο πυροδότησης τους ή με το μέσον πυροδότησης τους να περιέχει τουλάχιστον δύο αποτελεσματικά προστατευτικά χαρακτηριστικά, μπορούν να μεταφέρονται ασυσκευάστα.
50	Μεγάλα είδη χωρίς το μέσον ανάφλεξης τους μπορούν να μεταφέρονται ασυσκευάστα.
51	Μεγάλα είδη μπορούν να μεταφέρονται ασυσκευάστα.
53	Σάκοι, από πλεγμένο πλαστικό, αδιαπέραστοι (5H2), μπορούν να χρησιμοποιούνται μόνον για TNT σε νιφάδες ή ψημένοι στην ξηρή κατάσταση και με μέγιστο καθαρό βάρος 30 kg ανά κόλο.
55	Δεν μπορεί να συσκευάζεται περισσότερο από 50 g ύλης σε μία εσωτερική συσκευασία.
56	Κιβώτια από φύλλο φάϊμπερ (4G) θα πρέπει να μην χρησιμοποιούνται ως εξωτερική συσκευασία.
57	Επένδυση ή εσωτερική επικάλυψη απαιτείται για μεταλλικές εξωτερικές συσκευασίες (π.χ., 4A, 4B, 1A2, 1B2) εκτός εάν κάποιο άλλο μέσον όπως η χρήση μίας εσωτερικής συσκευασίας ή ενός προστατευτικού υλικού προστατεύει την εκρηκτική ύλη από επαφή με την μεταλλική εξωτερική συσκευασία κατά τη διάρκεια κανονικών συνθηκών μεταφοράς.
58	Τα πλαστικά δοχεία θα πρέπει να έχουν κλεισίματα βιδωτού πώματος ασφαλισμένα με ταινία και να είναι χωρητικότητας όχι μεγαλύτερης από 5 λίτρα το καθένα. Κάθε δοχείο θα πρέπει να περιέχεται μέσα σε μία ενδιάμεση συσκευασία. Κάθε πλαστικός σάκος θα πρέπει να περιβάλλεται απ' όλες τις πλευρές με τουλάχιστον 50 mm μη-καύσιμο απορροφητικού προστατευτικού υλικού. Μεταλλικά μπιτόνια στο εξωτερικό κιβώτιο θα πρέπει επίσης να προστατεύονται το ένα από το άλλο σε όλες τις κατευθύνσεις. Το καθαρό βάρος του προωθητικού θα πρέπει να περιορίζεται σε 30 kg για κάθε κόλο.
59	Το ενδιάμεσο βαρέλι θα πρέπει να περιβάλλεται απ' όλες τις πλευρές με τουλάχιστον 50 mm μη-καύσιμο απορροφητικού προστατευτικού υλικού. Μία σύνθετη συσκευασία αποτελούμενη από ένα πλαστικό δοχείο σε ένα μεταλλικό βαρέλι μπορεί να χρησιμοποιείται αντί της εσωτερικής και ενδιάμεσης συσκευασίας. Ο καθαρός όγκος του προωθητικού σε κάθε κόλο θα πρέπει να μην υπερβαίνει τα 120 λίτρα.

## Κλάση 1

## 3. Μικτή συσκευασία

2104 (1) Ύλες και είδη που καλύπτονται από τον ίδιο χαρακτηριστικό αριθμό<sup>3/</sup>, με την εξαίρεση των υλών και ειδών της Ομάδας Συμβατότητας L και των υλών και ειδών που είναι καταχωρημένα σε μία ε.α.ο. καταχώρηση, μπορούν να συσκευάζονται μαζί.

(2) Εκτός άλλως ειδικά ορίζεται παρακάτω, ύλες και είδη που έχουν διαφορετικούς χαρακτηριστικούς αριθμούς δεν μπορούν να συσκευάζονται μαζί.

(3) Ύλες και είδη της Κλάσης 1 δεν μπορούν να συσκευάζονται μαζί με ύλες άλλων Κλάσεων ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

(4) Είδη των ομάδων συμβατότητας C, D και E μπορούν να συσκευάζονται μαζί.

(5) Είδη των ομάδων συμβατότητας D ή E μπορούν να συσκευάζονται μαζί με το δικό τους μέσον πυροδότησης υπό την προϋπόθεση ότι τέτοιο μέσον έχει τουλάχιστον δύο αποτελεσματικά προστατευτικά χαρακτηριστικά που παρεμποδίζουν την έκρηξη ενός είδους σε περίπτωση τυχαίας λειτουργίας του μέσου πυροδότησης.

(6) Είδη των ομάδων συμβατότητας D ή E μπορούν να συσκευάζονται μαζί με το δικό τους μέσον πυροδότησης που δεν έχουν δύο αποτελεσματικά προστατευτικά χαρακτηριστικά (δηλ. μέσον πυροδότησης καταχωρημένο στην ομάδα συμβατότητας B), υπό την προϋπόθεση ότι, κατά τη γνώμη της αρμόδιας αρχής της χώρας προέλευσης, η τυχαία λειτουργία του μέσου πυροδότησης δεν προκαλεί την έκρηξη ενός είδους υπό κανονικές συνθήκες μεταφοράς.

(7) Ύλες και είδη της ομάδας συμβατότητας L δεν μπορούν να συσκευάζονται μαζί με έναν διαφορετικό τύπο ύλης ή είδους εκείνης της ομάδας συμβατότητας.

(8) Είδη μπορούν να συσκευάζονται μαζί με το δικό τους μέσον ανάφλεξης υπό την προϋπόθεση ότι το μέσον ανάφλεξης δεν θα πρέπει να λειτουργεί υπό κανονικές συνθήκες μεταφοράς.

(9) Εμπορεύματα με τους χαρακτηριστικούς αριθμούς που εμφανίζονται στον πίνακα 4 μπορούν να περιλαμβάνονται στο ίδιο κόλο υπό τις συνθήκες που υποδεικνύονται.

## Επεξηγήσεις του πίνακα 4:

A. Ύλες και είδη με αυτούς τους χαρακτηριστικούς αριθμούς μπορούν να περιλαμβάνονται στο ίδιο κόλο χωρίς οποιονδήποτε ειδικό περιορισμό βάρους.

B. Ύλες και είδη με αυτούς τους χαρακτηριστικούς αριθμούς μπορούν να περιλαμβάνονται στο ίδιο κόλο μέχρι ενός συνολικού βάρους 30 kg εκρηκτικών υλών.

(10) Για μικτή συσκευασία, πρέπει να λαμβάνεται υπόψη μία δυνατή τροποποίηση της ταξινόμησης των κόλων σε συμφωνία με το περιθωριακό 2100.

(11) Για την περιγραφή εμπορευμάτων στο έγγραφο μεταφοράς στην περίπτωση της μικτής συσκευασίας υλών και ειδών της Κλάσης 1, βλέπε περιθωριακό 2110 (4).

<sup>3/</sup> Αριθμός ταυτότητας της ύλης ή του είδους σύμφωνα με τις Υποδείξεις των Ηνωμένων Εθνών για τη Μεταφορά Επικίνδυνων Εμπορευμάτων (βλέπε περιθωριακό 2101, υποσημείωση 1).

## Κλάση 1

4. *Μαρκάρισμα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη Α.9)**Μαρκάρισμα*

- 2105 (1) Τα κόλα θα πρέπει να φέρουν τον χαρακτηριστικό αριθμό και μία από τις ονομασίες της ύλης ή τους είδους που υπογραμμίζονται, στο περιθωριακό 2101, Πίνακας 1, στήλη 2. Για ύλες και είδη καταχωρημένα σε μία ε.α.ο. καταχώρηση, καθώς και για άλλα είδη των 25° και 34°, η τεχνική ονομασία των εμπορευμάτων θα πρέπει να δίνεται επιπλέον της ονομασίας της ε.α.ο. καταχώρησης. Για ύλες της 4°, Αριθμ. 0081, 0082, 0083, 0084 και 0241, και ύλες της 48°, Αριθμ. 0331 και 0332, η εμπορική ονομασία του συγκεκριμένου εκρηκτικού θα πρέπει να ορίζεται επιπλέον του τύπου. Για άλλες ύλες και είδη, η εμπορική ή τεχνική ονομασία μπορεί να προστίθεται. Το μαρκάρισμα, που θα πρέπει να είναι καθαρά ευανάγνωστο και ανεξίτηλο, θα πρέπει να είναι σε μία επίσημη γλώσσα της χώρας προέλευσης και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά, εκτός εάν οποιεσδήποτε συμφωνίες μεταξύ των χωρών που εμπλέκονται στη επιχείρηση μεταφοράς ορίζουν αλλιώς.

*Ετικέτες κινδύνου*

- (2) Κόλα που περιέχουν ύλες ή είδη των 1° έως 34° θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 1. Ο κωδικός ταξινόμησης σύμφωνα με το περιθωριακό 2101, Πίνακα 1, στήλη 3, θα πρέπει να φαίνεται στο χαμηλότερο μέρος της ετικέτας. Κόλα που περιέχουν ύλες ή είδη των 35° έως 47° θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 1.4 και κόλα που περιέχουν ύλες της 48° και είδη της 49° θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 1.5 και εκείνες που περιέχουν είδη του είδους 50° θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 1.6. Η ομάδα συμβατότητας σύμφωνα με το περιθωριακό 2101, Πίνακας 1, στήλη 3, θα πρέπει να φαίνεται στο χαμηλότερο μέρος της ετικέτας.

- (3) Κόλα που περιέχουν ύλες και είδη των

4°, Αριθμ. 0076 και 0143,  
21°, Αριθμ. 0018,  
26°, Αριθμ. 0077,  
30°, Αριθμ. 0019 και  
43°, Αριθμ. 0301

θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1.

Κόλα που περιέχουν είδη των

21°, Αριθμ. 0015 και 0018,  
30°, Αριθμ. 0016 και 0019 και  
43°, Αριθμ. 0301 και 0303

θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

2106-  
2109

B. *Εγγραφές στο έγγραφο μεταφοράς*

- 2110 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2101, Πίνακας 1, στήλη 2. Για ύλες και είδη καταχωρημένα σε μία ε.α.ο. καταχώρηση, καθώς και για άλλα είδη των 25° και 34°, η τεχνική ονομασία των εμπορευμάτων θα πρέπει να δίνεται επιπλέον της ονομασίας της ε.α.ο. καταχώρησης. Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από τον κωδικό ταξινόμησης τον Αριθμ. Είδους

## Κλάση 1

**2110** (περιθωριακό 2101, Πίνακας 1, στήλες 3 και 1) και να συμπληρώνεται από το καθαρό βάρος σε kg (συνεχ.) της εκρηκτικής ύλης και τα αρχικά "ADR" (ή "RID") (π.χ.: 0160 Πυρίτιδα, άκαπνη, 1.1 C, 2°, 4,600 kg, ADR).

(2) Για ύλες της 4°, Αριθμ. 0081, 0082, 0083, 0084 και 0241 και για ύλες της 48°, Αριθμ. 0331 και 0332, η εμπορική ονομασία του εκρηκτικού θα πρέπει να καθορίζεται καθώς και ο τύπος του εκρηκτικού. Για άλλες ύλες και είδη, η εμπορική ονομασία ή τεχνική ονομασία μπορεί να προστίθεται.

(3) Για πλήρη φορτία, το έγγραφο μεταφοράς θα πρέπει να αναφέρει τον αριθμό κόλων, το βάρος κάθε κόλου σε κιλά και το συνολικό καθαρό βάρος σε κιλά της εκρηκτικής ύλης.

(4) Για μικτή συσκευασία δύο διαφορετικών εμπορευμάτων, η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει τους χαρακτηριστικούς αριθμούς και τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2101, Πίνακας 1, στήλη 2 και των δύο υλών ή ειδών. Εάν περισσότερα από δύο διαφορετικά εμπορεύματα περιέχονται στο ίδιο κόλο σε συμφωνία με το περιθωριακό 2104, το έγγραφο μεταφοράς θα πρέπει να αναφέρει κάτω από την περιγραφή των εμπορευμάτων τους χαρακτηριστικούς αριθμούς όλων των υλών και των ειδών που περιέχονται στο κόλο, στη μορφή, "Εμπορεύματα με Αριθμ. ...".

(5) Για τη μεταφορά υλών και ειδών καταχωρημένων σε μία ε.α.ο. καταχώρηση, ένα αντίγραφο της έγκρισης της αρμόδιας αρχής με τους όρους μεταφοράς θα πρέπει να επισυνάπτεται στο έγγραφο μεταφοράς. Θα πρέπει να είναι σε μία επίσημη γλώσσα της χώρας αποστολής και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά εκτός εάν συμφωνίες, εάν υπάρχουν, μεταξύ των χωρών που εμπλέκονται στην επιχείρηση μεταφοράς ορίζουν αλλιώς.

2111-  
2114

**C. Κενές συσκευασίες**

**2115** (1) Κενές συσκευασίες, ακαθάριστες, της 51° θα πρέπει να είναι με ασφάλεια κλεισμένες και να είναι στεγανές στον ίδιο βαθμό σαν να ήταν γεμάτες.

(2) Κενές συσκευασίες, ακαθάριστες, της 51° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.

(3) Η καταχώρηση στο έγγραφο μεταφοράς θα πρέπει να είναι: "Κενές συσκευασίες, 1, 51° ADR".

**D. Ειδικές διατάξεις**

**2116** Ύλες και είδη της Κλάσης 1, που ανήκουν στις ένοπλες δυνάμεις ενός Κράτους Μέλους, που ήταν συσκευασμένες πριν από την 1 Ιανουαρίου 1990 σε συμφωνία με τις διατάξεις της ADR που ίσχυε τότε, μπορούν να μεταφέρονται μετά την 1 Ιανουαρίου 1990 υπό την προϋπόθεση ότι η συσκευασία διατηρούν την ακεραιότητά τους και δηλώνονται στο έγγραφο μεταφοράς ως στρατιωτικά εμπορεύματα συσκευασμένα πριν από την 1 Ιανουαρίου 1990. Οι άλλες διατάξεις που εφαρμόζονται από την 1 Ιανουαρίου 1990 για αυτήν την Κλάση, θα πρέπει να ισχύουν.

2117-  
2199

**ΚΛΑΣΗ 2. ΑΕΡΙΑ: ΠΕΠΗΣΜΕΝΑ, ΥΓΡΟΠΟΙΗΜΕΝΑ Ή ΔΙΑΛΥΜΕΝΑ ΥΠΟ ΠΙΕΣΗ****1. Κατάλογος Υλών**

**2200** (1) Μεταξύ των υλών και ειδών που καλύπτονται από τον τίτλο της Κλάσης 2, μόνον τα απαριθμούμενα στο περιθωριακό 2201 θα γίνονται δεκτά για μεταφορά και τότε μόνον υπό την επιφύλαξη των διατάξεων του παρόντος Παραρτήματος και των διατάξεων του Παραρτήματος Β. Οι ύλες και είδη που γίνονται δεκτά για μεταφορά υπό ορισμένους όρους θα θεωρούνται ως ύλες και είδη αυτής της Οδηγίας.

(2) Οι ύλες που έχουν κρίσιμη θερμοκρασία κατώτερη των 50 °C ή, εις 50 °C, πίεση ατμού μεγαλύτερη των 300 KPa (3 bar) θεωρούνται ως ύλες της Κλάσης 2.

**ΣΗΜΕΙΩΣΗ:** Για την κατάταξη των διαλυμάτων και των μειγμάτων (όπως παρασκευάσματα και μείγματα) τα οποία περιέχουν ένα ή περισσότερα συστατικά που αναφέρονται στο περιθωριακό 2201, βλέπε επίσης περιθωριακό 2002 (8).

(3) Οι ύλες και τα είδη της Κλάσης 2 ταξινομούνται ως κάτωθι:

- A. Πεπυσμένα αέρια έχοντα κρίσιμη θερμοκρασία κάτω των -10 °C.
- B. Υγροποιημένα αέρια έχοντα κρίσιμη θερμοκρασία -10 °C ή άνω:
  - a. Υγροποιημένα αέρια έχοντα κρίσιμη θερμοκρασία 70 °C ή άνω.
  - b. Υγροποιημένα αέρια έχοντα κρίσιμη θερμοκρασία -10 °C ή άνω, αλλά κάτω των 70 °C.
- C. Βαθιά κατεψυγμένα υγροποιημένα αέρια.
- D. Αέρια διαλυμένα υπό πίεση.
- E. Διανεμητές Αεροζόλ και μη-ξαναγεμιζόμενα εμπορευματοκιβώτια αερίων υπό πίεση.
- F. Αέρια υποκείμενα σε ειδικούς όρους.
- G. Κενά δοχεία και κενές δεξαμενές.

Οι ύλες και τα είδη της Κλάσης 2, υποδιαίρονται σύμφωνα με τις χημικές τους ιδιότητες, όπως παρακάτω:

- (a) άφλεκτα
- (at) άφλεκτα, τοξικά
- (b) εύφλεκτα
- (bt) εύφλεκτα, τοξικά
- (c) χημικώς ασταθή
- (ct) χημικώς ασταθή, τοξικά

Εκτός εάν ορίζεται διαφορετικά, οι χημικώς ασταθείς ύλες πρέπει να θεωρούνται ως εύφλεκτες.

Τις ονομασίες των διαβρωτικών και οξειδωτικών αερίων και των ειδών που περιέχουν τέτοια αέρια, θα πρέπει να ακολουθούν οι λέξεις "διαβρωτικό" ή "οξειδωτικό" αντίστοιχα, σε εισαγωγικά.

## Κλάση 2

**2200** (4) Οι ύλες της Κλάσης 2 που απαριθμούνται μεταξύ των χημικών ασταθών αερίων, θα (συνεχ.) γίνονται δεκτές για μεταφορά, μόνον εάν τα απαραίτητα μέτρα έχουν παρθεί ώστε να αποφεύγεται η επικίνδυνη αποσύνθεση, αυτοξειδοαναγωγή ή πολυμερισμός τους, κατά τη διάρκεια της μεταφοράς. Για τον σκοπό αυτό, πρέπει να λαμβάνεται ειδικότερη μέριμνα να εξασφαλίζεται ότι τα δοχεία και οι δεξαμενές δεν περιέχουν ύλες υποκείμενες στην προαγωγή αυτών των αντιδράσεων.

**2201 A. Πεπιεσμένα αέρια** [βλέπε επίσης περιθωριακό 2201a υπό 2201 στοιχείο (a). Για αέρια της 10 (a) και (b) και 20(a) μέσα σε διανεμητές αεροζόλ ή σε μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέρια υπό πίεση, βλέπε υπό στοιχεία 10° και 11°].

Αέρια που έχουν κρίσιμη θερμοκρασία κάτω των -10 °C, θεωρούνται ότι είναι πεπιεσμένα αέρια για τους σκοπούς αυτής της Οδηγίας.

1° Καθαρά αέρια και τεχνικώς-καθαρά αέρια

(a) Άφλεκτα

Αργό, ήλιο, κρυπτό, νέον, άζωτο, οξυγόνο (οξειδωτικό), τετραφθορομεθάνιο (R 14).

(at) Άφλεκτα, τοξικά

Τριφθοριούγο βόριο, φθόριο (οξειδωτικό), τριφθοριούγο άζωτο, τετραφθοριούγο πυρίτιο (διαβρωτικό).

(b) Εύφλεκτα

Δευτέριο, υδρογόνο, μεθάνιο.

(bt) Εύφλεκτα, τοξικά

Μονοξειδίο του άνθρακα.

(ct) Χημικώς ασταθή, τοξικά

Νιτρικό οξείδιο (μονοξειδίο του αζώτου) NO (άφλεκτο).

2° Μείγματα αερίων

(a) Άφλεκτα

Μείγματα δύο ή περισσότερων από τα παρακάτω αέρια: σπάνια αέρια (περιέχοντα όχι περισσότερο από 10%, ξένο κατ' όγκο), άζωτο, οξυγόνο, διοξειδίο του άνθρακα (όχι περισσότερο του 30% κατ' όγκο). Άφλεκτα μείγματα δύο ή περισσότερων από τα παρακάτω αέρια: υδρογόνο, μεθάνιο, άζωτο, σπάνια αέρια (περιέχοντα όχι περισσότερο από 10% ξένο κατ' όγκο), όχι περισσότερο από 30% διοξειδίο του άνθρακα κατ' όγκο. Άζωτο, περιέχον όχι περισσότερο από 6% αιθυλένιο κατ' όγκο. Αέρας.

**ΣΗΜΕΙΩΣΗ :** Μείγματα περιέχοντα περισσότερο από 25 % (κατ' όγκο) οξυγόνο, θεωρούνται οξειδωτικά.

## Κλάση 2

2201  
(συνεχ.)(b) Εύφλεκτα

Μείγματα του μεθανίου (με όχι λιγότερο από 90 % μεθάνιο κατ' όγκο) με υδρογονάνθρακες των 3° (b) και 5° (b). Εύφλεκτα μείγματα δύο ή περισσότερων από τα παρακάτω αέρια: υδρογόνο, μεθάνιο, άζωτο, σπάνια αέρια (περιέχοντα όχι περισσότερο από 10% ξένο κατ' όγκο), όχι περισσότερο από 30% διοξείδιο του άνθρακα κατ' όγκο. Μείγματα φυσικού αερίου περιέχοντα όχι περισσότερο από 10 % σιλάνιο κατ' όγκο με ένα ή περισσότερα από τα παρακάτω αέρια: υδρογόνο, άζωτο, αργό, ήλιο, κρυπτό, νέον, δευτέριο και μεθάνιο.

(bt) Εύφλεκτα, τοξικά

Αέριο πόλης (δήμου): μείγματα υδρογόνου με όχι περισσότερο από 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ' όγκο ή με όχι περισσότερο από 15% αρσίνη κατ' όγκο. Μείγματα αζώτου ή σπανίων αερίων (περιεχόντων όχι περισσότερο από 10% ξένο κατ' όγκο) με όχι περισσότερο από 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ' όγκον ή με όχι περισσότερο από 15% αρσίνη κατ' όγκον. Υδραέριο. Αέριο σύνθεσης (π.χ. εκ της μεθόδου FISCHER-TROPSCH). Μείγματα μονοξειδίου του άνθρακα με υδρογόνο ή με μεθάνιο.

(ct) Χημικώς ασταθή, τοξικά

Μείγματα υδρογόνου με όχι περισσότερο από 10% διβοράνιο κατ' όγκο. Μείγματα αζώτου ή σπανίων αερίων (περιεχόντων όχι περισσότερο από 10% ξένο κατ' όγκο) με όχι περισσότερο από 10% διβοράνιο κατ' όγκο.

**B. Υγροποιημένα αέρια** [βλέπε επίσης περιθωριακό 2201a υπό στοιχεία (b) και (e). Για αέρια των 3° έως 6° μέσα σε διανεμητές αεροζόλ ή μέσα σε μη-ξαναγεμιζόμενα εμπορευματοκιβώτια αερίων υπό πίεση, βλέπε υπό στοιχεία 10° και 11°).

Αέρια έχοντα κρίσιμη θερμοκρασία -10 °C ή παραπάνω, θεωρούνται ως υγροποιημένα αέρια για τους σκοπούς αυτής της Οδηγίας.

**a. Υγροποιημένα αέρια έχοντα κρίσιμη θερμοκρασία 70° C ή παραπάνω:**

3° Καθαρά αέρια και τεχνικώς-καθαρά αέρια

(a) Άφλεκτα

Βρωμοχλωροδιφθορομεθάνιο (R 12 B 1), χλωροδιφθορομεθάνιο (R 22), χλώρο-πενταφθοροαιθάνιο (R 115), 1-γλώρο-1,2,2,2-τετραφθοροαιθάνιο (R 124), 1-γλώρο-2,2,2-τροφθοροαιθάνιο (R 133a), διγλώροδιφθορομεθάνιο (R 12), διγλώροφθορομεθάνιο (R 21), 1,2-διγλώρο-1,1,2,2-τετραφθοροαιθάνιο (R 114), οκταφθοροβουτ-2-ένιο (R 1318), οκταφθοροκυκλοβουτάνιο (RC 318), οκταφθοροπροπάνιο, 1,1,1,2-τετραφθοροαιθάνιο (R 134a).

(at) Άφλεκτα, τοξικά

Αμμωνία, τριγλωριούχο βόριο (διαβρωτικό), γλώριο (διαβρωτικό), τριφθοριούχο γλώριο (διαβρωτικό), εξαφθοροαικετόνη, εξαφθοροπροπυλένιο (R 1216), υδροβρώμιο (διαβρωτικό), μεθυλοβρωμίδιο, νιτροδολογλωρίδιο (διαβρωτικό), διοξείδιο του αζώτου NO<sub>2</sub> (υπεροξειδίου του αζώτου, τετροξειδίου του αζώτου N<sub>2</sub>O<sub>4</sub>) (οξειδωτικό), φωσγένιο (διαβρωτικό), διοξείδιο του θείου, σουλφουρυλοφθορίδιο, εξαφθοριούχο βολφράμιο.

## Κλάση 2

2201  
(συνεχ.)(b) Εύφλεκτα

Βουτάνιο, 1-Βουτυλένιο (1-βουτένιο), 1-γλωρο-1,1-διφθοροαιθάνιο (R 142b), cis-2-βουτυλένιο (cis-2-βουτένιο), κυκλοπροπάνιο, 1,1-διφθοροαιθάνιο (R 152a), διμεθυλαιθέρας, 2,2-διμεθυλοπροπάνιο, ισοβουτάνιο, ισοβουτυλένιο (ισοβουτένιο), μεθυλοσιλάνιο, προπάνιο, προπιλένιο, trans-2-βουτυλένιο (trans-2-βουτένιο), 1,1,1-τριφθοροαιθάνιο.

(bt) Εύφλεκτα, τοξικά

Αρσίνη, καρβονυλοσουλφίδιο (διαβρωτικό), διγλωροσιλάνιο, διμεθυλαμίνη, διμεθυλοσιλάνιο, αιθυλαμίνη, αιθυλογλωρίδιο, υδροσελίνιο, υδρόθειο, μεθυλαμίνη, μεθυλογλωρίδιο, μεθυλομερκαπτάνη, τριμεθυλαμίνη, τριμεθυλοσιλάνιο.

(c) Χημικός ασταθή

1,2-βουταδιένιο, 1,3-βουταδιένιο, προπαδιένιο, αδρανές, βινυλογλωρίδιο.

**ΣΗΜΕΙΩΣΗ:** Σε δοχεία περιέχοντα 1,2-Βουταδιένιο, η συμπίκνωση οξυγόνου στην αέρια φάση δεν θα πρέπει να υπερβαίνει τα 50 ml/m<sup>3</sup>

(ct) Χημικός ασταθή, τοξικά

Κυανογόνο, γλωροκυανίδιο (άφλεκτο) (διαβρωτικό), αιθυλενοξειδίο, υδροϊώδιο άνυδρο (άφλεκτο) (διαβρωτικό), μεθυλοβινυλαιθέρας, τριφθορογλωροαιθυλένιο (R 1113), βινυλοβρωμίδιο.

**ΣΗΜΕΙΩΣΗ:** Στην περίπτωση των αλογονωμένων υδρογονανθράκων, επιτρέπεται επίσης η χρήση ονομασιών συνήθων στο εμπόριο, όπως οι παρακάτω: Algoftene, Arcton, Edifren, Fluvene, Forane, Freon, Fresane, Frigen, Isceon, Kaltron, ακολουθούμενες από τον αριθμό αναγνώρισης της ύλης χωρίς το γράμμα R.

4° Μείγματα αερίων(a) Άφλεκτα

Μείγματα υλών της 3° (a), με ή χωρίς εξαφθοροπροπιλένιο της 3° (at), τα οποία ως:

Μείγμα F 1, έχει τάση ατμών στους 70 °C όχι μεγαλύτερη από 1.3 MPa (13 bar) και πυκνότητα στους 50 °C όχι μικρότερη από αυτή του διγλωροφθορομεθανίου (1.30).

Μείγμα F 2, έχει τάση ατμών στους 70 °C όχι μεγαλύτερη από 1.9 MPa (19 bar) και πυκνότητα στους 50 °C όχι μικρότερη από αυτήν του διγλωροδιφθορομεθανίου (1.21).

Μείγμα F 3, έχει τάση ατμών στους 70 °C όχι μεγαλύτερη από 3 MPa (30 bar) και πυκνότητα στους 50 °C όχι μικρότερη από αυτήν του γλωροδιφθορομεθανίου (1.09).

**ΣΗΜΕΙΩΣΗ 1:** Το τριγλωροφθορομεθάνιο (R 11), το τριγλωροτριφθοροαιθάνιο (R 113) και το χλωροτριφθοροαιθάνιο (R 133) δεν θεωρούνται υγροποιημένα αέρια κατά την έννοια αυτής της Οδηγίας και συνεπώς δεν υπόκεινται στους όρους αυτής της Οδηγίας. Μπορούν, παρ'όλα αυτά, να συμπεριληφθούν στη σύνθεση των μειγμάτων F 1 έως F 3.

## Κλάση 2

2201  
(συνεχ.)**ΣΗΜΕΙΩΣΗ 2:** Βλέπε ΣΗΜΕΙΩΣΗ υπό στοιχείο 3°.

Το αζεotropicό μείγμα διχλωροδιφθορομεθάνιου (R 12) και 1,1-διφθορο-αιθάνιου (R 152a), γνωστό ως R 500.

Το αζεotropicό μείγμα χλωροπενταφθοροαιθάνιου (R 115) και χλωροδιφθορομεθάνιου (R 22), γνωστό ως R 502.

Το μείγμα περιεκτικότητας 19 έως 21 % κατά βάρος σε διχλωροδιφθορομεθάνιο (R 12) και 79 έως 81 % κατά βάρος σε βρωμοχλωροδιφθορομεθάνιο (R 12 B1).

(at) Αφλεκτα, τοξικά

Μείγματα μεθυλοβρωμίδιου και χλωροπικρίνης, έχοντα τάση ατμών μεγαλύτερη από 300 kPa (3 bar) στους 50 °C. Μείγματα διχλωροδιφθορομεθάνιου και αιθυλενοξειδίου, περιέχοντα όχι περισσότερο από 12 % (κατά βάρος) αιθυλενοξείδιο.

(b) Εύφλεκτα

Μείγματα υδρογονανθράκων της 3° (b) και αιθάνιου και αιθυλενίου της 5° (b), τα οποία ως:

Μείγμα Α, έχει τάση ατμών στους 70 °C όχι μεγαλύτερη από 1.1 MPa (11 bar) και σχετική πυκνότητα στους 50 °C όχι μικρότερη από 0.525.

Μείγμα Α Ο, έχει τάση ατμών στους 70°C όχι μεγαλύτερη από 1.6 MPa (16 bar) και σχετική πυκνότητα στους 50°C όχι μικρότερη από 0.495.

Μείγμα Α 1, έχει τάση ατμών στους 70°C όχι μεγαλύτερη από 2.1 MPa (21 bar) και σχετική πυκνότητα στους 50°C όχι μικρότερη από 0.485.

Μείγμα Β, έχει τάση ατμών στους 70°C όχι μεγαλύτερη από 2.6 MPa (26 bar) και σχετική πυκνότητα στους 50°C όχι μικρότερη από 0.450.

Μείγμα C, έχει τάση ατμών στους 70°C όχι μεγαλύτερη από 3.1 MPa (31 bar) και σχετική πυκνότητα στους 50°C όχι μικρότερη από 0.440.

**ΣΗΜΕΙΩΣΗ:** Στην περίπτωση των ανωτέρω μειγμάτων, επιτρέπεται η χρήση των παρακάτω συνήθων στο εμπόριο ονομασιών για τη περιγραφή των υλών αυτών:

Ονομασία υπό στοιχείο 4° (b)                      Ονομασία συνήθης στο εμπόριο

Μείγμα Α, μείγμα Α Ο

βουτάνιο

Μείγμα C

προπάνιο

Μείγματα υδρογονανθράκων των 3° (b) και 5° (b), περιέχοντα μεθάνιο.

(bt) Εύφλεκτα, τοξικά

Μείγματα δύο ή περισσότερων από τα παρακάτω αέρια: μεθυλοσιλάνιο, διμεθυλοσιλάνιο, τριμεθυλοσιλάνιο. Μεθυλοχλωρίδιο και μεθυλενοχλωρίδιο σε μείγματα, έχοντα τάση ατμών μεγαλύτερη από 300 kPa (3 bar) στους 50°C. Μείγματα μεθυλοχλωρίδιου και χλωροπικρίνης και μείγματα μεθυλοβρωμίδιου και

## Κλάση 2

2201  
(συνεχ.)

αιθυλενοβρωμίδιου, έχοντα σε κάθε περίπτωση, τάση ατμών μεγαλύτερη από 300 kPa (3 bar) στους 50°C.

(c) Χημικός ασταθή

Μείγματα 1,3-βουταδιενίου και υδρογονανθράκων της 3° (b), έχοντα τάση ατμών στους 70°C όχι μεγαλύτερη από 1.1 MPa (11 bar) και πυκνότητα στους 50°C όχι μικρότερη από 0.525. Προπαδιένιο με 1 % έως 4 % μεθυλακετυλένιο σταθεροποιημένο.

μείγματα μεθυλακετυλενίου και προπαδιενίου με τους υδρογονάνθρακες της 3° (b), τα οποία ως:

μείγμα P 1, περιέχουν όχι περισσότερο από 63 % μεθυλακετυλένιο και προπαδιένιο κατ' όγκο και όχι περισσότερο από 24 % προπάνιο και προπυλένιο κατ' όγκο, ενώ το ποσοστό των C<sub>4</sub>-κορεσμένων υδρογονανθράκων είναι όχι μικρότερο από 14 % κατ' όγκο και ως

μείγμα P 2, περιέχουν όχι περισσότερο από 48 % μεθυλακετυλένιο και προπαδιένιο κατ' όγκο και όχι περισσότερο από 50 % προπάνιο και προπυλένιο κατ' όγκο, ενώ το ποσοστό των C<sub>4</sub>-κορεσμένων υδρογονανθράκων είναι όχι μικρότερο από 5 % κατ' όγκο.

(ct) Χημικός ασταθή, τοξικά

Αιθυλενοξειδίου περιέχον όχι περισσότερο από 10 % διοξειδίου του άνθρακα κατά βάρος. Αιθυλενοξειδίου περιέχον όχι περισσότερο από 50 % μυρμηκικό μεθυλεστέρα κατά βάρος, με άζωτο έως ολικής πίεσης όχι μεγαλύτερης από 1 MPa(10 bar) στους 50°C. Αιθυλενοξειδίου με άζωτο έως ολικής πίεσης 1 MPa(10 bar) στους 50°C.

b. Υγροποιημένα αέρια έχοντα κρίσιμη θερμοκρασία -10 °C ή μεγαλύτερη, αλλά μικρότερη από 70 °C:5° Καθαρά αέρια και τεχνικός-καθαρά αέρια(a) Άφλεκτα

Βρωμοτριφθορομεθάνιο (R 13 B 1), διοξειδίου του άνθρακα, γλωροτριφθορομεθάνιο (R 13), εξαφθοροαιθάνιο (R 116), υποξειδίου του αζώτου N<sub>2</sub>O (οξειδωτικό), πενταφθοροαιθάνιο (R 125), θειοφθορίδιο, τριφθορομεθάνιο (R 23), ξένο.

Σχετικά με το διοξειδίου του άνθρακα, βλέπε επίσης περιθωριακό 2201a υπό στοιχείο (c).

**ΣΗΜΕΙΩΣΗ 1:** Το υποξείδιου του αζώτου θα γίνεται δεκτό για μεταφορά, μόνο εάν είναι όχι λιγότερο από 99 % καθαρό.

**ΣΗΜΕΙΩΣΗ 2:** Βλέπε ΣΗΜΕΙΩΣΗ υπό στοιχείο 3°.

(at) Άφλεκτα, τοξικά

Υδρογλώριο (διαβρωτικό).

(b) Εύφλεκτα

Αιθάνιο, αιθυλένιο, σιλάνιο.

Γερμάνιο, φωσφίνη.(c) Χημικώς ασταθή  
1,1-διφθοροαιθυλένιο, βινυλοφθορίδιο.(ct) Χημικώς ασταθή, τοξικά  
Διβοράνιο.6° Μείγματα αερίων(a) Άφλεκτα

Διοξείδιο του άνθρακα περιέχον όχι λιγότερο από 1 % και όχι περισσότερο από 10 % άζωτο, οξυγόνο, αέρα ή σπάνια αέρια κατά βάρος. Το αζεοτροπικό μείγμα χλωροτριφθορομεθάνιου (R 13) και τριφθορομεθάνιου (R 23), γνωστό ως R 503.

**ΣΗΜΕΙΩΣΗ:** Διοξείδιο του άνθρακα περιέχον λιγότερο από 1 % άζωτο, οξυγόνο, αέρα ή σπάνια αέρια κατά βάρος, είναι ύλη της 5° (a).

(c) Χημικώς ασταθή

Διοξείδιο του άνθρακα περιέχον όχι περισσότερο από 35 % αιθυλενοξείδιο κατά βάρος.

(ct) Χημικώς ασταθή, τοξικά

Αιθυλενοξείδιο περιέχον περισσότερο από 10 % αλλά όχι περισσότερο από 50 % διοξείδιο του άνθρακα κατά βάρος.

## C. Βαθιά-κατεψυγμένα υγροποιημένα αέρια

7° Καθαρά αέρια και τεχνικώς-καθαρά αέρια(a) Άφλεκτα

Αργό, διοξείδιο του άνθρακα, ήλιο, κρυπτό, νέον, άζωτο, υποξείδιο του άζώτου N<sub>2</sub>O (οξειδωτικό), οξυγόνο (οξειδωτικό), ξένο.

(b) Εύφλεκτα

Αιθάνιο, αιθυλένιο, υδρογόνο, μεθάνιο.

8° Μείγματα αερίων(a) Άφλεκτα

Αέρας, μείγματα υλών της 7° (a).

**ΣΗΜΕΙΩΣΗ:** Μείγματα της 8° (a), περιέχοντα περισσότερο από 32 % (κατά βάρος) υποξείδιο του άζώτου, ο αέρας και μείγματα περιέχοντα περισσότερο από 20 % (κατά βάρος) οξυγόνο, θεωρούνται ως οξειδωτικά.

## Κλάση 2

2201  
(συνεχ.)(b) Εύφλεκτα

Μείγματα υλών της 7<sup>ο</sup> (b), φυσικό αέριο, μείγμα περιέχον τουλάχιστον 71.5 % αιθυλένιο (κατ' όγκο) με όχι περισσότερο από 22.5 % ακετυλένιο (κατ' όγκο) και όχι περισσότερο από 6 % προπυλένιο (κατ' όγκο).

## D. Αέρια διαλυμένα υπό πίεση

9<sup>ο</sup> Καθαρά αέρια και τεχνικός-καθαρά αέρια(at) Αφλεκτα, τοξικά

Αμμωνία διαλυμένη σε νερό με περισσότερο από 35 % αλλά όχι περισσότερο από 40 % αμμωνία κατά βάρος, αμμωνία διαλυμένη σε νερό με περισσότερο από 40 % αλλά όχι περισσότερο από 50 % αμμωνία κατά βάρος.

**ΣΗΜΕΙΩΣΗ:** 2672 Διάλυμα αμμωνίας, σχετικής πυκνότητας μεταξύ 0.880 και 0.957 στους 15 °C σε νερό, με περισσότερο από 10 % αλλά όχι περισσότερο από 35 % αμμωνία, είναι ύλη της Κλάσης 8 [βλέπε περιθωριακό 2801, 43<sup>ο</sup> (c)].

(c) Χημικός ασταθής

Ακετυλένιο διαλυμένο σε διαλύτη (π.χ. ακετόνη) απορροφούμενο από πορώδεις ύλες.

## E. Διανεμητές αεροζόλ και μη-ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση [βλέπε επίσης περιθωριακό 2201a υπό στοιχείο (d)]

**ΣΗΜΕΙΩΣΗ 1:** Οι διανεμητές αεροζόλ είναι δοχεία τα οποία μπορούν να χρησιμοποιηθούν μόνο μία φορά, είναι εφοδιασμένα με βαλβίδα απελευθέρωσης ή μηχανισμό διασποράς και περιέχουν, υπό πίεση, αέριο ή μείγμα αερίων του περιθωριακού 2208 (2), ή περιέχουν ενεργή ύλη (εντομοκτόνο, καλλυντική ύλη κλπ.) μαζί με αέριο ή μείγμα αερίων ως προωθητική γόμωση.

**ΣΗΜΕΙΩΣΗ 2:** Μη-ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση είναι δοχεία τα οποία μπορούν να χρησιμοποιηθούν μόνο μία φορά και περιέχουν αέριο ή μείγμα αερίων του περιθωριακού 2208 (2) και (3) (π.χ. βουτάνιο για συσκευές μαγειρέματος κατασκευασμένων, ψυκτικά αέρια, κλπ.), αλλά δεν είναι εφοδιασμένα με βαλβίδα απελευθέρωσης.

**ΣΗΜΕΙΩΣΗ 3:** Ο όρος "εύφλεκτες ύλες" σημαίνει:

(i) Αέρια (προωθητική γόμωση διανεμητών αεροζόλ, περιεχόμενο μη-ξαναγεμιζόμενων εμπορευματοκιβωτίων αερίου υπό πίεση), των οποίων τα μείγματα με αέρα μπορούν να αναφλεγούν και έχουν κατώτερο και ανώτερο όριο ανάφλεξης.

(ii) Υγρά (ενεργές ύλες διανεμητών αεροζόλ) της Κλάσης 3.

**ΣΗΜΕΙΩΣΗ 4:** Ο όρος "χημικός ασταθής", εφαρμόζεται σε περιεχόμενο το οποίο ελλείπει ειδικών προφυλάξεων, υφίσταται επικίνδυνη αποσύνθεση ή αυτο-πολυμερισμό σε θερμοκρασία όχι μεγαλύτερη από 70 °C.

## Κλάση 2

2201  
(συνεχ.)10° Διανεμητές αεροζόλ(a) Άφλεκτοι

Με άφλεκτο περιεχόμενο.

(at) Άφλεκτοι τοξικοί

Με άφλεκτο τοξικό περιεχόμενο.

(b) Εύφλεκτοι

1. Με όχι περισσότερο από 45 % εύφλεκτο περιεχόμενο κατά βάρος.

2. Με περισσότερο από 45 % εύφλεκτο περιεχόμενο κατά βάρος.

(bt) Εύφλεκτοι τοξικοί

1. Με τοξικό περιεχόμενο και όχι περισσότερο από 45 % εύφλεκτο περιεχόμενο κατά βάρος.

2. Με τοξικό περιεχόμενο και περισσότερο από 45 % εύφλεκτο περιεχόμενο κατά βάρος.

(c) Χημικώς ασταθείς

Με χημικώς-ασταθές περιεχόμενο.

(ct) Χημικώς ασταθείς, τοξικοί

Με χημικώς-ασταθές τοξικό περιεχόμενο.

11° Μη-ξαναγεμίζόμενα εμπορευματοκιβώτια αερίου υπό πίεση(a) Άφλεκτα

Με άφλεκτο περιεχόμενο.

(at) Άφλεκτα, τοξικά

Με άφλεκτο τοξικό περιεχόμενο.

(b) Εύφλεκτα

Με εύφλεκτο περιεχόμενο.

(bt) Εύφλεκτα, τοξικά

Με εύφλεκτο τοξικό περιεχόμενο.

(c) Χημικώς ασταθή

Με χημικώς-ασταθές περιεχόμενο.

## Κλάση 2

2201  
(συνεχ.)(ct) Χημικώς ασταθή, τοξικά

Με χημικώς-ασταθές τοξικό περιεχόμενο.

## F. Αέρια υποκείμενα σε ειδικούς όρους

12° Διάφορα μείγματα αερίων

Μείγματα περιέχοντα αέρια αναφερόμενα με άλλους αριθμούς είδους αυτής της Κλάσης και μείγματα ενός ή περισσότερων αερίων αναφερομένων με άλλους αριθμούς είδους αυτής της Κλάσης με έναν ή περισσότερους ατμούς υλών που δεν εξαιρούνται από τη μεταφορά σύμφωνα μ' αυτήν την Οδηγία, υπό τον όρο ότι κατά τη μεταφορά:

1. το μείγμα παραμένει πλήρως αεριοποιημένο και
2. αποκλείεται κάθε πιθανότητα επικίνδυνης αντίδρασης.

13° Αέρια δοκιμών

Αέρια και μείγματα αερίων μη αναφερόμενα με άλλους αριθμούς είδους αυτής της Κλάσης που χρησιμοποιούνται μόνο για εργαστηριακές δοκιμές, υπό τον όρο ότι κατά τη μεταφορά:

- (a) το αέριο ή μείγμα αερίων παραμένει πλήρως αεριοποιημένο και
- (b) αποκλείεται κάθε πιθανότητα επικίνδυνης αντίδρασης.

## G. Κενά δοχεία και κενές δεξαμενές

14° Κενά δοχεία, κενά οχήματα-δεξαμενές ή κενά εμπορευματοκιβώτια-δεξαμενές ακαθάριστα, τα οποία περιείχαν ύλες της Κλάσης 2.

**ΣΗΜΕΙΩΣΗ:** Δοχεία και δεξαμενές, οι οποίες μετά το άδειασμά τους από ύλες της κλάσης 2, περιέχουν ακόμη μικρές ποσότητες υπολειμμάτων, θεωρούνται κενά δοχεία ή κενές δεξαμενές, ακαθάριστες.

2201a Αέρια και είδη που παραδίδονται για μεταφορά σύμφωνα με τις παρακάτω διατάξεις, δεν υπόκεινται στους όρους ή τις διατάξεις τις σχετικές με αυτήν την Κλάση που ρυθμίζονται αλλού σ' αυτό το Παράρτημα ή στο Παράρτημα Β:

- (a) Πεπιεσμένα αέρια, τα οποία δεν είναι ούτε εύφλεκτα ούτε τοξικά ούτε διαβρωτικά και η πίεση των οποίων στο δοχείο, αναφερόμενη σε θερμοκρασία 15 °C, δεν υπερβαίνει τα 200 KPa (2 bar). Ο ίδιος κανόνας ισχύει για μείγματα αερίων περιέχοντα όχι περισσότερο από 2 % εύφλεκτα συστατικά.
- (b) Υγροποιημένα αέρια περιεχόμενα, σε ποσότητες όχι μεγαλύτερες από 60 λίτρα, ή σε ποσότητες μικρότερες από 5 λίτρα με όχι περισσότερο από 25 g υδρογόνο, μέσα σε ψυκτικές συσκευές (ψυγεία, μηχανές πάγου, κλπ.) και είναι απαραίτητα για τη λειτουργία τους. Αυτές οι ψυκτικές συσκευές πρέπει να προστατεύονται και να φορτώνονται με τέτοιο τρόπο, ώστε να αποφεύγεται η οποιαδήποτε αλλαγή στο ψυκτικό τους κύκλωμα.
- (c) Διοξείδιο του άνθρακα και υποξείδιο του αζώτου (N<sub>2</sub>O) της 5° (a) σε μεταλλικές κάψουλες (sodors, sparklets; cream capsules), εάν το διοξείδιο του άνθρακα και το υποξείδιο του αζώτου στην αεριοποιημένη κατάσταση δεν περιέχουν περισσότερο από 0.5% αέρα και οι κάψουλες περιέχουν όχι περισσότερο από 25 g διοξείδιο του άνθρακα ή υποξειδίου του αζώτου ανά cm<sup>3</sup> χωρητικότητας.
- (d) Είδη των 10° και 11° χωρητικότητας όχι μεγαλύτερης από 50 cm<sup>3</sup>. Κάθε κόλο ειδών, δεν θα πρέπει να ζυγίζει περισσότερο από 10 kg.

## Κλάση 2

- 2201a (e) Υγροποιημένα αέρια πετρελαίου περιεχόμενα σε δεξαμενές μηχανοκίνητων οχημάτων σταθερά στερεωμένες στα οχήματα. Η στρόφιγγα του καυσίμου μεταξύ της δεξαμενής και της μηχανής θα πρέπει να είναι κλειστή και η ηλεκτρική επαφή ανουκτιή.

## 2. Διατάξεις

## A. Κόλα

## I. Γενικοί όροι συσκευασίας

- 2202 (1) Τα υλικά από τα οποία είναι κατασκευασμένα τα δοχεία και τα κλεισίματά τους, δεν πρέπει να υπόκεινται σε προσβολή από το περιεχόμενο ή σε σχηματισμό βλαβερών ή επικίνδυνων ενώσεων με αυτά.

**ΣΗΜΕΙΩΣΗ:** Μέριμνα πρέπει να λαμβάνεται ώστε να μην επιτρέπεται η είσοδος υγρασίας στα δοχεία όταν γεμίζονται και τα δοχεία να στεγνώνουν πλήρως μετά τις δοκιμές υδραυλικής πίεσης (βλέπε περιθωριακό 2216) που γίνονται με νερό ή με υδατικά διαλύματα..

(2) Οι συσκευασίες, συμπεριλαμβανομένων των κλεισμάτων των, θα πρέπει να είναι επαρκώς άκαμπτες και γερές σε όλα τα μέρη τους, ώστε να αποφεύγεται οποιαδήποτε χαλάρωση κατά τη διάρκεια της μεταφοράς και να τηρούνται οι κανονικοί όροι της μεταφοράς. Όταν ορίζονται εξωτερικές συσκευασίες, τα δοχεία θα πρέπει να στερεώνονται στερεά μέσα σ' αυτές. Εκτός εάν ορίζεται διαφορετικά στο άρθρο με τίτλο "Συσκευασία μιας μόνης ύλης ή ειδών του ίδιου τύπου", οι εσωτερικές συσκευασίες μπορούν να κλείνονται μέσα σε εξωτερικές συσκευασίες, είτε μία - μία, είτε ομαδικά.

(3) Μεταλλικά δοχεία προοριζόμενα για τη μεταφορά αερίων των 1° έως 6° και της 9°, θα πρέπει να περιέχουν μόνο το αέριο για το οποίο δοκιμάστηκαν και του οποίου η ονομασία έχει γραφεί πάνω στο δοχείο [βλέπε περιθωριακό 2218 (1) (a)].

Ανακλήσεις επιτρέπονται:

1. Για μεταλλικά δοχεία δοκιμασμένα για μία από τις ύλες των 3° (a) ή 4° (a) ή για βρωμοτριφθορομεθάνιο, χλωροτριφθορομεθάνιο ή τριφθοριομεθάνιο της 5° (a). Τα δοχεία αυτά, μπορούν επίσης να γεμισθούν με κάποια άλλη ύλη των προαναφερθέντων ειδών, υπό τον όρο ότι η προβλεπόμενη για την ύλη αυτή ελάχιστη πίεση δοκιμής, δεν υπερβαίνει την πίεση δοκιμής του δοχείου και ότι η ονομασία της ύλης και το επιτρεπτόν μέγιστο βάρος γεμίματος γι' αυτήν, αναγράφονται πάνω στο δοχείο.
2. Για μεταλλικά δοχεία δοκιμασμένα για υδρογονάνθρακες των 3° (b) ή 4° (b). Τα δοχεία αυτά μπορούν επίσης να γεμισθούν με κάποιον άλλον υδρογονάνθρακα, υπό τον όρον ότι η προβλεπόμενη για την ύλη αυτή ελάχιστη πίεση δοκιμής, δεν υπερβαίνει τη πίεση δοκιμής του δοχείου και ότι η ονομασία της ύλης και το επιτρεπτόν μέγιστο βάρος γεμίματος γι' αυτήν, αναγράφονται πάνω στο δοχείο.

Για 1. και 2., βλέπε επίσης περιθωριακά 2215, 2218 (1) (a) και 2220, (1) έως (3).

(4) Αλλαγή της χρήσης που έχει ορισθεί για ένα δοχείο, επιτρέπεται καταρχήν εάν δεν αντιβαίνει στους εθνικούς κανονισμούς, απαιτείται όμως η έγκριση της αρμόδιας αρχής και η αντικατάσταση των προηγούμενων ενδείξεων με τις ενδείξεις τις σχετικές με τη νέα χρήση.

## Κλάση 2

## 2. Συσκευασία μίας μόνης ύλης ή ειδών του ίδιου τύπου

**ΣΗΜΕΙΩΣΗ:** Για διοξείδιο του άνθρακα και υποξείδιο του αζώτου της 7<sup>ο</sup> (a), μείγματα περιέχοντα διοξείδιο του άνθρακα και υποξείδιο του αζώτου της 8<sup>ο</sup> (a) και τα αέρια της 7<sup>ο</sup> (b) και 8<sup>ο</sup> (b), βλέπε Παράρτημα Β, περιθωριακό 21 105.

## a. Φύση των δοχείων

- 2203** (1) Δοχεία προοριζόμενα για τη μεταφορά αερίων των 1<sup>ο</sup> έως 6<sup>ο</sup>, 9<sup>ο</sup>, 12<sup>ο</sup> και 13<sup>ο</sup>, θα πρέπει να είναι έτσι κλεισμένα και στεγανά, ώστε να αποφεύγεται οποιαδήποτε διαρροή των αερίων.
- (2) Τα δοχεία αυτά θα πρέπει να είναι κατασκευασμένα από ανθρακούχο χάλυβα ή κράμα χάλυβα (ειδικό χάλυβες).

Τα παρακάτω μπορούν, εντούτοις, να χρησιμοποιούνται:

## (a) χάλκινα δοχεία για:

1. πεπιεσμένα αέρια των 1<sup>ο</sup>, (a), (b) και (bt), και 2<sup>ο</sup>, (a) και (b), των οποίων η πίεση γεμίματος αναφερόμενη σε θερμοκρασία 15 °C, δεν υπερβαίνει τα 2 MPa (20 bar) και
2. υγροποιημένα αέρια της 3<sup>ο</sup> (a), διοξείδιο του θείου της 3<sup>ο</sup> (at), διμεθυλαιθέρας της 3<sup>ο</sup> (b), αιθυλοχλωρίδιο και μεθυλοχλωρίδιο της 3<sup>ο</sup> (bt), βινυλοχλωρίδιο της 3<sup>ο</sup> (c), βινυλοβρωμίδιο της 3<sup>ο</sup> (ct), μείγματα F 1, F 2 και F 3 της 4<sup>ο</sup> (a), και αιθυλενοξείδιο περιέχον όχι περισσότερο από 10 % διοξείδιο του άνθρακα κατά βάρος της 4<sup>ο</sup> (ct)

## (b) δοχεία από κράμα αλουμινίου (βλέπε Προσθήκη A.2) για:

1. πεπιεσμένα αέρια της 1<sup>ο</sup>, (a), (b) και (bt), οξείδιο του αζώτου (μονοξείδιο το αζώτου) NO της 1<sup>ο</sup> (ct) και πεπιεσμένα της 2<sup>ο</sup>, (a), (b) και (bt),
2. υγροποιημένα αέρια της 3<sup>ο</sup> (a), διοξείδιο του θείου της 3<sup>ο</sup> (at), υγροποιημένα αέρια της 3<sup>ο</sup> (b) άλλα από το μεθυλοσιλάνιο, υδροσελήνιο και μεθυλομερκαπτάνη της 3<sup>ο</sup> (bt), αιθυλενοξείδιο της 3<sup>ο</sup> (ct), υγροποιημένα αέρια της 4<sup>ο</sup>, (a) και (b), αιθυλενοξείδιο περιέχον όχι περισσότερο από 10 % διοξείδιο του άνθρακα κατά βάρος, της 4<sup>ο</sup> (ct) και υγροποιημένα αέρια της 5<sup>ο</sup>, (a) και (b), και 6<sup>ο</sup>, (a) και (c). Διοξείδιο του θείου της 3<sup>ο</sup> (at) και ύλες της 3<sup>ο</sup> (a) και 4<sup>ο</sup> (a) θα πρέπει να είναι ξηρές και
3. διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c).

Όλα τα αέρια τα οποία πρόκειται να μεταφερθούν σε δοχεία από κράμα αλουμινίου, θα πρέπει να είναι απαλλαγμένα από αλκαλικές ακαθαρσίες.

- 2204** (1) Τα δοχεία για διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c), θα πρέπει να είναι πλήρως γεμάτα με πορώδες υλικό, ομοιόμορφα κατανομημένο, τύπου εγκεκριμένου από την αρμόδια αρχή και το οποίο

- (a) δεν προσβάλλει τα δοχεία και δεν σχηματίζει επιβλαβείς ή επικίνδυνες ενώσεις είτε με το ακετυλένιο είτε με τον διαλύτη,
- (b) δεν εκτινάσσεται, ακόμη και μετά από παρατεταμένη χρήση ή από τράνταγμα, σε θερμοκρασίες μέχρι 60 °C,
- (c) είναι ικανό να εμποδίσει την εξάπλωση της αποσυνθέσεως του ακετυλενίου στη μάζα.

## Κλάση 2

(2) Ο διαλύτης δεν θα πρέπει να προσβάλει τα δοχεία.

**2205** (1) Τα παρακάτω υγροποιημένα αέρια μπορούν, επιπλέον, να μεταφέρονται μέσα σε γυάλινους σωλήνες με χονδρά τοιχώματα, υπό τον όρον ότι η ποσότητα της ύλης σε κάθε σωλήνα και ο βαθμός πλήρωσης των σωλήνων, δεν υπερβαίνουν τις παρακάτω αναφερόμενες τιμές:

Όνομασίες αερίων	Ποσότητα ύλης	Βαθμός πλήρωσης του σωλήνα
Διοξείδιο του άνθρακα, υποξείδιο του αζώτου N <sub>2</sub> O της 5° (a) αιθάνιο, αιθυλένιο της 5° (b)	3 g	μισό της χωρητικότητας
Αμμωνία, χλωρίο, μεθυλοβρωμίδιο της 3° (at), κυκλοπροπάνιο της 3° (b), αιθυλόχλωριδίο της 3° (bt)	20 g	δύο τρίτα της χωρητικότητας
Φωσγένιο, διοξείδιο του θείου της 3° (at)	100 g	τρία τέταρτα της χωρητικότητας

(2) Οι γυάλινοι σωλήνες θα πρέπει να είναι στεγανοί κατά της φλόγας και ασφαλισμένοι χωριστά με γη διατόμων σε κλειστές κάψουλες από έλασμα, οι οποίες θα πρέπει να τοποθετούνται σε ξύλινο κιβώτιο ή σε κάποια άλλη εξωτερική συσκευασία κατάλληλης αντοχής (βλέπε επίσης περιθωριακό 2222).

(3) Για διοξείδιο του θείου της 3° (at), επιτρέπονται επίσης γερά γυάλινα σιφόνια περιέχοντα όχι περισσότερο από 1.5 kg ύλης και γεμάτα όχι περισσότερο από 88% της χωρητικότητάς τους. Τα σιφόνια θα πρέπει να ασφαλιζονται με γη διατόμων, πριονίδι ή κονιοποιημένο ανθρακικό ασβέστιο, ή με μείγμα των δύο τελευταίων, μέσα σε γερά ξύλινα κιβώτια ή σε κάποια άλλη εξωτερική συσκευασία επαρκούς αντοχής. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg. Εάν ζυγίζει περισσότερο από 30 kg, θα πρέπει να είναι εφοδιασμένο με χειρολαβές.

**2206** (1) Αέρια των 3° (a), 3° (b) εκτός του μεθυλοσιλανίου, 3° (bt) εκτός της αρσίνης, του διχλωροσιλανίου, του διμεθυλοσιλανίου, του υδροσεληνίου και του τριμεθυλοσιλανίου, 3° (c), 3° (ci) εκτός του χλωροκυανιδίου και μείγματα της 4° (a) και 4° (b), μπορούν επίσης, υπό τον όρον ότι το βάρος του περιεχομένου ανά λίτρο υγρού, δεν υπερβαίνει είτε το μέγιστο βάρος του περιεχομένου όπως ορίζεται στο περιθωριακό 2220, είτε 150 g ανά σωλήνα, να περιληφθούν σε γυάλινους σωλήνες με χονδρό τοίχωμα, ή σε μεταλλικούς σωλήνες με χονδρό τοίχωμα κατασκευασμένους από μέταλλο επιτρεπόμενο από το περιθωριακό 2203 (2). Οι σωλήνες θα πρέπει να είναι απαλλαγμένοι από βλάβες που μπορούν να εξασθενήσουν την αντοχή τους. Ειδικότερα, οι εσωτερικές τάσεις των γυάλινων σωλήνων θα πρέπει να έχουν ελαττωθεί κατάλληλα και το πάχος των τοιχωμάτων του σωλήνα δε θα πρέπει να είναι μικρότερο από 2 mm. Η στεγανότητα του συστήματος κλεισίματος θα πρέπει να εξασφαλίζεται με πρόσθετο μηχανισμό (κάλυμμα, κορώνα, σφραγίδα, δέσιμο, κλπ.) ικανό να εμποδίζει οποιαδήποτε χαλάρωση του συστήματος κλεισίματος κατά τη διάρκεια της μεταφοράς. Οι σωλήνες θα πρέπει να ασφαλιζονται με αποσβεστικό υλικό σε μικρά κουτιά κατασκευασμένα από ξύλο ή ινώδη σανίδα, ο δε αριθμός των σωλήνων ανά κουτί θα πρέπει να είναι τέτοιος, ώστε το βάρος του υγρού του περιεχομένου στο κουτί μην υπερβαίνει τα 600 g. Τα μικρά αυτά κουτιά θα πρέπει να τοποθετούνται σε ξύλινα κιβώτια ή σε κάποια άλλη εξωτερική συσκευασία επαρκούς αντοχής. Εάν το υγρό περιεχόμενο του κιβωτίου ζυγίζει περισσότερο από 5 kg, το κιβώτιο θα πρέπει να επενδύεται με έλασμα μαλακής συγκόλλησης.

(2) Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 75 kg.

**2207** (1) Τα αέρια της 7° και 8° θα πρέπει να κλείνονται σε μεταλλικά δοχεία τα οποία θα είναι έτσι μονωμένα, ώστε να μη μπορούν να επικαλυφθούν από δρόσο ή παγετό. Τα δοχεία θα πρέπει να είναι εφοδιασμένα με βαλβίδες ασφαλείας.

## Κλάση 2

(2) Τα αέρια της 7<sup>ο</sup> (a) εκτός του διοξειδίου του άνθρακα και της 8<sup>ο</sup> (a) εκτός των μειγμάτων που περιέχουν διοξείδιο του άνθρακα, μπορούν επίσης να κλείνονται σε δοχεία τα οποία δεν είναι ερμητικά κλεισμένα και τα οποία είναι:

(a) γυάλινα δοχεία διπλού τοιχώματος με μανδύα κενού, επενδεδυμένα με μία απορροφητική μονωτική ύλη. Τα δοχεία αυτά θα πρέπει να προστατεύονται με συρμάτινα καλάθια και να τοποθετούνται σε μεταλλικά κιβώτια, ή

(b) μεταλλικά δοχεία προστατευόμενα κατά της μετάδοσης της θερμότητας κατά τέτοιο τρόπο ώστε να μη μπορούν να επικαλυφθούν με δρόσο ή παγετό. Η χωρητικότητα των δοχείων αυτών δε θα πρέπει να υπερβαίνει τα 100 λίτρα.

(3) Τα μεταλλικά κιβώτια που αναφέρονται στο εδάφιο (2) (a) και τα δοχεία που αναφέρονται στο εδάφιο (2) (b) παραπάνω, θα πρέπει να είναι εφοδιασμένα με χειρολαβές. Τα ανοίγματα των δοχείων που αναφέρονται στα εδάφια (2) (a) και (b), θα πρέπει να είναι εφοδιασμένα με μηχανισμούς που θα επιτρέπουν στα αέρια να διαφεύγουν, εμποδίζοντας πιεσίλιμμα του υγρού και στερεωμένους έτσι ώστε να μην πέφτουν. Στην περίπτωση του οξυγόνου της 7<sup>ο</sup>(a) και μειγμάτων περιεχόντων οξυγόνο της 8<sup>ο</sup>(a), οι παραπάνω αναφερόμενοι μηχανισμοί και η απορροφητική μονωτική ύλη που περιβάλλει τα δοχεία που αναφέρεται στο εδάφιο (2)(a) θα πρέπει να είναι από άκαυστο υλικό.

**2208** (1) Οι διανεμητές αεροζόλ (10<sup>ο</sup>) και τα μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέριο υπό πίεση (11<sup>ο</sup>), θα πρέπει να ικανοποιούν τους παρακάτω όρους:

(a) οι διανεμητές αεροζόλ που περιέχουν ένα μόνο αέριο ή μείγμα αερίων και τα μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέριο υπό πίεση, θα πρέπει να είναι κατασκευασμένα από μέταλλο. Η διάταξη αυτή δε θα ισχύει για μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέριο υπό πίεση με μέγιστη χωρητικότητα 100 ml για βουτάνιο. Άλλοι διανεμητές αεροζόλ θα μπορούν να είναι κατασκευασμένοι από μέταλλο, πλαστική ύλη ή γυαλί. Δοχεία κατασκευασμένα από μέταλλο και έχοντα εξωτερική διάμετρο όχι μικρότερη των 40 mm, θα πρέπει να έχουν κοίλο πυθμένα.

(b) δοχεία κατασκευασμένα από υλικά υποκείμενα σε θρυμματισμό, όπως το γυαλί ή ορισμένες πλαστικές ύλες, θα πρέπει να κλείνονται σε κάποια συσκευή (στενά πλεγμένο συρμάτινο δίχτυ, ευκαμπτο κάλυμμα κατασκευασμένο από πλαστική ύλη κλπ.) που θα παρέχει προστασία έναντι δημιουργίας και διασποράς θραυσμάτων. Δοχεία των οποίων η χωρητικότητα δεν υπερβαίνει τα 150 cm<sup>3</sup> και των οποίων η εσωτερική πίεση στους 20 °C είναι μικρότερη από 150 kPa (1.5 bar), εξαιρούνται από τον όρο αυτό.

(c) Η χωρητικότητα των δοχείων που είναι κατασκευασμένα από μέταλλο, δε θα πρέπει να υπερβαίνει τα 1000 cm<sup>3</sup>, ενώ των δοχείων που είναι κατασκευασμένα από πλαστική ύλη ή γυαλί δε θα πρέπει να υπερβαίνει τα 500 cm<sup>3</sup>.

(d) Κάθε μοντέλο δοχείου, προτού τεθεί σε υπήρεια, θα πρέπει να ικανοποιεί δοκιμή υδραυλικής πίεσης διεξαγόμενη σύμφωνα με την Προσθήκη A.2, περιθωριακό 3291. Η εσωτερική πίεση που θα εφαρμόζεται (πίεση δοκιμής), θα πρέπει να είναι 1.5 φορά την εσωτερική πίεση στους 50° C, με ελάχιστη πίεση 1 MPa (10 bar).

(e) Οι βαλβίδες απελευθέρωσης των διανεμητών αεροζόλ και οι μηχανισμοί διασποράς (διανομής) τους, θα πρέπει να εξασφαλίζουν για τους διανεμητές να είναι έτσι κλεισμένοι, ώστε να είναι στεγανοί και θα πρέπει να προστατεύονται από τυχαίο άνοιγμα. Οι βαλβίδες και οι μηχανισμοί διασποράς (διανομής) που κλείνουν μόνο με τη δράση της εσωτερικής πίεσης, δε θα πρέπει να γίνονται δεκτοί.

**2208**

(συνεχ.) (2) Τα παρακάτω αέρια θα γίνονται δεκτά ως προωθητές, ή ως συστατικά προωθητών, ή ως πληρωτικά αέρια, για διανεμητές αεροζόλ: αέρια της 1<sup>ο</sup>, (a) και (b), 2<sup>ο</sup>, (a) και (b), 3<sup>ο</sup>, (a) και (b) εκτός του μεθυλοσουλανίου, αιθυλοχλωρίδιο της 3<sup>ο</sup> (bt), 1,3 - βουταδιένιο της 3<sup>ο</sup> (c), τριφθοροχλωροαιθυλένιο

## Κλάση 2

της 3 (ct), αέρια της 4, (a), (b) και (c), αέρια της 5°, (a) και (b) εκτός του σιλανιού, αέρια της 5° (c) και 6 (a) και (c).

(3) Όλα τα αέρια της (2) και, επιπροσθέτως, τα παρακάτω αέρια, θα γίνονται δεκτά ως πληρωτικά αέρια για μη-ξαναγεμιζόμενα εμπορευματοκιβώτια για αέριο υπό πίεση: μεθυλοβρωμίδιο της 3 (at), διμεθυλαμίνη, αιθυλαμίνη, μεθυλαμίνη, μεθυλομερκαπτάνη και τριμεθυλαμίνη της 3° (bt), αιθυλονοξειδίο, μεθυλοβινυλαιθέρας και βινυλοβρωμίδιο της 3° (ct), αιθυλενοξειδίο περιέχον όχι περισσότερο από 10% διοξειδίο του άνθρακα κατά βάρος, της 4° (ci).

**2209** (1) Η εσωτερική πίεση στους 50 °C των διανεμητών αεροζόλ και των μη - ξαναγεμιζόμενων εμπορευματοκιβωτίων αερίου υπό πίεση, δεν θα πρέπει να υπερβαίνει ούτε τα δύο τρίτα της πίεσης δοκιμής του δοχείου, ούτε τα 1.2 MPa (12 bar).

(2) Οι διανεμητές αεροζόλ και τα μη - ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση, θα πρέπει να είναι έτοιμα γεμισμένα, ώστε στους 50 °C η υγρή φάση να μην υπερβαίνει το 95% της χωρητικότητάς τους. Η χωρητικότητα των διανεμητών αεροζόλ, είναι ο διαθέσιμος όγκος σε κλειστό διανεμητή εφοδιασμένο με το υποστήριγμα της βαλβίδας, την βαλβίδα και το σωλήνα εμβάπτισης.

(3) Όλοι οι διανεμητές αεροζόλ και τα μη - ξαναγεμιζόμενα εμπορευματοκιβώτια για αέριο υπό πίεση, θα πρέπει να ικανοποιούν δοκιμή στεγανότητας, σύμφωνα με την Προσθήκη A.2, περιθωριακό 3292.

**2210** (1) Οι διανεμητές αεροζόλ και τα μη - ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση θα πρέπει να τοποθετούνται σε ξύλινα κιβώτια ή γερή ινώδη σανίδα ή μεταλλικά κουτιά. Οι διανεμητές αεροζόλ που είναι κατασκευασμένοι από γυαλί ή πλαστική ύλη και υπόκεινται σε θρυμματισμό, θα πρέπει να διαχωρίζονται ο ένας από τον άλλον με ενδιάμεσα φύλλα από ινώδη σανίδα ή άλλη κατάλληλη ύλη.

(2) Κάθε κόλο δε θα πρέπει να ζυγίζει περισσότερο από 50 kg, εάν χρησιμοποιούνται κουτιά από ινώδη σανίδα, ή περισσότερο από 75 kg εάν χρησιμοποιούνται άλλα μέσα συσκευασίας.

(3) Σε περίπτωση μεταφοράς πλήρους φορτίου, οι μεταλλικοί διανεμητές αεροζόλ, μπορούν επίσης να συσκευάζονται ως εξής: οι διανεμητές μπορούν να ομαδοποιούνται σε μονάδες πάνω σε δίσκους και να κρατούνται στη θέση τους με κατάλληλο πλαστικό κάλυμμα. Οι μονάδες αυτές θα πρέπει να στοιβάζονται και να ασφαλιζονται κατάλληλα, πάνω σε παλέτες.

*b. Όροι που διέπουν τα μεταλλικά δοχεία*

(Οι όροι αυτοί δεν εφαρμόζονται στην περίπτωση των μεταλλικών σωλήνων που αναφέρονται στο περιθωριακό 2206, των δοχείων που αναφέρονται στο περιθωριακό 2207 (2) (b), ή των διανεμητών αεροζόλ ή μη-ξαναγεμιζόμενων μεταλλικών εμπορευματοκιβωτίων για αέριο υπό πίεση, που αναφέρονται στο περιθωριακό 2208).

1. Κατασκευή και εξαρτήματα (βλέπε επίσης περιθωριακό 2238).

**2211** (1) Στην πίεση δοκιμής, η τάση του μετάλλου στο σημείο της μεγαλύτερης τάσης του δοχείου (περιθωριακά 2215, 2219 και 2220) δεν θα πρέπει να υπερβαίνει τα τρία τέταρτα της εγγυημένης ελάχιστης τάσης απόδοσης (Re). Με τον όρο "τάση απόδοσης", εννοείται η τάση στην οποία παρήχθη μόνιμη επιμήκυνση κατά 2% (δηλ. 0.2%) ή, για χάλυβες με ωστενίτη, 1% του μήκους του πεζομέτρου πάνω στο τεμάχιο δοκιμής.

**ΣΗΜΕΙΩΣΗ:** Στην περίπτωση φύλλου μετάλλου (ελάσματος), ο άξονας του τεμαχίου δοκιμής αντοχής σε εφελκυσμό, θα πρέπει να είναι σε ορθές γωνίες προς τη κατεύθυνση της κλίσης. Η μόνιμη επιμήκυνση του θραύσματος (l=5 d) θα πρέπει να μετράται πάνω σε τεμάχιο δοκιμής κυκλικής διατομής, στο οποίο το μήκος του πεζομέτρου l είναι ίσο με πέντε φορές τη διάμετρο d. Εάν χρησιμοποιηθούν τεμάχια - δοκιμής ορθογώνιας διατομής, το μήκος του πεζομέτρου θα υπολογίζεται με τον τύπο

---

1409

Κλάση 2

$$l = 5.65 \sqrt{F_0}$$

όπου  $F_0$  το αρχικό εμβαδόν της διατομής του δοχείου δοκιμής.

## Κλάση 2

- 2211** (2) (a) Χαλύβδινα δοχεία των οποίων η πίεση δοκιμής υπερβαίνει τα 60 MPa (6 bar), θα πρέπει να είναι κατασκευασμένα χωρίς ραφές, ή συγκολλημένα. Για συγκολλημένα δοχεία, θα πρέπει να χρησιμοποιούνται χάλυβες (ανθρακούχοι ή κράματα) πλήρως ικανοποιητικής ικανότητας συγκόλλησης.
- (b) Δοχεία των οποίων η πίεση - δοκιμής δεν υπερβαίνει τα 60 kg/cm<sup>2</sup>, θα πρέπει είτε να είναι σύμφωνα με τις διατάξεις του παραπάνω εδαφίου (a), είτε να είναι πριτσινωμένα, είτε να υποστούν σκληρή συγκόλληση, υπό τον όρον ότι ο κατασκευαστής εγγυάται την εργασία του πριτσινώματος και της σκληρής συγκόλλησης και ότι οι αρμόδιες αρχές της χώρας προέλευσης έχουν δώσει την έγκρισή τους.
- (3) Τα δοχεία από κράμα αλουμινίου, θα πρέπει να είναι χωρίς ραφές ή συγκολλημένα.
- (4) Συγκολλημένα δοχεία γίνονται δεκτά, μόνον υπό τον όρον ότι ο κατασκευαστής εγγυάται την ποιότητα της εργασίας της συγκόλλησης και ότι οι αρμόδιες αρχές της χώρας προέλευσης έχουν δώσει την έγκρισή τους.
- 2212** (1) Γίνεται διάκριση μεταξύ των παρακάτω τύπων δοχείων:
- (a) Κύλινδροι χωρητικότητας όχι μεγαλύτερης από 150 λίτρα.
- (b) Δοχεία με χωρητικότητα όχι μικρότερη από 100 λίτρα [με εξαίρεση των κυλίνδρων που είναι σύμφωνα με το εδάφιο (a)] και όχι μεγαλύτερη από 1.000 λίτρα (π.χ. κυλινδρικά δοχεία εφοδιασμένα με τέρκια (στεφάνες) σπειροειδείς και δοχεία σε πέλματα), με εξαίρεση των δοχείων που είναι σύμφωνα με το (e).
- (c) Δεξαμενές (βλέπε Παράρτημα Β).
- (d) Συγκροτήματα, γνωστά ως "πλαίσια", κυλίνδρων, σύμφωνα με το εδάφιο (1) (a), στα οποία οι κύλινδροι είναι συνδεδεμένοι μεταξύ τους με σωλήνωση και συγκρατούνται σταθερά μεταξύ τους με μεταλλικό εξάρτημα.
- (e) Δοχεία σύμφωνα με περιθωριακό 2207, με χωρητικότητα όχι μεγαλύτερη από 1000 λίτρα.
- (2) (a) Εάν, σύμφωνα με τους κανονισμούς της χώρας αναχώρησης, οι κύλινδροι που αναφέρονται στο εδάφιο (1) (a) είναι υποχρεωτικό να είναι εφοδιασμένοι με μηχανισμό πρόληψης της κύλισης, ο μηχανισμός αυτός δεν θα πρέπει να είναι αναπόσπαστος από το πόμα της βαλβίδας [περιθωριακό 2213 (2)].
- (b) Δοχεία σύμφωνα με το εδάφιο (1) (b), τα οποία είναι ικανά να κυλήσουν, θα πρέπει να είναι εφοδιασμένα με κυλιόμενες στεφάνες ή αλλιώς να προστατεύονται από ζημιές οφειλόμενες στη κύλιση (π.χ. με μέταλλο ανθεκτικό στη διάβρωση, ψεκασμένο πάνω στην εξωτερική επιφάνεια του δοχείου). Δοχεία σύμφωνα με τα εδάφια (1) (b) και (1) (c) τα οποία είναι ικανά να κυλήσουν, θα πρέπει να είναι εφοδιασμένα με μηχανισμούς (πέλματα, δακτύλιοι, ταινίες) που να εξασφαλίζουν ότι μπορούν ασφαλώς να χειρισθούν με μηχανικό μέσο και έτσι διευθετημένους, ώστε να μην εξασθενείται η αντοχή και να μην προκαλούνται αδικαιολόγητες τάσεις στο τοίχωμα του δοχείου.
- (c) Πλαίσια κυλίνδρων, σύμφωνα με το εδάφιο (1) (d), θα πρέπει να είναι εφοδιασμένα με μηχανισμούς που να εξασφαλίζουν ότι μπορούν να χειρισθούν ασφαλώς. Η σωλήνωση και ο κύριος κρουνός, θα πρέπει να βρίσκονται μέσα στο πλαίσιο και να είναι έτσι στερεωμένα ώστε να προστατεύονται από οποιασδήποτε ζημιά.
- (3) (a) Με εξαίρεση τα αέρια της 7<sup>ο</sup> και 8<sup>ο</sup>, τα αέρια της κλάσης 2, μπορούν να μεταφέρονται μέσα σε κυλίνδρους σύμφωνα με το εδάφιο (1) (a).

## Κλάση 2

2212  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ:** Για πιθανούς περιορισμούς στην χωρητικότητα των κολώνδρων για ορισμένα αέρια, βλέπε περιθωριακό 2219.

- (b) Με εξαίρεση τα: φθόριο, τριφθοριούχο άζωτο και τετραφθοριούχο πυρίτιο της 1<sup>ο</sup> (at), μονοξειδίο του αζώτου (NO) της 1<sup>ο</sup> (ct), μείγματα υδρογόνου με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο, μείγματα αζώτου ή σπάνιων αερίων (περιέχοντα όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο της 2<sup>ο</sup> (bt), μείγματα υδρογόνου με όχι περισσότερο από 10 % διβοράνιο κατ' όγκο, μείγματα αζώτου ή σπάνιων αερίων (περιέχοντα όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο από 10 % διβοράνιο κατ' όγκο της 2<sup>ο</sup> (ct), οκταφθοροβουτένιο-2 (R 1318) και οκταφθοροπροπάνιο της 3<sup>ο</sup> (a), τριχλωριούχο βόριο, τριφθοριούχο χλώριο, εξαφθοροακετόνη, νιτροδυλοχλωρίδιο, σουλφουρυλοφθορίδιο και εξαφθοριούχο βολφράμιο της 3<sup>ο</sup> (at), 2,2-διμεθυλοπροπάνιο και μεθυλοσιλάνιο της 3<sup>ο</sup> (b), αρσίνη, καρβονυλοσουλφίδιο, διχλωροσιλάνιο, διμεθυλοσιλάνιο, υδροσελήνιο και τριμεθυλοσιλάνιο της 3<sup>ο</sup> (bt), προπαδιένιο, αδρανές, της 3<sup>ο</sup> (c), χλωροκυανίδιο, κυανογόνο, αιθυλενοξειδίο και υδροϊώδιο, άνυδρο, της 3<sup>ο</sup> (ct), μείγματα μεθυλοσιλανίων της 4<sup>ο</sup> (bt), προπαδιένιο με 1 % έως 4 % μεθυλοακετυλένιο, σταθεροποιημένο, της 4<sup>ο</sup> (c), αιθυλενοξειδίο περιέχον όχι περισσότερο από 50 % μυρμηκικό μεθυλεστέρα κατά βάρος, της 4<sup>ο</sup> (ct), υποξειδίο του αζώτου της 5<sup>ο</sup> (a), σιλάνιο της 5<sup>ο</sup> (b), και ύλες της 5<sup>ο</sup> (bt), 5<sup>ο</sup> (ct), 7<sup>ο</sup>, 8<sup>ο</sup>, 12<sup>ο</sup> και 13<sup>ο</sup>, αέρια της κλάσης 2 μπορούν να μεταφερθούν σε δοχεία σύμφωνα με το εδάφιο (1) (b).
- (c) Με εξαίρεση τα: τριφθοριούχο άζωτο και τετραφθοριούχο πυρίτιο της 1<sup>ο</sup> (at), μονοξειδίο του αζώτου της 1<sup>ο</sup> (ct), μείγματα υδρογόνου με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο, μείγματα αζώτου ή σπάνιων αερίων (περιέχοντα όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο της 2<sup>ο</sup> (bt), μείγματα υδρογόνου με όχι περισσότερο από 10 % διβοράνιο κατ' όγκο, μείγματα αζώτου ή σπάνιων αερίων (περιέχοντα όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο από 10 % διβοράνιο κατ' όγκο της 2<sup>ο</sup> (ct), οκταφθοροβουτένιο-2 (R 1318) και οκταφθοροπροπάνιο της 3<sup>ο</sup> (a), τριχλωριούχο βόριο, τριφθοριούχο χλώριο, νιτροδυλοχλωρίδιο, εξαφθοροακετόνη, σουλφουρυλο-χλωρίδιο και εξαφθοριούχο βολφράμιο της 3<sup>ο</sup> (at), 2,2-διμεθυλοπροπάνιο και μεθυλοσιλάνιο της 3<sup>ο</sup> (b), αρσίνη, καρβονυλοσουλφίδιο, διχλωροσιλάνιο, διμεθυλο-σιλάνιο, υδροσελήνιο και τριμεθυλοσιλάνιο της 3<sup>ο</sup> (bt), προπαδιένιο, αδρανές, της 3<sup>ο</sup> (c), χλωροκυανίδιο, κυανογόνο, αιθυλενοξειδίο και υδροϊώδιο, άνυδρο της 3<sup>ο</sup> (ct), μείγματα μεθυλοσιλανίων της 4<sup>ο</sup> (bt), ύλες της 4<sup>ο</sup> (c) και 4<sup>ο</sup> (ct), υποξειδίο του αζώτου της 5<sup>ο</sup> (a), σιλάνιο της 5<sup>ο</sup> (b), και ύλες της 5<sup>ο</sup> (bt), 5<sup>ο</sup> (ct), 7<sup>ο</sup>, 8<sup>ο</sup>, 12<sup>ο</sup> και 13<sup>ο</sup>, αέρια της κλάσης 2 μπορούν να μεταφερθούν μέσα σε πλαίσια κολώνδρων σύμφωνα με το εδάφιο (1) (d). Κάθε κολώνδρος μέσα σε ένα πλαίσιο κολώνδρων θα πρέπει να περιέχει μόνο ένα και το ίδιο πεπιεσμένο αέριο, υγροποιημένο αέριο ή αέριο διαλυμένο υπό πίεση. Κάθε κολώνδρος σε ένα πλαίσιο κολώνδρων για φθόριο της 1<sup>ο</sup> (at) ή διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c) θα πρέπει, παρ' όλα αυτά, να είναι εφοδιασμένος με κρουνό. Οι κολώνδροι σε ένα πλαίσιο κολώνδρων για ακετυλένιο, θα πρέπει όλοι να περιέχουν το ίδιο πορώδες υλικό (περιθωριακό 2204).
- (d) Για δοχεία σύμφωνα με το (1) (e), βλέπε περιθωριακό 2207.

2213

(1) Τα ανοίγματα για γέμισμα και άδειασμα δοχείων θα πρέπει να είναι εφοδιασμένα με βαλβίδες τύπου θυρίδας ή βελονοειδείς βαλβίδες. Βαλβίδες άλλων τύπων μπορούν να γίνουν, όμως, δεκτές εάν παρέχουν ίδιες εγγυήσεις ασφαλείας και έχουν εγκριθεί στη χώρα προέλευσης. Παρ' όλα αυτά, οποιοσδήποτε τύπος βαλβίδας υιοθετηθεί, το σύστημα προσαρτήσεώς της πρέπει να είναι γερό και τέτοιο ώστε η ικανοποιητική της κατάσταση να επαληθεύεται εύκολα πριν από κάθε γέμισμα.

## Κλάση 2

**2213** (συνεχ.) Εκτός από την ανθρωποθυρίδα, η οποία, εάν παρέχεται, θα είναι κλειστή με αποτελεσματικό κλείσιμο (κάλυμμα) και τις απαραίτητες οπές για την αφαίρεση των ιζημάτων, τα δοχεία και οι δεξαμενές σύμφωνα με το περιθωριακό 2212 (1) (b) και (c), θα πρέπει να είναι εφοδιασμένα με περισσότερα από δύο ανοίγματα, για γέμισμα και άδειασμα αντίστοιχα. Εντούτοις, δοχεία χωρητικότητας όχι μικρότερης από 100 λίτρα προοριζόμενα για τη μεταφορά διαλυμένου ακετυλενίου της 9<sup>ο</sup> (c), μπορούν να έχουν περισσότερα από δύο ανοίγματα (οπές) για γέμισμα και άδειασμα.

Ομοίως, δοχεία και δεξαμενές σύμφωνα με το περιθωριακό 2212 (1), (b) και (c), προοριζόμενα για τη μεταφορά των υλών της 3<sup>ο</sup> (b) και 4<sup>ο</sup> (b), μπορούν να διαθέτουν και άλλα ανοίγματα, προοριζόμενα ειδικότερα για την επαλήθευση της στάθμης του υγρού και της πίεσης του πιεζομέτρου.

(2) Οι βαλβίδες (κρουνοί) θα πρέπει να προστατεύονται αποτελεσματικά με πώματα ή μόνιμες φλάντζες. Τα πώματα θα πρέπει να διαθέτουν οπές αερισμού επαρκούς διατομής για την εκκένωση των αερίων σε περίπτωση διαρροής στις βαλβίδες. Τα πώματα ή οι φλάντζες θα πρέπει να προστατεύουν επαρκώς τη βαλβίδα εάν ο κύλινδρος πέσει κατά τη διάρκεια της μεταφοράς και στοιβασίας. Για βαλβίδες τοποθετημένες εσωτερικά του λαμού των δοχείων και προστατευόμενες από κοχλιοτό πώμα και δοχεία που μεταφέρονται συσκευασμένα σε προστατευτικά κιβώτια, δε θα απαιτείται πώμα. Ομοίως, δεν θα απαιτείται προστατευτικό πώμα για βαλβίδες (κρουνοί) σε πλαίσια κυλίνδρων.

(3) Δοχεία περιέχοντα φθόριο της 1<sup>ο</sup> (at), τριφθοριούχο χλώριο της 3<sup>ο</sup> (at), ή χλωροκτανίδιο της 3<sup>ο</sup> (ct), ανεξαρτήτως εάν μεταφέρονται ή όχι συσκευασμένα σε προστατευτικά κιβώτια, θα πρέπει να είναι εφοδιασμένα με πώματα από χάλυβα. Τα πώματα αυτά δε θα έχουν ανοίγματα και, καθ' όλη τη διάρκεια της μεταφοράς, θα είναι εφοδιασμένα με παρέμβυσμα, που θα εξασφαλίζει την αέριο - στεγανότητα και θα είναι κατασκευασμένο από υλικό που δεν κινδυνεύει να προσβληθεί από το περιεχόμενο του δοχείου.

**2214** (1) Στην περίπτωση δοχείων που περιέχουν τριφθοριούχο βόριο ή φθόριο της 1<sup>ο</sup> (at), τριφθοριούχο χλώριο ή υγροποιημένη αμμωνία της 3<sup>ο</sup> (at), αμμωνία διαλυμένη στο νερό της 9<sup>ο</sup> (at), νιτροδυσλχωρίδιο της 3<sup>ο</sup> (at), ή διμεθυλαμίνη, αιθυλαμίνη, μεθυλαμίνη ή τριμεθυλαμίνη της 3<sup>ο</sup> (bt), βαλβίδες κατασκευασμένες από χαλκό ή οποιοδήποτε άλλο μέταλλο που θα μπορούσε να προσβληθεί από τα αέρια, αυτά δε θα γίνονται δεκτές.

(2) Η χρήση υλικών που περιέχουν λίπος ή λάδι για την εξασφάλιση της στεγανότητας των ενώσεων (ραφών) ή για τη συντήρηση των μηχανισμών κλεισίματος των δοχείων που χρησιμοποιούνται για οξυγόνο της 1<sup>ο</sup> (a), φθόριο της 1<sup>ο</sup> (at), μείγματα με οξυγόνο της 2<sup>ο</sup> (a), διοξείδιο του αζώτου, τριφθοριούχο χλώριο της 3<sup>ο</sup> (at), υποξείδιο του αζώτου της 5<sup>ο</sup> (a), ή μείγματα της 12<sup>ο</sup> περιέχοντα περισσότερο από 10% οξυγόνο κατ' όγκο, απαγορεύεται.

(3) Οι παρακάτω όροι θα πρέπει να ισχύουν για την κατασκευή των δοχείων που αναφέρονται στο περιθωριακό 2207 (1):

(a) Τα υλικά και η κατασκευή των δοχείων, θα πρέπει να είναι σύμφωνα με τους όρους της Προσθήκης A.2, B, περιθωριακά 3250 έως 3254. Όλα τα μηχανικά και τεχνολογικά χαρακτηριστικά του χρησιμοποιηθέντος υλικού θα πρέπει να καθορίζονται για κάθε δοχείο κατά την πρώτη δοκιμή, αναφορικά με την αντοχή σε κρούση και το συντελεστή κάμψης. Βλέπε Προσθήκη A.2, B, περιθωριακά 3265 έως 3285.

(b) Τα δοχεία θα πρέπει να είναι εφοδιασμένα με βαλβίδα ασφαλείας η οποία θα είναι ικανή να ανοίγει στη καθορισμένη πίεση λειτουργίας, που αναφέρεται πάνω στο δοχείο. Οι βαλβίδες θα πρέπει να είναι έτσι κατασκευασμένες, ώστε να λειτουργούν άριστα ακόμη και στην χαμηλότερη θερμοκρασία λειτουργίας. Η αξιοπιστία της λειτουργίας τους στη θερμοκρασία αυτή θα καθορίζεται και ελέγχεται με δοκιμή κάθε βαλβίδας ή δείγματος βαλβίδων του ίδιου τύπου κατασκευής.

## Κλάση 2

**2214**  
(συνεχ.)

- (c) Οι σπές αερισμού και οι βαλβίδες ασφαλείας των δοχείων, θα πρέπει να έχουν σχεδιασθεί έτσι, ώστε να εμποδίζουν το πτώσιμα του υγρού.
- (d) Οι μηχανισμοί κλεισίματος, θα πρέπει να είναι έτσι ρυθμισμένοι, ώστε να μην είναι δυνατό το άνοιγμά τους από αναρμόδια πρόσωπα.
- (e) Δοχεία των οποίων το γέμισμα μετράται κατ' όγκον, θα πρέπει να διαθέτουν δείκτη στάθμης.
- (f) Τα δοχεία θα πρέπει να είναι θερμικά μονωμένα. Η θερμική μόνωση θα πρέπει να προστατεύεται έναντι της κρούσης, με συνεχή μεταλλική επένδυση. Εάν ο χώρος μεταξύ του δοχείου και της μεταλλικής επένδυσης δεν περιέχει αέρα (μόνωση υπό κενό), η προστατευτική επένδυση θα πρέπει να σχεδιαστεί έτσι ώστε να αντέχει χωρίς παραμόρφωση σε εξωτερική πίεση τουλάχιστον 100 KPa (1 bar). Εάν η επένδυση έχει έτσι κλεισθεί, ώστε να είναι αέριο-στεγής (π.χ. στη περίπτωση της μόνωσης υπό κενό), θα πρέπει να διατίθεται μηχανισμός ο οποίος να εμποδίζει την ανάπτυξη οποιασδήποτε επικίνδυνης πίεσης στο μονωτικό στρώμα, σε περίπτωση ακατάλληλης αέριο - στεγανότητας του δοχείου ή των εξαρτημάτων του. Ο μηχανισμός θα πρέπει να εμποδίζει την υγρασία να εισχωρήσει στη μόνωση.

(4) Στην περίπτωση δοχείων περιεχόντων μείγματα της P1 ή P2 της 4<sup>ο</sup> (c), μείγμα αιθυλενίου με ακετυλένιο και προπυλένιο της 8<sup>ο</sup> (b) ή διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c), τα μεταλλικά τμήματα των μηχανισμών κλεισίματος που έρχονται σε επαφή με το περιεχόμενο, δεν θα πρέπει να περιέχουν περισσότερο από 70% χαλκό. Δοχεία για διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c), μπορούν επίσης να διαθέτουν ατμοφράκτες.

(5) Δοχεία περιέχοντα οξυγόνο των 1<sup>ο</sup> (a) έως 7<sup>ο</sup> (a) και εφαρμοσμένα σε ιχθυοδεξαμενές, θα γίνονται ομοίως δεκτά, εάν διαθέτουν συσκευές παρέχουσες στο οξυγόνο τη δυνατότητα να διαφεύγει βαθμιαία.

2. Επίσημος έλεγχος δοχείων (για δοχεία από κράμα αλουμινίου, βλέπε επίσης Προσθήκη A.2)

**2215**

(1) Τα μεταλλικά δοχεία θα πρέπει να υποβάλλονται σε αρχικούς και περιοδικούς ελέγχους υπό την επίβλεψη εμπειρογνώμονα εγκεκριμένου από την αρμόδια αρχή. Η φύση των ελέγχων αυτών, καθορίζεται στα περιθωριακά 2216 και 2217.

(2) Για να εξασφαλισθεί ότι τηρούνται οι διατάξεις των περιθωριακών 2204 και 0221 (2), οι έλεγχοι των δοχείων που προορίζονται να περιέχουν διαλυμένο ακετυλένιο της 9<sup>ο</sup> (c), θα πρέπει να περιλαμβάνουν, επιπλέον, εξέταση της φύσης του πορώδους υλικού και της ποσότητας του διαλύτη.

**2216**

(1) Ο αρχικός έλεγχος καινούργιων ή αμεταχειριστων δοχείων, θα πρέπει να περιλαμβάνει:

A. Για κατάλληλο δείγμα δοχείων:

- (a) Έλεγχο του υλικού κατασκευής, τουλάχιστον σε σχέση με την τάση απόδοσης, την αντοχή σε εφελκυσμό και τη μόνιμη επιμήκυνση του θραύσματος. Οι τιμές που προκύπτουν από αυτούς τους ελέγχους, θα πρέπει να συμφωνούν με τους εθνικούς κανονισμούς.
- (b) Μέτρηση του πάχους στο λεπτότερο σημείο του τοιχώματος και υπολογισμός της τάσης.
- (c) Έλεγχο της ομοιογένειας του υλικού για κάθε παρτίδα κατασκευής και επιθεώρηση της εξωτερικής και εσωτερικής κατάστασης των δοχείων.

## Κλάση 2

2216 B. Για όλα τα δοχεία:  
(συνεχ.)

- (d) Έλεγχο υδραυλικής πίεσης, σύμφωνα με τις διατάξεις των περιθωριακών 2219 - 2221.

**ΣΗΜΕΙΩΣΗ:** Με τη σύμφωνη γνώμη του εμπειρογνώμονα που είναι εγκεκριμένος από την αρμόδια αρχή, ο έλεγχος υδραυλικής πίεσης, μπορεί να αντικατασταθεί από έλεγχο με τη χρήση αερίου, όπου μία τέτοια ενέργεια δεν συνεπάγεται κανέναν κίνδυνο.

- (e) Επιθεώρηση των ενδείξεων πάνω στα δοχεία (βλέπε περιθωριακό 2218).

C. Επιπλέον, για δοχεία προορισμένα για τη μεταφορά διαλυμένου ακετυλενίου της 9° (c):

- (f) Επιθεώρηση όπως απαιτείται από τους εθνικούς κανονισμούς.

(2) Τα δοχεία θα πρέπει να αντέχουν στη πίεση ελέγχου χωρίς να υφίστανται μόνιμη παραμόρφωση ή να παρουσιάζουν ρωγμές.

(3) Στις περιοδικές επιθεωρήσεις, θα πρέπει να επαναλαμβάνονται τα παρακάτω: ο έλεγχος υδραυλικής πίεσης, έλεγχος της εξωτερικής και εσωτερικής κατάστασης του δοχείου (π.χ. με ζύγισμα, εσωτερική επιθεώρηση, έλεγχος του πάχους του τοιχώματος), επαλήθευση του εξοπλισμού και των ενδείξεων και, εάν χρειασθεί, επαλήθευση των χαρακτηριστικών του υλικού με κατάλληλους ελέγχους.

**ΣΗΜΕΙΩΣΗ:** Με τη σύμφωνη γνώμη του εμπειρογνώμονα που έχει εγκριθεί από την αρμόδια αρχή, ο έλεγχος υδραυλικής πίεσης μπορεί να αντικατασταθεί από μία ισοδύναμη μέθοδο βασισμένη στους υπερήχους..

Περιοδικές επιθεωρήσεις θα πρέπει να διεξάγονται:

- (a) Κάθε 2 χρόνια στην περίπτωση των δοχείων που προορίζονται για τη μεταφορά αερίων της 1° (at) και 1° (ct), αέριο πόλης της 2° (bt), αέρια της 3° (at) εκτός της αμμωνίας, εξαφθοροπροπυλένιο και μεθυλοβρωμίδιο, χλωροκυανίδιο της 3° (ct), και ύλης της 5° (at).
- (b) Κάθε 5 χρόνια στην περίπτωση των δοχείων που προορίζονται για τη μεταφορά άλλων πεπεσμένων και υγροποιημένων αερίων (με την επιφύλαξη των διατάξεων του παρακάτω εδαφίου (c)) και δοχείων για τη μεταφορά αμμωνίας διαλυμένης υπό πίεση της 9° (at).
- (c) Κάθε 10 χρόνια στην περίπτωση των δοχείων που προορίζονται για τη μεταφορά αερίων της 1° (a) εκτός του οξυγόνου, μειγμάτων αζώτου με σπάνια αέρια, της 2° (a), αερίων της 3° (a) και 3° (b) εκτός του 1-χλωρο-1,1-διφθοροαιθάνιου, 1,1-διφθοροαιθάνιου, διμεθυλαιθέρα, μεθυλοσιλάνιου και 1,1,1-τριφθοροαιθάνιου, και μειγμάτων αερίων της 4° (a) και 4° (b), εάν τα δοχεία έχουν χωρητικότητα όχι μεγαλύτερη από 150 λίτρα και η χώρα προέλευσης δεν προβλέπει μικρότερο χρονικό διάστημα.
- (d) Στην περίπτωση των δοχείων που προορίζονται για τη μεταφορά διαλυμένου ακετυλενίου της 9° (c), το περιθωριακό 2217 (1) θα ισχύει και στην περίπτωση των δοχείων που είναι σύμφωνα με το περιθωριακό 2207(1), το περιθωριακό 2217 (2) θα ισχύει.

2217 (1) Η εξωτερική κατάσταση (διάβρωση, παραμόρφωση) και η κατάσταση (χαλάρωση, καθίζηση) του πορώδους υλικού σε δοχεία προοριζόμενα για τη μεταφορά διαλυμένου ακετυλενίου της 9° (c), θα πρέπει να ελέγχονται κάθε 5 χρόνια. Η δειγματοληψία θα εκτελείται με κοπή, εάν θεωρηθεί απαραίτητο, κατάλληλου αριθμού δοχείων και επιθεώρησής τους εσωτερικά για διάβρωση και για οποιοδήποτε αλλαγές που ενδέχεται να προέκυψαν στα συστατικά υλικά και το πορώδες υλικό.

## Κλάση 2

2217 (2) Τα δοχεία που είναι σύμφωνα με το περιθωριακό 2207(1), θα πρέπει να υποβάλλονται κάθε 5 χρόνια σε εξωτερική επιθεώρηση και σε έλεγχο της στεγανότητας. Ο έλεγχος στεγανότητας θα διεξάγεται με το αέριο που περιέχει το δοχείο ή με αδρανές αέριο σε πίεση 0,2 MPa (2 bar). Ο έλεγχος θα εκτελείται με πιεζόμετρο ή με μέτρηση με κενό. Η θερμική μόνωση δε θα πρέπει να αφαιρείται. Η πίεση δε θα πρέπει να μειώνεται κατά τη διάρκεια της 8-ωρης περιόδου ελέγχου. Αλλαγές που απορρέουν από τη φύση του αερίου δοκιμής (ελέγχου) ή από τη διακύμανση της θερμοκρασίας, θα λαμβάνονται υπ' όψη.

(3) Οι κύλινδροι που αναφέρονται στο περιθωριακό 2212 (1) (a) μπορούν να μεταφερθούν μετά τη λήξη του χρονικού ορίου που έχει τεθεί για τον περιοδικό έλεγχο που ορίζεται περιθωριακό 2215, με σκοπό τη διεξαγωγή του ελέγχου.

## 3. Ενδείξεις πάνω στα δοχεία

2218 (1) Τα μεταλλικά δοχεία θα πρέπει να φέρουν τα παρακάτω στοιχεία με καθαρούς ευανάγνωστους και διαρκείας χαρακτήρες:

(a) Μία από τις ονομασίες του αερίου ή του μείγματος αερίων, πλήρη, όπως δίνεται ιστο περιθωριακό 2201, 1° έως 9°, την επωνυμία ή το σήμα του κατασκευαστή ή ιδιοκτήτη και τον αριθμό του δοχείου [βλέπε επίσης περιθωριακό 2202 (3)]. Στην περίπτωση αλογονωμένων υδρογονανθράκων της 1° (a), 3° (a), 3° (at), 3° (b), 3° (ct), 4° (a), 5° (a) και 6° (a), επιτρέπεται επίσης η χρήση του γράμματος R, ακολουθούμενου από τον αριθμό αναγνώρισης της ύλης.

(b) Το απόβαρο του δοχείου, χωρίς εξαρτήματα και συμπληρώματα.

(c) Επιπλέον, στην περίπτωση που τα δοχεία προορίζονται για υγροποιημένα αέρια, το απόβαρο του δοχείου, συμπεριλαμβανομένων ορισμένων εξαρτημάτων και συμπληρωμάτων όπως βαλβίδων, μεταλλικών παωμάτων κλπ., εκτός του προστατευτικού καλύμματος.

*ΣΗΜΕΙΩΣΗ στις (b) και (c): Αντά τα στοιχεία βάρους, στην περίπτωση που δεν αναγράφονται ήδη πάνω στο δοχείο, θα πρέπει να αναγραφούν έτσι κατά τον επόμενο περιοδικό έλεγχο.*

(d) Την πίεση δοκιμής (βλέπε περιθωριακά 2219 έως 2221) και την ημερομηνία (μήνα, έτος) της τελευταίας δοκιμής (ελέγχου) που έγινε (βλέπε περιθωριακά 2216 και 2217).

(e) Τη σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις επιθεωρήσεις και, επιπλέον,

(f) στην περίπτωση πεπιεσμένων αερίων ή μειγμάτων πεπιεσμένων αερίων της 1°, 2°, 12° και 13° : την μέγιστη πίεση πλήρωσης στους 15°C που επιτρέπεται για το συγκεκριμένο δοχείο (βλέπε περιθωριακό 2219).

(g) Στην περίπτωση τριφθοριούχου βορίου της 1° (at), υγροποιημένων αερίων των 3° έως 6° και αμμωνίας διαλυμένης στο νερό της 9° (at): το επιτρεπόμενο ανάτοπο γέμισμα, και τη χωρητικότητα. Στην περίπτωση βαθιά κατεψυγμένων αερίων των 7° και 8°: τη χωρητικότητα.

(h) Στην περίπτωση ακετυλενίου διαλυμένου σε διαλύτη της 9° (c): την επιτρεπόμενη πίεση πλήρωσης [βλέπε περιθωριακό 2221 (2)] και το βάρος του κενού δοχείου, συμπεριλαμβανομένου του βάρους των εξαρτημάτων και παρακολουθημάτων, του πορώδους υλικού, και του διαλύτη.

## Κλάση 2

2118  
(συνεχ.)

- (i) Στην περίπτωση μειγμάτων αερίων της 12° και αερίων δοκιμών (ελέγχων) της 13°, οι λέξεις "μείγματα αερίων" ή "αέρια ελέγχων", ανάλογα με την περίπτωση, θα χαράσσονται στο δοχείο σαν γενική ένδειξη του περιεχομένου. Ακριβής περιγραφή του περιεχομένου θα πρέπει να εικονίζεται με ανθεκτικό τρόπο, καθ' όλη τη διάρκεια της μεταφοράς.
- (k) Στην περίπτωση μεταλλικών δοχείων τα οποία, σύμφωνα με το περιθωριακό 2202 (3), γίνονται δεκτά για τη μεταφορά ενός αριθμού διαφορετικών αερίων (δοχεία πολλαπλής χρήσεως), ακριβής περιγραφή του περιεχομένου θα πρέπει να εικονίζεται με ανθεκτικό τρόπο καθ' όλη τη διάρκεια της μεταφοράς.

(2) Οι ενδείξεις θα πρέπει να χαράσσονται είτε πάνω σε κάποιο ενισχυμένο τμήμα του δοχείου, είτε πάνω σε κάποιο δακτύλιο, είτε πάνω σε πλάκα δεδομένων, τοποθετημένη σταθερά πάνω στο δοχείο. Επιπλέον, η ονομασία της ύλης μπορεί να αναφέρεται πάνω στο δοχείο με ευκρινώς ορατή επιγραφή με βαφή ή οποιαδήποτε άλλη ισοδύναμη μέθοδο.

c. Πίεση δοκιμής, βαθμός πλήρωσης και όριο χωρητικότητας των δοχείων (βλέπε επίσης περιθωριακά 2238, 211 180, 211 184 και 212 180).

2219

(1) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά πεπιεσμένων αερίων των 1°, 2° και 12°, η εσωτερική πίεση (πίεση δοκιμής) που πρέπει να εφαρμοστεί για τον έλεγχο υδραυλικής πίεσης, θα πρέπει να είναι τουλάχιστον μιάμιση φορά την πίεση πλήρωσης στους 15°C που αναφέρεται πάνω στο δοχείο, αλλά όχι μικρότερη από 1 MPa (10 bar).

(2) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά υλών της 1° (a) εκτός των τετραφθορομεθανίου, δευτερίου και υδρογόνου της 1°(b), ή αερίων της 2°(a), η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 30 MPa (300 bar) αναφερόμενα σε θερμοκρασία 15°C. Στην περίπτωση δεξαμενών, η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 25 MPa (250 bar), αναφερόμενα σε θερμοκρασία 15°C.

Στην περίπτωση δοχείων και δεξαμενών προοριζόμενων για τη μεταφορά άλλων αερίων των 1° και 2°, η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 20 MPa (200 bar), αναφερόμενα σε θερμοκρασία 15°C.

(3) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά φθορίου της 1° (at) η εσωτερική πίεση (πίεση ελέγχου) που πρέπει να εφαρμοστεί για τον έλεγχο της υδραυλικής πίεσης, θα πρέπει να είναι 20 MPa (200 bar) και η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 2.8 MPa (28 bar) σε θερμοκρασία 15°C. Επιπλέον, κανένα δοχείο δεν θα πρέπει να περιέχει περισσότερο από 5 kg φθόριο.

Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά τριφθοριούχου βορίου της 1°(at), η υδραυλική πίεση που πρέπει να εφαρμοστεί στην πίεση δοκιμής (ελέγχου), θα πρέπει να είναι είτε 30 MPa (300 bar), οπότε το μέγιστο βάρος του περιεχομένου ανά λίτρο χωρητικότητας, δεν θα πρέπει να υπερβαίνει τα 0.86 kg, είτε 22.5 MPa (225 bar), οπότε το μέγιστο βάρος του περιεχομένου ανά λίτρο χωρητικότητας, δεν θα πρέπει να υπερβαίνει τα 0.715 kg.

(4) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά μονοξειδίου του αζώτου NO της 1° (ct), η χωρητικότητα θα πρέπει να περιορίζεται στα 50 λίτρα, η υδραυλική πίεση που πρέπει να εφαρμοστεί κατά την δοκιμή (πίεση δοκιμής), θα πρέπει να είναι 20 MPa (200 bar) και η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 5 MPa (50 bar) σε θερμοκρασία 15°C.

(5) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά μειγμάτων υδρογόνου με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο, μειγμάτων αζώτου ή σπάνιων αερίων (περιεχόντων όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο από 10 % υδροσελήνιο ή φωσφίνη ή γερμανομεθάνιο κατ' όγκο ή με όχι περισσότερο από 15 % αρσίνη κατ' όγκο, της 2° (bt), μειγμάτων υδρογόνου με όχι περισσότερο από 10 % διβόριο κατ' όγκο, ή μειγμάτων αζώτου ή σπანიών αερίων (περιεχόντων όχι περισσότερο από 10 % ξένο κατ' όγκο) με όχι περισσότερο

## Κλάση 2

2219  
(συνεχ.)

από 10 % διβοράνιο κατ' όγκο, της 2° (ct), η χωρητικότητα θα πρέπει να περιορίζεται σε 50 λίτρα, η υδραυλική πίεση που πρέπει να εφαρμοστεί στον έλεγχο (πίεση ελέγχου), θα πρέπει να είναι όχι μικρότερη από 20 MPa (200 bar) και η πίεση πλήρωσης δεν θα πρέπει να υπερβαίνει τα 5 MPa (50 bar) σε θερμοκρασία 15 °C.

(6) Ο βαθμός πλήρωσης των δοχείων που είναι σύμφωνα με το περιθωριακό 2207 (1) και προορίζονται για τη μεταφορά αερίων της 7° (b) και 8° (b), θα πρέπει να παραμένουν κάτω από το όριο, στο οποίο, εάν το περιεχόμενο ανέβαινε στη θερμοκρασία στην οποία η τάση ατμών εξισώνεται με την πίεση ανοίγματος της βαλβίδας, ο όγκος του υγρού θα έφτανε το 95 % της χωρητικότητας του δοχείου σ' αυτή τη θερμοκρασία. Δοχεία προοριζόμενα για τη μεταφορά αερίων της 7° (a) και 8° (a), μπορούν να γεμίζονται έως το 98 % στην θερμοκρασία γεμίσματος και την πίεση γεμίσματος. Όταν μεταφέρεται οξυγόνο της 7° (a), θα πρέπει να λαμβάνονται μέτρα, για αποφυγή οποιουδήποτε χυσίματος της υγρής φάσης.

(7) Όταν μεταφέρεται διαλυμένο ακετυλένιο της 9°(c) σε δοχεία σύμφωνα με το περιθωριακό 2212 (1) (b), η χωρητικότητα των δοχείων δεν θα πρέπει να υπερβαίνει τα 150 λίτρα.

(8) Η χωρητικότητα των δοχείων που προορίζονται για τη μεταφορά μειγμάτων αερίων της 12°, δεν θα πρέπει να υπερβαίνει τα 50 λίτρα. Η πίεση του μείγματος δεν θα πρέπει να υπερβαίνει τα 15 MPa (150 bar) σε θερμοκρασία 15 °C.

(9) Η χωρητικότητα των δοχείων που προορίζονται για τη μεταφορά αερίων δοκιμής (ελέγχου) της 13°, δεν θα πρέπει να υπερβαίνει τα 50 λίτρα. Η πίεση πλήρωσης σε θερμοκρασία 15°C, δεν θα πρέπει να υπερβαίνει το 7% της πίεσης (ελέγχου) του δοχείου.

(10) Στην περίπτωση του εξαφθοριούχου βολφραμίου της 3° (at), η χωρητικότητα των δοχείων θα πρέπει να περιορίζεται στα 60 λίτρα.

Η χωρητικότητα δοχείων για τετραφθοριούχο πυρίτιο της 1° (at), τριγλωριούχο βόριο, νιτροδυλογλωρίδιο και σουλφουρυλοφθορίδιο της 3° (at), μεθυλοσιλάνιο της 3° (b), αρσίνη, διχλωροσιλάνιο, διμεθυλοσιλάνιο, υδροσελίνιο και τριμεθυλοσιλάνιο, της 3° (bt), χλωροκυανίδιο και κυανογόνο της 3° (ct), μέγιστα μεθυλοσιλανίων της 4° (bt), αιθυλενοξείδιο περιέχον όχι περισσότερο από 50 % μυρμηκικό μεθυλεστερά κατά βάρος, της 4° (ct), σιλάνιο, της 5° (b), και ύλες της 5° (bt) και (ct), θα πρέπει να περιορίζεται σε 50 λίτρα.

(11) Στην περίπτωση δοχείων προοριζόμενων για τριφθοριούχο χλώριο της 3° (at), η χωρητικότητα θα πρέπει να περιορίζεται στα 40 λίτρα. Μετά το γέμισμα, δοχείο περιέχον τριφθοριούχο χλώριο της 3° (at), πριν παραδοθεί για μεταφορά, θα πρέπει να κρατείται για όχι λιγότερο από 7 ημέρες για επαλήθευση της στεγανότητάς του.

2220

(1) Στην περίπτωση δοχείων προοριζόμενων για τη μεταφορά υγροποιημένων αερίων των 3° έως 6° και δοχείων προοριζόμενων για τη μεταφορά αερίων διαλυμένων υπό πίεση της 9°, η υδραυλική πίεση που πρέπει να εφαρμοστεί κατά τη δοκιμή (πίεση δοκιμής), δεν θα πρέπει να είναι μικρότερη από 1 MPa (10 bar).

(2) Στην περίπτωση υγροποιημένων αερίων των 3° και 4° θα πρέπει να τηρούνται οι παρακάτω τιμές για την υδραυλική πίεση που πρέπει να εφαρμοστεί στο δοχεία κατά τη δοκιμή (πίεση δοκιμής) και για τον μέγιστο επιτρεπόμενο ανώτατο βαθμό πλήρωσης.<sup>1/</sup>

Μείγμα με 19 έως 21 % κατά βάρος διγλωροδιφθορομεθάνιο (R12) και 79 έως 81 % κατά βάρος βρωμοχλωροδιφθορομεθάνιο (R 12 B 1)	4° (a)	1.2	1.50
Μείγματα διγλωροδιφθορομεθάνιου και αιθυλενοξειδίου περιέχον όχι περισσότερο από 12 % αιθυλενοξείδιο κατά βάρος	4° (at)	1.8	1.09
Μείγματα μεθυλοβρωμίδιου και χλωροπικρίνης	4° (at)	1	1.51
Μείγμα Α (εμπορική ονομασία: βουτάνιο)	4° (b)	1	0.50
Μείγμα Α Ο (εμπορική ονομασία: βουτάνιο)	4° (b)	1.5	0.47
Μείγμα Α 1	4° (b)	2	0.46
Μείγμα Β	4° (b)	2.5	0.43
Μείγμα C (εμπορική ονομασία: προπάνιο)	4° (b)	3	0.42
Μείγματα υδρογονανθράκων περιέχοντα μεθάνιο	4° (b)	22.5 30	0.187 0.244
Μείγματα μεθυλοσιλανίων	4° (bt)	22.5	0.39
Μείγματα μεθυλοχλωριδίου και μεθυλενοχλωριδίου	4° (bt)	1.7	0.81
Μείγματα μεθυλοχλωριδίου και χλωροπικρίνης	4° (bt)	1.7	0.81
Μείγματα μεθυλοβρωμίδιου και αιθυλενοβρωμίδιου	4° (bt)	1	1.51
Μείγματα 1,3-βουταδιενίου και υδρογονανθράκων της 3° (b)	4° (c)	1	0.50
Μείγματα μεθυλακετυλένιου / προπαδιενίου και υδρογονανθράκων	3° (b)		
Μείγμα Ρ 1	4° (c)	3	0.49
Μείγμα Ρ 2	4° (c)	2.4	0.47
Προπαδιένιο με 1 % έως 4 % μεθυλακετυλένιο, σταθεροποιημένο	4° (c)	2.2	0.50
Αιθυλενοξείδιο περιέχον όχι περισσότερο από 10 % διοξείδιο του άνθρακα κατά βάρος	4° (ct)	2.8	0.73
Αιθυλενοξείδιο περιέχον όχι περισσότερο από 50 % μυρμηκικού μεθυλεστερα κατά βάρος, με άζωτο έως μέγιστης ολικής πίεσης 1 MPa (10 bar) στους 50°C	4° (ct)	2.5	0.80
Αιθυλενοξείδιο με άζωτο έως ολικής πίεσης 1 MPa (10 bar) στους 50°C	4° (ct)	1.5	0.78

**ΣΗΜΕΙΩΣΗ 1:** Οι προβλεπόμενες πιέσεις δοκιμής/ελέγχου, είναι τουλάχιστον ίσες προς τις πιέσεις ατμού των υγρών στους 70 °C, μειωμένες κατά 100 KPa (1 bar), η απαιτούμενη όμως ελάχιστη πίεση δοκιμής/ελέγχου είναι, εντούτοις, 1 MPa (10 bar).

**ΣΗΜΕΙΩΣΗ 2:** Δεδομένου του υψηλού βαθμού τοξικότητας του φωσγενείου της 3°(at) και του χλωροκυανιδίου της 3° (ct), η ελάχιστη πίεση δοκιμής/ελέγχου για τα αέρια αυτά, έχει ορισθεί στα 2 MPa (20 bar).

**ΣΗΜΕΙΩΣΗ 3:** Οι μέγιστες προβλεπόμενες τιμές για τον βαθμό πλήρωσης σε kg/l έχουν, καθορισθεί ως εξής: Μέγιστο βάρος περιεχομένου ανά λίτρο χωρητικότητας = 0.95 φορές την πυκνότητα της υγρής φάσης στους 50 °C, επιπλέον, η φάση ατμού θα πρέπει να μην εξαφανίζεται κάτω από τους 60 °C.

(3) Στην περίπτωση δοχείων προοριζόμενων να περιέχουν υγροποιημένα αέρια των 5° και 6°, ο βαθμός πλήρωσης θα είναι τέτοιος, ώστε η εσωτερική πίεση στους 65°C να μην υπερβαίνει την πίεση δοκιμής/ελέγχου των δοχείων. Οι παρακάτω τιμές θα πρέπει να τηρούνται (βλέπε επίσης παράγραφο (4):

Περιγραφή ύλης	Αριθμός είδους	Ελάχιστη πίεση δοκιμής MPa	Μέγιστο βάρος περιεχομένου ανά λίτρο χωρητικότητας (kg)

		4.2		0.20
		10		0.66
Διοξειδίο του άνθρακα περιέχον όχι περισσότερο από 35 % αιθυλενοξειδίο κατά βάρος	6° (c)	19		0.66
		25		0.75
Αιθυλενοξειδίο περιέχον περισσότερο από 10 % αλλά όχι περισσότερο από 50 % διοξειδίο του άνθρακα κατά βάρος	6° (ct)	19		0.66
		25		0.75

(4) Για τις ύλες της 5° εκτός από υδρογλώριο της 5° (at), γερμιομεθάνιο και φωσφίνη της 5° (bt), και διβοράνιο της 5° (ct), και για ύλες της 6°, η χρήση δοχείων ελεγμένων σε πίεση μικρότερη από αυτήν που αναφέρεται στην παράγραφο (3) για τη συγκεκριμένη ύλη, επιτρέπεται, αλλά η ποσότητα της ύλης ανά δοχείο δεν θα πρέπει να υπερβαίνει εκείνη, η οποία στους 65°C θα παρήγαγε μέσα στο δοχείο πίεση ίση με την πίεση δοκιμής/ ελέγχου. Στην περίπτωση αυτή, το επιτρεπόμενο μέγιστο φορτίο θα καθορίζεται από τον εμπειρογνώμονα που έχει εγκριθεί από την αρμόδια αρχή.

2221

(1) Στην περίπτωση αερίων διαλυμένων υπό πίεση, της 9°, οι παρακάτω τιμές θα τηρούνται για την υδραυλική πίεση που πρέπει να εφαρμοστεί στα δοχεία κατά την δοκιμή / έλεγχο (πίεση δοκιμής/ελέγχου) και για τον επιτρεπόμενο μέγιστο βαθμό πλήρωσης:

Περιγραφή ύλης	Αριθμός είδους	Ελάχιστη πίεση δοκιμής MPa	Μέγιστο βάρος περιεχομένου ανά λίτρο χωρητικότητας (kg)
Αμμωνία διαλυμένη υπό πίεση σε νερό με περισσότερο από 35 % αλλά όχι περισσότερο από 40 % αμμωνία κατά βάρος	9° (at)	1	0.80
	9° (at)	1.2	0.77
με περισσότερο από 40 % αλλά όχι περισσότερο από 50 % αμμωνία κατά βάρος			
Διαλυμένο ακετυλένιο	9° (c)	6	βλέπε υπό στοιχείο (2)

(2) Στην περίπτωση διαλυμένου ακετυλενίου της 90(c), εφόσον η ισορροπία έχει επιτευχθεί στους 15°C, η πίεση πλήρωσης του κυλίνδρου, δεν θα πρέπει να υπερβαίνει την τιμή που προβλέπεται από την αρμόδια αρχή για την πορώδη μάζα, η οποία τιμή θα πρέπει να είναι χαραγμένη πάνω στον κύλινδρο. Η ποσότητα του διαλύτη και η ποσότητα του ακετυλενίου, θα πρέπει να αντιστοιχούν κι αυτές στις τιμές που ορίζονται στην έγκριση.

## Κλάση 2

## 3. Μικτή συσκευασία

- 2222 (1) Οι ύλες της Κλάσης αυτής, εκτός των υλών των 7° και 8°, μπορούν να κλεισθούν στο ίδιο κόλο ή μία με την άλλη, εάν περιέχονται :
- (a) σε μεταλλικά δοχεία πίεσης όγκου όχι μεγαλύτερου από 10 λίτρα,
- (b) σε γυάλινους σωλήνες χονδρού τοιχώματος ή γυάλινα σιφόνια σύμφωνα με τα περιθωριακά 2205 και 2206, υπό τον όρο ότι, τα εύθραυστα αυτά δοχεία ασφαρίζονται σύμφωνα με τις διατάξεις του περιθωριακού 2201(7). Τα αποσβεστικά υλικά θα πρέπει να ταιριάζουν στις ιδιότητες του περιεχομένου. Οι εσωτερικές συσκευασίες θα πρέπει να τοποθετούνται σε εξωτερική συσκευασία, στην οποία θα πρέπει να διατηρούνται αποτελεσματικά, χωριστά η μία από την άλλη.
- (2) Είδη των 10° και 11°, μπορούν να κλείνονται στο ίδιο κόλο η μία με την άλλη, υπό τους όρους που προβλέπονται στο περιθωριακό 2210.
- (3) Επιπλέον, ύλες συσκευασμένες σύμφωνα με τα περιθωριακά 2205 και 2206, μπορούν να κλείνονται στο ίδιο κόλο η μία με την άλλη, υπό τους παρακάτω ειδικούς όρους.
- (4) Κόλοτο οποίο θα πληρεί τους όρους των (1) και (3), δεν θα πρέπει να ζυγίσει πάνω από 100 kg, ή πάνω από 75 kg, εάν περιέχει εύθραυστα δοχεία.

Ειδικοί όροι:

#### 4. Ενδείξεις και ετικέτες στα κόλα (βλέπε Προσθήκη Α.9)

##### Ενδειξη

- 2223** (1) Κάθε κόλο περιέχον δοχεία με αέρια των 1° έως 9°, 12° ή 13° ή μην ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση της 11°, θα πρέπει να μαρκάρεται ευανάγνωστα και ανεξίτηλα με μία ένδειξη του περιεχομένου τους, με την προσθήκη "Κλάση 2". Το μαρκάρισμα αυτό θα πρέπει να είναι σε μία επίσημη γλώσσα του Κράτους Μέλους αναχώρησης και επίσης, εάν η γλώσσα αυτή δεν είναι η Αγγλική, η Γαλλική, ή η Γερμανική, στην Αγγλική, Γαλλική ή Γερμανική, εκτός εάν προβλέπεται διαφορετικά από τυχόν συμφωνίες που έχουν γίνει μεταξύ των Κρατών Μελών τις οποίες αφορά η διαδικασία της μεταφοράς.

Αυτή η διάταξη δεν χρειάζεται να τηρηθεί, εάν τα δοχεία και οι ενδείξεις τους είναι σαφώς ορατά.

- (2) Κόλα που περιέχουν διανεμητές αεροζόλ της 10°, θα πρέπει να μαρκάρονται με τη λέξη "ΑΕΡΟΖΟΛ", με γράμματα ευανάγνωστα και ανεξίτηλα.

- (3) Όταν μία αποστολή αποτελεί ένα πλήρες φορτίο, οι ενδείξεις που αναφέρονται στην παράγραφο (1), δεν είναι υποχρεωτικές.

##### Ετικέτες κινδύνου

- 2224** **ΣΗΜΕΙΩΣΗ:** Ως κόλο, νοείται οποιαδήποτε συσκευασία που περιέχει δοχεία, διανεμητές αεροζόλ ή μη-ξαναγεμιζόμενα εμπορευματοκιβώτια αερίου υπό πίεση, ή οποιοδήποτε δοχείο χωρίς εξωτερική συσκευασία.

- (1) Κόλα που περιέχουν ύλες και είδη της κλάσης 2, εκτός αυτών που αναφέρονται στην παράγραφο (2), Πίνακας 2 και στην παράγραφο (3) αυτού του περιθωριακού, θα πρέπει να φέρουν τις ετικέτες που ορίζονται παρακάτω:

## Κλάση 2

222s  
(συνεχ.)

## Πίνακας 1

Υλεις και ειδη	Αριθμοι υποδειγματος ετικετας
Ταξινομημένα υπό (a)	2
Ταξινομημένα υπό (at)	6.1
Ταξινομημένα υπό (b)	3
Ταξινομημένα υπό (bt)	6.1 + 3
Ταξινομημένα υπό (c)	3
Ταξινομημένα υπό (ct)	6.1 + 3

(2) Κόλα περιέχοντα ύλεις και είδη που περιγράφονται στον Πίνακα 2 παρακάτω, θα πρέπει να φέρουν τις ετικέτες που ορίζονται:

## Πίνακας 2

Αριθμός είδους	Υλεις και ειδη	Αριθμοι υποδειγματος ετικετας
1° (a)	Οξυγόνο	2 + 05
1° (at)	Φθόριο	6.1 + 05
1° (at)	Τετραφθοριούχο πυρίτιο	6.1 + 8
1° (ct)	Μονοξειδίο του αζώτου	6.1
2° (a)	Μείγματα με περισσότερο από 25 % οξυγόνο (κατ' όγκο)	2 + 05
3° (at)	Χλωριούχο βόριο, χλώριο, τριφθοριούχο χλώριο, υδροβρώμιο, νιτροχλωρίδιο και φωσγένιο	6.1 + 8
3° (at)	Διοξείδιο του αζώτου	6.1 + 05
3° (bt)	Καρβονυλοσουλφίδιο	3 + 6.1 + 8
3° (ct)	Χλωροκυανίδιο, υδροϊώδιο, άνυδρο	6.1 + 8
5° (a)	Υποξείδιο του αζώτου	2 + 05
5° (at)	Υδροχλώριο	6.1 + 8
7° (a)	Οξυγόνο, υποξείδιο του αζώτου	2 + 05
8° (a)	Αέρας και μείγματα περιέχοντα περισσότερο από 20 % οξυγόνο (κατά βάρος), μείγματα περιέχοντα περισσότερο από 32 % υποξείδιο του αζώτου (κατά βάρος)	2 + 05
10° (a)	Διανεμητές αεροζόλ	Χωρίς ετικέτα
10° (b)1	Διανεμητές αεροζόλ	Χωρίς ετικέτα
10° (bt)1	Διανεμητές αεροζόλ	6.1

## Κλάση 2

2221 (3) Σύμφωνα με τις επικίνδυνες ιδιότητες των υλών, τα κόλλα που περιέχουν ύλες των I2° και (συνεχ.) I3°, θα πρέπει να φέρουν:

- ετικέτα σε συμφωνία με το μοντέλο Αριθμ. 3 για εύφλεκτα αέρια,
- ετικέτα σε συμφωνία με το μοντέλο Αριθμ. 6.1 για τοξικά αέρια,
- ετικέτες σε συμφωνία με τα μοντέλα Αριθμ. 6.1 και 8 για διαβρωτικά αέρια,
- ετικέτες σε συμφωνία με τα μοντέλα Αριθμ. 2 και 05 για οξειδωτικά αέρια,
- ετικέτες σε συμφωνία με τα μοντέλα Αριθμ. 6.1 και 3 για εύφλεκτα τοξικά αέρια,
- ετικέτες σε συμφωνία με τα μοντέλα Αριθμ. 3, 6.1 και 8 για εύφλεκτα διαβρωτικά αέρια,
- ετικέτα σε συμφωνία με το μοντέλο Αριθμ. 2 για αέρια τα οποία δεν είναι εύφλεκτα, τοξικά, διαβρωτικά ή οξειδωτικά,
- ετικέτες σε συμφωνία με τα μοντέλα Αριθμ. 6.1 και 05 για μείγματα περιέχοντα φθόριο και εκείνα που περιέχουν διοξείδιο του αζώτου.

(4) Τα κόλλα τα οποία περιέχουν δοχεία κατασκευασμένα από υλικά υποκειμένα σε θραύση, όπως γυαλί ή ορισμένα πλαστικά υλικά, θα πρέπει να φέρουν ετικέτα σε συμφωνία με το μοντέλο Αριθμ. 12.

(5) Κάθε κόλλα που περιέχει αέρια της 7°(a) ή 8°(a), θα πρέπει να φέρει, σε δύο αντίθετες πλευρές, ετικέτες σε συμφωνία με το μοντέλο Αριθμ. 11 και αν οι ύλες τις οποίες περιέχει είναι κλεισμένες σε γυάλινα δοχεία [περιθωριακό 2207(2) (a)], πρέπει, επιπλέον, να φέρει ετικέτα σε συμφωνία με το μοντέλο Αριθμ. 12.

(6) Οι ετικέτες πάνω σε κυλίνδρους αερίου, μπορούν να προσαρτηθούν στο "αφτί" του κυλίνδρου και μπορούν να έχουν μικρότερες διαστάσεις αναλόγως, υπό την προϋπόθεση ότι παραμένουν καθαρά ορατές.

## 2225

## B. Αναγραφές στο έγγραφο μεταφοράς

2226 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς, πρέπει να υπάρχει:

- (a) στην περίπτωση των καθαρών και τεχνικώς - καθαρών αερίων των 1°, 3°, 5°, 7° ή 9°, των διανεμητών αεροζόλ της 10°, των μη-ξαναγεμιζόμενων εμπορευματοκιβωτίων αερίου υπό πίεση της 11°, μία από τις ονομασίες που είναι υπογραμμισμένες στο περιθωριακό 2201,
- (b) στην περίπτωση των μειγμάτων αερίων των 2°, 4°, 6°, 8°, 12° ή 13° : "μείγμα αερίων". Η περιγραφή αυτή, πρέπει να συμπληρώνεται με μία ένδειξη της σύνθεσης του μείγματος αερίων κατ' όγκο στα εκατό, ή βάρος στα εκατό. Συστατικά μέρη κάτω από 1%, δεν χρειάζεται να αναφέρονται. Στην περίπτωση των μειγμάτων αερίων των 2°(a), 2°(b), 2°(bt), 4°(a), 4°(b), 4°(c), 4°(ct), 6°(a), 8°(a) ή 8°(b), οι περιγραφές ή οι συνήθειες στο εμπόριο ονομασίες, που είναι υπογραμμισμένες στο περιθωριακό 2201, μπορούν ομοίως να χρησιμοποιούνται, χωρίς το καθορισμό της σύνθεσης.

Στην περίπτωση των μειγμάτων A, AO και C της 4° (b) μεταφερόμενων σε δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές, όμως, οι συνήθειες στο εμπόριο ονομασίες που αναφέρονται στη ΣΗΜΕΙΩΣΗ, μπορούν να χρησιμοποιούνται μόνο ως συμπλήρωμα.

## Κλάση 2

**2226** Οι περιγραφές αυτές πρέπει να ακολουθούνται από στοιχεία της Κλάσης, τον αριθμό είδους (συνεχ.) (μαζί με το γράμμα, αν υπάρχει) και τα αρχικά "ADR" (ή "RID") π.χ. 2, 5° (at), ADR.

(2) Στην περίπτωση δεξαμενών που περιέχουν αέρια της 7° (a) ή 8° (a), εκτός του διοξειδίου του άνθρακα και υποξειδίου του αζώτου, το έγγραφο μεταφοράς, θα πρέπει να φέρει την παρακάτω εγγραφή:

**"Η δεξαμενή είναι σε μόνιμη επικοινωνία με την ατμόσφαιρα".**

(3) Για τη μεταφορά κυλίνδρων σύμφωνα με το περιθωριακό 2212 (1) (a) υπό τους όρους του περιθωριακού 2217 (3), η παρακάτω εγγραφή θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

**"Μεταφορά σύμφωνα με το περιθωριακό 2217 (3)".**

**2227-  
2236**

**C. Κενές συσκευασίες**

**2237** (1) Τα δοχεία και οι δεξαμενές της 14°, θα πρέπει να κλείνονται με τον ίδιο τρόπο, σαν να ήταν γεμάτα.

(2) Τα ακαθάριστα κενά δοχεία της 14°, θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου, σαν να ήταν γεμάτα.

(3) Η περιγραφή στο έγγραφο μεταφοράς, θα πρέπει να είναι σύμφωνη με τις ονομασίες που δίνονται στην 14°, π.χ. "Κενό δοχείο, ακαθάριστο, 2, 14°, ADR". Η περιγραφή θα πρέπει να συμπληρώνεται με την προσθήκη των λέξεων "Τελευταίο φορτίο", μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία π.χ. "Τελευταίο φορτίο: γλώριο, 3° (at)".

(4) Τα δοχεία της 14°, που αναφέρονται στο περιθωριακό 2212 (1) (a), (b) και (d), μπορούν να μεταφέρονται μετά τη λήξη του χρονικού ορίου που τίθεται για την περιοδική δοκιμή που καθορίζεται στο περιθωριακό 2215, προκειμένου να υποβληθούν στη δοκιμή.

**D. Μεταβατικές διατάξεις**

**2238** Οι παρακάτω μεταβατικές διατάξεις θα πρέπει να εφαρμόζονται στα δοχεία για πεπεσμένα ή υγροποιημένα αέρια ή αέρια διαλυμένα υπό πίεση:

(a) Δοχεία ήδη σε υπηρεσία, θα πρέπει, με την επιφύλαξη των παρακάτω εξαιρέσεων, να γίνονται δεκτά, εφ' όσον το επιτρέπουν οι διατάξεις του Κράτους Μέλους στο οποίο διεξήχθησαν οι δοκιμασίες σύμφωνα με το περιθωριακό 2216 και εφ' όσον έχουν τηρηθεί οι προθεσμίες που προβλέπονται από τα περιθωριακά 2216 (3) και 2217 για τις περιοδικές επιθεωρήσεις.

(b) Στην περίπτωση δοχείων που έχουν κατασκευαστεί σύμφωνα με το προηγούμενο σύστημα (επιτρεπόμενη τάση δύο τρίτα αντί τριών-τετάρτων, της τάσης απόδοσης), δεν θα επιτρέπεται καμία αύξηση ούτε στη πίεση δοκιμής, ούτε στη πίεση πλήρωσης [βλέπε περιθωριακό 2211 (1)].

(c) Μεταβατικά μέτρα για δεξαμενές: βλέπε περιθωριακά 211 180 και 211 184.

(d) Μεταβατικά μέτρα για εμπορευματοκιβώτια-δεξαμενές: βλέπε περιθωριακό 212 180.

**2239-  
2299**

**ΚΛΑΣΗ 3. ΕΥΦΛΕΚΤΑ ΥΓΡΑ****1. Κατάλογος υλών**

**2300** (1) Ανάμεσα στις ύλες και τα μείγματα που καλύπτονται από τον τίτλο της Κλάσης 3, εκείνα που αναφέρονται στο περιθωριακό 2301 ή που υπάγονται σ' ένα συγκεντρωτικό τίτλο εκείνου του περιθωριακού και είδη περιέχοντα τέτοιες ύλες, υπόκεινται στους όρους που ορίζονται στα περιθωριακά 2300 (2) έως 2322 και στις διατάξεις αυτού του Παραρτήματος και του Παραρτήματος Β και είναι συνεπώς ύλες αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες των υλών που αναφέρονται στο περιθωριακό 2301, οι οποίες δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση, είτε σ' αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2301α.

(2) Ο τίτλος της Κλάσης 3, καλύπτει ύλες και είδη που περιέχουν ύλες αυτής της Κλάσης, οι οποίες:

- είναι υγρά σε μέγιστη θερμοκρασία 20 °C, ή για ιξώδεις ύλες για τις οποίες δεν μπορεί να οριστεί ένα συγκεκριμένο σημείο τήξης, είναι εξαιρετικά ιξώδεις σύμφωνα με τα κριτήρια ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310), ή είναι υγρά σύμφωνα με την μέθοδο ελέγχου ASTM D 4359-90,
- έχουν στους 50 °C τάση ατμών όχι μεγαλύτερη από 300 kPa (3 bar),
- έχουν σημείο ανάφλεξης όχι υψηλότερο από 61 °C.

Ο τίτλος της Κλάσης 3, καλύπτει επίσης εύφλεκτες υγρές ύλες και τετηγμένες στερεές ύλες με σημείο ανάφλεξης υψηλότερο από 61°C και οι οποίες μεταφέρονται ή παραδίδονται για μεταφορά ενώ θερμαίνονται σε θερμοκρασίες ίσες ή υψηλότερες από το σημείο ανάφλεξής τους.

Υλες με σημείο ανάφλεξης πάνω από 35 °C, μη-τοξικές και μη-διαβρωτικές, οι οποίες, κάτω από τους δεδομένους όρους ελέγχου, δεν υφίστανται ανάφλεξη (βλέπε Προσθήκη Α.3, περιθωριακό 3304) δεν συμπεριλαμβάνονται. Εάν όμως αυτές οι ύλες παραδίδονται για μεταφορά και μεταφέρονται ενώ θερμαίνονται σε θερμοκρασίες ίσες με ή υψηλότερες από το σημείο ανάφλεξής τους, είναι ύλες αυτής της Κλάσης.

Εύφλεκτα υγρά τα οποία, λόγω πρόσθετων επικίνδυνων ιδιοτήτων, αναφέρονται σε, ή προορίζονται για άλλες κλάσεις, επίσης δεν συμπεριλαμβάνονται. Το σημείο ανάφλεξης θα καθορίζεται όπως υποδεικνύεται στην προσθήκη Α.3, περιθωριακά 3300 έως 3302.

**ΣΗΜΕΙΩΣΗ 1:** Για γκαζόιλ, πετρέλαιο καύσιμο, καύσιμο θέρμανσης (ελαφρύ) (χαρακτηριστικός αριθμός 1202) με σημείο ανάφλεξης πάνω από 61 °C βλέπε, παρ' όλα αυτά, ΣΗΜΕΙΩΣΗ υπό περιθωριακό 2301, 31° (c).

**ΣΗΜΕΙΩΣΗ 2:** Για ύλες με σημείο ανάφλεξης πάνω από 61 °C οι οποίες μεταφέρονται ή παραδίδονται για μεταφορά στο ή πάνω από το σημείο ανάφλεξής τους, βλέπε παρ' όλα αυτά, περιθωριακό 2301, 61° (c).

(3) Οι ύλες και τα είδη της Κλάσης 3, υποδιαιρούνται ως εξής:

- A. Υλες με σημείο ανάφλεξης κάτω από 23 °C μη τοξικές, μη διαβρωτικές.
- B. Υλες με σημείο ανάφλεξης κάτω από 23 °C και τοξικές.
- C. Υλες με σημείο ανάφλεξης κάτω από 23 °C και διαβρωτικές.
- D. Υλες με σημείο ανάφλεξης κάτω από 23 °C, τοξικές και διαβρωτικές και είδη περιέχοντα εκείνες τις ύλες.

## Κλάση 3

2300  
(συνεχ.)

- E. Υλεις με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων, οι οποίες θα μπορούσαν να είναι ελαφρώς τοξικές και/ή ελαφρώς διαβρωτικές.
- F. Υλεις και παρασκευάσματα χρησιμοποιούμενα ως παρασιτοκτόνα, με σημείο ανάφλεξης κάτω από 23 °C.
- G. Υλεις με σημείο ανάφλεξης πάνω από 61 °C οι οποίες μεταφέρονται ή παραδίδονται για μεταφορά στο ή πάνω από το σημείο ανάφλεξής τους.
- H. Κενές συσκευασίες.

Υλεις και είδη της Κλάσης 3, εκτός εκείνων των 6°, 12°, 13°, και 28° ταξινομημένα υπό τους διάφορους αριθμούς του περιθωριακού 2301, θα πρέπει να κατατάσσονται σε μία από τις παρακάτω ομάδες που διακρίνονται με το γράμμα (a), (b) ή (c) σύμφωνα με τον βαθμό κινδύνου τους:

γράμμα (a): πολύ επικίνδυνες ύλες: εύφλεκτα υγρά με σημείο βρασμού ή αρχικό σημείο βρασμού όχι μεγαλύτερο από 35 °C, και εύφλεκτα υγρά με σημείο ανάφλεξης κάτω από 23 °C, τα οποία είναι είτε εξαιρετικά τοξικά σύμφωνα με τα κριτήρια του περιθωριακού 2600 είτε εξαιρετικά διαβρωτικά σύμφωνα με τα κριτήρια του περιθωριακού 2800,

γράμμα (b): επικίνδυνες ύλες: εύφλεκτα υγρά με σημείο ανάφλεξης κάτω από 23 °C τα οποία δεν κατατάσσονται στο γράμμα (a), με εξαίρεση τις ύλες του περιθωριακού 2301, 5° (c),

γράμμα (c): ύλες που παρουσιάζουν μικρό κίνδυνο: εύφλεκτα υγρά με σημείο ανάφλεξης από 23 °C έως 61 °C συμπεριλαμβανομένων και ύλες του περιθωριακού 2301, 5° (c).

- (4) Εάν ύλες της Κλάσης 3, σαν αποτέλεσμα προσηκόντων, μεταπηδήσουν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες οι ύλες που αναφέρονται ειδικά στο περιθωριακό 2301 ανήκουν, αυτά τα μείγματα ή διαλύματα θα πρέπει να κατατάσσονται στα είδη και γράμματα στα οποία ανήκουν στη βάση του πραγματικού βαθμού κινδύνου τους.

**ΣΗΜΕΙΩΣΗ:** Για την κατάταξη των διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

- (5) Στη βάση των διαδικασιών ελέγχου σε συμφωνία με την Προσθήκη Α.3, περιθωριακά 3300 έως 3302, 3304 και 3310, και τα κριτήρια που έχουν τεθεί στην (2), μπορεί επίσης να καθοριστεί εάν η φύση ενός διαλύματος ή ενός μείγματος ειδικά αναφερόμενου ή περιέχοντος μία ειδικά αναφερόμενη ύλη είναι τέτοια ώστε το διάλυμα ή μείγμα να μην υπόκειται στις διατάξεις για αυτήν την Κλάση.

- (6) Ορισμένες εξαιρετικά τοξικές εύφλεκτες υγρές ύλες με σημείο ανάφλεξης κάτω από 23 °C είναι ύλες της Κλάσης 6.1 (περιθωριακό 2601, 1° έως 10°).

- (7) Υλεις της Κλάσης 3 οι οποίες είναι υποκείμενες στο σχηματισμό υπεροξειδίων εύκολα (όπως συμβαίνει με τους αιθέρες ή με ορισμένες εταιροκυκλικές οξειδωμένες ύλες) θα γίνονται δεκτές για μεταφορά, μόνον εάν το περιεχόμενό του σε υπεροξείδια, υπολογιζόμενο ως υπεροξείδιο του υδρογόνου (H<sub>2</sub>O<sub>2</sub>), δεν υπερβαίνει το 0.3 %. Το περιεχόμενο σε υπεροξείδια θα καθορίζεται όπως ορίζεται στην προσθήκη Α.3, περιθωριακό 3303.

- (8) Οι χημικώς ασταθείς ύλες της Κλάσης 3 θα γίνονται δεκτές για μεταφορά μόνο εάν έχουν ληφθεί τα απαραίτητα μέτρα για την αποφυγή της επικίνδυνης αποσύνθεσης ή πολυμερισμού τους κατά τη διάρκεια της μεταφοράς. Για το σκοπό αυτό, θα βεβαιώνεται ειδικά ότι τα δοχεία δεν περιέχουν οποιαδήποτε ύλη υποκείμενη σε τέτοιες δράσεις.

## Κλάση 3

2ο1 Α. Υγες με σημείο ανάφλεξης κάτω από 23 °C, μη τοξικές, μη διαβρωτικές.

1° Υγες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με τάση ατμών στους 50 °C μεγαλύτερη από 175 kPa (1.75 bar):

- (a) 1089 ακεταλδεΐδη (αιθανάλη), 1108 1-πεντένιο (n-αμυλένιο), 1144 κροτονυλένιο (2-βουτίνιο), 1243 μυρμηκικός μεθυλεστέρας, 1265 πεντάνια υγρό (ισοπεντάνιο), 1267 αργό πετρέλαιο, 1303 γλωριούχο βινυλιδένιο, αδρανές (1,1-διγλωροαιθυλένιο, αδρανές), 1308 ζιρκόνιο σε εναιώρημα σε εύφλεκτο υγρό, 1863 καύσιμο στροβιλοκινητήρων αεροπορίας, 2371 ισοπεντένια, 2389 φουράνιο, 2456 2-γλωροπροπένιο, 2459 2-μεθυλο-1-βουτένιο, 2561 3-μεθυλο-1-βουτένιο (1-ισοαμυλένιο) (ισοπροπυλαιθυλένιο), 2749 τετραμεθυλοσιλάνιο, 1268 κλάσματα πετρελαίου, ε.α.ο. ή 1268 προϊόντα πετρελαίου, ε.α.ο., 3295 υδρογονάνθρακες, υγροί, ε.α.ο., 1993 εύφλεκτο υγρό, ε.α.ο.

2° Υγες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με τάση ατμών στους 50 °C μεγαλύτερη από 110 kPa (1.10 bar) αλλά όχι μεγαλύτερη από 175 kPa (1.75 bar):

- (a) 1155 διαιθυλαιθέρας (αιθυλαιθέρας), 1167 διβινυλαιθέρας αδρανής, 1218 ισοπρένιο, αδρανές, 1267 αργό πετρέλαιο, 1280 προπυλενοξείδιο, αδρανές, 1302 βινυλαιθυλαιθέρας, αδρανής, 1308 ζιρκόνιο σε εναιώρημα σε εύφλεκτο υγρό, 1863 καύσιμο, στροβιλοκινητήρων αεροπορίας, 2356 2-γλωροπροπάνιο, 2363 αιθυλομερκαπτανή, 1268 κλάσματα πετρελαίου, ε.α.ο. ή 1268 προϊόντα πετρελαίου, ε.α.ο., 3295 υδρογονάνθρακες, υγροί, ε.α.ο., 1993 εύφλεκτο υγρό, ε.α.ο.,

- (b) 1164 διμεθυλοσουλφίδιο, 1234 μεθυάλη (διμαιοξυμεθάνιο), 1265 πεντάνια υγρό (n-πεντάνιο), 1267 αργό πετρέλαιο, 1278 1-γλωροπροπάνιο (προπυλοχλωρίδιο), 1308 ζιρκόνιο σε εναιώρημα σε εύφλεκτο υγρό, 1863 καύσιμο στροβιλοκινητήρων αεροπορίας, 2246 κυκλοπεντένιο, 2460 2-μεθυλο-2-βουτένιο, 2612 μεθυλο προπυλαιθέρας, 1224 κετόνες, ε.α.ο., 1987 αλκοόλες, εύφλεκτες, ε.α.ο., 1989 αλδεΐδες, εύφλεκτες, ε.α.ο., 1268 κλάσματα πετρελαίου, ε.α.ο. ή 1268 προϊόντα πετρελαίου, ε.α.ο., 3295 υδρογονάνθρακες, υγροί, ε.α.ο., 1993 εύφλεκτο υγρό, ε.α.ο.

3° Υγες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με τάση ατμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar):

- (b) 1203 οινόπνευμα κινητήρων, 1267 αργό πετρέλαιο, 1863 καύσιμο στροβιλοκινητήρων αεροπορίας, 1268 κλάσματα πετρελαίου, ε.α.ο. ή 1268 προϊόντα πετρελαίου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ενώ σε ορισμένες κλιματολογικές συνθήκες το πετρέλαιο (γκαζολίνη) μπορεί να έχει τάση ατμών στους 50 °C μεγαλύτερη από 110 kPa (1.10 bar) αλλά όχι μεγαλύτερη από 150 kPa (1.50 bar), θα πρέπει να συνεχίσει να κατατάσσεται κάτω από αυτόν τον αριθμό είδους.

Υδρογονάνθρακες:

1114 βενζόλιο, 1136 κλάσματα λιθανθρακόπισσας, 1145 κυκλοεξάνιο, 1146 κυκλοπεντάνιο, 1175 αιθυλοβενζόλιο, 1206 επτάνια, 1208 εξάνια, 1216 ισοοκτένια, 1262 οκτάνια, 1288 ασφαλτούχος σιγστόλιθος, 1294 τολουόλιο, 1300 υποκατάστατο τερεβινθίνης (white spirit), 1307 ξυλένια

## Κλάση 3

2391  
(συνεχ.)

(ο-ξυλένιο, διμεθυλοβενζόλια), 2050 διίσοβουτυλένιο, ισομερικές ενώσεις, 2057 τριπροπυλένιο (προπυλένιο τριμερές), 2241 κυκλοεπτάνιο, 2242 κυκλοεπτένιο, 2251 δικυκλο-(2.2.1)-επτα-2.5-διένιο, αδρανές (2.5-νορμποραδιένιο, αδρανές), 2256 κυκλοεξένιο, 2263 διμεθυλοκυκλοεξάνια, 2278 η-επτένιο, 2287 ισοεπτένια, 2288 ισοεξένια, 2296 μεθυλοκυκλοεξάνιο, 2298 μεθυλοκυκλοπεντάνιο, 2309 οκταδιένια, 2358 κυκλοοκτατετραένιο, 2370 1-εξένιο, 2457 2,3-διμεθυλοβουτάνιο, 2458 εξαδιένια, 2461 μεθυλοπενταδιένια, 3295 υδρογονάνθρακες, υγροί ε.α.ο..

Αλογονωμένες ύλες:

1107 αμυλογλωρίδια, 1126 1-βρωμοβουτάνιο, (η-βουτυλοβρωμίδιο), 1127 χλωροβουτάνια (βουτυλογλωρίδια), 1150 1,2-διγλωροαιθυλένιο, 1279 1,2-διγλωροπροπάνιο, (διγλωριούχο προπυλένιο) 2047 διγλωροπροπένια, 2338 βενζοτριφθορίδιο, 2339 2-βρωμοβουτάνιο, 2340 2-βρωμοαιθυλαιθυλ αιθέρας, 2342 βρωμομεθυλοπροπάνια, 2343 2-βρωμοπεντάνιο, 2344 βρωμοπροπάνια, 2345 3-βρωμοπροπίνιο, 2362 1,1-διγλωροαιθάνιο (αιθυλιδενογλωρίδιο), 2387 φθοροβενζόλιο, 2388 φθοροτολουόλια, 2390 2-ιωδοβουτάνιο, 2391 ιωδομεθυλοπροπάνια, 2554 μεθυλαλλυλογλωρίδιο.

Αλκοόλες:

1105 αμυλοπνεύματα, 1120 βουτανόλες, 1148 διακετοναλκοόλη τεχνική, 1170 αιθανόλη (αιθυλική αλκοόλη) ή 1170 αιθανόλη (αιθυλική αλκοόλη) σε υδατικό διάλυμα περιέχον περισσότερο από 70 % αλκοόλη κατ' όγκο, 1219 ισοπροπανόλη (ισοπροπυλική αλκοόλη), 1274 η-προπανόλη (προπυλική αλκοόλη, κανονική), 3065 αλκοολούχα ποτά περιέχοντα περισσότερο από 70 % αλκοόλη κατ' όγκο, 1987 αλκοόλες, εύφλεκτες, ε.α.ο..

**ΣΗΜΕΙΩΣΗ:** Αλκοολούχα ποτά περιέχοντα περισσότερο από 24 % και όχι περισσότερο από 70 % αλκοόλη κατ' όγκο, είναι ύλες της 31° (c).

Αιθέρες:

1088 ακετάλη (1,1-διαιθοξυαιθάνιο), 1159 διίσοπροπυλαιθέρας, 1165 διοξάνιο, 1166 διοξολάνιο, 1179 αιθυλοβουτυλαιθέρας, 1304 βινυλοίσοβουτυλαιθέρας, αδρανής, 2056 τετραϊδροφουράνιο, 2252 1,2-διμεθοξυαιθάνιο, 2301 2-μεθυλοφουράνιο, 2350 βουτυλομεθυλαιθέρας, 352 βουτυλοβινυλαιθέρας, αδρανής, 2373 διαιθοξυμεθάνιο, 2374 3,3-διαιθοξυπροπένιο, 2376 2,3-διϊδροπυράνη, 2377 1,1-διμεθοξυαιθάνιο, 2384 δι-η-προπυλαιθέρας, 2398 τριτοταγής μεθυλοβουτυλαιθέρας, 2536 μεθυλοτετραϊδροφουράνιο, 2615 αιθυλοπροπυλαιθέρας, 2707 διμεθυλοδιοξάνια, 3022 1,2-βουτυλενοξείδιο, σταθεροποιημένο, 3271 αιθέρες, ε.α.ο..

Αλδεύδες:

1129 βουτυραλδεύδη, 1178 2-αιθυλοβουτυραλδεύδη, 1275 προπιοναλδεύδη, 2045 ισοβουτυραλδεύδη (ισοβουτυλαλδεύδη), 2058 βαλεριανάλδεύδη, 2367 α-μεθυλοβαλεριανάλδεύδη, 1989 αλδεύδες, εύφλεκτες, ε.α.ο..

## Κλάση 3

2301  
(συνεχ.)

Κετόνες:

1090 ακετόνη, 1156 διαιθυλοκετόνη, 1193 μεθυλαιθυλοκετόνη (αιθυλομεθυλοκετόνη), 1245 μεθυλοϊσοβουτυλοκετόνη, 1246 μεθυλοϊσοπροπενυλοκετόνη, αδρανής, 1249 μεθυλοπροπυλοκετόνη, 1251 μεθυλοβινυλοκετόνη, 2346 βουτανοδιόνη (διακετυλική), 2397 3-μεθυλοβουταν-2-όνη, 1224 κετόνες, ε.α.ο.,

Εστέρες:

1123 οξικοί βουτλεστέρες, 1128 n- μυρμηκικός βουτλεστέρας, 1161 καρβονικός διμεθυλεστέρας, 1173 οξικός αιθυλεστέρας, 1176 βορικός αιθυλεστέρας, 1190 μυρμηκικός αιθυλεστέρας, 1195 προπιονικός αιθυλεστέρας, 1213 οξικός ισοβουτλεστέρας, 1220 οξικός ισοπροπυλεστέρας, 1231 οξικός μεθυλεστέρας, 1237 βουτυρικός μεθυλεστέρας, 1247 μονομερές του μεθακρυλικού μεθυλεστέρα, αδρανής, 1248 προπιονικός μεθυλεστέρας, 1276 n-οξικός προπυλεστέρας, 1281 μυρμηκικός προπυλεστέρας, 1301 οξικός βινυλεστέρας, αδρανής, 1862 κροτονικός αιθυλεστέρας, 1917 ακρυλικός αιθυλεστέρας, αδρανής, 1919 ακρυλικός μεθυλεστέρας αδρανής, 2277 μεθακρυλικός αιθυλεστέρας, 2385 ισοβουτυρικός αιθυλεστέρας, 2393 μυρμηκικός ισοβουτλεστέρας, 2394 προπιονικός ισοβουτλεστέρας, 2400 ισοβαλεριανικός μεθυλεστέρας, 2403 οξικός ισοπροπενυλεστέρας, 2406 ισοβουτυρικός ισοπροπυλεστέρας, 2409 προπιονικός ισοπροπυλεστέρας, 2416 βορικός τριμεθυλεστέρας, 2616 βορικός τριϊσοπροπυλεστέρας, 2838 βουτυρικός βινυλεστέρας, αδρανής, 3272 εστέρες, ε.α.ο.,

Υλεις περιέχουσες θείο:

1111 αμυλομερκαπτάνες, 2347 βουτυλομερκαπτάνες, 2375 διαιθυλοσουλφίδια, 2381 διμεθυλοδισουλφίδια, 2402 προπανοθειόλες (προπυλομερκαπτάνες), 2412 τετραϋδροθειοφένια (θειολάννιο), 2414 θειοφένιο, 2436 θειοξεικό οξύ.

Υλεις περιέχουσες άζωτο:

1113 νιτρώδες αμόλιο, 1222 νιτρικό ισοπροπίλιο, 1261 νιτρομεθάνιο, 1282 πυριδίνη, 1648 ακετονιτρίλιο (μεθυλοκυανίδιο), 1865 n-νιτρικό πρόπυλιο, 2351 νιτρώδη άλατα του βουτυλίου, 2372 1,2 δι-(διμεθυλαμινο)αιθάνιο (τετραμεθυλαιθυλενοδιαμίνη), 2410 1, 2, 3, 6-τετραϋδροπυριδίνη,

Άλλες εύφλεκτες ύλες και μείγματα και παρασκευάσματα περιέχοντα εύφλεκτα υγρά:

1091 ακετονέλαια, 1201 ζυμέλαιο, 1293 βάμματα, φαρμακευτικά, 1308 ζιρκόνιο σε εναίωρημα σε εύφλεκτο υγρό, 2380 διμεθυλοδιαθοξυσιλάνιο, 1993 εύφλεκτο υγρό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για ιξώδεις ύλες, μείγματα και παρασκευάσματα, βλέπε 5°.

4° Διαλύματα νιτροκυτταρίνης σε μείγματα των υλών της 1° έως 3° περιέχοντα περισσότερο από 20 % αλλά όχι περισσότερο από 55 % νιτροκυτταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερη από 12.6 % (κατά βάρος επί ξηρού):

- (a) 2059 διάλυμα νιτροκυτταρίνης, εύφλεκτο.
- (b) 2059 διάλυμα νιτροκυτταρίνης, εύφλεκτο.

## Κλάση 3

2301  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 1:** Μείγματα με σημείο ανάφλεξης κάτω από 23 °C και περιέχοντα περισσότερο από 55 % νιτροκυταρίνη, ασχέτως της περιεκτικότητάς της σε άζωτο ή περιέχοντα όχι περισσότερο από 55 % νιτροκυταρίνη με περιεκτικότητα σε άζωτο πάνω από 12.6 % (κατά βάρος επί ξηρού), είναι όλες της Κλάσης 1, (βλέπε περιθωριακό 2101, 4°, χαρακτηριστικός αριθμός 0340, ή 26°, χαρακτηριστικός αριθμός 0342), ή της Κλάσης 4.1 (βλέπε περιθωριακό 2401, 24°).

**ΣΗΜΕΙΩΣΗ 2:** Μείγματα περιέχοντα 20 % ή λιγότερο νιτροκυταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερη από 12.6 % (κατά βάρος επί ξηρού) είναι όλες της 5°.

5° Υγρά ή ιξώδη μείγματα και παρασκευάσματα, συμπεριλαμβανομένων εκείνων που περιέχουν 20 % ή λιγότερο νιτροκυταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερο από 12.6 % (κατά βάρος επί ξηρού):

(a) με σημείο βρασμού ή αρχικό σημείο βρασμού όχι μεγαλύτερο από 35 °C υπό την προϋπόθεση ότι, δεν βρίσκονται κάτω από την (c):

1133 κόλλες, 1139 επικαλυπτικό διάλυμα, 1169 εκχυλίσματα, αρωματικά, υγρά, 1197 εκχυλίσματα, γευστικά, υγρά, 1210 μελάνη τυπογραφίας, 1263 χρώμα (συμπεριλαμβάνοντας χρώμα, λάκα, σμάλτο, βαφή, σέλακ, βερνίκι, λούστρο, υγρό πληρωτικό υλικό και υγρή βάση λάκας) ή 1263 υλικό σχετιζόμενο με χρώμα (συμπεριλαμβάνοντας ένωση λέπτυνσης ή μείωσης του χρώματος), 1266 προϊόντα αρωματοποίησης, 1286 ρητινέλαιο, 1287 διάλυμα καουτσούκ, 1306 συντηρητικά ξύλου, 1866 διάλυμα ρητίνης,

(b) με σημείο βρασμού ή αρχικό σημείο βρασμού μεγαλύτερο από 35 °C υπό την προϋπόθεση ότι, δεν βρίσκονται κάτω από την (c):

1133 κόλλες, 1139 επικαλυπτικό διάλυμα, 1169 εκχυλίσματα, αρωματικά, υγρά, 1197 εκχυλίσματα, γευστικά, υγρά, 1210 μελάνη τυπογραφίας, 1263 χρώμα (συμπεριλαμβάνοντας χρώμα, λάκα, σμάλτο, βαφή, σέλακ, βερνίκι, λούστρο, υγρό πληρωτικό υλικό και υγρή βάση λάκας) ή 1263 υλικό σχετιζόμενο με χρώμα (συμπεριλαμβάνοντας ένωση λέπτυνσης ή μείωσης του χρώματος), 1266 προϊόντα αρωματοποίησης, 1286 ρητινέλαιο, 1287 διάλυμα καουτσούκ, 1306 συντηρητικά ξύλου, 1866 διάλυμα ρητίνης, 1999 πίσσες, υγρές συμπεριλαμβάνοντας άσφαλο δρόμων και οδέλαια, βιτούμιο και υπολείμματα, 3269 κτ πολυεστερικής ρητίνης,

(c) 1133 κόλλες, 1139 επικαλυπτικό διάλυμα, 1169 εκχυλίσματα, αρωματικά, υγρά, 1197 εκχυλίσματα, γευστικά, υγρά, 1210 μελάνη τυπογραφίας, 1263 χρώμα (συμπεριλαμβάνοντας χρώμα, λάκα, σμάλτο, βαφή, σέλακ, βερνίκι, λούστρο, υγρό πληρωτικό υλικό και υγρή βάση λάκας) ή 1263 υλικό σχετιζόμενο με χρώμα (συμπεριλαμβάνοντας ένωση λέπτυνσης ή μείωσης του χρώματος), 1266 προϊόντα αρωματοποίησης, 1286 ρητινέλαιο, 1287 διάλυμα καουτσούκ, 1306 συντηρητικά ξύλου, 1866 διάλυμα ρητίνης, 1999 πίσσες, υγρές συμπεριλαμβάνοντας άσφαλο δρόμων και οδέλαια, βιτούμιο και υπολείμματα, 3269 κτ πολυεστερικής ρητίνης, 1993 εύφλεκτο υγρό, ε.α.ο.

Ταξινόμηση υπό το γράμμα (c) είναι μόνο δυνατή εάν καλύπτονται οι παρακάτω απαιτήσεις:

## Κλάση 3

2301  
(συνεχ.)

1. ότι το ύψος του διαχωρισμένου στρώματος διαλύτη είναι λιγότερο από 3 % του ολικού ύψους στον έλεγχο διαχωρισμού του διαλύτη,<sup>1/</sup> και
2. ότι το ιξώδες<sup>2/</sup> και το σημείο ανάφλεξης είναι σε συμφωνία με τον παρακάτω πίνακα:

Κινηματικό ιξώδες (εκτιμώμενο) (σε σχεδόν μηδενικό βαθμό διάτμησης) mm <sup>2</sup> /s στους 23 °C	Χρόνος ροής t σε συμφωνία με ISO 2431:1984		Σημείο ανάφλεξης  σε °C
	σε s	Διάμετρος αναβλυστήρα σε mm	
20 < g ≤ 80	20 < t ≤ 60	4	πάνω από 17
80 < g ≤ 135	60 < t ≤ 100	4	πάνω από 10
135 < g ≤ 220	20 < t ≤ 32	6	πάνω από 5
220 < g ≤ 300	32 < t ≤ 44	6	πάνω από -1
300 < g ≤ 700	44 < t ≤ 100	6	πάνω από -5
700 < g ≤	100 < t	6	-5 και κάτω

**ΣΗΜΕΙΩΣΗ 1:** Μείγματα περιέχοντα περισσότερο από 20 % αλλά όχι περισσότερο από 55 % νιτροκυτταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερη από 12.6 % κατά βάρος επί ξηρού, είναι όλες της 4°.

Μείγματα με σημείο ανάφλεξης κάτω από 23 °C και περιέχοντα:

- περισσότερο από 55 % νιτροκυτταρίνη, ασχέτως περιεκτικότητας σε, ή
- όχι περισσότερο από 55 % νιτροκυτταρίνη με περιεκτικότητα σε άζωτο πάνω από 12.6 % κατά βάρος επί ξηρού,

είναι όλες της Κλάσης 1 (βλέπε περιθωριακό 2101, 4°, Αριθμ. 0340, ή 22°, Αριθμ. 0342) ή της Κλάσης 4.1 (βλέπε περιθωριακό 2401, 24°).

**ΣΗΜΕΙΩΣΗ 2:** Καμία όλη αυτής της Οδηγίας αναφερόμενη με την ονομασία της κάτω από άλλες εγγραφές δεν μπορεί να μεταφέρεται κάτω από την εγγραφή 1263 Χρώμα ή 1263 Υλικό σχετιζόμενο με χρώμα. Υλές υπό χαρακτηριστικό αριθμό 1263 μπορούν να περιέχουν όχι περισσότερο από 20 % νιτροκυτταρίνη υπό την προϋπόθεση ότι, η περιεκτικότητα σε άζωτο δεν υπερβαίνει το 12.6 % κατά βάρος επί ξηρού.

<sup>1/</sup> Έλεγχος διαχωρισμού του διαλύτη: αυτός ο έλεγχος διεξάγεται στους 23 °C με τη χρήση ενός βαθμονομημένου μετρητικού κυλίνδρου των 100 ml πωματισμένου τύπου συνολικού ύψους περίπου 25 cm και ομοιόμορφης εσωτερικής διαμέτρου περίπου 3 cm πάνω από το διαβαθμισμένο τμήμα. Η ύλη ανακινείται μέχρι να αποκτήσει ομοιόμορφη πυκνότητα και χύνεται μέσα στον μετρητικό κύλινδρο έως το σημάδι των 100 ml. Το πάμα μπαίνει και ο κύλινδρος μένει χωρίς ανακίνηση για 24 ώρες. Μετά από 24 ώρες το ύψος του υπερκείμενου διαχωρισμένου στρώματος μετράται και υπολογίζεται το ύψος του στρώματος ως ποσοστό του συνολικού ύψους του δείγματος.

<sup>2/</sup> Προσδιορισμός του ιξώδους: Εάν η συγκεκριμένη ύλη είναι μη-Νευτώνια, ή εάν η μέθοδος προσδιορισμού του ιξώδους από ροή είναι ακατάλληλη, χρησιμοποιείται για την ύλη ένα ιξωδόμετρο μεταβλητού ρυθμού διάτμησης, στους 23 °C, για έναν αριθμό ρυθμών διάτμησης, οι λαμβανόμενες τιμές σημειώνονται σε σχέση με τον αντίστοιχο ρυθμό διάτμησης και στη συνέχεια παρεκτείνονται για μηδενικό ρυθμό διάτμησης. Το δυναμικό ιξώδες που λαμβάνεται με αυτόν τον τρόπο, διαφαιρούμενο με τη πυκνότητα, δίνει το φαινομενικό κινηματικό ιξώδες σε μία περιοχή κοντά στο μηδενικό ρυθμό διάτμησης.

## Κλάση 3

**ΣΗΜΕΙΩΣΗ 3:** 3269 Τα κит πολυεστερικής ρητίνης έχουν δύο συστατικά: ένα βασικό προϊόν [ΚΛΑΣΗ 3, Ομάδα(b) ή (c)], και έναν ενεργοποιητή (οργανικό υπεροξείδιο), το καθένα συσκευασμένο ξεχωριστά σε μία εσωτερική συσκευασία. Το οργανικό υπεροξείδιο θα πρέπει να είναι των τύπων D, E ή F, χωρίς να απαιτεί ρύθμιση της θερμοκρασίας και περιορισμένο σε 125 ml υγρό και 500 g στερεό ανά εσωτερική συσκευασία. Τα συστατικά μπορούν να τοποθετούνται στην ίδια εξωτερική συσκευασία, υπό την προϋπόθεση ότι, δεν αντιδρούν επικίνδυνα μεταξύ τους σε περίπτωση διαρροής.

- 6° 3064 διάλυμα νιτρογλυκερίνης σε αλκοόλη με περισσότερο από 1 % αλλά όχι περισσότερο από 5 % νιτρογλυκερίνη.

**ΣΗΜΕΙΩΣΗ:** Ειδικοί όροι συσκευασίας εφαρμόζονται για αυτή την ύλη (βλέπε περιθωριακό 2303), βλέπε επίσης κλάση 1, περιθωριακό 2101, 4°, χαρακτηριστικός αριθμός 0144.

- 7° (b) 1204 διάλυμα δινιτρογλυκερίνης σε αλκοόλη με όχι περισσότερο από 1 % νιτρογλυκερίνη.

- B. Ύλες με σημείο ανάφλεξης κάτω από 23 °C και τοξικές.

**ΣΗΜΕΙΩΣΗ 1:** Τοξικές ύλες με σημείο ανάφλεξης 23 °C ή παραπάνω, και μερικές ύλες που αναφέρονται με την ονομασία τους στα 1° έως 10° του περιθωριακού 2601 είναι ύλες της Κλάσης 6.1.

**ΣΗΜΕΙΩΣΗ 2:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600.

- 11° Νιτρίλια ή ισονιτρίλια (ισοκυανίδια):

- (a) 1093 ακρυλονιτρίλιο, αδρανές, 3079 μεθακρυλονιτρίλιο, αδρανές, 3273 νιτρίλιο, εύφλεκτα, τοξικά, ε.α.ο.,  
(b) 2284 ισοβουτυρονιτρίλιο, 2378 2-διμεθυλο-αμινακετονιτρίλιο, 2404 προπυλονιτρίλιο, 2411 βουτυρονιτρίλιο, 3273 νιτρίλιο, εύφλεκτα, τοξικά, ε.α.ο.

- 12° 1921 προπυλενιμίνη, αδρανής.

**ΣΗΜΕΙΩΣΗ:** Ειδικοί όροι συσκευασίας εφαρμόζονται για αυτή την ύλη (βλέπε περιθωριακό 2304).

- 13° 2481 Ισοκυανικός αιθυλεστέρας.

**ΣΗΜΕΙΩΣΗ:** Ειδικοί όροι συσκευασίας εφαρμόζονται για αυτή την ύλη (βλέπε περιθωριακό 2304).

- 14° Άλλοι ισοκυανικοί εστέρες:

- (a) 2483 ισοκυανικός ισοπροπυλεστέρας, 2605 ισοκυανικός μεθοξυμεθυλεστέρας,  
(b) 2486 ισοκυανικός ισοβουτυλεστέρας, 2478 ισοκυανικοί εστέρες, εύφλεκτοι, τοξικοί, ε.α.ο., ή 2478 διάλυμα ισοκυανικών εστέρων, εύφλεκτο, τοξικό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Διαλύματα ισοκυανικών εστέρων με σημείο ανάφλεξης όχι μικρότερο από 23 °C, είναι ύλες της Κλάσης 6.1 (βλέπε περιθωριακό 2601, 18° ή 19°).

## Κλάση 3

- 2301** 15° Άλλες ύλες περιέχουσες άζωτο:  
(συνεχ.)
- (a) 1194 νιτροδες αιθύλιο, διάλυμα.
- 16° Αλογονωμένες οργανικές ύλες:
- (a) 1099 αλλυλοβρωμίδιο, 1100 αλλυλογλωρίδιο, 1991 γλωροπρένιο, αδρανές,
- (b) 1184 διγλωριούχο αιθυλένιο (1,2-διγλωροαιθάνιο), 2354 γλωρομεθυλαιθυλαιθέρας.
- 17° Οξυγονωμένες οργανικές ύλες:
- (a) 2336 μυρμηγκικός αλλυλεστέρας, 2983 μείγμα αιθυλενοξειδίου και προπιλενοξειδίου, με όχι περισσότερο από 30 % αιθυλενοξείδιο, 1986 αλκοόλες, εύφλεκτες, τοξικές, ε.α.ο., 1988 αλδεΐδες, εύφλεκτες, τοξικές, ε.α.ο.,
- (b) 1230 μεθανόλη, 2333 οξικός αλλυλεστέρας, 2335 αλλυλαιθυλαιθέρας, 2360 διαλλυλαιθέρας, 2396 μεθακρυλαλδεΐδη, αδρανής, 2622 γλυκιδαλδεΐδη, 1986 αλκοόλες, εύφλεκτες, τοξικές, ε.α.ο., 1988 αλδεΐδες, εύφλεκτες, τοξικές, ε.α.ο.
- 18° Οργανικές ύλες περιέχουσες θείο:
- (a) 1131 διθειούχος άνθρακας (θειούχος άνθρακας),
- (b) 1228 μερκαπτάνες, υγρές, εύφλεκτες, τοξικές, ε.α.ο., ή 1228 μείγμα μερκαπτάνης, υγρό, εύφλεκτο, τοξικό, ε.α.ο.
- 19° Ύλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα), με σημείο ανάφλεξης κάτω από 23 °C και τοξικά τα οποία δεν μπορούν να ταξινομηθούν υπό άλλο συγκεντρωτικό τίτλο:
- (a) 1992 εύφλεκτο υγρό, τοξικό, ε.α.ο.,
- (b) 2603 κυκλοεπτατριένιο, 3248 φάρμακο, υγρό, εύφλεκτο, τοξικό, ε.α.ο., 1992 εύφλεκτο υγρό, τοξικό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Φαρμακευτικά προϊόντα έτοιμα για χρήση, π.χ καλλυντικά, ναρκωτικά και φάρμακα, τα οποία είναι ύλες που παρασκευάζονται και συσκευάζονται σε συσκευασίες, τύπου που προορίζεται για λιανική πώληση ή διανομή για προσωπική ή οικιακή κατανάλωση, τα οποία θα ήταν αλλιώς ύλες του είδους 19° (b), δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**C.** Ύλες με σημείο ανάφλεξης κάτω από 23 °C και διαβρωτικές

**ΣΗΜΕΙΩΣΗ 1:** Διαβρωτικά υγρά με σημείο ανάφλεξης 23 °C ή παραπάνω είναι ύλες της Κλάσης 8 (βλέπε περιθωριακό 2801).

**ΣΗΜΕΙΩΣΗ 2:** Ορισμένα εύφλεκτα διαβρωτικά υγρά με σημείο ανάφλεξης κάτω από 23°C και σημείο βρασμού πάνω από 35°C, είναι ύλες της Κλάσης 8 [βλέπε περιθωριακό 2800 (7) (α)].

## Κλάση 3

2301  
(συνεχ.)**ΣΗΜΕΙΩΣΗ 3:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800.

21° Χλωροσιλάνια:

- (a) 1250 μεθυλοτριγλωροσιλάνιο, 1305 βινυλοτριγλωροσιλάνιο, αδρανές,  
 (b) 1162 διμεθυλοδιγλωροσιλάνιο, 1196 αιθυλοτριγλωροσιλάνιο, 1298 τριμεθυλογλωροσιλάνιο, 2985 γλωροσιλάνια, εύφλεκτα, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Χλωροσιλάνια τα οποία παράγουν εύφλεκτα αέρια σε επαφή με το νερό, είναι όλες της Κλάσης 4.3, 1° (a) [βλέπε περιθωριακό 2471, 1° (a)].

22° Αμίνες και διαλύματά τους:

- (a) 1221 ισοπροπυλαμίνη, 1297 υδατικό διάλυμα τριμεθυλαμίνης, περιέχον 30 % έως 50 % τριμεθυλαμίνη (κατά βάρος), 2733 αμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο. ή 2733 πολυαμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο.,  
 (b) 1106 αμυλαμίνες (n-αμυλαμίνη, τριτοταγής-αμυλαμίνη), 1125 n-βουτυλαμίνη, 1154 διαιθυλαμίνη, 1158 διίσοπροπυλαμίνη, 1160 υδατικό διάλυμα διμεθυλαμίνης, 1214 ισοβουτυλαμίνη, 1235 υδατικό διάλυμα μεθυλαμίνης, 1277 προπυλαμίνη, 1296 τριαθυλαμίνη, 1297 υδατικό διάλυμα τριμεθυλαμίνης, με όχι περισσότερο από 30 % τριμεθυλαμίνη κατά βάρος, 2266 N,N-διμεθυλοπροπυλαμίνη (διμεθυλο-N-προπυλαμίνη), 2270 υδατικό διάλυμα αιθυλαμίνης με όχι λιγότερο από 50 % αλλά όχι περισσότερο από 70 % αιθυλαμίνη (κατά βάρος), 2379 1, 3- διμεθυλοβουτυλαμίνη, 2383 διπροπυλαμίνη, 2945 N-μεθυλοβουτυλαμίνη, 2733 αμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο. ή 2733 πολυαμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Η άνοδρη διμεθυλοαμίνη, η αιθυλαμίνη, η μεθυλαμίνη και η τριμεθυλαμίνη είναι όλες της Κλάσης 2 [βλέπε περιθωριακό 2201, 3° (bt)].

23° Άλλες ύλες περιέχουσες άζωτο:

- (b) 1922 πυρρολιδίνη, 2386 1-αιθυλοπυριδίνη, 2399 1-μεθυλοπυριδίνη, 2401 πυριδίνη, 2493 εξαμεθυλενοϊμίνη, 2535 4-μεθυλομορφολίνη (N-μεθυλομορφολίνη).

24° Διαλύματα αλκοολικών αλάτων:

- (b) 1289 διάλυμα μεθυλικού νατρίου σε αλκοόλη, 3274 διάλυμα αλκοολικών αλάτων, ε.α.ο. σε αλκοόλη.

25° Άλλες αλογονωμένες διαβρωτικές ύλες:

- (b) 1717 ακετυλογλωρίδιο, 1723 αλλυλοϊωδιδιο, 1815 προπιονυλογλωρίδιο, 2353 βουτυρυλογλωρίδιο, 2395 ισοβουτυρυλογλωρίδιο.

26° Ύλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με σημείο ανάφλεξης κάτω από 23 °C και εξαερετικά διαβρωτικά, διαβρωτικά ή λίγο διαβρωτικά, τα οποία δεν μπορούν να ταξινομηθούν κάτω από άλλο συλλογικό τίτλο:

## Κλάση 3

2301  
(συνεχ.)

- (a) 2924 εύφλεκτο υγρό, διαβρωτικό, ε.α.ο.,  
 (b) 2924 εύφλεκτο υγρό, διαβρωτικό, ε.α.ο.

D. Υγες με σημείο ανάφλεξης κάτω από 23 °C, τοξικές και διαβρωτικές και είδη περιέχοντα εκείνες τις ύλες

- 27° (a) 3286 εύφλεκτο υγρό, τοξικό, διαβρωτικό, ε.α.ο.,  
 (b) 2359 διαλλυλαμίνη,  
3286 εύφλεκτο υγρό, τοξικό, διαβρωτικό, ε.α.ο.

28° 3165 δεξαμενή καυσίμου μονάδας υδραυλικής ισχύος αεροσκάφους περιέχον μείγμα άνυδρης υδραζίνης και μεθυλυδραζίνης.

*ΣΗΜΕΙΩΣΗ:* Ειδικοί όροι συσκευασίας εφαρμόζονται για αυτές τις δεξαμενές (βλέπε περιθωριακό 2309).

E. Υγες με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων οι οποίες θα μπορούσαν να είναι λίγο τοξικές ή λίγο διαβρωτικές

*ΣΗΜΕΙΩΣΗ:* Μη-τοξικά και μη-διαβρωτικά διαλύματα και ομογενή μείγματα με σημείο ανάφλεξης 23 °C ή παραπάνω (ιξώδεις ύλες, χρώματα ή βερνίκια, εκτός από ύλες περιέχουσες περισσότερο από 20 % νιτροκυταρίνη) συσκευασμένα σε δοχεία με λιγότερο από 450 λίτρα χωρητικότητα, υπόκεινται μόνο στις απαιτήσεις του περιθωριακού 2314 εάν, στον έλεγχο διαχωρισμού του διαλύτη, όπως περιγράφεται στην υποσημείωση <sup>11</sup> στην 5°, το ύψος του διαχωρισμένου στρώματος διαλύτη είναι μικρότερο από 3 % του ολικού ύψους, και εάν οι ύλες στους 23 °C έχουν, στο πάμα ροής σύμφωνα με το ISO 2431:1984 με αναβλυστήρα διαμέτρου 6 mm, χρόνο ροής:

- (a) όχι μικρότερο από 60 δευτερόλεπτα, ή  
 (b) όχι μικρότερο από 40 δευτερόλεπτα και περιέχουν όχι περισσότερο από 60 % ύλες της Κλάσης 3.

31° Υγες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων, όχι λίγο τοξικά και όχι λίγο διαβρωτικά:

- (c) 1202 πετρέλαιο καύσιμο ή 1202 γκαζόιλ ή 1202 καύσιμο θέρμανσης (ελαφρύ), 1223 κηροζίνη, 1267 αργό πετρέλαιο, 1863 καύσιμο στροβιλομηχανών αεροπορίας, 1268 κλάσματα πετρελαίου, ε.α.ο. ή 1268 προϊόντα πετρελαίου, ε.α.ο.

*ΣΗΜΕΙΩΣΗ:* Με έκπτωση από το περιθωριακό 2300 (2), το πετρέλαιο καύσιμο, το γκαζόιλ και το καύσιμο θέρμανσης (ελαφρύ) με σημείο ανάφλεξης πάνω από 61 °C, θα θεωρούνται ύλες της 31° (c), χαρακτηριστικός αριθμός ύλης 1202.

2301  
(συνεχ.)

Υδρογονάνθρακες:

1136 κλάσματα λιθανθρακόπισσας, 1147 δεκαϋδروναφθαλένιο (δεκαλίνη), 1288 ασφαλτούχος σχιστόλιθος, 1299 τερεβινθίνη, 1300 υποκατάστατο τερεβινθίνης (white spirit), 1307 ξυλένια (π-ξυλένιο, p-ξυλένιο, διμεθυλοβενζόλια), 1918 ισοπροπυλοβενζόλιο (κουμένιο), 1920 εννείνια, 1999 πίσσες, γυρές συμπεριλαμβάροντας άσφαλτο δρόμων και οδέλια, βιτούμιο και υπολείμματα, 2046 κυμένια (o-,m-,p-) (μεθυλισοπροπυλοβενζόλια), 2048 δικυκλοπενταδιέριο, 2049 διαιθυλοβενζόλια (o-,m-,p-), 2052 διπεντέριο (λιμονένιο), 2055 στυρέριο μονομερές, αδρανές (βινυλοβενζόλιο μονομερές αδρανές), 2057 τριπροπυλέριο (προπυλέριο τριμερές), 2247 n-δεκάνιο, 2286 πενταμεθυλοεπτάνιο (ισοδαδεκάνιο), 2303 ισοπροπενυλοβενζόλιο, 2324 τρισοβουτυλέριο, 2325 1.3.5-τριμεθυλοβενζόλιο (μεστυλέριο), 2330 ενδεκάνιο, 2364 n- προπυλοβενζόλιο, 2368 α-πινένιο, 2520 κυκλοοκταδιένια, 2541 τερπινολένιο, 2618 βινυλοτολουόλια, αδρανή (o-,m-,p-), 2709 βουτυλοβενζόλια, 2850 προπυλέριο τετραμερές (τετραπροπυλέριο), 2319 τερπενικοί υδρογονάνθρακες, ε.α.ο., 3295 υδρογονάνθρακες, υγροί, ε.α.ο.

Αλογονωμένες ύλες:

1134 γλωροβενζόλιο (φαινυλοχλωρίδιο), 1152 διγλωροπεντάνια, 2047 διγλωροπροπένια, 2234 γλωροβενζοτριφθορίδια (o-,m-,p-), 2238 γλωροτολουόλια (o-,m-,p-), 2341 1-βρωμο- 3-μεθυλοβουτάνιο, 2392 ιωδοπροπάνια, 2514 βρωμοβενζόλια, 2711 m-διβρωμοβενζόλιο,

Αλκοόλες:

1105 αμυλαλκοόλες, 1120 βουτανόλες, 1148 διακετονική αλκοόλη χημικός καθαρή, 1170 διάλυμα αιθανόλης (διάλυμα αιθυλικής αλκοόλης) περιέχον περισσότερο από 24 % και όχι περισσότερο από 70 % αλκοόλη, 1171 μονοαιθυλαιθέρας της αιθυλενογλυκόλης (2-αιθοξυ-αιθανόλη), 1188 μονομεθυλαιθέρας της αιθυλενογλυκόλης (2-μεθοξυ- αιθανόλη), 1212 ισοβουτανόλη (ισοβουτυλική αλκοόλη), 1274 n-προπανόλη, (προπυλική αλκοόλη, κανονική), 2053 μεθυλοϊσοβουτυλική καρβινόλη (μεθυλαμυλική αλκοόλη), 2244 κυκλοπεντανόλη, 2275 2-αιθυλοβουτανόλη, 2282 εξανόλες, 2560 2- μεθυλοπεντανόλη-2, 2614 μεταλλυλική αλκοόλη, 2617 μεθυλοκυκλοεξανόλες, εύφλεκτες, 2686 διαιθυλαμινοαιθανόλη, 3065 αλκοολούχα ποτά περιέχοντα όχι περισσότερο από 24 % και όχι περισσότερο από 70 % αλκοόλη κατ' όγκο, 3092 1-μεθοξυ-2-προπανόλη, 1987 αλκοόλες, εύφλεκτες, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ 1:** Υδατικά διαλύματα αιθυλικής αλκοόλης και αλκοολούχα ποτά περιέχοντα όχι περισσότερο από 24 % αλκοόλη κατ' όγκο, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Αλκοολούχα ποτά περιέχοντα περισσότερο από 24 % και όχι περισσότερο από 70 % αλκοόλη κατ' όγκο, υπόκεινται στις διατάξεις αυτής της Οδηγίας μόνο εάν μεταφέρονται σε δοχεία με χωρητικότητα μεγαλύτερη από 250 λίτρα ή σε οχήματα-δεξαμενές, εμπορευματοκιβώτια-δεξαμενές ή αποσυναρμολογούμενες δεξαμενές.

Αιθέρες:

1149 διβουτυλαιθέρας, 1153 διαιθυλαιθέρας της αιθυλενογλυκόλης (1, 2- διαιθοξυαιθάνιο), 2219 αλλυλικός γλυκιδυλαιθέρας, 2222 ανισόλη (φαινυλομεθυλαιθέρας), 2707 διμεθυλοδιοξάνια, 2752 1.2-εποξυ-3-αιθοξυπροπάνιο, 3271 αιθέρες, ε.α.ο.,

## Κλάση 3

2301  
(συνεχ.)

## Αλδεύδες:

1191 οκτυλαλδεύδες (αιθυλεξάλδεύδες) (2-αιθυλεξάλδευδη) (3-αιθυλεξάλδευδη), 1199 φουρφοουράλη (φουρφοουραλδεύδη), 1207 εξάλδευδη, 1264 παραλδεύδη, 2498 1,2,3,6-τετραϋδοβενζάλδευδη, 2607 ακρολείνη διμερής, σταθεροποιημένη, 3056 n-επταλδεύδη, 1989 αλδεύδες, εύφλεκτες, ε.α.ο.,

## Κετόνες:

1110 n-αμυλομεθυλοκετόνη, 1157 δύσσοβουτυλοκετόνη, 1229 μεσιτυλοξείδιο, 1915 κυκλοεξανόνη, 2245 κυκλοπεντανόνη, 2271 αιθυλοαμυλοκετόνες, 2293 4-μεθοξυ-4 μεθυλοπεντανόνη-2, 2297 μεθυλοκυκλοεξανόνες, 2302 5-μεθυλοεξανόνη - 2, 2310 πεντανοδιόνη-2.4 (ακετυλακετόνη), 2621 ακετυλομεθυλοκαρβινόλη, 2710 διπροτυλοκετόνη, 1224 κετόνες, ε.α.ο.,

## Εστέρες:

1104 οξικός αμυλεστέρας, 1109 μυρμηκικός αμυλεστέρας, 1123 οξικός βουτυλεστέρας, 1172 οξικός μονοαιθυλαιθέρας της αιθυλενογλυκόλης (2-οξικός αιθοξαιθυλεστέρας), 1177 οξικός αιθυλοβουτυλεστέρας, 1180 βουτυρικός αιθυλεστέρας, 1189 οξικός μονομεθυλαιθέρας της αιθυλενογλυκόλης, 1192 γαλακτικός αιθυλεστέρας, 1233 οξικός μεθυλαμυλεστέρας, 1292 πυριτικός τετρααιθυλεστέρας, 1914 n-προπιονικός βουτυλεστέρας, 2227 n-μεθακρυλικός βουτυλεστέρας, αδρανής, 2243 οξικός κυκλοεξυλεστέρας, 2283 μεθακρυλικός ισοβουτυλεστέρας, αδρανής, 2323 φωσφοράδες τριαθύλιο, 2329 φωσφοράδες τριμεθύλιο, 2348 n-ακρυλικός βουτυλεστέρας αδρανής, 2366 καρβονικός διαιθυλεστέρας (καρβονικός αιθυλεστέρας), 2405 βουτυρικός ισοπροπυλεστέρας, 2413 ορθοτιτανικός τετραπροπυλεστέρας, 2524 ορθομυρμηκικός αιθυλεστέρας, 2527 ακρυλικός ισοβουτυλεστέρας αδρανής, 2528 ισοβουτυρικός ισοβουτυλεστέρας, 2616 βορικός τριϊσοπροπυλεστέρας, 2620 βουτυρικός αμυλεστέρας, 2708 βουτοξύλιο (3-μεθοξυ-1-ακετοξυβουτάνιο), 2933 2-γλωροπροπιονικός μεθυλεστέρας, 2934 2-γλωροπροπιονικός ισοπροπυλεστέρας, 2935 2-γλωροπροπιονικός αιθυλεστέρας, 2947 γλωροξικός ισοπροπυλεστέρας, 3272 εστέρας, ε.α.ο.,

## Υλεις περιέχουσες άζωτο:

1112 νιτρικό αμόλιο, 2054 μορφολίνη, 2265 N,N-διμεθυλοφορμαμίδιο, 2313 πικολίνες (μεθυλοπυριδίνες) 2332 οξίμη ακεταλδεύδης, 2351 νιτρούδη βουτύλια, 2608 νιτροπροπάνια, 2840 βουτυραλδοξίμη, 2842 νιτροαιθάνιο, 2906 διάλυμα τριϊσοκονατοϊσοκονουρικών ή ισοφορονεδίϊσοκονικικών αλάτων, (70 % κατά βάρος), 2943 τετραϋδροφουρφοουραμίνη.

## Υλεις περιέχουσες θείο:

3054 κυκλοεξυλομερκαπτάνη.

## Κλάση 3

2301  
(συνεχ.)

Άλλες εύφλεκτες ύλες, μείγματα και παρασκευάσματα περιέχοντα εύφλεκτα υγρά:

1130 καμφορέλαιο, 1133 κόλλες, 1139 επικαλυπτικό διάλυμα, 1169 εκχυλίσματα αρωματικά, υγρά, 1197 εκχυλίσματα, γευστικά, υγρά, 1201 ζυμέλαιο, 1210 μελάνη τυπογραφίας, 1263 χρώμα (συμπεριλαμβάνοντας χρώμα, λάκα, σμάλτο, βαφή, σέλακ, βερνίκι, λούστρο, υγρό πληρωτικό υλικό και υγρή βάση λάκας) ή 1263 υλικό σγετιζόμενο με χρώμα (συμπεριλαμβάνοντας ένωση λέπτυνσης ή μείωσης χρώματος), 1266 προϊόντα αρωματοποίησης, 1272 έλαιο πεύκου, 1286 ρητινέλαιο, 1287 διάλυμα καουτσούκ, 1293 βάμματα, φαρμακευτικά, 1306 συντηρητικά ζύλου, υγρά, 1308 ζιρκόνιο σε εναιώρημα σε εύφλεκτο υγρό, 1866 διάλυμα ρητίνης, 3269 πολυεστερικής ρητίνης, 1993 εύφλεκτο υγρό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Μείγματα περιέχοντα περισσότερο από 20 % αλλά όχι περισσότερο από 55 % νιτροκυταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερη από 12,6 % (κατά βάρος επί ξηρού), είναι ύλες του 34° (c).

**ΣΗΜΕΙΩΣΗ 2:** Για 3269 εξαρτήματα πολυεστερικής ρητίνης, βλέπε 5° ΣΗΜΕΙΩΣΗ 3.

32° Υλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων, λίγο τοξικά:

- (c) 2841 δι-η-αμυλαμίνη, 1228 μερκαπτανές, υγρές, εύφλεκτες, τοξικές, ε.α.ο. ή 1228 μείγμα μερκαπτανής, υγρό, εύφλεκτο, τοξικό, ε.α.ο., 1986 αλκοόλες εύφλεκτες, τοξικές, ε.α.ο., 1988 αλδεΐδες εύφλεκτες, τοξικές, ε.α.ο., 2478 ισοκτανικά άλατα, εύφλεκτα, τοξικά, ε.α.ο. ή 2478 διάλυμα ισοκτανικών αλάτων, εύφλεκτο, τοξικό, ε.α.ο., 3248 φάρμακο, υγρό, εύφλεκτο, τοξικό, ε.α.ο., 1992 εύφλεκτο, υγρό, τοξικό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Προϊόντα φαρμακοποιίας έτοιμα για χρήση, π.χ. καλλυντικά, ναρκωτικά και φάρμακα, τα οποία είναι ύλες που παρασκευάζονται και συσκευάζονται σε συσκευασίες, τύπου που προορίζεται για λιανική αγορά ή διανομή για προσωπική ή οικιακή κατανάλωση, οι οποίες θα μπορούσαν αλλιώς να είναι ύλες της 32° (c), δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

33° Υλες, διαλύματα και μείγματα (όπως παρασκευάσματα και απόβλητα) με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων, λίγο διαβρωτικά:

- (c) 1106 αμυλαμίνη (sec-αμυλαμίνη), 1198 διάλυμα φορμαλδεΐδης, εύφλεκτο, 1289 διάλυμα μεθυλικού νατρίου σε αλκοόλη, 1297 υδατικό διάλυμα τριμεθυλαμίνης, (όχι περισσότερο από 30 % τριμεθυλαμίνη, κατά βάρος), 2260 τριπροπυλαμίνη, 2276 2-αιθυλεξυλαμίνη, 2361 δίσοβουτυλαμίνη, 2526 φουρφορυλαμίνη, 2529 ισοβουτυρικό οξύ, 2530 ισοβουτυρικός ανυδρίδιο, 2610 τριαλλυλαμίνη, 2684 διαιθυλαμινοπροπυλαμίνη, 2733 αμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο. ή 2733 πολυαμίνες, εύφλεκτες, διαβρωτικές, ε.α.ο., 2924 εύφλεκτο υγρό, διαβρωτικό, ε.α.ο.

## Κλάση 3

**2301** 34° Δ ιαλύματα νιτροκυτταρίνης σε μείγματα υλών της 31° (c) περιέχοντα περισσότερο (συνεχ.) από 20 % αλλά όχι περισσότερο από 55 % νιτροκυτταρίνη με περιεκτικότητα σε άζωτο όχι μεγαλύτερη από 12.6 % (κατά βάρος επί ξηρού):

(c) 2059 διάλυμα νιτροκυτταρίνης, εύφλεκτο.

**ΣΗΜΕΙΩΣΗ:** Μείγματα περιέχοντα περισσότερο από 55 % νιτροκυτταρίνη, ασχέτως της περιεκτικότητάς της σε άζωτο, ή περιέχοντα όχι περισσότερο από 55 % νιτροκυτταρίνη με περιεκτικότητα σε άζωτο πάνω από 12.6 % (κατά βάρος επί ξηρού), είναι ύλες της Κλάσης 1 (βλέπε περιθωριακό 2101, 4°, χαρακτηριστικός αριθμός 0340 ή 26°, χαρακτηριστικός αριθμός 0342) ή της Κλάσης 4.1 (βλέπε περιθωριακό 2401, 24°).

**F. Ύλες και παρασκευάσματα χρησιμοποιούμενα ως παρασιτοκτόνα με σημείο ανάφλεξης κάτω από 23 °C**

**ΣΗΜΕΙΩΣΗ 1:** Εύφλεκτες υγρές ύλες και παρασκευάσματα, χρησιμοποιούμενα ως παρασιτοκτόνα, οι οποίες είναι εξαιρετικά τοξικά, τοξικά ή λίγο τοξικά και έχουν σημείο ανάφλεξης 23 °C ή παραπάνω, είναι ύλες της Κλάσης 6.1 (βλέπε περιθωριακό 2601, 71° έως 87°).

**ΣΗΜΕΙΩΣΗ 2:** Στους πίνακες, τα παρασιτοκτόνα υποδιαιρούνται σε είδη 41° έως 57° ως εξής:

- εξαιρετικά τοξικές ύλες και παρασκευάσματα
- τοξικές ύλες και παρασκευάσματα
- λίγο τοξικές ύλες και παρασκευάσματα

**ΣΗΜΕΙΩΣΗ 3:** Όλες οι ενεργές ύλες και τα παρασκευάσματά τους τα χρησιμοποιούμενα ως παρασιτοκτόνα, θα κατατάσσονται υπό τις 41° έως 57° εξαιρετικά τοξικά, τοξικά και λίγο τοξικά, σε συμφωνία με το περιθωριακό 2600 (3).

**ΣΗΜΕΙΩΣΗ 4:** Εάν είναι γνωστή μόνο η τιμή  $LD_{50}$  της ενεργής ύλης και όχι εκείνη των παρασκευασμάτων της ενεργής ύλης, τα παρασκευάσματα μπορούν να καταταγούν υπό τις 41° έως 57° εξαιρετικά τοξικά, τοξικά και βλαβερά χρησιμοποιώντας τους παρακάτω πίνακες, όπου οι τιμές που εμφανίζονται στις στήλες "εξαιρετικά τοξικά", "τοξικά" και "λίγο τοξικά" της 41° έως 57° αντιπροσωπεύουν το ποσοστό της ενεργής παρασιτοκτόνου ύλης στα παρασκευάσματα.

**ΣΗΜΕΙΩΣΗ 5:** Για τις ύλες οι οποίες δεν ονομάζονται στον κατάλογο, και για τις οποίες μόνο η τιμή  $LD_{50}$  της ενεργής ύλης είναι γνωστή και όχι η τιμή  $LD_{50}$  των διαφόρων παρασκευασμάτων, η κατάταξη ενός παρασκευάσματος μπορεί να καθοριστεί από τον πίνακα στο περιθωριακό 2600(3), χρησιμοποιώντας μία τιμή  $LD_{50}$  λαμβανόμενη από πολλαπλασιασμό της τιμής  $LD_{50}$  της ενεργής ύλης επί  $100/X$ , όπου  $x$  είναι το ποσοστό της ενεργής ύλης κατά βάρος, σύμφωνα με τον παρακάτω τύπο:

$$\text{Τιμή } LD_{50} = \frac{\text{τιμή της } LD_{50} \text{ της ενεργούς ύλης} \times 100}{\text{ποσοστό της ενεργούς ύλης κατά βάρος}}$$

**ΣΗΜΕΙΩΣΗ 6:** Η κατάταξη σύμφωνα με τις παραπάνω ΣΗΜΕΙΩΣΕΙΣ 4 και 5 δεν θα χρησιμοποιούνται όταν τα παρασκευάσματα περιέχουν πρόσθετα τα οποία επηρεάζουν την τοξικότητα της ενεργής ύλης ή όταν ένα παρασκεύασμα περιέχει περισσότερο από μία ενεργή ύλη. Σε τέτοιες περιπτώσεις η κατάταξη θα βασίζεται στην τιμή  $LD_{50}$  του συγκεκριμένου παρασκευάσματος, σύμφωνα με τα κριτήρια στο περιθωριακό 2600 (3). Εάν η τιμή  $LD_{50}$  δεν είναι γνωστή, η ύλη θα κατατάσσεται στα εξαιρετικά τοξικά της 41° έως 57°.

G. Ύλες με σημείο ανάφλεξης πάνω από 61 °C οι οποίες μεταφέρονται ή παραδίδονται για μεταφορά στο ή πάνω από το σημείο ανάφλεξής τους

61° (c) 3256 υγρά υψηλής θερμοκρασίας, εύφλεκτα, ε.α.ο., με σημείο ανάφλεξης πάνω από 61 °C, στο ή πάνω από το σημείο ανάφλεξής τους.

H. Κενές συσκευασίες

71° Κενές συσκευασίες συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα, (IBC), κενές οχήματα-δεξαμενές, κενές αποσυναρμιολογούμενες δεξαμενές, κενά εμπορευματοκιβώτια-δεξαμενές, ακαθάριστα που περιείχαν ύλες της Κλάσης 3.

2301a Ούτε οι όροι γι' αυτήν την κλάση που περιέχονται σ' αυτό το Παράρτημα ούτε εκείνοι που περιέχονται στο Παράρτημα Β εφαρμόζονται στα παρακάτω:

(1) Ύλες των 1° έως 5°, 21° έως 26° και 31° έως 34° και λίγο τοξικές ύλες των 41° έως 57° που μεταφέρονται σε συμφωνία με τους παρακάτω όρους:

(a) Ύλες ταξινομημένες υπό την (α) κάθε είδους: όχι περισσότερο από 500 ml ανά εσωτερική συσκευασία και όχι περισσότερο από 1 λίτρο ανά κόλο.

## Κλάση 3

- 2301a** (συνεχ.)
- (b) Ύλες ταξινομημένες υπό την (b) κάθε είδους εκτός της 5° (b) και αλκοολούχων ποτών της 3° (b): όχι περισσότερο από 3 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 12 λίτρα ανά κόλο.
  - (c) Αλκοολούχα ποτά της 3° (b): όχι περισσότερο από 5 λίτρα ανά εσωτερική συσκευασία.
  - (d) Ύλες ταξινομημένα υπό την 5° (b): όχι περισσότερο από 5 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 20 λίτρα ανά κόλο.
  - (e) Ύλες ταξινομημένες υπό την (c) κάθε είδους: όχι περισσότερο από 5 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 45 λίτρα ανά κόλο.

Αυτές οι ποσότητες των υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες σύμφωνα τουλάχιστον με τους όρους του περιθωριακού 3538.

Οι "Γενικοί όροι συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

**ΣΗΜΕΙΩΣΗ:** Στην περίπτωση ομογενών μειγμάτων περιεχόντων νερό, οι ορισμένες ποσότητες σχετίζονται μόνο με την όλη αυτής της κλάσης που περιέχεται σε εκείνα τα μείγματα.

- (2) Αλκοολικά ποτά της 31° (c) σε συσκευασίες περιέχουσες όχι περισσότερο από 250 λίτρα.
- (3) Το καύσιμο κινητήρων που περιέχεται στις δεξαμενές οχημάτων μεταφοράς για την κίνησή τους ή τη λειτουργία των εξειδικευμένων συσκευών τους (π.χ. ψυγεία). Οι κρουνοί καυσίμου μεταξύ της μηχανής και της δεξαμενής καυσίμου των μοτοσυκλετών και μοτοποδηλάτων των οποίων οι δεξαμενές περιέχουν καύσιμο, θα πρέπει να είναι κλειστοί κατά τη διάρκεια της μεταφοράς και επιπλέον, αυτές οι μοτοσυκλέτες και τα μοτοποδήλατα θα πρέπει να φορτώνονται σε όρθια θέση και στερεωμένες ώστε να μην πέφτουν.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικοί όροι συσκευασίας

- 2302**
- (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τους όρους του Παραρτήματος Α.5, εκτός εάν ορίζονται ειδικοί όροι για τη συσκευασία ορισμένων υλών στα περιθωριακά 2303 έως 2310.
  - (2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) θα πρέπει να ικανοποιούν τους όρους της προσθήκης Α.6.
  - (3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2300 (3) και 3511 (2) ή 3611 (2), οι παρακάτω θα πρέπει να χρησιμοποιούνται:
    - Συσκευασίες της ομάδας συσκευασίας 1, μαρκαρισμένες με το γράμμα "X", προκειμένου για πολύ επικίνδυνες ύλες ταξινομημένες στο γράμμα (a) κάθε είδους.
    - Συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις επικίνδυνες ύλες που ταξινομούνται στο γράμμα (b) κάθε είδους.
    - Συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις λιγότερο επικίνδυνες ύλες που ταξινομούνται υπό το γράμμα (c) κάθε είδους.

## Κλάση 3

**2302 ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά των υλών της Κλάσης 3 σε οχήματα-δεξαμενές, (συνεχ.) αποσυναρμιολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές, βλέπε Παράρτημα Β.

**2. Ειδικοί όροι για τη συσκευασία ορισμένων υλών**

**2303** Διάλυμα νιτρογλυκερίνης σε αλκοόλη, της 6<sup>ο</sup> θα πρέπει να συσκευάζεται σε μεταλλικούς τενεκέδες με όχι μεγαλύτερη από 1 λίτρο χωρητικότητα ο καθένας, υπερσυσκευασμένοι σε ξύλινα κιβώτια ικανά να περιέχουν όχι περισσότερο από 5 λίτρα διαλύματος. Οι μεταλλικοί τενεκέδες θα πρέπει να είναι πλήρως περιτυλιγμένοι με απορροφητικό επικαλυπτικό υλικό. Τα ξύλινα κιβώτια θα πρέπει να είναι πλήρως επενδεδυμένα με κατάλληλο υλικό αδιαπέραστο από το νερό και τη νιτρογλυκερίνη.

Τα κόλα αυτού του είδους θα πρέπει να ικανοποιούν τις απαιτήσεις ελέγχου για συνδυασμένες συσκευασίες σε συμφωνία με την προσθήκη Α.5 για ομάδα συσκευασίας II.

**2304** (1) Προπυλενμίνη της 12<sup>ο</sup> θα πρέπει να συσκευάζεται:

- (a) σε χαλύβδινα δοχεία επαρκούς πάχους, τα οποία θα πρέπει να κλείνονται με σπειρωτό πώμα ή τάπα στεγανή και προς το υγρό και προς τον ατμό με κατάλληλη φλάντζα. Τα δοχεία θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση όχι μικρότερη από 0.3 MPa (3 bar) πίεση πιεζομέτρου σε συμφωνία με τα **περιθωριακά 2215 (1)** και 2216. Κάθε δοχείο θα πρέπει να ασφαλίεται με απορροφητικά επικαλυπτικά υλικά σε γερή στεγανή προστατευτική μεταλλική συσκευασία. Η προστατευτική συσκευασία θα πρέπει να κλείνεται ερμητικά και το κλείσιμό της θα πρέπει να ασφαλίεται έναντι οποιουδήποτε ανοίγματος από αμέλεια. Η μάζα του περιεχομένου δεν θα πρέπει να υπερβαίνει τα 0.67 kg ανά λίτρο χωρητικότητας. Ένα κόλο δε θα πρέπει να ζυγίζει περισσότερο από 75 kg. Κόλα που ζυγίζουν περισσότερο από 30 kg, εκτός εκείνων που αποστέλλονται ως πλήρες φορτίο, θα πρέπει να είναι εφοδιασμένα με μέσα χειρισμού, ή
- (b) σε χαλύβδινα δοχεία επαρκούς πάχους, τα οποία θα πρέπει να κλείνονται με σπειρωτό πώμα και σπειρωτή προστατευτική κάψουλα ή ισοδύναμο μέσο στεγανό και προς το υγρό και προς τον ατμό. Τα δοχεία θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση τουλάχιστον 1 MPa (10 bar) πίεση πιεζομέτρου σε συμφωνία με τα **περιθωριακά 2215 (1)** και 2216. Η μάζα του περιεχομένου δεν θα πρέπει να υπερβαίνει τα 0.67 kg ανά λίτρο χωρητικότητας. Ένα κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 75 kg.
- (c) Δοχεία σε συμφωνία με τα (a) και (b) θα φέρουν, με καθαρά ευανάγνωστους και διαρκείας χαρακτήρες:
  - την ονομασία ή μάρκα του κατασκευαστή και τον αριθμό του δοχείου,
  - τη λέξη "προπυλενμίνη",
  - το απόβαρο του δοχείου και το μέγιστο επιτρεπόμενο βάρος του όταν είναι γεμάτο
  - την ημερομηνία (μήνα και χρόνο) του αρχικού ελέγχου και του πιο πρόσφατου ελέγχου στον οποίο υπεβλήθη,
  - τη σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις εξετάσεις.

(2) Ισοκυανικός αιθυλεστέρας της 13<sup>ο</sup>, θα πρέπει να συσκευάζεται:

- (a) σε ερμητικά κλειστά δοχεία κατασκευασμένα από καθαρό αλουμίνιο και με χωρητικότητα όχι μεγαλύτερη από 1 λίτρο, τα οποία δεν θα πρέπει να γεμίζονται πέρα από το 90 % της χωρητικότητάς τους. Τα δοχεία θα πρέπει να ασφαρίζονται, όχι

## Κλάση 3

2304  
(συνεχ.)

περισσότερα από 10 σε ένα κιβώτιο, με κατάλληλο προστατευτικό υλικό σε ξύλινο κιβώτιο. Τα κόλα αυτού του είδους θα πρέπει να ικανοποιούν τις απαιτήσεις ελέγχου για συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 για ομάδα συσκευασίας I και δεν θα πρέπει να ζυγίζουν περισσότερο από 30 kg, ή

- (b) σε δοχεία κατασκευασμένα από καθαρό αλουμίνιο με πάχος τοιχωμάτων όχι μικρότερο από 5 mm ή σε δοχεία ανοξείδωτου χάλυβα. Τα δοχεία θα πρέπει να είναι πλήρως συγκολλημένα και θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση τουλάχιστον 0.5 MPa (5 bar) πίεση πιεζομέτρου σε συμφωνία με τα περιθωριακά 2215 (1) και 2216. Θα πρέπει να κλείνονται έτσι ώστε να είναι στεγανά με δύο πώματα, το ένα πάνω στο άλλο, ένα από τα οποία θα πρέπει να είναι σπειρωτό ή να ασφαρίζεται με έναν ομοίως αποτελεσματικό τρόπο. Ο βαθμός πλήρωσης θα πρέπει να είναι όχι μεγαλύτερος από 90 %.

Βαρέλια που ζυγίζουν περισσότερο από 100 kg θα πρέπει να είναι εφοδιασμένα με τσέρκα κύλισης ή πλευρά ενίσχυσης.

- (c) Δοχεία σε συμφωνία με τα (b) θα φέρουν, με καθαρά ευανάγνωστα και διαρκείας χαρακτήρες:
- την ονομασία ή μάρκα του κατασκευαστή και τον αριθμό του δοχείου,
  - τη λέξη "ισοκυανικός αιθυλεστέρας",
  - Το απόβαρο του δοχείου και το μέγιστο επιτρεπόμενο βάρος του όταν είναι γεμάτο,
  - την ημερομηνία (μήνα και έτος ) του αρχικού ελέγχου και του πιο πρόσφατου ελέγχου στον οποίο υπεβλήθη,
  - τη σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις εξετάσεις.

2305 Υγες που ταξινομούνται υπό την (a) των διαφόρων ειδών, θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια με μη-μετακινούμενη κεφαλή σύμφωνα με το περιθωριακό 3520, ή
- (b) σε αλουμινένια βαρέλια με μη-μετακινούμενη κεφαλή σύμφωνα με το περιθωριακό 3521, ή
- (c) σε χαλύβδινα μπιτόνια με μη-μετακινούμενη κεφαλή σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια με μη-μετακινούμενη κεφαλή χωρητικότητας όχι μεγαλύτερης από 60 λίτρα ή πλαστικά μπιτόνια με μη-μετακινούμενη κεφαλή σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από γυαλί, πλαστικό υλικό ή μέταλλο, σύμφωνα με το περιθωριακό 3538.

2306 (1) Υγες ταξινομημένες υπό τα (b) των διαφόρων ειδών, θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) σε βαρέλια αλουμινίου σύμφωνα με το περιθωριακό 3521, ή

## Κλάση 3

2306  
(συνεχ.)

- (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια ή μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538.

*ΣΗΜΕΙΩΣΗ 1 στα (a), (b), (c) και (d): Νιτρομεθάνιο της 3<sup>ο</sup> (b) δεν θα πρέπει να μεταφέρεται σε συσκευασίες με μετακινούμενη κεφαλή.*

*ΣΗΜΕΙΩΣΗ 2 στα (a), (b), (c) και (d): Απλοποιημένοι όροι εφαρμόζονται στα βαρέλια ή μπιτόνια κινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες πάνω από 200 mm<sup>2</sup>/s στους 23 °C (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).*

(2) Ύλες ταξινομημένες υπό την (b) των 3°, 15°, 17°, 22°, 24° και 25° όπως επίσης και οι λίγο τοξικές ύλες που ταξινομούνται υπό την (b) των 41° έως 57° μπορούν επίσης να συσκευάζονται σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή πυρίμαχα) σύμφωνα με το περιθωριακό 3539.

(3) Ύλες ταξινομημένες υπό την (b) των διαφόρων ειδών με εξαίρεση το νιτρομεθάνιο της 3<sup>ο</sup> (b) οι οποίες έχουν τάση αιμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar) μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, σε άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σε σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

2307

- (1) Ύλες ταξινομημένες υπό την (c) των διαφόρων ειδών θα πρέπει να συσκευάζονται:
- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) σε βαρέλια αλουμινίου σύμφωνα με το περιθωριακό 3521, ή
  - (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) σε πλαστικά βαρέλια ή μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σε σύνθετες συσκευασίες (πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) σε σύνθετες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή πυρίμαχα) σύμφωνα με το περιθωριακό 3539.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c) και (d): Απλοποιημένοι όροι μπορούν να εφαρμοστούν στα βαρέλια και μπιτόνια κινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).*

(2) Ύλες ταξινομημένες υπό την (c) των διαφόρων ειδών μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, σε άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σε σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

2308

- (1) Αιθυλική αλκοόλη και υδατικά διαλύματά της και αλκοολούχα ποτά των 3° (b) και 31° (c) μπορούν επίσης να συσκευάζονται σε ξύλινα βαρέλια τύπου-πάματος σύμφωνα με το περιθωριακό 3524.
- (2) Αλκοολούχα ποτά περιέχοντα περισσότερο από 24 % αλκοόλη αλλά όχι περισσότερο από 70 % κατ' όγκο, όταν μεταφέρονται ως μέρος της διαδικασίας παραγωγής, μπορούν να

## Κλάση 3

**2308** μεταφέρονται σε ξύλινα βαρέλια χωρητικότητας όχι μεγαλύτερης από 500 λίτρα, αποκλίνοντας (συνεχ.) από τους όρους της προσθήκης A.5 υπό τους παρακάτω όρους:

- (a) τα βαρέλια θα πρέπει να ελέγχονται και να δένονται πριν το γέμισμα,
- (b) Επαρκές συμπλήρωμα (όχι λιγότερο από 3 %) θα πρέπει να αφήνεται ώστε να επιτρέπει τη διαστολή του υγρού,
- (c) τα βαρέλια θα πρέπει να μεταφέρονται με το πάμα προ τα πάνω και,
- (d) τα βαρέλια θα πρέπει να μεταφέρονται σε εμπορευματοκιβώτια σύμφωνα με τις απαιτήσεις του Διεθνούς Συνεδρίου για Ασφαλή Εμπορευματοκιβώτια (CSC),<sup>4/</sup> όπως έχει διορθωθεί. Κάθε βαρέλι θα πρέπει να ασφαρίζεται σε επί τούτου κατασκευασμένες βάσεις και να σφηνώνεται με κατάλληλο τρόπο ώστε να αποτρέπεται η μετακίνησή του καθ'οποιοδήποτε τρόπο κατά τη διάρκεια της μεταφοράς.

(3) Ύλες των 3° (b), 4° (b), 5° (b) και (c), 31° (c), 32° (c), 33° (c), 34° (c) και οι λίγο τοξικές ύλες που είναι ταξινομημένες υπό την (b) των 41° έως 57° μπορούν επίσης να συσκευάζονται σε μεταλλικές συσκευασίες ελαφρού περιτυπώματος σύμφωνα με το περιθωριακό 3540. Απλοποιημένοι όροι μπορούν να εφαρμοστούν στις μεταλλικές συσκευασίες ελαφρού περιτυπώματος μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23°C και για ύλες της 5° (c). (Βλέπε περιθωριακά 3512 και 3552 έως 3554).

**ΣΗΜΕΙΩΣΗ:** *Νιτρομεθάνιο της 3° (b) δεν θα πρέπει να μεταφέρεται σε συσκευασίες μετακινούμενης κεφαλής.*

(4) Οι παρακάτω ύλες: 1133 κόλλες, 1210 μελάνη τυπογραφίας, 1263 χρώμα, 1263 υλικά σχετιζόμενα με χρώμα, 1866 διάλυμα ρητίνης και 3269 εξάρτημα πολυεστερικής ρητίνης των 5° (b), 5° (c) και 31° (c) μπορούν να μεταφέρονται σε ποσότητες όχι μεγαλύτερες από 5 λίτρα σε μεταλλικές ή πλαστικές συσκευασίες σύμφωνα μόνο με τις απαιτήσεις του περιθωριακού 3500 (1), (2) και (5) έως (7), υπό τον όρο ότι, οι συσκευασίες ασφαρίζονται πάνω σε παλέτες με ψάντες, με συρρικνούμενο ή εκτεινόμενο υλικό περιτυλίγματος ή με άλλο κατάλληλο τρόπο, ή υπό τον όρο ότι, οι συσκευασίες είναι εσωτερικές συσκευασίες μίας σύνθετης συσκευασίας με μέγιστο ολικό μικτό βάρος 40 kg. Οι πληροφορίες στο έγγραφο μεταφοράς θα πρέπει να είναι σύμφωνες με το περιθωριακό 2314 (1) και (3).

**2309** Οι δεξαμενές καυσίμου της μονάδας υδραυλικής ισχύος των αεροσκαφών της 28° αναγνωρίζονται ως υποκείμενες σε καθέναν από τους παρακάτω όρους.

- (a) η μονάδα θα πρέπει να συνίσταται σε ένα αλουμινένιο δοχείο πίεσης που έχει κατασκευαστεί από σύστημα σωληνώσεων και έχει συγκολλημένες κεφαλές. Η κυρίως συγκράτηση του καυσίμου μέσα σ' αυτό το δοχείο θα έγκειται σε μία αλουμινένια κύστη με μέγιστο εσωτερικό όγκο 46 λίτρα. Το εξωτερικό δοχείο θα πρέπει να έχει ελάχιστη πίεση (πιεζομέτρου) σχεδιασμού 1.275 kPa και ελάχιστη πίεση (πιεζομέτρου) έκρηξης 2.755 kPa. Κάθε δοχείο θα πρέπει να είναι ελεγχόμενο για διαρροή κατά τη διάρκεια της κατασκευής και πριν την φόρτωση και θα πρέπει να βρίσκεται στεγανό. Η πλήρης εσωτερική μονάδα θα πρέπει να συσκευάζεται με ασφάλεια σε μη-εύφλεκτο προστατευτικό υλικό, όπως βερμικουλίτης, σε γερή εξωτερική σφιστά κλεισμένη μεταλλική συσκευασία η οποία θα πρέπει επαρκώς να προστατεύει όλα τα εξαρτήματα. Η μέγιστη ποσότητα καυσίμου ανά μονάδα και κόλο είναι 42 λίτρα, ή

<sup>4/</sup> Παγκόσμιο Συνέδριο για Ασφαλή Δοχεία (Γενεύη, 1972), όπως διορθώθηκε, δημοσίευση από τον Διεθνή Ναυπλιακό Οργανισμό, 4 Albert Embankment, London SE1 7SR.

## Κλάση 3

**2309** (b) η μονάδα θα πρέπει να συνίσταται σε ένα αλουμινένιο δοχείο πίεσης. Η κυρίως (συνεχ.) συγκράτηση του καυσίμου σ' αυτό το δοχείο θα έγκειται σε ένα συγκολλημένο ερμητικά σφραγισμένο τμήμα καυσίμου με μία ελαστομερή κύστη με μέγιστη εσωτερικό όγκο 46 λίτρα. Το δοχείο πίεσης θα πρέπει να έχει ελάχιστη πίεση (πιεζόμετρου) σχεδιασμού 2.860 kPa και ελάχιστη πίεση (πιεζόμετρου) έκρηξης 5.170 kPa. Κάθε δοχείο θα πρέπει να ελέγχεται για διαρροή κατά τη διάρκεια της κατασκευής και πριν τη φόρτωση και θα πρέπει να βρίσκεται στεγανό. Η πλήρης εσωτερική μονάδα θα πρέπει να συσκευάζεται με ασφάλεια σε μη-εύφλεκτο προστατευτικό υλικό, όπως βερμικουλίτης, σε γερή εξωτερική σφικτά κλεισμένη μεταλλική συσκευασία η οποία θα πρέπει επαρκώς να προστατεύει όλα τα εξαρτήματα. Η μέγιστη ποσότητα καυσίμου ανά μονάδα και κόλο είναι 42 λίτρα.

**2310** Δοχεία ή IBC, περιέχοντα παρασκευάσματα των 31° (c), 32° (c), και 33° (c), τα οποία αναδίδουν μικρές ποσότητες διοξειδίου του άνθρακα και/ή αζώτο, θα πρέπει να εξαερίζονται, σε συμφωνία με **περιθωριακά 3500 (8) ή 3601 (6)**.

### 3. Μικτές συσκευασίες

**2311** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους μπορούν να συσκευάζονται μαζί σε σύνθετη συσκευασία σύμφωνα με το **περιθωριακό 3538**.

(2) Ύλες ή είδη διαφορετικών μερών αυτής της Κλάσης σε ποσότητες όχι μεγαλύτερες από 5 λίτρα ανά εσωτερική συσκευασία, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας σε συνδυασμένη συσκευασία σύμφωνα με το **περιθωριακό 3538**, υπό τον όρο ότι, δεν αντιδρούν επικίνδυνα μεταξύ τους.

(3) Ύλες των 6°, 7°, 12° και 13° δεν θα πρέπει να συσκευάζονται με άλλα εμπορεύματα.

(4) Ύλες ταξινομημένες υπό την (α) των διαφόρων ειδών, δεν θα πρέπει να συσκευάζονται μαζί με ύλες και είδη των κλάσεων 1 και 5.2 (εκτός από σκληρυντές και συστήματα ενώσεων) και υλικά της Κλάσης 7.

(5) Εκτός άλλως ορίζεται ειδικά, οι ύλες που είναι ταξινομημένες υπό την (α) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες από 0.5 λίτρο ανά εσωτερική συσκευασία και 1 λίτρο ανά κόλο και ύλες που είναι ταξινομημένες υπό τις (b) ή (c) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες από 5 λίτρα ανά εσωτερική συσκευασία, μπορούν να συσκευάζονται μαζί σε συνδυασμένη συσκευασία σύμφωνα με το **περιθωριακό 3538** με ύλες ή είδη άλλων Κλάσεων, υπό την προϋπόθεση ότι, μικτή συσκευασία επιτρέπεται επίσης για ύλες ή είδη αυτών των Κλάσεων και/ή με εμπορεύματα τα οποία δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό τον όρο ότι, δεν αντιδρούν επικίνδυνα μεταξύ τους.

(6) Οι παρακάτω θεωρούνται ως επικίνδυνες αντιδράσεις:

- (a) καύση και/ή έκλυση σημαντικού ποσού θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

(7) Η μικτή συσκευασία όξινων υλών με βασικές ύλες σε ένα κόλο, δεν θα επιτρέπεται εάν οι δύο ύλες είναι συσκευασμένες σε εύθραυστα δοχεία.

(8) Οι όροι των **περιθωριακών 2001 (7), 2002 (6) και (7) και 2302** θα πρέπει να ισχύουν.

(9) Εάν χρησιμοποιούνται ξύλινα κιβώτια ή κιβώτια από φύλλο φάιμπερ, ένα κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

## Κλάση 3

4. *Μαρκαρίσματα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη A9)**Μαρκαρίσματα*

- 2312 (1) Κάθε κόλα θα πρέπει καθαρά να μαρκάρεται με τον χαρακτηριστικό αριθμό των εμπορευμάτων που πρόκειται να εισαχθούν στο έγγραφο μεταφοράς, ακολουθούμενο από τα γράμματα "UN".

*Ετικέτες κινδύνου*

- (2) Κόλα περιέχοντα ύλες ή είδη αυτής της Κλάσης, θα πρέπει να φέρουν ετικέτα, σύμφωνα με το υπόδειγμα Αριθμ. 3.
- (3) Κόλα περιέχοντα ύλες των 11° έως 19°, 32° και 41° έως 57° θα πρέπει να φέρουν επιπλέον ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1.
- (4) Κόλα περιέχοντα ύλες των 21° έως 26° και 33° θα πρέπει να φέρουν επιπλέον ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.
- (5) Κόλα περιέχοντα ύλες ή είδη των 27° και 28° θα πρέπει να φέρουν επιπλέον ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1 και ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.
- (6) Κόλα περιέχοντα εύθραυστα δοχεία όχι ορατά απ' έξω, θα πρέπει επιπλέον να φέρουν σε δύο πλευρές, ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.
- (7) Κόλα περιέχοντα δοχεία, τα πόματα των οποίων δεν είναι ορατά απ' έξω και κόλα περιέχοντα εξαεριζόμενα δοχεία ή εξαεριζόμενα δοχεία χωρίς εξωτερική συσκευασία θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές, ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2313

B. *Καταγραφές στο έγγραφο μεταφοράς*

- 2314 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς, θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2301.

Εάν η ύλη δεν αναφέρεται με την ονομασία της, αλλά είναι καταχωρημένη ως ε.α.ο., ή σε μία άλλη συγκεντρωτική καταχώρηση, η περιγραφή των προϊόντων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο. ή τον χαρακτηρισμό συγκεντρωτικής καταχώρησης, ακολουθούμενα από τη χημική ή τεχνική ονομασία<sup>5/</sup>

Η περιγραφή των προϊόντων θα πρέπει να ακολουθείται από καταγραφές της Κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), (π.χ. "3, 1° (a), ADR").

Για ύλες και παρασκευάσματα των 41° έως 57°, η ονομασία θα πρέπει να εισάγεται για τα πιο επικίνδυνα συστατικά, τόσο του παρασιτοκτόνου στοιχείου<sup>6/</sup> όσο και του εύφλεκτου υγρού στοιχείου (π.χ. "παραθείο σε εξάνιο").

<sup>5/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν τον σκοπό.

<sup>6/</sup> Για την περιγραφή του παρασιτοκτόνου στοιχείου, θα πρέπει να χρησιμοποιείται η ονομασία σύμφωνα με το Πρότυπο ISO 1750:1981 (βλέπε περιθωριακό 2601), εάν εμφανίζεται εκεί.

## Κλάση 3

**2314** Για τη μεταφορά αποβλήτων (βλέπε περιθωριακό 2000 (5)), η περιγραφή των εμπορευμάτων θα είναι: "Απόβλητα περιέχοντα ...", το(α) δε συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων υπό το περιθωριακό 2002 (8), θα εισάγεται(ονται) με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα, περιέχοντα 1230 μεθανόλη, 3, 17° (b)".

Για τη μεταφορά διαλυμάτων ή μειγμάτων (όπως παρασκευάσματα και απόβλητα) περιεχόντων διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να γίνεται αναφορά σε περισσότερα από δύο συστατικά τα οποία κυρίως συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και μειγμάτων.

Για τη μεταφορά διαλυμάτων ή μειγμάτων περιεχόντων μόνο ένα συστατικό υποκείμενο στις διατάξεις αυτής της Οδηγίας, οι λέξεις "διάλυμα" ή "μείγμα" θα πρέπει να προστίθενται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Εάν ένα διάλυμα ή μείγμα με συγκεκριμένη ονομασία ή περιέχον μία ύλη με συγκεκριμένη ονομασία, δεν υπόκειται στους όρους αυτής της Κλάσης σε συμφωνία με το περιθωριακό 2300 (5), ο αποστολέας μπορεί να καταχωρήσει στο έγγραφο μεταφοράς "Όχι εμπορεύματα της Κλάσης 3".

(2) Για αποστολές σε συμφωνία με τη ΣΗΜΕΙΩΣΗ υπό την Ε του περιθωριακού 2301, ο αποστολέας θα πρέπει να καταχωρήσει στο έγγραφο μεταφοράς "Μεταφορά σε συμφωνία με τη ΣΗΜΕΙΩΣΗ υπό την Ε του περιθωριακού 2301".

(3) Για αποστολές σε συμφωνία με το περιθωριακό 2308 (4), ο αποστολέας θα πρέπει να καταχωρήσει στο έγγραφο μεταφοράς "Μεταφορά σε συμφωνία με το περιθωριακό 2308 (4)".

2315-  
2321

## C. Κενές συσκευασίες

**2322** (1) Οι κενές συσκευασίες, συμπεριλαμβανομένων των κενών IBC, ακαθάριστες, της 71°, θα πρέπει να κλείνονται με τον ίδιο τρόπο και τον ίδιο βαθμό στεγανότητας, σαν να ήταν γεμάτες.

(2) Οι κενές συσκευασίες, συμπεριλαμβανομένων των κενών IBC, ακαθάριστες, της 71°, θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου, σαν να ήταν γεμάτες.

(3) Η περιγραφή στο έγγραφο μεταφοράς, θα πρέπει να είναι σε συμφωνία με μία από τις ονομασίες που υπογραμμίζονται στην 71°, π.χ. "Κενή συσκευασία 3, 71°, ADR".

Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτιών-δεξαμενών, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται με την προσθήκη των λέξεων "Τελευταίο φορτίο", μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο 1089 ακεταλδεϋδη, 1° (a)".

2323-  
2324

## D. Μεταβατικά μέτρα

**2325** Υλεις της Κλάσης 3 μπορούν να μεταφέρονται έως την 30η Ιουνίου 1995 σε συμφωνία με τις απαιτήσεις που εφαρμόζονται για την κλάση 3 έως την 31η Δεκεμβρίου 1994. Το έγγραφο μεταφοράς θα φέρει σε τέτοιες περιπτώσεις την εγγραφή "Μεταφορά σε συμφωνία με την ADR σε ισχύ πριν την 1η Ιανουαρίου 1995"

2326-  
2399

**ΚΛΑΣΗ 4.1. ΕΥΦΛΕΚΤΑ ΣΤΕΡΕΑ****1. Κατάλογος υλών**

2400 (1) Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της κλάσης 4.1, εκείνα που αναφέρονται στο περιθωριακό 2401 ή καλύπτονται από μία συγκεντρωτική καταχώρηση σε εκείνο το περιθωριακό, υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2400 (2) έως 2422 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ύλες και είδη αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες υλών που αναφέρονται στο περιθωριακό 2401 που δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση, είτε σ' αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2401α.

(2) Ο τίτλος της κλάσης 4.1 καλύπτει ύλες και είδη που έχουν σημείο τήξης μεγαλύτερο από 20 °C ή είναι κολλώδεις, σύμφωνα με τα κριτήρια του ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310) ή δεν είναι υγρές σύμφωνα με την μέθοδο ελέγχου ASTM D 4359-90, ή που είναι αυτενεργά υγρά. Τα παρακάτω καταχωρούνται στην Κλάση 4.1:

- Άμεσα εύφλεκτες στερεές ύλες και είδη, και εκείνα που μπορούν να αναφλεγούν από σπινθήρες ή μπορούν να προκαλέσουν φωτιά μέσω τριβής,
- αυτενεργές ύλες που (σε κανονικές ή αυξημένες θερμοκρασίες), υπόκεινται σε ισχυρά εξώθερμη αποσύνθεση δημιουργούμενη από υπερβολικά υψηλές θερμοκρασίες μεταφοράς ή από επαφή με ακαθαρσίες,
- ύλες της οικογένειας των αυτενεργών υλών, που διακρίνονται από τις τελευταίες με το να έχουν θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης μεγαλύτερη από 75 °C και υπόκεινται σε ισχυρά εξώθερμη αποσύνθεση και μπορεί, σε ορισμένες συσκευασίες, να ικανοποιούν τα κριτήρια για εκρηκτικές ύλες της κλάσης 1,
- εκρηκτικά, που είναι βρεγμένα με τέτοια ποσότητα νερού ή αλκοόλης ή που περιέχουν τέτοια ποσότητα πλαστικοποιητικού ή αδρανοποιητικού μέσου, ώστε οι εκρηκτικές ιδιότητές του εξουδετερώνονται.

**ΣΗΜΕΙΩΣΗ 1:** Οι αυτενεργές ύλες και τα παρασκευάσματα αυτενεργών υλών, δεν θεωρούνται αυτενεργές ύλες της κλάσης 4.1 εάν:

- είναι εκρηκτικά σύμφωνα με τα κριτήρια της κλάσης 1,
- είναι οξειδωτικές ύλες σύμφωνα με τη διαδικασία καταχώρησης της κλάσης 5.1,
- είναι οργανικά υπεροξειδία σύμφωνα με τα κριτήρια της κλάσης 5.2,
- η θερμότητα αποσύνθεσής τους είναι μικρότερη από 300 J/g,
- η θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης (SADT) είναι μεγαλύτερη από 75 °C για ένα κόλο 50 kg,
- δοκιμές έχουν αποδείξει ότι, εξαιρούνται ως τύπου G [βλέπε Προσθήκη Α.1, περιθωριακό 3104 (2) (g)].

**ΣΗΜΕΙΩΣΗ 2:** Η θερμότητα αποσύνθεσης μπορεί να υπολογιστεί χρησιμοποιώντας οποιαδήποτε διεθνώς αναγνωρισμένη μέθοδο π.χ. Διαφορική Θερμιδομετρία Σάρωσης και αδιαβατική θερμιδομετρία.

## Κλάση 4.1

**2400 ΣΗΜΕΙΩΣΗ 3:** Η θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης (SADT) είναι η χαμηλότερη (συνεχ.) θερμοκρασία στην οποία μπορεί να συμβεί αυτο-επιταχυνόμενη αποσύνθεση με μία ύλη στη συσκευασία που χρησιμοποιείται κατά τη διάρκεια της μεταφοράς. Απαιτήσεις για τον υπολογισμό της SADT δίνονται στην Προσθήκη Α.1, περιθωριακό 3103.

(3) Οι ύλες και τα είδη της κλάσης 4.1 υποδιαιρούνται ως εξής:

- A. Στερεές οργανικές εύφλεκτες ύλες και είδη
- B. Στερεές ανόργανες εύφλεκτες ύλες και είδη
- C. Εκρηκτικές ύλες σε μη-εκρηκτική κατάσταση
- D. Ύλες της οικογένειας των αυτενεργών υλών
- E. Αυτενεργές ύλες που δεν απαιτούν έλεγχο της θερμοκρασίας
- F. Αυτενεργές ύλες που απαιτούν έλεγχο της θερμοκρασίας
- G. Κενές συσκευασίες

Ύλες και είδη της κλάσης 4.1, με εξαίρεση τις ύλες των 5° και 15°, που ταξινομούνται στα διάφορα είδη του περιθωριακού 2401, θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες που προσδιορίζονται από το γράμμα (a), (b) ή (c) σύμφωνα με τον βαθμό κινδύνου τους:

- (a) πολύ επικίνδυνες
- (b) επικίνδυνες
- (c) λιγότερο επικίνδυνες

Όλες οι στερεές ύλες, κανονικά βρεγμένες, πο., εάν στην ξηρή κατάσταση, θα κατατάσσονταν ως εκρηκτικές, καταχωρούνται στο γράμμα (a) των διαφόρων ειδών.

Οι αυτενεργές ύλες καταχωρούνται στο γράμμα (b) των διαφόρων ειδών.

Ύλες της οικογένειας των αυτενεργών υλών καταχωρούνται στα γράμματα (b) ή (c) των διαφόρων ειδών.

(4) Η καταχώρηση υλών και ειδών χωρίς συγκεκριμένη ονομασία στα 3° έως 8° του περιθωριακού 2401, καθώς και μέσα σ' αυτά τα είδη στα γράμματα, μπορεί να βασιστεί στην εμπειρία ή στα αποτελέσματα των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3320 και 3321. Η καταχώρηση στα 11° έως 14°, 16° και 17° καθώς και μέσα σ' αυτά τα είδη στα γράμματα, θα πρέπει να βασίζεται στα αποτελέσματα της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3320 και 3321. Η εμπειρία θα πρέπει επίσης να λαμβάνεται υπόψη όταν οδηγεί σε μία καταχώρηση σε πιο αυστηρή βάση.

(5) Όταν ύλες ή είδη χωρίς συγκεκριμένη ονομασία καταχωρούνται στα είδη του περιθωριακού 2401 βάσει των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3320 και 3321, τα παρακάτω κριτήρια εφαρμόζονται:

- (a) Άμεσα εύφλεκτες, σε μορφή σκόνης, κοκκώδεις ή κολλώδεις ύλες των 1°, 4°, 6° έως 8°, 11°, 12°, 14°, 16° και 17°, θα πρέπει να καταχωρούνται στην Κλάση 4.1 εάν μπορούν να αναφλεγούν εύκολα από σύντομη επαφή με μία πηγή σπινθήρα (π.χ. ένα αναμμένο σπίρτο), ή εάν, στην περίπτωση ανάφλεξης, η φλόγα απλώνεται γρήγορα, ο χρόνος ανάφλεξης είναι μικρότερος από 45 δευτερόλεπτα για μετρημένη απόσταση 100 mm ή η ταχύτητα της ανάφλεξης είναι μεγαλύτερη από 2.2 mm/s.

## Κλάση 4.1

2400  
(συνεχ.)

- (b) Σκόνες μετάλλων ή σκόνες κραμάτων μετάλλων της 13° θα πρέπει να καταχωρούνται στην Κλάση 4.1 εάν μπορούν να αναφλεγούν από μία φλόγα και η αντίδραση απλώνεται πάνω απ'όλο το δείγμα σε λιγότερο από 10 λεπτά.
- (6) Όταν ύλες και είδη χωρίς συγκεκριμένη ονομασία καταχωρούνται στα γράμματα των ειδών του περιθωριακού 2401 βάσει των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη A.3, περιθωριακά 3320 και 3321, τα παρακάτω κριτήρια εφαρμόζονται:
- (a) Τα εύφλεκτα στερεά των 4°, 6° έως 8°, 11°, 12°, 14°, 16° και 17°, που, όταν δοκιμάζονται, έχουν χρόνο ανάφλεξης μικρότερο από 45 δευτερόλεπτα πάνω από μετρημένη απόσταση 100 mm θα πρέπει να καταχωρούνται στα:
- (i) γράμμα (b) εάν η φλόγα περνάει την βρεγμένη ζώνη,
- (ii) γράμμα (c) εάν η βρεγμένη ζώνη σταματάει την φλόγα για τουλάχιστον τέσσερα λεπτά,
- (b) Σκόνες μετάλλων ή σκόνες κραμάτων μετάλλων των 13° στα οποία, όταν δοκιμάζονται, η αντίδραση:
- (i) απλώνεται πάνω απ'όλο το μήκος του δείγματος σε πέντε λεπτά, θα πρέπει να καταχωρούνται στο γράμμα (b),
- (ii) απλώνεται πάνω απ'όλο το μήκος σε περισσότερο από πέντε λεπτά, θα πρέπει να καταχωρούνται στο γράμμα (c).
- (7) Εάν ύλες της κλάσης 4.1, ως αποτέλεσμα προσμείξεων, μεταβαίνουν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες οι ύλες του περιθωριακού 2401 ανήκουν, αυτά τα μείγματα θα πρέπει να καταχωρούνται στα είδη και γράμματα στα οποία ανήκουν βάσει του πραγματικού βαθμού κινδύνου τους.
- ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) βλέπε επίσης περιθωριακό 2002 (8).
- (8) Όταν ύλες και είδη έχουν συγκεκριμένη ονομασία σε περισσότερα από ένα γράμματα του ίδιου είδους του περιθωριακού 2401, το σχετικό γράμμα μπορεί να υπολογιστεί βάσει των αποτελεσμάτων των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη A.3, περιθωριακά 3320 και 3321 και τα κριτήρια που τίθενται στην (6).
- (9) Βάσει των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη A.3, τα περιθωριακά 3320 και 3321 και τα κριτήρια που τίθενται στην (6), μπορεί επίσης να υπολογιστεί εάν η φύση μίας ύλης με συγκεκριμένη ονομασία είναι τέτοια ώστε εκείνη η ύλη να μην υπόκειται στις διατάξεις για αυτήν την Κλάση (βλέπε περιθωριακό 2414).
- (10) Οι χημικά ασταθείς ύλες της κλάσης 4.1 θα γίνονται δεκτές για μεταφορά μόνον εάν έχουν ληφθεί τα αναγκαία μέτρα για την αποφυγή της επικίνδυνης αποσύνθεσης ή πολυμερισμού τους κατά τη διάρκεια της μεταφοράς. Για το σκοπό αυτό, θα πρέπει ειδικά να βεβαιώνεται ότι εκείνα τα δοχεία δεν περιέχουν οποιαδήποτε ύλη υποκείμενη στην προαγωγή αυτών των αντιδράσεων.
- (11) Εύφλεκτα στερεά, οξειδωτικά, καταχωρημένα στον χαρακτηριστικό αριθμό 3097 των Υποδείξεων των Ηνωμένων Εθνών πάνω στη Μεταφορά Επικίνδυνων Εμπορευμάτων, δεν θα γίνονται δεκτά για μεταφορά (βλέπε, όμως, περιθωριακό 2002 (8), υποσημείωση στον πίνακα της παραγράφου 2.3.1).

## Κλάση 4.1

2400  
(συνεχ.)Αυτενεργές ύλες

(12) Η αποσύνθεση των αυτενεργών υλών μπορεί να αρχίσει από θερμότητα, επαφή με καταλυτικές προσμείξεις (π.χ. οξέα, ενώσεις βαρέων μετάλλων, βάσεις), τριβή ή σύγκρουση. Ο ρυθμός της αποσύνθεσης αυξάνει με τη θερμοκρασία και ποικίλει ανάλογα με την ύλη. Η αποσύνθεση, ειδικά εάν δεν συμβεί ανάφλεξη, μπορεί να οδηγήσει στην έκκλιση τοξικών αερίων ή ατμών. Για ορισμένες αυτενεργές ύλες, η θερμοκρασία θα πρέπει να ελέγχεται. Μερικές αυτενεργές ύλες, μπορεί να αποσυντεθούν εκρηκτικά ειδικά εάν είναι κλεισμένες σε περιορισμένο χώρο.

Αυτό το χαρακτηριστικό μπορεί να μεταβληθεί από την προσθήκη διαλυτών ή από την χρήση κατάλληλων συσκευασιών. Μερικές αυτενεργές ύλες καίγονται ζωηρά. Αυτενεργές ύλες είναι, για παράδειγμα, μερικές ενώσεις των τύπων που αναφέρονται παρακάτω:

αλειφατικές αζωενώσεις (-C-N=N-C-),  
οργανικά αζίδια (-C-N<sub>3</sub>),  
διαζωνικά άλατα (-CN<sub>2</sub><sup>+</sup> Z<sup>-</sup>),  
N-νιτρωδοενώσεις (-N-N=O), και  
αρωματικά σουλφοϋδραζίδια (-SO<sub>2</sub>-NH-NH<sub>2</sub>).

Αυτός ο κατάλογος δεν είναι εξαντλητικός και ύλες με άλλες ενεργές ομάδες και μερικά μείγματα υλών μπορεί να έχουν παρόμοιες ιδιότητες.

(13) Οι αυτενεργές ύλες ταξινομούνται σε επτά τύπους σύμφωνα με τον βαθμό κινδύνου. Οι αρχές που πρέπει να εφαρμόζονται στην ταξινόμηση των υλών που δεν αναφέρονται στο περιθωριακό 2401 τίθενται στην προσθήκη Α.1, περιθωριακό 3104. Οι τύποι μίας αυτενεργής ύλης ποικίλει από τον τύπο Α, που δεν γίνεται δεκτός για μεταφορά στη συσκευασία στην οποία δοκιμάστηκε, έως τον τύπο G, που δεν υπόκειται στις διατάξεις για αυτενεργές ύλες της κλάσης 4.1 [βλέπε περιθωριακό 2414 (5)]. Η ταξινόμηση των τύπων Β έως F σχετίζεται άμεσα με τη μέγιστη επιτρεπόμενη ποσότητα σε μία συσκευασία.

(14) Οι παρακάτω αυτενεργές ύλες δεν θα επιτρέπονται για μεταφορά:

- αυτενεργές ύλες τύπου Α [βλέπε Προσθήκη Α.1, περιθωριακό 3104 (2) (α)],

(15) Αυτενεργές ύλες και συνθέσεις αυτενεργών υλών που αναφέρονται στο περιθωριακό 2401, καταχωρούνται στα 31° έως 50°, χαρακτηριστικοί αριθμοί 3221 έως 3240.

Οι ταξινομήσεις για ύλες των 31° έως 50° βασίζονται στην τεχνικά καθαρή ύλη (εκτός όπου καθορίζεται συγκέντρωση μικρότερη από 100 %). Για άλλες συγκεντρώσεις, η ύλη μπορεί να ταξινομηθεί διαφορετικά ακολουθώντας τις διαδικασίες στην προσθήκη Α.1, περιθωριακό 3104.

Οι συγκεντρωτικές καταχωρήσεις προδιαγράφουν:

- αυτενεργές ύλες των τύπων Β έως F, βλέπε παράγραφο (13) παραπάνω,
- φυσική κατάσταση (υγρό / στερεό) και
- έλεγχο θερμοκρασίας (όταν απαιτείται), βλέπε παράγραφο (20) παρακάτω.

(16) Η ταξινόμηση των αυτενεργών υλών ή συνθέσεων των αυτενεργών υλών που δεν αναφέρονται στο περιθωριακό 2401 και η εγγραφή σε μία συγκεντρωτική καταχώρηση θα πρέπει να γίνεται από την αρμόδια αρχή του Κράτους Μέλους προέλευσης.

## Κλάση 4.1

**2400 (17)** Ενεργοποιητές, όπως ενώσεις ψευδαργύρου, μπορεί να προστεθούν σε μερικές (συνεχ.) αυτενεργές ύλες για αλλαγή της δραστηρότητάς τους. Ανάλογα με τον τύπο και την συγκέντρωση του ενεργοποιητή, αυτό μπορεί να οδηγήσει σε μείωση της θερμικής σταθερότητας και αλλαγή των εκρηκτικών ιδιοτήτων. Εάν οποιαδήποτε από αυτές τις ιδιότητες μεταβληθεί, η νέα σύνθεση θα πρέπει να εκτιμάται σε συμφωνία με τη διαδικασία ταξινόμησης.

(18) Δείγματα αυτενεργών υλών ή συνθέσεων αυτενεργών υλών που δεν αναφέρονται στο περιθωριακό 2401, για τα οποία δεν είναι διαθέσιμη μία πλήρης σειρά αποτελεσμάτων δοκιμών και που πρόκειται να μεταφερθούν για περαιτέρω δοκιμή και αξιολόγηση, θα πρέπει να καταχωρούνται σε μία από τις κατάλληλες καταχωρήσεις για αυτενεργές ύλες τύπου C, υπό την προϋπόθεση ότι ικανοποιούνται οι παρακάτω συνθήκες:

- Τα διαθέσιμα δεδομένα δείχνουν ότι το δείγμα δεν θα ήταν πιο επικίνδυνο από αυτενεργές ύλες τύπου B,
- το δείγμα είναι συσκευασμένο σε συμφωνία με τη μέθοδο συσκευασίας OP2A ή OP2B και η ποσότητα ανά μονάδα μεταφοράς περιορίζεται σε 10 kg,
- τα διαθέσιμα δεδομένα δείχνουν ότι η θερμοκρασία ελέγχου, εάν υπάρχει, είναι αρκετά χαμηλή για την αποφυγή οποιασδήποτε επικίνδυνης αποσύνθεσης και αρκετά υψηλή για την αποφυγή οποιουδήποτε επικίνδυνου διαχωρισμού φάσης.

(19) Για να εξασφαλιστεί η ασφάλεια κατά τη διάρκεια της μεταφοράς, οι αυτενεργές ύλες σε πολλές περιπτώσεις απευαισθητοποιούνται με τη χρήση διαλύτη. Όπου ορίζεται ένα ποσοστό μίας ύλης, αυτό αναφέρεται στο ποσοστό κατά βάρος, στρογγυλοποιημένο στον κοντινότερο ακέραιο αριθμό. Εάν χρησιμοποιείται διαλύτης, η αυτενεργή ύλη θα πρέπει να δοκιμάζεται με τον διαλύτη παρόντα στη συγκέντρωση και τη μορφή που χρησιμοποιείται στη μεταφορά. Διαλύτες που μπορεί να επιτρέψουν σε μία αυτενεργή ύλη να συγκεντρωθεί σ' επικίνδυνο βαθμό σε περίπτωση διαρροής από μία συσκευασία, δεν θα πρέπει να χρησιμοποιούνται. Οποιοσδήποτε διαλύτης θα πρέπει να είναι συμβατός με την αυτενεργή ύλη. Υπό αυτό το πρίσμα, συμβατοί διαλύτες είναι εκείνα τα στερεά ή υγρά που δεν έχουν ανεπιθύμητη επίδραση στη θερμική σταθερότητα και τον τύπο επικινδυνότητας της αυτενεργής ύλης. Υγροί διαλύτες σε συνθέσεις που απαιτούν έλεγχο της θερμοκρασίας [βλέπε παράγραφο (20)] θα πρέπει να έχουν σημείο βρασμού τουλάχιστον 60 °C και σημείο ανάφλεξης όχι μικρότερο από 5 °C. Το σημείο βρασμού του υγρού θα πρέπει να είναι τουλάχιστον 50 °C υψηλότερο από την θερμοκρασία ελέγχου της αυτενεργής ύλης.

(20) Η θερμοκρασία ελέγχου είναι η μέγιστη θερμοκρασία στην οποία η αυτενεργή ύλη μπορεί να μεταφερθεί με ασφάλεια. Θεωρείται ότι η θερμοκρασία των άμεσων περιβλημάτων ενός κόλου υπερβαίνει μόνον τους 55 °C κατά τη διάρκεια της μεταφοράς για ένα σχετικά σύντομο χρονικό διάστημα μέσα σε μία περίοδο 24 ωρών. Σε περίπτωση απώλειας του ελέγχου της θερμοκρασίας, μπορεί να είναι αναγκαίο να εφαρμοστούν διαδικασίες κινδύνου. Η θερμοκρασία κινδύνου είναι η θερμοκρασία στην οποία θα πρέπει να εφαρμοστούν τέτοιες διαδικασίες.

Οι θερμοκρασίες ελέγχου και κινδύνου απορρέουν από την SADT (βλέπε Πίνακα 1). Η SADT θα πρέπει να καθορίζεται για να αποφασιστεί εάν μία ύλη θα πρέπει να υπόκειται σε έλεγχο θερμοκρασίας κατά τη διάρκεια της μεταφοράς. Διατάξεις για τον καθορισμό της SADT δίνονται στην προσθήκη A.1, περιθωριακό 3103.

**Πίνακας 1: Υπολογισμός θερμοκρασιών ελέγχου και κινδύνου**

SADT	Θερμοκρασία ελέγχου	Θερμοκρασία κινδύνου
20 °C ή μικρότερη	20 °C κάτω από την SADT	10 °C κάτω από την SADT
πάνω από 20 °C έως 35 °C	15 °C κάτω από την SADT	10 °C κάτω από την SADT
πάνω από 35 °C	10 °C κάτω από την SADT	5 °C κάτω από την SADT

## Κλάση 4.1

**2400** Αυτενεργές ύλες με SADT όχι μεγαλύτερη από 55 °C, θα πρέπει να υπόκεινται σε έλεγχο (συνεχ.) θερμοκρασίας κατά τη διάρκεια της μεταφοράς. Όπου είναι εφαρμόσιμες, οι θερμοκρασίες ελέγχου και κινδύνου αναφέρονται στο περιθωριακό 2401. Η πραγματική θερμοκρασία κατά τη διάρκεια της μεταφοράς μπορεί να είναι χαμηλότερη από τη θερμοκρασία ελέγχου αλλά θα πρέπει να επιλέγεται έτσι ώστε να αποφεύγεται επικίνδυνος διαχωρισμός φάσεων.

**2401** Α. Στερεές οργανικές εύφλεκτες ύλες και είδη

1° Υλεις λαμβανόμενες από την επεξεργασία καουτσούκ σε εύφλεκτη μορφή:

(b) 1345 ψήγματα καουτσούκ, τρίμματα ή 1345 καουτσούκ άχρηστο, σε σκόνη ή σε κόκκους.

2° Εύφλεκτα είδη σε εμπορική μορφή:

(c) 1331 σπίρτα που ανάβουν παντού, 1944 σπίρτα ασφάλειας (βιβλίο, κάρτα ή κουτί), 1945 σπίρτα επαλειμμένα με κερί, 2254 σπίρτα μεγάλα, 2623 προσανάμματα, στερεά, με εύφλεκτο υγρό.

3° Είδη παραγόμενα από ελαφρώς νιτρομένη νιτροκυτταρίνη:

(c) 1324 φιλμ νιτροκυτταρινικής βάσης, καλυμμένα με ζελατίνη, εκτός από ψήγματα, 2000 κυτταρινοειδή σε κομμάτια, ράβδους, κυλίνδρους, φύλλα, σωλήνες κλπ., εκτός από ψήγματα, 1353 ίνες νοπές με ελαφρώς νιτρομένη νιτροκυτταρίνη, ε.α.ο. ή 1353 υφάσματα νοπά με ελαφρώς νιτρομένη νιτροκυτταρίνη, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2006 πλαστικά, νιτροκυτταρινικής βάσης, αυτοθερμαινόμενα, ε.α.ο., και 2002 κυτταρινοειδή ψήγματα είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 4°).

4° (c) 3175 στερεά ή μείγματα στερεών (όπως παρασκευάσματα και απόβλητα) που περιέχουν εύφλεκτα υγρά ε.α.ο. με σημείο ανάφλεξης έως 100 °C.

5° Οργανικές εύφλεκτες ύλες στην τετηγμένη κατάσταση:

2304 ναφθαλίνιο, τετηγμένο, 3176 εύφλεκτες στερεές, οργανικές, τετηγμένες, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 1334 το ναφθαλίνιο, ακατέργαστο ή καθαρισμένο, είναι ύλη του 6°.

6° Οργανικά εύφλεκτα στερεά, μη-τοξικά και μη-διαβρωτικά και μείγματα οργανικών εύφλεκτων στερεών, μη-τοξικά και μη-διαβρωτικά (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν κάτω από άλλες συγκεντρωτικές καταχωρήσεις:

(b) 1325 εύφλεκτά στερεά, οργανικά, ε.α.ο.,

(c) 1312 βορνεόλη, 1328 εξαμεθυλενοτετραμίνη, 1332 μεταλδεϋδη, 1334 ναφθαλίνιο, ακατέργαστο ή 1334 ναφθαλίνιο, καθαρισμένο, 2213 παραφορμαλδεϋδη, 2538 νιτροναφθαλίνιο, 2717 καμφορά, συνθετική, 1325 εύφλεκτα στερεά, οργανικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2304 το ναφθαλίνιο, τετηγμένο, είναι ύλη του 5°.

7° Οργανικά εύφλεκτα στερεά, τοξικά, και μείγματα οργανικών εύφλεκτων στερεών, τοξικά (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν κάτω από άλλα συγκεντρωτικά κεφάλαια:

## Κλάση 4.1

- 2401 (συνεχ.) (b) 2926 εύφλεκτα στερεά, τοξικά, οργανικά, ε.α.ο.,  
 (c) 2926 εύφλεκτα στερεά, τοξικά, οργανικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

- 8° Οργανικά εύφλεκτα στερεά, διαβρωτικά, και μείγματα οργανικών εύφλεκτων στερεών, διαβρωτικά (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν κάτω από άλλα συγκεντρωτικά κεφάλαια:

- (b) 2925 εύφλεκτα στερεά, διαβρωτικά, οργανικά, ε.α.ο.,  
 (c) 2925 εύφλεκτα στερεά, διαβρωτικά, οργανικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας βλέπε περιθωριακό 2800 (3).

**B. Στερεές ανόργανες εύφλεκτες ύλες και είδη**

- 11° Ανόργανες μη-μεταλλικές ύλες σε εύφλεκτη μορφή:

- (b) 1339 επταθειούχος φωσφόρος (P<sub>4</sub>S<sub>7</sub>) ελεύθερος από κίτρινο και λευκό φωσφόρο, 1341 πολυθειούχος φωσφόρος (P<sub>4</sub>S<sub>3</sub>) ελεύθερος από κίτρινο και λευκό φωσφόρο, 1343 τριθειούχος φωσφόρος (P<sub>4</sub>S<sub>6</sub>) ελεύθερος από κίτρινο και λευκό φωσφόρο, 2989 φωσφορώδης μόλυβδος, διβασικός, 3178 εύφλεκτες στερεές, ανόργανες, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Θειούχα άλατα του φωσφόρου που δεν είναι ελεύθερα από κίτρινο και λευκό φωσφόρο δεν θα γίνονται δεκτά για μεταφορά.

- (c) 1338 φωσφόρος, άμορφος, 1350 θείο (επίσης άνθη θείου), 2989 φωσφορώδης μόλυβδος, διβασικός, 2687 νιτρικό δικυκλοεξυλαμμώνιο, 3178 εύφλεκτες στερεές, ανόργανες, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2448 το θείο, τετηγμένο, είναι ύλη του 15°.

- 12° Εύφλεκτα μεταλλικά άλατα οργανικών ενώσεων:

- (b) 3181 μεταλλικά άλατα οργανικών ενώσεων, εύφλεκτα, ε.α.ο.,  
 (c) 1313 αβιετικό ασβέστιο, 1314 αβιετικό ασβέστιο, τετηγμένο, 1318 αβιετικό κοβάλτιο, συμπυκνωμένο, 1330 αβιετικό μαγγάνιο, 2001 ναφθενικά άλατα κοβαλτίου, σε σκόνη, 2714 αβιετικός ψευδάργυρος, 2715 αβιετικό αλουμίνιο, 3181 μεταλλικά άλατα οργανικών ενώσεων, εύφλεκτα, ε.α.ο.

- 13° Μέταλλα και μεταλλικά κράματα σε σκόνη ή άλλη εύφλεκτη μορφή:

**ΣΗΜΕΙΩΣΗ 1:** Μέταλλα και μεταλλικά κράματα σε σκόνη ή άλλη εύφλεκτη μορφή, υποκείμενα σε αυτόματη ανάφλεξη, είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 12°).

**ΣΗΜΕΙΩΣΗ 2:** Μέταλλα και μεταλλικά κράματα σε σκόνη ή άλλη εύφλεκτη μορφή που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 11° έως 15°).

## Κλάση 4.1

2401  
(συνεχ.)

(b) 1309 αλουμίνιο σε σκόνη, επικαλυμμένο, 1323 σιδηροδημήτριο, 1326 άφνιο σε σκόνη, βρεγμένο με όχι λιγότερο από 25 % (κατά βάρος) νερό, 1333 δημήτριο, πλάκες, ράβδοι, 1352 τιτάνιο σκόνη, βρεγμένο με όχι λιγότερο από 25 % (κατά βάρος) νερό, 1358 ζirkόνιο σκόνη, βρεγμένο με όχι λιγότερο από 25 % (κατά βάρος) νερό, 3089 μεταλλική σκόνη, εύφλεκτη, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ 1:** Άφνιο, τιτάνιο και ζirkόνιο σε σκόνη θα πρέπει να περιέχουν ορατή ποσότητα νερού.

**ΣΗΜΕΙΩΣΗ 2:** Άφνιο, τιτάνιο και ζirkόνιο σε σκόνη, βρεγμένα, παραγόμενα μηχανικά, μεγέθους κόκκων 53 μικρών και πάνω, ή παραγόμενα χημικά, μεγέθους κόκκων 840 μικρών και πάνω, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

(c) 1309 αλουμίνιο σκόνη, επικαλυμμένο, 1346 πυρίτιο σκόνη, άμορφο, 1869 μαγνήσιο ή 1869 κράμα μαγνησίου, σε σβόλους, τονναρίσματα ή ταινίες, 2858 ζirkόνιο, ξηρό, σε μορφή σπειροειδούς σύρματος, τελειωμένων μεταλλικών φύλλων, λωρίδων (λεπτότερον από 254 μικρά αλλά όχι λεπτότερον από 18 μικρά), 2878 τιτάνιο σπογγώδες σε κόκκους ή 2878 τιτάνιο σπογγώδες σε σκόνη, 3089 μέταλλα σε σκόνη, εύφλεκτα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Κράματα μαγνησίου με όχι περισσότερο από 50 % μαγνήσιο δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Πυρίτιο σε σκόνη σε οποιαδήποτε άλλη μορφή, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 3:** 2009 ζirkόνιο, ξηρό, σε μορφή τελειωμένων φύλλων, λωρίδων ή σπειροειδούς σύρματος, σε πάχος μικρότερο από 18 μικρά, είναι ύλη της κλάσης 4.2 [βλέπε περιθωριακό 2431, 12° (c)]. Ζirkόνιο, ξηρό, σε μορφή τελειωμένων φύλλων, λωρίδων, σπειροειδούς σύρματος, σε πάχος 254 μικρών ή παραπάνω, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

14° Εύφλεκτα υδρίδια μετάλλων:

(b) 1437 υδρίδιο ζirkόνιου, 1871 υδρίδιο τιτανίου, 3182 υδρίδια μετάλλων, εύφλεκτα, ε.α.ο.,

(c) 3182 υδρίδια μετάλλων, εύφλεκτα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Υδρίδια μετάλλων που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 16°).

**ΣΗΜΕΙΩΣΗ 2:** 2870 βοροϋδρίδιο του αλουμινίου ή 2870 βοροϋδρίδιο του αλουμινίου σε συσκευές, είναι ύλη της κλάσης 4.2 [βλέπε περιθωριακό 2431, 17° (a)].

15° Η παρακάτω ανόργανη εύφλεκτη ύλη σε τετηγμένη μορφή:

2448 θείο, τετηγμένο.

**ΣΗΜΕΙΩΣΗ 1:** 1350 το στερεό θείο είναι ύλη της 11° (c).

**ΣΗΜΕΙΩΣΗ 2:** Άλλες ανόργανες εύφλεκτες ύλες σε τετηγμένη μορφή δεν θα γίνονται δεκτές για μεταφορά.

16° Ανόργανα εύφλεκτα στερεά, τοξικά, και μείγματα ανόργανων εύφλεκτων στερεών, τοξικών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

## Κλάση 4.1

2401 (συνεχ.) (b) 1868 δεκαβοράνιο, 3179 εύφλεκτα στερεά, τοξικά, ανόργανα, ε.α.ο.,

(c) 3179 εύφλεκτα στερεά, τοξικά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

17° Ανόργανα εύφλεκτα στερεά, διαβρωτικά, και μείγματα ανόργανων εύφλεκτων στερεών, διαβρωτικά (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(b) 3180 εύφλεκτα στερεά, διαβρωτικά, ανόργανα, ε.α.ο.,

(c) 3180 εύφλεκτα στερεά, διαβρωτικά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

C. Εκρηκτικές ύλες στην μη-εκρηκτική κατάσταση

**ΣΗΜΕΙΩΣΗ 1:** Εκρηκτικές ύλες στη μη-εκρηκτική κατάσταση, άλλες από εκείνες που αναφέρονται στα 21° έως 25°, δεν θα γίνονται δεκτές για μεταφορά ως ύλες της κλάσης 4.1.

**ΣΗΜΕΙΩΣΗ 2:** Ειδικές απαιτήσεις συσκευασίας εφαρμόζονται για ύλες των 21° έως 26° (βλέπε περιθωριακό 2404).

21° Οι παρακάτω βρεγμένες με νερό εκρηκτικές ύλες:

- (a) 1310 πικρικό αμμώνιο, βρεγμένο με όχι λιγότερο από 10 % (κατά βάρος) νερό,  
1322 δινιτροεξορσίνη, βρεγμένη με όχι λιγότερο από 15 % (κατά βάρος) νερό,  
1336 νιτρογουανιδίνη (πικρίτης), βρεγμένη με όχι λιγότερο από 20 % (κατά βάρος) νερό,  
1337 νιτράμωλο, βρεγμένο με όχι λιγότερο από 20 % (κατά βάρος) νερό,  
1344 τρινιτροφαινόλη, βρεγμένη με όχι λιγότερο από 30 % (κατά βάρος) νερό,  
1347 πικρικός άργυρος, βρεγμένος με όχι λιγότερο από 30 % (κατά βάρος) νερό,  
1349 πικραμικό νάτριο, βρεγμένο με όχι λιγότερο από 20 % (κατά βάρος) νερό,  
1354 τρινιτροβενζόλιο, βρεγμένο με όχι λιγότερο από 30 % (κατά βάρος) νερό,  
1355 τρινιτροβεβζοϊκό οξύ, βρεγμένο με όχι λιγότερο από 30 % (κατά βάρος) νερό,  
1356 τρινιτροτολουόλιο, βρεγμένο με όχι λιγότερο από 30 % (κατά βάρος) νερό,  
1357 νιτρική ουρία, βρεγμένη με όχι λιγότερο από 20 % (κατά βάρος) νερό,  
1517 πικραμικό ζιρκόνιο, βρεγμένο με όχι λιγότερο από 20 % (κατά βάρος) νερό,  
2852 διπικρυλοσουλφίδιο, βρεγμένο με όχι λιγότερο από 10 % (κατά βάρος) νερό.

**ΣΗΜΕΙΩΣΗ 1:** Εκρηκτικές ύλες με περιεκτικότητα σε νερό μικρότερη από τα αναφερόμενα όρια, είναι ύλες της κλάσης 1.

**ΣΗΜΕΙΩΣΗ 2:** Το νερό θα πρέπει να κατανέμεται ομοιογενώς πάνω από όλη την εκρηκτική ύλη. Κατά τη διάρκεια της μεταφοράς, δεν θα πρέπει να συμβαίνει κανένας διαχωρισμός του μείγματος που να μειώνει το δράνοποιητικό αποτέλεσμα.

## Κλάση 4.1

**2401 (συνεχ.)** **ΣΗΜΕΙΩΣΗ 3:** Εκρηκτικά βρεγμένα με νερό δεν θα πρέπει να είναι ικανά να έλθουν σε έκρηξη από τη δράση του κοινού πυροκροτητή<sup>1/</sup> και δεν θα πρέπει να είναι ικανά να έλθουν σε εκτόνωση μάζας από την επίδραση ενός ισχυρού ενισχυτή.

22° Οι παρακάτω τοξικές βρεγμένες με νερό εκρηκτικές ύλες:

- (a) 1320 δινιτροφαινόλη, βρεγμένη με όχι λιγότερο από 15 % (κατά βάρος) νερό,  
1321 δινιτροφαινολικά άλατα, βρεγμένα με όχι λιγότερο από 15 % (κατά βάρος) νερό,  
1348 δινιτρο-ο-κρεζολικό νάτριο, βρεγμένο με όχι λιγότερο από 15 % (κατά βάρος) νερό.

**ΣΗΜΕΙΩΣΗ 1:** Εκρηκτικές ύλες με περιεκτικότητα σε νερό μικρότερη από τα αναφερόμενα όρια, είναι ύλες της κλάσης 1.

**ΣΗΜΕΙΩΣΗ 2:** Το νερό θα πρέπει να κατανέμεται ομοιογενώς πάνω από όλη την εκρηκτική ύλη. Κατά τη διάρκεια της μεταφοράς δεν θα πρέπει να συμβαίνει κανένας διαχωρισμός του μείγματος που να μειώνει το αδρανοποιητικό αποτέλεσμα.

**ΣΗΜΕΙΩΣΗ 3:** Εκρηκτικά βρεγμένα με νερό δεν θα πρέπει να είναι ικανά να έλθουν σε έκρηξη από τη δράση του κοινού πυροκροτητή<sup>1/</sup> και δεν θα πρέπει να είναι ικανά να έλθουν σε εκτόνωση μάζας από την επίδραση ενός ισχυρού ενισχυτή.

23° Η παρακάτω εκρηκτική ύλη που έχει καταστεί αδρανής:

- (b) 2907 μείγμα δινιτρικού ισοσορβιδίου με όχι λιγότερο από 60 % λακτόζη, μανόζη, άμυλο ή όξινο φωσφορικό ασβέστιο ή με άλλους επιβραδυντές, υπό την προϋπόθεση ότι ένας τέτοιος επιβραδυντής έχει αδρανοποιητικές ιδιότητες που είναι τουλάχιστον τόσο αποτελεσματικές.

24° Τα παρακάτω μείγματα νιτρομένης κυταρίνης:

- (a) 2555 νιτροκυταρίνη με όχι λιγότερο από 25 % (κατά βάρος) νερό,  
2556 νιτροκυταρίνη με όχι λιγότερο από 25 % (κατά βάρος) αλκοόλη και όχι περισσότερο από 12.6 % άζωτο επί ξηρής μάζας,  
2557 νιτροκυταρίνη, με όχι περισσότερο από 12.6 % άζωτο, κατά βάρος επί ξηρού, μείγμα με ή χωρίς πλαστικοποιητή, με ή χωρίς χρώμα.

**ΣΗΜΕΙΩΣΗ 1:** 2556 νιτροκυταρίνη με όχι λιγότερο από 25 % (κατά βάρος) αλκοόλη, ή 2557 νιτροκυταρίνη με όχι περισσότερο από 12.6 % άζωτο, κατά βάρος επί ξηρού, μείγμα με ή χωρίς πλαστικοποιητή, με ή χωρίς χρώμα, θα πρέπει να συσκευάζονται σε δοχεία έτσι κατασκευασμένα ώστε να μην είναι δυνατή η έκρηξη λόγω αυξημένης εσωτερικής πίεσης.

**ΣΗΜΕΙΩΣΗ 2:** Μείγματα νιτροκυταρίνης με περιεκτικότητα σε νερό, περιεκτικότητα σε αλκοόλη ή περιεκτικότητα σε πλαστικοποιητή μικρότερη από τα αναφερόμενα όρια, είναι ύλες της κλάσης 1 (βλέπε περιθωριακό 2101, 4° και 26°).

<sup>1/</sup> Βλέπε "Υποδείξεις για τη Μεταφορά Επικίνδυνων Εμπορευμάτων, Έλεγχοι και Κριτήρια", Μέρος I, Παράρτημα 1, ST/SG/AC.10/11/Rev.1.

## Κλάση 4.1

2401 25° Το παρακάτω τοξικό αζίδιο:  
(συνεχ.)

- (a) 1571 αζίδιο του βαρίου, βρεγμένο με όχι λιγότερο από 50 % (κατά βάρος) νερό.

**ΣΗΜΕΙΩΣΗ:** Αζίδιο του βαρίου με περιεκτικότητα σε νερό μικρότερη από το αναφερόμενο όριο, δεν θα γίνεται δεκτό για μεταφορά.

D. Ύλες της οικογένειας των αυτενεργών υλών.

26° Οι παρακάτω ύλες της οικογένειας των αυτενεργών υλών:

- (b)3242 αζοδικαρβοναμίδιο

- (c) 2956 5-τριτοπαγές βουτυλο-2,4,6-τρινιτρο-*m*-ξυλένιο (ξυλένιο μόσχου)  
3251 μονονιτρικό ισοσορβίδιο-5.

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές απαιτήσεις συσκευασίας εφαρμόζονται για ύλες της 26° [βλέπε περιθωριακό 2404 (3)].

**ΣΗΜΕΙΩΣΗ 2:** Μονονιτρικό ισοσορβίδιο-5 ή συνθέσεις αυτής της ύλης που έχουν δείξει από την εκτέλεση της σειράς δοκιμών 2 της διαδικασίας καταχώρησης της κλάσης 1 [βλέπε Προσθήκη Α.1, περιθωριακό 3101 (1)] ότι είναι πολύ όχι-ευαίσθητες για να συμπεριληφθούν στην Κλάση 1, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

E. Αυτενεργές ύλες που δεν απαιτούν έλεγχο θερμοκρασίας

31° (b)3221 αυτενεργά υγρά τύπου Β<sup>2/</sup>

32° (b)3222 αυτενεργά υγρά τύπου Β, όπως:

Ύλη	Συγκέντρωση (%)	Μέθοδος συσκευασίας (βλέπε περιθωριακό 2405)

50° (b) 3240 αυτενεργά στερεά τύπου F, υπό ελεγχόμενη θερμοκρασία<sup>10/</sup>

## G. Κενές συσκευασίες

- 51° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάρσιτων, καθώς και κενών οχημάτων για μεταφορά χύμα και κενών μικρών εμπορευματοκιβωτίων για μεταφορά χύμα, ακαθάρσιτων, που περιείχαν ύλες της κλάσης 4.1.
- 2401a Ύλες των 1° έως 4°, 6° και 11° έως 14°, μεταφερόμενων σε συμφωνία με τους παρακάτω όρους, δεν θα πρέπει να υπόκεινται στις συνθήκες για αυτή την Κλάση που περιέχονται σε αυτό το Παράρτημα και στο παράρτημα B):

- (a) Ύλες ταξινομημένες υπό την (b) κάθε είδους, έως 3 kg ανά εσωτερική συσκευασία και 12 kg ανά κόλο,  
(b) Ύλες ταξινομημένες υπό την (c) κάθε είδους, έως 6 kg ανά εσωτερική συσκευασία και 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που τουλάχιστον ικανοποιούν τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1) και (2) καθώς και (5) έως (7) θα πρέπει να τηρούνται.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

- 2402 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν καθορίζονται ειδικές συνθήκες στα περιθωριακά 2403 έως 2405 και 2408 για τη συσκευασία ορισμένων υλών.

Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να είναι σύμφωνα με τις συνθήκες της προσθήκης A.6.

- (2) Σε συμφωνία με τις διατάξεις των περιθωριακών 2400 (3) και 3511 (2) ή 3611 (2) αντίστοιχα, θα πρέπει να χρησιμοποιούνται τα παρακάτω:

συσκευασίες της ομάδας συσκευασίας 1, μαρκαρισμένες με το γράμμα "X", για πολύ επικίνδυνες ύλες ταξινομημένες υπό την (a) κάθε είδους,

<sup>10/</sup>

Καμία αυτενεργή ύλη δεν συμπεριλαμβάνεται προς το παρόν σ' αυτό το είδος.

## Κλάση 4.1

**2402** (συνεχ.) συσκευασίες των ομάδων συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας ομάδα II, μαρκαρισμένα με το γράμμα "Y", για επικίνδυνες ύλες ταξινομημένες υπό την (b) κάθε είδους,

συσκευασίες των ομάδων συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC των ομάδων συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για λιγότερο επικίνδυνες ύλες ταξινομημένες υπό την (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 4.1 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και για μεταφορά χύμα, βλέπε Παράρτημα Β.

2. Ειδικές συνθήκες για τη συσκευασία ορισμένων υλών

**2403** Ύλες της 5<sup>ο</sup> και τετηγμένο θείο της 15<sup>ο</sup> μπορούν να μεταφέρονται μόνο σε οχήματα-δεξαμενές (βλέπε Προσθήκη Β.1a) ή σε εμπορευματοκιβώτια-δεξαμενές (βλέπε Προσθήκη Β.1b).

**2404** (1) Ύλες των 21<sup>ο</sup>, 22<sup>ο</sup>, 23<sup>ο</sup> και 25<sup>ο</sup> θα πρέπει να συσκευάζονται:

- (a) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ, το περιθωριακό 3525 για φύλλο φάιμπερ ή το περιθωριακό 3526 για πλαστικά υλικά, σε κάθε περίπτωση με έναν ή περισσότερους αδιαπέραστους από την υγρασία εσωτερικούς σάκους, ή
- (b) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με αδιαπέραστες από την υγρασία εσωτερικές συσκευασίες. Πάντως, καμία εσωτερική ή εξωτερική συσκευασία από μέταλλο δεν θα πρέπει να επιτρέπεται.

Οι συσκευασίες θα πρέπει να είναι έτσι σχεδιασμένες ώστε η περιεκτικότητα σε νερό ή η περιεκτικότητα σε αδρανοποιητή, που προστίθεται στην ύλη για να την καταστήσει αδρανή, να μην μπορεί να μειωθεί κατά τη διάρκεια της μεταφοράς.

(2) Ύλες της 24<sup>ο</sup> θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
- (d) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523, ή
- (e) βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, ή
- (f) κιβώτια από φύλλα φάιμπερ σύμφωνα με το περιθωριακό 3530, ή
- (g) χαλύβδινα ή αλουμινένια κιβώτια σύμφωνα με το περιθωριακό 3532, ή
- (h) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, όμως, καμία εσωτερική ή εξωτερική συσκευασία από μέταλλο δεν θα πρέπει να επιτρέπεται.

Τα μεταλλικά δοχεία θα πρέπει να είναι έτσι κατασκευασμένα και κλεισμένα ώστε να αποδίδουν σε εσωτερική πίεση όχι μεγαλύτερη από 300 kPa (3 bar).

2555 νιτροκυτταρίνη με όχι λιγότερο από 25 % (κατά βάρος) νερό μπορεί επίσης να συσκευάζεται σε πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526.

## Κλάση 4.1

**2404** Εάν 2557 νιτροκυτταρίνη, με όχι περισσότερο από 12.6 % άζωτο, κατά βάρος επί ξηρού, μείγμα (συνεχ.) με ή χωρίς πλαστικοποιητή, με ή χωρίς χρώμα συσκευάζεται σε μεταλλικά δοχεία, θα πρέπει να χρησιμοποιείται εσωτερικός σάκος με τοιχώματα από πολλαπλά φύλλα χαρτιού.

Εάν 2555 νιτροκυτταρίνη με όχι λιγότερο από 25 % (κατά βάρος) νερό ή 2556 νιτροκυτταρίνη με όχι λιγότερο από 25 % (κατά βάρος) αλκοόλη συσκευάζεται σε βαρέλια από κόντρα-πλακέ, βαρέλια από φάιμπερ ή κιβώτια από φύλλα φάιμπερ, θα πρέπει να χρησιμοποιείται εσωτερικός σάκος αδιαπέραστος από την υγρασία, επένδυση με πλαστικό στρώμα ή εσωτερική επικάλυψη από πλαστικό υλικό.

Όλες οι συσκευασίες θα πρέπει να είναι έτσι σχεδιασμένες ώστε το νερό, η αλκοόλη ή ο αδρανιστικός που περιέχεται να μην μπορεί να μειωθεί κατά τη διάρκεια της μεταφοράς.

(3) (a) Ύλες του είδους 26° θα πρέπει να συσκευάζονται σε βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525 με πλαστική επένδυση ή μία εξίσου αποτελεσματική εσωτερική επικάλυψη. Ένα κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 50 kg.

(b) 3242 αζωδικαρβοναμίδιο της 26° (b) μπορεί επίσης να συσκευάζεται:

- μία εσωτερική συσκευασία ενός μόνου πλαστικού σάκου σε ένα κιβώτιο από φύλλα φάιμπερ, μέγιστου περιεχομένου 50 kg, ή

- εσωτερικές συσκευασίες πλαστικών φιαλών, βάζων, σάκων ή κιβωτίων, μέγιστου περιεχομένου 5 kg η καθεμία, μέσα σε μία εξωτερική συσκευασία κιβωτίου από φύλλα φάιμπερ ή βαρελιού από φάιμπερ μέγιστου περιεχομένου 25 kg.

**2405** (1) Οι ύλες της 31° θα πρέπει να συσκευάζονται χρησιμοποιώντας μεθόδους συσκευασίας που αναφέρονται στον Πίνακα 2 και χαρακτηρίζονται OP1A έως OP8A για υγρά και OP1B έως OP8B για στερεά. Οι ύλες θα πρέπει να συσκευάζονται όπως υποδεικνύεται στο περιθωριακό 2401 και όπως τίθεται με λεπτομέρειες στον Πίνακα 2 (A) και 2 (B). Μία μέθοδος συσκευασίας που αντιστοιχεί σε μικρότερο μέγεθος κόλου (δηλ. με χαμηλότερο αριθμό OP) μπορεί να χρησιμοποιείται, αλλά μία μέθοδος συσκευασίας που αντιστοιχεί σε μεγαλύτερο μέγεθος κόλου (δηλ. με υψηλότερο αριθμό OP) δεν θα πρέπει να χρησιμοποιείται. Μεταλλικές συσκευασίες που ικανοποιούν τα κριτήρια ελέγχου της ομάδας συσκευασίας I δεν θα πρέπει να χρησιμοποιούνται. Για συνδυασμένες συσκευασίες, τα προστατευτικά υλικά δεν θα πρέπει να είναι άμεσα εύφλεκτα και δεν θα πρέπει να προκαλούν αποσύνθεση της αυτενεργής ύλης σε περίπτωση διαρροής.

(2) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01 σε συμφωνία με το περιθωριακό 2412 (5), θα πρέπει να είναι σύμφωνες με τις διατάξεις του περιθωριακού 2102 (4) και (6).

(3) Για αυτενεργές ύλες ή συνθέσεις αυτενεργών υλών που δεν αναφέρονται στο περιθωριακό 2401, η παρακάτω διαδικασία θα πρέπει να χρησιμοποιείται ώστε να καθορίζεται η κατάλληλη μέθοδος συσκευασίας:

(a) αυτενεργές ύλες τύπου B:

Οι ύλες θα πρέπει να καταχωρούνται στη μέθοδο συσκευασίας OP5A ή OP5B υπό την προϋπόθεση ότι ικανοποιούν τα κριτήρια της προσθήκης Α.1, περιθωριακό 3104 (2) (b) σε μία από τις συσκευασίες που υποδεικνύονται. Εάν η αυτενεργή ύλη μπορεί μόνον να ικανοποιεί αυτά τα κριτήρια σε μικρότερη συσκευασία από εκείνες που αναφέρονται για τη μέθοδο συσκευασίας OP5A ή OP5B (δηλ. μία από τις συσκευασίες που αναφέρονται για OP1A έως OP4A ή OP1B έως OP4B), τότε θα πρέπει να καταχωρείται η αντίστοιχη μέθοδος συσκευασίας με τον μικρότερο αριθμό OP.

## Κλάση 4.1

2405  
(συνεχ.)

(b) αυτενεργές ύλες τύπου C:

Οι ύλες θα πρέπει να καταχωρούνται στη μέθοδο συσκευασίας OP6A ή OP6B υπό την προϋπόθεση ότι ικανοποιούν τα κριτήρια της προσθήκης A.1, περιθωριακό 3104 (2) (c) σε μία από τις συσκευασίες που υποδεικνύονται. Εάν η αυτενεργή ύλη μπορεί μόνον να ικανοποιεί αυτά τα κριτήρια σε μικρότερη συσκευασία από εκείνες που αναφέρονται για τη μέθοδο συσκευασίας OP6A ή OP6B τότε θα πρέπει να καταχωρείται η αντίστοιχη μέθοδος συσκευασίας με τον μικρότερο αριθμό OP.

(c) αυτενεργές ύλες τύπου D:

Η μέθοδος συσκευασίας OP7A ή OP7B θα πρέπει να χρησιμοποιείται.

(d) αυτενεργές ύλες τύπου E:

Η μέθοδος συσκευασίας OP8A ή OP8B θα πρέπει να χρησιμοποιείται.

(e) αυτενεργές ύλες τύπου F:

Η μέθοδος συσκευασίας OP8A ή OP8B θα πρέπει να χρησιμοποιείται.

(4) Ύλες των 39° (b), 40° (b), 49° (b) ή 50° (b) μπορούν να μεταφέρονται σε IBC υπό συνθήκες που θεσπίζονται από την αρμόδια αρχή της χώρας προέλευσης όταν, βάσει του ελέγχου, η αρμόδια αρχή ικανοποιείται ότι τέτοια μεταφορά μπορεί να διεξαχθεί με ασφάλεια. Οι έλεγχοι θα πρέπει να περιλαμβάνουν εκείνα τα απαραίτητα στοιχεία ώστε:

- να αποδεικνύουν ότι η αυτενεργή ύλη είναι σύμφωνη με τις αρχές για την ταξινόμηση που δίνονται στην προσθήκη A.1, περιθωριακό 3104 (2) (f),
- να αποδεικνύουν την συμβατότητα με όλα τα υλικά που κανονικά είναι σε επαφή με την ύλη κατά τη διάρκεια της μεταφοράς,
- να καθορίζουν, όταν έχουν εφαρμογή, τις θερμοκρασίες ελέγχου και κινδύνου που σχετίζονται με τη μεταφορά της ύλης στο συγκεκριμένο IBC όπως απορρέει από την SADT,
- να σχεδιάζουν, όταν έχουν εφαρμογή, τις συσκευές αναγκαστικής εκτόνωσης, και
- να καθορίζουν εάν είναι αναγκαίες οποιοσδήποτε ειδικές απαιτήσεις.

(5) Για την αποφυγή εκρηκτικής θραύσης των μεταλλικών IBC ή των σύνθετων IBC με μεταλλικό περίβλημα πλήρους τοιχώματος, οι συσκευές αναγκαστικής εκτόνωσης θα πρέπει να σχεδιάζονται έτσι ώστε να εξαερίζουν όλα τα προϊόντα αποσύνθεσης και τους ατμούς που παράγονται κατά τη διάρκεια μίας περιόδου όχι μικρότερης από μία ώρα εξέλιξης της φωτιάς (φορτίο θερμότητας 110 kW/m<sup>2</sup>) ή αυτο-επιταχυνόμενης αποσύνθεσης.

(6) Δοχεία ή IBC, που περιέχουν ύλες των 31° (b), 33° (b), 35° (b), 37° (b), 39° (b), 41° (b), 43° (b), 45° (b), 47° (b) ή 49° (b), που εκλύουν μικρές ποσότητες αερίων, θα πρέπει να εξαερίζονται, σε συμφωνία με το περιθωριακό 3500 (8) ή 3601 (6).

Πίνακας 2 (Α) : ΚΑΤΑΛΟΓΟΣ ΣΥΣΚΕΥΑΣΙΩΝ ΓΙΑ ΑΥΤΕΝΕΡΓΙΑ ΥΓΡΑ ΚΑΙ ΜΕΤΕΣΤΗ ΠΟΣΟΤΗΤΑ Ή ΚΑΘΑΡΟ ΒΑΡΟΣ ΑΝΑ ΚΩΔΟ

1/ Εάν δίνονται δύο τιμές, η πρώτη εφαρμόζεται στο μέγιστο καθαρό βάρος ανά εσωτερική συσκευασία και η δεύτερη στο μέγιστο καθαρό βάρος του πλήρους κελού.

2/ Για συνδυασμένες συσκευασίες που περιέχουν αυτενέργο στερεό τύπων B και C, μόνον μη-μεταλλικές συσκευασίες επιτρέπονται. Όμως, γυάλινα δοχεία θα πρέπει να χρησιμοποιούνται μόνον ως εσωτερικές συσκευασίες για μεθόδους συσκευασίας OP1B και OP2B.

3/ Εάν χρησιμοποιούνται χωρίσματα επιβραδυντικά της φωτιάς, το μέγιστο καθαρό βάρος του πλήρους κελού, θα πρέπει να είναι 25 kg.

4/ Επιτρέπεται μόνον ως μέρος μιας συνδυασμένης συσκευασίας. Η εσωτερική συσκευασία θα πρέπει να είναι κατάλληλη για τις ύλες που πρόκειται να μεταφέρονται.

## Κλάση 4.1

- 2406 (1) Ύλες ταξινομημένες υπό το (b) των 1° έως 17° θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (πλαστικά υλικά) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη, ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539, ή
  - (h) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622.
- (2) Ύλες ταξινομημένες υπό το (b) των 1° έως 17° με σημείο τήξης παραπάνω από 45 °C ή που είναι κολλώδη σύμφωνα με τα κριτήρια του ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3 περιθωριακό 3310), ή που δεν είναι υγρές σύμφωνα με τη μέθοδο ελέγχου ASTM D 4359-90 μπορούν επίσης να συσκευάζονται σε:
- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή βαρέλια από φάϊμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) κιβώτια σύμφωνα με το περιθωριακό 3532 για χαλύβδινα ή αλουμινένια, περιθωριακό 3527 για φυσικό ξύλο, περιθωριακό 3528 για κόντρα-πλακέ, περιθωριακό 3529 για ανασυσταμένο ξύλο, περιθωριακό 3530 για φύλλο φάϊμπερ, ή περιθωριακό 3531 για πλαστικό, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (c) αδιαπέραστους σάκους σύμφωνα με το περιθωριακό 3533 για υφαντουργικά προϊόντα, περιθωριακό 3534 για πλεκτό πλαστικό, περιθωριακό 3535 για πλαστική μεμβράνη ή περιθωριακό 3536 για χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή οι σάκοι φορτώνονται πάνω σε παλέτες.
- (3) Ύλες ταξινομημένες υπό το (b) των 1°, 6°, 7°, 8°, 12°, 13°, 16° και 17° μπορούν επίσης να συσκευάζονται σε:
- (a) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
  - (b) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, εκτός των τύπων 11HZ2 και 31HZ2.
- (4) Ύλες ταξινομημένες υπό το (b) των 1°, 6°, 12° και 13° με σημείο τήξης παραπάνω από 45 °C ή που είναι κολλώδεις σύμφωνα με τα κριτήρια ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310), ή που δεν είναι υγρά σύμφωνα με τη μέθοδο ελέγχου ASTM D 4359-90 μπορούν επίσης να συσκευάζονται σε:
- (a) IBC από φύλλο φάϊμπερ σύμφωνα με το περιθωριακό 3626, ή
  - (b) ξύλινα IBC σύμφωνα με το περιθωριακό 3627.

## Κλάση 4.1

**2406** (5) Υγες ταξινομημένες υπό το (b) των 1°, 6°, και 12° με σημείο τήξης παραπάνω από 45 °C ή (συνεχ.) που είναι κολλώδεις σύμφωνα με τα κριτήρια ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310), ή που δεν είναι υγρές σύμφωνα με την μέθοδο ελέγχου ASTM D 4359-90 μπορούν να συσκευάζονται σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, εκτός των τύπων 13H1, 13L1 και 13M1, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC φορτώνονται πάνω σε παλέτες.

**2407** (1) Υγες ταξινομημένες υπό του (c) των 1° έως 17° θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη, ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) μεταλλικές συσκευασίες ελαφρού περιτυπώματος σύμφωνα με το περιθωριακό 3540, ή
- (i) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
- (j) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
- (k) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, εκτός των τύπων 11HZ2 και 31HZ2.

(2) Υγες ταξινομημένες υπό το (c) των 1° έως 17° με σημείο τήξης παραπάνω από 45 °C ή που είναι κολλώδεις σύμφωνα με τα κριτήρια ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310), ή που δεν είναι υγρές σύμφωνα με τη μέθοδο ελέγχου ASTM D 4359-90 μπορούν επίσης να συσκευάζονται σε:

- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή βαρέλια από φάϊμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) κιβώτια σύμφωνα με το περιθωριακό 3532 για χαλύβδινα και αλουμινένια, περιθωριακό 3527 για φυσικό ξύλο, περιθωριακό 3528 για κόντρα-πλακέ, περιθωριακό 3529 για ανασυσταμένο ξύλο, περιθωριακό 3530 για φύλλο φάϊμπερ, ή περιθωριακό 3531 για πλαστικό, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (c) αδιαπέραστους σάκους σύμφωνα με το περιθωριακό 3533 για προϊόντα υφαντουργίας, περιθωριακό 3534 για πλεκτά πλαστικά, περιθωριακό 3535 για πλαστική μεμβράνη, περιθωριακό 3536 για χαρτί.

(3) Υγες ταξινομημένες υπό το (c) των 6°, 11° έως 14°, 16° και 17° με σημείο τήξης παραπάνω από 45 °C ή που είναι κολλώδεις σύμφωνα με τα κριτήρια ελέγχου με πενετρόμετρο (βλέπε Προσθήκη Α.3, περιθωριακό 3310), ή που δεν είναι υγρές σύμφωνα με την μέθοδο ελέγχου ASTM D 4359-90 μπορούν επίσης να συσκευάζονται σε:

## Κλάση 4.1

- 2407 (συνεχ.)
- (a) εύκαμτα IBC σύμφωνα με το περιθωριακό 3623, εκτός των τύπων 13H1, 13L1 και 13M1, ή
  - (b) IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626, ή
  - (c) ξύλινα IBC σύμφωνα με το περιθωριακό 3627 ή
  - (d) σύνθετα IBC με πλαστικό εσωτερικό δοχείο τύπου 11HZ2 σύμφωνα με το περιθωριακό 3625.

2408 Κυτταροειδή σε φύλλα της 3<sup>ο</sup> (c) μπορούν επίσης να μεταφέρονται ασυσκευάστα πάνω σε παλέτες, περιτυλιγμένα σε πλαστική μεμβράνη και ασφαλισμένα με κατάλληλο τρόπο, όπως χαλύβδινους μιάντες, ως πλήρες φορτίο σε κλειστά οχήματα. Κάθε παλέτα δεν θα πρέπει να ζυγίζει περισσότερο από 1 000 kg.

2409-  
2410

### 3. Μικτή συσκευασία

- 2411
- (1) Ύλες που ανήκουν στο ίδιο είδος μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.
  - (2) Ύλες των 21° έως 26° και 31° έως 50° δεν θα πρέπει να συσκευάζονται με άλλα εμπορεύματα.
  - (3) Εκτός από τις ύλες που αναφέρονται στην παράγραφο (2) και εκτός εάν ειδικές συνθήκες με αντίθετο περιεχόμενο καθορίζονται στην παράγραφο (7), οι ύλες της κλάσης 4.1 σε ποσότητες που δεν υπερβαίνουν τα 5 kg ανά δοχείο μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, με ύλες ή είδη άλλων κλάσεων - υπό την προϋπόθεση ότι μικτή συσκευασία επίσης επιτρέπεται για ύλες και είδη αυτών των κλάσεων - και ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αναδρούν επικίνδυνα μεταξύ τους.
  - (4) Τα παρακάτω θα πρέπει να θεωρούνται επικίνδυνες αντιδράσεις:
    - (a) ανάφλεξη και ή εκπομπή σημαντικής θερμότητας,
    - (b) έκλυση εύφλεκτων και/ή τοξικών αερίων,
    - (c) σχηματισμός διαβρωτικών υγρών,
    - (d) σχηματισμός ασταθών υλών.
  - (5) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2402 θα πρέπει να τηρούνται.
  - (6) Όπου χρησιμοποιείται ξύλινο κιβώτιο ή κιβώτιο από φύλλο φάιμπερ, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.
  - (7) Ύλες ταξινομημένες υπό την (b) ή (c) των 1° έως 5° και 11° έως 14° δεν θα πρέπει να συσκευάζονται μαζί με ύλες της κλάσης 5.1 ταξινομημένες υπό τα (a) ή (b) των διαφόρων ειδών του περιθωριακού 2501.

## Κλάση 4.1

4. *Μαρκάρισμα και ετικέτες κινδύνου πάνω σε κόλα (βλέπε Προσθήκη Α.9)**Μαρκάρισμα*

- 2412 (1) Κάθε κόλα θα πρέπει να μαρκάρεται καθαρά και με τρόπο διαρκείας με τον χαρακτηριστικό αριθμό των εμπορευμάτων που πρόκειται να εγγραφεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

*Ετικέτες κινδύνου*

- (2) Κόλα που περιέχουν ύλες της κλάσης 4.1 θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.1.

- (3) Κόλα που περιέχουν ύλες των 7°, 16°, 22° ή 25° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1 και κόλα που περιέχουν ύλες των 8° και 17° να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

- (4) Κόλα που περιέχουν αυτενεργές ύλες των ειδών 31°, 32°, 41° και 42° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01 εκτός εάν η αρμόδια αρχή έχει επιτρέψει την παράληψη της ετικέτας για τον τύπο συσκευασίας που δοκιμάστηκε επειδή τα αποτελέσματα απέδειξαν ότι η αυτενεργή ύλη σε τέτοια συσκευασία δεν εμφανίζει εκρηκτική συμπεριφορά [βλέπε περιθωριακό 2414 (4)].

- (5) Κόλα που περιέχουν εύθραυστα δοχεία μη-ορατά από έξω, θα πρέπει να φέρουν σε δύο απέναντι πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

- (6) Κόλα που περιέχουν υγρά σε συσκευασίες τα πάματα των οποίων δεν είναι ορατά από έξω, κόλα που περιέχουν εξαεριζόμενες συσκευασίες ή εξαεριζόμενες συσκευασίες χωρίς εξωτερικές συσκευασίες, θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

## 2413

B. *Στοιχεία στο έγγραφο μεταφοράς*

- 2414 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς, θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2401.

Εάν η ύλη δεν αναφέρεται με ονομασία, αλλά αναφέρεται σε μία ε.α.ο. καταχώρηση ή συγκεντρωτική καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο. ή συγκεντρωτική καταχώρηση, ακολουθούμενη από τη χημική ή τεχνική ονομασία της ύλης<sup>1/</sup>.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζονται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "4.1, 6°(b), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (4)] η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα που περιέχουν ...", ενώ το(τα) συστατικό(α) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα πρέπει να εισάγεται(ονται) με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα, γαίες που περιέχουν τολουόλιο 4.1, 4° (c), ADR".

<sup>1/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που χρησιμοποιείται ήδη σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό.

## Κλάση 4.1

**2414** (συνεχ.) Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά και υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να γίνεται αναφορά σε περισσότερα από δύο συστατικά που κατά προτεραιότητα συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και μειγμάτων.

Εάν μία επώνυμη ύλη σε συμφωνία με το περιθωριακό 2400 (9) δεν υπόκειται στη συνθήκη αυτής της κλάσης, ο αποστολέας μπορεί να εισάγει στο έγγραφο μεταφοράς: "Όχι εμπορεύματα της κλάσης 4.1."

(2) Όταν ύλες μεταφέρονται υπό συνθήκες κανονισμένες από την αρμόδια αρχή (βλέπε περιθωριακά 2400 (16) και 2405 (4)), η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Μεταφορά σε συμφωνία με το περιθωριακό 2414 (2)."

(3) Όταν ένα δείγμα αυτενεργής ύλης μεταφέρεται σε συμφωνία με τα περιθωριακά 2400 (18) και 2405 (6), η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Μεταφορά σε συμφωνία με το περιθωριακό 2414 (3)."

(4) Όταν, με άδεια της αρμόδιας αρχής σε συμφωνία με το περιθωριακό 2412 (4), ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01 δεν απαιτείται, η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Η ετικέτα κινδύνου σύμφωνα με το υπόδειγμα Αριθμ. 01 δεν απαιτείται."

(5) Όταν αυτενεργές ύλες τύπου G (βλέπε Προσθήκη Α.1 περιθωριακό 3104 (2) (g)) μεταφέρονται, η παρακάτω αναφορά μπορεί να δίνεται στο έγγραφο μεταφοράς:

"Όχι αυτενεργή ύλη της κλάσης 4.1."

(6) Για αυτενεργές ύλες που απαιτούν έλεγχο θερμοκρασίας κατά τη διάρκεια της μεταφοράς, η παρακάτω αναφορά θα πρέπει να δίνεται στο έγγραφο μεταφοράς:

"Θερμοκρασία ελέγχου: .....°C      Θερμοκρασία κινδύνου: .....°C"

(7) Για τα διαλύματα και τα μείγματα που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις αυτής της Οδηγίας, η λέξη "διάλυμα" ή "μείγμα" θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8) (a)].

(8) Όταν ένα στερεό παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει επιπλέον να αναφέρει "τετηγμένο", εκτός εάν ο όρος ήδη εμφανίζεται στην ονομασία.

**2415-  
2421**

**C. Κενές συσκευασίες**

**2422** (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, εκτός από εκείνα που αναφέρονται στην παράγραφο (2), ακαθάριστα, της 51°, θα πρέπει να είναι κλεισμένα με τον ίδιο τρόπο και να παρουσιάζουν τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.

(2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 51°, στα εξωτερικά τμήματα των οποίων έχουν κολλήσει υπολείμματα από το προηγούμενο περιεχόμενό τους, θα πρέπει να μεταφέρονται σε στεγανές συσκευασίες.

## Κλάση 4.1

2422 (3) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, που περιείχαν βρεγμένες με νερό ύλες της 13° (b) ή ύλες των 21° έως 25° δεν θα γίνονται δεκτές για μεταφορά εκτός εάν τα υπολείμματα είναι έτσι συσκευασμένα ώστε η περιεκτικότητα του νερού ή των άλλων αδρανοποιητών που προστίθενται στις ύλες για να τις καταστήσουν αδρανείς να μην μπορεί να μειωθεί.

Ακαθάριστες κενές συσκευασίες που περιείχαν ύλες των 31° έως 50° δεν θα γίνονται δεκτές για μεταφορά εκτός εάν έχουν ληφθεί μέτρα για την αποφυγή επικίνδυνης αποσύνθεσης.

(4) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 51°, και συσκευασίες σύμφωνες με το (2) θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.

(5) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στην 51°, π.χ. "Κενή συσκευασία, 4.1, 41°, ADR". Στην περίπτωση ακαθάρσιτων κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων, η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 2304 ναφθαλίνο, τετηγμένο, 5°".

2423-  
2424

## D. Μεταβατικά μέτρα

2425 Ύλες και είδη της κλάσης 4.1 μπορούν να μεταφέρονται μέχρι τις 30 Ιουνίου 1993 σε συμφωνία με τις διατάξεις της κλάσης 4.1 όπως εφαρμόζονταν μέχρι τις 31 Δεκεμβρίου 1992. Το έγγραφο μεταφοράς θα πρέπει, σε τέτοιες περιπτώσεις, να φέρει την επιγραφή: "Μεταφορά σε συμφωνία με την ADR που ισχύει πριν την 1 January 1993."

2426-  
2429

**ΚΛΑΣΗ 4.2. ΥΛΕΣ ΥΠΟΚΕΙΜΕΝΕΣ ΣΕ ΑΥΤΟΜΑΤΗ ΑΝΑΦΛΕΞΗ****1. Κατάλογος υλών**

2430 (1) Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της κλάσης 4.2, εκείνα που αναφέρονται στο περιθωριακό 2431 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο σε εκείνο το περιθωριακό, υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2430 (2) έως 2452 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας.

(2) Ο τίτλος της κλάσης 4.2 καλύπτει:

- ύλες, συμπεριλαμβανομένων διαλυμάτων και μειγμάτων (υγρά ή στερεά), που ακόμα και σε μικρές ποσότητες αναφλέγονται με επαφή με τον αέρα μέσα σε πέντε λεπτά. Περιγράφονται ως ύλες υποκείμενες σε αυτόματη ανάφλεξη (πυροφορικές ύλες),

- ύλες και είδη, συμπεριλαμβανομένων διαλυμάτων και μειγμάτων, που, σε επαφή με τον αέρα, υπόκεινται σε θέρμανση χωρίς καμία εισαγωγή ενέργειας. Αυτές οι ύλες μπορούν να αναφλεγούν μόνον σε μεγάλες ποσότητες (κιλά) και μετά από μακρά χρονική περίοδο (ώρες ή μέρες). Περιγράφονται ως αυτοθερμαινόμενες ύλες.

(3) Οι ύλες και τα είδη της κλάσης 4.2 υποδιαιρούνται ως εξής:

A. Οργανικές ύλες υποκείμενες σε αυτόματη ανάφλεξη.

B. Ανόργανες ύλες υποκείμενες σε αυτόματη ανάφλεξη.

C. Οργανομεταλλικές ενώσεις υποκείμενες σε αυτόματη ανάφλεξη.

D. Κενές συσκευασίες.

Υλες και είδη της κλάσης 4.2 ταξινομημένες σε διάφορα είδη του περιθωριακού 2431, θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες που χαρακτηρίζονται με τα γράμματα (a), (b) ή (c), σύμφωνα με το βαθμό κινδύνου τους:

(a) υποκείμενες σε αυτόματη ανάφλεξη (πυροφορικές),

(b) αυτοθερμαινόμενες,

(c) ελαφρά αυτοθερμαινόμενες.

(4) Η καταχώρηση υλών και ειδών χωρίς συγκεκριμένη ονομασία στα 3° έως 5°, 12°, 15°, 16°, 31° και 32° του περιθωριακού 2431, καθώς και μέσα σ'αυτά τα είδη στα γράμματα, μπορεί να βασίζεται στην εμπειρία ή στα αποτελέσματα της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333. Η καταχώρηση στις 6° έως 10°, 14°, 17° έως 21° και 33°, καθώς και μέσα σ'αυτά στα γράμματα, θα πρέπει να βασίζεται στα αποτελέσματα της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333. Η εμπειρία θα πρέπει επίσης να λαμβάνεται υπόψη όταν οδηγεί σε μία πιο αυστηρά βασισμένη καταχώρηση.

(5) Όταν ύλες ή είδη χωρίς συγκεκριμένη ονομασία καταχωρούνται στα είδη του περιθωριακού 2431 με βάση τις διαδικασίες ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333, εφαρμόζονται τα παρακάτω κριτήρια:

## Κλάση 4.2

2430  
(συνεχ.)

- (a) Στερεά υποκείμενα σε αυτόματη ανάφλεξη (πυροφορικά) θα πρέπει να καταχωρούνται στην Κλάση 4.2 όταν αναφλέγονται στην περίπτωση που πέφτουν από ένα ύψος ενός μέτρου ή μέσα σε πέντε λεπτά,
- (b) Υγρά υποκείμενα σε αυτόματη ανάφλεξη (πυροφορικά) θα πρέπει να καταχωρούνται στην Κλάση 4.2 όταν:
- όταν χύνονται πάνω σε κάποιο αδρανή φορέα, αναφλέγονται μέσα σε πέντε λεπτά, ή
  - σε περίπτωση αρνητικού αποτελέσματος του ελέγχου σύμφωνα με το (i), όταν χύνονται πάνω σε κάποιο ξηρό, χαραγμένο χάρτινο φίλτρο (φίλτρο Whatman Αριθμ. 3), το αναφλέγουν ή απανθρακώνουν μέσα σε πέντε λεπτά,
- (c) Ύλες στις οποίες, σε δείγμα-κύβο 10 εκατοστών, στους 140 °C θερμοκρασία ελέγχου, παρατηρείται αυτόματη ανάφλεξη ή αύξηση της θερμοκρασίας πάνω από 200 °C μέσα σε 24 ώρες, θα πρέπει να καταχωρούνται στην Κλάση 4.2. Αυτό το κριτήριο βασίζεται στην θερμοκρασία της αυτόματης ανάφλεξης του ξυλάνθρακα, που είναι στους 50 °C για ένα δείγμα-κύβο όγκου 27 m<sup>3</sup>. Ύλες με θερμοκρασία αυτόματης ανάφλεξης μεγαλύτερη από 50 °C για έναν όγκο 27 m<sup>3</sup> δεν θα καταχωρούνται στην κλάση 4.2.
- (6) Όταν ύλες και είδη χωρίς συγκεκριμένη ονομασία καταχωρούνται στα γράμματα των ειδών του περιθωριακού 2431 βάσει των διαδικασιών ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333, τα παρακάτω κριτήρια θα πρέπει να εφαρμόζονται:
- Ύλες υποκείμενες σε αυτόματη ανάφλεξη (πυροφορικές) θα πρέπει να καταχωρούνται στο γράμμα (a),
  - Αυτοθερμαινόμενες ύλες και είδη στις οποίες, σε ένα δείγμα-κύβο 2.5 εκατοστών, στους 140 °C θερμοκρασία ελέγχου, παρατηρείται αυτόματη ανάφλεξη ή αύξηση της θερμοκρασίας πάνω από 200 °C μέσα σε 24 ώρες, θα πρέπει να καταχωρούνται στο γράμμα (b),
  - Ελαφρά αυτοθερμαινόμενες ύλες στις οποίες, τα φαινόμενα που αναφέρονται σε ένα δείγμα-κύβο 2.5 εκατοστών, υπό την (b) δεν παρατηρούνται, στις δεδομένες συνθήκες, αλλά στις οποίες σε ένα δείγμα-κύβο 10 εκατοστών στους 140 °C θερμοκρασία ελέγχου παρατηρείται αυτόματη ανάφλεξη ή αύξηση της θερμοκρασίας πάνω από 200 °C μέσα σε 24 ώρες, θα πρέπει να καταχωρούνται στο γράμμα (c).
- (7) Εάν ύλες της κλάσης 4.2, ως αποτέλεσμα προσμείξεων, μεταβαίνουν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες ανήκουν οι ύλες του περιθωριακού 2431, αυτά τα μείγματα θα πρέπει να καταχωρούνται στα είδη και τα γράμματα στα οποία ανήκουν βάσει του πραγματικού βαθμού κινδύνου τους.
- ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).
- (8) Όταν ύλες έχουν συγκεκριμένη ονομασία σε περισσότερα από ένα γράμματα του ίδιου είδους στο περιθωριακό 2431, το σχετικό γράμμα μπορεί να καθοριστεί βάσει των αποτελεσμάτων της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333, και τα κριτήρια που τίθενται στο (6).
- (9) Βάσει της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3330 έως 3333, και των κριτηρίων που τίθενται στο (6), μπορεί επίσης να καθοριστεί εάν η φύση μίας ύλης με συγκεκριμένη ονομασία είναι τέτοια ώστε η ύλη να μην υπόκειται στις διατάξεις για αυτήν την Κλάση (βλέπε περιθωριακό 2444).

## Κλάση 4.2

2430 (10) Ύλες και μείγματα υλών με σημείο τήξης υψηλότερο από 45 °C θα πρέπει να θεωρούνται (συνεχ.) ότι είναι στερεά όπως καθορίζεται στις απαιτήσεις συσκευασίας των περιθωριακών 2435 (2), 2436 (2) και 2437 (3) και (4).

(11) Αυτοθερμαινόμενα στερεά, οξειδωτικά, που καταχωρούνται στον χαρακτηριστικό αριθμό 3127 των Υποδείξεων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων των Ηνωμένων Εθνών, δεν θα πρέπει να γίνονται δεκτά για μεταφορά (βλέπε, πάντως, περιθωριακό 2002 (8), υποσημείωση<sup>1/</sup> στον πίνακα στην παράγραφο 2.3.1).

2431 A. Οργανικές ύλες υποκείμενες σε αυτόματη ανάφλεξη

1° Άνθρακας, σε σκόνη, σε κόκκους ή σε κομμάτια

(b) 1361 άνθρακας ή 1361 αιθάλη, ζωικής ή φυτικής προέλευσης

(c) 1361 άνθρακας ή 1361 αιθάλη, ζωικής ή φυτικής προέλευσης, 1362 άνθρακας, ενεργοποιημένος.

**ΣΗΜΕΙΩΣΗ 1:** Άνθρακες παραγόμενοι από διαδικασία ενεργοποίησης ατμού και μη-ενεργοποιημένη αιθάλη ορυκτής προέλευσης δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Μη-ενεργοποιημένοι άνθρακες ορυκτής προέλευσης και σκόνη άνθρακα σε κατάσταση μη υποκείμενη σε αυτόματη θέρμανση δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

2° Ζωικές και φυτικές ύλες:

(b) 1374 ιχθυόλευρο, (υπολείμματα ψαριών), αποσταθεροποιημένο,

(c) 1363 κόπρα, 1386 πύγμα σπόρων που περιέχει περισσότερο από 1.5 % (κατά βάρος) λάδι και με όχι περισσότερο από 11 % (κατά βάρος) υγρασία, 2217 πύγμα σπόρων που περιέχει όχι περισσότερο από 1.5 % (κατά βάρος) λάδι και με όχι περισσότερο από 11 % (κατά βάρος) υγρασία.

3° Βιομηχανικά-παραγόμενα νήματα, υφάσματα και παρόμοια προϊόντα:

(c) 1364 απόβλητα βαμβακιού, ελαιώδη, 1365 βαμβάκι, νωπό, 1379 γαρτί, ακόρεστο λάδι κατεργασμένο, ατελώς αποξηραμένο (συμπεριλαμβανομένου του χαρτιού από άνθρακα), 1373 νήματα, ζωικά ή φυτικά ή συνθετικά, ε.α.ο. διαποτισμένα με λάδι, ή 1373 υφάσματα, ζωικά ή φυτικά ή συνθετικά, ε.α.ο. διαποτισμένα με λάδι.

4° Ύλες παραγόμενες από ασθενώς νιτρωμένη κυτταρίνη:

(c) 2002 κυτταρινοειδή, υπολείμματα,

2006 πλαστικά, νιτροκυτταρινικής βάσης, αυτοθερμαινόμενα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 1353 νήματα ή υφάσματα διαποτισμένα με ασθενώς νιτρωμένη κυτταρίνη, μη-αυτοθερμαινόμενα και 2000 κυτταρινοειδή είναι είδη της κλάσης 4.1 [βλέπε περιθωριακό 2401, 3° (c)].

5° Στερεές οργανικές αυτόματα εύφλεκτες μη-τοξικές και μη-διαβρωτικές ύλες και μείγματα στερεών οργανικών αυτόματα εύφλεκτων μη-τοξικών και μη-διαβρωτικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2846 πυροφορικά στερεά, οργανικά, ε.α.ο.,

## Κλάση 4.2

2431  
(συνεχ.)(b) 1369 p-νιτρωδοδιμεθυλανιλίνη, 2940 9-φωσφαδικυκλοεπενείνια (κυκλοοκταδιενοφωσφίνες), 3088 αυτοθερμαινόμενα στερεά, οργανικά, ε.α.ο.,(c) 3088 αυτοθερμαινόμενα στερεά, οργανικά, ε.α.ο.

6° Υγρά οργανικά αυτόματα, εύφλεκτα, μη-τοξικά και μη-διαβρωτικές ύλες και μείγματα οργανικών αυτόματα εύφλεκτων, μη-τοξικών και μη-διαβρωτικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2845 πυροφορικά υγρά, οργανικά, ε.α.ο.,*ΣΗΜΕΙΩΣΗ: Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτήν την ύλη (βλέπε περιθωριακό 2433).*(b) 3183 αυτοθερμαινόμενα υγρά, οργανικά, ε.α.ο.,(c) 3183 αυτοθερμαινόμενα υγρά, οργανικά, ε.α.ο.

7° Στερεές οργανικές αυτόματα εύφλεκτης τοξικές ύλες και μείγματα στερεών οργανικών αυτόματα εύφλεκτων τοξικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(b) 3128 αυτοθερμαινόμενα στερεά, τοξικά, οργανικά, ε.α.ο.,(c) 3128 αυτοθερμαινόμενα στερεά, τοξικά, οργανικά, ε.α.ο.*ΣΗΜΕΙΩΣΗ: Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).*

8° Υγρές οργανικές αυτόματα εύφλεκτης τοξικές ύλες και μείγματα οργανικών αυτόματα εύφλεκτων τοξικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(b) 3184 αυτοθερμαινόμενα υγρά, τοξικά, οργανικά, ε.α.ο.,(c) 3184 αυτοθερμαινόμενα υγρά, τοξικά, οργανικά, ε.α.ο.*ΣΗΜΕΙΩΣΗ: Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).*

9° Οργανικά αυτόματα εύφλεκτα διαβρωτικά στερεά και μείγματα οργανικών αυτόματα εύφλεκτων διαβρωτικών στερεών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(b) 3126 αυτοθερμαινόμενα στερεά, διαβρωτικά, οργανικά, ε.α.ο.,(c) 3126 αυτοθερμαινόμενα στερεά, διαβρωτικά, οργανικά, ε.α.ο.*ΣΗΜΕΙΩΣΗ: Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).*

10° Οργανικά αυτόματα εύφλεκτα διαβρωτικά υγρά και μείγματα οργανικών αυτόματα εύφλεκτων διαβρωτικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

## Κλάση 4.2

- (b) 3185 αυτοθερμαινόμενα υγρά, διαβρωτικά, οργανικά, ε.α.ο.,  
 (c) 3185 αυτοθερμαινόμενα υγρά, διαβρωτικά, οργανικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

## B. Ανόργανες ύλες υποκείμενες σε αυτόματη ανάφλεξη

## 11° Φωσφόρος

- (a) 1381 φωσφόρος, λευκός ή κίτρινος, ξηρός ή 1381 φωσφόρος, λευκός ή κίτρινος, κάτω από νερό ή 1381 φωσφόρος, λευκός ή κίτρινος, σε διάλυμα.

**ΣΗΜΕΙΩΣΗ:** 2447 φωσφόρος, λευκός ή κίτρινος, τετηγμένος είναι ύλη της 22°.

## 12° Μέταλλα και μεταλλικά κράματα σε σκόνη, λεπτή σκόνη ή σε κοκκώδη μορφή ή σε άλλη αυτόματα εύφλεκτη μορφή:

- (a) 1854 κράμα βαρίου, πυροφορικό, 1855 ασβέστιο, πυροφορικό ή 1855 κράμα ασβεστίου, πυροφορικό, 2008 ζιρκόνιο σε σκόνη, ξηρό, 2545 άφνιο σε σκόνη, ξηρό, 2546 τιτάνιο σε σκόνη, ξηρό, 2881 καταλύτης μετάλλου, ξηρός, 1383 πυροφορικά μέταλλα, ε.α.ο. ή 1383 πυροφορικά κράματα, ε.α.ο.,  
 (b) 1378 καταλύτης μετάλλου, βρεγμένος με ορατή περίσσεια υγρού, 2008 ζιρκόνιο σε σκόνη, ξηρό, 2545 άφνιο σε σκόνη, ξηρό, 2546 τιτάνιο σε σκόνη, ξηρό, 2881 καταλύτης μετάλλου, ξηρός, 3189 αυτοθερμαινόμενα μέταλλα σε σκόνη, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ** στα (a) και (b): Οι χαρακτηριστικοί αριθμοί 1378 και 2881 περιλαμβάνουν μόνον μεταλλικούς καταλύτες με βάση το νικέλιο, το κοβάλτιο, τον χαλκό, το μαγγάνιο ή ενώσεις τους.

- (c) 1932 υπολείμματα ζιρκόνιου, 2008 ζιρκόνιο σε σκόνη, ξηρό, 2009 ζιρκόνιο, ξηρό, σε επεξεργασμένα φύλλα, λωρίδες ή σπειροειδές σύρμα (λιγότερο από 18 mm παχύ), 2545 άφνιο σε σκόνη, ξηρό, 2546 τιτάνιο σε σκόνη, ξηρό, 2793 σιδηρομεταλλικά γρέζια, ροκανίδια, торναρίσματα ή κοιμιάτια σε αυτοθερμαινόμενη μορφή, 2881 καταλύτης μετάλλου, ξηρός, 3189 αυτοθερμαινόμενη σκόνη μετάλλου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** 2858 προϊόντα επεξεργασμένου ζιρκόνιου πάχους 18 mm ή περισσότερο είναι ύλες της κλάσης 4.1 [βλέπε περιθωριακό 2401, 13° (c)].

**ΣΗΜΕΙΩΣΗ 2:** 1326 σκόνες άφνιου, 1352 σκόνες τιτανίου ή 1358 σκόνες ζιρκόνιου, βρεγμένες, με όχι λιγότερο από 25 % νερό, είναι ύλες της κλάσης 4.1 (βλέπε περιθωριακό 2401, 13°).

**ΣΗΜΕΙΩΣΗ 3:** Λεπτή σκόνη και σκόνη μετάλλων σε μη-αυτόματα εύφλεκτη μορφή, που παρ'όλα αυτά, σε επαφή με νερό, εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 13°).

## Κλάση 4.2

2431 13° Σουλφίδια, υδροσουλφίδια και θειονώδη άλατα σε αυτόματα εύφλεκτη μορφή:  
(συνεχ.)

- (b) 1382 θειούχο κάλιο, άνυδρο ή 1382 θειούχο κάλιο με λιγότερο από 30 % νερό από κρυστάλλωση, 1384 διθειονώδες νάτριο (υδροθειώδες νάτριο), 1385 θειώδες νάτριο, άνυδρο ή 1385 θειώδες νάτριο με λιγότερο από 30 % νερό από κρυστάλλωση, 1923 διθειονώδες ασβέστιο (υδροθειώδες ασβέστιο), 1929 διθειονώδες κάλιο (υδροθειώδες κάλιο), 2318 υδροθειούχο νάτριο με λιγότερο από 25 % νερό από κρυστάλλωση,

**ΣΗΜΕΙΩΣΗ:** 1847 θειούχο κάλιο, ενυδατωμένο, με όχι λιγότερο από 30 % νερό από κρυστάλλωση και 2949 υδροθειούχο νάτριο με όχι λιγότερο από 25 % νερό από κρυστάλλωση είναι ύλες της κλάσης 8 [βλέπε περιθωριακό 2801, 45° (b) 1.]

- (c) 3174 διθειούχο τιτάνιο

14° Μεταλλικά άλατα και αλκοολικά άλατα, μη-τοξικά και μη-διαβρωτικά, σε αυτόματα εύφλεκτη μορφή:

- (b) 3205 αλκοολικά άλατα μετάλλων αλκαλικών γαιών, ε.α.ο.,

- (c) 3205 αλκοολικά άλατα μετάλλων αλκαλικών γαιών, ε.α.ο.

15° Μεταλλικά άλατα και αλκοολικά άλατα, διαβρωτικά, σε αυτόματα εύφλεκτη μορφή:

- (a) 2441 τριχλωριούχο τιτάνιο, πυροφορικό ή 2441 μείγματα τριχλωριούχου τιτανίου, πυροφορικά,

- (b) 1431 μεθυλικό νάτριο, 3206 αλκαλικά αλκοολικά άλατα μετάλλων, αυτοθερμαινόμενα, διαβρωτικά, ε.α.ο.,

- (c) 3206 αλκαλικά αλκοολικά άλατα μετάλλων, αυτοθερμαινόμενα, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2869 τριχλωριούχο τιτάνιο ή μείγμα τριχλωριούχου τιτανίου, μη-πυροφορικό, είναι ύλη της κλάσης 8 [βλέπε περιθωριακό 2801, 11° (b) ή (c)].

16° Αυτόματα εύφλεκτα, μη-τοξικά και μη-διαβρωτικά ανόργανα στερεά και μείγματα αυτόματα εύφλεκτων μη-τοξικών και μη-διαβρωτικών ανόργανων στερεών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3200 πυροφορικά στερεά, ανόργανα, ε.α.ο.,

- (b) 2004 διαμίδιο του μαγνησίου, 3190 αυτοθερμαινόμενα στερεά, ανόργανα, ε.α.ο.,

- (c) 1376 οξειδίο του σιδήρου, χρησιμοποιημένο, ή 1376 σπογγώδης σίδηρος, χρησιμοποιημένος, λαμβανόμενος από τον καθαρισμό φωταερίου, 2210 maneb (μαγνανιούχο αιθυλένιο 1,2-bis (διθειοκαρβαμικό)) ή 2210 παρασκευάσματα maneb με όχι λιγότερο από 60 % maneb, 3190 αυτοθερμαινόμενα στερεά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2968 maneb ή 2968 παρασκευάσματα maneb που είναι σταθεροποιημένα έναντι της αυτοθέρμανσης και που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 4.3 [βλέπε περιθωριακό 2471, 20° (c)].

## Κλάση 4.2

2431 17° Ανόργανα αυτόματα εύφλεκτα, μη-τοξικά και μη-διαβρωτικά υγρά και μείγματα αυτόματα εύφλεκτων ανόργανων μη-τοξικών και μη-διαβρωτικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 2870 βοροϋδρίδιο του αλουμινίου ή 2870 βοροϋδρίδιο του αλουμινίου που περιέχεται σε συσκευές, 3194 πυροφορικά υγρά, ανόργανα, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ'αυτές τις ύλες (βλέπε περιθωριακό 2433).

**ΣΗΜΕΙΩΣΗ 2:** Άλλα μεταλλικά υδρίδια σε εύφλεκτη μορφή, είναι ύλες της κλάσης 4.1 (βλέπε περιθωριακό 2401, 14°).

**ΣΗΜΕΙΩΣΗ 3:** Μεταλλικά υδρίδια που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 16°).

- (b) 3186 αυτοθερμαινόμενα υγρά, ανόργανα, ε.α.ο.,

- (c) 3186 αυτοθερμαινόμενα υγρά, ανόργανα, ε.α.ο.

18° Ανόργανα αυτόματα εύφλεκτα τοξικά στερεά και μείγματα ανόργανων αυτόματα εύφλεκτων τοξικών στερεών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (b) 3191 αυτοθερμαινόμενα στερεά, τοξικά, ανόργανα, ε.α.ο.,

- (c) 3191 αυτοθερμαινόμενα στερεά, τοξικά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

19° Ανόργανα αυτόματα εύφλεκτα τοξικά υγρά και μείγματα ανόργανων αυτόματα εύφλεκτων τοξικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1380 πενταβοράνιο,

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ'αυτή την ύλη (βλέπε περιθωριακό 2433).

- (b) 3187 αυτοθερμαινόμενα υγρά, τοξικά, ανόργανα, ε.α.ο.,

- (c) 3187 αυτοθερμαινόμενα υγρά, τοξικά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

20° Ανόργανα αυτόματα εύφλεκτα διαβρωτικά στερεά και μείγματα ανόργανων αυτόματα εύφλεκτων διαβρωτικών στερεών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (b) 3192 αυτοθερμαινόμενα στερεά, διαβρωτικά, ανόργανα, ε.α.ο.,

- (c) 3192 αυτοθερμαινόμενα στερεά, διαβρωτικά, ανόργανα, ε.α.ο.

## Κλάση 4.2

2431  
(συνεχ.)**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

- 21° Ανόργανα αυτόματα εύφλεκτα διαβρωτικά υγρά και μείγματα ανόργανων αυτόματα εύφλεκτων διαβρωτικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(b) 3188 αυτοθερμαινόμενα υγρά, διαβρωτικά, ανόργανα, ε.α.ο.,(c) 3188 αυτοθερμαινόμενα υγρά, διαβρωτικά, ανόργανα, ε.α.ο.**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

- 22° 2447 φωσφόρος, λευκός τετηγμένος.

**C. Οργανομεταλλικές ενώσεις υποκείμενες σε αυτόματη ανάφλεξη****ΣΗΜΕΙΩΣΗ 1:** Οργανομεταλλικές ενώσεις και διαλύματά τους που δεν είναι υποκείμενα σε αυτόματη ανάφλεξη αλλά, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, είναι όλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 3°).**ΣΗΜΕΙΩΣΗ 2:** Εύφλεκτα διαλύματα με οργανομεταλλικών ενώσεων που δεν είναι υποκείμενες σε αυτόματη ανάφλεξη και, σε επαφή με το νερό, δεν εκλύουν εύφλεκτα αέρια, είναι όλες της κλάσης 3.**ΣΗΜΕΙΩΣΗ 3:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται στις ύλες των 31° έως 33° (βλέπε περιθωριακό 2433).

- 31° Αυτόματα εύφλεκτα αλκάλια μετάλλων και αρύλια μετάλλων

(a) 1366 διαιθυλοψευδάργυρος, 1370 διμεθυλοψευδάργυρος, 2005 διφενύλιο μαγνησίου, 2445 αλκάλια λιθίου, 3051 αλκάλια αλουμινίου, 3053 αλκάλια μαγνησίου, 2003 αλκάλια μετάλλων, ε.α.ο. ή 2003 αρύλια μετάλλων, ε.α.ο.,

- 32° Άλλες αυτόματα εύφλεκτες οργανομεταλλικές ενώσεις

(a) 3052 αλκυλαλογονούχες ενώσεις αλουμινίου, 3076 αλκυλαλογονούχες ενώσεις αλουμινίου, 3049 αλκυλαλογονούχες ενώσεις μετάλλων, ε.α.ο. ή 3049 αρυλαλογονούχες ενώσεις μετάλλων, ε.α.ο., 3050 αλκυλοϋδρίδια μετάλλων, ε.α.ο. ή 3050 αρυλοϋδρίδια μετάλλων, ε.α.ο.

- 33° Αυτόματα εύφλεκτες οργανομεταλλικές ενώσεις

(a) 3203 πυροφορική οργανομεταλλική ένωση, ε.α.ο.**D. Κενές συσκευασίες**

- 41° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών οχημάτων και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, καθώς και κενά οχήματα για μεταφορά χύμα και κενά μικρά εμπορευματοκιβώτια για μεταφορά χύμα, ακαθάριστα, που περιείχαν όλες της κλάσης 4.2.

## Κλάση 4.2

**2431 (συνεχ.)** **ΣΗΜΕΙΩΣΗ:** Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων που περιέχουν ύλες της 4<sup>ο</sup> (c), χαρακτηριστικός αριθμός 2002, της 12<sup>ο</sup> (c), χαρακτηριστικός αριθμός 1932, 2009 και 2793, και της 16<sup>ο</sup> (c), χαρακτηριστικός αριθμός 1376, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

**2432** (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στο περιθωριακό 2433.

Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.

(2) Με εξαίρεση τις συσκευασίες που αναφέρονται στο περιθωριακό 2436 (2) (a) και (b) και (3) και στο περιθωριακό 2437 (3) (a) και (b), (4) και (5), οι (εσωτερικές) συσκευασίες θα πρέπει να είναι ερμητικά κλεισμένες.

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2430 (3) και 3511 (2) ή 3611 (2) αντίστοιχα, θα πρέπει να χρησιμοποιούνται τα παρακάτω:

- συσκευασίες της ομάδας συσκευασίας I, μαρκαρισμένες με το γράμμα "X", για ύλες υποκείμενες σε αυτόματη ανάφλεξη (πυροφορικές) ταξινομημένες υπό το (a) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για αυτοθερμαινόμενες ύλες ταξινομημένες υπό το (b) κάθε είδους,
- συσκευασίες των ομάδων συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC των ομάδων συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για αυτοθερμαινόμενες ύλες ταξινομημένες υπό το (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 4.2 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και για μεταφορά χύμα, βλέπε Προσθήκη B.

## 2. Συσκευασία μεμονωμένων υλών

**2433** (1) Πυροφορικά υγρά των 6<sup>ο</sup> (a), 17<sup>ο</sup> (a) με εξαίρεση το βοροϋδρίδιο του αλουμινίου σε συσκευές, 19<sup>ο</sup> (a) και 31<sup>ο</sup> έως 33<sup>ο</sup>, θα πρέπει να συσκευάζονται σε μεταλλικά δοχεία που κλείνουν ερμητικά, που δεν προσβάλλονται από το περιεχόμενο και έχουν χωρητικότητα όχι μεγαλύτερη από 450 λίτρα. Τα δοχεία θα πρέπει να υπόκεινται στον αρχικό έλεγχο και σε περιοδικούς ελέγχους κάθε πέντε χρόνια σε πίεση όχι μικρότερη από 1MPa (10 bar) (πίεση πιεζομέτρου). Τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από 90 % της χωρητικότητας τους, όμως ένας χώρος τουλάχιστον 5 % θα πρέπει να παραμένει κενός για ασφάλεια όταν το υγρό είναι σε μέση θερμοκρασία 50 °C. Κατά τη διάρκεια της μεταφοράς, το υγρό θα πρέπει να είναι κάτω από ένα στρώμα αδρανούς αερίου η πίεση πιεζομέτρου του οποίου θα πρέπει να είναι όχι μικρότερη από 50 kPa (0.5 bar). Τα δοχεία θα πρέπει να φέρουν μία πλάκα δεδομένων με τα παρακάτω στοιχεία αναγραφόμενα σε μορφή διαρκείας:

## Κλάση 4.2

2433  
(συνεχ.)

- ύλη ή ύλες<sup>1/</sup> που γίνονται δεκτές για μεταφορά,
- το απόβαρο<sup>2/</sup> του δοχείου, συμπεριλαμβανομένων των εξαρτημάτων,
- πίεση ελέγχου<sup>2/</sup> (πίεση πιεζομέτρου),
- ημερομηνία (μήνας, χρόνος) του τελευταίου ελέγχου που έγινε,
- σφραγίδα του εμπειρογνώμονα που διεξήγαγε τον έλεγχο,
- χωρητικότητα<sup>2/</sup> του δοχείου,
- μέγιστο επιτρεπόμενο βάρος πλήρωσης<sup>2/</sup>.

(2) Αυτές οι ύλες μπορούν επίσης να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με γυάλινη εσωτερική συσκευασία και χαλύβδινη ή αλουμινένια εξωτερική συσκευασία σύμφωνα με το περιθωριακό 3532. Τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από 90 % της χωρητικότητάς τους. Κάθε κόλο θα πρέπει να περιέχει μία μόνη εσωτερική συσκευασία. Τέτοιες συνδυασμένες συσκευασίες θα πρέπει να συμφωνούν σ'έναν τύπο σχεδιασμού που έχει ελεγχθεί και εγκριθεί σε συμφωνία με την προσθήκη A.5 για την ομάδα συσκευασίας I.

2434 Φωσφόρος της 22° θα πρέπει να μεταφέρεται μόνον σε οχήματα-δεξαμενές και αποσυναρμολογούμενες δεξαμενές (βλέπε Προσθήκη B.1a) ή σε εμπορευματοκιβώτια-δεξαμενές (βλέπε Προσθήκη B.1b).

2435 (1) Ύλες ταξινομημένες υπό το (a) των 5°, 12°, 15° και 16° θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια μη-αφαιρούμενης κεφαλής με μέγιστη χωρητικότητα 60 λίτρα και σε πλαστικά μπιτόνια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες με γυάλινες, πλαστικού υλικού ή μεταλλικές εσωτερικές συσκευασίες σύμφωνα με το περιθωριακό 3538.

(2) Στερεά όπως ορίζονται στο περιθωριακό 2430 (10) μπορούν επίσης να συσκευάζονται σε βαρέλια αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3520 για χαλύβδινα, περιθωριακό 3521 για αλουμινένια, ή περιθωριακό 3526 για πλαστικού υλικού, ή σε μπιτόνια αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3522 για χαλύβδινα ή περιθωριακό 3526 για πλαστικού υλικού.

<sup>1/</sup> Η ονομασία μπορεί να αντικατασταθεί από μία γενική περιγραφή που καλύπτει ύλες παρόμοιās φύσης και επίσης συμβατές με τα χαρακτηριστικά του δοχείου.

<sup>2/</sup> Οι μονάδες μέτρησης πρέπει να προστίθενται κάθε φορά μετά από τις αριθμητικές τιμές.

## Κλάση 4.2

- 2435 (3) Λευκός ή κίτρινος φωσφόρος της 11° (a) θα πρέπει να συσκευάζονται σε:  
(συνεχ.)
- (a) χαλύβδινα βαρέλια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3520,
  - (b) χαλύβδινα μπιτόνια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3522,
  - (c) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με μεταλλικές εσωτερικές συσκευασίες.
- (4) Βοροϋδρίδιο του αλουμινίου που περιέχεται σε συσκευές της 17° (a) θα πρέπει να συσκευάζεται σε:
- (a) χαλύβδινα βαρέλια αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
  - (c) πλαστικά βαρέλια αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
  - (d) χαλύβδινα ή αλουμινένια κιβώτια σύμφωνα με το περιθωριακό 3532.
- 2436 (1) Ύγρες ταξινομημένες στο (b) των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη, ψαμμίργιλος) σύμφωνα με το περιθωριακό 3539, ή
  - (h) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
  - (i) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
  - (j) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, με εξαίρεση τους τύπους 11HZ2 και 31HZ2.
- (2) Στερεά όπως ορίζονται στο περιθωριακό 2430 (10) μπορούν επίσης να συσκευάζονται σε:
- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή σε βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) σάκους με πλαστική μεμβράνη σύμφωνα με το περιθωριακό 3535, υπό την προϋπόθεση ότι συνθέτουν ένα πλήρες φορτίο ή είναι φορτωμένα πάνω σε παλέτες.
- (3) Ιχθυάλευρο της 2° (b) μπορεί επίσης να συσκευάζεται σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, με εξαίρεση τους τύπους 13H1, 13L1 και 13M1, υπό την προϋπόθεση ότι συνθέτουν ένα πλήρες φορτίο ή ότι τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

## Κλάση 4.2

2437 (1) Ύλες ταξινομημένες στο (c) των διαφόρων ειδών, θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) μεταλλικές συσκευασίες ελαφρού περιτυπώματος σύμφωνα με το περιθωριακό 3540.

**ΣΗΜΕΙΩΣΗ:** Οι μεταλλικές συσκευασίες για ύλες της 4<sup>ο</sup> θα πρέπει να είναι έτσι κατασκευασμένες και κλεισμένες ώστε να αποδίδουν όταν η εσωτερική πίεση φτάνει μία τιμή όχι μεγαλύτερη από 300 kPa (3 bar).

(2) Με εξαίρεση τις ύλες της 4<sup>ο</sup>, οι ύλες μπορεί επίσης να συσκευάζονται σε:

- (a) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
- (b) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
- (c) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625 με εξαίρεση τους τύπους 11HZ2 και 31HZ2.

(3) Στερεά όπως ορίζονται στο περιθωριακό 2430 (10) μπορούν επίσης να συσκευάζονται σε:

- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523, ή σε βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) σάκους με πλαστική μεμβράνη σύμφωνα με το περιθωριακό 3535.

(4) Με εξαίρεση τις ύλες της 4<sup>ο</sup>, στερεά όπως ορίζονται στο περιθωριακό 2430 μπορούν επίσης να συσκευάζονται σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, με εξαίρεση τους τύπους 13H1, 13L1 και 13M1.

(5) Ύλες των 2<sup>ο</sup> (c) και 3<sup>ο</sup> (c) μπορούν επίσης να συσκευάζονται σε μη-ελεγμένες συσκευασίες, που χρειάζεται μόνον να ικανοποιήσουν τις διατάξεις του περιθωριακού 3500 (1), (2) και (4) έως (7). Απόβλητα βαμβακιού με περιεκτικότητα σε λάδι μικρότερη από 5 % (κατά βάρος) και βαμβάκι της 3<sup>ο</sup> (c) μπορούν επίσης να μεταφέρονται σε στερεά ασφαλισμένες σφαίρες.

## Κλάση 4.2

- 2438 (1) Τα ανοίγματα των δοχείων για τη μεταφορά υγρών με ιξώδες, στους 23 °C, μικρότερο από 200 mm<sup>2</sup>/s, με εξαίρεση τις γυάλινες αμπούλες και τους κυλίνδρους πίεσης, θα πρέπει να σφραγίζονται ερμητικά με δύο συσκευές στη σειρά, μία από τις οποίες θα πρέπει να είναι κλειστή με βίδες ή ασφαλισμένη με έναν ισοδύναμο τρόπο.

**ΣΗΜΕΙΩΣΗ:** Για IBC, πάντως, βλέπε περιθωριακό 3621 (8).

- (2) Χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, που περιέχουν βρεγμένο καταλύτη μετάλλου της 12° (b), θα πρέπει να είναι εφοδιασμένα με εξαεριστήρα σε συμφωνία με το περιθωριακό 3500 (8).

2439-  
2440

### 3. Μικτή συσκευασία

- 2441 (1) Υγες ταξινομημένες στο ίδιο είδος μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

- (2) Υγες των 6° (a), 11°, 17° (a), 19° (a), και 31° έως 33° δεν θα πρέπει να συσκευάζονται μαζί με ύλες ή είδη άλλων ειδών της κλάσης 4.2, με ύλες ή είδη άλλων κλάσεων ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

- (3) Με εξαίρεση τις ύλες που αναφέρονται στο (2) παραπάνω, ύλες της κλάσης 4.2, σε ποσότητες που δεν ξεπερνούν τα 3 λίτρα για υγρά και/ή 6 kg για στερεά, ανά δοχείο, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, με ύλες ή είδη άλλων κλάσεων - υπό την προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για ύλες και είδη εκείνων των κλάσεων - και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

Για ύλες ταξινομημένες στην ομάδα (a), η καθαρή ποσότητα ανά κόλο δεν θα πρέπει να υπερβαίνει τα 3 kg για στερεά, 3 λίτρα για υγρά.

- (4) Οι παρακάτω θα πρέπει να θεωρούνται επικίνδυνες αντιδράσεις:

- (a) ανάφλεξη και/ή εκπομπή αξιοσημείωτης θερμότητας,
- (b) Έκλυση εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

- (5) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2432 θα πρέπει να τηρούνται.

- (6) Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg όταν χρησιμοποιούνται ξύλινα κασόνια ή κασόνια από φύλλο φάιμπερ.

## Κλάση 4.2

4. *Μαρκάρισμα και επικέτες κινδύνου πάνω στα κόλα (βλέπε Προσθήκη Α.9)**Μαρκάρισμα*

- 2442 (1) Κάθε κόλο θα πρέπει να είναι μαρκαρισμένο καθαρά και με τρόπο διάρκειας με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα αναγράφονται στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

*Ετικέτες κινδύνου*

- (2) Κόλα που περιέχουν ύλες της κλάσης 4.2 θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2.
- (3) Κόλα που περιέχουν ύλες της 17° (a), maneb ή παρασκευάσματα maneb της 16° (c), και ύλες των 31° έως 33°, θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.3.
- (4) Κόλα που περιέχουν ύλες των 7°, 8°, 11°, 18° και 19° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1.
- (5) Κόλα που περιέχουν ύλες των 9°, 10°, 15°, 20° και 21° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.
- (6) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω, θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.
- (7) Κόλα που περιέχουν υγρά, τα πάματα των οποίων δεν είναι ορατά από έξω, κόλα που περιέχουν δοχεία εφοδιασμένα με εξαεριστήρες ή δοχεία εφοδιασμένα με εξαεριστήρες χωρίς εξωτερική συσκευασία και κόλα που περιέχουν φωσφόρο καλυμμένο με νερό της 11° (a), θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2443

**B. Στοιχεία στο έγγραφο μεταφοράς**

- 2444 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφώνει με έναν από τους χαρακτηριστικούς αριθμούς και ονομασίες που υπογραμμίζονται στο περιθωριακό 2431. Εάν η ύλη δεν αναφέρεται με την ονομασία της, αλλά είναι καταχωρημένη σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από τη χημική ή τεχνική ονομασία της ύλης<sup>3/</sup>.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα και τα αρχικά "ADR" (ή "RID"), π.χ. "4.2. 13° (b), ADR".

Για τη μεταφορά των αποβλήτων [βλέπε περιθωριακό 2000 (5)] η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα που περιέχουν ..." και το(τα) συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα αναγράφεται(ονται) με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα, γαίες που περιέχουν 1381 λευκό φωσφόρος κάτω από νερό 4.2, 11° (a) ADR".

<sup>3/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό.

## Κλάση 4.2

2444 (συνεχ.) Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά υποκείμενα στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κυρίως συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και μειγμάτων.

Εάν μία επώνυμη ύλη σε συμφωνία με το περιθωριακό 2430 (9) δεν υπόκειται στις συνθήκες αυτής της Κλάσης, ο αποστολέας μπορεί να γράψει στο έγγραφο μεταφοράς: "Όχι εμπορεύματα της κλάσης 4.2".

Για τα διαλύματα και μείγματα που περιέχουν μόνον ένα συστατικό υποκείμενο στις διατάξεις αυτής της Οδηγίας, η λέξη "διάλυμα" ή "μείγμα" θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8) (a)].

Όταν ένα στερεό παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει επιπλέον να αναφέρουν "τετηγμένο", εκτός εάν ο όρος ήδη εμφανίζεται στην ονομασία.

2445-  
2451

## C. Κενές συσκευασίες

2452 (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC της 41° θα πρέπει να κλείνονται με τον ίδιο τρόπο και να είναι στεγανές στον ίδιο βαθμό σαν να ήταν γεμάτες.

(2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC της 41° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.

(3) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 41°, π.χ. "Κενή συσκευασία, 4.2, 41°, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών ή κενών μικρών εμπορευματοκιβωτίων, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συνοδεύεται από τις λέξεις "Τελευταίο φορτίο" και την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία π.χ. "Τελευταίο φορτίο: 1381 λευκός φωσφόρος, ξηρός, 11° (a)".

2453-  
2469

**ΚΛΑΣΗ 4.3. ΥΛΕΣ ΠΟΥ, ΣΕ ΕΠΑΦΗ ΜΕ ΤΟ ΝΕΡΟ,  
ΕΚΛΥΟΥΝ ΕΥΦΛΕΚΤΑ ΑΕΡΙΑ**

**1. Κατάλογος υλών**

- 2470** (1) Ανάμεσα στις ύλες που καλύπτονται από τον τίτλο της κλάσης 4.3, εκείνα που αναφέρονται στο περιθωριακό 2471 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο εκείνου του περιθωριακού, υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2470 (2) έως 2492 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες υλών που αναφέρονται στο περιθωριακό 2471 που δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση, είτε σε αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2471α.

- (2) Ο τίτλος της κλάσης 4.3 καλύπτει ύλες που αντιδρούν με το νερό προς έκλυση εύφλεκτων αερίων υποκείμενων στο σχηματισμό εκρηκτικών μειγμάτων με τον αέρα.

**ΣΗΜΕΙΩΣΗ:** Ο όρος "ενεργή με το νερό" που χρησιμοποιείται στις ε.α.ο. καταχωρήσεις του περιθωριακού 2471, δηλώνει μία ύλη που σε επαφή με το νερό εκλύει εύφλεκτα αέρια.

- (3) Οι ύλες της κλάσης 4.3 υποδιαιρούνται ως εξής:

- A. Οργανικές ύλες, οργανομεταλλικές ενώσεις και ύλες σε οργανικούς διαλύτες, που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια,
- B. Ανόργανες ύλες που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια,
- C. Κενές συσκευασίες.

Υλες της κλάσης 4.3 ταξινομημένες στα διάφορα είδη του περιθωριακού 2471, θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες, που χαρακτηρίζονται από το γράμμα (a), (b) ή (c), σύμφωνα με το βαθμό κινδύνου τους:

- (a) πολύ επικίνδυνες,
- (b) επικίνδυνες,
- (c) λιγότερο επικίνδυνες.

- (4) Καταχώρηση υλών που δεν αναφέρονται με συγκεκριμένη ονομασία στο περιθωριακό 2471, 1°, 3°, 11°, 13°, 14°, 16° και 20° έως 25°, και μέσα σ' αυτά τα είδη στα γράμματα, θα πρέπει να βασίζεται στα αποτελέσματα της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3340 και 3341. Η εμπειρία θα πρέπει επίσης να λαμβάνεται υπόψη όταν οδηγεί σε μία περισσότερο αυστηρά βασισμένη καταχώρηση.

- (5) Όταν ύλες χωρίς συγκεκριμένη ονομασία καταχωρούνται στα είδη του περιθωριακού 2471 βάσει της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3340 και 3341, εφαρμόζονται τα παρακάτω κριτήρια:

Μία ύλη θα πρέπει να καταχωρείται στην κλάση 4.3 εάν:

- (a) κατά τη διάρκεια οποιασδήποτε φάσης του ελέγχου το αέριο που εκλύεται αναφλέγεται αυτόματα, ή
- (b) ο ρυθμός εκπομπής εύφλεκτου αερίου ανά ώρα είναι ίσος ή μεγαλύτερος από 1 λίτρο ανά χιλιόγραμμο ανά ώρα της ύλης που είναι υπό έλεγχο.

## Κλάση 4.3

**2470** (6) Όταν ύλες χωρίς συγκεκριμένη ονομασία καταχωρούνται στα γράμματα των ειδών στο (συνεχ.) περιθωριακό 2471 βάσει της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3340 και 3341, τα παρακάτω κριτήρια θα πρέπει να εφαρμόζονται:

- (a) Οποιαδήποτε ύλη που αντιδρά ζωηρά με το νερό σε θερμοκρασία περιβάλλοντος προς παραγωγή αερίου που αναφλέγεται αυτόματα, ή αερίου που αντιδρά άμεσα με το νερό σε θερμοκρασίες περιβάλλοντος τέτοιες ώστε ο ρυθμός εκπομπής εύφλεκτου αερίου μέσα σ'ένα λεπτό είναι ίσος ή μεγαλύτερος από 10 λίτρα ανά χιλιόγραμμο ύλης, θα πρέπει να καταχωρείται στο γράμμα (a),
- (b) Οποιαδήποτε ύλη που αντιδρά άμεσα με το νερό σε θερμοκρασία περιβάλλοντος τέτοια ώστε ο μέγιστος ρυθμός εκπομπής εύφλεκτου αερίου ανά ώρα είναι ίσος ή μεγαλύτερος από 20 λίτρα ανά χιλιόγραμμο ύλης, και που δεν ικανοποιεί τα κριτήρια του γράμματος (a), θα πρέπει να καταχωρείται στο γράμμα (b),
- (c) Οποιαδήποτε ύλη που αντιδρά αργά με το νερό σε θερμοκρασία περιβάλλοντος τέτοια ώστε ο μέγιστος ρυθμός εκπομπής εύφλεκτου αερίου ανά ώρα είναι ίσος ή μεγαλύτερος από 1 λίτρο ανά χιλιόγραμμο ύλης, και που δεν ικανοποιεί τα κριτήρια των γραμμάτων (a) ή (b), θα πρέπει να καταχωρείται στο γράμμα (c).

(7) Εάν ύλες της κλάσης 4.3, ως αποτέλεσμα προσμείξεων, μπαίνουν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες ανήκουν οι ύλες του περιθωριακού 2471, αυτά τα μείγματα θα πρέπει να καταχωρούνται στα είδη και γράμματα στα οποία ανήκουν βάσει του πραγματικού βαθμού κινδύνου τους.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και ασόβλητα) βλέπε επίσης περιθωριακό 2002 (8).

(8) Όταν ύλες έχουν συγκεκριμένη ονομασία σε περισσότερα από ένα γράμματα του ίδιου είδους του περιθωριακού 2471, το σχετικό γράμμα μπορεί να καθοριστεί βάσει των αποτελεσμάτων της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3340 και 3341, και τα κριτήρια που τίθενται στην παράγραφο (6).

(9) Βάσει της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3340 και 3341, και τα κριτήρια που τίθενται στην παράγραφο (6), μπορεί επίσης να καθοριστεί εάν η φύση μίας συγκεκριμένης ονομασίας ύλης είναι τέτοια ώστε η ύλη να μην υπόκειται στις διατάξεις για αυτήν την Κλάση (βλέπε περιθωριακό 2484).

(10) Ύλες και μείγματα υλών με σημείο τήξης υψηλότερο από 45 °C θα πρέπει να θεωρούνται ως στερεά για τους σκοπούς των συνθηκών συσκευασίας στα περιθωριακά 2474 (2), 2475 (3) και 2476 (2).

(11) Ενεργά με το νερό στερεά, εύφλεκτα, που καταχωρούνται στον χαρακτηριστικό αριθμό 3132, ενεργά με το νερό στερεά, οξειδωτικά, που καταχωρούνται στον χαρακτηριστικό αριθμό 3133 και ενεργά με το νερό στερεά, αυτοθερμαινόμενα, που καταχωρούνται στον χαρακτηριστικό αριθμό 3135 των Υποδείξεων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων των Ηνωμένων Εθνών, δεν θα πρέπει να γίνονται δεκτά για μεταφορά (βλέπε, όμως, περιθωριακό 2002 (8), υποσημείωση<sup>1/</sup> στον πίνακα στην παράγραφο 2.3.1).

## Κλάση 4.3

2471 Α. Οργανικές ύλες, οργανομεταλλικές ενώσεις και ύλες σε οργανικούς διαλύτες που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια

1° Χλωροσιλάνια:

- (a) 1183 αιθυλοδιγλωροσιλάνιο, 1242 μεθυλοδιγλωροσιλάνιο, 1295 τριγλωροσιλάνιο, 2988 γλωροσιλάνια, ενεργά με το νερό, εύφλεκτα, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ'αυτές τις ύλες [βλέπε περιθωριακό 2473 (1)].

**ΣΗΜΕΙΩΣΗ 2:** Χλωροσιλάνια με σημείο ανάφλεξης μικρότερο από 23 °C και που, σε επαφή με το νερό, δεν εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 3 [βλέπε περιθωριακό 2301, 21° (a)].

**ΣΗΜΕΙΩΣΗ 3:** Χλωροσιλάνια με σημείο ανάφλεξης ίσο ή μεγαλύτερο από 23 °C και που, σε επαφή με το νερό, δεν εκλύουν εύφλεκτα αέρια, είναι ύλες της κλάσης 8 (βλέπε περιθωριακό 2801, 37°).

2° Το παρακάτω σύμπλεγμα τριφθοριούχου βορίου:

- (a) 2965 διμεθυλαιθερικό τριφθοριούχο βόριο.

3° Οργανομεταλλικές ενώσεις και μείγματα αυτών:

- (a) 1928 βρωμιούχο μεθυλομαγνήσιο σε αιθυλαιθέρα, 3207 οργανομεταλλική ένωση, ενεργή με το νερό, εύφλεκτη, ε.α.ο. ή 3207 διάλυμα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο. ή 3207 εναιώρημα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ'αυτές τις ύλες [βλέπε περιθωριακό 2473 (2)].

- (b) 3207 οργανομεταλλική ένωση, ενεργή με το νερό, εύφλεκτη, ε.α.ο. ή 3207 διάλυμα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο. ή 3207 εναιώρημα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο.,

- (c) 3207 οργανομεταλλική ένωση, ενεργή με το νερό, εύφλεκτη, ε.α.ο. ή 3207 διάλυμα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο. ή 3207 εναιώρημα οργανομεταλλικής ένωσης, ενεργό με το νερό, εύφλεκτο, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Οργανομεταλλικές ενώσεις και μείγματα αυτών που αναφλέγονται αυτόματα, είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 31° έως 33°).

**ΣΗΜΕΙΩΣΗ 2:** Εύφλεκτα μείγματα με οργανομεταλλικές ενώσεις σε συγκεντρώσεις που, σε επαφή με το νερό, ούτε εκλύουν εύφλεκτα αέρια σε επικίνδυνες ποσότητες ούτε αναφλέγονται αυτόματα, είναι ύλες της κλάσης 3.

## Κλάση 4.3

2471 Β. Ανόργανες ύλες που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια (συνεχ.)

**ΣΗΜΕΙΩΣΗ 1:** Ο όρος "αλκαλιμέταλλα" συμπεριλαμβάνει τα στοιχεία λίθιο, νάτριο, κάλιο, ρουβίδιο και καίσιο.

**ΣΗΜΕΙΩΣΗ 2:** Ο όρος μέταλλα "της σειράς των αλκαλικών γαιών" συμπεριλαμβάνει τα στοιχεία μαγνήσιο, ασβέστιο, στρόντιο και βάριο.

11° Αλκαλιμέταλλα και μέταλλα της σειράς των αλκαλικών γαιών και κράματα και μεταλλικές ενώσεις τους:

(a) 1389 αμάλγαμα αλκαλιμετάλλου, 1391 εναίωρημα αλκαλιμετάλλου ή 1391 εναίωρημα μετάλλου της σειράς των αλκαλικών γαιών, 1392 αμάλγαμα μετάλλου της σειράς των αλκαλικών γαιών, 1407 καίσιο, 1415 λίθιο, 1420 κάλιο μεταλλικό κράμα, 1422 κράμα καλίου νατρίου, 1423 ρουβίδιο, 1428 νάτριο, 2257 κάλιο, 1421 κράμα αλκαλιμετάλλου. υγρό. ε.α.ο.,

(b) 1400 βάριο, 1401 ασβέστιο, 1393 κράμα μετάλλου της σειράς των αλκαλικών γαιών. ε.α.ο.,

(c) 2950 μαγνήσιο κοκκώδες, επικαλυμμένο με μέγεθος κόκκου όχι μικρότερο από 149 μικρά.

**ΣΗΜΕΙΩΣΗ 1:** Μέταλλα της σειράς των αλκαλικών γαιών και κράματα μετάλλων της σειράς των αλκαλικών γαιών σε πυροφορική μορφή, είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 12°).

**ΣΗΜΕΙΩΣΗ 2:** 1869 μαγνήσιο ή 1869 κράμα μαγνησίου που περιέχει περισσότερο από 50 % μαγνήσιο σε μορφή σβόλων, ροκανιδίων ή ροδέλων, είναι ύλες της κλάσης 4.1 [βλέπε περιθωριακό 2401, 13° (c)].

**ΣΗΜΕΙΩΣΗ 3:** 1418 μαγνήσιο σε σκόνη και 1418 κράμα μαγνησίου σε μορφή σκόνης είναι ύλες του 14°.

12° Κράματα πυριτίου και πυριτιούχα μέταλλα:

(b) 1405 πυριτιούχο ασβέστιο, 1417 λιθιοπυρίτιο, 2624 πυριτιούχο μαγνήσιο, 2830 λιθιοσιδηροπυρίτιο,

(c) 1405 πυριτιούχο ασβέστιο, 2844 ασβεστιομαγνησιοπυρίτιο.

**ΣΗΜΕΙΩΣΗ:** Για τις ύλες του (c) βλέπε επίσης περιθωριακό 2471a.

13° Άλλα μέταλλα, κράματα και μείγματα μετάλλων, μη-τοξικά, που σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια:

(a) 3208 μεταλλικές ύλες, ενεργές με το νερό. ε.α.ο.,

(b) 1396 αλουμίνιο σε σκόνη, μη-επικαλυμμένο, 3078 δημήτριο, σε τορναρίσματα ή αμμώδη σκόνη, 3170 υπο-προϊόντα επεξεργασίας αλουμινίου, 3208 μεταλλική ύλη, ενεργή με το νερό. ε.α.ο.,

(c) 1398 αλουμνιοπυρίτιο σε σκόνη, μη-επικαλυμμένο, 1435 τέφρες ψευδάργυρου, 3170 υποπροϊόντα επεξεργασίας αλουμινίου, 3208 μεταλλική ύλη, ενεργή με το νερό. ε.α.ο.

## Κλάση 4.3

2471  
(συνεχ.)**ΣΗΜΕΙΩΣΗ 1:** Λεπτή σκόνη και σκόνη μετάλλων σε πυροφορική μορφή, είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 12°).**ΣΗΜΕΙΩΣΗ 2:** Αλουμινοπυρίτιο σε σκόνη, επικαλυμμένο, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.**ΣΗΜΕΙΩΣΗ 3:** 1333 δημήτριο σε πλάκες, ράβδους ή πλινθώματα είναι ύλη της κλάσης 4.1 [βλέπε περιθωριακό 2401, 13° (b)].

14° Μέταλλα και κράματα μετάλλων στη μορφή σκόνης ή σε οποιαδήποτε άλλη μορφή, που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια και είναι ικανά για αυτοθέρμανση:

(a) 1436 ψευδάργυρος σε σκόνη ή 1436 ψευδάργυρος σε λεπτή σκόνη, 3209 μεταλλική ύλη, ενεργή με το νερό, αυτοθερμαινόμενη, ε.α.ο.,(b) 1418 μαγνήσιο σε σκόνη ή 1418 κράμα μαγνησίου σε σκόνη, 1436 ψευδάργυρος σε σκόνη ή 1436 ψευδάργυρος σε λεπτή σκόνη, 3209 μεταλλική ύλη, ενεργή με το νερό, αυτοθερμαινόμενη, ε.α.ο.,(c) 1436 ψευδάργυρος σε σκόνη ή 1436 ψευδάργυρος σε λεπτή σκόνη, 3209 μεταλλική ύλη, ενεργή με το νερό, αυτοθερμαινόμενη, ε.α.ο.**ΣΗΜΕΙΩΣΗ 1:** Μέταλλα και κράματα μετάλλων σε πυροφορική μορφή, είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 12°).**ΣΗΜΕΙΩΣΗ 2:** Μέταλλα και κράματα μετάλλων που, σε επαφή με το νερό, δεν εκλύουν εύφλεκτα αέρια και δεν είναι πυροφορικά ή αυτοθερμαινόμενα, αλλά που αναφλέγονται εύκολα, είναι ύλες της κλάσης 4.1 (βλέπε περιθωριακό 2401, 13°).

15° Μέταλλα και κράματα μετάλλων, τοξικά:

(b) 1395 αλουμινοσιδηροπυρίτιο σε σκόνη,(c) 1408 σιδηροπυρίτιο με 30 % ή περισσότερο αλλά λιγότερο από 90 % πυρίτιο.**ΣΗΜΕΙΩΣΗ:** Σιδηροπυρίτιο που περιέχει λιγότερο από 30 % ή όχι λιγότερο από 90 % (κατά βάρος) πυρίτιο, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

16° Υδρίδια μετάλλων:

(a) 1404 υδρίδιο ασβεστίου, 1410 υδρίδιο λιθιοαλουμινίου, 1411 υδρίδιο λιθιοαλουμινίου, αιθερικό, 1413 βοροϋδρίδιο λιθίου, 1414 υδρίδιο λιθίου, 1426 βοροϋδρίδιο νατρίου, 1427 υδρίδιο νατρίου, 1870 βοροϋδρίδιο καλίου, 2010 υδρίδιο μαγνησίου, 2463 υδρίδιο αλουμινίου, 1409 υδρίδια μετάλλων, ενεργά με το νερό, ε.α.ο.,(b) 2805 υδρίδιο λιθίου, στερεό, σε χυτά τεμάχια, 2835 υδρίδιο νατραλουμινίου, 1409 υδρίδια μετάλλων, ενεργά με το νερό, ε.α.ο.**ΣΗΜΕΙΩΣΗ 1:** 1871 υδρίδιο τιτανίου και 1437 υδρίδιο ζirkόνιου είναι ύλες της κλάσης 4.1 (βλέπε περιθωριακό 2401, 14°).**ΣΗΜΕΙΩΣΗ 2:** 2870 το βοροϋδρίδιο αλουμινίου είναι ύλη της κλάσης 4.2 [βλέπε περιθωριακό 2431, 17° (a)].

## Κλάση 4.3

2471 17° Καρβίδια μετάλλων και νιτρίδια μετάλλων:  
(συνεχ.)

- (a) 2806 νιτρίδιο λιθίου,  
(b) 1394 καρβίδιο αλουμινίου, 1402 καρβίδιο ασβεστίου.

18° Φωσφίδια μετάλλων, τοξικά:

- (a) 1360 φωσφίδιο ασβεστίου, 1397 φωσφίδιο αλουμινίου, 1419 φωσφίδιο μαγνησιοαλουμινίου, 1432 φωσφίδιο νατρίου, 1433 φωσφίδια κασσίτερου, 1714 φωσφίδιο ψευδάργυρου, 2011 φωσφίδιο μαγνησίου, 2012 φωσφίδιο καλίου, 2013 φωσφίδιο στροντίου.

**ΣΗΜΕΙΩΣΗ 1:** Ενώσεις φωσφόρου με βαριά μέταλλα όπως σίδηρος, χαλκός, κ.λπ., δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** 3048 παρασιτοκτόνα φωσφίδια του αλουμινίου, με πρόσθετα που παρεμποδίζουν την εκπομπή εύφλεκτων αερίων, είναι ύλες της κλάσης 6.1 [βλέπε περιθωριακό 2601, 43°, (a)].

19° Αμιδία μετάλλων και κυαναμίδια μετάλλων:

- (b) 1390 αμιδία αλκαλιμετάλλων,  
(c) 1403 κυαναμίδιο ασβεστίου με περισσότερο από 0.1 % (κατά βάρος) καρβίδιο ασβεστίου.

**ΣΗΜΕΙΩΣΗ 1:** Κυαναμίδιο ασβεστίου που περιέχει όχι περισσότερο από 0.1 % (κατά βάρος) καρβίδιο ασβεστίου, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** το 2004 διαμίδιο μαγνησίου, είναι ύλη της κλάσης 4.2 [βλέπε περιθωριακό 2431, 16° (b)].

20° Ανόργανες στερεές ύλες και μείγματα (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, μη-τοξικά και μη-διαβρωτικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 2813 ενεργά με το νερό στερεά, ε.α.ο.,  
(b) 1340 πενταθειούχος φωσφόρος (P<sub>2</sub>S<sub>5</sub>) ελεύθερος από κίτρινο και λευκό φωσφόρο, 2813 ενεργά με το νερό στερεά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Πενταθειούχος φωσφόρος όχι ελεύθερος από κίτρινο και λευκό φωσφόρο, δεν θα γίνεται δεκτός για μεταφορά.

- (c) 2968 maneb (1,2-bis(διθειοκαρβαμικό) μαγναισιοαιθυλένιο), σταθεροποιημένο έναντι της αυτοθέρμανσης, ή 2968 παρασκεύασμα maneb, σταθεροποιημένο έναντι της αυτοθέρμανσης, 2813 ενεργά με το νερό στερεά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2210 maneb ή 2210 παρασκευάσματα maneb σε αυτοθερμαινόμενη μορφή, είναι ύλες της κλάσης 4.2 [βλέπε περιθωριακό 2431, 16° (c)], όμως, βλέπε επίσης περιθωριακό 2471a, (c).

## Κλάση 4.3

2471 21° Ανόργανες υγρές ύλες και διαλύματα ανόργανων υλών (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, μη-τοξικά και μη-διαβρωτικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3148 ενεργά με το νερό υγρά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2473 (2)].

(b) 3148 ενεργά με το νερό υγρά, ε.α.ο.

(c) 3148 ενεργά με το νερό υγρά, ε.α.ο.

22° Ανόργανες στερεές ύλες και μείγματα (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, τοξικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3134 ενεργά με το νερό στερεά, τοξικά, ε.α.ο.

(b) 3134 ενεργά με το νερό στερεά, τοξικά, ε.α.ο.

(c) 3134 ενεργά με το νερό στερεά, τοξικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

23° Ανόργανες υγρές ύλες και διαλύματα ανόργανων υλών (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, τοξικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3130 ενεργά με το νερό υγρά, τοξικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2473 (2)].

(b) 3130 ενεργά με το νερό υγρά, τοξικά, ε.α.ο.

(c) 3130 ενεργά με το νερό υγρά, τοξικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια τοξικότητας, βλέπε περιθωριακό 2600 (3).

24° Ανόργανες στερεές ύλες και μείγματα (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, διαβρωτικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3131 ενεργά με το νερό στερεά, διαβρωτικά, ε.α.ο.

(b) 3131 ενεργά με το νερό στερεά, διαβρωτικά, ε.α.ο.

(c) 3131 ενεργά με το νερό στερεά, διαβρωτικά, ε.α.ο.

## Κλάση 4.3

2471 (συνεχ.) **ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

25° Ανόργανες υγρές ύλες και διαλύματα ανόργανων υλών (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια, διαβρωτικά και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3129 ενεργά με το νερό υγρά, διαβρωτικά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2473 (2)].

(b) 3129 ενεργά με το νερό υγρά, διαβρωτικά, ε.α.ο.,

(c) 3129 ενεργά με το νερό υγρά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

**C. Κενές συσκευασίες**

31° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, καθώς και κενά οχήματα για μεταφορά χύμα και κενά μικρά εμπορευματοκιβώτια για μεταφορά χύμα, ακαθάριστα, που περιείχαν ύλες της κλάσης 4.3.

2471a Ύλες των διαφόρων ειδών που μεταφέρονται υπό τους παρακάτω όρους, δεν υπόκεινται στις διατάξεις για αυτή την Κλάση που περιέχονται σε αυτό το Παράρτημα και στο Παράρτημα Β:

(a) Ύλες ταξινομημένες στο (a) κάθε είδους, δεν καλύπτονται από αυτό το περιθωριακό,

(b) Ύλες ταξινομημένες στο (b) κάθε είδους:  
υγρά: έως 500 ml ανά εσωτερική συσκευασία,  
αλουμίνιο σε σκόνη της 13° (b): έως 1 kg ανά εσωτερική συσκευασία,  
άλλα στερεά: έως 500 g ανά εσωτερική συσκευασία,

(c) Ύλες ταξινομημένες στο (c) κάθε είδους:  
υγρά: έως 1 λίτρο ανά εσωτερική συσκευασία,  
στερεά: έως 1 kg ανά εσωτερική συσκευασία.

Αυτές οι ποσότητες υλών, θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που ικανοποιούν τουλάχιστον τους όρους του περιθωριακού 3538. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 30 kg.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

## Κλάση 4.3

## 2. Διατάξεις

## Α. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

2472 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών ορίζονται στο περιθωριακό 2473.

Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.6.

(2) Οι συσκευασίες θα πρέπει να είναι ερμητικά κλεισμένες έτσι ώστε να αποφεύγεται οποιαδήποτε διείσδυση υγρασίας ή οποιαδήποτε απώλεια περιεχομένου. Δεν θα πρέπει να έχουν εξαεριστήρες σε συμφωνία με τα περιθωριακά 3500 (8) ή 3601 (6).

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2470 (3) και 3511 (2) ή 3611 (2) αντίστοιχα, θα πρέπει να χρησιμοποιούνται τα παρακάτω:

- συσκευασίες της ομάδας συσκευασίας I, μαρκαρισμένες με το γράμμα "X", για πολύ επικίνδυνες ύλες ταξινομημένες υπό το (a) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για επικίνδυνες ύλες ταξινομημένες υπό το (b) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για λιγότερο επικίνδυνες ύλες ταξινομημένες υπό το (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 4.3 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για μεταφορά χύμα, βλέπε Παράρτημα Β.

## 2. Ειδικές συνθήκες για συσκευασία ορισμένων υλών

2473 (1) Χλωροσιλάνια της 1<sup>ο</sup> (a), θα πρέπει να συσκευάζονται σε ανθεκτικά στη διάβρωση χαλύβδινα δοχεία με μέγιστη χωρητικότητα 450 λίτρα. Τα δοχεία θα πρέπει να υπόκεινται στον αρχικό έλεγχο και σε περιοδικούς ελέγχους κάθε πέντε χρόνια σε πίεση όχι μικρότερη από 0.4 MPa (4 bar) (πίεση πιεζομέτρου). Η συσκευή κλεισίματος του δοχείου θα πρέπει να προστατεύεται από κάλυμμα. Το μέγιστο επιτρεπτό βάρος πλήρωσης ανά λίτρο χωρητικότητας για τριγλωροσιλάνιο, αιθυλοδιγλωροσιλάνιο και μεθυλοδιγλωροσιλάνιο, δεν θα πρέπει να υπερβαίνει τα 1.14 kg, 0.93 kg ή 0.95 kg αντίστοιχα, εάν η πλήρωση γίνεται κατά βάρος, εάν η πλήρωση είναι κατ'όγκο, ο βαθμός πλήρωσης δεν θα πρέπει να υπερβαίνει το 85 %. Τα δοχεία θα πρέπει επίσης να φέρουν μία πλακέτα που να δείχνει τα παρακάτω στοιχεία σε μορφή διαρκείας:

- χλωροσιλάνια, Κλάση 4.3,
- περιγραφή του(των) χλωροσιλάνιου(ων) που γίνεται(ονται) δεκτό(ά) για μεταφορά,
- το απόβαρο <sup>1/</sup> του δοχείου, συμπεριλαμβανομένων των εξαρτημάτων,
- πίεση ελέγχου <sup>1/</sup> (πίεση πιεζομέτρου),

<sup>1/</sup> Οι μονάδες μέτρησης πρέπει να προστίθενται κάθε φορά μετά από τις αριθμητικές τιμές.

## Κλάση 4.3

- 2473  
(συνεχ.)
- ημερομηνία (μήνα, έτος) του τελευταίου ελέγχου που έγινε,
  - σφραγίδα του εμπειρογνώμονα που διεξήγαγε τον έλεγχο,
  - την χωρητικότητα <sup>1/</sup> του δοχείου,
  - μέγιστο επιτρεπόμενο βαθμό πλήρωσης κατά βάρος <sup>1/</sup> για κάθε ύλη που γίνεται δεκτή για μεταφορά.

(2) Ύλες των 3° (a), 21° (a), 23° (a) και 25° (a), θα πρέπει να συσκευάζονται σε μεταλλικά δοχεία που κλείνουν ερμητικά, που δεν προσβάλλονται από το περιεχόμενο και έχουν χωρητικότητα όχι μεγαλύτερη από 450 λίτρα. Τα δοχεία θα πρέπει να υπόκεινται στον αρχικό έλεγχο και σε περιοδικούς ελέγχους κάθε πέντε χρόνια σε πίεση τουλάχιστον 1 MPa (10 bar) (πίεση πιεζόμετρου).

Τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από το 90 % της χωρητικότητάς τους, όμως, ένας χώρος 5 % θα πρέπει να παραμένει κενός για ασφάλεια όταν το υγρό είναι σε μία μέση θερμοκρασία 50 °C. Κατά τη διάρκεια της μεταφοράς, το υγρό θα πρέπει να είναι κάτω από ένα στρώμα αδρανούς αερίου, η πίεση πιεζόμετρου του οποίου θα πρέπει να είναι όχι μικρότερη από 50 kPa (0.5 bar). Τα δοχεία θα πρέπει να φέρουν πλακέτα που να δείχνει τα παρακάτω στοιχεία σε μορφή διαρκείας:

- ύλη ή ύλες <sup>2/</sup> γίνονται δεκτές για μεταφορά,
- απόβαρο <sup>3/</sup> του δοχείου, συμπεριλαμβανομένων των εξαρτημάτων,
- πίεση ελέγχου <sup>3/</sup> (πίεση πιεζόμετρου),
- ημερομηνία (μήνας, χρόνος) του τελευταίου ελέγχου που έγινε,
- σφραγίδα του εμπειρογνώμονα που διεξήγαγε τον έλεγχο,
- χωρητικότητα <sup>3/</sup> του δοχείου,
- μέγιστο επιτρεπόμενο βάρος πλήρωσης <sup>3/</sup>.

(3) Ύλες που αναφέρονται στην παράγραφο (2) παραπάνω, μπορούν επίσης να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με γυάλινη εσωτερική συσκευασία και χαλύβδινη ή αλουμινένια εξωτερική συσκευασία σύμφωνα με το περιθωριακό 3532. Τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από το 90 % της χωρητικότητάς τους. Κάθε κόλο θα πρέπει να περιέχει μία μόνη εσωτερική συσκευασία. Τέτοιες συνδυασμένες συσκευασίες θα πρέπει να συμφωνούν σ'έναν τύπο σχεδιασμού που έχει ελεγχθεί και εγκριθεί σε συμφωνία με την προσθήκη A.5 για την ομάδα συσκευασίας I.

<sup>1/</sup> Οι μονάδες μέτρησης πρέπει να προστίθενται κάθε φορά μετά από τις αριθμητικές τιμές.

<sup>2/</sup> Η ονομασία αντικαθίσταται από μία συγκεντρωτική περιγραφή που καλύπτει ύλες παρόμοιας φύσης και ομοίως συμβατές με τις ιδιότητες του δοχείου.

<sup>3/</sup> Οι μονάδες μέτρησης πρέπει να προστίθενται κάθε φορά μετά από τις αριθμητικές τιμές.

## Κλάση 4.3

- 2474 (1) Ύλες ταξινομημένες στα (α) των 2°, 11°, 13°, 14°, 16° έως 18°, 20°, 22° και 24°, θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια μη-μετακινούμενης κεφαλής, σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια μη-μετακινούμενης κεφαλής με μέγιστη χωρητικότητα 60 λίτρα και πλαστικά μπιτόνια μη-αφαιρούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες με γυάλινα, πλαστικού υλικού ή μεταλλικά εσωτερικά δοχεία σύμφωνα με το περιθωριακό 3538.
- (2) Στερεά όπως ορίζονται στο περιθωριακό 2470 (10) μπορούν επίσης να συσκευάζονται σε:
- (a) βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520 για χαλύβδινα, περιθωριακό 3521 για αλουμινένια, περιθωριακό 3526 για πλαστικού υλικού, ή σε μπιτόνια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522 για χαλύβδινα ή περιθωριακό 3526 για πλαστικού υλικού, ή
  - (b) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους.
- 2475 (1) Ύλες ταξινομημένες στα (b) των διαφόρων ειδών, θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη, ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539.
- (2) Ύλες των 12° έως 17° και 20° μπορούν επίσης να συσκευάζονται σε:
- (a) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
  - (b) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
  - (c) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, με εξαίρεση των τύπων 11HZ2 και 31HZ2.

## Κλάση 4.3

- 2475 (3) Στερεά όπως ορίζονται στο περιθωριακό 2470 (10) μπορούν επίσης να συσκευάζονται σε:  
(συνεχ.)
- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους ή
  - (b) σάκους με πλαστική μεμβράνη σύμφωνα με το περιθωριακό 3535, υπό την προϋπόθεση ότι συνθέτουν ένα πλήρες φορτίο ή είναι φορτωμένοι πάνω σε παλέτες.
- 2476 (1) Υλεις ταξινομημένες στα (c) των διαφόρων ειδών, θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη, ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539, ή
  - (h) ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540, ή
  - (i) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
  - (j) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
  - (k) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625 με εξαίρεση των τύπων 11HZ2 και 31HZ2.
- (2) Στερεά όπως ορίζονται στο περιθωριακό 2470 (10) μπορούν επίσης να συσκευάζονται σε:
- (a) βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) σάκους με πλαστική μεμβράνη σύμφωνα με το περιθωριακό 3535, ή
  - (c) εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, με εξαίρεση τους τύπους 13H1, 13L1 και 13M1.

**ΣΗΜΕΙΩΣΗ:** Υλεις της 15° (c) μπορούν επίσης να συσκευάζονται σε συσκευασίες, που χρειάζεται μόνον να ικανοποιούν τις απαιτήσεις του περιθωριακού 3500 (1), (2) και (5) έως (7), και μπορούν επιπλέον να συσκευάζονται σε IBC του τύπου 13H1.

- 2477 Τα ανοίγματα των δοχείων για ύλες της 23° θα πρέπει να είναι σφιστά κλεισμένα με δύο συσκευές στη σειρά, μία από τις οποίες θα πρέπει να είναι βιδωμένη ή ασφαλισμένη με ισοδύναμο τρόπο.

**ΣΗΜΕΙΩΣΗ:** Για τα IBC, βλέπε, πάντως, περιθωριακό 3621 (8).

## Κλάση 4.3

2478-  
2480

## 3. Μικτή συσκευασία

- 2481 (1) Ύλες ταξινομημένες στα ίδια είδη μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία, σύμφωνα με το περιθωριακό 3538.
- (2) Ύλες ταξινομημένες στα (α) των διαφόρων ειδών, δεν μπορούν να συσκευάζονται μαζί με ύλες των διαφόρων ειδών της κλάσης 4.3, με ύλες και είδη άλλων κλάσεων ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.
- (3) Με εξαίρεση τις ύλες που αναφέρονται στη (2), ύλες των διαφόρων ειδών της κλάσης 4.3, σε ποσότητες όχι μεγαλύτερες από 3 λίτρα για υγρά και/ή 6 kg για στερεά ανά δοχείο, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 η μία με την άλλη, με ύλες ή είδη άλλων κλάσεων - υπό την προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για ύλες και είδη εκείνων των κλάσεων - και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.
- (4) Οι παρακάτω θα πρέπει να θεωρούνται επικίνδυνες αντιδράσεις:
- ανάφλεξη και/ή έκλυση αξιοσημείωτης θερμότητας,
  - εκπομπή εύφλεκτων και/ή τοξικών αερίων,
  - σχηματισμός διαβρωτικών υγρών,
  - σχηματισμός ασταθών υλών.
- (5) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2472 θα πρέπει να τηρούνται.
- (6) Εάν χρησιμοποιούνται κιβώτια ξύλινα ή από φύλλο φάιμπερ, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

## 4. Μαρκάρισμα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη Α.9)

2482 *Μαρκάρισμα*

- (1) Κάθε κόλο θα πρέπει να είναι καθαρά και με διάρκεια μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα εγγραφεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

*Ετικέτες κινδύνου*

- (2) Κόλα που περιέχουν ύλες της κλάσης 4.3, θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.3.
- (3) Κόλα που περιέχουν ύλες των 1° και 2°, θα πρέπει, επί πλέον, να φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 3 και 8.
- (4) Κόλα που περιέχουν ύλες της 3° και υδρίδιο λιθιοαλουμινίου, αιθερικό, της 16° (α), θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.
- (5) Κόλα που περιέχουν ύλες της 14° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2.

## Κλάση 4.3

2482 (6) Κόλα που περιέχουν ύλες των 15°, 18°, 22° και 23°, θα πρέπει, επιπλέον, να φέρουν ετικέτα (συνεχ.) σύμφωνα με το υπόδειγμα Αριθμ. 6.1.

(7) Κόλα που περιέχουν ύλες των 24° και 25°, θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

(8) Κόλα που περιέχουν εύθραυστα δοχεία που δεν είναι ορατά από έξω, θα πρέπει, επιπλέον, να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(9) Κόλα που περιέχουν υγρά σε δοχεία τα πώματα των οποίων δεν είναι ορατά από έξω, θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2483

## B. Στοιχεία στο έγγραφο μεταφοράς

2484 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς, θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2471.

Εάν η ύλη δεν αναφέρεται με την ονομασία της, αλλά έχει εγγραφεί σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από τη χημική ή τεχνική ονομασία της ύλης<sup>4/</sup>.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα και τα αρχικά "ADR" (ή "RID") π.χ. "4.3, 1° (a), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)], η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα που περιέχουν ...", και το(τα) συστατικό(α) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8), θα εγγράφεται(ονται) κάτω από τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα, γαίες που περιέχουν 1428 νάτριο, 4.3, 11° (a), ADR".

Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερο από δύο συστατικά που κυρίως συμβάλλουν στον κίνδυνο ή τους κινδύνους του διαλύματος και του μείγματος.

Εάν μία επώνυμη ύλη σε συμφωνία με το περιθωριακό 2470 (9) δεν υπόκειται στις συνθήκες αυτής της κλάσης, ο αποστολέας μπορεί να γράψει στο έγγραφο μεταφοράς: "Όχι εμπορεύματα της κλάσης 4.3".

Για τα διαλύματα και μείγματα που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις αυτής της Οδηγίας, η λέξη "διάλυμα" ή "μείγμα" θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8) (a)].

Όταν ένα στερεό παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει επιπλέον να διευκρινίζει "τετηγμένο", εκτός εάν ο όρος ήδη εμφανίζεται στην ονομασία.

2485-

2491

<sup>4/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ήδη χρησιμοποιούμενη σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό.

## Κλάση 4.3

## C. Κενές συσκευασίες

- 2492 (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 31<sup>ο</sup> θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και στεγανές έναντι διαρροής στον ίδιο βαθμό σαν να ήταν γεμάτες.
- (2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 31<sup>ο</sup> θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου, σαν να ήταν γεμάτες.
- (3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στην 31<sup>ο</sup>, π.χ. "Κενή συσκευασία, 4.3, 31<sup>ο</sup>, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από τις λέξεις "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 1295 τριχλωροσίλάνιο, 1<sup>ο</sup> (a)".

2493-  
2499

**ΚΛΑΣΗ 5.1. ΟΞΕΙΔΩΤΙΚΕΣ ΥΛΕΣ****1. Κατάλογος υλών**

**2500** (1) Ανάμεσα στις ύλες που καλύπτονται από τον τίτλο της κλάσης 5.1, εκείνες που αναφέρονται στο περιθωριακό 2501 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο σε εκείνο το περιθωριακό, υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2500 (2) έως 2522 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες υλών που αναφέρονται στο περιθωριακό 2501 και που δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση, είτε σε αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2501a.

(2) Ο τίτλος της κλάσης 5.1 καλύπτει ύλες που, ενώ από μόνες τους δεν είναι απαραίτητα εύφλεκτες, μπορεί, γενικά με προσθήκη οξυγόνου, να προκαλέσουν την ή συμβάλουν στην ανάφλεξη ενός άλλου υλικού.

(3) Οι ύλες της κλάσης 5.1, υποδιαιρούνται ως εξής:

- A. Υγρές οξειδωτικές ύλες και υδατικά διαλύματά τους
- B. Στερεές οξειδωτικές ύλες και υδατικά διαλύματά τους
- C. Κενές συσκευασίες

Ύλες της κλάσης 5.1 (άλλες από τις ύλες των 5° και 20°) που ταξινομούνται στα διάφορα είδη του περιθωριακού 2501, θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες χαρακτηρίζονται από το γράμμα (a), (b) ή (c), σύμφωνα με το βαθμό κινδύνου τους.

- (a) εξαιρετικά οξειδωτικές,
- (b) οξειδωτικές,
- (c) ελαφρώς οξειδωτικές.

(4) Στερεές οξειδωτικές ύλες χωρίς συγκεκριμένη ονομασία, μπορούν να καταχωρούνται στην κλάση 5.1 είτε με βάση την εμπειρία, είτε σε συμφωνία με τη μέθοδο ελέγχου, τη διαδικασία και τα κριτήρια που τίθενται στην προσθήκη Α.3, περιθωριακά 3350 και 3351. Σε περίπτωση απόκλισης μεταξύ των αποτελεσμάτων του ελέγχου και της γνώστης εμπειρίας, η κρίση που βασίζεται σε γνώστη εμπειρία, θα πρέπει να έχει προτεραιότητα έναντι των αποτελεσμάτων ελέγχου. Υγρές οξειδωτικές ύλες χωρίς συγκεκριμένη ονομασία, θα πρέπει να καταχωρούνται στην κλάση 5.1 με βάση την εμπειρία.

(5) Όταν ύλες χωρίς συγκεκριμένη ονομασία καταχωρούνται στα είδη του περιθωριακού 2501 με βάση τη διαδικασία ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3350 και 3351, το παρακάτω κριτήριο εφαρμόζεται:

Μία ύλη θα πρέπει να καταχωρείται στην κλάση 5.1 εάν, σε κάθε συγκέντρωση στην οποία δοκιμάζεται, ο μέσος χρόνος καύσης του πριονιδίου που υπολογίζεται μετά από τρεις ελέγχους, είναι ίσος με ή μικρότερος από εκείνον του μέσου όρου τριών ελέγχων με μείγμα υπερθευκού αμμωνίου.

(6) Όταν ύλες χωρίς συγκεκριμένη ονομασία καταχωρούνται στα γράμματα των ειδών του περιθωριακού 2501 με βάση τη διαδικασία ελέγχου σε συμφωνία με την προσθήκη Α.3, περιθωριακά 3350 και 3351, τα παρακάτω κριτήρια εφαρμόζονται:

μία ύλη θα πρέπει να καταχωρείται στο γράμμα (a) όταν, σε κάθε συγκέντρωση στην οποία δοκιμάζεται, παρουσιάζει χρόνο καύσης μικρότερο απ' ό,τι με βρωμικό κάλιο,

## Κλάση 5.1

- 2500** - μία ύλη θα πρέπει να καταχωρείται στο γράμμα (b) όταν, σε κάθε συγκέντρωση στην οποία ελέγχεται, παρουσιάζει χρόνο καύσης ίσο με ή μικρότερο απ' ό,τι με υπερχλωρικό κάλιο και τα κριτήρια για το γράμμα (a) δεν ικανοποιούνται,
- (συνεχ.) - μία ύλη θα πρέπει να καταχωρείται στο γράμμα (c) όταν, σε κάθε συγκέντρωση στην οποία ελέγχεται, παρουσιάζει χρόνο καύσης ίσο με ή μικρότερο απ' ό,τι με υπερθεϊκό αμμώνιο και τα κριτήρια για τα γράμματα ομάδων (a) ή (b) δεν ικανοποιούνται.

(7) Εάν ύλες της κλάσης 5.1, ως αποτέλεσμα προσμείξεων, μεταβαίνουν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες οι ύλες του περιθωριακού 2501 ανήκουν, αυτά τα μείγματα ή διαλύματα θα πρέπει να καταχωρούνται στα είδη και γράμματα στα οποία ανήκουν με βάση τον πραγματικό βαθμό κινδύνου τους.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση των διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

(8) Όταν ύλες έχουν συγκεκριμένη ονομασία σε περισσότερα από ένα γράμματα του ίδιου είδους του περιθωριακού 2501, το σχετικό γράμμα μπορεί να καθοριστεί με βάση τα αποτελέσματα της διαδικασίας ελέγχου σε συμφωνία με την προσθήκη A.3, περιθωριακά 3350 και 3351, και τα κριτήρια που τίθενται στην παράγραφο (6).

(9) Με βάση τη διαδικασία ελέγχου σε συμφωνία με την προσθήκη A.3, περιθωριακά 3350 και 3351 και τα κριτήρια που τίθενται στην παράγραφο (6), μπορεί επίσης να καθοριστεί εάν η φύση μίας ειδικά επώνυμης ύλης είναι τέτοια ώστε η ύλη να μην υπόκειται στις διατάξεις για αυτήν την Κλάση (βλέπε περιθωριακό 2514).

(10) Για τις απαιτήσεις συσκευασίας των περιθωριακών 2506 (2), 2507 (2) και 2508 (2), ύλες ή μείγματα υλών με σημείο τήξης μεγαλύτερο από 45 °C θεωρούνται ως στερεά.

(11) Οι χημικώς ασταθείς ύλες της κλάσης 5.1, θα πρέπει να γίνονται δεκτές για μεταφορά μόνον εάν έχουν ληφθεί τα αναγκαία μέτρα για την αποφυγή επικίνδυνης αποσύνθεσης ή πολυμερισμού τους κατά τη διάρκεια της μεταφοράς. Γι' αυτό το σκοπό, θα πρέπει ειδικά να βεβαιώνεται ότι εκείνα τα δοχεία δεν περιέχουν κανένα υλικό υποκειμένο στην προαγωγή αυτών των αντιδράσεων.

(12) Οξειδωτικά στερεά, αυτοθερμαινόμενα, που καταχωρούνται στον χαρακτηριστικό αριθμό 3100, οξειδωτικά στερεά, ενεργά με το νερό, που καταχωρούνται στον χαρακτηριστικό αριθμό 3121 και οξειδωτικά στερεά, εύφλεκτα, που καταχωρούνται στον χαρακτηριστικό αριθμό 3137 των Υποδείξεων για τη Μεταφορά των Επικίνδυνων Εμπορευμάτων των Ηνωμένων Εθνών, δεν θα πρέπει να γίνονται δεκτά για μεταφορά (βλέπε, όμως, περιθωριακό 2002 (8), υποσημείωση 1/ στον πίνακα που περιέχεται στην παράγραφο 2.3.1).

**2501 A. Υγρές οξειδωτικές ύλες και υδατικά διαλύματά τους**

1° Υπεροξειδίου του υδρογόνου και διαλύματά του, ή μείγματα του υπεροξειδίου του υδρογόνου με ένα άλλο υγρό σε υδατικό διάλυμα:

- (a) 2015 υπεροξείδιο του υδρογόνου, σταθεροποιημένο, ή 2015 υδατικό διάλυμα του υπεροξειδίου του υδρογόνου, σταθεροποιημένο με περισσότερο από 60 % υπεροξείδιο του υδρογόνου,

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακό 2503).

**ΣΗΜΕΙΩΣΗ 2:** Υπεροξείδιο του υδρογόνου, όχι σταθεροποιημένο ή υδατικό διάλυμα του υπεροξειδίου του υδρογόνου, όχι σταθεροποιημένο που περιέχει περισσότερο από 60 % υπεροξείδιο του υδρογόνου, δεν θα γίνονται δεκτά για μεταφορά.

## Κλάση 5.1

- 2501 (συνεχ.) (b) 2014 υδατικό διάλυμα του υπεροξειδίου του υδρογόνου, με όχι λιγότερο από 20 % αλλά όχι περισσότερο από 60 % υπεροξειδίου του υδρογόνου (σταθεροποιημένο όπως χρειάζεται), 3149 υπεροξειδίου του υδρογόνου και μείγμα υπεροξοξικού οξέος, σταθεροποιημένο, με οξύ(οξέα), νερό και όχι περισσότερο από 5 % υπεροξοξικό οξύ,

**ΣΗΜΕΙΩΣΗ:** Αυτό το μείγμα υπεροξειδίου του υδρογόνου και υπεροξοξικού οξέος (Αριθμ. 3149), θα πρέπει σε εργαστηριακό έλεγχο<sup>1/</sup>, ούτε να εκρήγνυται στην τρβώδη κατάσταση ούτε να αναφλέγεται καθόλου και δεν θα πρέπει να δείχνει καμία επίδραση όταν θερμαίνεται υπό περιορισμό, ούτε καμία εκρηκτική ισχύ. Η σύνθεση θα πρέπει να είναι θερμικά σταθερή (θερμοκρασία αυτο-επιταχυνόμενης απόσυνθεσης 60 °C ή υψηλότερη για ένα κόλο 50 kg), και θα πρέπει να χρησιμοποιείται ένα υγρό συμβατό με το υπεροξοξικό οξύ για απευαισθητοποίηση. Συνθέσεις που δεν ικανοποιούν αυτά τα κριτήρια θα πρέπει να θεωρούνται ως ύλες της κλάσης 5.2 [βλέπε Προσθήκη Α.1, περιθωριακό 3106 (2) (g)].

- (c) 2984 υδατικό μείγμα υπεροξειδίου του υδρογόνου, με όχι λιγότερο από 8 % αλλά λιγότερο από 20 % υπεροξειδίου του υδρογόνου (σταθεροποιημένο όπως χρειάζεται).

**ΣΗΜΕΙΩΣΗ:** Υδατικά μείγματα υπεροξειδίου του υδρογόνου, που περιέχουν λιγότερο από 8 % υπεροξειδίου του υδρογόνου, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## 2° Τετρανιτρομεθάνιο:

- (a) 1510 τετρανιτρομεθάνιο.

**ΣΗΜΕΙΩΣΗ:** Τετρανιτρομεθάνιο όχι ελεύθερο από εύφλεκτες προσμείξεις δεν θα γίνεται δεκτό για μεταφορά.

## 3° Διάλυμα υπερχλωρικού οξέος:

- (a) 1873 υπερχλωρικό οξύ σε υδατικό διάλυμα με περισσότερο από 50 % αλλά όχι περισσότερο από 72 % οξύ, κατά βάρος.

**ΣΗΜΕΙΩΣΗ 1:** Διαλύματα υπερχλωρικού οξέος που περιέχουν περισσότερο από 72 % (κατά βάρος) οξύ, ή μείγματα υπερχλωρικού οξέος με οποιοδήποτε υγρό άλλο από νερό, δεν θα γίνονται δεκτά για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** 1802 υπερχλωρικό οξύ με όχι περισσότερο από 50 %, κατά βάρος, σε υδατικό διάλυμα, οξύ, είναι ύλη της κλάσης 8 [βλέπε περιθωριακό 2801, 4° (b)].

## 4° Διάλυμα χλωρικού οξέος:

- (b) 2626 υδατικό διάλυμα χλωρικού οξέος, με όχι περισσότερο από 10 % χλωρικό οξύ.

**ΣΗΜΕΙΩΣΗ:** Διάλυμα χλωρικού οξέος που περιέχει περισσότερο από 10 % χλωρικό οξύ ή μείγματα χλωρικού οξέος με οποιοδήποτε υγρό άλλο από νερό, δεν θα γίνεται δεκτό για μεταφορά.

## 5° Οι παρακάτω αλογονωμένες ενώσεις του φθορίου:

1745 πενταφθοριούχο βρώμιο, 1746 τριφθοριούχο βρώμιο, 2495 πενταφθοριούχο ιώδιο.

1/

Βλέπε Υποδείξεις των Ηνωμένων Εθνών για τη Μεταφορά Επικίνδυνων Εμπορευμάτων, παράγραφος 11.3.3.

## Κλάση 5.1

**2501** *ΣΗΜΕΙΩΣΗ 1:* Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε (συνεχ.) περιθωριακό 2504).

*ΣΗΜΕΙΩΣΗ 2:* Άλλες αλογωνωμένες ενώσεις του φθορίου, δεν θα γίνονται δεκτές για μεταφορά ως ύλες της κλάσης 5.1.

**B. Στερεές οξειδωτικές ύλες και υδατικά διαλύματά τους**

11° Χλωρικά άλατα και μείγματα χλωρικών αλάτων με βορικά άλατα ή υγροσκοπικά χλωρίδια (όπως χλωριούχο μαγνήσιο ή χλωριούχο ασβέστιο):

- (b) 1452 χλωρικό ασβέστιο, 1458 μείγμα χλωρικού και βορικού άλατος, 1459 μείγμα χλωρικού άλατος και χλωριούχου μαγνησίου, 1485 χλωρικό κάλιο, 1495 χλωρικό νάτριο, 1506 χλωρικό στρόντιο, 1513 χλωρικός ψευδάργυρος, 2427 υδατικό διάλυμα χλωρικού καλίου, 2428 υδατικό διάλυμα χλωρικού νατρίου, 2429 υδατικό διάλυμα χλωρικού ασβεστίου, 2721 χλωρικός γαλκός, 2723 χλωρικό μαγνήσιο, 1461 χλωρικά άλατα, ανόργανα, ε.α.ο., 3210 υδατικά διαλύματα ανόργανων χλωρικών αλάτων, ε.α.ο.

*ΣΗΜΕΙΩΣΗ 1:* Βλέπε επίσης 29°.

*ΣΗΜΕΙΩΣΗ 2:* Χλωρικό αμμώνιο και μείγματα χλωρικού άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

12° Υπερχλωρικό αμμώνιο:

- (b) 1442 υπερχλωρικό αμμώνιο.

*ΣΗΜΕΙΩΣΗ:* Η ταξινόμηση αυτής της ύλης θα πρέπει να είναι σε συμφωνία με τα αποτελέσματα των ελέγχων στην προσθήκη Α.1. Ανάλογα με το μέγεθος κόκκων και τη συσκευασία της ύλης, βλέπε επίσης Κλάση 1 (περιθωριακό 2101, 4°, Αριθμ. 0402).

13° Υπερχλωρικά άλατα (με εξαίρεση το υπερχλωρικό αμμώνιο, βλέπε 12°):

- (b) 1455 υπερχλωρικό ασβέστιο, 1475 υπερχλωρικό μαγνήσιο, 1489 υπερχλωρικό κάλιο, 1502 υπερχλωρικό νάτριο, 1508 υπερχλωρικό στρόντιο, 1481 υπερχλωρικά άλατα, ανόργανα, ε.α.ο., 3211 υδατικά διαλύματα ανόργανων υπερχλωρικών αλάτων ε.α.ο.

*ΣΗΜΕΙΩΣΗ:* Βλέπε επίσης 29°.

14° Χλωριώδη άλατα:

- (b) 1453 χλωριώδες ασβέστιο, 1496 χλωριώδες νάτριο, 1462 χλωριώδη άλατα, ανόργανα, ε.α.ο.

*ΣΗΜΕΙΩΣΗ 1:* 1908 διάλυμα χλωριώδους άλατος είναι ύλη της κλάσης 8 [βλέπε περιθωριακό 2801, 61° (b) ή (c)].

*ΣΗΜΕΙΩΣΗ 2:* Χλωριώδες αμμώνιο και μείγματα χλωριώδους άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

## Κλάση 5.1

2501 15° Υποχλωριώδη άλατα:  
(συνεχ.)

- (b) 1471 υποχλωριώδες λίθιο, Ξηρό ή 1471 μείγματα υποχλωριώδους λιθίου, 1748 υποχλωριώδες ασβέστιο, Ξηρό ή 1748 μείγμα υποχλωριώδους ασβεστίου, Ξηρό με περισσότερο από 39 % διαθέσιμο χλώριο (8.8 % διαθέσιμο οξυγόνο), 2880 υποχλωριώδες ασβέστιο, ενυδατωμένο ή 2880 ενυδατωμένο μείγμα υποχλωριώδους ασβεστίου με όχι λιγότερο από 5.5 % αλλά όχι περισσότερο από 10 % νερό, 3212 υποχλωριώδη άλατα, ανόργανα, ε.α.ο.,
- (c) 2208 μείγμα υποχλωριώδους ασβεστίου, Ξηρό με περισσότερο από 10 % αλλά όχι περισσότερο από 39 % διαθέσιμο χλώριο.

**ΣΗΜΕΙΩΣΗ 1:** Μείγματα υποχλωριώδους ασβεστίου, ξηρά, που περιέχουν όχι περισσότερο από 10 % διαθέσιμο χλώριο, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** 1791 διάλυμα υποχλωριώδους άλατος είναι ύλη της κλάσης 3 [βλέπε περιθωριακό 2801, 61° (b) ή (c)].

**ΣΗΜΕΙΩΣΗ 3:** Μείγματα υποχλωριώδους άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

**ΣΗΜΕΙΩΣΗ 4:** Βλέπε επίσης 29°.

16° Βρωμικά άλατα:

- (b) 1473 βρωμικό μαγνήσιο, 1484 βρωμικό κάλιο, 1494 βρωμικό νάτριο, 1450 βρωμικά άλατα, ανόργανα, ε.α.ο., 3213 υδατικά διαλύματα ανόργανων βρωμικών αλάτων, ε.α.ο.,
- (c) 2469 βρωμικός ψευδάργυρος, 3213 υδατικά διαλύματα ανόργανων βρωμικών αλάτων, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Βρωμικό αμμώνιο και μείγματα βρωμικού άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Βλέπε επίσης 29°.

17° Υπερμαγγανικά άλατα:

- (b) 1456 υπερμαγγανικό ασβέστιο, 1490 υπερμαγγανικό κάλιο, 1503 υπερμαγγανικό νάτριο, 1515 υπερμαγγανικός ψευδάργυρος, 1482 υπερμαγγανικά άλατα, ανόργανα, ε.α.ο., 3214 διαλύματα ανόργανων υπερμαγγανικών αλάτων, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Υπερμαγγανικό αμμώνιο και μείγματα υπερμαγγανικού άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Βλέπε επίσης 29°.

## Κλάση 5.1

2501 18° Υπερθειικά άλατα:  
(συνεχ.)

- (c) 1444 υπερθειικό αμμώνιο, 1492 υπερθειικό κάλιο, 1505 υπερθειικό νάτριο, 3215 υπερθειικά άλατα, ανόργανα, ε.α.ο., 3216 διαλύματα ανόργανων υπερθειικών αλάτων, ε.α.ο.

19° Υπερανθρακικά άλατα:

- (c) 2467 υπερανθρακικά άλατα νατρίου, 3217 υπερανθρακικά άλατα, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Το υπεροξυ-ενδρο ανθρακικό νάτριο, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

20° Διαλύματα νιτρικού αμμωνίου:

2426 νιτρικό αμμώνιο, υγρό, θερμό συμπυκνωμένο διάλυμα, σε συγκέντρωση μεγαλύτερη από 80 % , αλλά όχι μεγαλύτερη από 93 % , υπό την προϋπόθεση ότι:

1. το pH είναι μεταξύ 5 και 7 μετρημένο σε υδατικό διάλυμα 10 % της μεταφερόμενης ύλης,
2. το διάλυμα δεν περιέχει περισσότερο από 0.2 % εύφλεκτα υλικά ή ενώσεις χλωρίου σε ποσότητες τέτοιες ώστε το επίπεδο του χλωρίου να υπερβαίνει το 0.02 %.

**ΣΗΜΕΙΩΣΗ:** Υδατικά διαλύματα νιτρικού αμμωνίου, σε συγκέντρωση όχι μεγαλύτερη από 80 % , δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

21° Νιτρικό αμμώνιο και λιπάσματα νιτρικού αμμωνίου<sup>2/</sup>:

- (c) 1942 νιτρικό αμμώνιο με όχι περισσότερο από 0.2 % εύφλεκες ύλες, συμπεριλαμβανομένης οποιασδήποτε οργανικής ύλης υπολογιζόμενης ως άνθρακας και εξαιρουμένης οποιασδήποτε άλλης προστιθέμενης ύλης,  
2067 λιπάσματα νιτρικού αμμωνίου, τύπου A1: ομοιογενή μη-διαχωριζόμενα μείγματα νιτρικού αμμωνίου με προστετημένη ύλη που είναι ανόργανη και χημικώς αδρανής με το νιτρικό αμμώνιο, με όχι λιγότερο από 90 % νιτρικό αμμώνιο και όχι περισσότερο από 0.2 % εύφλεκτων υλικών (συμπεριλαμβανομένων οργανικών υλικών υπολογιζόμενων ως άνθρακας), ή με περισσότερο από 70 % αλλά λιγότερο από 90 % νιτρικό αμμώνιο και όχι περισσότερο από 0.4 % ολικά εύφλεκτα υλικά,  
2068 λιπάσματα νιτρικού αμμωνίου, τύπου A2: ομοιογενή μη-διαχωριζόμενα μείγματα νιτρικού αμμωνίου με ανθρακικό ασβέστιο και/ή δολομίτη, με περισσότερο από 80 % αλλά λιγότερο από 90 % νιτρικό αμμώνιο και όχι περισσότερο από 0.4 % ολικά εύφλεκτα υλικά,

<sup>2/</sup> Λιπάσματα που περιέχουν νιτρικό αμμώνιο που καταχωρίζονται στον αριθμό ταυτότητας 2071 των Υποδείξεων των Ηνωμένων Εθνών δεν υπόκειται στις διατάξεις αυτής της Οδηγίας. Λιπάσματα που περιέχουν νιτρικό αμμώνιο που καταχωρίζονται στον αριθμό ταυτότητας 2072 των Υποδείξεων των Ηνωμένων Εθνών, δεν θα γίνονται δεκτά για μεταφορά.

## Κλάση 5.1

2501  
(συνεχ.)

2069 λιπάσματα νιτρικού αμμωνίου, τύπου A3: ομοιογενή μη-διαχωριζόμενα μείγματα νιτρικού αμμωνίου και θειικού αμμωνίου, με περισσότερο από 45 % αλλά όχι περισσότερο από 70 % νιτρικό αμμώνιο και όχι περισσότερο από 0.4 % ολικά εύφλεκτα υλικά,

2070 λιπάσματα νιτρικού αμμωνίου, τύπου A4: ομοιογενή μη-διαχωριζόμενα μείγματα φωσφορικού αζώτου ή αζώτου τύπου ποτάσας ή πλήρη λιπάσματα φωσφορικού αζώτου τύπου ποτάσας, με περισσότερο από 70 % αλλά λιγότερο από 90 % νιτρικό αμμώνιο και όχι περισσότερο από 0.4 % ολικά εύφλεκτα υλικά.

**ΣΗΜΕΙΩΣΗ 1:** Νιτρικό αμμώνιο που περιέχει περισσότερο από 0.2 % εύφλεκτη ύλη (συμπεριλαμβανομένης οποιασδήποτε οργανικής ύλης υπολογιζόμενης ως άνθρακας) δεν θα γίνεται δεκτό για μεταφορά εκτός εάν είναι συστατικό μίας ύλης ή ενός είδους της κλάσης 1.

**ΣΗΜΕΙΩΣΗ 2:** Στον προσδιορισμό της περιεκτικότητας σε νιτρικό αμμώνιο, όλα τα νιτρικά ιόντα για τα οποία ένα μοριακό ισοδύναμο ιόντων αμμωνίου είναι παρόν στο μείγμα θα πρέπει να υπολογίζονται ως νιτρικό αμμώνιο.

**ΣΗΜΕΙΩΣΗ 3:** Λιπάσματα με περιεκτικότητα σε νιτρικό αμμώνιο ή περιεκτικότητα σε εύφλεκτη ύλη μεγαλύτερη από τις τιμές που φαίνονται δεν θα γίνονται δεκτά για μεταφορά, παρά μόνο κάτω από τις συνθήκες που εφαρμόζονται στην κλάση 1. Βλέπε επίσης Σημείωση 5.

**ΣΗΜΕΙΩΣΗ 4:** Λιπάσματα με περιεκτικότητα σε νιτρικό αμμώνιο κάτω από τις τιμές ορίου που υποδεικνύονται δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 5:** Λιπάσματα νιτρικού αμμωνίου, ομοιογενή μη-διαχωριζόμενα μείγματα φωσφορικού αζώτου ή αζώτου τύπου ποτάσας ή πλήρη λιπάσματα φωσφορικού αζώτου τύπου ποτάσας των οποίων η μοριακή περίσσεια νιτρικών ιόντων επί των ιόντων αμμωνίου (υπολογιζόμενα ως νιτρικό κάλιο) είναι μικρότερη από 10 %, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι:

- (a) η περιεκτικότητά τους σε νιτρικό αμμώνιο είναι όχι μεγαλύτερη από 70 % και η ολική περιεκτικότητά τους σε εύφλεκτα υλικά είναι όχι μεγαλύτερη από 0.4 %, ή
- (b) η περιεκτικότητά τους σε νιτρικό αμμώνιο είναι όχι μεγαλύτερη από 45 % ανεξάρτητα από την περιεκτικότητά τους σε εύφλεκτα υλικά.

22° Νιτρικά άλατα (με εξαίρεση τις ύλες των 20°, 21° και 29°):

- (b) 1493 νιτρικός άργυρος, 1514 νιτρικός ψευδάργυρος, 1477 νιτρικά άλατα, ανόργανα, ε.α.ο., 3218 υδατικά διαλύματα ανόργανων νιτρικών αλάτων, ε.α.ο.,
- (c) 1438 νιτρικό αλουμίνιο, 1451 νιτρικό καίσιο, 1454 νιτρικό ασβέστιο, 1465 νιτρικό διδύμο, 1466 νιτρικό άλας τρισθενούς σιδήρου, 1467 νιτρική γουανιδίνη, 1474 νιτρικό μαγνήσιο, 1486 νιτρικό κάλιο, 1498 νιτρικό νάτριο, 1499 μείγματα νιτρικού νατρίου και νιτρικού καλίου, 1507 νιτρικό στρόντιο, 2720 νιτρικό χρώμιο, 2722 νιτρικό λίθιο, 2724 νιτρικό μαγνήσιο, 2725 νιτρικό νικέλιο, 2728 νιτρικό ζirkόνιο, 1477 νιτρικά άλατα, ανόργανα, ε.α.ο., 3218 υδατικά διαλύματα ανόργανων νιτρικών αλάτων, ε.α.ο.

## Κλάση 5.1

2501  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 1:** Τα: 1625 νιτρικός υδράργυρος (II), 1627 νιτρικός υδράργυρος (I) και 2727 νιτρικό θάλλιο είναι ύλες της κλάσης 6.1 [βλέπε περιθωριακό 2601, 52° (b) και 68° (b)]. Τα: 2976 νιτρικό θόριο, στερεό, 2980 διάλυμα εξα-ενδρου νιτρικού ουρανύλιου και 2981 νιτρικό ουρανύλιο, στερεό είναι ύλες της κλάσης 7 (βλέπε περιθωριακό 2704, κατάλογοι 5, 6, 9, 10, 11 και 13).

**ΣΗΜΕΙΩΣΗ 2:** Η εμπορική ποιότητα λιπάσματος νιτρικού ασβεστίου, που συνίσταται κυρίως από ένα διπλό άλας (νιτρικό ασβέστιο και νιτρικό αμμώνιο) και που περιέχει όχι περισσότερο από 10 % νιτρικό αμμώνιο και τουλάχιστον 12 % νερό από κρυστάλλωση, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

23° Νιτρώδη άλατα:

(b) 1488 νιτρώδες κάλιο, 1512 νιτρώδες ψευδαργυραμμώνιο, 2627 νιτρώδη άλατα, ανόργανα, ε.α.ο., 3219 υδατικά διαλύματα ανόργανων νιτρωδών αλάτων, ε.α.ο.,

(c) 1500 νιτρώδες νάτριο, 2726 νιτρώδες νικέλιο, 3219 υδατικά διαλύματα ανόργανων νιτρωδών αλάτων, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Νιτρώδες αμμώνιο και μείγματα ανόργανου νιτρώδους άλατος με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Το νιτρώδες ψευδαργυραμμώνιο δεν επιτρέπεται να μεταφέρεται από θαλάσσιες οδούς.

24° Μείγματα νιτρικών και νιτρωδών αλάτων των ειδών 22° και 23°.

(b) 1487 μείγμα νιτρικού καλίου και νιτρώδους νατρίου.

**ΣΗΜΕΙΩΣΗ:** Μείγματα με άλας αμμωνίου, δεν θα γίνονται δεκτά για μεταφορά.

25° Υπεροξειδία και υπέρ-υπεροξειδία:

(a) 1491 υπεροξειδίο του καλίου, 1504 υπεροξειδίο του νατρίου, 2466 υπερ-υπεροξειδίο του καλίου, 2547 υπερ-υπεροξειδίο του νατρίου,

(b) 1457 υπεροξειδίο του ασβεστίου, 1472 υπεροξειδίο του λιθίου, 1476 υπεροξειδίο του μαγνησίου, 1509 υπεροξειδίο του στροντίου, 1516 υπεροξειδίο του ψευδάργυρου, 1483 υπεροξειδία, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Βλέπε επίσης 29°.

26° Χλωροϊσοκυανουρικά οξέα και άλατα αυτών:

(b) 2465 διχλωροϊσοκυανουρικό οξύ, ξηρό ή 2465 άλατα του διχλωροϊσοκυανουρικού οξέος, 2468 τριχλωροϊσοκυανουρικό οξύ, ξηρό.

**ΣΗΜΕΙΩΣΗ:** Το ένδρο άλας του διχλωροϊσοκυανουρικού οξέος με νάτριο, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

## Κλάση 5.1

**2501 27°** Στερεές οξειδωτικές ύλες, μη-τοξικές, μη-διαβρωτικές, και μείγματα αυτών των υλών (τέτοια (συνεχ.) όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1479 οξειδωτικά στερεά, ε.α.ο.,
- (b) 1439 διγρωμικό αμμώνιο, 3247 υπεροξυβορικό νάτριο, άνδρο, 1479 οξειδωτικά στερεά, ε.α.ο.,

3085 οξειδωτικά στερεά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

**ΣΗΜΕΙΩΣΗ 2:** 1755 διάλυμα χρωμικού οξέος είναι ύλη της κλάσης 8 [βλέπε περιθωριακό 2801, 17° (b) ή (c)].

32° Υδατικά διαλύματα στερεών οξειδωτικών υλών, διαβρωτικών και μειγμάτων αυτών των υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3098 οξειδωτικά υγρά, διαβρωτικά, ε.α.ο.,
- (b) 3098 οξειδωτικά υγρά, διαβρωτικά, ε.α.ο.,
- (c) 3098 οξειδωτικά υγρά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Για κριτήρια διαβρωτικότητας, βλέπε περιθωριακό 2800 (3).

### C. Κενές συσκευασίες

**ΣΗΜΕΙΩΣΗ:** Κενές συσκευασίες με υπολείμματα από το προηγούμενο περιεχόμενό τους κολλημένα στο εξωτερικό τους, δεν θα γίνονται δεκτές για μεταφορά.

41° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων καθώς και κενά οχήματα για μεταφορά χύμα και κενά μικρά εμπορευματοκιβώτια για μεταφορά χύμα, ακαθάριστα, που περιείχαν ύλες της κλάσης 5.1.

## Κλάση 5.1

2501a Υγες των διαφόρων ειδών, μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις, δεν υπόκεινται ούτε στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα ούτε σε εκείνες που περιέχονται στο παράρτημα Β:

- (a) Υγες ταξινομημένες στο (a) κάθε είδους, δεν καλύπτονται από αυτό το περιθωριακό.
- (b) Υγες ταξινομημένες στο (b) κάθε είδους:  
υγρά: όχι περισσότερο από 500 ml ανά εσωτερική συσκευασία,  
στερεά: όχι περισσότερο από 500 g ανά εσωτερική συσκευασία,
- (c) Υγες ταξινομημένες στο (c) κάθε είδους:  
υγρά: όχι περισσότερο από 1 λίτρο ανά εσωτερική συσκευασία,  
στερεά: όχι περισσότερο από 1 kg ανά εσωτερική συσκευασία.

Αυτές οι ποσότητες υλών, θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που ικανοποιούν τουλάχιστον τις συνθήκες του περιθωριακού 3538. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 30 kg.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500(1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

## 2. Διατάξεις

## Α. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

2502 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στα περιθωριακά 2503 και 2504.

(2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.6.

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2500(3) και 3511(2) ή 3611(2) αντίστοιχα θα πρέπει να χρησιμοποιούνται τα παρακάτω:

- συσκευασίες της ομάδας συσκευασίας I, μαρκαρισμένες με το γράμμα "X" για τις ισχυρά οξειδωτικές ύλες που ταξινομούνται στο γράμμα (a) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις οξειδωτικές ύλες που ταξινομούνται στο γράμμα (b) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y", ή "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις ελαφρώς οξειδωτικές ύλες που ταξινομούνται στο γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 5.1 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα Β.

## Κλάση 5.1

2. *Ειδικές συνθήκες για τη συσκευασία ορισμένων υλών*

2503 (1) Ύλες της 1<sup>ο</sup> (α) θα πρέπει να συσκευάζονται σε:

- (α) βαρέλια μη-μετακινούμενης κεφαλής από αλουμίνιο καθαρότητας τουλάχιστον 99.5 %, σύμφωνα με το περιθωριακό 3521, ή σε βαρέλια μη-μετακινούμενης κεφαλής από ειδικό χάλυβα, που δεν υπόκειται στην πρόκληση αποσύνθεσης του υπεροξειδίου του υδρογόνου, σύμφωνα με το περιθωριακό 3520, ή
- (β) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 με εσωτερικές συσκευασίες από γυαλί, πλαστικό ή μέταλλο που δεν υπόκειται στην πρόκληση αποσύνθεσης του υπεροξειδίου του υδρογόνου. Μία εσωτερική συσκευασία κατασκευασμένη από γυαλί ή πλαστικό, δεν θα πρέπει να περιέχει περισσότερο από 2 λίτρα: μία από μέταλλο, όχι περισσότερο από 5 λίτρα.

Οι συσκευασίες θα πρέπει να είναι εφοδιασμένες με εξαεριστήρα σύμφωνα με το περιθωριακό 3500 (8). Αυτές οι συνδυασμένες συσκευασίες θα πρέπει να συμφωνούν σ'έναν τύπο σχεδιασμού που έχει ελεγχθεί και εγκριθεί σε συμφωνία με την προσθήκη A.5 για την ομάδα συσκευασίας I.

(2) Οι συσκευασίες δεν θα πρέπει να γεμίζονται περισσότερο από το 90 % της χωρητικότητας τους.

(3) Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 125 kg.

2504 Ύλες της 5<sup>ο</sup> θα πρέπει να μεταφέρονται σε κυλίνδρους με χωρητικότητα όχι μεγαλύτερη από 150 λίτρα, ή δοχεία με χωρητικότητα όχι μεγαλύτερη από 1 000 λίτρα (π.χ. κυλινδρικά δοχεία με κυλιόμενα τσέρκια ή σφαιρικά δοχεία), κατασκευασμένα από ανθρακούχο χάλυβα ή από κατάλληλο κράμα χάλυβα.

- (α) Τα δοχεία θα πρέπει να είναι σύμφωνα με τις σχετικές διατάξεις της κλάσης 2 [βλέπε περιθωριακά 2211 και 2213(1) και (2)]. Τα δοχεία θα πρέπει να είναι σχεδιασμένα για μία υπολογιζόμενη πίεση όχι μικρότερη από 2.1 MPa (21 bar) (πίεση πιεζομέτρου). Το πάχος τοιχωμάτων των δοχείων, δεν θα πρέπει να είναι, όμως, μικρότερο από 3mm. Πριν από την πρώτη τους χρήση, τα δοχεία θα πρέπει να υπόκεινται σε υδραυλική πίεση ελέγχου με πίεση πιεζομέτρου όχι μικρότερη από 1 MPa (10 bar). Αυτός ο έλεγχος θα πρέπει να επαναλαμβάνεται κάθε 8 χρόνια, συνοδευόμενος από μία εσωτερική επιθεώρηση του δοχείου και έλεγχο των εξαρτημάτων. Τα δοχεία θα πρέπει επιπλέον να επιθεωρούνται για διάβρωση κάθε 2 χρόνια με κατάλληλες συσκευές μέτρησης (π.χ. υπέρηχοι) και επίσης όσον αφορά στην κατάσταση των εξαρτημάτων. Για τους ελέγχους και επιθεωρήσεις οι σχετικές διατάξεις της κλάσης 2 θα πρέπει να εφαρμόζονται (βλέπε περιθωριακά 2215 και 2216).
- (β) Τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από το 92 % της χωρητικότητας τους.
- (γ) Τα παρακάτω στοιχεία θα πρέπει να φαίνονται πάνω στα δοχεία καθαρά με ευανάγνωστο και μόνιμο τρόπο:
  - ονομασία του κατασκευαστή ή η κατασκευαστική μάρκα και ο αριθμός του δοχείου,
  - περιγραφή της ύλης σύμφωνα με το περιθωριακό 2501, 5<sup>ο</sup>,
  - απόβαρο του δοχείου και επιτρεπόμενο μέγιστο βάρος του γεμάτου δοχείου,
  - ημερομηνία (μήνας, χρόνος) του αρχικού ελέγχου και του τελευταίου περιοδικού ελέγχου,
  - σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις επιθεωρήσεις.

## Κλάση 5.1

- 2505** Διαλύματα νιτρικού αμμωνίου της 20<sup>ο</sup> θα πρέπει να μεταφέρονται μόνον σε οχήματα-δεξαμενές και αποσυναρμολογούμενες δεξαμενές (βλέπε Προσθήκη Β.1a) ή σε εμπορευματοκιβώτια-δεξαμενές (βλέπε Προσθήκη Β.1b).
- 2506** (1) Ύλες ταξινομημένες στο (a) των διαφόρων ειδών, άλλο από το 1<sup>ο</sup> (a), του περιθωριακού 2501 θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια μη-μετακινούμενης κεφαλής χωρητικότητας όχι μεγαλύτερης από 60 λίτρα ή πλαστικά μπιτόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από γυαλί, πλαστικό ή μέταλλο σύμφωνα με το περιθωριακό 3538.
- (2) Υπερχλωρικό οξύ της 3<sup>ο</sup> (a) μπορεί επίσης να συσκευάζεται σε σύνθετες συσκευασίες (γυαλί) σύμφωνα με το περιθωριακό 3539.
- (3) Στερεές ύλες κατά την έννοια του περιθωριακού 2500 (10) μπορεί επίσης να συσκευάζονται σε:
- (a) βαρέλια μετακινούμενης κεφαλής σύμφωνα με τα περιθωριακά 3520 για χάλυβα, 3521 για αλουμίνιο, 3523 για κόντρα-πλακέ, 3525 για φύλλο φάϊμπερ, ή 3526 για πλαστικό υλικό, ή σε μπιτόνια μετακινούμενης κεφαλής σύμφωνα με περιθωριακά 3522 για χάλυβα ή 3526 για πλαστικό υλικό, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους.
- 2507** (1) Ύλες ταξινομημένες στο (b) των διαφόρων ειδών του περιθωριακού 2501, θα πρέπει να συσκευάζονται σε:
- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539, ή
  - (h) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή

## Κλάση 5.1

- 2507 (i) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή  
(συνεχ.) (j) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625 με εξαίρεση των τύπων 11HZ2 και 31HZ2.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).*

- (2) Στερεές ύλες κατά την έννοια του περιθωριακού 2500 (10) μπορούν επίσης να συσκευάζονται σε:
- (a) βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) αδιαπέραστους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά ή 3535 για πλαστικές μεμβράνες ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως ένα πλήρες φορτίο ή οι σάκοι είναι ασφαλισμένοι πάνω σε παλέτες, ή
  - (c) εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση των τύπων 13H1, 13L1 και 13M1, υπό την προϋπόθεση ότι η μεταφορά περιορίζεται σε πλήρη φορτία.

- 2508 (1) Ύλες ταξινομημένες στο (c) των διαφόρων ειδών του περιθωριακού 2501, θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540, ή
- (i) μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
- (j) άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
- (k) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, με εξαίρεση τους τύπους 11HZ2 και 31HZ2.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια μετακινούμενης κεφαλής, μπιτόνια και ελαφρού περιτυπώματος μεταλλικές συσκευασίες για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560).*

## Κλάση 5.1

- 2508** (2) Στερεές ύλες κατά την έννοια του περιθωριακού 2500 (10) μπορούν επίσης να συσκευάζονται σε:
- (α) βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (β) αδιαπέραστους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά ή 3535 για πλαστικές μεμβράνες ή 3536 για αδιάβροχο χαρτί, ή
- (γ) εύκαμπτα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) με εξαίρεση τους τύπους 13H1, 13L1 και 13M1, σύμφωνα με το περιθωριακό 3623. Ύλες των 21° και 22° (c) μπορούν να μεταφέρονται σε όλους τους τύπους των εύκαμπτων IBC σύμφωνα με το περιθωριακό 3623.

**2509** Συσκευασίες ή IBC που περιέχουν ύλες της 1° (b) ή 1° (c) θα πρέπει να είναι εφοδιασμένα με εξαραιστήρα σύμφωνα με το περιθωριακό 3500 (8) ή 3601 (6) αντίστοιχα.

**2510**

### 3. Μικτή συσκευασία

**2511** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες διαφορετικών ειδών αυτής της κλάσης, σε ποσότητες όχι μεγαλύτερες, ανά δοχείο, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας, σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(3) Εκτός εάν ειδικά αλλιώς προβλέπεται στην παράγραφο (7), οι ύλες αυτής της κλάσης, σε ποσότητες όχι μεγαλύτερες, ανά δοχείο, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, με ύλες ή είδη άλλων κλάσεων, υπό την προϋπόθεση ότι μικτή συσκευασία επίσης επιτρέπεται για τις ύλες και τα είδη αυτών των κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(4) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:

- (a) ανάφλεξη και/ή εκπομπή αξιοσημείωτης θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

(5) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2502, θα πρέπει να ισχύουν.

(6) Εάν χρησιμοποιούνται κιβώτια ξύλινα ή από φύλλο φάιμπερ, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

(7) Για ύλες των 1° (a), 2°, 4°, 5°, 11°, 12°, 13°, 14°, 16° (b), 17°, 25° και 27° έως 32° και ύλες ταξινομημένες στο (a) στα υπόλοιπα είδη, μικτή συσκευασία δεν επιτρέπεται. Όμως, για υπερχλωρικό οξύ με περισσότερο από 50 % οξύ της 3° (a), μικτή συσκευασία επιτρέπεται με υπερχλωρικό οξύ της κλάσης 8, περιθωριακό 2801, 4° (b).

## Κλάση 5.1

4. **Μαρκάρισμα και ετικέτες κινδύνου πάνω στα κόλα (βλέπε Προσθήκη Α.9)****Μαρκάρισμα**

- 2512 (1) Κάθε κόλο θα πρέπει να είναι μαρκαρισμένο καθαρά και ανθεκτικά με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα εγγραφεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

**Ετικέτες κινδύνου**

(2) Κόλα που περιέχουν ύλες της κλάσης 5.1, θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 5.1.

(3) Κόλα που περιέχουν ύλες των 2°, 5°, 29° ή 30°, θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1. Κόλα που περιέχουν ύλες των 1° (a), 1° (b), 3° (a), 5°, 31° ή 32°, θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

(4) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω, θα πρέπει να φέρουν σε δύο εγκάρσιες αντίθετες πλευρές ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 12.

(5) Κόλα που περιέχουν υγρές ύλες σε δοχεία, τα πόματα των οποίων δεν είναι ορατά από έξω, καθώς και κόλα που περιέχουν εξαεριζόμενα δοχεία ή εξαεριζόμενα δοχεία χωρίς εξωτερική συσκευασία, θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

## 2513

**B. Στοιχεία στο έγγραφο μεταφοράς**

- 2514 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2501.

Εάν η ύλη δεν αναφέρεται με την ονομασία της αλλά έχει εγγραφεί σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από τη χημική ή τεχνική ονομασία της ύλης<sup>9/</sup>.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "5.1, 11° (b), ADR".

Για τη μεταφορά αποβλήτων (βλέπε περιθωριακό 2000 (4)) η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα, που περιέχουν ...", και το(τα) συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα εγγράφονται με τη(τις) χημική(ές) ονομασία(ες) του(ς) π.χ. "Απόβλητα γαίες που περιέχουν 1513 χλωρικό ψευδάργυρο, 5.1, 11° (b), ADR".

Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κυρίως συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και μειγμάτων.

Εάν μία επώνυμη ύλη σε συμφωνία με το περιθωριακό 2500 (9), δεν υπόκειται στις συνθήκες αυτής της κλάσης, ο αποστολέας μπορεί να γράψει στο έγγραφο μεταφοράς: "Όχι εμπορεύματα της κλάσης 5.1".

<sup>9/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό.

## Κλάση 5.1

**2514** Για τα διαλύματα και μείγματα που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις (συν.) αυτής της Οδηγίας, η λέξη "διάλυμα" ή "μείγμα" θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8) (a)].

Όταν ένα στερεό παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει επιπλέον να διευκρινίζει "τετηγμένο", εκτός εάν ο όρος ήδη εμφανίζεται στην ονομασία.

2515-  
2521

**C. Κενές συσκευασίες**

**2522** (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 41°, θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.

(2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 41° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνους σαν να ήταν γεμάτες.

(3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 41°, π.χ. "Κενές συσκευασίες, 5.1, 41°, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων για μεταφορά χύμα, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 2015 υπεροξειδίου του υδρογόνου, αδρανές 1° (a)".

2523-  
2549

**ΚΛΑΣΗ 5.2. ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ****1. Κατάλογος υλών**

**2550** (1) Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της κλάσης 5.2, μόνον εκείνα που αναφέρονται στο περιθωριακό 2551 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο εκείνου του περιθωριακού υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2550 (4) έως 2567 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας<sup>1/</sup>.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση των διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

(2) Οργανικά υπεροξειδία και συνθέσεις οργανικών υπεροξειδίων δεν θεωρούνται ύλες της κλάσης 5.2, εάν:

- περιέχουν όχι περισσότερο από 1.0 % διαθέσιμο οξυγόνο από τα οργανικά υπεροξειδία όταν περιέχουν όχι περισσότερο από 1.0 % υπεροξειδίου του υδρογόνου,
- περιέχουν όχι περισσότερο από 0.5 % διαθέσιμο οξυγόνο από τα οργανικά υπεροξειδία όταν περιέχουν περισσότερο από 1.0 % αλλά όχι περισσότερο από 7.0 % υπεροξειδίου του υδρογόνου, ή
- δοκιμές έχουν αποδείξει ότι είναι του τύπου G [βλέπε παράγραφο (6)].

**ΣΗΜΕΙΩΣΗ:** Η περιεκτικότητα σε διαθέσιμο οξυγόνο (%) μίας σύνθεσης οργανικού υπεροξειδίου δίνεται από τον τύπο  $16 \times S (n_i \times c_i / m_i)$  όπου:

$n_i$  - ο αριθμός των ομάδων υπεροξυγόνου ανά μόριο οργανικού υπεροξειδίου  $i$ ,

$c_i$  - η συγκέντρωση (% κατά βάρος) του οργανικού υπεροξειδίου  $i$ , και

$m_i$  - το μοριακό βάρος του οργανικού υπεροξειδίου  $i$ .

(3) Τα παρακάτω οργανικά υπεροξειδία δεν θα πρέπει να γίνονται δεκτά για μεταφορά κάτω από τις διατάξεις της κλάσης 5.2:

- οργανικά υπεροξειδία τύπου Α [βλέπε Προσθήκη Α.1, περιθωριακό 3104 (2)(α)].

**Ορισμός**

(4) Η κλάση 5.2 καλύπτει οργανικές ύλες που περιέχουν τη δισθενή -O-O- δομή και μπορούν να θεωρηθούν παράγωγα του υπεροξειδίου του υδρογόνου, όπου το ένα ή και τα δύο άτομα υδρογόνου έχουν αντικατασταθεί από οργανικές ρίζες.

**Ιδιότητες**

(5) Τα οργανικά υπεροξειδία είναι θερμικά ασταθείς ύλες που υπόκεινται σε εξώθερμη αυτο-επιταχυνόμενη αποσύνθεση σε κανονικές ή αυξημένες θερμοκρασίες. Η αποσύνθεση μπορεί να ξεκινήσει από θερμότητα, επαφή με προσμείξεις (π.χ. οξέα, βαριά-μέταλλα ενώσεις, αμίνες), τριβή ή χτύπημα. Ο ρυθμός αποσύνθεσης αυξάνει με τη θερμοκρασία και ποικίλει ανάλογα με τη σύνθεση του οργανικού υπεροξειδίου. Η αποσύνθεση μπορεί να οδηγήσει στην παραγωγή βλαβερών, ή εύφλεκτων αερίων ή ατμών. Μερικά οργανικά υπεροξειδία μπορούν να αποσυντίθενται εκρηκτικά, ειδικά εάν είναι περιορισμένα. Αυτό το χαρακτηριστικό μπορεί να μεταβληθεί από την προσθήκη

<sup>1/</sup> Για τις ποσότητες υλών που αναφέρονται στο περιθωριακό 2551 που δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση, είτε σε αυτό το Παράρτημα είτε στο παράρτημα Β, βλέπε περιθωριακό 2551α.

## Κλάση 5.2

**2550** διαλυτών ή από τη χρήση κατάλληλων συσκευασιών. Πολλά οργανικά υπεροξειδία καίγονται (συν.) ζωηρά. Η επαφή των οργανικών υπεροξειδίων με τα μάτια θα πρέπει να αποφεύγεται. Μερικά οργανικά υπεροξειδία μπορούν να προκαλέσουν σοβαρή βλάβη στον κερατοειδή χιτώνα, μετά ακόμα και από σύντομη επαφή, ή μπορούν να είναι διαβρωτικά στο δέρμα.

*Ταξινόμηση των οργανικών υπεροξειδίων*

(6) Τα οργανικά υπεροξειδία ταξινομούνται σε επτά τύπους σύμφωνα με τον βαθμό κινδύνου. Οι αρχές που εφαρμόζονται στην ταξινόμηση υλών που δεν αναφέρονται στο περιθωριακό 2551 τίθενται στην προσθήκη A.1, περιθωριακό 3104. Οι τύποι των οργανικών υπεροξειδίων κυμαίνονται από τον τύπο A, που δεν είναι δεκτός για μεταφορά στη συσκευασία στην οποία ελέγχεται, έως τον τύπο G, που δεν υπόκειται στις διατάξεις της κλάσης 5.2 [βλέπε περιθωριακό 2561 (5)]. Η ταξινόμηση των τύπων B έως F σχετίζεται άμεσα με τη μέγιστη επιτρεπτή ποσότητα σε μία συσκευασία.

(7) Οργανικά υπεροξειδία και συνθέσεις οργανικών υπεροξειδίων που αναφέρονται στο περιθωριακό 2551, καταχωρούνται στα συγκεντρωτικά κεφάλαια:

- 1° έως 20°, χαρακτηριστικοί αριθμοί 3101 έως 3120.

Τα συγκεντρωτικά κεφάλαια προσδιορίζουν:

- τον τύπο (B έως F) του οργανικού υπεροξειδίου, βλέπε παράγραφο (6),
- την φυσική κατάσταση (υγρό/στερεό), βλέπε περιθωριακό 2553 (1), και
- τον έλεγχο θερμοκρασίας (όταν απαιτείται), βλέπε παράγραφο (16) έως (19).

Μείγματα αυτών των συνθέσεων μπορούν να ταξινομηθούν ως ο ίδιος τύπος οργανικού υπεροξειδίου με εκείνον του πιο επικίνδунου συστατικού και να μεταφέρεται κάτω από τις συνθήκες μεταφοράς που δίνονται για αυτόν τον τύπο. Όμως, όπως δύο σταθερά συστατικά μπορούν να σχηματίσουν ένα θερμικά λιγότερο σταθερό μείγμα, η θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης του μείγματος θα πρέπει να προσδιορίζεται και, εάν είναι αναγκαίο, η θερμοκρασία ελέγχου και κινδύνου που απορρέει από την SADT σε συμφωνία με το περιθωριακό 2550 (17).

(8) Η ταξινόμηση των οργανικών υπεροξειδίων, συνθέσεων ή μειγμάτων οργανικών υπεροξειδίων που δεν αναφέρονται στο περιθωριακό 2551 και η καταχώρηση σ'ένα συγκεντρωτικό κεφάλαιο, θα πρέπει να γίνεται από την αρμόδια αρχή της χώρας προέλευσης.

(9) Δείγματα οργανικών υπεροξειδίων ή συνθέσεων οργανικών υπεροξειδίων που δεν αναφέρονται στο περιθωριακό 2551, για τα οποία δεν είναι διαθέσιμο ένα πλήρες σετ αποτελεσμάτων ελέγχου και που πρόκειται να μεταφερθούν για περαιτέρω έλεγχο ή αξιολόγηση, θα πρέπει να καταχωρούνται σε μία από τις κατάλληλες καταχωρήσεις για τα οργανικά υπεροξειδία τύπου C, υπό την προϋπόθεση ότι τηρούνται οι παρακάτω συνθήκες:

- τα διαθέσιμα δεδομένα δείχνουν ότι το δείγμα θα ήταν όχι περισσότερο επικίνδυνο από τα οργανικά υπεροξειδία τύπου B,
- το δείγμα είναι συσκευασμένο σε συμφωνία με τη μέθοδο συσκευασίας OP2A ή OP2B και η ποσότητα ανά μονάδα μεταφοράς περιορίζεται στα 10 kg,

## Κλάση 5.2

- 2550 - τα διαθέσιμα δεδομένα δείχνουν ότι η θερμοκρασία ελέγχου, εάν υπάρχει, είναι (συνεχ.) επαρκώς χαμηλή για την αποφυγή οποιασδήποτε επικίνδυνης αποσύνθεσης και επαρκώς υψηλή για την αποφυγή οποιουδήποτε επικίνδυνου διαχωρισμού φάσης.

*Απευαισθητοποίηση των οργανικών υπεροξειδίων*

(10) Για την εξασφάλιση της ασφάλειας κατά τη διάρκεια της μεταφοράς, τα οργανικά υπεροξειδία σε πολλές περιπτώσεις απευαισθητοποιούνται από οργανικά υγρά ή στερεά, ανόργανα στερεά ή νερό. Όπου το ποσοστό μίας ύλης συμφωνείται, αυτό αναφέρεται στο ποσοστό κατά βάρος, στρογγυλοποιημένο στον πλησιέστερο ακέραιο αριθμό. Γενικά, η απευαισθητοποίηση θα πρέπει να είναι τέτοια ώστε, σε περίπτωση χυσίματος, το οργανικό υπεροξείδιο να μην συμπεκνώνεται σε επικίνδυνο βαθμό.

(11) Εκτός εάν αναφέρεται διαφορετικά για σύνθεση του μεμονωμένου οργανικού υπεροξειδίου, ο(οι) παρακάτω ορισμός(οί) θα πρέπει να εφαρμόζεται(ονται) στους διαλύτες που χρησιμοποιούνται για την απευαισθητοποίηση:

- οι διαλύτες τύπου Α είναι οργανικά υγρά που είναι συμβατά με το οργανικό υπεροξείδιο και που έχει σημείο βρασμού όχι μικρότερο από 150 °C. Διαλύτες τύπου Α μπορούν να χρησιμοποιούνται για την απευαισθητοποίηση όλων των οργανικών υπεροξειδίων.
- οι διαλύτες τύπου Β είναι οργανικά υγρά που είναι συμβατά με το οργανικό υπεροξείδιο και που έχει σημείο βρασμού μικρότερο από 150 °C αλλά όχι μικρότερο από 60 °C και σημείο ανάφλεξης όχι μικρότερο από 5 °C.

Διαλύτες τύπου Β μπορούν μόνον να χρησιμοποιηθούν για την απευαισθητοποίηση οργανικών υπεροξειδίων για τα οποία απαιτείται έλεγχος της θερμοκρασίας. Το σημείο βρασμού του υγρού θα πρέπει να είναι τουλάχιστον 50 °C υψηλότερο από τη θερμοκρασία ελέγχου του οργανικού υπεροξειδίου.

(12) Διαλύτες, άλλοι από τους τύπους Α ή Β, μπορούν να προστίθενται σε συνθέσεις οργανικού υπεροξειδίου όπως αναφέρεται στο περιθωριακό 2551, υπό την προϋπόθεση ότι είναι συμβατοί και δεν αλλάζουν την ταξινόμηση.

(13) Το νερό μπορεί μόνο να χρησιμοποιείται για την απευαισθητοποίηση οργανικών υπεροξειδίων που αναφέρονται στο περιθωριακό 2551 ή στην απόφαση της αρμόδιας αρχής σύμφωνα με την παράγραφο (8) ως υπάρχοντα "με νερό" ή "ως σταθερό εναιώρημα σε νερό". Δείγματα οργανικών υπεροξειδίων ή συνθέσεις οργανικών υπεροξειδίων που δεν αναφέρονται στο περιθωριακό 2551, μπορούν επίσης να απευαισθητοποιούνται με νερό υπό την προϋπόθεση ότι οι απαιτήσεις της παραγράφου (9) τηρούνται.

(14) Οργανικά και ανόργανα στερεά μπορούν να χρησιμοποιούνται για την απευαισθητοποίηση των οργανικών υπεροξειδίων υπό την προϋπόθεση ότι είναι συμβατά.

(15) Συμβατά υγρά και στερεά είναι εκείνα που δεν έχουν επιβλαβή επίδραση στη θερμική σταθερότητα και τον τύπο κινδύνου της σύνθεσης του οργανικού υπεροξειδίου.

*Διατάξεις για τον έλεγχο της θερμοκρασίας*

(16) Ορισμένα οργανικά υπεροξειδία μπορούν να μεταφέρονται μόνον κάτω από συνθήκες ελεγχόμενης θερμοκρασίας. Η θερμοκρασία ελέγχου είναι η μέγιστη θερμοκρασία στην οποία το οργανικό υπεροξείδιο μπορεί να μεταφερθεί με ασφάλεια. Θεωρείται ότι η θερμοκρασία των άμεσων περιβλημάτων ενός κόλου υπερβαίνει μόνον τους 55 °C κατά τη διάρκεια της μεταφοράς για ένα σχετικά μικρό χρονικό διάστημα σε μία περίοδο 24 ωρών. Σε περίπτωση απώλειας του ελέγχου της θερμοκρασίας, μπορεί να είναι αναγκαίο να εφαρμοστούν διαδικασίες κινδύνου. Η θερμοκρασία κινδύνου είναι η θερμοκρασία στην οποία τέτοιες διαδικασίες θα πρέπει να εφαρμόζονται.

## Κλάση 5.2

**2550** (17) Οι θερμοκρασίες ελέγχου και κινδύνου απορρέουν από τη θερμοκρασία αυτο-επιταχυνόμενης (συν.) αποσύνθεσης (SADT) που ορίζεται ως η χαμηλότερη θερμοκρασία στην οποία μπορεί να συμβεί αυτο-επιταχυνόμενη αποσύνθεση με μία ύλη στη συσκευασία που χρησιμοποιείται κατά τη διάρκεια της μεταφοράς (βλέπε Πίνακα 1). Η SADT θα πρέπει να προσδιορίζεται για να αποφασιστεί εάν μία ύλη θα πρέπει να υπόκειται σε έλεγχο της θερμοκρασίας κατά τη διάρκεια της μεταφοράς. Διατάξεις για τον καθορισμό της SADT δίνονται στην προσθήκη Α.1, περιθωριακό 3103.

Πίνακας 1. Υπολογισμός των θερμοκρασιών ελέγχου και κινδύνου

SADT	Θερμοκρασία ελέγχου	Θερμοκρασία κινδύνου
20 °C ή χαμηλότερη	20 °C κάτω από την SADT	10 °C κάτω από την SADT
πάνω από 20 °C έως 35 °C	15 °C κάτω από την SADT	10 °C κάτω από την SADT
πάνω από 35 °C	10 °C κάτω από την SADT	5 °C κάτω από την SADT

(18) Τα παρακάτω οργανικά υπεροξειδία θα πρέπει να υπόκεινται σε έλεγχο της θερμοκρασίας κατά τη διάρκεια της μεταφοράς:

- οργανικά υπεροξειδία των τύπων Β και C με SADT μικρότερη ή ίση από 50 °C,
- οργανικά υπεροξειδία τύπου D που εμφανίζουν βίαιη ή μέση επίδραση όταν θερμαίνονται υπό περιορισμό με SADT μικρότερη ή ίση από 50 °C ή εμφανίζουν χαμηλή ή καθόλου επίδραση όταν θερμαίνονται υπό περιορισμό με SADT μικρότερη ή ίση από 45 °C, και
- οργανικά υπεροξειδία των τύπων E και F με SADT μικρότερη ή ίση από 45 °C.

**ΣΗΜΕΙΩΣΗ:** Διατάξεις για τον προσδιορισμό των επιδράσεων της θέρμανσης υπό περιορισμό δίνονται στην προσθήκη Α.1, περιθωριακό 3103.

(19) Όπου εφαρμόζονται, οι θερμοκρασίες ελέγχου και κινδύνου αναφέρονται στο περιθωριακό 2551. Η πραγματική θερμοκρασία κατά τη διάρκεια της μεταφοράς μπορεί να είναι χαμηλότερη από την θερμοκρασία ελέγχου αλλά θα πρέπει να επιλέγεται έτσι ώστε να αποφεύγεται ο επικίνδυνος διαχωρισμός φάσεων.

**2551 Α. Οργανικά υπεροξειδία που δεν απαιτούν έλεγχο της θερμοκρασίας**

1° (b) 3101 οργανικά υπεροξειδία τύπου Β, υγρά, όπως:

**B. Οργανικά υπεροξειδία που απαιτούν έλεγχο της θερμοκρασίας**

**ΣΗΜΕΙΩΣΗ:** Υλεις των 11° έως 20° είναι οργανικά υπεροξειδία που αποσυντίθενται εύκολα σε κανονικές θερμοκρασίες και θα πρέπει συνέπώς να μεταφέρονται μόνον υπό συνθήκες επαρκούς ψύξης. Για αυτά τα οργανικά υπεροξειδία, η μέγιστη θερμοκρασία κατά τη διάρκεια της μεταφοράς, δεν θα πρέπει να υπερβαίνει την θερμοκρασία ελέγχου που υποδεικνύεται.

11° (b) 3111 οργανικά υπεροξειδία τύπου B, υγρά, με ελεγχόμενη θερμοκρασία, όπως:

## C. Κενές συσκευασίες

31° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά γύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάρτιστων, που περιείχαν ύλες της κλάσης 5.2.

2551a Εξαρτήματα ελέγχου ή επισκευής, ή άλλα είδη, που περιέχουν μικρές ποσότητες υλών που υποδεικνύονται παρακάτω, μεταφερόμενα σε συμφωνία με τις παρακάτω διατάξεις, δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα ή στο Παράρτημα B:

(a) υγρά των 1°, 3°, 5°, 7°, ή 9°: όχι περισσότερο από 25 ml ανά εσωτερική συσκευασία,

(b) στερεά των 2°, 4°, 6°, 8°, ή 10°: όχι περισσότερο από 100 g ανά εσωτερική συσκευασία.

Αυτές οι ποσότητες υλών, θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που τουλάχιστον ικανοποιούν τις συνθήκες του περιθωριακού 3538. Το συνολικό μκτό βάρος του κόλου, δεν θα πρέπει να υπερβαίνει τα 30 kg. Αυτές οι ποσότητες υλών, μπορούν να συσκευάζονται μαζί με άλλα είδη ή ύλες, υπό την προϋπόθεση ότι δεν θα αντιδράσουν επικίνδυνα σε περίπτωση διαρροής.

## Κλάση 5.2

**51a** Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:  
(συνεχ.)

- (a) ανάφλεξη και/ή έκλυση αξιοσημείωτης θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

**2552** (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5 και θα πρέπει να είναι έτσι κατασκευασμένες ώστε κανένα από τα υλικά που είναι σε επαφή με το περιεχόμενο να μην επιδρά επικίνδυνα στο περιεχόμενο. Ο βαθμός πλήρωσης δεν θα πρέπει να υπερβαίνει το 93 %. Για συνδυασμένες συσκευασίες, τα προστατευτικά υλικά δεν θα πρέπει να είναι άμεσα εύφλεκτα και δεν θα πρέπει να προκαλούν αποσύνθεση του οργανικού υπορροξείδιου σε περίπτωση διαρροής.

(2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 3511 (2) ή 3611 (2), συσκευασίες των ομάδων συσκευασίας II ή I μαρκαρισμένες με το γράμμα "Y" ή "X" ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", θα πρέπει να χρησιμοποιούνται. Μεταλλικές συσκευασίες της ομάδας συσκευασίας I, όμως, δεν θα πρέπει να χρησιμοποιούνται.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 5.2 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές, βλέπε Παράρτημα B.

## 2. Ειδικές συνθήκες για τη συσκευασία ορισμένων υλών και ειδών

**2553** (1) Οι μέθοδοι συσκευασίας για ύλες της κλάσης 5.2 αναφέρονται στον Πίνακα 2 και χαρακτηρίζονται OP1A έως OP8A για υγρά και OP1B έως OP8B για στερεά. Ιξώδεις ύλες με χρόνο εκροής από ένα DIN-CUP με 4 mm διάμετρο εξόδου στους 20 °C μεγαλύτερο από 10 λεπτά (που αντιστοιχεί σε χρόνο εκροής μεγαλύτερο από 690 δευτερόλεπτα στους 20 °C από ένα πώμα περάσματος 4, ή μεγαλύτερο από  $2,68 \times 10^{-3} \text{ m}^3/\text{s}$ ), θα πρέπει να θεωρούνται ως στερεά.

(2) Οι ύλες και τα είδη θα πρέπει να συσκευάζονται όπως υποδεικνύεται στο περιθωριακό 2551 και όπως τίθεται λεπτομερειακά στον Πίνακα 2(A) και 2(B). Μία μέθοδος συσκευασίας για ένα κόλο μικρότερου μεγέθους (δηλ. με μικρότερο αριθμό OP) μπορεί να χρησιμοποιηθεί. Αυτή η διάταξη δεν εφαρμόζεται, όμως, σε μία μέθοδο συσκευασίας για ένα κόλο μεγαλύτερου μεγέθους (δηλ. με μεγαλύτερο αριθμό OP).

(3) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01, θα πρέπει να είναι σύμφωνες με τις διατάξεις του περιθωριακού 2102 (4) και (6).

(4) Δοχεία ή IBC, που περιέχουν ύλες των 1° (b), 3° (b), 5° (b), 7° (b), 9° (b), 11° (b), 13° (b), 15° (b), 17° (b) ή 19° (b), που εκπέμπουν μικρές ποσότητες αερίων, θα πρέπει να εξαερίζονται, σε συμφωνία με το περιθωριακό 3500 (8) ή 3601 (6).

## Κλάση 5.2

25. (1) Για οργανικά υπεροξειδία ή συνθέσεις οργανικών υπεροξειδίων που δεν αναφέρονται στο περιθωριακό 2551, η παρακάτω διαδικασία θα πρέπει να χρησιμοποιείται για τον καθορισμό της κατάλληλης μεθόδου συσκευασίας:

(a) Οργανικά υπεροξειδία τύπου B:

Οι ύλες και τα είδη θα πρέπει να καταχωρούνται στη μέθοδο συσκευασίας OP5A ή OP5B, υπό την προϋπόθεση ότι ικανοποιούν τα κριτήρια της προσθήκης A.1, περιθωριακό 3104 (2) (b) σε μία από τις συσκευασίες που υποδεικνύονται. Εάν το οργανικό υπεροξειδίο μπορεί μόνον να ικανοποιεί αυτά τα κριτήρια σε μικρότερη συσκευασία από εκείνες που αναφέρονται για τη μέθοδο συσκευασίας OP5A ή OP5B (δηλ. μία από τις συσκευασίες που αναφέρονται για OP1A έως OP4A ή OP1B έως OP4B), τότε η αντίστοιχη μέθοδος συσκευασίας με τον μικρότερο αριθμό OP θα πρέπει να καταχωρείται.

(b) Οργανικά υπεροξειδία τύπου C:

Οι ύλες και τα είδη θα πρέπει να καταχωρούνται στη μέθοδο συσκευασίας OP6A ή OP6B υπό την προϋπόθεση ότι ικανοποιούν τα κριτήρια της προσθήκης A.1, περιθωριακό 3104 (2)(c) σε μία από τις συσκευασίες που υποδεικνύονται. Εάν το οργανικό υπεροξειδίο μπορεί μόνον να ικανοποιεί αυτά τα κριτήρια σε μικρότερη συσκευασία από εκείνες που αναφέρονται για τη μέθοδο συσκευασίας OP6A ή OP6B τότε η αντίστοιχη μέθοδος συσκευασίας με τον μικρότερο αριθμό OP θα πρέπει να καταχωρείται.

(c) Οργανικά υπεροξειδία τύπου D:

Η μέθοδος συσκευασίας OP7A ή OP7B θα πρέπει να καταχωρείται.

(d) Οργανικά υπεροξειδία τύπου E:

Η μέθοδος συσκευασίας OP8A ή OP8B θα πρέπει να καταχωρείται.

(e) Οργανικά υπεροξειδία τύπου F:

Η μέθοδος συσκευασίας OP8A ή OP8B θα πρέπει να καταχωρείται.

(2) Πίνακας 2 (Α): ΚΑΤΑΛΟΓΟΣ ΣΥΣΚΕΥΑΣΙΩΝ ΓΙΑ ΥΓΡΑ ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ

\* Απογορεύεται για οργανικά υπεροξείδια των τύπων B και C.

<sup>1/</sup> Εάν δίνονται δύο τιμές, η πρώτη εφαρμόζεται στο μέγιστο καθαρό βάρος ανά εσωτερικό δοχείο και η δεύτερη στο μέγιστο καθαρό βάρος του πλήρους κόλου.

<sup>2/</sup> Για συνδυασμένες συσκευασίες που περιέχουν οργανικό υπεροξείδιο τύπου B ή C, μόνον μη-μεταλλικές συσκευασίες μπορούν να χρησιμοποιούνται. Όμως, γυάλινα δοχεία μπορούν μόνον να χρησιμοποιούνται ως εσωτερικά δοχεία για τις μεθόδους συσκευασίας OP1B και OP2B.

<sup>3/</sup> Εάν χρησιμοποιούνται διαμερίσματα επιβραδυντικά της φωτιάς, το μέγιστο καθαρό βάρος του πλήρους κόλου μπορεί να είναι 2.5 kg.

<sup>4/</sup> Αντές οι συσκευασίες επιτρέπονται μόνον ως μέρος μίας συνδυασμένης συσκευασίας. Οι εσωτερικές συσκευασίες θα πρέπει να είναι κατάλληλες για τις τιμές που πρόκειται να μεταφερθούν.

## Κλάση 5.2

2555 (1) Οι ύλες του περιθωριακού 2551, 9° (b), 10° (b), 19° (b) ή 20° (b) μπορούν να μεταφέρονται σε IBC υπό συνθήκες που επιβάλλονται από την αρμόδια αρχή τις χώρες προέλευσης όταν, με βάση τον έλεγχο, η αρμόδια αρχή ικανοποιείται ότι τέτοια μεταφορά μπορεί να διεξαχθεί με ασφάλεια. Οι έλεγχοι θα πρέπει να συμπεριλαμβάνουν τα παρακάτω αναγκαία:

- να αποδείξουν ότι το οργανικό υπεροξειδίο είναι σύμφωνο με τις αρχές για την ταξινόμηση που δίνονται στην προσθήκη Α.1, περιθωριακό 3104 (2) (f),
- να αποδείξουν τη συμβατότητα με όλα τα υλικά που είναι κανονικά σε επαφή με την ύλη κατά τη διάρκεια της μεταφοράς,
- να προσδιορίσουν, όταν εφαρμόζεται, τις θερμοκρασίες ελέγχου και κινδύνου συσχετισμένες με τη μεταφορά της ύλης στα συγκεκριμένα IBC όπως απορρέει από την SADT,
- να σχεδιάσουν, όταν εφαρμόζεται, συσκευές εκτόνωσης κινδύνου, και
- να προσδιορίσουν εάν οποιεσδήποτε ειδικές απαιτήσεις είναι αναγκαίες.

(2) Τα παρακάτω οργανικά υπεροξειδία τύπου F μπορούν να μεταφέρονται σε IBC του εμφανιζόμενου τύπου, χωρίς να είναι σύμφωνα με τις συνθήκες της παραγράφου (1):

Υλη	Τύπος IBC	Μέγιστη χωρητικότητα (λίτρα)	Θερμοκρασία ελέγχου	Θερμοκρασία κινδύνου
3109 ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ ΤΥΠΟΥ F, ΥΓΡΑ: - υπεροξειδίο του διωδεκανοϋλίου, όχι περισσότερο από 42 %, σταθερό εναίωρημα, σε νερό	31HA1	1 000		
3119 ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ ΤΥΠΟΥ F, ΥΓΡΑ, ΕΛΕΓΧΟΜΕΝΗΣ ΘΕΡΜΟΚΡΑΣΙΑΣ - υπεροξυδιτανθρακικό δι-(4-τριτοαγές βουτυλοκυκλοεξύλιο), όχι περισσότερο από 42 %, σταθερό εναίωρημα, σε νερό	31HA1	1 000	+30 °C	+35 °C
- υπεροξυδιτανθρακικό δικετύλιο, όχι περισσότερο από 42 %, σταθερό εναίωρημα, σε νερό	31HA1	1 000	+30 °C	+35 °C
- υπεροξυδιτανθρακικό διμυριστύλιο, όχι περισσότερο από 42 %, σταθερό εναίωρημα, σε νερό	31HA1	1 000	+15 °C	+15 °C

(3) Για την αποφυγή εκρηκτικής θραύσης των μεταλλικών IBC ή σύνθετων IBC με μεταλλικό περίβλημα πλήρων τοιχωμάτων, οι συσκευές εκτόνωσης κινδύνου θα πρέπει να σχεδιάζονται ώστε να εξαερίζονται όλα τα προϊόντα αποσύνθεσης και οι ατμοί που εκλύονται κατά τη διάρκεια μίας περιόδου όχι μικρότερης από μία ώρα δράσης της φωτιάς (φορτίο θερμότητας 110 kW/m<sup>2</sup>) ή αυτο-επιταχυνόμενης αποσύνθεσης.

## Κλάση 5.2

## 3. Μικτή συσκευασία

- 2558 Ύλες της κλάσης 5.2 δεν θα πρέπει να συσκευάζονται μαζί με ύλες ή είδη άλλων κλάσεων ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## 4. Μαρκάρισμα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη Α.9)

## Μαρκάρισμα

- 2559 (1) Κάθε κόλα θα πρέπει να είναι καθαρά και με διάρκεια μαρκαρισμένο με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα καταχωρηθεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

## Ετικέτες κινδύνου

- (2) Κόλα που περιέχουν ύλες της κλάσης 5.2, θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 5.2.

(3) Κόλα που περιέχουν οργανικά υπεροξειδία των 1°, 2°, 11° και 12°, θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01, εκτός εάν η αρμόδια αρχή έχει επιτρέψει την παράλειψη αυτής της ετικέτας για τον τύπο της συσκευασίας που ελέγχεται διότι τα αποτελέσματα έχουν αποδείξει ότι το οργανικό υπεροξειδίο σε τέτοια συσκευασία δεν εμφανίζει εκρηκτική συμπεριφορά [βλέπε περιθωριακό 2561 (4)].

(4) Όταν μία ύλη είναι εξαιρετικά διαβρωτική ή διαβρωτική σύμφωνα με τα κριτήρια της κλάσης 8 [βλέπε περιθωριακό 2800 (1)], τα κόλα θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8. Αυτό υποδεικνύεται στο περιθωριακό 2551 (πρόσθετη επισήμανση) ή, όταν απαιτείται, στις εγκεκριμένες συνθήκες μεταφοράς [βλέπε περιθωριακό 2550 (8)].

(5) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω, θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(6) Κόλα που περιέχουν υγρά σε συσκευασίες τα πάματα των οποίων δεν είναι ορατά από έξω, κόλα που περιέχουν εξαεριζόμενες συσκευασίες ή εξαεριζόμενες συσκευασίες χωρίς εξωτερικές συσκευασίες, θα πρέπει να φέρουν σε δύο αντίθετες πλευρές, ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2560

## B. Στοιχεία στο έγγραφο μεταφοράς

- 2561 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και το αντίστοιχο συγκεντρωτικό κεφάλαιο που υπογραμμίζεται στο περιθωριακό 2551 ακολουθούμενη από τη χημική ονομασία (σε παρένθεση).

Αυτή η περιγραφή θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα και τα αρχικά "ADR" (ή "RID"), π.χ. "3108, οργανικό υπεροξειδίο τύπου E, στερεό, (υπεροξειδίο του διβενζοϋλίου), 5.2, 8° (b), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)], η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα που περιέχουν ..." και το(τα) συστατικό(ά) που έχει(έχουν) χρησιμοποιηθεί για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα πρέπει να εγγράφονται με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα, που περιέχουν 3107 οργανικό υπεροξειδίο τύπου E, υγρό, (υπεροξοξικό οξύ), 5.2, 7° (b), ADR". Γενικά, δεν χρειάζεται να εμφανίζονται περισσότερα από τα δύο συστατικά που κυρίως συμβάλουν στον κίνδυνο ή τους κινδύνους των αποβλήτων.

## Κλάση 5.2

- 2561 (2) Όταν ύλες και είδη μεταφέρονται υπό συνθήκες κανονισμένες από την αρμόδια αρχή (συνεχ.) (βλέπε περιθωριακά 2550 (8), 2555 (1), 211 511 και 212 511, η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Μεταφορά σε συμφωνία με το περιθωριακό 2561 (2)".

Ένα αντίγραφο της απόφασης της αρμόδιας αρχής με τις συνθήκες μεταφοράς, θα πρέπει να επισυνάπτεται στο έγγραφο μεταφοράς.

- (3) Όταν ένα δείγμα ενός οργανικού υπεροξειδίου μεταφέρεται σε συμφωνία με το περιθωριακό 2550 (9), η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Μεταφορά σε συμφωνία με το περιθωριακό 2561 (3)".

- (4) Όταν, με άδεια της αρμόδιας αρχής σε συμφωνία με το περιθωριακό 2559 (2), ετικέτα σύμφωνα με το υπόδειγμα Αριθμ.01 δεν απαιτείται, η παρακάτω αναφορά θα πρέπει να συμπεριλαμβάνεται στο έγγραφο μεταφοράς:

"Ετικέτα κινδύνου σύμφωνα με το υπόδειγμα Αριθμ.01 δεν απαιτείται".

- (5) Όταν οργανικά υπεροξειδία τύπου G [βλέπε Προσθήκη Α.1, περιθωριακό 3104 (2)(g)] μεταφέρονται, η παρακάτω αναφορά μπορεί να δίνεται στο έγγραφο μεταφοράς:

"Όχι ύλη της κλάσης 5.2".

- (6) Για οργανικά υπεροξειδία που απαιτούν έλεγχο της θερμοκρασίας κατά τη διάρκεια της μεταφοράς, η παρακάτω αναφορά θα πρέπει να δίνεται στο έγγραφο μεταφοράς:

"Θερμοκρασία ελέγχου: ...°C"

Θερμοκρασία κινδύνου: ...°C".

2562-  
2566

### C. Κενές συσκευασίες

- 2567 (1) Κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, ακαθάριστων, της 31° θα πρέπει να είναι κλεισμένα με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.

- (2) Κενές συσκευασίες συμπεριλαμβανομένων κενών IBC, ακαθάριστων, της 31° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.

- (3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 31°, π.χ. "Κενές συσκευασίες, 5.2, 31°, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με τη χημική ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 3109 οργανικό υπεροξείδιο τύπου F, υγρό, (υδροϋπεροξείδιο του τριτοταγούς βουτυλίου), 9° (b)".

2568-  
2599

## ΚΛΑΣΗ 6.1 - ΤΟΞΙΚΕΣ ΥΛΕΣ

## 1. Κατάλογος υλών

**2600** (1) Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της κλάσης 6.1, εκείνα που αναφέρονται στο περιθωριακό 2601 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο εκείνου του περιθωριακού, υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2600(2) έως 2622 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες υλών του περιθωριακού 2601 που δεν υπόκεινται στις διατάξεις για αυτήν την κλάση είτε σε αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2601a.

(2) Ο τίτλος της κλάσης 6.1 καλύπτει τις τοξικές ύλες για τις οποίες είναι γνωστό από την εμπειρία ή σχετικά με τις οποίες θεωρείται ως δεδομένο από πειράματα σε ζώα ότι, σε σχετικά μικρή ποσότητα, είναι ικανές με μία μόνη δράση ή με δράση μικρής διάρκειας να προκαλέσουν βλάβη στην ανθρώπινη υγεία, ή θάνατο, από εισπνοή, από δερματική απορρόφηση ή από κατάποση.

Οι ύλες της κλάσης 6.1, υποδιαιρούνται ως εξής:

- A. Ύλες που είναι εξαιρετικά τοξικές σε περίπτωση εισπνοής με σημείο ανάφλεξης κάτω από 23 °C, που δεν είναι ύλες της κλάσης 3,
  - B. Οργανικές ύλες που έχουν σημείο ανάφλεξης όχι μικρότερο από 23 °C ή μη-εύφλεκτες οργανικές ύλες,
  - C. Οργανομεταλλικές ενώσεις ή καρβονύλια,
  - D. Ανόργανες ύλες που μπορούν να απελευθερώσουν τοξικά αέρια σε περίπτωση επαφής με το νερό (ή την ατμοσφαιρική υγρασία), υδατικά διαλύματα ή οξέα και άλλες τοξικές ενεργές με το νερό<sup>1/</sup> ύλες,
  - E. Άλλες ανόργανες ύλες και μεταλλικά άλατα οργανικών υλών,
  - F. Ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα,
  - G. Ύλες που προορίζονται για εργαστήρια και πειράματα και για την παραγωγή φαρμακευτικών προϊόντων, εάν δεν αναφέρονται σε άλλα είδη αυτής της κλάσης,
  - H. Κενές συσκευασίες.
- (3) Ύλες και είδη της κλάσης 6.1, άλλα από τις ύλες των 1° έως 5°, που ταξινομούνται στα διάφορα είδη του περιθωριακού 2601, θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες, που χαρακτηρίζονται με τα γράμματα (a), (b) ή (c), σύμφωνα με τον βαθμό τοξικότητάς τους:
- (a) εξαιρετικά τοξικές ύλες
  - (b) τοξικές ύλες
  - (c) ελαφρώς τοξικές ύλες

Ύλες, μείγματα και διαλύματα, συμπεριλαμβανομένων παρασιτοκτόνων των 71° έως 87°, που δεν αναφέρονται ρητά, θα πρέπει να ταξινομούνται στα κατάλληλα είδη και γράμματα σύμφωνα με τα παρακάτω κριτήρια:

<sup>1/</sup> Ο όρος "ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.

## Κλάση 6.1

- 2600· 1. (συνεχ.) Για την εκτίμηση του βαθμού τοξικότητας, θα πρέπει να λαμβάνεται υπόψη η ανθρώπινη εμπειρία περιπτώσεων τυχαίας δηλητηρίασης, καθώς και ειδικές ιδιότητες των οποιωνδήποτε μεμονωμένων υλών: υγρή κατάσταση, υψηλή πεπτικότητα, οποιαδήποτε ειδική πιθανότητα δερματικής απορρόφησης και ειδικές βιολογικές επιδράσεις.
2. Σε περίπτωση έλλειψης παρατηρήσεων σε ανθρώπους, ο βαθμός τοξικότητας θα πρέπει να εκτιμάται με τη χρήση των διαθέσιμων δεδομένων από πειράματα σε ζώα σε συμφωνία με τον παρακάτω πίνακα:

	Υποδιαίρεση σε ομάδες μέσα σ'ένα είδος	Στοματική τοξικότητα LD <sub>50</sub> (mg/kg)	Δερματική τοξικότητα LD <sub>50</sub> (mg/kg)	Τοξικότητα σε περίπτωση εισπνοής LC <sub>50</sub> σκόνης και νέφη (mg/l)
Εξαιρετικά τοξικά	(a)	≤ 5	≤ 40	≤ 0.5
Τοξικά	(b)	> 5-50	> 40-200	> 0.5-2
Ελαφρώς τοξικά	(c) <sup>2/</sup>	στερεά: > 50-200 υγρά: > 50-500	> 200-1 000	> 2-10

- 2.1 Όπου μία ύλη εμφανίζει διαφορετικούς βαθμούς τοξικότητας για δύο ή περισσότερα είδη έκθεσης, θα πρέπει να ταξινομείται στον υψηλότερο τέτοιο βαθμό τοξικότητας.
- 2.2 Ύλες που ικανοποιούν τα κριτήρια της κλάσης 8 και με τοξικότητα εισπνοής σκόνης και νέφους (LC<sub>50</sub>) που οδηγεί στην Ομάδα συσκευασίας I, θα πρέπει μόνον να γίνονται δεκτές για καταμερισμό στην κλάση 6.1 εάν η τοξικότητα μέσω στοματικής κατάποσης ή δερματικής επαφής είναι τουλάχιστον στην κλίμακα της ομάδας (a) ή (b). Αλλιώς, θα πρέπει να γίνεται καταχώρηση στην κλάση 8, εάν είναι κατάλληλη (βλέπε υποσημείωση 1/, περιθωριακό 2800).

**Τιμή LD<sub>50</sub> για έντονη στοματική τοξικότητα**

- 2.3 Εκείνη η παρεχόμενη δόση της ύλης που εξετάζεται, που είναι περισσότερο πιθανό να προκαλέσει θάνατο μέσα σε 14 ημέρες στον μισό πληθυσμό και των αρσενικών και των θηλυκών νέων ώριμων λευκοπαθικών αρουραίων. Ο αριθμός των ζώων που ελέγχονται θα πρέπει να είναι αρκετός για να δώσει ένα στατιστικώς ενδεικτικό αποτέλεσμα και θα πρέπει να είναι σε συμφωνία με την καλή φαρμακολογική πρακτική. Το αποτέλεσμα εκφράζεται σε mg ανά kg βάρους σώματος.

**Τιμή LD<sub>50</sub> για έντονη δερματική τοξικότητα**

- 2.4 Εκείνη η δόση της ύλης που, παρεχόμενη με συνεχή επαφή για 24 ώρες με το γυμνό δέρμα των λευκοπαθικών κουνελιών, είναι πολύ πιθανό να προκαλέσει θάνατο μέσα σε 14 ημέρες στο μισό πληθυσμό των ζώων που ελέγχονται. Ο αριθμός των ζώων που ελέγχονται θα πρέπει να είναι επαρκής ώστε να δώσει ένα στατιστικώς ενδεικτικό αποτέλεσμα και θα πρέπει να είναι σε συμφωνία με την καλή φαρμακολογική πρακτική. Το αποτέλεσμα εκφράζεται σε mg ανά kg βάρους σώματος.

<sup>2/</sup> Δακρυγόνα αέρια θα πρέπει να συμπεριλαμβάνονται στην ομάδα (b) ακόμα και τα δεδομένα για την τοξικότητα τους αντιστοιχούν με κριτήρια της ομάδας (c).

## Κλάση 6.1

**Τιμή LC<sub>50</sub> για έντονη τοξικότητα σε περίπτωση εισπνοής**2600  
(συνεχ.)

- 2.5 Εκείνη η συγκέντρωση ατμού, νέφους ή σκόνης που, παρεχόμενη με συνεχή εισπνοή για μία ώρα και στους αρσενικούς και θηλυκούς νέους ώριμους λευκοπαθικούς αρουραίους, είναι πολύ πιθανόν να προκαλέσει θάνατο μέσα σε 14 ημέρες στο μισό πληθυσμό των ζώων που ελέγχονται. Εάν η ύλη παρέχεται στα ζώα ως σκόνη ή νέφος, περισσότερο από 90 % των σωματιδίων που είναι διαθέσιμα για εισπνοή στον θάλαμο ελέγχου, θα πρέπει να έχουν διάμετρο 10 μm ή μικρότερη, υπό την προϋπόθεση ότι είναι λογικά προβλεπόμενο ότι τέτοιες συγκεντρώσεις θα μπορούσαν να έλθουν σ'επαφή με ανθρώπους κατά τη διάρκεια της μεταφοράς. Το αποτέλεσμα εκφράζεται σε mg ανά λίτρο αέρα για σκόνες και νέφη και σε ml ανά m<sup>3</sup> αέρα (ppm) για ατμό.
- 2.6 Αυτά τα κριτήρια για τοξικότητα εισπνοής σκόνης και νέφους βασίζονται στα δεδομένα για την LC<sub>50</sub> σχετιζόμενη με έκθεση 1 ώρας και όπου τέτοιες πληροφορίες είναι διαθέσιμες θα πρέπει να χρησιμοποιούνται. Όμως, όπου μόνον δεδομένα για την LC<sub>50</sub> σχετιζόμενη με έκθεση 4 ωρών είναι διαθέσιμα, τέτοιες τιμές μπορούν να πολλαπλασιάζονται επί τέσσερα και το αποτέλεσμα να αντικαθίσταται στα παραπάνω κριτήρια, δηλ. η τιμή LC<sub>50</sub> πολλαπλασιαζόμενη επί τέσσερα (για 4 ώρες) θεωρείται ισοδύναμη με την τιμή LC<sub>50</sub> (για 1 ώρα).

**Τοξικότητα εισπνοής ατμών**

3. Υγρά που εκπέμπουν τοξικό ατμό, θα πρέπει να ταξινομούνται στις παρακάτω ομάδες όπου "V" είναι η συγκέντρωση κορεσμένου ατμού (σε ml/m<sup>3</sup> αέρα) (πητικότητα) στους 20 °C και κανονική ατμοσφαιρική πίεση:

	Υποδιαίρεση σε ομάδες μέσα σε ένα είδος	
Εξαιρετικά τοξικά	(a)	Όπου $V \geq 10 LC_{50}$ και $LC_{50} \leq 1\ 000\ \text{ml/m}^3$
Τοξικά	(b)	Όπου $V \geq LC_{50}$ και $LC_{50} \leq 3\ 000\ \text{ml/m}^3$ και τα κριτήρια για το (a) δεν ικανοποιούνται
Ελαφρώς τοξικά	(c)	Όπου $V \geq 1/5 LC_{50}$ και $LC_{50} \leq 5\ 000\ \text{ml/m}^3$ και τα κριτήρια για τα (a) και (b) δεν ικανοποιούνται

Αυτά τα κριτήρια για τοξικότητα εισπνοής ατμών βασίζονται στα δεδομένα για την LC<sub>50</sub> σχετιζόμενη με έκθεση 1 ώρας και όπου τέτοιες πληροφορίες είναι διαθέσιμες, θα πρέπει να χρησιμοποιούνται.

Όμως, όπου μόνον δεδομένα για την LC<sub>50</sub> σχετιζόμενη με έκθεση 4 ωρών στους ατμούς είναι διαθέσιμα, τέτοιες τιμές μπορούν να πολλαπλασιάζονται επί δύο και το αποτέλεσμα να αντικαθίσταται στα παραπάνω κριτήρια, δηλ. η LC<sub>50</sub> (για 4 ώρες) x 2 θεωρείται ισοδύναμη της LC<sub>50</sub> (για 1 ώρα).

2600 Τοξικότητα εισπνοής ατμών  
(συνεχ.)

ΟΡΙΑ ΤΩΝ ΟΜΑΔΩΝ

Σε αυτές τις τιμές, τα κριτήρια εκφράζονται σε γραφική μορφή, ως βοήθημα για εύκολη ταξινόμηση. Όμως, λόγω της χοντρικής προσέγγισης που επιτυγχάνεται με τη χρήση των γραφημάτων, ύλες που πέφτουν πάνω ή κοντά στα όρια των ομάδων, θα πρέπει να ελέγχονται με τη χρήση αριθμητικών κριτηρίων.

#### Μείγματα υγρών

4. Μείγματα υγρών που είναι τοξικά σε περίπτωση εισπνοής, θα πρέπει να καταχωρούνται σε κατηγορίες κινδύνου σύμφωνα με τα παρακάτω κριτήρια:
- 4.1 Εάν η  $LC_{50}$  είναι γνωστή για καθεμία από τις τοξικές ύλες που απαρτίζουν το μείγμα, η ομάδα μπορεί να προσδιορίζεται ως εξής:
  - (α) υπολογισμός της  $LC_{50}$  του μείγματος:

$$LC_{50} (mixture) = \frac{1}{\sum_{i=1}^n \frac{f_i}{LC_{50i}}}$$

Όπου  $f_i$  = μοριακό κλάσμα του συστατικού  $i$  του μείγματος.

$LC_{50i}$  = μέση θανάσιμη συγκέντρωση του συστατικού  $i$  σε  $ml/m^3$ .

## Κλάση 6.1

2600  
(συνεχ.)

- (b) υπολογισμός της πτητικότητας κάθε συστατικού του μείγματος:

$$V_i = P_i \times \frac{10^6}{101.3} \text{ ml/m}^3$$

όπου  $P_i$  = μερική πίεση του συστατικού  $i$  σε kPa στους 20 °C και σε κανονική ατμοσφαιρική πίεση.

- (c) υπολογισμός του λόγου της πτητικότητας προς την
- $LC_{50}$
- :

$$R = \frac{\sum_{i=1}^n V_i}{LC_{50i}}$$

- (d) οι υπολογιζόμενες τιμές για την
- $LC_{50}$
- (μείγμα) και
- $R$
- χρησιμοποιούνται τότε για τον προσδιορισμό της ομάδας του μείγματος:

Ομάδα (a)  $R \geq 10$  και  $LC_{50}$  (μείγμα)  $\leq 1\,000 \text{ ml/m}^3$ Ομάδα (b)  $R \geq 1$  και  $LC_{50}$  (μείγμα)  $\leq 3\,000 \text{ ml/m}^3$ , εάν το μείγμα δεν ικανοποιεί τα κριτήρια για το (a)Ομάδα (c)  $R \geq 1/5$  και  $LC_{50}$  (μείγμα)  $\leq 5\,000 \text{ ml/m}^3$ , εάν το μείγμα δεν ικανοποιεί τα κριτήρια της ομάδας (a) ή της ομάδας (b).

4.2 Σε περίπτωση απουσίας δεδομένων για την  $LC_{50}$  των τοξικών συστατικών υλών, το μείγμα μπορεί να καταχωρείται σε μία ομάδα βάσει των παρακάτω απλοποιημένων ελέγχων για το κατώφλι τοξικότητας. Όταν αυτοί οι έλεγχοι κατωφλίου χρησιμοποιούνται, η περισσότερη περιοριστική ομάδα θα πρέπει να προσδιορίζεται και να χρησιμοποιείται για τη μεταφορά του μείγματος.

4.3 Ένα μείγμα καταχωρείται στην ομάδα (a) μόνον εάν ικανοποιεί και τα δύο από τα παρακάτω κριτήρια:

- (i) Ένα δείγμα του υγρού μείγματος εξατμίζεται και διαλύεται με αέρα για την παραγωγή μίας ατμόσφαιρας ελέγχου  $1\,000 \text{ ml/m}^3$  εξατμισμένου μείγματος σε αέρα. Δέκα λευκοπαθικοί αρουραίοι (5 αρσενικοί και 5 θηλυκοί) εκτίθενται στην ατμόσφαιρα ελέγχου για 1 ώρα και παρακολουθείται για 14 ημέρες. Εάν πέντε ή περισσότερα από τα ζώα πεθάνουν μέσα σε 14 ημερών περίοδο παρακολούθησης, το μείγμα θεωρείται ότι έχει  $LC_{50}$  ίσο με ή μικρότερο από  $1000 \text{ ml/m}^3$ .

- (ii) Ένα δείγμα ατμού σε ισορροπία με το υγρό μείγμα διαλύεται με 9 ίσους όγκους αέρα για το σχηματισμό μίας ατμόσφαιρας ελέγχου. Δέκα λευκοπαθικοί αρουραίοι (5 αρσενικοί και 5 θηλυκοί) εκτίθενται στην ατμόσφαιρα ελέγχου για 1 ώρα και παρατηρούνται για 14 ημέρες. Εάν πέντε ή περισσότερα από τα ζώα πεθάνουν μέσα σε μία περίοδο παρακολούθησης 14 ημερών, το μείγμα θεωρείται ότι έχει πτητικότητα ίση με ή μεγαλύτερη από 10 φορές την  $LC_{50}$  του μείγματος.

4.4 Ένα μείγμα καταχωρείται στην ομάδα (b) μόνον εάν ικανοποιεί και τα δύο από τα παρακάτω κριτήρια και δεν ικανοποιεί τα κριτήρια για την ομάδα (a):

- (i) Ένα δείγμα του υγρού μείγματος εξατμίζεται και διαλύεται με αέρα για την παραγωγή μίας ατμόσφαιρας ελέγχου  $3\,000 \text{ ml/m}^3$  εξατμισμένου μείγματος σε αέρα. Δέκα λευκοπαθικοί αρουραίοι (5 αρσενικοί και 5 θηλυκοί) εκτίθενται στην ατμόσφαιρα ελέγχου για 1 ώρα και παρακολουθούνται για 14 ημέρες. Εάν πέντε ή περισσότερα ζώα πεθάνουν μέσα σε μία περίοδο παρακολούθησης 14 ημερών, το μείγμα θεωρείται ότι έχει  $LC_{50}$  ίση με ή μικρότερη από  $3\,000 \text{ ml/m}^3$ .

## Κλάση 6.1

2600  
(συνεχ.)

- (ii) Ένα δείγμα του ατμού σε ισορροπία με το υγρό μείγμα χρησιμοποιείται για το σχηματισμό μίας ατμόσφαιρας ελέγχου. Δέκα λευκοπαθικοί αρουραίοι (5 αρσενικοί και 5 θηλυκοί) εκτίθενται στην ατμόσφαιρα ελέγχου για 1 ώρα και παρακολουθούνται για 14 ημέρες. Εάν πέντε ή περισσότερα από τα ζώα πεθάνουν μέσα σε μία περίοδο παρακολούθησης 14 ημερών, το μείγμα θεωρείται ότι έχει πτητικότητα ίση με ή μεγαλύτερη από την LC<sub>50</sub> του μείγματος.

4.5 Ένα μείγμα καταχωρείται στην ομάδα (c) μόνον εάν ικανοποιεί και τα δύο από τα παρακάτω κριτήρια και δεν ικανοποιεί τα κριτήρια για τις ομάδες (a) ή (b):

- (i) Ένα δείγμα του υγρού μείγματος εξατμίζεται και διαλύεται με αέρα για την παραγωγή μίας ατμόσφαιρας ελέγχου 5 000 ml/m<sup>3</sup> εξατμισμένου μείγματος σε αέρα. Δέκα λευκοπαθικοί αρουραίοι (5 αρσενικοί και 5 θηλυκοί) εκτίθενται στην ατμόσφαιρα ελέγχου για 1 ώρα και παρακολουθούνται για 14 ημέρες. Εάν πέντε ή περισσότερα ζώα πεθάνουν μέσα σε μία περίοδο παρακολούθησης 14 ημερών, το μείγμα θεωρείται ότι έχει LC<sub>50</sub> ίση με ή μικρότερη από 5 000 ml/m<sup>3</sup>.
- (ii) Η συγκέντρωση ατμού (πτητικότητα) του υγρού μείγματος μετράται και εάν η συγκέντρωση ατμού είναι ίση με ή μεγαλύτερη από 1 000 ml/m<sup>3</sup>, το μείγμα θεωρείται ότι έχει πτητικότητα ίση με ή μεγαλύτερη από το 1/5 της LC<sub>50</sub> του μείγματος.

(4) Όταν, ως αποτέλεσμα προσθηκών, ύλες της κλάσης 6.1 μεταβαίνουν σε άλλες κατηγορίες κινδύνου από εκείνες στις οποίες οι αναφερόμενες με την ονομασία τους στο περιθωριακό 2601 ύλες ανήκουν, αυτά τα μείγματα ή διαλύματα θα πρέπει να καταχωρούνται στα είδη και τα γράμματα στα οποία ανήκουν, με βάση τον πραγματικό βαθμό κινδύνου τους.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση των διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

(5) Με βάση τα κριτήρια της παραγράφου (3), μπορεί επίσης να προσδιορίζεται εάν η φύση ενός διαλύματος ή μείγματος που αναφέρεται με συγκεκριμένη ονομασία ή που περιέχει μία ύλη που αναφέρεται με συγκεκριμένη ονομασία, είναι τέτοια ώστε το διάλυμα ή το μείγμα να μην υπόκειται στις απαιτήσεις για αυτήν την Κλάση.

(6) Εύφλεκτα υγρά που είναι τοξικά σε περίπτωση εισπνοής, με σημείο ανάφλεξης κάτω από 23 °C, εκτός από τις ύλες των 1° έως 10°, είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301, 11° έως 19°).

(7) Εύφλεκτα υγρά ελαφρώς τοξικά, με εξαίρεση τις ύλες και τα παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα, με σημείο ανάφλεξης μεταξύ 23 °C έως 61 °C, συμπεριλαμβανομένων, είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301).

(8) Αυτοθερμαινόμενες ύλες ελαφρώς τοξικές είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431).

(9) Ενεργές με το νερό ύλες ελαφρώς τοξικές είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471).

(10) Οξειδωτικές ύλες ελαφρώς τοξικές είναι ύλες της κλάσης 5.1 (βλέπε περιθωριακό 2501).

(11) Ύλες ελαφρώς τοξικές και ελαφρώς διαβρωτικές είναι ύλες της κλάσης 8 (βλέπε περιθωριακό 2801).

(12) Χημικώς ασταθείς ύλες της κλάσης 6.1 δεν θα πρέπει να γίνονται δεκτές για μεταφορά, εκτός εάν έχουν ληφθεί τα αναγκαία μέτρα για την αποφυγή της επικίνδυνης αποσύνθεσης ή πολυμερισμού τους κατά τη διάρκεια της μεταφοράς. Για το σκοπό αυτό, θα πρέπει ειδικά να βεβαιώνεται ότι εκείνα τα δοχεία δεν περιέχουν οποιαδήποτε (οποιοσδήποτε) ύλη(ες) που πιθανώς να προκαλέσει(ουν) τέτοια αντίδραση.

## Κλάση 6.1

- 2600** (13) Ύλες και μείγματα υλών με σημείο τήξης παραπάνω από 45 °C, θεωρούνται ως στερεά (συνεχ.) κατά την έννοια των απαιτήσεων συσκευασίας των περιθωριακών 2606 (2), 2607 (4) και 2608 (3).
- (14) Το σημείο ανάφλεξης που αναφέρεται παρακάτω, θα πρέπει να προσδιορίζεται με τον τρόπο που περιγράφεται στην προσθήκη Α.3.
- 2601** **A.** Εξαιρετικά τοξικές ύλες με σημείο ανάφλεξης κάτω από 23 °C που δεν είναι ύλες της κλάσης 3
- 1° Υδροκάνιο, σταθεροποιημένο:
- 1051 υδροκάνιο, σταθεροποιημένο, που περιέχει όχι περισσότερο από 3 % νερό, 1614 υδροκάνιο, σταθεροποιημένο, που περιέχει όχι περισσότερο από 3 % νερό και είναι προσροφημένο σε πορώδες αδρανές υλικό.
- ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2603 (1)].
- ΣΗΜΕΙΩΣΗ 2:** Άνδρο υδροκάνιο που δεν ικανοποιεί αυτή τη συνθήκη δεν θα γίνεται δεκτό για μεταφορά.
- ΣΗΜΕΙΩΣΗ 3:** Υδροκάνιο (Υδροκυανικό οξύ) που περιέχει λιγότερο από 3 % νερό είναι σταθερό, εάν η τιμή του pH είναι  $2.5 \pm 0.5$  και το υγρό είναι καθαρό και άχρωμο.
- 2° Μείγματα υδροκυανίου:
- 1613 υδατικό διάλυμα υδροκυανίου, (υδροκυανικό οξύ), με όχι περισσότερο από 20 % υδροκάνιο.
- 3294 υδροκάνιο, διάλυμα σε αλκοόλη, με όχι περισσότερο από 45 % υδροκάνιο.
- ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες [βλέπε περιθωριακό 2603 (2)].
- ΣΗΜΕΙΩΣΗ 2:** Διαλύματα υδροκυανίου που δεν συμφωνούν με αυτές τις συνθήκες δεν θα γίνονται δεκτά για μεταφορά.
- 3° Καρβονύλια μετάλλων:
- 1259 καρβονύλιο νικελίου, 1994 πεντακαρβονύλιο σιδήρου.
- ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακό 2604).
- ΣΗΜΕΙΩΣΗ 2:** Άλλα καρβονύλια μετάλλων με σημείο ανάφλεξης κάτω από 23 °C δεν θα γίνονται δεκτά για μεταφορά.
- 4° 1185 αιθυλοενεΐμίνη, αδρανής.
- ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2605 (1)].

## Κλάση 6.1

2601 5° 2480 ισοκουανικός μεθυλεστέρας.  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτή την ύλη [βλέπε περιθωριακό 2605 (2)].

6° Άλλα ισοκουανικά άλατα με σημείο ανάφλεξης κάτω από 23 °C:

(a) 2482 ισοκουανικός n-προπυλεστέρας, 2484 ισοκουανικός τριτοταγής βουτυλεστέρας, 2485 ισοκουανικός n-βουτυλεστέρας.

7° Αζωτούχες ύλες:

(a) 1. 1163 διμεθυλυδραζίνη, ασυμμετρική, 1244 μεθυλυδραζίνη,  
2. 2334 αλλυλαμίνη, 2382 διμεθυλυδραζίνη, συμμετρική.

8° Οξυγονωμένες ύλες:

(a) 1092 ακρολεϊνη, αδρανής, 1098 αλλυλική αλκοόλη, 1143 κροτοναλδεϋδη, σταθεροποιημένη, 2606 ορθοπυρρικός μεθυλεστέρας.

9° Αλογονωμένες ύλες:

(a) 1239 μεθυλοχλωρομεθυλαιθέρας.

10° Διαβρωτικές αλογονωμένες ύλες:

(a) 1182 γλωρομυρμηκικός αιθυλεστέρας, 1238 γλωρομυρμηκικός μεθυλεστέρας, 2407 γλωρομυρμηκικός ισοπροπυλεστέρας, 2438 τριμεθυλοακετυλοχλωρίδιο.

**B. Οργανικές ύλες που έχουν σημείο ανάφλεξης 23 °C ή μεγαλύτερο ή μη-εύφλεκτες οργανικές ύλες**

**ΣΗΜΕΙΩΣΗ:** Οργανικές ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα είναι ύλες των 71° έως 78° και 81° έως 87°.

11° Αζωτούχες ύλες με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

(a) 3275 νιτρίλια, τοξικά, εύφλεκτα, ε.α.ο.,

(b) 2668 γλωροακετονιτρίλιο, 3073 βινυλοπυριδίνες, αδρανή, 3275 νιτρίλια, τοξικά, εύφλεκτα, ε.α.ο.

12° Αζωτούχες ύλες με σημείο ανάφλεξης μεγαλύτερο από 61 °C:

(a) 1541 κυανυδρίνη της ακετόνης, σταθεροποιημένη, 3276 νιτρίλια, τοξικά, ε.α.ο.,

(b) 1547 ανιλίνη, 1577 γλωροδιητροβενζόλια, 1578 γλωρονιτροβενζόλια, 1590 διγλωροανιλίνες, 1596 διητροανιλίνες, 1597 διητροβενζόλια, 1598 διητρο-ο-κρεζόλη, 1599 διάλυμα διητροφαινόλης, 1650 β-ναφθυλαμίνη, 1652 ναφθυλουρία, 1661 νιτροανιλίνες (ο-,m-p-), 1662 νιτροβενζόλιο, 1664 νιτροτολουόλια (ο-,m-p-), 1665 νιτροξυλένια, (ο-,m-p-) 1708 τολουϊδίνες, 1711 ξυλιδίνες, 1843 διητρο-ο-κρεζολικό αμμώνιο, 1885 βενζιδίνη, 2018 γλωροανιλίνες, στερεές, 2019 γλωροανιλίνες, υγρές, 2038 διητροτολουόλια,

## Κλάση 6.1

2601  
(συνεχ.)

2224 βενζονιτρίλιο, 2253 N,N-διμεθυλανιλίνη, 2306 νιτροβενζοτριφθορίδια, 2307 3-νιτρο-4-γλωροβενζοτριφθορίδιο, 2522 μεθακρυλικός διμεθυλαμινοαιθυλεστέρας, 2572 φαιλυδραζίνη, 2647 μαλονονιτρίλιο, 2671 αμινοπυριδίνες (ο-,m-p-), 2673 2-αμινο-4-γλωροφαινόλη, 2690 N,n-βουτυλοϊμιδαζόλη, 2738 N-βουτυλανιλίνη, 2754 N-αιθυλοτολουϊδίνες, 2822 2-γλωροπυριδίνη, 3276 νιτρίλια, τοξικά, ε.α.ο.

- (c) 1548 υδρογλωρική ανιλίνη, 1599 διάλυμα δινιτροφαινόλης, 1663 νιτροφαινόλες (ο-,m-,p-), 1673 φαιλυενοδιαμίνες (ο-,m-,p-), 1709 2,4-τολουένοδιαμίνη, 2074 ακρυλαμίδιο, 2077 α-ναφθυλαμίνη, 2205 αδιπονιτρίλιο, 2272 N-αιθυλανιλίνη, 2273 2-αιθυλανιλίνη, 2274 N-αιθυλο-N-βενζυλανιλίνη, 2294 N-μεθυλανιλίνη, 2300 2-μεθυλο-5-αιθυλοπυριδίνη, 2311 φαινετιδίνες, 2431 ανισιδίνες, 2432 N,N-διαιθυλανιλίνη, 2446 νιτροκρεζόλες, 2470 φαιλυακετονιτρίλιο, υγρό, 2512 αμινοφαινόλες(ο-,m-,p-), 2651 4,4'-διαμινοδιφαιλυλομεθάνιο, 2656 κινολίνη, 2660 νιτροτολουϊδίνες (μονο), 2666 κυανοξικός αιθυλεστέρας, 2713 ακριδίνη, 2730 νιτροανισόλη, 2732 νιτροβρωμοβενζόλιο, 2753 N-αιθυλοβενζυλοτολουϊδίνες, 2873 διβουτυλαμινοαιθανόλη, 2941 φθορανιλίνες, 2942 2-τριφθορομεθυλανιλίνη, 2946 2-αμινο-5-διαιθυλαμινοπεντάνιο, 3276 νιτρίλια, τοξικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** *Ισοκτανικά άλατα με σημείο ανάφλεξης μεγαλύτερο από 61 °C είναι ύλες της 19°.*

13° Οξυγονωμένες ύλες με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (a) 2521 δικετένιο, αδρανές.

14° Οξυγονωμένες ύλες με σημείο ανάφλεξης μεγαλύτερο από 61 °C:

- (b) 1594 θειικό διαιθύλιο, 1671 φαινόλη, στερεά, 2261 Ξυλενόλες, 2587 βενζοκινόνη, 2669 γλωροκρεζόλες, 2821 διάλυμα φαινόλης, 2839 αλδόλη,
- (c) 2369 μονοβουτυλαιθέρας της αιθυλενογλυκόλης, 2525 οξάλικός αιθυλεστέρας, 2609 βορικός τριαλλυλεστέρας, 2662 υδροκινόνη, 2716 1,4-βουτινοδιόλη, 2821 διάλυμα φαινόλης, 2874 φουρφορυλαλκοόλη, 2876 ρεζορσίνη, 2937 α-μεθυλοβενζυλαλκοόλη, 2938 βενζοϊικός μεθυλεστέρας.

15° Αλογωνωμένοι υδρογονάνθρακες:

- (a) 1605 αιθυλενοδιβρωμίδιο, 1647 μείγμα μεθυλοβρωμιδίου και αιθυλενοδιβρωμιδίου, υγρό, 2646 εξαγλωροκυκλοπενταδιένιο,

**ΣΗΜΕΙΩΣΗ:** *Μείγματα αιθυλενοδιβρωμιδίου (συμ-διβρωμοαιθανίου) με μεθυλοβρωμίδιο που έχουν, στους 50 °C, τάση ατμών μεγαλύτερη από 300 kPa (3 bar) είναι ύλες της κλάσης 2 [βλέπε περιθωριακό 2201, 4° (b)].*

- (b) 1669 πενταγλωροαιθάνιο, 1701 Ξυλοβρωμίδιο, 1702 1,1,2,2-τετραγλωροαιθάνιο, 1846 τετραγλωράνθρακας, 1886 βενζυλοϊδενογλωρίδιο, 1891 αιθυλοβρωμίδιο, 2322 τριγλωροβουτένιο, 2644 μεθυλοϊωδίδιο, 2653 βενζυλοϊωδίδιο,
- (c) 1591 ο-δγλωροβενζόλιο, 1593 διγλωρομεθάνιο (μεθυλενογλωρίδιο), 1710 τριγλωροαιθυλένιο, 1887 βρωμογλωρομεθάνιο, 1888 γλωροφόρμιο, 1897 τετραγλωροαιθυλένιο, 2279 εξαγλωροβουταδιένιο, 2321 τριγλωροβενζόλια, υγρά, 2504 τετραβρωμοαιθάνιο, 2515 βρωμοφόρμιο, 2516 τετραβρωμάνθρακας,

## Κλάση 6.1

2601  
(συνεχ.)2664 διβρωμοαιθάνιο, 2688 1-βρωμο-3-γλωροπροπάνιο, 2729 εξαγλωροβενζόλιο, 2831 1,1,1-τριγλωροαιθάνιο, 2872 διβρώμογλωροπροπάνια.

**ΣΗΜΕΙΩΣΗ:** Μείγματα μεθυλοχλωριδίου με μεθυλοχλωρίδιο (διγλωρομεθάνιο) που έχουν, στους 50 °C, τάση ατμών μεγαλύτερη από 300 kPa (3 bar), είναι όλες της κλάσης 2 [βλέπε περιθωριακό 2201, 4° (bt)].

16° Άλλες αλογονωμένες ύλες με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (a) 1135 αιθυλενογλωροδρίνη, 2558 επιβρωμωδρίνη,
- (b) 1181 γλωροξικός αιθυλεστέρας, 1569 βρωμοακετόνη, 1603 βρωμοξικός αιθυλεστέρας, 1916 2,2'-διγλωροδιαιθυλαιθέρας, 2023 επγλωροδρίνη, 2295 γλωροξικός μεθυλεστέρας, 2589 γλωροξικός βινυλεστέρας, 2611 προπυλενογλωροδρίνη.

17° Άλλες αλογονωμένες ύλες με σημείο ανάφλεξης μεγαλύτερο από 61 °C:

- (a) 1580 γλωροπικρίνη, 1670 υπεργλωρομεθυλομερκαπτάνη, 1672 γλωριούχο φαινυλοκαρβουλαμίνη, 1694 βρωμοβενζυλοκυανίδια, 2232 γλωρακεταλδεύδη, 2628 φθοροξικό κάλιο, 2629 φθοροξικό νάτριο, 2642 φθοροξικό οξύ, 1583 μείγμα γλωροπικρίνης, ε.α.ο., 1610 αλογονωμένα ερεθιστικά υγρά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Μείγματα μεθυλοβρωμιδίου ή μεθυλοχλωριδίου με γλωροπικρίνη, που έχουν, στους 50 °C, τάση ατμών μεγαλύτερη από 300 kPa (3 bar) είναι όλες της κλάσης 2 [βλέπε περιθωριακό 2201, 4° (σε) ή 4° (bt)].

- (b) 1695 γλωρακετόνη, σταθεροποιημένη, 1697 γλωρακετοφαινόνη, 2075 γλωράλη, άνυδρη, αδρανής, 2490 διγλωροϊσοπροπυλαιθέρας, 2552 εξαφθορακετόνη ένυδρη, 2567 πενταγλωροφαινικό νάτριο, 2643 βρωμοξικός μεθυλεστέρας, 2645 φαινακυλοβρωμίδιο, 2648 1,2-διβρωμοβουτανόνη-3, 2649 1,3-διγλωρακετόνη, 2650 1,1-διγλωρο-1-νιτροαιθάνιο, 2750 1,3-διγλωροπροπανόλη-2, 2948 3-τριφθορομεθυλανιλίνη, 3155 πενταγλωροφαινόλη, 1583 μείγμα γλωροπικρίνης, ε.α.ο., 1610 αλογονωμένα ερεθιστικά υγρά, ε.α.ο.,
- (c) 1579 υδρογλωροική 4-γλωρο-ο-τολουϊδίνη, 2020 γλωροφαινόλες, στερεές, 2021 γλωροφαινόλες, υγρές, 2233 γλωραμισιδίνες, 2235 γλωροβενζυλογλωρίδια, 2237 γλωρονιτροανιλίνες, 2239 γλωροτολουϊδίνες, 2299 διγλωροξικός μεθυλεστέρας, 2433 γλωρονιτροτολουόλια, 2533 τριγλωροξικός μεθυλεστέρας, 2659 γλωροξικό νάτριο, 2661 εξαγλωρακετόνη, 2689 α-μονογλωροδρίνη της γλυκερίνης, 2747 γλωροφορμικός τριτοταγής βουτυλοκυκλοεξυλεστέρας, 2849 3-γλωροπροπανόλη-1, 2875 εξαγλωροφαινόλη, 3241 2-βρωμο-2-νιτροπροπανοδιόλη-1,3, 1583 μείγμα γλωροπικρίνης, ε.α.ο., 1610 αλογονωμένα ερεθιστικά υγρά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Χλωροφορμικά άλατα με επικρατέστερα διαβρωτικές ιδιότητες είναι όλες της κλάσης 8 (βλέπε περιθωριακό 2801, 64°).

## Κλάση 6.1

2601  
(συνεχ.)

18° Ισοκυανικά άλατα με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (b) 2285 ισοκυανατοβενζοτριφθορίδια, 2487 ισοκυανικός φαινυλεστέρας, 2488 ισοκυανικός κυκλοεξυλεστέρας, 3080 ισοκυανικά άλατα, τοξικά, εύφλεκτα, ε.α.ο. ή 3080 διάλυμα ισοκυανικού άλατος, τοξικό, εύφλεκτο, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Διάλυμα αυτών των ισοκυανικών αλάτων με σημείο ανάφλεξης κάτω από 23 °C είναι ύλες της κλάσης 3 [βλέπε περιθωριακό 2301, 14° (b)].

19° Ισοκυανικά άλατα με σημείο ανάφλεξης παραπάνω από 61 °C:

- (b) 2078 διϊσοκυανικό τολουόλιο και ισομερή μείγματα, 2236 ισοκυανικός 3-γλωρο-4-μεθυλοφαινυλεστέρας, 2250 ισοκυανικοί διγλωροφαινυλεστέρες, 2281 διϊσοκυανικό εξαμεθυλένιο, 2206 ισοκυανικά άλατα, τοξικά, ε.α.ο. ή 2206 διαλύματα ισοκυανικών αλάτων, τοξικά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ 1:** Διάλυμα αυτών των ισοκυανικών αλάτων με σημείο ανάφλεξης κάτω από 23 °C είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301, 14°).

**ΣΗΜΕΙΩΣΗ 2:** Διάλυμα αυτών των ισοκυανικών αλάτων με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων, είναι ύλες του 18° (b).

- (c) 2290 ισοφορονοδιϊσοκυανικό άλας, 2328 διϊσοκυανικό τριμεθυλοεξαμεθυλένιο και ισομερή μείγματα, 2489 4,4'-διϊσοκυανικό διφαινυλομεθάνιο, 2206 ισοκυανικά άλατα, τοξικά, ε.α.ο. ή 2206 διαλύματα ισοκυανικών αλάτων, τοξικά, ε.α.ο.

20° Ύλες που περιέχουν θείο και με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (a) 2337 φαινυλομερκαπτάνη,  
 (b) 1545 ισοθειοκυανικός αλλυλεστέρας, αδρανής, 2477 ισοθειοκυανικός μεθυλεστέρας, 3023 τριτοταγής οκτυλομερκαπτάνη, 3071 μερκαπτάνες, υγρές, τοξικές, εύφλεκτες, ε.α.ο. ή 3071 μείγμα μερκαπτάνης, υγρό, τοξικό, εύφλεκτο, ε.α.ο.

21° Ύλες που περιέχουν θείο και με σημείο ανάφλεξης παραπάνω από 61 °C:

- (b) 1651 ναφθυλθειουρία, 2474 θειοφωσγένιο, 2936 θειογαλακτικό οξύ, 2966 θειογλυκόλη,  
 (c) 2785 4-θειαπεντανάλη.

22° Ύλες που περιέχουν φωσφόρο και με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (a) 3279 οργανοφωσφορικές ενώσεις, τοξικές, εύφλεκτες, ε.α.ο.,  
 (b) 3279 οργανοφωσφορικές ενώσεις, τοξικές, εύφλεκτες, ε.α.ο.

23° Ύλες που περιέχουν φωσφόρο και με σημείο ανάφλεξης παραπάνω από 61 °C:

- (a) 3278 οργανοφωσφορικές ενώσεις, τοξικές, ε.α.ο.,

## Κλάση 6.1

2601  
(συνεχ.)

- (b) 1611 τετραφωσφορικό εξααιθύλιο, 1704 διθειοπυροφωσφορικό τετρααιθύλιο, 2501 διάλυμα του οξειδίου της τρις-(1-αζιριδινυλο)φωσφίνης, 2574 φωσφορικό τρικρεζύλιο με περισσότερο από 3 % ορθο ισομερές, 3278 οργανοφωσφορικές ενώσεις, τοξικές, ε.α.ο.,
- (c) 2501 διάλυμα του οξειδίου της τρις-(1-αζιριδινυλο)φωσφίνης, 3278 οργανοφωσφορικές ενώσεις, τοξικές, ε.α.ο.

24° Τοξικές οργανικές ύλες μεταφερόμενες στην τετηγμένη κατάσταση:

- (b) 1. 1600 δινιτροτολουόλια, τετηγμένα, 2312 φαινόλη, τετηγμένη,  
2. 3250 γλωροξικό οξύ, τετηγμένο.

25° Οργανικές ύλες και είδη και διαλύματα και μείγματα οργανικών υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλο συγκεντρωτικό κεφάλαιο:

- (a) 1601 απολυμαντικά, στερεά, τοξικά, ε.α.ο.,  
1602 βαφές, υγρές, τοξικές, ε.α.ο. ή 1602 ενδιάμεσα βαφών, υγρά, τοξικά, ε.α.ο.,  
1693 ύλες δακρυγόνων αερίων, υγρές ή στερεές, ε.α.ο.,  
3142 απολυμαντικά, υγρά, τοξικά, ε.α.ο.,  
3143 βαφές, στερεές, τοξικές, ε.α.ο. ή 3143 ενδιάμεσα βαφών, στερεά, τοξικά, ε.α.ο.,  
2810 τοξικά υγρά, οργανικά, ε.α.ο.,  
2811 τοξικά στερεά, οργανικά, ε.α.ο.,

*ΣΗΜΕΙΩΣΗ: 2,3,7,8-τετραχλωροδιβενζο-p-διοξίνη (TCDD) σε συγκεντρώσεις που θεωρούνται εξαιρετικά τοξικές σύμφωνα με τα κριτήρια στο περιθωριακό 2600(3), δεν θα γίνεται δεκτή για μεταφορά.*

- (b) 2016 πυρομαχικά, τοξικά, μη-εκρηκτικά χωρίς ρήγμα ή διαρροή φορτίου, μη-τετηγμένα,  
1601 απολυμαντικά, στερεά, τοξικά, ε.α.ο.,  
1602 βαφές, υγρές, τοξικές, ε.α.ο. ή 1602 ενδιάμεσα βαφών, υγρά, τοξικά, ε.α.ο.,  
1693 ύλες δακρυγόνων αερίων, υγρές ή στερεές, ε.α.ο.,  
3142 απολυμαντικά, υγρά, τοξικά, ε.α.ο.,  
3143 βαφές, στερεές, τοξικές, ε.α.ο., ή 3143 ενδιάμεσα βαφών, στερεά, τοξικά, ε.α.ο.,  
2810 τοξικά υγρά, οργανικά, ε.α.ο.,  
2811 τοξικά στερεά, οργανικά, ε.α.ο.,

- (c) 2518 1,5,9-κυκλοωδεκατριένιο, 2667 βουτυλοτολουόλια,  
1601 απολυμαντικά, στερεά, τοξικά, ε.α.ο.,  
1602 βαφές, υγρές, τοξικές, ε.α.ο. ή 1602 ενδιάμεσα βαφών, υγρά, τοξικά, ε.α.ο.,  
3142 απολυμαντικά, υγρά, τοξικά, ε.α.ο.,  
3143 βαφές, στερεές, τοξικές, ε.α.ο. ή 3143 ενδιάμεσα βαφών, στερεά, τοξικά, ε.α.ο.,  
2810 τοξικά υγρά, οργανικά, ε.α.ο.,  
2811 τοξικά στερεά, οργανικά, ε.α.ο.,

26° Εύφλεκτες τοξικές οργανικές ύλες, είδη που περιέχουν εύφλεκτες τοξικές οργανικές ύλες και διαλύματα και μείγματα εύφλεκτων τοξικών οργανικών υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλο συγκεντρωτικό κεφάλαιο:

## Κλάση 6.1

2601  
(συνεχ.)

- (a) 1. 2929 τοξικά υγρά, εύφλεκτα, οργανικά, ε.α.ο.,  
2. 2930 τοξικά στερεά, εύφλεκτα, οργανικά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Διγλωρομεθυλαιθέρας, συμμετρικός, (Χαρακτηριστικός αριθμός 2249), δεν θα γίνεται δεκτός για μεταφορά.

- (b) 1. 2929 τοξικά υγρά, εύφλεκτα, οργανικά, ε.α.ο.,  
2. 1700 κεριά δακρυγόνων αερίων,  
2930 τοξικά στερεά, εύφλεκτα, οργανικά, ε.α.ο.,

27° Διαβρωτικές τοξικές οργανικές ύλες, είδη που περιέχουν τέτοιες ύλες και διαλύματα και μείγματα διαβρωτικών τοξικών οργανικών υλών (όπως παρασκευάσματα και απόβλητα):

- (a) 1595 θειικό διμεθύλιο, 1752 γλωρακετυλογλωρίδιο, 1889 βρωμιούχο κυανογόνο,  
3246 μεθανοσουλφονυλογλωρίδιο,  
2927 τοξικά υγρά, διαβρωτικά, οργανικά, ε.α.ο.,  
2928 τοξικά στερεά, διαβρωτικά, οργανικά, ε.α.ο.,
- (b) 1737 βενζυλοβρωμίδιο, 1738 βενζυλογλωρίδιο, 1750 διάλυμα γλωροξικού οξέος,  
1751 γλωροξικό οξύ, στερεό, 2017 πυρομαγικά, που προκαλούν δάκρυα, μη-εκρηκτικά  
χωρίς ρήγμα ή διαρροή φορτίου, μη-τετηγμένα, 2022 κρεζυλικό οξύ,  
2076 κρεζόλες (ο-, m-, p-), 2267 διμεθυλοθειοφωσφορυλογλωρίδιο, 2745 γλωρομυρμηκικός  
γλωρομεθυλεστέρας, 2746 γλωρομυρμηκικός φαινυλεστέρας, 2748 γλωρομυρμηκικός  
2-αιθυλοεξυλεστέρας,  
3277 γλωρομυρμηκικοί εστέρες, τοξικοί, διαβρωτικοί, ε.α.ο.,  
2927 τοξικά υγρά, διαβρωτικά, οργανικά, ε.α.ο.,  
2928 τοξικά στερεά, διαβρωτικά, οργανικά, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Χλωρομυρμηκικοί εστέρες με κυρίαρχα διαβρωτικές ιδιότητες είναι ύλες της κλάσης 8 (βλέπε περιθωριακό 2801, 64°).

28° Εύφλεκτοι διαβρωτικοί τοξικοί γλωρομυρμηκικοί εστέρες:

- (a) 1722 γλωρομυρμηκικός αλλυλεστέρας, 2740 γλωρομυρμηκικός n-προτυλεστέρας,
- (b) 2743 γλωρομυρμηκικός n-βουτυλεστέρας, 2744 γλωρομυρμηκικός κυκλοβουτυλεστέρας,  
2742 γλωρομυρμηκικοί εστέρες, τοξικοί, διαβρωτικοί, εύφλεκτοι, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Χλωρομυρμηκικοί εστέρες με κυρίαρχα διαβρωτικές ιδιότητες είναι ύλες της κλάσης 8 (βλέπε περιθωριακό 2801, 64°).

## C. Οργανομεταλλικές ενώσεις και καρβονύλια

**ΣΗΜΕΙΩΣΗ 1:** Τοξικές οργανομεταλλικές ενώσεις που χρησιμοποιούνται ως παρασποκτόνα, είναι ύλες των 75° και 76°.

**ΣΗΜΕΙΩΣΗ 2:** Αντόματα εύφλεκτες οργανομεταλλικές ενώσεις είναι ύλες της κλάσης 4.2 (βλέπε περιθωριακό 2431, 31° έως 33°).

**ΣΗΜΕΙΩΣΗ 3:** Ενεργές με το νερό οργανομεταλλικές ενώσεις, εύφλεκτες, είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 3°).

## Κλάση 6.1

- 2601 31° Οργανικές ενώσεις του μολύβδου:  
(συνεχ.)
- (a) 1649 μείγμα αντιεκρηκτικών καυσίμων κινητήρων (τετρααιθυλομόλυβδος, τετραμεθυλομόλυβδος).
- 32° Οργανικές ενώσεις του κασσίτερου:
- (a) 2788 οργανοκασσιτερικές ενώσεις υγρές, ε.α.ο.,  
3146 οργανοκασσιτερικές ενώσεις στερεές, ε.α.ο.,
- (b) 2788 οργανοκασσιτερικές ενώσεις υγρές, ε.α.ο.,  
3146 οργανοκασσιτερικές ενώσεις στερεές, ε.α.ο.,

- (b) 3281 καρβονύλια μετάλλων, ε.α.ο.,
- (c) 3281 καρβονύλια μετάλλων, ε.α.ο.,

## Κλάση 6.1

2601 D. **Ανόργανες ύλες που, σε επαφή με το νερό (ή την ατμοσφαιρική υγρασία), μπορεί να εκλύουν τοξικά αέρια, υδατικά διαλύματα ή οξέα και άλλες τοξικές ενεργές με το νερό ύλες (συνεχ.)**

41° **Ανόργανα κυανιούχα άλατα:**

- (a) 1565 κυανιούχο βάριο, 1575 κυανιούχο ασβέστιο, 1626 υδραργυρικό κάλιο, 1680 κυανιούχο κάλιο, 1689 κυανιούχο νάτριο, 1713 κυανιούχος ψευδάργυρος, 2316 γαλκοκυανιούχο νάτριο, στερεό, 2317 διάλυμα γαλκοκυανιούχου νατρίου, 1588 κυανιούχα άλατα, ανόργανα, στερεά, ε.α.ο., 1935 διάλυμα κυανιούχου αλάτος, ε.α.ο.,
- (b) 1587 κυανιούχος γαλκός, 1620 κυανιούχος μόλυβδος, 1636 κυανιούχος υδράργυρος, 1642 οξυκυανιούχος υδράργυρος, απευαισθητοποιημένος, 1653 κυανιούχο νικέλιο, 1679 γαλκοκυανιούχο κάλιο, 1684 κυανιούχος άργυρος, 1588 κυανιούχα άλατα, ανόργανα, στερεά, ε.α.ο., 1935 διαλύματα κυανιούχων αλάτων, ε.α.ο.,
- (c) 1588 κυανιούχα άλατα, ανόργανα, στερεά, ε.α.ο., 1935 διαλύματα κυανιούχων αλάτων, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Σιδηροκυανιούχα άλατα, σιδηροκυανιούχα άλατα του σιδήρου, αλκαλικά θειοκυανικά άλατα και θειοκυανικό αμμώνιο δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Διαλύματα ανόργανων κυανιούχων αλάτων με ολική περιεκτικότητα σε ιόντα κυανιδίου μεγαλύτερη από 30 % θα πρέπει να ταξινομούνται στο γράμμα (a), διαλύματα με ολική περιεκτικότητα σε ιόντα κυανιδίου μεγαλύτερη από 3 % και όχι μεγαλύτερη από 30 % στο γράμμα (b) και διαλύματα με περιεκτικότητα σε ιόντα κυανιδίου μεγαλύτερη από 0.3 % και όχι μεγαλύτερη από 3 % στο γράμμα (c).

42° **Αζίδια:**

- (b) 1687 αζίδια του νατρίου.

**ΣΗΜΕΙΩΣΗ 1:** 1571 αζίδιο του βαρίου, βρεγμένο, είναι ύλη της κλάσης 4.1 (βλέπε περιθωριακό 2401, 25°).

**ΣΗΜΕΙΩΣΗ 2:** Αζίδιο του βαρίου στην ξηρή κατάσταση ή με λιγότερο από 50 % νερό ή αλκοόλη, δεν θα γίνεται δεκτό για μεταφορά.

43° **Παρασκευάσματα φωσφιδίων που περιέχουν πρόσθετα που παρεμποδίζουν την εκπομπή εύφλεκτων αερίων:**

- (a) 3048 Παρασιτοκτόνα φωσφιδίου του αλουμινίου.

**ΣΗΜΕΙΩΣΗ 1:** Αυτά τα παρασκευάσματα δεν θα γίνονται δεκτά για μεταφορά εκτός εάν περιέχουν πρόσθετα που παρεμποδίζουν την εκπομπή εύφλεκτων αερίων.

**ΣΗΜΕΙΩΣΗ 2:** 1397 φωσφίδιο του αλουμινίου, 2011 φωσφίδιο του μαγνησίου, 1714 φωσφίδιο του ψευδαργύρου, 1432 φωσφίδιο του νατρίου, 1360 φωσφίδιο του ασβεστίου και 2013 φωσφίδιο του στροντίου είναι ύλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 18°).

## Κλάση 6.1

2601 44° Άλλες ενεργές με το νερό τοξικές ύλες:  
(συνεχ.)

- (b) 3123 τοξικά υγρά, ενεργά με το νερό, ε.α.ο.,  
3125 τοξικά στερεά, ενεργά με το νερό, ε.α.ο.,
- (c) 3123 τοξικά υγρά, ενεργά με το νερό, ε.α.ο.,  
3125 τοξικά στερεά, ενεργά με το νερό, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ο όρος "ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.

E. Άλλες ανόργανες ύλες και μεταλλικά άλατα οργανικών υλών

51° Αρσενικό και ενώσεις του αρσενικού:

- (a) 1553 αρσενικό οξύ, υγρό, 1560 τριχλωριούχο αρσενικό,  
1556 ενώσεις αρσενικού, υγρές, ε.α.ο., (αρσενικά άλατα, αρσενίτες και  
αρσενικά σουλφίδια),  
1557 ενώσεις αρσενικού, στερεές, ε.α.ο., (αρσενικά άλατα, αρσενίτες και αρσενικά  
σουλφίδια),
- (b) 1546 αρσενικό αμμώνιο, 1554 αρσενικό οξύ, στερεό, 1555 βρωμιούχο αρσενικό,  
1558 αρσενικό, 1559 πεντοξειδίο του αρσενικού, 1561 τριοξειδίο του αρσενικού, 1562 σκόνη  
με αρσενικό, 1572 κακοδυλικό οξύ, 1573 αρσενικό ασβέστιο, 1574 μείγμα αρσενικού  
ασβεστίου και αρσενίτη του ασβεστίου, στερεό, 1585 ακεταρσενίτης του χαλκού, 1586  
αρσενίτης του χαλκού, 1606 αρσενικός σίδηρος (III), 1607 αρσενίτης του σιδήρου (III),  
1608 αρσενικός σίδηρος (II), 1617 αρσενικά άλατα του μολύβδου, 1618 αρσενίτες του  
μολύβδου, 1621 πορφυρό του Λονδίνου, 1622 αρσενικό μαγνήσιο, 1623 αρσενικός  
υδράργυρος, 1677 αρσενικό κάλιο, 1678 αρσενίτης του καλίου, 1683 αρσενίτης του  
αργύρου, 1685 αρσενικό νάτριο, 1686 υδατικό διάλυμα του αρσενίτη του νατρίου,  
1688 κακοδυλικό νάτριο, 1691 αρσενίτης του στροντίου, 1712 αρσενικός ψευδάργυρος ή  
1712 αρσενίτης του ψευδάργυρου ή 1712 μείγμα αρσενικού ψευδάργυρου και αρσενίτη  
του ψευδάργυρου, 2027 αρσενίτης του νατρίου, στερεός,  
1556 ενώσεις του αρσενικού, υγρές, ε.α.ο. (αρσενικά άλατα, αρσενίτες και αρσενικά  
σουλφίδια), 1557 ενώσεις του αρσενικού, στερεές, ε.α.ο. (αρσενικά άλατα, αρσενίτες και  
αρσενικά σουλφίδια),
- (c) 1686 υδατικό διάλυμα του αρσενίτη του νατρίου,  
1556 ενώσεις του αρσενικού, υγρές, ε.α.ο. (αρσενικά άλατα, αρσενίτες και αρσενικά  
σουλφίδια),  
1557 ενώσεις του αρσενικού, στερεές, ε.α.ο. (αρσενικά άλατα, αρσενίτες και αρσενικά  
σουλφίδια).

**ΣΗΜΕΙΩΣΗ:** Υλες και παρασκευάσματα που περιέχουν αρσενικό και που χρησιμοποιούνται ως παρασιτοκτόνα είναι ύλες της 79°.

52° Ενώσεις του υδράργυρου:

- (a) 2024 ενώσεις του υδράργυρου, υγρές, ε.α.ο.,  
2025 ενώσεις του υδραργύρου, στερεές, ε.α.ο.,
- (b) 1624 γλωριούχος υδράργυρος, 1625 νιτρικός υδράργυρος, 1627 νιτρικός υφιδράργυρος,  
1629 οξικός υδράργυρος, 1630 γλωριούχο υδραργυραμμώνιο, 1631 βενζοϊκός υδράργυρος,  
1634 βρωμιούχα άλατα του υδράργυρου, 1637 γλυκονικός υδράργυρος, 1638 ιωδιούχος  
υδράργυρος, 1639 νουκλεϊκός υδράργυρος, 1640 ελαϊκός υδράργυρος, 1641 οξειδίο του  
υδράργυρου, 1643 ιωδιούχο

## Κλάση 6.1

2601  
(συνεχ.)

υδραργυροκάλιο, 1644 σαλικυλικός υδράργυρος, 1645 θειικός υδράργυρος,  
1646 θειοκυανικός υδράργυρος,  
2024 ενώσεις του υδραργύρου, υγρές, ε.α.ο.,  
2025 ενώσεις του υδραργύρου, στερεές, ε.α.ο.,

- (c) 2024 ενώσεις του υδραργύρου, υγρές, ε.α.ο.,  
2025 ενώσεις του υδραργύρου, στερεές, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ 1:** Υλεις και παρασκευάσματα που περιέχουν υδράργυρο και που χρησιμοποιούνται ως παρασιτοκτόνα, είναι ύλες του 75°.

**ΣΗΜΕΙΩΣΗ 2:** Ο χλωριούχος υφιδράργυρος (καλομέλας) είναι ύλη της κλάσης 9 [βλέπε περιθωριακό 2901, 12 °(c)]. Το κιννάβαρι δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 3:** Τα βροντώδη άλατα του υδράργυρου δεν θα γίνονται δεκτά για μεταφορά.

53° Ενώσεις του θαλλίου:

- (b) 1707 ενώσεις του θαλλίου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Υλεις και παρασκευάσματα που περιέχουν θάλλιο και που χρησιμοποιούνται ως παρασιτοκτόνα είναι ύλες της 85°.

**ΣΗΜΕΙΩΣΗ 2:** 2727 το νιτρικό θάλλιο είναι ύλη της 68°.

54° Βηρύλλιο και ενώσεις του βηρυλλίου:

- (b) 1. 1567 βηρύλλιο, σκόνη,  
 2. 1566 ενώσεις βηρυλλίου, ε.α.ο.,

- (c) 1566 ενώσεις βηρυλλίου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2464 το νιτρικό βηρύλλιο είναι ύλη της κλάσης 5.1 [βλέπε περιθωριακό 2501, 29° (b)].

55° Σελήνιο και ενώσεις σελήνιου:

- (a) 2630 σεληνικά άλατα ή 2630 σεληνίτες,  
3283 ενώσεις σελήνιου, ε.α.ο.,

- (b) 2657 διθειούχο σελήνιο,  
3283 ενώσεις σελήνιου, ε.α.ο.,

- (c) 2658 σελήνιο σε σκόνη,  
3283 ενώσεις σελήνιου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 1905 το σεληνικό οξύ είναι ύλη της κλάσης 8 [βλέπε περιθωριακό 2801, 16° (a)].

56° Ενώσεις οσμίου:

- (a) 2471 τετροξειδίο του οσμίου.

57° Ενώσεις τελλουρίου:

- (b) 3284 ενώσεις τελλουρίου, ε.α.ο.,

- (c) 3284 ενώσεις τελλουρίου, ε.α.ο.

## Κλάση 6.1

2601 58° Ενώσεις βαναδίου:  
(συνεχ.)

- (b) 2859 μεταβαναδικό αμμώνιο, 2861 πολυβαναδικό αμμώνιο, 2862 πεντοξείδιο του βαναδίου, μη-τετηγμένη μορφή, 2863 βαναδικό νατραμμώνιο, 2864 μεταβαναδικό κάλιο, 2931 θειικό βαναδύλιο, 3285 ενώσεις βαναδίου, ε.α.ο.,
- (c) 3285 ενώσεις βαναδίου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** 2443 οξυτριχλωριούχο βανάδιο, 2444 τετραχλωριούχο βανάδιο και 2475 τριχλωριούχο βανάδιο είναι όλες της κλάσης 8 (βλέπε περιθωριακό 2801, 11° και 12°).

**ΣΗΜΕΙΩΣΗ 2:** Το πεντοξείδιο του βαναδίου, τετηγμένο και στερεοποιημένο, δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

59° Αντιμόνιο και ενώσεις αντιμονίου:

- (c) 1550 γαλακτικό αντιμόνιο, 1551 παρτρικό αντιμονοκάλιο, 2871 αντιμόνιο σε σκόνη, 1549 ενώσεις αντιμονίου, στερεές, ε.α.ο., 3141 ενώσεις αντιμονίου, ανόργανες, υγρές, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** 1730 πενταφθοριούχο αντιμόνιο, υγρό, 1731 διάλυμα πενταφθοριούχου αντιμονίου, 1733 τριχλωριούχο αντιμόνιο και 1732 πενταφθοριούχο αντιμόνιο είναι όλες της κλάσης 8 (βλέπε περιθωριακό 2801, 10°, 11° και 12°).

**ΣΗΜΕΙΩΣΗ 2:** Οξείδια αντιμονίου και θειούχο αντιμόνιο με περιεκτικότητα σε αρσενικό όχι μεγαλύτερη από του 0.5 % του συνολικού βάρους, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

60° Ενώσεις βαρίου:

- (b) 1564 ενώσεις βαρίου, ε.α.ο.,
- (c) 1884 οξείδιο του βαρίου, 1564 ενώσεις βαρίου, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** 1445 χλωρικό βάριο, 1446 νιτρικό βάριο, 1447 υπερχλωρικό βάριο, 1448 υπερμαγγανικό βάριο 1449 υπεροξείδιο του βαρίου είναι όλες της κλάσης 5.1 (βλέπε περιθωριακό 2501, 29°).

**ΣΗΜΕΙΩΣΗ 2:** 1571 αζίδιο του βαρίου, βρεγμένο, είναι όλη της κλάσης 4.1 (βλέπε περιθωριακό 2401, 25°).

**ΣΗΜΕΙΩΣΗ 3:** Στεαρικό βάριο, θειικό βάριο και τιτανικό βάριο δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## Κλάση 6.1

2601 61° Ενώσεις καδμίου:  
(συνεχ.)

- (a) 2570 ενώσεις καδμίου,
- (b) 2570 ενώσεις καδμίου,
- (c) 2570 ενώσεις καδμίου.

**ΣΗΜΕΙΩΣΗ:** Χρωστικές καδμίου, όπως θειούχα άλατα του καδμίου, σουλφοσεληνιούχα άλατα καδμίου και άλατα καδμίου με υψηλότερα λιπαρά οξέα (π.χ. στεατικό κάδμιο), δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

62° Ενώσεις μολύβδου:

- (c) 1616 οξικός μολύβδος,  
2291 ενώσεις μολύβδου, διαλυτές, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** 1469 νιτρικός μολύβδος και 1470 υπερχλωρικός μολύβδος είναι ύλες της κλάσης 5.1 (βλέπε περιθωριακό 2501, 29°).

**ΣΗΜΕΙΩΣΗ 2:** Άλατα μολύβδου και χρωστικές μολύβδου που, όταν αναμειγνύονται σε μία αναλογία 1:1 000 με 0.07 M υδροχλωρικού οξέος και αναδεύονται για μία ώρα σε θερμοκρασία 23 °C ± 2 °C, εμφανίζουν διαλυτότητα 5 % ή μικρότερη, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

63° Φθοριούχα άλατα διαλυτά στο νερό:

- (c) 1690 φθοριούχο νάτριο, 1812 φθοριούχο κάλιο, 2505 φθοριούχο αμμώνιο.

**ΣΗΜΕΙΩΣΗ:** Διαβρωτικά φθοριούχα άλατα είναι ύλες της κλάσης 8 (βλέπε περιθωριακό 2801, 6° έως 10°).

64° Φθοροπυριτικά άλατα:

- (c) 2655 φθοροπυριτικό κάλιο, 2674 φθοροπυριτικό νάτριο, 2853 φθοροπυριτικό μαγνήσιο, 2854 φθοροπυριτικό αμμώνιο, 2855 φθοροπυριτικός ψευδάργυρος,  
2856 φθοροπυριτικά άλατα, ε.α.ο.

65° Ανόργανες ύλες και διαλύματα και μείγματα ανόργανων υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλο συγκεντρωτικό κεφάλαιο:

- (a) 3287 τοξικά υγρά, ανόργανα, ε.α.ο.,  
3288 τοξικά στερεά, ανόργανα, ε.α.ο.,
- (b) 3243 στερεά που περιέχουν τοξικά υγρά, ε.α.ο.,  
3287 τοξικά υγρά, ανόργανα, ε.α.ο.,  
3288 τοξικά στερεά, ανόργανα, ε.α.ο.,

**ΣΗΜΕΙΩΣΗ:** Μείγματα στερεών και τοξικών υγρών που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας μπορούν να μεταφέρονται υπό τον αριθμό 3243 χωρίς τα κριτήρια ταξινόμησης για την Κλάση 6.1 να εφαρμόζονται σ' αυτά, υπό την προϋπόθεση ότι καμία υπερχειλίση υγρού δεν είναι ορατή κατά τη διάρκεια της φόρτωσης ή όταν η μονάδα συσκευασίας ή μεταφοράς κλείνεται. Κάθε συσκευασία θα πρέπει να αντιστοιχεί σε ένα τύπο σχεδιασμού που έχει περάσει τον έλεγχο στεγανότητας για την ομάδα συσκευασίας II. Αυτός αριθμός δεν θα πρέπει να χρησιμοποιείται για στερεά που περιέχουν υγρό ταξινομημένο στο γράμμα (α).

## Κλάση 6.1

2601  
(συνεχ.)

- (c) 3293 υδατικό διάλυμα υδραζίνης, με όχι περισσότερο από 37 % υδραζίνη κατά βάρος, 3287 τοξικά υγρά, ανόργανα, ε.α.ο., 3288 τοξικά στερεά, ανόργανα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2030 υδραζίνη ενυδατωμένη και 2030 υδατικό διάλυμα υδραζίνης, με όχι λιγότερο από 37 % και όχι περισσότερο από 64 % υδραζίνη, κατά βάρος, είναι ύλες της κλάσης 8 [βλέπε περιθωριακό 2801, 44°(b)].

66° Τοξικές, αυτοθερμαινόμενες ύλες:

- (a) 3124 τοξικά στερεά, αυτοθερμαινόμενα, ε.α.ο.,

- (b) 3124 τοξικά στερεά, αυτοθερμαινόμενα, ε.α.ο.

67° Τοξικές ύλες, διαβρωτικές:

- (a) 3289 τοξικά υγρά, διαβρωτικά, ανόργανα, ε.α.ο., 3290 τοξικά στερεά, διαβρωτικά, ανόργανα, ε.α.ο.,

- (b) 3289 τοξικά υγρά, διαβρωτικά, ανόργανα, ε.α.ο., 3290 τοξικά στερεά, διαβρωτικά, ανόργανα, ε.α.ο.

68° Τοξικές ύλες, οξειδωτικές:

- (a) 3086 τοξικές στερεές, οξειδωτικές, ε.α.ο., 3122 τοξικά υγρά, οξειδωτικά, ε.α.ο.,

- (b) 2727 νιτρικό θάλλιο, 3086 τοξικά στερεά, οξειδωτικά, ε.α.ο., 3122 τοξικά υγρά, οξειδωτικά, ε.α.ο.

**F. Ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα**

**ΣΗΜΕΙΩΣΗ 1:** Εύφλεκτες υγρές ύλες και παρασκευάσματα, που χρησιμοποιούνται ως παρασιτοκτόνα, που είναι εξαιρετικά τοξικές, τοξικές ή επιβλαβείς και έχουν σημείο ανάφλεξης χαμηλότερο από 23 °C, είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301, 41° έως 57°).

**ΣΗΜΕΙΩΣΗ 2:** (a) Είδη διαποτισμένα με ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα των 71° έως 87°, όπως πλάκες από φύλλο φάιμπερ, λωρίδες χαρτιού, σφαίρες ακατέργαστου βαμβακιού, φύλλα από πλαστικό υλικό, κ.λπ. σε αεροστεγή, ερμητικά κλεισμένα περιτυλίγματα, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

(b) Ύλες όπως χόρτα και δημητριακά διαποτισμένα με ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα των 71° έως 87° ή άλλες ύλες της κλάσης 6.1 θα πρέπει να ταξινομούνται σύμφωνα με την τοξικότητα τους (βλέπε περιθωριακό 2600(3) και ΣΗΜΕΙΩΣΗ 3 παρακάτω).

71° έως 87°: Σε αυτά τα είδη, ύλες και παρασκευάσματα που χρησιμοποιούνται ως παρασιτοκτόνα ταξινομούνται σε ομάδες που χαρακτηρίζονται με τα γράμματα (a), (b), (c):

- (a) εξαιρετικά τοξικές ύλες και παρασκευάσματα,  
(b) τοξικές ύλες και παρασκευάσματα,  
(c) ελαφρώς τοξικές ύλες και παρασκευάσματα.

## Κλάση 6.1

2601  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 1:** Όλες οι ενεργές ύλες και τα παρασκευάσματα τους που χρησιμοποιούνται ως παρασιτοκτόνα, θα πρέπει να ταξινομούνται στα 71° έως 87° (a), (b) και (c) σε συμφωνία με το περιθωριακό 2600 (3).

**ΣΗΜΕΙΩΣΗ 2:** Εάν είναι γνωστή μόνον η τιμή της  $LD_{50}$  της ενεργούς ύλης και όχι εκείνη των παρασκευασμάτων της ενεργούς ύλης, τα παρασκευάσματα μπορούν να ταξινομούνται στις 71° έως 87° (a), (b) ή (c) χρησιμοποιώντας τους παρακάτω πίνακες, όπου οι τιμές που εμφανίζονται στις στήλες (a), (b) και (c) των 71° έως 87° αντιπροσωπεύουν το ποσοστό της ενεργούς ύλης του παρασιτοκτόνου στα παρασκευάσματα.

**ΣΗΜΕΙΩΣΗ 3:** Ο στόχος των παρακάτω πινάκων είναι να δείξουν το φάσμα των παρασιτοκτόνων και των παρασκευασμάτων τους σε σχέση με τις διαφορετικές ομάδες συσκευασίας σύμφωνα με τη συγκέντρωση της ενεργούς ύλης. Εάν η τιμή της  $LD_{50}$  του παρασκευάσματος είναι γνωστή και εάν οι ομάδες συσκευασίας που προσδιορίζονται από την εφαρμογή των κριτηρίων στο περιθωριακό 2600 (3) δεν αντιστοιχούν στις ομάδες συσκευασίας που υποδεικνύονται στους παρακάτω πίνακες με βάση τη συγκέντρωση της ενεργούς ύλης στο παρασκεύασμα, η ομάδα συσκευασίας που προσδιορίζεται σε συμφωνία με τα κριτήρια στο περιθωριακό 2600 (3) θα πρέπει να έχει προτεραιότητα.

**ΣΗΜΕΙΩΣΗ 4:** Για ύλες που δεν ονομάζονται στον κατάλογο και για τις οποίες μόνον η τιμή της  $LD_{50}$  της ενεργούς ύλης είναι γνωστή και όχι η τιμή της  $LD_{50}$  των διαφόρων παρασκευασμάτων, η ταξινόμηση ενός παρασκευάσματος μπορεί να καθορίζεται από τον πίνακα στο περιθωριακό 2600 (3), χρησιμοποιώντας μία τιμή της  $LD_{50}$  που λαμβάνεται από πολλαπλασιασμό της τιμής της  $LD_{50}$  της ενεργούς ύλης με: 100.

X

όπου X είναι το ποσοστό της ενεργούς ύλης κατά βάρος, σύμφωνα με τον παρακάτω τύπο:

$$LD_{50} \text{ του παρασκευάσματος} = \frac{\text{τιμή της } LD_{50} \text{ της ενεργούς ύλης} \times 100}{\text{ποσοστό της ενεργούς ύλης κατά βάρος}}$$

**ΣΗΜΕΙΩΣΗ 5:** Η ταξινόμηση σύμφωνα με τις Σημειώσεις 2, 3 και 4 παραπάνω, δεν θα πρέπει να χρησιμοποιούνται όταν τα παρασκευάσματα περιέχουν πρόσθετα που επιδρούν στην τοξικότητα της ενεργής ύλης ή όταν ένα παρασκεύασμα περιέχει περισσότερες από μία ενεργή ύλη. Σε τέτοιες περιπτώσεις, η ταξινόμηση θα πρέπει να βασίζεται στην τιμή της  $LD_{50}$  του υπό συζήτηση παρασκευάσματος σύμφωνα με τα κριτήρια στο περιθωριακό 2600 (3). Εάν η τιμή της  $LD_{50}$  δεν είναι γνωστή, η ύλη θα πρέπει να ταξινομείται στο (a) των 71° έως 87°.

**ΣΗΜΕΙΩΣΗ:** Τα παρασιτοκτόνα του φωσφιδίου του αλουμινίου είναι ύλες του 43° (a).

G. Ενεργές ύλες όπως εκείνες που προορίζονται για εργαστήρια και πειράματα και για την παραγωγή φαρμακευτικών προϊόντων, εάν δεν αναφέρονται σε άλλα είδη αυτής της κλάσης.

90° Ενεργές ύλες, συμπεριλαμβανομένων:

- (a) 1570 βρυκίνη, 1692 στρυγγίνη ή 1692 άλατα στρυγγίνης, 1544 αλκαλοειδή, στερεά, ε.α.ο. ή 1544 αλκαλοειδή άλατα, στερεά, ε.α.ο., 1655 ενώσεις νικοτίνης, στερεές, ε.α.ο. ή 1655 παρασκευάσματα νικοτίνης, στερεά, ε.α.ο., 3140 αλκαλοειδή, υγρά, ε.α.ο. ή 3140 αλκαλοειδή άλατα, υγρά, ε.α.ο., 3144 ενώσεις νικοτίνης, υγρά, ε.α.ο. ή 3144 παρασκευάσματα νικοτίνης, υγρά, ε.α.ο., 3172 τοξίνες, εκχυλισμένες από ζωντανές πηγές, ε.α.ο.
- (b) 1654 νικοτίνη, 1656 υδροχλωρική νικοτίνη ή 1656 διάλυμα υδροχλωρικής νικοτίνης, 1657 σαλικυλική νικοτίνη, 1658 θειική νικοτίνη, στερεή ή 1658 διάλυμα θειικής νικοτίνης, 1659 ταρταρική νικοτίνη, 1544 αλκαλοειδή, στερεά, ε.α.ο. ή 1544 αλκαλοειδή άλατα, στερεά, ε.α.ο., 1655 ενώσεις νικοτίνης, στερεές, ε.α.ο. ή 1655 παρασκευάσματα νικοτίνης, στερεά, ε.α.ο., 1851 φάρμακα, υγρά, τοξικά, ε.α.ο., 3140 αλκαλοειδή, υγρά, ε.α.ο. ή 3140 αλκαλοειδή άλατα, υγρά, ε.α.ο., 3144 ενώσεις νικοτίνης, υγρά, ε.α.ο. ή 3144 παρασκευάσματα νικοτίνης, υγρά, ε.α.ο., 3172 τοξίνες εκχυλισμένες από ζωντανές πηγές, ε.α.ο., 3249 φάρμακα, στερεά, τοξικά, ε.α.ο.
- (c) 1544 αλκαλοειδή, στερεά, ε.α.ο. ή 1544 αλκαλοειδή άλατα, στερεά, ε.α.ο., 1655 ενώσεις νικοτίνης, στερεές, ε.α.ο. ή 1655 παρασκευάσματα νικοτίνης, στερεά, ε.α.ο., 1851 φάρμακα, υγρά, τοξικά, ε.α.ο., 3140 αλκαλοειδή, υγρά, ε.α.ο. ή 3140 αλκαλοειδή άλατα, υγρά, ε.α.ο., 3144 ενώσεις νικοτίνης, υγρές, ε.α.ο. ή 3144 παρασκευάσματα νικοτίνης, υγρά, ε.α.ο., 3172 τοξίνες εκχυλισμένες από ζωντανές πηγές, ε.α.ο., 3249 φάρμακα, στερεά, τοξικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Οι ενεργές ύλες και κονιοποιήσεις ή μείγματα υλών της 90° με άλλες ύλες θα πρέπει να ταξινομούνται σύμφωνα με την τοξικότητά τους [βλέπε περιθωριακό 2600 (3)].

**ΣΗΜΕΙΩΣΗ 2:** Φαρμακευτικά προϊόντα έτοιμα για χρήση, π.χ. καλλυντικά, ναρκωτικά και φάρμακα, που είναι ύλες που παράγονται και συσκευάζονται σε συσκευασίες τύπου που προορίζεται για λιανική πώληση ή διανομή για προσωπική ή οικιακή κατανάλωση, που αλλιώς θα ήταν ύλες της 90° δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 3:** Υλες και παρασκευάσματα που περιέχουν αλκαλοειδή ή νικοτίνη που χρησιμοποιούνται ως παρασιτοκτόνα είναι ύλες του 87°.

## Κλάση 6.1

2601 Η. Κενές συσκευασίες  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ:** Κενές συσκευασίες με υπολείμματα από το προηγούμενο περιεχόμενο τους κολλημένα στις εξωτερικές πλευρές δεν θα γίνονται δεκτές για μεταφορά.

91° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά γύμα (IBC) κενών οχημάτων-δεξαμενών, κ ενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών, κενών οχημάτων για μεταφορά γύμα και κενών εμπορευματοκιβωτίων για μεταφορά γύμα, ακαθάριστων, που περιείχαν ύλες της κλάσης 6.1.

2601a Ύλες των 11°, 12°, 14° έως 28°, 32° έως 36°, 41°, 42°, 44°, 51° έως 55°, 57° έως 68°, 71° έως 87° και 90° μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις δεν υπόκεινται ούτε στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα, ούτε σ' εκείνες που περιέχονται στο παράρτημα Β:

(a) Ύλες ταξινομημένες στο (b) κάθε είδους:

- υγρά: όχι περισσότερο από 500 ml ανά εσωτερική συσκευασία και όχι περισσότερο από 2 λίτρα ανά κόλο,
- στερεά: όχι περισσότερο από 1 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 4 kg ανά κόλο.

(b) Ύλες ταξινομημένες στο (c) κάθε είδους:

- υγρά: όχι περισσότερο από 3 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 12 λίτρα ανά κόλο.
- στερεά: όχι περισσότερο από 6 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες σύμφωνες τουλάχιστον με τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

## 2. Διατάξεις

## Α. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

- 2602 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στα περιθωριακά 2603 έως 2608.
- (2) Τα Ενδιάμεσα Εμπορευματοκιβώτια για Μεταφορά γύμα (IBC) θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης Α.6.
- (3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2600 (3) και 3511 (2) ή 3611 (2) θα πρέπει να χρησιμοποιούνται τα παρακάτω:
- συσκευασίες της ομάδας συσκευασίας Ι, μαρκιαρισμένες με το γράμμα "X", για τις εξαιρετικά τοξικές ύλες ταξινομημένες στο γράμμα (a) κάθε είδους,

## Κλάση 6.1

- 2602** - συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X",  
(συνεχ.) ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις τοξικές ύλες που είναι ταξινομημένες στο γράμμα (b) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις ελαφρώς τοξικές ύλες που είναι ταξινομημένες στο γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 6.1 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα Β.

**2. Ειδικές συνθήκες για τη συσκευασία ορισμένων υλών**

- 2603** (1) Σταθεροποιημένο υδροκυάνιο της 1<sup>ο</sup> θα πρέπει να συσκευάζεται:
- (a) όταν είναι πλήρως απορροφημένο από αδρανές πορώδες υλικό: σε γερά μεταλλικά δοχεία χωρητικότητας όχι μεγαλύτερης από 7.5 λίτρα, τοποθετημένα σε ξύλινα κιβώτια με τέτοιο τρόπο ώστε να μην μπορούν να έλθουν σ' επαφή μεταξύ τους. Μία τέτοια συνδυασμένη συσκευασία θα πρέπει να είναι σύμφωνη με τις παρακάτω συνθήκες:
1. τα δοχεία θα πρέπει να ελέγχονται σε πίεση όχι μικρότερη από 0.6 MPa (6 bar) (πίεση πιεζομέτρου),
  2. τα δοχεία θα πρέπει να γεμίζονται πλήρως με το πορώδες υλικό. Το πορώδες υλικό δεν θα πρέπει να κατακάθεται ή να σχηματίζει επικίνδυνα κενά ακόμη και μετά από παρατεταμένη χρήση ή από χτύπημα, ακόμα και σε θερμοκρασίες έως 50 °C. Η ημερομηνία πλήρωσης θα πρέπει να είναι με διάρκεια μαρκαρισμένη στο καπάκι κάθε δοχείου,
  3. η συνδυασμένη συσκευασία θα πρέπει να ελέγχεται και εγκρίνεται, σε συμφωνία με την προσθήκη A.5, για την ομάδα συσκευασίας I. Το κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 120 kg,
- (b) όταν είναι υγρό, αλλά όχι απορροφημένο από πορώδες υλικό: σε κυλίνδρους από κοινό χάλυβα ανθεκτικούς στην πίεση, που θα πρέπει να ικανοποιούν τις παρακάτω συνθήκες:
1. πριν χρησιμοποιηθούν για πρώτη φορά, οι ανθεκτικοί στην πίεση κύλινδροι θα πρέπει να υπόκεινται σε υδραυλικό έλεγχο της πίεσης σε πίεση όχι μικρότερη από 10 MPa (100 bar) (πίεση πιεζομέτρου). Ο έλεγχος της πίεσης θα πρέπει να επαναλαμβάνεται κάθε δύο χρόνια και θα πρέπει να περιλαμβάνει λεπτομερή επιθεώρηση του εσωτερικού του δοχείου και έλεγχο του απόβαρου,
  2. Οι κύλινδροι θα πρέπει να είναι σύμφωνοι με τις σχετικές διατάξεις της κλάσης 2 (βλέπε περιθωριακά 2211, 2212 (1) (a), 2213, 2215 και 2218),
  3. μέγιστο επιτρεπτό βάρος του περιεχομένου: 0.55 kg ανά λίτρο χωρητικότητας.
- (2) Δυσάλυματα υδροκυανικού οξέος της 2<sup>ο</sup> θα πρέπει να συσκευάζονται σε σφραγισμένες με φλόγα γυάλινες αμπούλες, που περιέχουν όχι περισσότερο από 50 g, ή σε γυάλινες φιάλες έτσι κλεισμένες ώστε να είναι στεγανές σε διαρροή και που περιέχουν όχι περισσότερο από 250 g.

Οι αμπούλες ή φιάλες θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που ικανοποιούν τις παρακάτω συνθήκες:

## Κλάση 6.1

- 2603 (συνεχ.)
- (a) Οι αμπούλες και φιάλες θα πρέπει να ασφαλιζονται με απορροφητικά προστατευτικά υλικά σε στεγανές σε διαρροή χαλύβδινες ή αλουμιμένες εξωτερικές συσκευασίες. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 15 kg, ή
  - (b) Οι αμπούλες και φιάλες θα πρέπει να ασφαλιζονται με απορροφητικά προστατευτικά υλικά σε ξύλινα κιβώτια με στεγανή σε διαρροή επικασιτερωμένη επένδυση. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 75 kg.

Οι συνδυασμένες συσκευασίες που αναφέρονται στα (a) και (b), θα πρέπει να ελέγχονται και εγκρίνονται, σε συμφωνία με την προσθήκη Α.5, για την ομάδα συσκευασίας I.

- 2604 Πεντακαρβονύλιο του σιδήρου και τετρακαρβονύλιο του νικέλιου της 3<sup>ο</sup> θα πρέπει να συσκευάζονται ως εξής:

(1) Σε φιάλες χωρίς ραφές χιτές από καθαρό αλουμίνιο χωρητικότητας όχι μεγαλύτερης από 1 λίτρο και με πάχος τοιχωμάτων όχι μικρότερο από 1 mm, που θα πρέπει να ελέγχονται σε πίεση όχι μικρότερη από 1 MPa (10 bar) (πίεση πιεζομέτρου). Οι φιάλες θα πρέπει να είναι κλεισμένες με μεταλλικό βιδωτό πώμα με αδρανή φλάντζα και το βιδωτό πώμα θα πρέπει να βιδώνεται στέρεα στο λαμό της φιάλης και να ασφαλιζεται έτσι ώστε να μην μπορεί να χαλαρώσει σε κανονικές συνθήκες μεταφοράς.

Το πολύ τέσσερις αλουμιμένες φιάλες αυτού του τύπου μπορούν να ασφαλιζονται σε εξωτερικές συσκευασίες από ξύλο ή φύλλο φάιμπερ από μη-εύφλεκτο απορροφητικό προστατευτικό υλικό. Μία τέτοια συνδυασμένη συσκευασία θα πρέπει να συμφωνεί με έναν τύπο σχεδιασμού που έχει ελεγχθεί και εγκριθεί για την ομάδα συσκευασίας I σε συμφωνία με την προσθήκη Α.5.

Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 10 kg.

(2) Σε μεταλλικά δοχεία εφοδιασμένα με συσκευές για πλήρως στεγανό σε διαρροή κλείσιμο, που θα πρέπει να ασφαλιζονται, εάν είναι αναγκαίο, έναντι μηχανικής ζημιάς, με προστατευτικά καλύμματα. Χαλύβδινα δοχεία χωρητικότητας όχι μεγαλύτερης από 150 λίτρα, θα πρέπει να έχουν ελάχιστο πάχος τοιχωμάτων 3 mm και μεγαλύτερα χαλύβδινα δοχεία και δοχεία κατασκευασμένα από άλλα υλικά θα πρέπει να έχουν τοιχώματα τουλάχιστον αρκετά παχιά ώστε να εγγώνονται ισοδύναμη μηχανική αντοχή. Η μέγιστη επιτρεπόμενη χωρητικότητα των δοχείων, θα πρέπει να είναι 250 λίτρα. Το βάρος του περιεχομένου θα πρέπει να είναι όχι μεγαλύτερο από 1 kg υγρού ανά λίτρο χωρητικότητας.

Πριν χρησιμοποιηθούν για πρώτη φορά, τα δοχεία θα πρέπει να υπόκεινται σε υδραυλικό έλεγχο της πίεσης σε πίεση όχι μικρότερη από 1 MPa (10 bar) (πίεση πιεζομέτρου). Ο έλεγχος της πίεσης θα πρέπει να επαναλαμβάνεται κάθε πέντε χρόνια και θα πρέπει να περιλαμβάνει λεπτομερή επιθεώρηση του εσωτερικού του δοχείου και έλεγχο του απόβαρου. Τα μεταλλικά δοχεία θα πρέπει να φέρουν τα παρακάτω στοιχεία με καθαρά ευανάγνωστους και διαρκείας χαρακτήρες:

- (a) την πλήρη ονομασία της ύλης (οι ονομασίες και των δύο υλών μπορούν επίσης να φαίνονται δίπλα-δίπλα σε περίπτωση εναλλακτικής χρήσης),
- (b) την ονομασία του ιδιοκτήτη του δοχείου,
- (c) το απόβαρο του δοχείου, συμπεριλαμβανομένων τέτοιων προσαρτήσεων και εξαρτημάτων όπως βαλβίδες, προστατευτικά καλύμματα κ.λπ.,
- (d) την ημερομηνία (μήνα, χρόνο) του αρχικού ελέγχου και του πιο πρόσφατου ελέγχου και τη σφράγιδα του εμπειρογνώμονα που διεξήγαγε τον έλεγχο,
- (e) το μέγιστο επιτρεπτό βάρος του περιεχομένου του δοχείου σε kg,

## Κλάση 6.1

- 2604 (f) την εσωτερική πίεση (πίεση ελέγχου) που πρέπει να εφαρμόζεται στον υδραυλικό έλεγχο της πίεσης.
- (συνεχ.)
- 2605 (1) (a) Αιθυλενεϊμίνη, αδρανής, της 4<sup>ο</sup> θα πρέπει να συσκευάζεται σε χαλύβδινα δοχεία επαρκούς πάχους, που θα πρέπει να είναι κλεισμένα με βιδωτό πώμα ή τάπα στεγανά σε διαρροή τόσο υγρού όσο και ατμού, με κατάλληλη φλάντζα. Τα δοχεία, θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση όχι μικρότερη από 0.3 MPa (3 bar) (πίεση πιεζομέτρου) σε συμφωνία με τα περιθωριακά 2215 (1) και 2216. Κάθε δοχείο θα πρέπει να ασφαλιζονται με απορροφητικά προστατευτικά υλικά σε γερή στεγανή προστατευτική μεταλλική συσκευασία. Η προστατευτική συσκευασία θα πρέπει να είναι ερμητικά κλεισμένη και το πώμα της θα πρέπει να ασφαλιζεται έναντι οποιουδήποτε ακούσιου ανοίγματος. Το βάρος του περιεχομένου δεν θα πρέπει να υπερβαίνει τα 0.67 kg ανά λίτρο χωρητικότητας. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 75 kg. Κόλα που ζυγίζουν περισσότερο από 30 kg, άλλες από εκείνες που αποστέλλονται ως πλήρες φορτίο, θα πρέπει να είναι εφοδιασμένες με λαβές.
- (b) Αιθυλενεϊμίνη, αδρανής, της 4<sup>ο</sup> μπορεί επίσης να συσκευάζεται σε χαλύβδινα δοχεία επαρκούς πάχους, που θα πρέπει να είναι κλεισμένα με βιδωτό πώμα και βιδωτό προστατευτικό κάλυμμα ή ισοδύναμη συσκευή στεγανή σε διαρροή τόσο υγρού όσο και ατμού. Τα δοχεία θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση τουλάχιστον 1 MPa (10 bar) (πίεση πιεζομέτρου) σε συμφωνία με τα περιθωριακά 2215 (1) και 2216. Το βάρος του περιεχομένου δεν θα πρέπει να υπερβαίνει τα 0.67 kg ανά λίτρο χωρητικότητας. Κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 75 kg.
- (c) Δοχεία σε συμφωνία με τα (a) και (b), θα πρέπει να φέρουν, με καθαρά ενανάντωντους και διαρκείας χαρακτήρες:
- την ονομασία ή τη μάρκα του κατασκευαστή και τον αριθμό του δοχείου,
  - τη λέξη "αιθυλενεϊμίνη",
  - το απόβαρο του δοχείου και το μέγιστο επιτρεπόμενο βάρος του όταν είναι γεμάτο,
  - την ημερομηνία (μήνα και χρόνο) του αρχικού ελέγχου και του πιο πρόσφατου ελέγχου που έγινε,
  - την σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις εξετάσεις.
- (2) Ο ισοκυανικός μεθυλεστεράς της 5<sup>ο</sup> θα πρέπει να συσκευάζεται:
- (a) σε ερμητικά κλεισμένα δοχεία κατασκευασμένα από καθαρό αλουμίνιο και με χωρητικότητα όχι μεγαλύτερη από ένα λίτρο, που δεν θα πρέπει να γεμίζονται πάνω από το 90 % της χωρητικότητάς τους. Τα δοχεία θα πρέπει να ασφαλιζονται, όχι περισσότερα από 10 σε κάθε κιβώτιο, με κατάλληλο προστατευτικό υλικό σε ξύλινο κιβώτιο. Τα κόλα αυτού του είδους θα πρέπει να ικανοποιούν τις απαιτήσεις ελέγχου για συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 για την ομάδα συσκευασίας I και δεν θα πρέπει να ζυγίζουν περισσότερο από 30 kg, ή
- (b) σε δοχεία κατασκευασμένα από καθαρό αλουμίνιο με πάχος τοιχωμάτων όχι μικρό-τερο από 5 mm ή σε δοχεία από ανοξείδωτο χάλυβα. Τα δοχεία θα πρέπει να είναι πλήρως οξυγονοκολλημένα και θα πρέπει αρχικά και περιοδικά, τουλάχιστον κάθε πέντε χρόνια, να ελέγχονται σε πίεση τουλάχιστον 0.5 MPa (5 bar) (πίεση πιεζο-μέτρου) σε συμφωνία με τα περιθωριακά 2215 (1) και 2216. Θα πρέπει να είναι έτσι κλεισμένα ώστε να είναι στεγανά, με δύο πώματα, το ένα πάνω από το άλλο, το ένα από τα οποία θα πρέπει να είναι βιδωμένο ή ασφαλισμένο με έναν ισοδύναμο αποτε-λεσματικό τρόπο. Ο βαθμός πλήρωσης θα πρέπει να είναι όχι μεγαλύτερος από 90 %.

## Κλάση 6.1

2605  
(συνεχ.)

Βαρέλια που ζυγίζουν περισσότερο από 100 kg, θα πρέπει να είναι εφοδιασμένα με κυλιόμενα τσέρκια ή ενισχυτικές νευρώσεις.

- (c) Δοχεία σε συμφωνία με το (b), θα πρέπει να φέρουν, με καθαρά ευανάγνωστους και διαρκείας χαρακτήρες:
- την ονομασία ή μάρκα του κατασκευαστή και τον αριθμό του δοχείου,
  - τις λέξεις "ισοκυανικός μεθυλεστέρας",
  - το απόβαρο του δοχείου και το μέγιστο επιτρεπόμενο βάρος του όταν είναι γεμάτο,
  - την ημερομηνία (μήνα και χρόνο) του αρχικού ελέγχου και του πιο πρόσφατου ελέγχου που έγινε,
  - τη σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις εξετάσεις.

2606 (1) Ύλες ταξινομημένες στο (a) των διαφόρων ειδών, θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
- (b) σε αλουμινένια βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
- (c) σε χαλύβδινα μπιτόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια μη-μετακινούμενης κεφαλής χωρητικότητας όχι μεγαλύτερης από 60 λίτρα ή πλαστικά μπιτόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες με εσωτερική συσκευασία από γυαλί, πλαστικό ή μέταλλο σύμφωνα με το περιθωριακό 3538.

(2) Στερεές ύλες κατά την έννοια του περιθωριακού 2600 (13) μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια μετακινούμενης κεφαλής σύμφωνα με τα περιθωριακά 3520 για χάλυβα, 3521 για αλουμίνιο, 3523 για κόντρα-πλακέ, 3525 για φύλλο φάιμπερ, ή 3526 για πλαστικό υλικό, ή σε μπιτόνια μετακινούμενης κεφαλής σύμφωνα με τα περιθωριακά 3522 για χάλυβα ή 3526 για πλαστικό υλικό, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους.

(3) Το κυανιούχο νάτριο της 41° (a) μπορεί επίσης να συσκευάζεται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622 ή σε ξύλινα IBC με αδιαπέραστη εσωτερική επένδυση σύμφωνα με το περιθωριακό 3627, υπό την προϋπόθεση ότι μεταφέρεται ως πλήρες φορτίο.

2607 (1) Ύλες ταξινομημένες στο (b) των διαφόρων ειδών, θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή

## Κλάση 6.1

2607  
(συνεχ.)

- (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538.

**ΣΗΜΕΙΩΣΗ** στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C και για στερεά (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).

(2) Ύλες ταξινομημένες στο (b) των διαφόρων ειδών, που έχουν τάση ατμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar), μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622 ή σε άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σε σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Ύλες ταξινομημένες στην 15°(b) μπορούν επίσης να συσκευάζονται σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539.

(4) Στερεές ύλες κατά την έννοια του περιθωριακού 2600 (13) μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάϊμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) σε αδιάβροχους σάκους σύμφωνα με το περιθωριακό 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστική μεμβράνη ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή οι σάκοι ασφαλιζονται πάνω σε παλέτες, ή
- (c) σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, IBC από φύλλο φάϊμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627, ή
- (d) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, με εξαίρεση τα IBC των τύπων 13H1, 13L1, 13M1, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

2608 (1) Ύλες ταξινομημένες στο (c) των διαφόρων ειδών, θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539, ή

## Κλάση 6.1

- 2608 (συνεχ.) (h) σε ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια, μπιτόνια και ελαφρού περιτυπώματος μεταλλικές συσκευασίες μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s σε 23 °C και για στερεά (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560).*

(2) Ύλες ταξινομημένες στο (c) των διαφόρων ειδών, που έχουν τάση ατμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar), μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, σε άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σε σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Στερεές ύλες κατά την έννοια του περιθωριακού 2600 (13) μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ, ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστικές μεμβράνες ή 3536 για αδιάβροχο χαρτί, ή
- (c) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13H1, 13L1 και 13M1, σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, σε IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή σε ξύλινα IBC σύμφωνα με το περιθωριακό 3627.

2609-  
2610

### 3. Μικτή συσκευασία

- 2611 (1) Ύλες που καλύπτονται από τον ίδιο αριθμό ειδους, μπορούν να συσκευάζονται μαζί σε συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες διαφορετικών ειδών της κλάσης 6.1 σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας, σε συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(3) Ύλες των 1°, 3°, 4° και 5°, δεν θα πρέπει να συσκευάζονται με άλλα εμπορεύματα.

(4) Ύλες της 2° και ύλες ταξινομημένες στο (a) των διαφόρων ειδών, δεν θα πρέπει να συσκευάζονται μαζί με ύλες και είδη των κλάσεων 1 και 5.2 και υλικά της κλάσης 7.

(5) Εκτός εάν ειδικά προβλέπεται διαφορετικά, ύλες της 2° και υγρές ύλες ταξινομημένες στο (a) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες από 0.5 λίτρο ανά εσωτερική συσκευασία και 1 λίτρο ανά κόλο και ύλες ταξινομημένες στο (b) και (c) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, με ύλες ή είδη άλλων κλάσεων, υπό την προϋπόθεση ότι μικτή συσκευασία είναι επίσης επιτρεπόμενη για τις ύλες αυτών των κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

## Κλάση 6.1

2611 (6) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:  
(συνεχ.)

- (a) ανάφλεξη και/ή εκπομπή αξιοσημείωτης θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

(7) Η μικτή συσκευασία όξινων υλών με βασικές ύλες σε ένα κόλο, δεν θα πρέπει να επιτρέπεται εάν οι δύο ύλες είναι συσκευασμένες σε εύθραυστα δοχεία.

(8) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2602 θα πρέπει να τηρούνται.

(9) Εάν χρησιμοποιούνται ξύλινα κιβώτια ή κιβώτια από φύλλο φάιμπερ, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

4. *Μαρκάρισμα και επικέτες κινδύνου πάνω στα κόλα (Βλέπε Προσθήκη Α.9)*

*Μαρκάρισμα*

2612 (1) Κάθε κόλο θα πρέπει να είναι καθαρά και με διάρκεια μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που πρόκειται να εγγραφεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

*Επικέτες κινδύνου*

(2) Κόλα που περιέχουν ύλες ή είδη αυτής της κλάσης, θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1.

(3) Κόλα που περιέχουν ύλες των 1° έως 6°, 7° (a) 2., 8°, 9°, 11°, 13°, 16°, 18°, 20°, 22° ή 26° (a) 1. ή (b) 1. θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.

(4) Κόλα που περιέχουν εύφλεκτα παρασιτοκτόνα των 71° έως 87° με σημείο ανάφλεξης 23 °C ή παραπάνω, θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.

(5) Κόλα που περιέχουν ύλες των 7° (a) 1., 10° ή 28°, θα πρέπει, επιπλέον, να φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 3 και 8.

(6) Κόλα που περιέχουν ύλες των 26° (a) 2. ή (b) 2. ή 54° (b) 1., θα πρέπει, επιπλέον, να φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 4.1.

(7) Κόλα που περιέχουν ύλες της 66° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2.

(8) Κόλα που περιέχουν ύλες της 44° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.3.

(9) Κόλα που περιέχουν ύλες της 68° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 05.

(10) Κόλα που περιέχουν ύλες των 24° (b) 2., 27° ή 67° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

(11) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω, θα πρέπει, επιπλέον, να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

## Κλάση 6.1

**2612** (12) Κόλα που περιέχουν υγρά σε δοχεία, τα πόματα των οποίων δεν είναι ορατά από έξω, κόλα (συνεχ.) που περιέχουν δοχεία με εξαεριστήρες και δοχεία με εξαεριστήρες αλλά χωρίς εξωτερική συσκευασία, θα πρέπει, επιπλέον, να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

**2613**

### B. Στοιχεία στο έγγραφο μεταφοράς

**2614** Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς, θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς ύλης και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2601.

Εάν η ύλη δεν αναφέρεται με συγκεκριμένη ονομασία αλλά είναι εγγεγραμμένες σε μία ε.α.ο. καταχώρηση, ή σε μία άλλη συγκεντρωτική καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό, τον χαρακτηρισμό ε.α.ο. ή τον χαρακτηρισμό της συγκεντρωτικής καταχώρησης, ακολουθούμενο από τη χημική ή τεχνική ονομασία.<sup>4/</sup>

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID") π.χ. "6.1, 11°(a), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)], η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα που περιέχουν ..." και το(τα) συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα πρέπει να εγγράφεται(ονται) με τη(τις) χημική(ές) ονομασία(ές) του(ς), π.χ. "Απόβλητα, που περιέχουν 2570 ενώσεις καδμίου, 6.1, 61°(c) ADR".

Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που πιο κύρια συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και μειγμάτων.

Για τη μεταφορά διαλυμάτων και μειγμάτων που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις αυτής της Οδηγίας, οι λέξεις "διάλυμα" ή "μείγμα" θα πρέπει να προστίθενται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Όταν μία στερεή ύλη παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει να συμπληρώνεται από τη λέξη "τετηγμένο", εκτός εάν ήδη συμπεριλαμβάνεται στην ονομασία.

Εάν ένα διάλυμα ή μείγμα που περιέχει μία ύλη με ονομασία σε συμφωνία με το περιθωριακό 2600 (5), δεν υπόκειται στις συνθήκες αυτής της κλάσης, ο αποστολέας μπορεί να εγγράψει στο έγγραφο μεταφοράς "Όχι εμπορεύματα της κλάσης 6.1".

**2615-  
2621**

<sup>4/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν τον σκοπό. Στην περίπτωση παρασιτοκτόνων, η ονομασία που θα καταχωρίζεται θα πρέπει να είναι εκείνη που δίνεται στο Πρότυπο ISO 1750:1891 εάν αναφέρεται.

## Κλάση 6.1

## C. Κενές συσκευασίες

- 2622 (1) Εάν οι κενές συσκευασίες, ακαθάριστες, της 91<sup>ο</sup> είναι σάκοι ή εύκαμπτα IBC, αυτές θα πρέπει να τοποθετούνται σε κιβώτια ή αδιάβροχους σάκους για την αποφυγή οποιασδήποτε διαρροής της ύλης.
- (2) Άλλες κενές συσκευασίες, συμπεριλαμβανομένων ακαθάριστων κενών IBC της 91<sup>ο</sup>, θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.
- (3) Κενές συσκευασίες, συμπεριλαμβανομένων ακαθάριστων κενών IBC της 91<sup>ο</sup> θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.
- (4) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 91<sup>ο</sup>, π.χ.: "Κενή συσκευασία, 6.1, 91<sup>ο</sup> ADR".

Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών καθώς και κενών οχημάτων για μεταφορά χύμα και κενών εμπορευματοκιβωτίων για μεταφορά χύμα, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και το είδος των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ.: "Τελευταίο φορτίο: 2312 φαινόλη, τετηγμένη, 24<sup>ο</sup> (b)".

2623-  
2624

## D. Μεταβατικά μέτρα

- 2625 Υλεις της κλάσης 6.1 μπορούν να μεταφέρονται μέχρι τις 30 Ιουνίου 1995 σε συμφωνία με τις απαιτήσεις για την Κλάση 6.1 που εφαρμόζονται μέχρι τις 31 Δεκεμβρίου 1994. Το έγγραφο μεταφοράς θα πρέπει, σε τέτοιες περιπτώσεις, να φέρει την επιγραφή "Μεταφορά σε συμφωνία με την ADR που ισχύει πριν την 1 Ιανουαρίου 1995".

2626-  
2649

## ΚΛΑΣΗ 6.2 - ΜΟΛΥΣΜΑΤΙΚΕΣ ΥΛΕΣ

## 1. Κατάλογος υλών

2650 (1) Ανάμεσα στις ύλες <sup>1/</sup> που καλύπτονται από τον τίτλο της κλάσης 6.2, εκείνες που αναφέρονται στο περιθωριακό 2651 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο εκείνου του περιθωριακού, υπόκεινται στις συνθήκες που τίθενται στο περιθωριακό 2650 (2) έως το περιθωριακό 2675 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες αυτής της Οδηγίας.

(2) Η κλάση 6.2 περιλαμβάνει ύλες που περιέχουν βιώσιμους μικρο-οργανισμούς, συμπεριλαμβανομένων βακτηρίων, ιών, παρασίτων, μυκήτων, επίσης ως επανασυνδυασμένων, υβριδίων ή μεταλλαγμένων μικρο-οργανισμών, για τους οποίους είναι γνωστό ή λογικά πιστεύεται ότι προκαλούν ασθένειες σε ζώα ή ανθρώπους. Υπόκεινται στις διατάξεις αυτής της κλάσης εάν είναι ικανές να εξαπλώσουν ασθένειες σε ανθρώπους ή ζώα, σε περίπτωση έκθεσης σ' αυτές.

**ΣΗΜΕΙΩΣΗ 1:** Γενετικά τροποποιημένοι μικρο-οργανισμοί και οργανισμοί, βιολογικά προϊόντα, διαγνωστικά δείγματα και μολυσμένα ζωντανά ζώα θα πρέπει να καταχωρούνται σ' αυτήν την Κλάση εάν ικανοποιούν τις συνθήκες για αυτήν την Κλάση.

**ΣΗΜΕΙΩΣΗ 2:** Τοξικές τοξίνες από φυτικές, ζωικές ή βακτηριακές προελεύσεις που δεν περιέχουν οποιεσδήποτε μολυσματικές ύλες ή οργανισμούς ή που δεν περιέχονται σ' αυτές, είναι ύλες της κλάσης 6.1 (βλέπε περιθωριακό 2601, 90°, χαρακτηριστικός αριθμός 3172).

(3) Οι ύλες της κλάσης 6.2 υποδιαιρούνται ως εξής:

- A. Μολυσματικές ύλες με υψηλή δυνατότητα κινδύνου
- B. Άλλες μολυσματικές ύλες
- C. Κενές συσκευασίες.

Οι ύλες του περιθωριακού 2651, 3° και 4°, καταχωρούνται στην ομάδα που χαρακτηρίζονται από το γράμμα (b) με βάση τον βαθμό κινδύνου:

- (b) επικίνδυνες ύλες.

(4) Η καταχώρηση υλών που δεν αναφέρονται με συγκεκριμένη ονομασία στις 1°, 2° και 3° του περιθωριακού 2651, θα πρέπει να γίνεται, με βάση την τρέχουσα επιστημονική γνώση, σε συμφωνία με τις παρακάτω ομάδες κινδύνου <sup>2/</sup>:

- (i) Η ομάδα κινδύνου IV (υψηλός ατομικός κίνδυνος, υψηλός κοινωνικός κίνδυνος) καλύπτει μικρο-οργανισμούς που μπορούν να προκαλέσουν σοβαρή ασθένεια σε ανθρώπους ή ζώα, που μπορούν να παρουσιάσουν υψηλό κίνδυνο εξάπλωσης και για τους οποίους δεν υπάρχει συνήθως διαθέσιμη αποτελεσματική προφύλαξη ή θεραπεία.

<sup>1/</sup> Για τους σκοπούς αυτής της κλάσης, οι μικρο-οργανισμοί καθώς και είδη μολυσμένα με αυτούς θα πρέπει να θεωρούνται ως ύλες αυτής της κλάσης.

<sup>2/</sup> Βλέπε το "Εγχειρίδιο Εργαστηριακής Βιοασφάλειας" του Παγκόσμιου Οργανισμού Υγείας (WHO), Έκδοση 1983, και Οδηγία 90/679/EEC (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας, Αριθμ. L 374 της 31 Δεκεμβρίου 1990, σ.1). Δεν είναι ανταλλάξιμες με τις ομάδες συσκευασίας σε συμφωνία με π.χ. την προσθήκη Α.5.

## Κλάση 6.2

- 2650 (συνεχ.)
- (ii) Η ομάδα κινδύνου III (υψηλός ατομικός κίνδυνος, χαμηλός κοινωνικός κίνδυνος) καλύπτει μικρο-οργανισμούς που μπορούν να προκαλέσουν σοβαρή ασθένεια σε ανθρώπους ή ζώα και μπορούν να παρουσιάσουν υψηλό κίνδυνο εξάπλωσης, αλλά για τους οποίους υπάρχει συνήθως διαθέσιμη αποτελεσματική προφύλαξη ή θεραπεία.
  - (iii) Η ομάδα κινδύνου II (μέτριος ατομικός κίνδυνος, περιορισμένος κοινωνικός κίνδυνος) καλύπτει μικρο-οργανισμούς που μπορούν να προκαλέσουν ασθένεια σε ανθρώπους ή ζώα, που είναι πιθανόν να εξαπλωθούν και για τους οποίους υπάρχει συνήθως διαθέσιμη αποτελεσματική προφύλαξη ή θεραπεία.
  - (iv) Η ομάδα κινδύνου I (χαμηλός ατομικός και κοινωνικός κίνδυνος) καλύπτει μικρο-οργανισμούς που είναι απίθανο να προκαλέσουν ασθένεια σε ανθρώπους ή ζώα.

**ΣΗΜΕΙΩΣΗ 1:** Μικρο-οργανισμοί κινδύνου της ομάδας I, δεν είναι μολυσματικές ύλες κατά την έννοια αυτής της κλάσης.

**ΣΗΜΕΙΩΣΗ 2:** Γενετικά τροποποιημένοι μικρο-οργανισμοί και οργανισμοί <sup>3)</sup> είναι μικρο-οργανισμοί και οργανισμοί στους οποίους το γενετικό υλικό έχει επίτηδες τροποποιηθεί με τεχνικές μεθόδους ή με τρόπο που δεν μπορεί να συμβεί φυσικά στη φύση.

**ΣΗΜΕΙΩΣΗ 3:** Γενετικά τροποποιημένοι μικρο-οργανισμοί που είναι μολυσματικοί κατά την έννοια αυτής της κλάσης, είναι ύλες των 1<sup>ο</sup>, 2<sup>ο</sup> ή 3<sup>ο</sup>. Δεν μπορούν όμως να καταχωρούνται στην 4<sup>ο</sup>. Γενετικά τροποποιημένοι μικρο-οργανισμοί που δεν είναι μολυσματικές ύλες κατά την έννοια αυτής της κλάσης, μπορούν να είναι ύλες της κλάσης 9 (βλέπε περιθωριακό 2901, 13<sup>ο</sup>, χαρακτηριστικός αριθμός 3245).

**ΣΗΜΕΙΩΣΗ 4:** Γενετικά τροποποιημένοι οργανισμοί, για τους οποίους είναι γνωστό ή υπάρχει η υποψία ότι είναι επικίνδυνοι για ανθρώπους, ζώα ή το περιβάλλον, θα πρέπει να μεταφέρονται σε συμφωνία με τις συνθήκες που ορίζονται από την αρμόδια αρχή της χώρας προέλευσης.

(5) Ύλες και μείγματα υλών αυτής της κλάσης, θα πρέπει να θεωρούνται ως στερεά για τις διατάξεις συσκευασίας των περιθωριακών 2654 και 2655 όσο δεν περιέχουν ελεύθερο υγρό σε θερμοκρασία μικρότερη από 45 °C.

(6) "Βιολογικά προϊόντα" είναι:

- τελικά βιολογικά παρασκευάσματα για ανθρώπινη ή κτηνιατρική χρήση που παράγονται σε συμφωνία με τις απαιτήσεις των εθνικών αρχών δημόσιας υγείας και διακινούνται υπό ειδική έγκριση ή άδεια από τέτοιες αρχές, εάν απαιτείται, ή
- βιολογικά προϊόντα που μεταφέρονται πριν τη λήψη άδειας για λόγους έρευνας ή ανάπτυξης, ή
- τελικά παρασκευάσματα για χρήση στην πειραματική θεραπεία ανθρώπων ή ζώων που παράγονται σε συμφωνία με τις απαιτήσεις των εθνικών αρχών δημόσιας υγείας.

Καλύπτουν επίσης βιολογικά προϊόντα παρασκευασμένα σε συμφωνία με διαδικασίες εξειδικευμένων κυβερνητικών αντιπροσωπειών.

<sup>3)</sup> Βλέπε επίσης Οδηγία 90/219/EEC, Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας Αριθμ. L 117 της 8 Μαΐου 1990, σελίδα 1.

## Κλάση 6.2

**2650** (συνεχ.) Διαγνωστικά δείγματα είναι οποιοδήποτε υλικό από άνθρωπο ή ζώο συμπεριλαμβανομένων, χωρίς να είναι μόνον αυτά, περιτωμάτων, υπολειμμάτων, αίματος και των συστατικών του, ιστών και υγρών των ιστών που μεταφέρονται για λόγους διάγνωσης ή έρευνας, αλλά εκτός των ζωντανών μολυσμένων ζώων.

**ΣΗΜΕΙΩΣΗ:** "Βιολογικά προϊόντα" και "διαγνωστικά δείγματα" δεν θεωρούνται ως ύλες αυτής της κλάσης εάν είναι γνωστό ότι δεν περιέχουν μολυσματικές ύλες.

(7) Ζωντανά σπονδυλωτά ή ασπόνδυλα ζώα δεν θα πρέπει να χρησιμοποιούνται για τη μεταφορά ενός μολυσματικού παράγοντα, εκτός εάν ο παράγοντας δεν μπορεί να μεταφερθεί με οποιονδήποτε άλλον τρόπο. Τέτοια ζώα θα πρέπει να συσκευάζονται, μαρκαρισμένα, με ενδείξεις και μεταφερόμενα σε συμφωνία με τους σχετικούς κανονισμούς που διέπουν τη μεταφορά των ζώων.<sup>4/</sup>

(8) Για τη μεταφορά υλών αυτής της κλάσης, η διατήρηση μίας συγκεκριμένης θερμοκρασίας μπορεί να είναι αναγκαία.

#### A. Μολυσματικές ύλες με υψηλή δυνατότητα κινδύνου

**2651** 1° 2814 μολυσματική ύλη, που προσβάλλει ανθρώπους,  
2900 μολυσματική ύλη, που προσβάλλει ζώα μόνον.

**ΣΗΜΕΙΩΣΗ 1:** Ύλες που, σε συμφωνία με το περιθωριακό 2650 (4), καταχωρούνται στην ομάδα κινδύνου IV, θα πρέπει να καταχωρούνται σ' αυτό το είδος.

**ΣΗΜΕΙΩΣΗ 2:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακά 2653 και 2654).

2° 2814 μολυσματική ύλη, που προσβάλλει ανθρώπους,  
2900 μολυσματική ύλη, που προσβάλλει ζώα μόνον.

**ΣΗΜΕΙΩΣΗ 1:** Ύλες που, σε συμφωνία με το περιθωριακό 2650 (4), καταχωρούνται στην ομάδα κινδύνου III, θα πρέπει να καταχωρούνται σ' αυτό το είδος.

**ΣΗΜΕΙΩΣΗ 2:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακά 2653 και 2654).

#### B. Άλλες μολυσματικές ύλες

3° (b) 2814 μολυσματική ύλη, που προσβάλλει ανθρώπους,  
2900 μολυσματική ύλη, που προσβάλλει ζώα μόνον.

**ΣΗΜΕΙΩΣΗ:** Ύλες που, σε συμφωνία με το περιθωριακό 2650 (4), καταχωρούνται στην ομάδα κινδύνου II, θα πρέπει να καταχωρούνται σ' αυτό το είδος.

4° (b) 3291 κλινικά απόβλητα, μη-ορισμένα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Μη-ορισμένα απόβλητα προερχόμενα από ιατρική/κτηνιατρική θεραπεία ανθρώπων/ζώων ή από βιολογική έρευνα και που είναι πιθανόν να περιέχουν ύλες αυτής της κλάσης, θα πρέπει να καταχωρούνται σ' αυτό το είδος.

<sup>4/</sup> Τέτοιοι κανονισμοί περιέχονται, π.χ. στην Οδηγία 91/628/EEC (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας Αριθμ. L 340 της 11 Δεκεμβρίου 1992, σ. 17) και στις Υποδείξεις του Συμβουλίου της Ευρώπης (Υπουργική Επιτροπή) για τη μεταφορά ορισμένων ειδών ζώων.

## Κλάση 6.2

**2651** *ΣΗΜΕΙΩΣΗ 2:* Τα συγκεκριμένα απόβλητα θα πρέπει να καταχωρούνται στα 1°, 2° ή 3°.  
(συνεχ.)

*ΣΗΜΕΙΩΣΗ 3:* Απολυμασμένα κλινικά απόβλητα ή απόβλητα προερχόμενα από βιολογική έρευνα που προηγουμένως περιείχαν μολυσματικές ύλες, δεν υπόκεινται στις διατάξεις αυτής της κλάσης.

## C. Κενές συσκευασίες

11° Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, που περιείχαν ύλες της κλάσης 6.2 (βλέπε περιθωριακό 2672).

## 2. Διατάξεις

## A. Κόλα

## I. Γενικές συνθήκες συσκευασίας

**2652** (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στα περιθωριακά 2653 και 2656.

Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC), θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.

(2) Σε συμφωνία με τις διατάξεις των περιθωριακών 2650 (3) και 3511 (2) ή 3611 (2), θα πρέπει να χρησιμοποιούνται τα παρακάτω:

συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y" για επικίνδυνες ύλες ταξινομημένες στο γράμμα (b) κάθε είδους.

*ΣΗΜΕΙΩΣΗ:* Για τη μεταφορά υλών της κλάσης 6.2 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές, βλέπε Παράρτημα B.

## 2. Ειδικές συνθήκες για συσκευασία ορισμένων υλών

**2653** (1) Συσκευασίες για ύλες των 1° και 2° θα πρέπει να περιλαμβάνουν τα παρακάτω απαραίτητα στοιχεία:

(a) Μία εσωτερική συσκευασία που περιλαμβάνει:

- ένα στεγανό κύριο δοχείο,
- μία στεγανή δευτερεύουσα συσκευασία,
- απορροφητικό υλικό τοποθετημένο μεταξύ του κύριου δοχείου και της δευτερεύουσας συσκευασίας: εάν διάφορα αρχικά δοχεία είναι τοποθετημένα σε μία μόνη δευτερεύουσα συσκευασία, θα πρέπει να είναι μεμονωμένα περιτυλιγμένα έτσι ώστε να αποφεύγεται η επαφή μεταξύ τους. Το απορροφητικό υλικό, όπως ακατέργαστο βαμβάκι, θα πρέπει να είναι σε επαρκή ποσότητα ώστε να απορροφά όλο το περιεχόμενο των αρχικών δοχείων.

Οποιαδήποτε κι αν είναι η προοριζόμενη θερμοκρασία της αποστολής, το κύριο δοχείο ή η δευτερεύουσα συσκευασία θα πρέπει να είναι ικανές να αντέχουν χωρίς διαρροή μία εσωτερική πίεση που δημιουργεί διαφορετική πίεση όχι μικρότερη από 95 kPa (0.95 bar) και θερμοκρασίες στο διάστημα από -40 °C έως +55 °C.

## Κλάση 6.2

**2653 ΣΗΜΕΙΩΣΗ:** *Εσωτερικές συσκευασίες που περιέχουν μολυσματικές ύλες δεν θα πρέπει να (συνεχ.) ενοικιοούνται σε μία εξωτερική συσκευασία με άλλους τύπους εμπορευμάτων.*

(b) Μία εξωτερική συσκευασία επαρκούς στερεότητας για την χωρητικότητα, το βάρος και την προοριζόμενη χρήση της και με ελάχιστη εξωτερική διάσταση 100 mm.

(2) Συσκευασίες σύμφωνα με την παράγραφο (1) θα πρέπει να ελέγχονται σε συμφωνία με τις διατάξεις του περιθωριακού 2654. Ο τύπος σχεδιασμού για την συσκευασία θα πρέπει να είναι ένας από τους επιτρεπόμενους από την αρμόδια αρχή. Κάθε συσκευασία που κατασκευάζεται σε συμφωνία με τον εγκεκριμένο τύπο σχεδιασμού, θα πρέπει να είναι μαρκαρισμένη σε συμφωνία με το περιθωριακό 3512.

*Ελεγχι για συσκευασίες σε συμφωνία με το περιθωριακό 2653*

**2654** (1) Εκτός αν πρόκειται για συσκευασίες για ζωντανά ζώα και οργανισμούς, δείγματα κάθε συσκευασίας θα πρέπει να προετοιμάζονται για έλεγχο όπως περιγράφεται στην παράγραφο (2) και τότε να υπόκεινται στους ελέγχους των παραγράφων (3) έως (5). Εάν η φύση της συσκευασίας το κάνει αναγκαίο, ισοδύναμη προετοιμασία και έλεγχοι επιτρέπονται, υπό την προϋπόθεση ότι μπορούν να επιδειχθούν ότι είναι τουλάχιστον ίσης αποτελεσματικότητας.

(2) Δείγματα κάθε συσκευασίας θα πρέπει να προετοιμάζονται σαν για μεταφορά, εκτός του ότι η ύλη που πρόκειται να μεταφερθεί, θα αντικαθίσταται από νερό, ή, όπου καθορίζονται συνθήκες στους -18 °C, από ένα μείγμα νερού/αντιψυκτικού. Κάθε κύριο δοχείο θα πρέπει να γεμίζεται έως το 98 % της χωρητικότητας.

(3) Συσκευασίες προετοιμαζόμενες σαν για μεταφορά, θα πρέπει να υπόκεινται στους ελέγχους του πίνακα, που, για λόγους ελέγχου, κατηγοριοποιεί τις συσκευασίες σύμφωνα με τα χαρακτηριστικά του υλικού τους. Για εξωτερικές συσκευασίες, τα κεφάλαια στον πίνακα σχετίζονται με:

- φύλλο φάιμπερ ή παρόμοια υλικά των οποίων η απόδοση μπορεί γρήγορα να προσβληθεί από την υγρασία,
- πλαστικά που μπορούν σπάσουν σε χαμηλή θερμοκρασία, και
- άλλα υλικά όπως μέταλλα των οποίων η απόδοση δεν προσβάλλεται από την υγρασία ή τη θερμοκρασία.

Εάν ένα κύριο δοχείο και μία δευτερεύουσα συσκευασία [βλέπε περιθωριακό 2653 (1) (a)] είναι κατασκευασμένα από διαφορετικά υλικά, το υλικό του κύριου δοχείου καθορίζει τον κατάλληλο έλεγχο. Σε περιπτώσεις όπου ένα κύριο δοχείο είναι κατασκευασμένο από δύο υλικά, το υλικό το περισσότερο υποκείμενο σε ζημιά, θα πρέπει να καθορίζει τους κατάλληλους ελέγχους.

## Κλάση 6.2

## Πίνακας

2654  
(συνεχ.)

Υλικό της					Απαιτούμενοι έλεγχοι				
Εξωτερικής συσκευασίας			Εσωτερικής συσκευασίας		Γράμμα, σε συμφωνία με το (3)				Σε συμφωνία με το (4)
Φύλλο φάιμπερ	Πλαστικό	Άλλο	Πλαστικό	Άλλο	(a)	(b)	(c)	(d)	
X			X			X	X	Όταν χρησιμοποιείται ξηρός πάγος	X
X				X		X			X
	X		X				X		X
	X		X	X			X		X
		X		X	X		X		X

(a) Τα δείγματα θα πρέπει να υπόκεινται σε ελεύθερες πτώσεις πάνω σε άκαμπτη, μη-ελαστική, επίπεδη, οριζόντια επιφάνεια από ύψος 9 μέτρων. Όπου τα δείγματα είναι στο σχήμα κιβωτίου, πέντε θα πρέπει να πέφτουν στη σειρά:

- ένα με τον πάτο,
- ένα με την από πάνω πλευρά,
- ένα με την μακριά πλευρά,
- ένα με την κοντή πλευρά,
- ένα με μία γωνία.

Όπου τα δείγματα είναι στο σχήμα βαρελιού, τρία θα πρέπει να πέφτουν στη σειρά:

- ένα διαγωνίως με την πάνω κόγχη, με το κέντρο βάρους ακριβώς πάνω από το σημείο κρούσης,
- ένα διαγωνίως με την κάτω κόγχη,
- ένα με την πλευρά.

Μετά την κατάλληλη σειρά πτώσεων, δεν θα πρέπει να υπάρχει διαρροή από το(τα) κύριο(α) δοχείο(α), που θα πρέπει να παραμένει(ουν) προστατευμένο(α) από το απορροφητικό υλικό στη δευτερεύουσα συσκευασία.

- (b) Τα δείγματα θα πρέπει να εμβαπτίζονται πλήρως σε νερό για μία περίοδο τουλάχιστον 5 λεπτών και στη συνέχεια να αφήνονται να στραγγίζουν για όχι περισσότερο από 30 λεπτά στους 23 °C και  $50 \pm 2\%$  σχετική υγρασία. Θα πρέπει τότε να υπόκεινται στον έλεγχο που περιγράφεται στο (a).
- (c) Τα δείγματα θα πρέπει να παραμένουν σε μία ατμόσφαιρα θερμοκρασίας -18 °C ή χαμηλότερη για μία περίοδο τουλάχιστον 24 ωρών και μέσα σε 15 λεπτά από την απομάκρυνσή τους από εκείνη την ατμόσφαιρα να υπόκεινται στον έλεγχο που περιγράφεται στο (a). Όπου τα δείγματα περιέχουν ξηρό πάγο, η περίοδος παραμονής μπορεί να μειωθεί στις τέσσερις ώρες.
- (d) Όπου η συσκευασία προορίζεται να περιέχει ξηρό πάγο, θα πρέπει να διεξάγεται ένας έλεγχος επιπλέον εκείνου που ορίζεται στο (a) ή (b) ή (c). Ένα δείγμα θα πρέπει να αποθηκεύεται έτσι ώστε όλος ο ξηρός πάγος να διαλύεται και τότε να υπόκειται στον έλεγχο που περιγράφεται στο (a).

## Κλάση 6.2

2654 (4) Συσκευασίες με μικτό βάρος 7 kg ή λιγότερο, θα πρέπει να υπόκεινται στους ελέγχους που (συνεχ.) περιγράφονται στο (α) παρακάτω και συσκευασίες με μικτό βάρος μεγαλύτερο από 7 kg, στους ελέγχους του (b) παρακάτω.

- (a) Τα δείγματα θα πρέπει να τοποθετούνται σε μία επίπεδη σκληρή επιφάνεια. Μία κυλινδρική χαλύβδινη ράβδος βάρους τουλάχιστον 7 kg και διαμέτρου όχι μεγαλύτερης από 38 mm και της οποίας οι ακριανές ακμές κρούσης έχουν ακτίνα όχι μεγαλύτερη από 6 mm, θα πρέπει να πέφτει σε κάθετη ελεύθερη πτώση από ύψος 1 μέτρου, μετρημένο από την άκρη κρούσης έως την επιφάνεια κρούσης του δείγματος. Ένα δείγμα θα πρέπει να τοποθετείται πάνω στη βάση του. Ένα δεύτερο δείγμα θα πρέπει να τοποθετείται με προσανατολισμό κάθετο σ' εκείνο που χρησιμοποιήθηκε για το πρώτο. Σε κάθε περίπτωση, η χαλύβδινη ράβδος θα πρέπει να ρίχνεται προς σύγκρουση με το κύριο δοχείο. Μετά από κάθε σύγκρουση, διείδυση στη δευτερεύουσα συσκευασία είναι αποδεκτή, υπό την προϋπόθεση ότι δεν υπάρχει διαρροή από το(τα) κύριο(α) δοχείο(α).
- (b) Τα δείγματα θα πρέπει να πέφτουν στην άκρη μίας κυλινδρικής χαλύβδινης ράβδου. Η ράβδος θα πρέπει να έχει τοποθετηθεί κάθετα σε μία επίπεδη σκληρή επιφάνεια. Θα πρέπει να έχει διάμετρο 38 mm και οι ακμές της επάνω άκρης ακτίνα όχι μεγαλύτερη από 6 mm. Η ράβδος θα πρέπει να προεξέχει από την επιφάνεια κατά μία απόσταση τουλάχιστον ίση με εκείνη μεταξύ του(των) κύριου(ων) δοχείου(ων) και της εξωτερικής επιφάνειας της εξωτερικής συσκευασίας με ελάχιστη τιμή τα 200 mm. Ένα δείγμα θα πρέπει να πέφτει σε κάθετη ελεύθερη πτώση από ένα ύψος 1 μέτρου, μετρημένο από την κορυφή της χαλύβδινης ράβδου. Ένα δεύτερο δείγμα θα πρέπει να πέφτει από το ίδιο ύψος με προσανατολισμό κάθετο σ' εκείνον που χρησιμοποιείται για το πρώτο. Σε κάθε περίπτωση, η συσκευασία θα πρέπει να είναι έτσι προσανατολισμένη ώστε η χαλύβδινη ράβδος να μπορεί να διεισδύσει στο(στα) κύριο(α) δοχείο(α). Μετά από κάθε κρούση, διείδυση στην δευτερεύουσα συσκευασία είναι αποδεκτή, υπό την προϋπόθεση ότι δεν υπάρχει διαρροή από το(τα) κύριο(α) δοχείο(α).

(5) Εφ' όσον διατηρείται ένα ισοδύναμο επίπεδο απόδοσης, οι παρακάτω παραλλαγές στα κύρια δοχεία που είναι τοποθετημένα μέσα στη δευτερεύουσα συσκευασία, επιτρέπονται χωρίς την ανάγκη για περαιτέρω έλεγχο της πλήρους συσκευασίας.

Κύρια δοχεία ισοδύναμου ή μικρότερου μεγέθους όπως προκύπτει από σύγκριση με τα ελεγχόμενα κύρια δοχεία, μπορούν να χρησιμοποιούνται υπό την προϋπόθεση ότι:

- (a) τα κύρια δοχεία είναι παρόμοιου σχεδιασμού με το κύριο δοχείο που ελέγχεται (π.χ. στρογγυλοποιημένο, ορθογώνιο),
- (b) το υλικό κατασκευής των κύριων δοχείων (π.χ. γυαλί, πλαστικό, μέταλλο) έχει αντοχή σε κρούση και συσσωρευμένη πίεση ισοδύναμη με ή καλύτερη από εκείνες των κύριων δοχείων που αρχικά ελέγχθηκαν,
- (c) τα κύρια δοχεία έχουν τα ίδια ή μικρότερα ανοίγματα και το πάμα είναι ισοδύναμο σχεδιασμού (π.χ. βιδωτό πάμα, τάπα),
- (d) επαρκές πρόσθετο προστατευτικό υλικό χρησιμοποιείται για να γεμίσει τον κενό χώρο και για την αποφυγή σημαντικής κίνησης των κύριων δοχείων και
- (e) τα κύρια δοχεία είναι προσανατολισμένα μέσα στις δευτερεύουσες συσκευασίες, με τον ίδιο τρόπο όπως στο ελεγχθέν κόλο.

## Κλάση 6.2

- 2655 (1) Υλεις ταξινομημένες στα 3° (b) και 4° (b), θα πρέπει να συσκευάζονται σε:
- χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - πλαστικά βαρέλια ή μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539, ή
  - μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, ή
  - άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624, ή
  - (επιφλασσόμενο)
  - σύνθετα IBC με πλαστικά εσωτερικά δοχεία σύμφωνα με το περιθωριακό 3625, με εξαίρεση τα IBC των τύπων 11HZ2 και 31HZ2.
- (2) Στερεές ύλες κατά την έννοια του περιθωριακού 2650 (5) μπορούν επίσης να συσκευάζονται σε βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523 ή σε βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, εάν είναι αναγκαίο με έναν ή περισσότερους στεγανούς εσωτερικούς σάκους.
- 2656 Βιολογικά προϊόντα και διαγνωστικά δείγματα των 1° έως 3° όπου υπάρχει μία σχετικά χαμηλή πιθανότητα να υπάρχουν μολυσματικές ύλες π.χ. για συνήθεις ελέγχους ή αρχική διάγνωση, πρέπει να ικανοποιούν όλες τις διατάξεις αυτής της κλάσης εκτός όπου οι παρακάτω συνθήκες ικανοποιούνται:
- Τα κύρια δοχεία δεν περιέχουν περισσότερο από 50 ml για βιολογικά προϊόντα, 100 ml για διαγνωστικά δείγματα,
  - Η εξωτερική συσκευασία δεν περιέχει περισσότερο από:
    - 50 ml για βιολογικά προϊόντα όταν εύθραυστα κύρια δοχεία χρησιμοποιούνται,
    - 100 ml για βιολογικά προϊόντα όταν άλλα εκτός από εύθραυστα κύρια δοχεία χρησιμοποιούνται,
    - 500 ml για διαγνωστικά δείγματα.
  - Τα κύρια δοχεία είναι στεγανά, και
  - Η συσκευασία είναι σε συμφωνία με τις διατάξεις αυτής της κλάσης, όμως δεν χρειάζεται να υπόκειται στους ελέγχους.
- 2657 Όταν ύλες αυτής της Κλάσης μεταφέρονται σε βαθιά κατεψυγμένο υγρό άζωτο, οι εσωτερικές συσκευασίες θα πρέπει να είναι σύμφωνες με τις διατάξεις για αυτήν την Κλάση και τα εμπορευματοκιβώτια για το άζωτο θα πρέπει να είναι σύμφωνα με τις διατάξεις της κλάσης 2.
- 2658 (1) Τα ανοίγματα των κύριων δοχείων για υγρά των 1° και 2° θα πρέπει να είναι κλεισμένα έτσι ώστε να είναι στεγανά με δύο συσκευές τοποθετημένες στη σειρά, μία από τις οποίες θα πρέπει να είναι βιδωμένη ή ασφαλισμένη με έναν ισοδύναμο τρόπο.

## Κλάση 6.2

- 2658 (2) Δοχεία για ύλες των 3° και 4° που παράγουν αέρια και που μεταφέρονται σε θερμοκρασία (συνεχ.) περιβάλλοντος μεγαλύτερη από 15 °C, θα πρέπει να είναι εφοδιασμένα με ειδικό στεγανό στους παθογόνους μικροοργανισμούς εξαεριστήρα στο καπάκι, που θα πρέπει να προστατεύεται έναντι εξωτερικών μηχανικών καταπονήσεων.

Με επαναχρησιμοποιούμενα δοχεία, το φίλτρο του εξαεριστήρα θα πρέπει να αντικαθίσταται πριν την επαναπλήρωση.

(3) Συσκευασίες από πλαστικό ή φύλλο φάϊμπερ που προορίζονται για τη μεταφορά αποβλήτων της 4° θα πρέπει να είναι ανθεκτικές και, εάν τα απόβλητα περιέχουν αιχμηρά αντικείμενα, θα πρέπει να είναι αδιαπέραστες από τέτοια αντικείμενα.

(4) Το πάμα των συσκευασιών για ύλες της 4°, θα πρέπει να είναι έτσι κατασκευασμένο ώστε να είναι ερμητικά κλεισμένες μετά την πλήρωση και έτσι σχεδιασμένο ώστε οποιοδήποτε επακόλουθο άνοιγμα να είναι αμέσως εμφανές.

2659-  
2660

### 3. Μικτή συσκευασία

- 2661 (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες των 1°, 2° και 3° μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538, εάν το κόλο είναι ελεγμένο και εγκεκριμένο σύμφωνα με τις διατάξεις για τις ύλες των 1° και 2°.

(3) Ύλες της κλάσης 6.2 δεν θα πρέπει να συσκευάζονται μαζί με ύλες και είδη άλλων κλάσεων, ούτε με εμπορεύματα όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας. Αυτό δεν εφαρμόζεται σε βιολογικά προϊόντα και διαγνωστικά δείγματα που είναι συσκευασμένα σε συμφωνία με το περιθωριακό 2656 ή σε ύλες μεταφερόμενες ως ψυκτικά μέσα, π.χ. πάγος, ξηρός πάγος ή βαθιά κατεψυγμένο υγρό άζωτο.

(4) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2652 θα πρέπει να τηρούνται.

(5) Εάν χρησιμοποιούνται κιβώτια ξύλινα ή από φύλλο φάϊμπερ, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

### 4. Μαρκάρισμα και ετικέτες κινδύνου πάνω στα κόλα (Βλέπε Προσθήκη Α.9)

#### Μαρκάρισμα

- 2662 (1) Κάθε κόλο θα πρέπει να είναι μαρκαρισμένο καθαρά και με τρόπο διαρκείας με τον χαρακτηριστικό αριθμό των εμπορευμάτων που πρόκειται να καταχωρηθεί στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

#### Ετικέτες κινδύνου

(2) Κόλα που περιέχουν ύλες αυτής της κλάσης θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.2.

(3) Κόλα που περιέχουν ύλες αυτής της κλάσης μεταφερόμενες σε βαθιά κατεψυγμένο υγρό άζωτο, θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 2.

(4) Κόλα περιέχουν ύλες των 3° και 4° σε εύθραυστα δοχεία που δεν είναι ορατά από έξω θα πρέπει, επιπλέον, να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

## Κλάση 6.2

2662 (5) Κόλα που περιέχουν υγρές ύλες της 3<sup>ο</sup> σε δοχεία, τα πάματα των οποίων δεν είναι ορατά (συνεχ.) από έξω, καθώς και κόλα που περιέχουν εξαεριζόμενα δοχεία και εξαεριζόμενα δοχεία χωρίς εξωτερική συσκευασία, θα πρέπει, επιπλέον, να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2663

## B. Στοιχεία στο έγγραφο μεταφοράς

2664 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2651, ακολουθούμενα από την βιολογική ονομασία της ύλης<sup>9/</sup> για ύλες των 1<sup>ο</sup> έως 3<sup>ο</sup>.

(1) Εάν η μολυσματική ύλη είναι γενετικά τροποποιημένη ύλη, οι λέξεις "γενετικά τροποποιημένοι μικρο-οργανισμοί" θα πρέπει να προστίθενται.

(2) Για βιολογικά προϊόντα και διαγνωστικά δείγματα που προσφέρονται για μεταφορά υπό τις συνθήκες του περιθωριακού 2656, η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Βιολογικό προϊόν/διαγνωστικό δείγμα, που περιέχει ..." και θα καταχωρείται η μολυσματική ύλη που καθορίζει την ταξινόμηση στα 1<sup>ο</sup>, 2<sup>ο</sup> ή 3<sup>ο</sup>.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα και τα αρχικά "ADR" (ή "RID"), π.χ. "6.2, 3<sup>ο</sup> (b), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)] η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "απόβλητα, που περιέχουν ...", και το(τα) συστατικό(ά) που καθορίζει(ουν) την ταξινόμηση των αποβλήτων στο περιθωριακό 2002(8) θα εγγράφεται(ονται) κάτω από τη(τις) χημική(ές) ή βιολογική(ές) ονομασία(ες) του(ς), π.χ.: "Απόβλητα, που περιέχουν 2814. Μολυσματική ύλη, που προσβάλλει ανθρώπους, ιός Marburg, 6.2, 2<sup>ο</sup> ADR".

Για τη μεταφορά διαλυμάτων ή μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν δύο ή περισσότερα συστατικά που υπόκεινται σ' αυτή την Οδηγία, γενικά δεν είναι ανάγκη να εμφανίζονται περισσότερα από τα δύο συστατικά που πιο κύρια συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων ή μειγμάτων. Για απόβλητα της 4<sup>ο</sup>, η περιγραφή που υπογραμμίζεται είναι επαρκής: "3291 Κλινικά Απόβλητα, μη-οριζόμενα, ε.α.ο. 6.2, 4<sup>ο</sup> (b), ADR".

Για τη μεταφορά εύκολα αλλοιώσιμων υλών, θα πρέπει να δίνονται κατάλληλες πληροφορίες, π.χ. "Ψύξη στους +2/+4 °C" ή "μεταφορά σε κατεψυγμένη κατάσταση" ή "όχι κατάψυξη".

2665-  
2671

## C. Κενές συσκευασίες

2672 (1) Κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, ακαθάριστων, της 11<sup>ο</sup> θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.

<sup>9/</sup> Η βιολογική ονομασία που δίνεται θα πρέπει κανονικά να είναι εκείνη που χρησιμοποιείται σε βιβλία αναφοράς, τακτικά εμφανιζόμενες εκδόσεις και επιστημονικά και τεχνικά κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό.

## Κλάση 6.2

2672 (2) Κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, ακαθάριστων, της 11° θα πρέπει να (συνεχ.) φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.

(3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις περιγραφές που υπογραμμίζονται στο 11°, π.χ. "Κενές συσκευασίες, 6.2, 11°, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο", μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ.: "Τελευταίο φορτίο: 2900 Μολυσματική ύλη, που προσβάλλει ζώα, 3° (b)".

2673

## D. Άλλες διατάξεις

2674 Άλλες διατάξεις για ύλες αυτής της κλάσης, που ορίζονται για λόγους άλλους εκτός από λόγους ασφάλειας, δεν υιοθετούνται (π.χ. εκείνες που αφορούν εισαγωγή και εξαγωγή, εμπορία ή διανομή, προστασία στην εργασία, κτηνιατρικοί λόγοι).

## E. Μεταβατικές διατάξεις

2675 Ύλες της κλάσης 6.2 μπορούν να μεταφέρονται μέχρι τις 31 Δεκεμβρίου 1995 σε συμφωνία με τις διατάξεις που εφαρμόζονται για την Κλάση 6.2 μέχρι τις 31 Δεκεμβρίου 1994. Σε τέτοιες περιπτώσεις, το έγγραφο μεταφοράς θα πρέπει να φέρει την επιγραφή: "Μεταφορά σε συμφωνία με την ADR που ισχύει πριν την 1 Ιανουαρίου 1995".

2676-

2699

## ΚΛΑΣΗ 7. ΡΑΔΙΕΝΕΡΓΑ ΥΛΙΚΑ

## 2700 (1) Σκοπός

- (a) Ανάμεσα στα υλικά με ειδική δραστηριότητα μεγαλύτερη από 70 kBq/kg (2 nCi/g) και είδη που περιέχουν τέτοια υλικά, μόνον εκείνα που αναφέρονται ή καταχωρούνται σε μία ε.α.ο. καταχώρηση στο περιθωριακό 2701, θα γίνονται δεκτά για μεταφορά και τότε, μόνον κάτω από τις συνθήκες<sup>1/</sup> που τίθενται στα κατάλληλα προγράμματα του περιθωριακού 2704 και στην προσθήκη Α.7 (περιθωριακά 3700 έως 3799).
- (b) Τα υλικά και είδη που αναφέρονται στο (a) είναι υλικά και είδη αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Καρδιακοί βηματοδότες που περιέχουν ραδιενεργό υλικό, όταν έχουν εμφυτευτεί χειρουργικά σε κλινικούς ασθενείς, ή ράδιο-φαρμακευτικά χορηγούμενα σ' έναν ασθενή στα πλαίσια φαρμακευτικής θεραπείας, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## (2) Ορισμοί και Επεξηγήσεις

A<sub>1</sub> και A<sub>2</sub>

1. A<sub>1</sub> θα σημαίνει τη μέγιστη δραστηριότητα ειδικής μορφής ραδιενεργού υλικού που επιτρέπεται σε ένα κόλο Τύπου Α. A<sub>2</sub> θα σημαίνει τη μέγιστη δραστηριότητα ραδιενεργού υλικού, άλλου εκτός από ειδικής μορφής ραδιενεργού υλικού, που επιτρέπεται σε ένα κόλο Τύπου Α. (Βλέπε Προσθήκη Α.7, Πίνακα 1).

<sup>1/</sup> Οι διατάξεις της κλάσης 7 βασίζονται στις παρακάτω αρχές και διατάξεις της Διεθνούς Ατομικής Αντιπροσωπείας (ΙΑΕΑ):

*Κανονισμοί για την Ασφαλή Μεταφορά Ραδιενεργού Υλικού, Σειρά Ασφάλειας Αριθμ. 6, Έκδοση 1985, που επίσης περιλαμβάνει τις γενικές αρχές για Προστασία από Ακτινοβολία.*

*Κανονισμοί για την Ασφαλή Μεταφορά Ραδιενεργού Υλικού, Σειρά Ασφάλειας Αριθμ. 6 Συμπλήρωμα 1988.*

*Επεξηγήσεις και περαιτέρω πληροφορίες για αυτούς τους κανονισμούς μπορούν να βρεθούν στα παρακάτω έγγραφα:*

1. ΙΑΕΑ "Συμβουλευτικό Υλικό για την Εφαρμογή των Κανονισμών Μεταφοράς της ΙΑΕΑ" Σειρά Ασφάλειας Αριθμ. 37, Έκδοση 1987.
2. ΙΑΕΑ "Επεξηγηματικό Υλικό για την Εφαρμογή των Κανονισμών Μεταφοράς της ΙΑΕΑ" Σειρά Ασφάλειας Αριθμ. 7, Έκδοση 1987.
3. ΙΑΕΑ "Βασικά Πρότυπα Ασφάλειας για Προστασία από Ακτινοβολία" Σειρά Ασφάλειας Αριθμ. 9, Έκδοση.
4. ΙΑΕΑ "Σχέδιο Ενεργειών Κινδύνου και Ετοιμότητα για Ατυχήματα Μεταφοράς που εμπεριέχουν Ραδιενεργό Υλικό" Σειρά Ασφάλειας Αριθμ. 87, Έκδοση 1988.
5. ΙΑΕΑ "Σχέδιο Απαιτήσεων για τη Μεταφορά Καθορισμένων Τύπων Υλικού Ραδιενεργών Φορτίων" Σειρά Ασφάλειας Αριθμ. 80 (Όπως διορθώθηκε το 1990).

## Κλάση 7

2700  
(συνεχ.)*Άλφα Εκπομποί Χαμηλής Τοξικότητας*

2. *Χαμηλής τοξικότητας άλφα εκπομποί* θα σημαίνει φυσικό ουράνιο, εξαντλημένο ουράνιο, φυσικό θόριο, ουράνιο-235 ή ουράνιο-238, θόριο-232, θόριο-228 και θόριο-230 όταν περιέχονται σε μεταλλεύματα και φυσικά ή χημικά συμπυκνώματα, ραδιονουκλεΐδια με χρόνο υποδιπλασιασμού μικρότερο από δέκα ημέρες.

*Έγκριση*

3. *Πολυμερής έγκριση* θα σημαίνει έγκριση από τη σχετική αρμόδια αρχή τόσο της χώρας προέλευσης του σχεδιασμού ή φόρτωσης, όσο και της κάθε χώρας μέσω της οποίας ή στην οποία η αποστολή πρόκειται να μεταφερθεί.
4. *Μονομερής έγκριση* θα σημαίνει έγκριση ενός σχεδιασμού που απαιτείται να δοθεί από την αρμόδια αρχή της χώρας προέλευσης του σχεδιασμού μόνον.

*Εμπορευματοκιβώτιο*

5. Ένα *εμπορευματοκιβώτιο* για τη μεταφορά υλικού αυτής της κλάσης, θα πρέπει να είναι μόνιμου έγκλειστου χαρακτήρα, άκαμπτο και γερό αρκετά για επαναλαμβανόμενη χρήση. Μπορεί να χρησιμοποιείται ως συσκευασία εάν οι εφαρμόσιμες διατάξεις ικανοποιούνται και μπορεί επίσης να χρησιμοποιείται για να εκτελεί τις λειτουργίες μίας υπερσυσκευασίας.

*Σύστημα ανάσχεσης*

6. *Σύστημα ανάσχεσης* θα σημαίνει την συγκέντρωση συστατικών της συσκευασίας που ορίζονται από τον σχεδιαστή ως προοριζόμενα για τη συγκράτηση του ραδιενεργού υλικού κατά τη διάρκεια της μεταφοράς.

*Μόλυνση*

7. *Μόλυνση* θα σημαίνει την παρουσία μίας ραδιενεργής ύλης σε μία επιφάνεια σε ποσότητες μεγαλύτερες από  $0.4 \text{ Bq/cm}^2$  ( $10^{-5} \text{ mi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς, ή  $0.04 \text{ Bq/cm}^2$  ( $10^{-6} \text{ mi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς.

*Μόνιμη μόλυνση* θα σημαίνει μόλυνση άλλη εκτός από μη-μόνιμη μόλυνση.

*Μη-μόνιμη μόλυνση* θα σημαίνει μόλυνση που μπορεί να απομακρυνθεί από μία επιφάνεια κατά τη διάρκεια κανονικού χειρισμού.

*Σχεδιασμός*

8. *Σχεδιασμός* θα σημαίνει την περιγραφή ειδικής μορφής ραδιενεργού υλικού, κόλου, ή συσκευασίας που καθιστά ικανά τέτοια είδη να είναι πλήρως προσδιορισμένα. Η περιγραφή μπορεί να περιλαμβάνει προδιαγραφές, μηχανικά σχέδια, αναφορές που δείχνουν συμμόρφωση με ρυθμιστικές διατάξεις και άλλα σχετικά έγγραφα.

## Κλάση 7

2700  
(συνεχ.)*Αποκλειστική χρήση*

9. *Αποκλειστική χρήση* θα σημαίνει την μοναδική χρήση, από έναν μόνο αποστολέα, ενός οχήματος ή ενός μεγάλου εμπορευματοκιβωτίου με ελάχιστο μήκος 6 m, σχετικά με την οποία όλη η αρχική, ενδιάμεση, και τελική φόρτωση και εκφόρτωση διεξάγεται σε συμφωνία με τις οδηγίες του αποστολέα ή παραλήπτη.

*Σχάσιμο υλικό*

10. *Σχάσιμο υλικό* θα σημαίνει ουράνιο-233, ουράνιο-235, πλουτόνιο-238, πλουτόνιο-239, πλουτόνιο-241, ή οποιοσδήποτε συνδυασμός αυτών των ραδιονουκλεϊδίων. Μη-εκπέμπον φυσικό ουράνιο και εξαντλημένο ουράνιο και φυσικό ουράνιο ή εξαντλημένο ουράνιο που έχει τεθεί για εκπομπή σε θερμικούς αντιδραστήρες μόνον, δεν περιλαμβάνονται σε αυτόν τον ορισμό.

*Χαμηλής σχετικής δραστηρότητας υλικό*

11. *Χαμηλής σχετικής δραστηρότητας (LSA) υλικό* θα σημαίνει ραδιενεργό υλικό που από την φύση του έχει περιορισμένη σχετική δραστηρότητα, ή ραδιενεργό υλικό για το οποίο εφαρμόζονται όρια στην υπολογιζόμενη μέση σχετική δραστηρότητα. Εξωτερικά προστατευτικά υλικά που περιβάλλουν το LSA υλικό, δεν θα πρέπει να υπολογίζονται στον καθορισμό της υπολογιζόμενης μέσης σχετικής δραστηρότητας.

Το LSA υλικό θα πρέπει να είναι σε μία από τις τρεις ομάδες:

## (a) LSA-I

- (i) Μεταλλεύματα που περιέχουν φυσικά παραγόμενα ραδιονουκλεϊδια (π.χ. ουράνιο, θόριο), και συμπυκνώματα ουράνιου ή θόριου τέτοιων μεταλλευμάτων.
- (ii) Στερεό μη-εκπέμπον φυσικό ουράνιο ή μη-εκπέμπον εξαντλημένο ουράνιο ή μη-εκπέμπον φυσικό θόριο ή στερεές ή υγρές ενώσεις τους ή μείγματα, ή
- (iii) Ραδιενεργό υλικό, άλλο από σχάσιμο υλικό, για το οποίο η τιμή  $A_2$  είναι χωρίς όριο.

## (b) LSA-II

- (i) Νερό με συγκέντρωση σε τρίτιο έως 0.8 TBq/l (20 Ci/l), ή
- (ii) Άλλο υλικό στο οποίο η δραστηρότητα είναι κατανεμημένη απ' άκρου εις άκρον και η υπολογιζόμενη μέση σχετική δραστηρότητα δεν υπερβαίνει τα  $10^{-4}$   $A_2/g$  για στερεά και αέρια και  $10^{-5}$   $A_2/g$  για υγρά.

## (c) LSA-III

Στερεά (π.χ. ενοποιημένα απόβλητα, ενεργοποιημένο υλικό) στα οποία:

- (i) Το ραδιενεργό υλικό είναι κατανεμημένο απ' άκρου εις άκρον ενός στερεού ή ενός συνόλου στερεών αντικειμένων, ή είναι ουσιαδώς ομοιόμορφα κατανεμημένο σε ένα στερεό συμπαγές συνδετικό μέσο (όπως τσιμέντο, βιτούμιο, κεραμικό κ.λπ.).

## Κλάση 7

2700  
(συνεχ.)

- (ii) Το ραδιενεργό υλικό είναι σχετικά αδιάλυτο, ή περιέχεται ουσιαστικά σε ένα σχετικά αδιάλυτο πλέγμα, έτσι ώστε, ακόμα και σε περίπτωση απώλειας της συσκευασίας, η απώλεια του ραδιενεργού υλικού ανά κόλο με διήθηση όταν τοποθετείται σε νερό για επτά ημέρες, να μην υπερβαίνει τα 0.1 A<sub>2</sub> και
- (iii) Η υπολογιζόμενη μέση σχετική δραστηριότητα του στερεού, εκτός του οποιουδήποτε προστατευτικού υλικού, δεν υπερβαίνει τα  $2 \times 10^{-3}$  A<sub>2</sub>/g.

*Μέγιστη κανονική πίεση λειτουργίας*

12. *Μέγιστη κανονική πίεση λειτουργίας* θα σημαίνει τη μέγιστη πίεση πάνω από την ατμοσφαιρική πίεση σε μέσο επίπεδο θάλασσας που θα ανέπτυξε στο σύστημα ανάσχεσης σε μία περίοδο ενός χρόνου υπό τις συνθήκες θερμοκρασίας και ηλιακής ακτινοβολίας που αντιστοιχούν σε περιβαλλοντικές συνθήκες μεταφοράς με απουσία εξαερισμού, εξωτερική ψύξη από ένα βοηθητικό σύστημα, ή λειτουργικούς ελέγχους κατά τη διάρκεια μεταφοράς.

*Υπερσυσκευασία*

13. *Υπερσυσκευασία* θα σημαίνει μία περιβάλλουσα συσκευασία, όπως ένα κιβώτιο ή σάκο, που δεν χρειάζεται να ικανοποιεί τις διατάξεις για ένα εμπορευματοκιβώτιο και που χρησιμοποιείται από έναν μόνο αποστολέα για την ενοποίηση σε μία μονάδα χειρισμού μίας αποστολής δύο ή περισσότερων κόλων για ευκολία χειρισμού, αποθήκευσης και μεταφοράς. Η υπερσυσκευασία δεν ταυτίζεται με την εξωτερική συσκευασία όπως ορίζεται στο περιθωριακό 3510.

*Κόλο*

14. *Κόλο* θα σημαίνει τη συσκευασία με το ραδιενεργό περιεχόμενο της όπως παρουσιάζεται για μεταφορά. Τα μέτρα απόδοσης των κόλων και συσκευασιών, σε όρους διατήρησης της ακεραιότητας των μέσων ανάσχεσης και προστασίας, εξαρτώνται από την ποσότητα και τη φύση του ραδιενεργού υλικού που μεταφέρεται.

Τα μέτρα απόδοσης που εφαρμόζονται στα κόλα είναι διαβαθμισμένα ώστε να λαμβάνουν υπόψη συνθήκες μεταφοράς που χαρακτηρίζονται από τα παρακάτω επίπεδα σοβαρότητας:

- συνθήκες που απαντώνται συνήθως σε κοινές μεταφορές (σε συνθήκες ελεύθερες επεισοδίων),
- συνθήκες μεταφοράς λαμβάνοντας υπόψη δευτερεύοντα ατυχήματα, και
- συνθήκες μεταφοράς για απρόβλεπτα γεγονότα.

Τα μέτρα απόδοσης περιλαμβάνουν διατάξεις και ελέγχους σχεδιασμού. Κάθε κόλο θα πρέπει να ταξινομείται ως εξής:

- (a) *Εξαιρούμενο κόλο* είναι συσκευασία που περιέχει ραδιενεργό υλικό (βλέπε Προσθήκη Α.7, Πίνακα V) που είναι σχεδιασμένη να ικανοποιεί τις γενικές διατάξεις σχεδιασμού για όλα τα κόλα (βλέπε περιθωριακό 3732).
- (b) (i) *Βιομηχανικά Κόλα Τύπου 1 (IP-1)* είναι συσκευασία δεξαμενή ή εμπορευματοκιβώτιο που περιέχει LSA υλικό ή SCO, (βλέπε ορισμούς 11 και 22) που είναι σχεδιασμένα να ικανοποιούν τις γενικές διατάξεις σχεδιασμού για όλες τις συσκευασίες και τα κόλα (βλέπε περιθωριακό 3732) και, επιπλέον, για τη σχετική διάταξη σχεδιασμού (βλέπε περιθωριακό 3733).

## Κλάση 7

2700  
(συνεχ.)

- (II) *Βιομηχανικό Κόλο Τύπου 2 (IP-2)* είναι συσκευασία, δεξαμενή ή εμπορευματοκιβώτιο που περιέχει LSA υλικό ή SCO (βλέπε ορισμούς 11 και 22) που είναι σχεδιασμένα να ικανοποιούν τις γενικές διατάξεις σχεδιασμού για όλες τις συσκευασίες και τα κόλα (βλέπε περιθωριακό 3732) και, επιπλέον, τις παρακάτω σχετικές διατάξεις σχεδιασμού:
- (i) για κόλο, βλέπε περιθωριακό 3734,
  - (ii) για δεξαμενή, βλέπε περιθωριακό 3736 και Προσθήκες Β.1α και Β.1b,
  - (iii) για εμπορευματοκιβώτιο, βλέπε περιθωριακό 3736.
- (III) *Βιομηχανικό Κόλο Τύπου 3 (IP-3)* είναι συσκευασία, δεξαμενή ή εμπορευματοκιβώτιο που περιέχει LSA υλικό ή SCO, (βλέπε ορισμούς 11 και 22) που είναι σχεδιασμένα να ικανοποιούν τις γενικές διατάξεις σχεδιασμού για όλες τις συσκευασίες και τα κόλα (βλέπε περιθωριακό 3732) και, επιπλέον, τις παρακάτω σχετικές διατάξεις σχεδιασμού:
- (i) για κόλο, βλέπε περιθωριακό 3735,
  - (ii) για δεξαμενή, βλέπε περιθωριακό 3736 και Προσθήκες Β.1α και Β.1b,
  - (iii) για εμπορευματοκιβώτιο, βλέπε περιθωριακό 3736.
- (c) *Κόλο Τύπου Α* είναι συσκευασία, δεξαμενή ή εμπορευματοκιβώτιο που περιέχει δραστηριότητα έως Α<sub>1</sub> εάν πρόκειται για Ειδικής Μορφής Ραδιενεργό Υλικό, ή έως Α<sub>2</sub> εάν δεν πρόκειται για Ειδικής Μορφής Ραδιενεργό Υλικό, που είναι σχεδιασμένα να ικανοποιούν τις γενικές διατάξεις σχεδιασμού για όλες τις συσκευασίες και τα κόλα (βλέπε περιθωριακό 3732) και τις σχετικές διατάξεις σχεδιασμού στο περιθωριακό 3737 ως κατάλληλες.
- (d) *Κόλο τύπου Β* είναι συσκευασία, δεξαμενή ή εμπορευματοκιβώτιο που περιέχει δραστηριότητα που μπορεί να υπερβαίνει το Α<sub>1</sub>, εάν πρόκειται για Ειδικής Μορφής Ραδιενεργό Υλικό, ή να υπερβαίνει το Α<sub>2</sub> εάν δεν πρόκειται για Ειδικής Μορφής Ραδιενεργό Υλικό, που είναι σχεδιασμένα να ικανοποιούν τις γενικές διατάξεις σχεδιασμού για όλες τις συσκευασίες και τα κόλα (βλέπε περιθωριακό 3732) και τις σχετικές διατάξεις σχεδιασμού στο περιθωριακό 3737 και, ως κατάλληλες, περιθωριακά 3738-3740.

*Συσκευασία*

15. *Συσκευασία* θα σημαίνει το σύνολο των συστατικών που είναι αναγκαία για τον πλήρη εγκλεισμό του ραδιενεργού περιεχομένου. Μπορεί, ειδικά, να συνίσταται από ένα ή περισσότερα δοχεία, απορροφητικά υλικά, κατασκευές αραίωσης, μέσα προστασίας από ακτινοβολία, συσκευές εξυπηρέτησης για πλήρωση, άδειασμα, εξαερισμό και εκτόνωση πίεσης και συσκευές για ψύξη, για την απορρόφηση μηχανικών χτυπημάτων, για παροχή χειρισμών και δυνατότητα καθήλωσης, για θερμική μόνωση και συσκευές εξυπηρέτησης αναπόσπαστα του κόλου. Η συσκευασία μπορεί να είναι ένα κιβώτιο, βαρέλι ή παρόμοιο δοχείο, ή μπορεί επίσης να είναι ένα εμπορευματοκιβώτιο ή μία δεξαμενή που συνίσταται σύμφωνα με τον ορισμό 14.

## Κλάση 7

2700  
(συνεχ.)*Εξασφάλιση ποιότητας*

16. *Εξασφάλιση ποιότητας* θα σημαίνει ένα συστηματικό πρόγραμμα ελέγχων και επιθεωρήσεων εφαρμοζόμενων από οποιονδήποτε οργανισμό ή σώμα που εμπλέκεται στη μεταφορά του ραδιενεργού υλικού που στοχεύει στην παροχή επαρκούς βεβαιότητας ότι τα βασικά της ασφάλειας που καθορίζονται στην προσθήκη Α.7, επιτυγχάνονται στην πράξη.

*Επίπεδο ακτινοβολίας*

17. *Επίπεδο ακτινοβολίας* θα σημαίνει την αντίστοιχη δόση που είναι ισοδύναμη με το ρυθμό εκφρασμένο σε millisievert (millirem) ανά ώρα<sup>2/</sup>.

*Ραδιενεργό περιεχόμενο*

18. *Ραδιενεργό περιεχόμενο* θα σημαίνει το ραδιενεργό υλικό μαζί με οποιαδήποτε μολυσμένα στερεά, υγρά και αέρια μέσα στη συσκευασία.

*Ειδική ρύθμιση*

19. *Ειδική ρύθμιση* θα σημαίνει εκείνες τις διατάξεις, που είναι εγκεκριμένες από την αρμόδια αρχή, κάτω από τις οποίες μία αποστολή που δεν ικανοποιεί όλες τις εφαρμόσιμες διατάξεις των Προγραμμάτων 5-12 του περιθωριακού 2704, μπορεί να μεταφερθεί. Αποστολές αυτού του τύπου απαιτούν πολυμερή έγκριση.

*Ειδικής μορφής ραδιενεργό υλικό*

20. *Ειδικής μορφής ραδιενεργό υλικό* θα σημαίνει είτε ένα μη-διασπαρόμενο στερεό ραδιενεργό υλικό είτε μία σφραγισμένη κάψουλα που περιέχει ραδιενεργό υλικό (βλέπε περιθωριακό 3731).

*Σχετική δραστηριότητα*

21. *Σχετική δραστηριότητα* θα σημαίνει την δραστηριότητα ενός ραδιονουκλεϊδίου ανά μονάδα βάρους εκείνου του νουκλεϊδίου. Η σχετική δραστηριότητα ενός υλικού στο οποίο το ραδιονουκλεϊδιο είναι ουσιαστικά ομοιόμορφα κατανεμημένο, είναι η δραστηριότητα ανά μονάδα βάρους του υλικού.

*Επιφανειακά μολυσμένο αντικείμενο*

22. *Επιφανειακά μολυσμένο αντικείμενο (SCO)* θα σημαίνει ένα στερεό αντικείμενο που δεν είναι αφ' εαυτού ραδιενεργό αλλά που έχει ραδιενεργό υλικό κατανεμημένο στις επιφάνειές του. Τα SCO θα πρέπει να είναι σε μία από τις δύο ομάδες:

- (a) SCO-I: Ένα στερεό αντικείμενο πάνω στο οποίο:

<sup>2/</sup> Για χάρη σαφήνειας, το επίπεδο ακτινοβολίας μπορεί επίσης να υποδεικνύεται, σε παρενθέσεις, σε millirem ανά ώρα. Αναγνωρίζεται ότι τα millisievert ή τα millirem δεν είναι οι σωστές μονάδες που θα έπρεπε να εφαρμόζονται για την έκθεση σε ακτινοβολία σε όλες τις περιπτώσεις, παρ' όλα αυτά, αυτές οι μονάδες χρησιμοποιούνται αποκλειστικά για ευκολία.

## Κλάση 7

2700  
(συνεχ.)

- (i) η μη-μόνιμη μόλυνση πάνω στην προστιθέ επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδό της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $4 \text{ Bq/cm}^2$  ( $10^{-4} \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $0.4 \text{ Bq/cm}^2$  ( $10^{-5} \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς, και
- (ii) η μόνιμη μόλυνση πάνω στην προστιθέ επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδό της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $4 \times 10^4 \text{ Bq/cm}^2$  ( $1 \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $4 \times 10^3 \text{ Bq/cm}^2$  ( $0.1 \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς, και
- (iii) η μη-μόνιμη μόλυνση συν η μόνιμη μόλυνση πάνω στην απρόσιτη επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδόν της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $4 \times 10^4 \text{ Bq/cm}^2$  ( $1 \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $4 \times 10^3 \text{ Bq/cm}^2$  ( $0.1 \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς.
- (b) SCO-II: Ένα στερεό αντικείμενο στο οποίο είτε η μόνιμη είτε η μη-μόνιμη μόλυνση πάνω στην επιφάνεια υπερβαίνει τα εφαρμόσιμα όρια που ορίζονται για τα SCO-I στο (a) παραπάνω στο οποίο:
- (i) η μη-μόνιμη μόλυνση στην προστιθέ επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδόν της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $400 \text{ Bq/cm}^2$  ( $10^{-2} \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $40 \text{ Bq/cm}^2$  ( $10^{-3} \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς, και
- (ii) η μόνιμη μόλυνση πάνω στην προστιθέ επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδόν της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $8 \times 10^5 \text{ Bq/cm}^2$  ( $20 \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $8 \times 10^4 \text{ Bq/cm}^2$  ( $2 \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς, και
- (iii) η μη-μόνιμη μόλυνση συν την μόνιμη μόλυνση πάνω στην απρόσιτη επιφάνεια υπολογιζόμενη κατά μέσον όρο πάνω από  $300 \text{ cm}^2$  (ή στο εμβαδόν της επιφάνειας εάν είναι μικρότερο από  $300 \text{ cm}^2$ ) δεν υπερβαίνει τα  $8 \times 10^5 \text{ Bq/cm}^2$  ( $20 \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $8 \times 10^4 \text{ Bq/cm}^2$  ( $2 \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς.

## Δείκτης μεταφοράς

23. Δείκτης μεταφοράς (ΠΙ) θα σημαίνει έναν μόνο αριθμό καταχωρούμενο σε ένα κύκλο, υπερσυσκευασία, δεξαμενή ή εμπορευματοκιβώτιο, ή σε μη-συσκευασμένα LSA-I ή SCO-I, που χρησιμοποιείται για να παρέχει έλεγχο πάνω τόσο στην ασφάλεια πυρηνικής κρισιμότητας όσο και στην έκθεση σε ακτινοβολία (βλέπε περιθωριακό 3715). Επίσης χρησιμοποιείται για τον καθορισμό ορίων σε ορισμένα κύκλα, υπερσυσκευασίες, δεξαμενές και εμπορευματοκιβώτια, τον καθορισμό κατηγοριών για επισήμανση, τον προσδιορισμό εάν μεταφορά υπό αποκλειστική χρήση θα πρέπει να απαιτείται, τον καθορισμό διατάξεων αραίωσης κατά τη διάρκεια της αποθήκευσης σε διαμετακόμιση, τον καθορισμό περιορισμών στις μικτές φορτώσεις κατά τη διάρκεια μεταφοράς υπό ειδικές ρυθμίσεις και κατά τη διάρκεια αποθήκευσης σε διαμετακόμιση και τον καθορισμό του επιτρεπόμενου αριθμού κύκλων σε ένα εμπορευματοκιβώτιο ή πάνω σ' ένα όχημα (βλέπε Τομέα II της προσθήκης A.7).

## Κλάση 7

2700  
(συνεχ.)

*Μη-εκπέμπον θόριο*

24. *Μη-εκπέμπον θόριο* θα σημαίνει θόριο που περιέχει όχι περισσότερο από  $10^{-7}$  g ουράνιο-233 ανά γραμ. θόριου 232.

*Μη-εκπέμπον ουράνιο*

25. *Μη-εκπέμπον ουράνιο* θα σημαίνει ουράνιο που περιέχει όχι περισσότερο από  $10^{-6}$  g πλουτόνιο ανά γραμ. ουράνιο-235 και όχι περισσότερο από 9 MBq (0.20 mCi) σχάσιμων προϊόντων ανά γραμ. ουράνιο-235.

*Ουράνιο - φυσικό, εξαντλημένο, εμπλουτισμένο*

26. *Φυσικό ουράνιο* θα σημαίνει χημικώς απομονωμένο ουράνιο που περιέχει την φυσικά παραγόμενη κατανομή ισοτόπων του ουράνιου (περίπου 99.28% ουράνιο-238 και 0.72% ουράνιο-235). *Εξαντλημένο ουράνιο* θα σημαίνει ουράνιο που περιέχει μικρότερο ποσοστό βάρους ουράνιου-235 απ' ότι το φυσικό ουράνιο. *Εμπλουτισμένο ουράνιο* θα σημαίνει ουράνιο που περιέχει μεγαλύτερο ποσοστό βάρους ουράνιου-235 απ' ότι το φυσικό ουράνιο. Σε όλες τις περιπτώσεις ένα πολύ μικρό ποσοστό βάρους ουράνιου-234 είναι παρόν.

## 2701 (1) Κατάλογος υλών

Χαρακτηριστικός αριθμός <sup>3/</sup> και ονομασία της ύλης ή του αντικείμενου	Πρόγραμμα
<u>2910 Ραδιενεργό υλικό, εξαιρούμενο κόλο</u> - όργανα ή είδη - περιορισμένη ποσότητα υλικού - είδη παραγόμενα από φυσικό ή εξαντλημένο ουράνιο ή φυσικό θόριο - κενή συσκευασία	2 1 3 4
<u>2912 Ραδιενεργό υλικό, χαμηλή σχετική δραστικότητα (LSA), ε.α.ο.</u> - LSA-I - LSA-II - LSA-III - υπό ειδική ρύθμιση	5 6 7 13
<u>2913 Ραδιενεργό υλικό, επιφανειακά μολυσμένα αντικείμενα (SCO)</u> - SCO-I και SCO-II - υπό ειδική ρύθμιση	8 13
<u>2918 Ραδιενεργό υλικό, σγάζιμο, ε.α.ο.</u> - σε κόλα Τύπου IF, Τύπου AF, Τύπου B(U)F ή Τύπου B(M)F - υπό ειδική ρύθμιση	12 13

## Κλάση 7

**2701** (2) Τα υλικά και είδη αυτής της κλάσης περιέχουν ένα ή περισσότερα από τα ραδιονουκλεΐδια (συνεχ.) που αναφέρονται στον Τομέα 1 της προσθήκης A.7 (περιθωριακά 3700 και 3701).

(3) Ο παρακάτω κατάλογος θέτει τα προγράμματα του περιθωριακού 2704:

1. Περιορισμένες Ποσότητες Ραδιενεργού Υλικού σε Εξαιρούμενα Κόλα.
2. Όργανα ή Είδη σε Εξαιρούμενα Κόλα.
3. Είδη Παραγόμενα από Φυσικό Ουράνιο, Εξαντλημένο Ουράνιο ή Φυσικό Θόριο ως Εξαιρούμενα Κόλα.
4. Κενές Συσκευασίες ως Εξαιρούμενα Κόλα.
5. Χαμηλής Σχετικής Δραστικότητας Υλικό (LSA-I).
6. Χαμηλής Σχετικής Δραστικότητας Υλικό (LSA-II).
7. Χαμηλής Σχετικής Δραστικότητας Υλικό (LSA-III).
8. Επιφανειακά Μολυσμένα Αντικείμενα (SCO-I και SCO-II).
9. Ραδιενεργό Υλικό σε Κόλα Τύπου A.
10. Ραδιενεργό Υλικό σε Κόλα Τύπου B(U).
11. Ραδιενεργό Υλικό σε Κόλα Τύπου B(M).
12. Σχάσιμο Υλικό.
13. Ραδιενεργό Υλικό Μεταφερόμενο υπό Ειδική Ρύθμιση.

(4) Οι διατάξεις για τους διάφορους τύπους αποστολής περιέχονται σε 13 κεφάλαια σε συμφωνία με το περιθωριακό 2003 (3):

(i) Κοινές διατάξεις για τα Προγράμματα 1 έως 4 συνοψίζονται στο περιθωριακό 2702,

(ii) Κοινές διατάξεις για τα Προγράμματα 5 έως 13 συνοψίζονται στο περιθωριακό 2703.

**2702 Κοινές Διατάξεις για τα Προγράμματα 1 έως 4 του περιθωριακού 2704:**

1. Υλικά  
Βλέπε κατάλληλο πρόγραμμα.
2. Συσκευασία/Κόλο  
Βλέπε κατάλληλο πρόγραμμα.
3. Μέγιστο Επίπεδο Ακτινοβολίας  
5 mSv/h (0.5 mrem/h) σε οποιοδήποτε σημείο πάνω στην εξωτερική επιφάνεια του κόλου.

## Κλάση 7

- 2702 4. Μόλυνση πάνω στα Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες (συνεχ.)

Η μη-μόνιμη μόλυνση σε όλες τις εξωτερικές επιφάνειες και επιπλέον στις εσωτερικές επιφάνειες των οχημάτων, εμπορευματοκιβωτίων, δεξαμενών και υπερσυσκευασιών που χρησιμοποιούνται για τη μεταφορά εξαιρούμενων κόλων θα πρέπει να διατηρείται όσο χαμηλή είναι πρακτικά δυνατόν και δεν θα πρέπει να υπερβαίνει τα παρακάτω όρια:

- (a) Βήτα / γάμα / χαμηλής-τοξικότητας άλφα εκπομποί

$$0.4 \text{ Bq/cm}^2 (10^{-5} \text{ mCi/cm}^2)$$

- (b) Όλοι οι άλλοι άλφα εκπομποί

$$0.04 \text{ Bq/cm}^2 (10^{-6} \text{ mCi/cm}^2)$$

5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών

Οχήματα, συσκευές ή μέρη αυτών που έχουν μολυνθεί, θα πρέπει να απολυμνούνται το συντομότερο δυνατόν και σε οποιαδήποτε περίπτωση πριν από την επαναχρησιμοποίηση, με τα επίπεδά να μην υπερβαίνουν:

- (a) για μη-μόνιμη μόλυνση,

$$0.4 \text{ Bq/cm}^2 (10^{-5} \text{ mCi/cm}^2) \text{ για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς, και}$$

$$0.04 \text{ Bq/cm}^2 (10^{-6} \text{ mCi/cm}^2) \text{ για όλους τους άλλους άλφα εκπομπούς.}$$

- (b) επίπεδο ακτινοβολίας 5 mSv/h (0.5 mrem/h) στην επιφάνεια λόγω μόνιμης μόλυνσης.

6. Μικτή Συσκευασία

Δεν υπάρχουν διατάξεις.

7. Μικτή Φόρτωση

Δεν υπάρχουν διατάξεις.

8. Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτιο, Δεξαμενές και Υπερσυσκευασίες

Βλέπε κατάλληλο πρόγραμμα.

9. Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές

Βλέπε κατάλληλο πρόγραμμα.

10. Έγγραφα μεταφοράς

Βλέπε κατάλληλο πρόγραμμα.

11. Αποθήκευση και Αποστολή

Δεν υπάρχουν διατάξεις.

## Κλάση 7

2702 12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών  
(συνεχ.)

Δεν υπάρχουν διατάξεις.

13. Άλλες Διατάξεις

(a) Διατάξεις ατυχήματος: βλέπε περιθωριακά 2710 και 3712.

(b) Φθαρμένα ή διαρρέοντα κόλα: βλέπε περιθωριακό 3712.

(c) Έρευνες μόλυνσης: βλέπε περιθωριακό 3712 (3).

(d) Εξασφάλιση ποιότητας: βλέπε περιθωριακό 3766.

(e) Μη-παραλαμβανόμενες αποστολές: βλέπε περιθωριακό 2715.

2703 Κοινές Διατάξεις για τα Προγράμματα 5 έως 13 του περιθωριακού 2704:

1. Υλικά

Βλέπε κατάλληλο πρόγραμμα.

2. Συσκευασία/Κόλο

Βλέπε κατάλληλο πρόγραμμα.

3. Μέγιστο Επίπεδο Ακτινοβολίας

(a) Τα επίπεδα ακτινοβολίας για κόλα ή υπερσυσκευασίες όχι μεταφερόμενες υπό αποκλειστική χρήση δεν θα πρέπει να υπερβαίνουν:

(i) 2 mSv/h (200 mrem/h) σε οποιοδήποτε σημείο σε οποιαδήποτε εξωτερική επιφάνεια, και

(ii) 0.1 mSv/h (10 mrem/h) σε 1 μέτρο από εκείνη την επιφάνεια.

(b) Τα επίπεδα επιφανειακής ακτινοβολίας για κόλα ή υπερσυσκευασίες μεταφερόμενες υπό αποκλειστική χρήση μπορούν να υπερβαίνουν τα 2 mSv/h (200 mrem/h) αλλά σε καμία περίπτωση δεν θα πρέπει να υπερβαίνουν τα 10 mSv/h (1 000 mrem/h), υπό την προϋπόθεση ότι:

(i) το όχημα είναι εξοπλισμένο με περίφραξη που παρεμποδίζει μη-εξουσιοδοτημένη πρόσβαση στο φορτίο κατά τη διάρκεια της μεταφοράς, και

(ii) το κόλο ή υπερσυσκευασία είναι ασφαλισμένη ώστε να διατηρεί τη θέση της μέσα στην περίφραξη κατά τη διάρκεια συνήθους μεταφοράς, και

(iii) δεν υπάρχουν διαδικασίες φόρτωσης ή εκφόρτωσης μεταξύ την έναρξη και το πέρας της αποστολής.

4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες

Η μη-μόνιμη μόλυνση σε όλες τις εξωτερικές επιφάνειες και επιπλέον στις εσωτερικές επιφάνειες οχημάτων, εμπορευματοκιβωτίων, δεξαμενών και υπερσυσκευασιών που χρησιμοποιούνται για μεταφορά κόλων θα πρέπει να διατηρείται όσο χαμηλή είναι πρακτικά δυνατόν και δεν θα πρέπει να υπερβαίνει τα παρακάτω όρια:

## Κλάση 7

2703  
(συνεχ.)

- (a) Βήτα/γάμμα/χαμηλής-τοξικότητας άλφα εκπομποί:
- 0.4 Bq/cm<sup>2</sup> (10<sup>-5</sup> mCi/cm<sup>2</sup>) για αποστολές που επίσης περιλαμβάνουν εξαιρούμενα κόλα και/ή μη-ραδιενεργά εμπορεύματα,
- 4 Bq/cm<sup>2</sup> (10<sup>-4</sup> mCi/cm<sup>2</sup>) για όλες τις άλλες αποστολές.
- (b) Όλοι οι άλλοι άλφα εκπομποί:
- 0.04 Bq/cm<sup>2</sup> (10<sup>-6</sup> mCi/cm<sup>2</sup>) για αποστολές που επίσης περιλαμβάνουν εξαιρούμενα κόλα και/ή μη-ραδιενεργά εμπορεύματα,
- 0.4 Bq/cm<sup>2</sup> (10<sup>-5</sup> mCi/cm<sup>2</sup>) για όλες τις άλλες αποστολές.

## 5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών

Όχηματα, εξαρτήματα ή μέρη αυτών που έχουν μολυνθεί πάνω από τα όρια της παραγράφου 4, ή που εμφανίζουν επίπεδο επιφανειακής ακτινοβολίας μεγαλύτερο από 5mSv/h (0.5 mrem/h) θα πρέπει να απολυμαίνονται το συντομότερο δυνατόν και σε οποιαδήποτε περίπτωση πριν την επαναχρησιμοποίηση, σε επίπεδα όχι μεγαλύτερα από:

- (a) για μη-μόνιμη μόλυνση, βλέπε διατάξεις στο 4,
- (b) επίπεδο ακτινοβολίας 5 mSv/h (0.5 mrem/h) στην επιφάνεια λόγω μόνιμης μόλυνσης.

## 6. Μικτή Συσκευασία

Βλέπε περιθωριακό 3711 (1).

## 7. Μικτή Φόρτωση

- (a) Κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 7Α, 7Β ή 7C δεν θα πρέπει να φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.
- (b) Σε όλες τις άλλες περιπτώσεις μικτή φόρτωση είναι επιτρεπόμενη. Όμως, μικτή φόρτωση σε αποστολή υπό αποκλειστική χρήση θα πρέπει να κανονίζεται μόνον από τον αποστολέα.

## 8. Μαρκάρισμα και Ετικέτες κινδύνου στα Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες

Οι παρακάτω διατάξεις εφαρμόζονται σε κόλα, εμπορευματοκιβώτια, δεξαμενές και υπερσυσκευασίες με μη-σχάσιμο υλικό.

Για κόλα που περιέχουν σχάσιμο υλικό και για εμπορευματοκιβώτια και υπερσυσκευασίες που περιέχουν κόλα με σχάσιμο υλικό, βλέπε επιπλέον Πρόγραμμα 12.

- (a) Κόλα και υπερσυσκευασίες, πέραν από εμπορευματοκιβώτια ή δεξαμενές.

## Κλάση 7

2703  
(συνεχ.)

- (i) Τέτοια κόλα και υπερσυσκευασίες θα πρέπει, ανάλογα με την κατηγορία (βλέπε περιθωριακό 3718), να φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 7Α, 7Β ή 7C, συμπληρωμένες σε συμφωνία με το περιθωριακό 2706 (3). Οι ετικέτες θα πρέπει να τοποθετούνται σε δύο αντίθετες πλευρές των κόλων και υπερσυσκευασιών.
- (ii) Κάθε ετικέτα θα πρέπει να είναι μαρκαρισμένη με τη μέγιστη δραστηκότητα του ραδιενεργού περιεχομένου κατά τη διάρκεια της μεταφοράς.
- (iii) Κάθε κίτρινη ετικέτα θα πρέπει να είναι μαρκαρισμένη με τον δείκτη μεταφοράς για το κόλο ή υπερσυσκευασία.
- (iv) Στην περίπτωση υλών των παρακάτω χαρακτηριστικών αριθμών που αναφέρονται στο περιθωριακό 2701 (1), θα πρέπει επίσης να τοποθετούνται οι παρακάτω πρόσθετες ετικέτες:
- |      |  |                        |
|------|--|------------------------|
| 2975 | Μεταλλικό θόριο, πυροφορικό  | )                      |
|      |  | ) Υπόδειγμα Αριθμ. 4.2 |
| 2979 | Μεταλλικό ουράνιο, πυροφορικό  | )                      |
| 2976 | Νιτρικό θόριο, στερεό  | )                      |
|      |  | ) Υπόδειγμα Αριθμ. 05  |
| 2981 | Νιτρικό ουρανύλιο, στερεό  | )                      |
| 2977 | Εξαφθοριούχο ουράνιο<br>σχάσιμο, που περιέχει περισσότερο)<br>από 1% ουράνιο 235 | )                      |
|      |  | )                      |
| 2978 | Εξαφθοριούχο ουράνιο,<br>σχάσιμο εξαιρούμενο ή<br>μη-σχάσιμο                     | )                      |
|      |  | ) Υπόδειγμα Αριθμ. 8   |
|      |  | )                      |
| 2980 | Διάλυμα νιτρικού ουρανύλιου<br>εξα-ένυδρο  | )                      |
|      |  | )                      |
- (v) Κόλα με μικτό βάρος μεγαλύτερο από 50 kg θα πρέπει να είναι μαρκαρισμένα καθαρά και με τρόπο διαρκείας με το επιτρεπτό μικτό βάρος τους στην εξωτερική πλευρά.
- (vi) Κάθε κόλο εκτός από εμπορευματοκιβώτια-δεξαμενές και υπερσυσκευασίες θα πρέπει να είναι καθαρά μαρκαρισμένο με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα εγγραφεται στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".
- (vii) Οποιοσδήποτε ετικέτες που δεν σχετίζονται με το περιεχόμενο θα πρέπει να αφαιρούνται ή να καλύπτονται.
- (b) Εμπορευματοκιβώτια, επίσης όταν που χρησιμοποιούνται ως υπερσυσκευασίες, και δεξαμενές.
- (i) Τέτοια εμπορευματοκιβώτια και δεξαμενές θα πρέπει, ανάλογα με την κατηγορία (βλέπε περιθωριακό 3718), να φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 7Α, 7Β ή 7C, συμπληρωμένες σε συμφωνία με το περιθωριακό 2706 (3).
- Δεξαμενές, καθώς και μεγάλα εμπορευματοκιβώτια που περιέχουν κόλα άλλα από εξαιρούμενα κόλα, θα πρέπει επιπλέον να φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7D.

## Κλάση 7

2703  
(συνεχ.)

Αντί για ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7Α, 7Β ή 7C και επιπλέον ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7D, μεγεθυμένες ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7Α, 7Β ή 7C με τις διαστάσεις του υποδείγματος Αριθμ. 7D μπορούν να χρησιμοποιηθούν.

Οι ετικέτες θα πρέπει να τοποθετούνται και στις τέσσερις πλευρές των εμπορευματοκιβωτίων και εμπορευματοκιβωτίων-δεξαμενών, και στις δύο πλευρές και το πίσω μέρος των οχημάτων-δεξαμενών.

(ii) Στην περίπτωση υλών των παρακάτω χαρακτηριστικών αριθμών που αναφέρονται στο περιθωριακό 2701 (1), οι παρακάτω πρόσθετες ετικέτες θα πρέπει επίσης να τοποθετούνται:

2975 Μεταλλικό θόριο, πυροφορικό	)	) Υπόδειγμα Αριθμ. 4.2
2979 Μεταλλικό ουράνιο, πυροφορικό	)	
2976 Νιτρικό θόριο, στερεό	)	) Υπόδειγμα Αριθμ. 05
2981 Νιτρικό ουρανόλιο, στερεό	)	
2977 Εξαφθοριούχο ουράνιο σχάσιμο, που περιέχει περισσότερο από 1% ουράνιο 235	) ) )	) Υπόδειγμα Αριθμ. 8
2978 Εξαφθοριούχο ουράνιο, σχάσιμο εξαιρούμενο ή μη-σχάσιμο	) ) )	
2980 Διάλυμα νιτρικού ουρανόλιου εξα-ένυδρο	) )	

(iii) Οχήματα-δεξαμενές και εμπορευματοκιβώτια-δεξαμενές καθώς και οχήματα και εμπορευματοκιβώτια για μεταφορά χύμα θα πρέπει να είναι μαρκαρισμένα σε συμφωνία με το περιθωριακό 10 500 και Προσθήκη Β.5.

(iv) Εκτός εάν πρόκειται για μικτά φορτία, κάθε ετικέτα θα πρέπει να είναι μαρκαρισμένη με τη μέγιστη δραστηριότητα του ραδιενεργού περιεχομένου του εμπορευματοκιβωτίου ή της υπερσυσκευασίας κατά τη διάρκεια της μεταφοράς, αθροισμένη για όλο το περιεχόμενο. Για μικτά φορτία, βλέπε περιθωριακό 2706 (3).

(v) Κάθε κίτρινη ετικέτα θα πρέπει να είναι μαρκαρισμένη με τον δείκτη μεταφοράς για το εμπορευματοκιβώτιο ή την υπερσυσκευασία.

(vi) Τα εμπορευματοκιβώτια και δεξαμενές θα πρέπει να είναι καθαρά και μαρκαρισμένα με τρόπο διαρκείας στην εξωτερική πλευρά με το επιτρεπτό μικτό βάρος τους.

(vii) Οποιοδήποτε μαρκάρισμα ή ετικέτα κινδύνου που δεν σχετίζεται με το περιεχόμενο θα πρέπει να αφαιρείται ή να καλύπτεται.

9. Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές

(a) (i) Για αποστολές συσκευασμένου ή μη-συσκευασμένου ραδιενεργού υλικού, ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7D θα πρέπει να τοποθετούνται με κάθετο προσανατολισμό στα δύο πλευρικά τοιχώματα και στο πίσω τοίχωμα της μονάδας μεταφοράς.

## Κλάση 7

2703 (συνεχ.) (ii) Στην περίπτωση υλών των παρακάτω χαρακτηριστικών αριθμών που αναφέρονται στο περιθωριακό 2701 (1), θα πρέπει επίσης να τοποθετούνται οι παρακάτω πρόσθετες ετικέτες:

2975 Μεταλλικό θόριο, πυροφορικό	)	Υπόδειγμα Αριθμ. 4.2
2979 Μεταλλικό ουράνιο, πυροφορικό	)	
2976 Νιτρικό θόριο, στερεό	)	Υπόδειγμα Αριθμ. 05
2981 Νιτρικό ουρανύλιο, στερεό	)	
2977 Εξαφθοριούχο ουράνιο, σχάσιμο, που περιέχει περισσότερο από 1% ουράνιο-235	)	
2978 Εξαφθοριούχο ουράνιο, σχάσιμο εξαιρούμενο ή μη-σχάσιμο	)	Υπόδειγμα Αριθμ. 8
2980 Διάλυμα νιτρικού ουρανύλιου εξα-ένυδρο	)	

(b) Οποιαδήποτε ετικέτα κινδύνου που δεν σχετίζεται με το περιεχόμενο θα πρέπει να αφαιρείται ή να καλύπτεται.

## 10. Έγγραφα μεταφοράς

Βλέπε κατάλληλο πρόγραμμα.

## 11. Αποθήκευση και Αποστολή

(a) Κατά τη διάρκεια της αποθήκευσης απαιτείται διαχωρισμός από άλλα επικίνδυνα εμπορεύματα και από άτομα και μη-εμφανισμένες φωτογραφικές πλάκες και φιλμ:

- (i) για διαχωρισμό από άλλα επικίνδυνα εμπορεύματα - βλέπε τις διατάξεις στο κεφάλαιο 7,
- (ii) για διαχωρισμό από άτομα, από κόλα μαρκαρισμένα με 'FOTO' και από ταχυδρομικούς σάκους - βλέπε περιθωριακό 2711 για πίνακες διαχωρισμού.

(b) Περιορισμός συνολικού δείκτη μεταφοράς για αποθήκευση εκτός από LSA-I:

- (i) Ο αριθμός των κόλων, υπερσυσκευασιών, δεξαμενών και εμπορευματοκιβωτίων της κατηγορίας II-κίτρινο και της κατηγορίας III-κίτρινο, που αποθηκεύονται σε οποιοδήποτε μέρος, θα πρέπει να περιορίζεται έτσι ώστε το ολικό άθροισμα των δεικτών μεταφοράς σε οποιαδήποτε μεμονωμένη ομάδα τέτοιων κόλων, υπερσυσκευασιών, δεξαμενών ή εμπορευματοκιβωτίων να μην υπερβαίνει το 50. Τέτοιες ομάδες θα πρέπει να αποθηκεύονται έτσι ώστε να διατηρούν διάστημα τουλάχιστον 6 m το ένα από το άλλο.
- (ii) Όπου ο δείκτης μεταφοράς ενός μεμονωμένου κόλου, υπερσυσκευασίας, δεξαμενής ή εμπορευματοκιβωτίου υπερβαίνει το 50 ή ο συνολικός δείκτης μεταφοράς σ' ένα όχημα υπερβαίνει το 50, η αποθήκευση θα πρέπει να γίνεται έτσι ώστε να διατηρεί διάστημα τουλάχιστον 6 m από τα άλλα κόλα, υπερσυσκευασίες, δεξαμενές, εμπορευματοκιβώτια ή οχήματα που μεταφέρουν ραδιενεργό υλικό.

## Κλάση 7

2703  
(συνεχ.)

## 12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών

- (1) Βλέπε κατάλληλο πρόγραμμα.
- (2) (a) Κατά τη διάρκεια της μεταφοράς απαιτείται διαχωρισμός από άλλα επικίνδυνα εμπορεύματα και από άτομα και μη-εμφανισμένα φωτογραφικά φιλμ και πλάκες:
  - (i) για διαχωρισμό από άλλα επικίνδυνα εμπορεύματα - βλέπε τις διατάξεις στο κεφάλαιο 7,
  - (ii) για διαχωρισμό από άτομα, από κόλα μαρκαρισμένα ως 'FOTO' και από ταχυδρομικούς σάκους - βλέπε περιθωριακό 2711 για πίνακες διαχωρισμού.
- (b) Περιορισμός συνολικού δείκτη μεταφοράς για μεταφορά εκτός από LSA-I:
 

Ο συνολικός αριθμός κόλων, υπερσυσκευασιών, δεξαμενών και εμπορευματοκιβωτίων σε ένα μόνο όχημα θα πρέπει να περιορίζεται έτσι, ώστε το άθροισμα των δεικτών μεταφοράς να μην υπερβαίνει το 50. Για αποστολές υπό αποκλειστική χρήση αυτό το όριο δεν εφαρμόζεται - βλέπε περιθωριακό 3711 (3).
- (c) Οποιοδήποτε κόλο ή υπερσυσκευασία με δείκτη μεταφοράς μεγαλύτερο από 10, θα πρέπει να μεταφέρεται μόνον υπό αποκλειστική χρήση.
- (d) Μέγιστα επίπεδα ακτινοβολίας για οχήματα:
  - (i) 2 mSv/h (200 mrem/h) στην επιφάνεια των οχημάτων,
  - (ii) 0.1 mSv/h (10 mrem/h) σε 2 μέτρα από την επιφάνεια των οχημάτων,
  - (iii) 0.02 mSv/h (2 mrem/h) σε οποιαδήποτε κανονικά κατειλημμένη θέση σε ένα όχημα, εάν δεν χρησιμοποιούνται προσωπικές συσκευές ένδειξης.

## 13. Άλλες Διατάξεις

- (a) Προσδιορισμός δείκτη μεταφοράς: βλέπε περιθωριακό 3715.
- (b) Διατάξεις ατυχήματος: βλέπε περιθωριακά 2710, 3712 και 10 385.
- (c) Φθαρμένα ή διαρρέοντα κόλα: βλέπε περιθωριακό 3712.
- (d) Έρευνες μόλυνσης: βλέπε περιθωριακό 3712 (3).
- (e) Εξασφάλιση ποιότητας: βλέπε περιθωριακό 3766.
- (f) Μη-παραλαμβανόμενες αποστολές: βλέπε περιθωριακό 2715.
- (g) Εξαρτήματα και λειτουργίες μεταφοράς: βλέπε Παράρτημα Β, Μέρος I και περιθωριακό 71 000 και επόμενα.

## 2704 Πρόγραμμα 1

## ΠΕΡΙΟΡΙΣΜΕΝΕΣ ΠΟΣΟΤΗΤΕΣ ΡΑΔΙΕΝΕΡΓΟΥ ΥΛΙΚΟΥ ΣΕ ΕΞΑΙΡΟΥΜΕΝΑ ΚΟΛΑ

**ΣΗΜΕΙΩΣΗ 1:** Ραδιενεργό υλικό σε ποσότητες που προσφέρουν έναν πολύ περιορισμένο κίνδυνο ακτινοβολίας, μπορεί να μεταφέρεται σε εξαιρούμενα κόλα.

**ΣΗΜΕΙΩΣΗ 2:** Για άλλες επικίνδυνες ιδιότητες, βλέπε τις διατάξεις στα περιθωριακά 2002 (12) και (13), και 3770.

## 1. Υλικά

2910 Ραδιενεργό υλικό, εξαιρούμενο κόλο, περιορισμένη ποσότητα υλικού.

- (a) Μη-σχάσιμο ραδιενεργό υλικό σε ποσότητες που δεν υπερβαίνουν τα όρια που ορίζονται στον Πίνακα 1.
- (b) Σχάσιμο υλικό με δραστηκότητα που δεν υπερβαίνει τα όρια που ορίζονται στον Πίνακα 1 και επιπλέον, που ικανοποιεί όσον αφορά στις ποσότητες, στη μορφή και στη συσκευασία τις διατάξεις που δίνονται στο περιθωριακό 3741 της προσθήκης A.7. επιτρέποντάς τους να τακτοποιούνται ως κόλα μη-σχάσιμου ραδιενεργού υλικού.

**Πίνακας 1:** Όρια δραστηκότητας, ως τιμές των  $A_1$  ή  $A_2$  για εξαιρούμενα κόλα που περιέχουν ραδιενεργό υλικό<sup>4/</sup>,<sup>5/</sup>.

Φύση περιεχομένου	Όρια κόλου
Στερεά:	
Ειδική Μορφή	$10^3 A_1$
Άλλες Μορφές	$10^3 A_2$
Υγρά	$10^4 A_2$
Αέρια:	
Τρίτιο	$2 \times 10^2 A_2$
Ειδική Μορφή	$10^3 A_1$
Άλλες Μορφές	$10^3 A_2$

<sup>4/</sup> Για συγκεκριμένες τιμές των  $A_1$  και  $A_2$ , βλέπε Πίνακα 1 του περιθωριακού 3700 της Προσθήκης A.7.

<sup>5/</sup> Για μείγματα ραδιονουκλεϊδίων, οι μέθοδοι για τον προσδιορισμό των  $A_1$  και  $A_2$  δίνονται στο περιθωριακό 3701 (3) της προσθήκης A.7.

**2. Συσκευασία/Κόλο**

Ραδιενεργό υλικό σε περιορισμένες ποσότητες μπορεί να μεταφέρεται σε συσκευασίες, δεξαμενές και εμπορευματοκιβώτια, υπό την προϋπόθεση ότι:

- (a) Η συσκευασία θα πρέπει να είναι σε συμφωνία με τις γενικές διατάξεις για όλες τις συσκευασίες και τα κόλα που δίνονται στο περιθωριακό 3732 της προσθήκης Α.7 και επιπλέον, για δεξαμενές, Προσθήκες Β.1α και Β.1b.
- (b) Κόλα που περιέχουν σχάσιμο υλικό θα πρέπει να ικανοποιούν τουλάχιστον μία από τις διατάξεις που ορίζονται στο περιθωριακό 3741 της προσθήκης Α.7.
- (c) Ειδικά, το κόλο θα πρέπει να σχεδιάζεται έτσι ώστε κατά τη διάρκεια συνήθους μεταφοράς να μην υπάρχει διαρροή του ραδιενεργού περιεχομένου. Ραδιενεργό υλικό δεν θα πρέπει να μεταφέρεται χύμα.

**3. Μέγιστο Επίπεδο Ακτινοβολίας**

Βλέπε περιθωριακό 2702.

**4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**

Βλέπε περιθωριακό 2702.

**5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**

Βλέπε περιθωριακό 2702.

**6. Μικτή Συσκευασία**

Δεν υπάρχουν διατάξεις.

**7. Μικτή Φόρτωση**

Δεν υπάρχουν διατάξεις.

**8. Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες****(a) Κόλα**

- (i) Μαρκάρισμα: βλέπε περιθωριακό 2702  
Επισήμανση: Δεν υπάρχουν διατάξεις

- (ii) Η συσκευασία θα πρέπει να είναι μαρκαρισμένη ως "Ραδιενεργό" σε μία εσωτερική επιφάνεια ως προειδοποίηση για την παρουσία ραδιενεργού υλικού κατά το άνοιγμα του κόλου.

**(b) Εμπορευματοκιβώτια**

Δεν υπάρχουν διατάξεις.

## (c) Δεξαμενές

Βλέπε Προσθήκη B.1a/ B.1b, περιθωριακό 211 760/ 212 760 και Προσθήκη B.5.

## (d) Υπερσυσκευασίες

Δεν υπάρχουν διατάξεις.

9. **Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές**

Δεν υπάρχουν διατάξεις.

10. **Έγγραφο μεταφοράς**

Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει την περιγραφή "2910 Ραδιενεργό υλικό, εξαιρούμενο κόλο, περιορισμένη ποσότητα υλικού, 7, Πρόγραμμα 1, ADR (ή RID)".

11. **Αποθήκευση και Αποστολή**

Δεν υπάρχουν διατάξεις.

12. **Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών**

Δεν υπάρχουν διατάξεις.

13. **Άλλες Διατάξεις**

Βλέπε περιθωριακό 2702.

## Κλάση 7

2704 Πρόγραμμα 2  
(συνεχ.)

**ΟΡΓΑΝΑ Η ΕΙΔΗ ΣΕ ΕΞΑΙΡΟΥΜΕΝΑ ΚΟΛΑ**

**ΣΗΜΕΙΩΣΗ 1:** Ορισμένες ποσότητες ραδιενεργού υλικού, που είναι κλεισμένες σε ή σχηματίζουν ένα συστατικό μέρος ενός οργάνου ή άλλου κατασκευασμένου είδους και που προσφέρουν πολύ περιορισμένο κίνδυνο ακτινοβολίας, μπορούν να μεταφέρονται σε εξαιρούμενα κόλα.

**ΣΗΜΕΙΩΣΗ 2:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

**1. Υλικά****2910 Ραδιενεργό υλικό, εξαιρούμενο κόλο, όργανα ή είδη.**

- (a) Όργανα και κατασκευασμένα είδη όπως ρολόγια, ηλεκτρονικοί σωλήνες ή συσκευές που έχουν ως συστατικό μέρος, ραδιενεργό υλικό σε ποσότητες που δεν υπερβαίνουν τα όρια είδους και κόλου που ορίζονται στις στήλες 2 και 3 του Πίνακα 2, υπό την προϋπόθεση ότι το επίπεδο ακτινοβολίας σε 10 cm από την εξωτερική επιφάνεια οποιουδήποτε μη-συσκευασμένου οργάνου ή είδους, δεν υπερβαίνει τα 0.1 mSv/h (10  $\mu$ rem/h).
- (b) Όργανα και κατασκευασμένα είδη που έχουν σχάσιμο υλικό σε ποσότητες που δεν υπερβαίνουν τα όρια που ορίζονται στον Πίνακα 2 και επιπλέον, ικανοποιούν όσον αφορά στις ποσότητες, στη μορφή και στη συσκευασία τις διατάξεις που δίνονται στο περιθωριακό 3741 της προσθήκης A.7 επιτρέποντάς τους να τακτοποιούνται ως κόλα μη-σχάσιμου ραδιενεργού υλικού, υπό την προϋπόθεση ότι το επίπεδο ακτινοβολίας σε 10 cm από την εξωτερική επιφάνεια οποιουδήποτε μη-συσκευασμένου οργάνου ή είδους, δεν υπερβαίνει τα 0.1 mSv/h (10  $\mu$ rem/h).

**2. Συσκευασία/Κόλο**

- (a) Η συσκευασία θα πρέπει να είναι σε συμφωνία με τις γενικές διατάξεις για όλα τα κόλα που δίνονται στο περιθωριακό 3732 της προσθήκης A.7.
- (b) Κόλα που περιέχουν σχάσιμο υλικό θα πρέπει να ικανοποιούν τουλάχιστον μία από τις διατάξεις που ορίζονται στο περιθωριακό 3741 της προσθήκης A.7.
- (c) Τα όργανα και είδη θα πρέπει να συσκευάζονται με ασφάλεια.
- (d) Μεταφορά μη-συσκευασμένου ραδιενεργού υλικού δεν επιτρέπεται.

(συνεχ.)

**ΚΕΝΕΣ ΣΥΣΚΕΥΑΣΙΕΣ ΩΣ ΕΞΑΙΡΟΥΜΕΝΑ ΚΟΛΑ**

**ΣΗΜΕΙΩΣΗ 1:** Κενές ακαθάριστες συσκευασίες που έχουν χρησιμοποιηθεί για τη μεταφορά ραδιενεργού υλικού και που προσφέρουν πολύ περιορισμένο κίνδυνο ακτινοβολίας, μπορούν να μεταφέρονται ως εξαιρούμενα κόλα.

**ΣΗΜΕΙΩΣΗ 2:** (a) Κενές ακαθάριστες συσκευασίες που, ως αποτέλεσμα φθοράς ή άλλης μηχανικής ατέλειας, δεν μπορούν πιά να είναι κλεισμένες με ασφάλεια, θα πρέπει, εάν δεν μπορούν να μεταφέρονται σε άλλες συσκευασίες σε συμφωνία με τις διατάξεις αυτής της κλάσης, να μεταφέρονται υπό ειδικές ρυθμίσεις (Πρόγραμμα 13).

(b) Κενές ακαθάριστες συσκευασίες στις οποίες η εσωτερική μη-μόνιμη μόλυνση (δραστικότητα του υπολείμματος) υπερβαίνει τις μέγιστες τιμές που δίνονται στον Τομέα 1 (c) μπορούν να μεταφέρονται μόνον ως κόλα σε συμφωνία με τα διάφορα προγράμματα (περιθωριακό 2701 (3)), ανάλογα με την ποσότητα και τη μορφή της απομένουσας δραστηρότητας και μόλυνσης τους.

(c) Κενές συσκευασίες που έχουν καθαριστεί σε τέτοιο βαθμό ώστε να μην υπάρχει περαιτέρω μόλυνση μεγαλύτερη από την τιμή των  $0.4 \text{ Bq/cm}^2$  ( $10^{-3} \text{ mCi/cm}^2$ ) για βήτα- ή γάμα-εκπομπούς και  $0.04 \text{ Bq/cm}^2$  ( $10^{-6} \text{ mCi/cm}^2$ ) για άλφα-εκπομπούς και που δεν περιέχουν οποιοδήποτε ραδιενεργό υλικό με σχετική δραστηρότητα μεγαλύτερη από  $70 \text{ kBq/kg}$  ( $2 \text{ nCi/g}$ ) δεν υπόκεινται πιά στις διατάξεις αυτής της κλάσης.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

**1. Υλικά**2910 Ραδιενεργό υλικό, εξαιρούμενο κόλο, κενή συσκευασία

- (a) Κενές ακαθάριστες συσκευασίες περιλαμβάνουν κενά ακαθάριστα εμπορευματοκιβώτια ή δεξαμενές που έχουν χρησιμοποιηθεί για τη μεταφορά ραδιενεργού υλικού.
- (b) Εάν η συσκευασία περιέχει οποιαδήποτε ποσότητα ουράνιου ή θόριου στη δομή της, η διάταξη που ορίζεται στην παράγραφο 2 (c) παρακάτω, θα πρέπει να εφαρμόζεται.
- (c) Τα επίπεδα εσωτερικής μη-μόνιμης μόλυνσης (δραστικότητα του απομείναντος περιεχομένου) δεν-θα πρέπει να υπερβαίνει τα:
  - (i) για βήτα/γάμα/χαμηλής-τοξικότητας άλφα εκπομπούς,  $400 \text{ Bq/cm}^2$  ( $10^2 \text{ mCi/cm}^2$ ),
  - (ii) για όλους τους άλλους άλφα εκπομπούς,  $40 \text{ Bq/cm}^2$  ( $10^{-3} \text{ mCi/cm}^2$ ).

**2. Συσκευασία/Κόλο**

- (a) Η συσκευασία θα πρέπει να είναι σε συμφωνία με τις γενικές διατάξεις για όλα τα κόλα που δίνονται στο περιθωριακό 3732 της προσθήκης Α.7.
- (b) Η συσκευασία θα πρέπει να είναι σε καλά συντηρημένη κατάσταση και με ασφάλεια κλεισμένη.

- (c) Εάν η κενή συσκευασία περιλαμβάνει φυσικό ουράνιο ή εξαντλημένο ουράνιο ή φυσικό θόριο στη δομή της, η εξωτερική επιφάνεια του ουράνιου ή θόριου θα πρέπει να καλύπτεται με ένα ανενεργό περιβλήμα κατασκευασμένο από μέταλλο ή κάποιο άλλο ανθεκτικό υλικό.
- (d) Οποιοσδήποτε ετικέτες που παρουσιάζονται για να ικανοποιήσουν το περιθωριακό 2706, δεν θα πρέπει πιά να είναι ορατές.

### 3. Μέγιστο Επίπεδο Ακτινοβολίας

## Κλάση 7

2704 Πρόγραμμα 5  
(συνεχ.)**ΥΛΙΚΟ ΧΑΜΗΛΗΣ ΣΧΕΤΙΚΗΣ ΔΡΑΣΤΙΚΟΤΗΤΑΣ (LSA-I)**

**ΣΗΜΕΙΩΣΗ 1:** Η LSA-I είναι η πρώτη από τις τρεις ομάδες ραδιενεργού υλικού που από την φύση του έχει περιορισμένη σχετική δραστηριότητα ή για το οποίο εφαρμόζονται όρια της υπολογιζόμενης μέσης σχετικής δραστηριότητας.

**ΣΗΜΕΙΩΣΗ 2:** Σχάσιμο υλικό δεν επιτρέπεται να μεταφέρεται ως LSA-I υλικό.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

**1. Υλικά**

2912 Ραδιενεργό υλικό, χαμηλή σχετική δραστηριότητα (LSA-I), ε.α.ο.

2976 Νιτρικό θόριο, στερεό.

2978 Εξαφθοριούχο ουράνιο, σχάσιμο εξαιρούμενο ή μη-σχάσιμο.

2980 Διάλυμα νιτρικού ουρανύλιου εξα-ένυδρο.

2981 Νιτρικό ουρανύλιο, στερεό.

Χαμηλής σχετικής δραστηριότητας υλικό (LSA-I): ραδιενεργό υλικό για το οποίο το επίπεδο ακτινοβολίας σε 3 m από το ακάλυπτο περιεχόμενο ενός μονού κόλου ή σε ένα μόνο φορτίο μη-συσκευασμένου υλικού δεν θα πρέπει να υπερβαίνει τα 10 mSv/h (1000 mrem/h) και που ικανοποιεί επίσης μία από τις παρακάτω περιγραφές:

- (a) μεταλλεύματα που περιέχουν φυσικά παραγόμενα ραδιονουκλεϊδια (π.χ. ουράνιο, θόριο), ή
- (b) συμπυκνώματα ουρανίου και θόριου μεταλλευμάτων που περιέχουν φυσικά παραγόμενα ραδιονουκλεϊδια, ή
- (c) στερεό μη-εκπέμπον φυσικό ουράνιο ή εξαντλημένο ουράνιο ή φυσικό θόριο, ή
- (d) στερεές ή υγρές ενώσεις ή μείγματα μη-εκπέμποντος φυσικού ουρανίου ή εξαντλημένου ουρανίου ή φυσικού θόριου, ή
- (e) μη-σχάσιμο ραδιενεργό υλικό για το οποίο η τιμή  $A_2$  είναι απεριόριστη.

**2. Συσκευασία/Κόλο**

- (a) LSA-I υλικό μπορεί να μεταφέρεται σε συσκευασίες, δεξαμενές και εμπορευματοκιβώτια, υπό την προϋπόθεση ότι:
  - (i) η συσκευασία, που μπορεί να είναι δεξαμενή ή εμπορευματοκιβώτιο, ικανοποιεί τις διατάξεις σχεδιασμού για βιομηχανικά κόλα IP-1 ή IP-2 (βλέπε περιθωριακό 3733 ή 3734 και επιπλέον, για δεξαμενές, περιθωριακό 3736 και Προσθήκες Β.1α και Β.1β) ως κατάλληλη για τη μορφή του LSA-I υλικού όπως ορίζεται στον Πίνακα 3, και
  - (ii) το υλικό είναι φορτωμένο στη συσκευασία έτσι ώστε, σε συνθήκη μεταφορά, να μην προκύψει διαφυγή του περιεχομένου και απώλεια προστατευτικού μέσου.

**Πίνακας 3: Διατάξεις βιομηχανικών κώλων για LSA-I υλικό**

Περιεχόμενο	Αποκλειστική Χρήση	Όχι υπό Αποκλειστική Χρήση
Στερεά	IP-1	IP-1
Υγρά	IP-1	IP-2

(b) LSA-I υλικό μπορεί να μεταφέρεται χύμα, εάν:

(i) για άλλα από φυσικά μεταλλεύματα, μεταφέρεται έτσι ώστε, σε συνήθη μεταφορά, να μην προκύπτει διαφυγή του περιεχομένου από το όχημα και απώλεια προστατευτικού μέσου και μεταφέρεται υπό αποκλειστική χρήση, ή

(ii) για φυσικά μεταλλεύματα, μεταφέρεται σε όχημα υπό αποκλειστική χρήση.

**3. Μέγιστο Επίπεδο Ακτινοβολίας**

Βλέπε περιθωριακό 2703.

**4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**

(a) Βλέπε περιθωριακό 2703.

(b) Υπερσυσκευασίες ή εμπορευματοκιβώτια αφιερωμένα στη μεταφορά LSA-I υλικού υπό αποκλειστική χρήση, θα πρέπει να εξαιρούνται από το (a) παραπάνω όσον αφορά στην εσωτερική μόλυνση μόνον εφ' όσον παραμένουν υπό εκείνη την αποκλειστική χρήση.

**5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**

(a) Βλέπε περιθωριακό 2703.

(b) Ένα όχημα αφιερωμένο στη μεταφορά LSA-I υλικού υπό αποκλειστική χρήση θα πρέπει να εξαιρείται από το (a) παραπάνω όσον αφορά στην εσωτερική μόλυνση μόνον εφ' όσον παραμένει σε εκείνη την αποκλειστική χρήση.

2704 Πρόγραμμα 7  
(συνεχ.)

## ΧΑΜΗΛΗΣ ΣΧΕΤΙΚΗΣ ΔΡΑΣΤΙΚΟΤΗΤΑΣ ΥΛΙΚΟ (LSA-III)

**ΣΗΜΕΙΩΣΗ 1:** Η LSA-III είναι η τρίτη από τρεις ομάδες ραδιενεργού υλικού που, από τη φύση του, έχει περιορισμένη σχετική δραστηριότητα ή για το οποίο εφαρμόζονται όρια της υπολογιζόμενης μέσης σχετικής δραστηριότητας.

**ΣΗΜΕΙΩΣΗ 2:** Εάν σχάσιμο υλικό είναι παρόν, οι διατάξεις του Προγράμματος 12 θα πρέπει να ικανοποιούνται επιπλέον των διατάξεων αυτού του Προγράμματος.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

## 1. Υλικά

2912 Ραδιενεργό υλικό, χαμηλή σχετική δραστηριότητα (LSA-III), ε.α.ο.

Χαμηλής Σχετικής Δραστηριότητας Υλικό (LSA-III): στερεό ραδιενεργό υλικό για το οποίο το επίπεδο ακτινοβολίας σε 3 m από το ακάλυπτο περιεχόμενο ενός μονού κόλου δεν θα πρέπει να υπερβαίνει τα 10 mSv/h (1000 mrem/h) και που ικανοποιεί τις παρακάτω συνθήκες:

- το ραδιενεργό υλικό είναι κατανεμημένο απ' άκρου εις άκρον σε ένα στερεό ή σύνολο στερεών αντικειμένων ή είναι ουσιαστικά ομοιόμορφα κατανεμημένο σε ένα στερεό συμπαγές συνδεδετικό μέσο, (π.χ. τσιμέντο, βιτούμιο, κεραμικό) και
- το ραδιενεργό υλικό είναι σχετικά αδιάλυτο, ή ουσιαστικά περιέχεται σε ένα σχετικά αδιάλυτο πλέγμα, και
- η υπολογιζόμενη μέση σχετική δραστηριότητα, δεν υπερβαίνει τα  $2 \times 10^{-3} \text{ A}_2/\text{g}$ .

## 2. Συσκευασία/Κόλο

- LSA-III υλικό πρέπει να μεταφέρεται σε συσκευασίες που μπορούν να είναι εμπορευματοκιβώτια. Μεταφορά σε δεξαμενές δεν είναι εφαρμόσιμη.
- Η συσκευασία ή το εμπορευματοκιβώτιο θα πρέπει να ικανοποιεί τις διατάξεις σχεδιασμού για βιομηχανικά κόλα IP-2 (βλέπε περιθωριακό 3734) εάν μεταφέρονται σε αποκλειστική χρήση, ή IP-3 (βλέπε περιθωριακό 3735) εάν δεν μεταφέρονται σε αποκλειστική χρήση.
- Το υλικό θα πρέπει να φορτώνεται στη συσκευασία ή στο εμπορευματοκιβώτιο έτσι ώστε, σε συνήθη μεταφορά, να μην προκύπτει διαφυγή περιεχομένου και απώλεια προστατευτικού μέσου.

## 3. Μέγιστο Επίπεδο ακτινοβολίας

(συνεχ.)

## ΕΠΙΦΑΝΕΙΑΚΑ ΜΟΛΥΣΜΕΝΑ ΑΝΤΙΚΕΙΜΕΝΑ (SCO-I ΚΑΙ SCO-II)

**ΣΗΜΕΙΩΣΗ 1:** Ένα επιφανειακά μολυσμένο αντικείμενο (SCO) είναι στερεό αντικείμενο που είναι όχι αφ' εαυτού ραδιενεργό, αλλά που έχει ραδιενεργό υλικό καταμεμημένο στις επιφάνειές του. Επιφανειακά μολυσμένα αντικείμενα θα πρέπει να είναι σε μία από τις δύο ομάδες, είτε στην SCO-I είτε στην SCO-II, ανάλογα με το μέγιστο επιτρεπόμενο επίπεδο μόλυνσης (βλέπε Πίνακα 7).

**ΣΗΜΕΙΩΣΗ 2:** Εάν σχάσιμο υλικό είναι παρόν, οι διατάξεις του Προγράμματος 12 θα πρέπει να ικανοποιούνται επιπλέον των διατάξεων αυτού του Προγράμματος.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

## 1. Υλικά

## 2913 Ραδιενεργό υλικό, επιφανειακά μολυσμένα αντικείμενα (SCO-I ή SCO-II)

- (a) Στερεά, μη-ραδιενεργά αντικείμενα μολυσμένα στην επιφάνεια σ' ένα επίπεδο όχι μεγαλύτερο από τα επίπεδα μόλυνσης που ορίζονται στον Πίνακα 7 όταν η μόλυνση υπολογίζεται κατά μέσον όρο πάνω σε ένα εμβαδόν 300 cm<sup>2</sup> (ή στο εμβαδό της επιφάνειας εάν είναι μικρότερο από 300 cm<sup>2</sup>).

Πίνακας 7: Επιτρεπόμενη επιφανειακή μόλυνση για SCO

Τύπος μόλυνσης	Μη-μόνιμη σε προσιτή επιφάνεια	Μόνιμη σε προσιτή επιφάνεια	Άθροισμα μόνιμης και μη-μόνιμης στην μη-προσιτή επιφάνεια
<b>SCO-I</b>			
Βήτα/γάμμα/ χαμηλής τοξικότητας άλφα εκπομποί	4 Bq/cm <sup>2</sup> (10 <sup>-4</sup> mCi/cm <sup>2</sup> )	4x10 <sup>4</sup> Bq/cm <sup>2</sup> (1 mCi/cm <sup>2</sup> )	4x10 <sup>4</sup> Bq/cm <sup>2</sup> (1 mCi/cm <sup>2</sup> )
Όλοι οι άλλοι άλφα εκπομποί	0.4 Bq/cm <sup>2</sup> (10 <sup>-5</sup> mCi/cm <sup>2</sup> )	4x10 <sup>3</sup> Bq/cm <sup>2</sup> (0.1 mCi/cm <sup>2</sup> )	4x10 <sup>3</sup> Bq/cm <sup>2</sup> (0.1 mCi/cm <sup>2</sup> )
<b>SCO-II</b>			
Βήτα/γάμμα χαμηλής τοξικότητας άλφα εκπομποί	400 Bq/cm <sup>2</sup> (10 <sup>-2</sup> mCi/cm <sup>2</sup> )	8x10 <sup>5</sup> Bq/cm <sup>2</sup> (20 mCi/cm <sup>2</sup> )	8x10 <sup>5</sup> Bq/cm <sup>2</sup> (20 mCi/cm <sup>2</sup> )
Όλοι οι άλλοι άλφα εκπομποί	40 Bq/cm <sup>2</sup> (10 <sup>-3</sup> mCi/cm <sup>2</sup> )	8x10 <sup>4</sup> Bq/cm <sup>2</sup> (2 mCi/cm <sup>2</sup> )	8x10 <sup>4</sup> Bq/cm <sup>2</sup> (2 mCi/cm <sup>2</sup> )

- (b) Το επίπεδο ακτινοβολίας σε 3 m από το ακάλυπτο περιεχόμενο ενός μονού κόλου ή από ένα μόνο αντικείμενο ή σύνολο αντικειμένων, εάν είναι μη-συσκευασμένα, δεν θα πρέπει να υπερβαίνει τα 10 mSv/h (1000 mrem/h).

**2. Συσκευασία/Κόλο**

- (a) SCO-I και SCO-II μπορούν να μεταφέρονται σε συσκευασίες υπό την προϋπόθεση ότι:
- (i) η συσκευασία, που μπορεί να είναι εμπορευματοκιβώτιο, ικανοποιεί τις διατάξεις σχεδιασμού για βιομηχανικά κόλα IP-1 (βλέπε περιθωριακό 3733) για SCO-I, ή IP-2 (βλέπε περιθωριακό 3734) για SCO-II, και
  - (ii) τα αντικείμενα είναι φορτωμένα στη συσκευασία έτσι ώστε, σε συνήθη μεταφορά, να μην προκύπτει διαφυγή περιεχομένου και απώλεια προστατευτικού μέσου.
- (b) SCO-I μπορεί να μεταφέρεται μη-συσκευασμένο, υπό την προϋπόθεση ότι:
- (i) μεταφέρεται σε όχημα ή εμπορευματοκιβώτιο έτσι ώστε, σε συνήθη μεταφορά, να μην προκύπτει διαφυγή περιεχομένου και απώλεια προστατευτικού μέσου, και
  - (ii) θα πρέπει να μεταφέρεται υπό αποκλειστική χρήση εάν η μόλυνση στην προσιτή και στην απρόσιτη επιφάνεια είναι μεγαλύτερη από  $4 \text{ Bq/cm}^2$  ( $10^{-4} \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς ή  $0.4 \text{ Bq/cm}^2$  ( $10^{-5} \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς, και
  - (iii) μέτρα θα πρέπει να λαμβάνονται για να εξασφαλίζεται ότι το ραδιενεργό υλικό δεν απελευθερώνεται στο όχημα εάν αναμένεται ότι υπάρχει μη-μόνιμη μόλυνση σε απρόσιτες επιφάνειες μεγαλύτερη από  $4 \text{ Bq/cm}^2$  ( $10^{-4} \text{ mCi/cm}^2$ ) για βήτα και γάμα εκπομπούς και χαμηλής τοξικότητας άλφα εκπομπούς, ή  $0.4 \text{ Bq/cm}^2$  ( $10^{-5} \text{ mCi/cm}^2$ ) για όλους τους άλλους άλφα εκπομπούς.
- (c) SCO-II δεν θα πρέπει να μεταφέρεται μη-συσκευασμένο.

**3. Μέγιστο Επίπεδο ακτινοβολίας**

Βλέπε περιθωριακό 2703.

**4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**

- (a) Βλέπε περιθωριακό 2703.
- (b) Υπερσυσκευασίες ή εμπορευματοκιβώτια αφιερωμένα στη μεταφορά SCO υπό αποκλειστική χρήση μπορούν να εξαιρούνται από το (a) παραπάνω όσον αφορά στην εσωτερική μόλυνση μόνον εφ' όσον παραμένουν υπό εκείνη την αποκλειστική χρήση.

**5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**

- (a) Βλέπε περιθωριακό 2703.
- (b) Ένα όχημα αφιερωμένο στη μεταφορά SCO υπό αποκλειστική χρήση θα πρέπει να εξαιρείται από το (a) παραπάνω όσον αφορά στην εσωτερική μόλυνση μόνον εφ' όσον παραμένει σε εκείνη τη σχετική αποκλειστική χρήση.

**6. Μικτή Συσκευασία**

Βλέπε περιθωριακό 2703.

**7. Μικτή Φόρτωση**

Βλέπε περιθωριακό 2703.

**8. Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**

Βλέπε περιθωριακό 2703.

**9. Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές**

Βλέπε περιθωριακό 2703.

**10. Έγγραφα μεταφοράς**

(a) Για περίληψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.

(b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει την περιγραφή: "2913 Ραδιενεργό υλικό, Επιφανειακά μολυσμένο Αντικείμενο (SCO-I) ή (SCO-II), 7, Πρόγραμμα 8, ADR (ή RID)". Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.

**11. Αποθήκευση και Αποστολή**

Βλέπε περιθωριακό 2703.

**12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών**

(a) Βλέπε περιθωριακό 2703 12. (2), (a) έως (d).

(b) Η συνολική δραστηκότητα σε ένα μόνο όχημα δεν θα πρέπει να υπερβαίνει τα 100 A<sub>2</sub>.

**13. Άλλες Διατάξεις**

Βλέπε περιθωριακό 2703.

## Κλάση 7

2704 Πρόγραμμα 9  
(συνεχ.)

## ΡΑΔΙΕΝΕΡΓΑ ΥΛΙΚΑ ΣΕ ΚΟΛΑ ΤΥΠΟΥ Α

**ΣΗΜΕΙΩΣΗ 1:** Ραδιενεργό υλικό σε ποσότητες που προσφέρουν περιορισμένο ραδιολογικό κίνδυνο (βλέπε περιθωριακό 2700 (2) 1.) μπορεί να μεταφέρεται σε κόλα Τύπου Α, που θα πρέπει να σχεδιάζονται ώστε να αντέχουν τις συνθήκες μεταφοράς συμπεριλαμβανομένων δευτερευόντων ατυχημάτων.

**ΣΗΜΕΙΩΣΗ 2:** Εάν σχάσιμο υλικό είναι παρόν οι διατάξεις του Προγράμματος 12 θα πρέπει να ικανοποιούνται επιπλέον των διατάξεων αυτού του Προγράμματος.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

## 1. Υλικά

2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο.

2975 Μεταλλικό θόριο, πυροφορικό.

2976 Νιτρικό θόριο, στερεό.

2979 Μεταλλικό ουράνιο, πυροφορικό.

2980 Διάλυμα νιτρικού ουρανύλιου εξα-ένυδρου.

2981 Νιτρικό ουρανύλιο, στερεό.

2982 Ραδιενεργό υλικό, ε.α.ο.

Το περιεχόμενο ενός κόλου Τύπου Α θα πρέπει να περιορίζεται σε ραδιενεργό υλικό:

- (a) με δραστηριότητα όχι μεγαλύτερη από  $A_1$  (βλέπε περιθωριακά 3700 και 3701) εάν είναι σε ειδική μορφή, ή
- (b) με δραστηριότητα όχι μεγαλύτερη από  $A_2$  (βλέπε περιθωριακά 3700 και 3701) εάν είναι σε άλλη από ειδική μορφή.

## 2. Συσκευασία/Κόλο

- (a) Η συσκευασία, που μπορεί επίσης να είναι δεξαμενή ή εμπορευματοκιβώτιο, θα πρέπει να ικανοποιεί τις διατάξεις για κόλα Τύπου Α που ορίζονται στο περιθωριακό 3737 και επιπλέον, για δεξαμενές, Προσθήκες Β.1a και Β.1b.
- (b) Ειδικά, το κόλο Τύπου Α θα πρέπει να σχεδιάζεται έτσι ώστε, υπό συνθήκες μεταφοράς συμπεριλαμβανομένων δευτερευόντων ατυχημάτων, να παρεμποδίζει την απώλεια ή τη διασπορά του ραδιενεργού περιεχομένου και απώλεια της ακεραιότητας του προστατευτικού μέσου που θα είχε ως αποτέλεσμα σε μεγαλύτερη από 20% αύξηση στο εξωτερικό επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο.
- (c) Εάν το ραδιενεργό περιεχόμενο είναι ειδικής μορφής ραδιενεργό υλικό, απαιτείται έγκριση του σχεδιασμού από αρμόδια αρχή για το ειδικής μορφής ραδιενεργό υλικό.

- (d) Το εξωτερικό του κόλου Τύπου Α θα πρέπει να έχει ενσωματωμένο ένα χαρακτηριστικό τέτοιο όπως σφραγίδα, που θα είναι όχι άμεσα θραύσιμο και που, όταν είναι άθικτο, θα αποτελεί ένδειξη ότι δεν έχει ανοιχτεί.
3. **Μέγιστο Επίπεδο Ακτινοβολίας**  
Βλέπε περιθωριακό 2703.
4. **Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**  
Βλέπε περιθωριακό 2703.
5. **Απολόμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**  
Βλέπε περιθωριακό 2703.
6. **Μικτή Συσκευασία**  
Βλέπε περιθωριακό 2703.
7. **Μικτή Φόρτωση**  
Βλέπε περιθωριακό 2703.
8. **Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**  
(a) Βλέπε περιθωριακό 2703.  
(b) Κάθε κόλο Τύπου Α θα πρέπει να είναι ευανάγνωστα και με τρόπο διαρκείας μαρκαρισμένη απ' έξω με τις λέξεις "Τύπου Α".
9. **Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές**  
Βλέπε περιθωριακό 2703.
10. **Έγγραφο μεταφοράς**  
(a) Για περίληψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.  
(b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει:  
(i) τον χαρακτηριστικό αριθμό και την ονομασία σύμφωνα με το κεφάλαιο 1, μαζί με τις λέξεις "Ραδιενεργό υλικό σε κόλο Τύπου Α, 7, Πρόγραμμα 9, ADR (ή RID)", π.χ. "2976 Νιτρικό θόριο, στερεό, ραδιενεργό υλικό σε κόλο Τύπου Α, 7, Πρόγραμμα 9, ADR (ή RID)", ή  
(ii) στην περίπτωση υλικού όχι αλλιώς οριζόμενου, "2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο., σε κόλο Τύπου Α, 7, Πρόγραμμα 9, ADR (ή RID)", ή "2982 Ραδιενεργό υλικό, ε.α.ο., σε κόλο Τύπου Α, 7, Πρόγραμμα 9, ADR (ή RID)", όπως μπορεί να είναι η περίπτωση.

Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.

**ΡΑΔΙΕΝΕΡΓΟ ΥΛΙΚΟ ΣΕ ΚΟΛΑ ΤΥΠΟΥ Β(U)**

**ΣΗΜΕΙΩΣΗ 1:** Ραδιενεργό υλικό που υπερβαίνει σε ποσότητα τα όρια κόλου Τύπου Α μπορεί να μεταφέρεται σε κόλο Τύπου Β(U) που θα πρέπει να σχεδιάζεται έτσι ώστε να είναι απίθανη η απελευθέρωση του ραδιενεργού περιεχομένου ή η απώλεια του προστατευτικού μέσου της σε συνθήκες ατυχήματος κατά τη μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Εάν σχάσιμο υλικό είναι παρόν οι διατάξεις του Προγράμματος 12 θα πρέπει να ικανοποιούνται επιπλέον των διατάξεων αυτού του Προγράμματος.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

**1. Υλικά**

2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο.

2975 Μεταλλικό θόριο, πυροφορικό.

2976 Νιτρικό θόριο, στερεό.

2979 Μεταλλικό ουράνιο, πυροφορικό.

2980 Διάλυμα νιτρικού ουρανίου εξα-ένυδρου.

2981 Νιτρικό ουρανύλιο, στερεό.

2982 Ραδιενεργό υλικό, ε.α.ο.

Το όριο στη συνολική δραστηριότητα σε κόλο Τύπου Β(U) θα πρέπει να είναι όπως καθορίζεται στο πιστοποιητικό έγκρισης σχεδιασμού για εκείνο το κόλο.

**2. Συσκευασία/Κόλο**

- (a) Η συσκευασία, που μπορεί επίσης να είναι δεξαμενή ή εμπορευματοκιβώτιο, θα πρέπει να ικανοποιεί τις διατάξεις για κόλα Τύπου Β που ορίζονται στο περιθωριακό 3738, τις διατάξεις για κόλα Τύπου Β(U) που ορίζονται στο περιθωριακό 3739 και επιπλέον, για δεξαμενές, Προσθήκες Β.1a και Β.1b.
- (b) Ειδικά, το κόλο Τύπου Β(U) θα πρέπει να σχεδιάζεται έτσι ώστε:
- (i) υπό συνθήκες μεταφοράς συμπεριλαμβανομένων δευτερευόντων ατυχημάτων, θα περιορίζει την απώλεια ή τη διασπορά του ραδιενεργού περιεχομένου σε όχι μεγαλύτερη από  $A_2 \times 10^{-6}$  ανά ώρα, και θα παρεμποδίζει την απώλεια της ακεραιότητας του προστατευτικού μέσου που θα είχε ως αποτέλεσμα μεγαλύτερη από 20% αύξηση στο εξωτερικό επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο, και
  - (ii) θα είναι ικανή να αντέχει τις βλαπτικές επιδράσεις ενός ατυχήματος κατά τη μεταφορά όπως εκφράζεται με την διατήρηση του περιεχομένου και της ακεραιότητας του προστατευτικού μέσου στο βαθμό που απαιτείται από τα περιθωριακά 3738 και 3739.
- (c) Έγκριση του σχεδιασμού των κόλων Τύπου Β(U) σε συμφωνία με το περιθωριακό 3752 απαιτείται από την αρμόδια αρχή της χώρας προέλευσης του σχεδιασμού (μονομερής έγκριση).

- (d) Εάν το ραδιενεργό περιεχόμενο είναι ειδικής μορφής ραδιενεργό υλικό, απαιτείται έγκριση του σχεδιασμού από αρμόδια αρχή για το ειδικής μορφής ραδιενεργό υλικό.
- (e) Το εξωτερικό του κόλου Τύπου Β(U) θα πρέπει να έχει ενσωματωμένο ένα χαρακτηριστικό όπως μία σφραγίδα, που θα είναι όχι άμεσα θραύσιμο και που, όταν είναι άθικτο, θα αποτελεί ένδειξη ότι δεν έχει ανοιχτεί.
3. **Μέγιστο Επίπεδο ακτινοβολίας**  
Βλέπε περιθωριακό 2703.
4. **Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**  
Βλέπε περιθωριακό 2703.
5. **Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**  
Βλέπε περιθωριακό 2703.
6. **Μικτή Συσκευασία**  
Βλέπε περιθωριακό 2703.
7. **Μικτή Φόρτωση**  
Βλέπε περιθωριακό 2703.
8. **Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**
- (a) Βλέπε περιθωριακό 2703.
- (b) Κάθε κόλο Τύπου Β(U) θα πρέπει να είναι μαρκαρισμένο ευανάγνωστα και με τρόπο διαρκείας απ' έξω με:
- (i) την χαρακτηριστική ένδειξη που δίνεται σ' εκείνον τον σχεδιασμό από την αρμόδια αρχή,
  - (ii) έναν σειριακό αριθμό για τον μοναδικό προσδιορισμό κάθε συσκευασίας που συμφωνεί με εκείνον τον σχεδιασμό,
  - (iii) την διατύπωση "ΤΥΠΟΥ Β(U)", και
  - (iv) το σύμβολο σε σχήμα τριφυλλιού που φαίνεται στο περιθωριακό 2705 (5) ανάγλυφο ή σφραγισμένο στο περισσότερο ανθεκτικό στη φωτιά και στο νερό δοχείο.
9. **Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές**  
Βλέπε περιθωριακό 2703.
10. **Έγγραφα μεταφοράς**
- (a) Για περίληψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.

- (b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει:
- (i) τον χαρακτηριστικό αριθμό και την ονομασία σύμφωνα με το κεφάλαιο 1, μαζί με τις λέξεις "Ραδιενεργό υλικό σε κόλο Τύπου Β(U), 7, Πρόγραμμα 10, ADR (ή RID)", π.χ. "2976 Νιτρικό θόριο, στερεό, ραδιενεργό υλικό σε κόλο Τύπου Β(U), 7, Πρόγραμμα 10, ADR (ή RID)", ή
  - (ii) στην περίπτωση υλικού όχι αλλιώς οριζόμενου, "2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο., σε κόλο Τύπου Β(U), 7, Πρόγραμμα 10, ADR (ή RID)", ή "2982 Ραδιενεργό υλικό, ε.α.ο., σε κόλο Τύπου Β(U), 7, Πρόγραμμα 10, ADR (ή RID)", όπως μπορεί να είναι η περίπτωση.

Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.

- (c) Το πιστοποιητικό μονομερούς έγκρισης για το σχεδιασμό κόλου απαιτείται.
- (d) Πριν από κάθε φόρτωση οποιουδήποτε κόλου Τύπου Β(U), ο αποστολέας θα πρέπει να έχει στην κατοχή του όλα τα πιστοποιητικά έγκρισης της σχετικής αρμόδιας αρχής και θα πρέπει να εξασφαλίσει ότι αντίγραφα τους έχουν υποβληθεί, πριν την πρώτη φόρτωση, στην αρμόδια αρχή κάθε χώρας μέσω της οποίας ή στην οποία το κόλο πρόκειται να μεταφερθεί.
- (e) Πριν από κάθε φόρτωση όπου η δραστηρότητα είναι μεγαλύτερη από  $3 \times 10^3$  A<sub>2</sub> ή  $3 \times 10^3$  A<sub>1</sub>, όπως είναι κατάλληλο, ή 1 000 TBq (20 kCi), όπως είναι η χαμηλότερη τιμή, ο αποστολέας πρέπει να το γνωστοποιεί στις αρμόδιες αρχές όλων των χωρών που επηρεάζονται από τη μετακίνηση, κατά προτίμηση τουλάχιστον επτά ημέρες πριν.

#### 11. Αποθήκευση και Αποστολή

- (a) Βλέπε περιθωριακό 2703.
- (b) Ο αποστολέας θα πρέπει να έχει συμμορφωθεί με τις σχετικές διατάξεις για πριν τη χρήση και πριν την αποστολή του περιθωριακού 3710.
- (c) Οποιοσδήποτε διατάξεις στα πιστοποιητικά έγκρισης της αρμόδιας αρχής θα πρέπει να τηρούνται.

#### 12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών

- (a) Βλέπε περιθωριακό 2703 12. (2), (a) έως (d).
- (b) Εάν η μέση εκροή επιφανειακής θερμότητας από κόλο Τύπου Β(U) θα μπορούσε να υπερβεί τα 15 W/m<sup>2</sup>, οποιοσδήποτε ειδικές διατάξεις στοιβάγματος που ορίζονται στο πιστοποιητικό έγκρισης του κόλου που εκδίδεται από την αρμόδια αρχή πρέπει να τηρούνται.
- (c) Εάν η θερμοκρασία της προστιτής επιφάνειας του κόλου Τύπου Β(U) θα μπορούσε να υπερβεί τους 50 °C υπό σκιά, η μεταφορά επιτρέπεται μόνον υπό αποκλειστική χρήση, για την οποία η επιφανειακή θερμοκρασία περιορίζεται στους 85 °C. Μπορεί να λαμβάνονται υπόψη φραγμοί ή παραπετάσματα που προορίζονται να δίνουν προστασία στους εργάτες της μεταφοράς χωρίς οι φραγμοί ή τα παραπετάσματα να υπόκεινται σε οποιονδήποτε έλεγχο.

#### 13. Άλλες Διατάξεις

- Βλέπε περιθωριακό 2703.

## Κλάση 7

2704 Πρόγραμμα 11  
(συνεχ.)

**ΡΑΔΙΕΝΕΡΓΑ ΥΛΙΚΑ ΣΕ ΚΟΛΑ ΤΥΠΟΥ Β(Μ)**

**ΣΗΜΕΙΩΣΗ 1:** Ραδιενεργό υλικό που υπερβαίνει σε ποσότητα τα όρια του κόλου Τύπου Α μπορεί να μεταφέρεται σε κόλο τύπου Β(Μ) που θα πρέπει να σχεδιάζεται έτσι ώστε να είναι απίθανη η απελευθέρωση του ραδιενεργού περιεχομένου της ή η απώλεια της ακεραιότητας του προστατευτικού μέσου της σε συνθήκες ατυχήματος κατά τη μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Εάν σχάσιμο υλικό είναι παρόν οι διατάξεις του Προγράμματος 12 θα πρέπει να ικανοποιούνται επιπλέον των διατάξεων αυτού του Προγράμματος.

**ΣΗΜΕΙΩΣΗ 3:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

**1. Υλικά**

2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο.

2975 Μεταλλικό θόριο, πυροφορικό.

2976 Νιτρικό θόριο, στερεό.

2979 Μεταλλικό ουράνιο, πυροφορικό.

2980 Διάλυμα νιτρικού ουρανύλιου εξα-ένυδρου.

2981 Νιτρικό ουρανύλιο, στερεό.

2982 Ραδιενεργό υλικό, ε.α.ο.

Το όριο στη συνολική δραστηριότητα σε κόλο τύπου Β(Μ) θα πρέπει να είναι όπως καθορίζεται στο πιστοποιητικό έγκρισης σχεδιασμού για εκείνο το κόλο.

**2. Συσκευασία/Κόλο**

- (a) Η συσκευασία, που μπορεί επίσης να είναι δεξαμενή ή εμπορευματοκιβώτιο, θα πρέπει να ικανοποιεί τις διατάξεις για κόλα Τύπου Β που ορίζονται στο περιθωριακό 3738, τις διατάξεις για κόλα τύπου Β(Μ) που ορίζονται στο περιθωριακό 3740 και επιπλέον, για δεξαμενές, Προσθήκες Β.1a και Β.1b.
- (b) Ειδικά, το κόλο τύπου Β(Μ) θα πρέπει να σχεδιάζεται έτσι ώστε:
- (i) υπό συνθήκες μεταφοράς συμπεριλαμβανομένων δευτερευόντων ατυχημάτων, θα περιορίζει την απώλεια ή διασπορά του ραδιενεργού περιεχομένου σε όχι μεγαλύτερη από  $A_2 \times 10^{-6}$  ανά ώρα, και θα παρεμποδίζει την απώλεια προστατευτικού μέσου που θα είχε ως αποτέλεσμα σε μεγαλύτερη από 20% αύξηση στο εξωτερικό επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο, και
  - (ii) θα είναι ικανή να αντέχει τις βλαβερές επιδράσεις ενός ατυχήματος κατά τη μεταφορά όπως εκφράζεται με τη διατήρηση του περιεχομένου και της ακεραιότητας του προστατευτικού μέσου στο βαθμό που απαιτείται από τα περιθωριακά 3738 και 3739.
- (c) Περιοδικός εξερισμός κατά τη διάρκεια της μεταφοράς μπορεί να επιτρέπεται εάν αντισταθμιστικοί λειτουργικοί έλεγχοι είναι εγκεκριμένοι από όλες τις εμπλεκόμενες αρμόδιες αρχές.

- (d) Συμπληρωματικοί λειτουργικοί έλεγχοι αναγκαίοι για την εξασφάλιση της ασφάλειας του κόλου τύπου Β(Μ) κατά τη διάρκεια της μεταφοράς ή για την αντιστάθμιση των ανεπαρκειών από τις διατάξεις Τύπου Β(Υ) και οποιοδήποτε περιορισμοί στον τρόπο ή τις συνθήκες μεταφοράς θα πρέπει να εγκρίνονται από όλες τις εμπλεκόμενες αρμόδιες αρχές.
- (e) Έγκριση του σχεδιασμού των κόλου Τύπου Β(Μ) σε συμφωνία με το περιθωριακό 3753 απαιτείται τόσο από την αρμόδια αρχή της χώρας προέλευσης του σχεδιασμού όσο και από κάθε χώρα μέσω της οποίας ή στην οποία τα κόλα μεταφέρονται (πολυμερής έγκριση).
- (f) Εάν το ραδιενεργό περιεχόμενο είναι ειδικής μορφής ραδιενεργό υλικό, απαιτείται έγκριση του σχεδιασμού από αρμόδια αρχή για το ειδικής μορφής ραδιενεργό υλικό.
- (g) Το εξωτερικό του κόλου τύπου Β(Μ) θα πρέπει να ενσωματώνει ένα χαρακτηριστικό όπως μία σφραγίδα, που θα είναι όχι άμεσα θραύσιμο και που, όταν είναι άθικτο, θα αποτελεί ένδειξη ότι δεν έχει ανοιχτεί.

### 3. Μέγιστο Επίπεδο ακτινοβολίας

Βλέπε περιθωριακό 2703.

### 4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες

Βλέπε περιθωριακό 2703.

### 5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών

Βλέπε περιθωριακό 2703.

### 6. Μικτή Συσκευασία

Βλέπε περιθωριακό 2703.

### 7. Μικτή Φόρτωση

Βλέπε περιθωριακό 2703.

### 8. ~~Μαρκάρισμα και Ετικέτες~~ κινδύνου σε ~~Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες~~

(a) Βλέπε περιθωριακό 2703.

(b) Κάθε κόλο Τύπου Β(Μ) θα πρέπει να είναι ευανάγνωστα και με τρόπο διαρκείας μαρκαρισμένη στο εξωτερικό με:

- (i) την χαρακτηριστική ένδειξη που δίνεται σ' εκείνο τον σχεδιασμό από την αρμόδια αρχή,
- (ii) έναν σειριακό αριθμό για τον μοναδικό προσδιορισμό κάθε συσκευασίας που συμφωνεί με εκείνον τον σχεδιασμό,
- (iii) την διατύπωση "ΤΥΠΟΥ Β(Μ)", και

- (iv) το σύμβολο σε σχήμα τριφυλλίου που φαίνεται στο περιθωριακό 2705 (5) ανάγλυφο ή σφραγισμένο στο περισσότερο ανθεκτικό στη φωτιά και στο νερό δοχείο.

### 9. Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές

Βλέπε περιθωριακό 2703.

### 10. Έγγραφο μεταφοράς

- (a) Για περίληψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.
- (b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει:
- (i) τον χαρακτηριστικό αριθμό και την ονομασία σύμφωνα με το κεφάλαιο 1, μαζί με τις λέξεις "Ραδιενεργό υλικό σε κόλο τύπου B(M) , 7, Πρόγραμμα 11, ADR (ή RID)", π.χ. "2976 Νιτρικό θόριο, στερεό, ραδιενεργό υλικό σε κόλο τύπου B(M) , 7, Πρόγραμμα 11, ADR (ή RID)", ή
  - (ii) στην περίπτωση υλικού όχι αλλιώς που οριζόμενου, "2974 Ραδιενεργό υλικό, ειδική μορφή, ε.α.ο., σε κόλο τύπου B(M) , 7, Πρόγραμμα 11, ADR (ή RID)", ή "2982 Ραδιενεργό υλικό, ε.α.ο., σε κόλο τύπου B(M) , 7, Πρόγραμμα 11, ADR (ή RID)", όπως μπορεί να είναι η περίπτωση.

Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.

- (c) Τα πιστοποιητικά πολυμερούς έγκρισης για τον σχεδιασμό κόλου απαιτούνται.
- (d) Εάν το κόλο είναι σχεδιασμένο να επιτρέπει για ελεγχόμενο περιοδικό εξαερισμό ή εάν το συνολικό περιεχόμενο υπερβαίνει τα  $3 \times 10^3 A_2$  ή  $3 \times 10^3 A_1$ , όπου είναι κατάλληλο, ή τα 1000 TBq (20 kCi), όποια είναι η χαμηλότερη τιμή, απαιτούνται πιστοποιητικά πολυμερούς έγκρισης της φόρτωσης εκτός εάν οι εμπλεκόμενες αρμόδιες αρχές επιτρέπουν τη μεταφορά με μία σχετική διάταξη στα πιστοποιητικά για την έγκριση του σχεδιασμού κόλου.
- (e) Πριν από κάθε φόρτωση οποιουδήποτε κόλου τύπου B(M), ο αποστολέας θα πρέπει να έχει στη διάθεσή του όλα τα σχετικά πιστοποιητικά έγκρισης.
- (f) Πριν από κάθε φόρτωση, ο αποστολέας θα πρέπει να ενημερώνει τις αρμόδιες αρχές όλων των χωρών που επηρεάζονται από την μετακίνηση, κατά προτίμηση τουλάχιστον επτά ημέρες νωρίτερα.

### 11. Αποθήκευση και Αποστολή

- (a) Βλέπε περιθωριακό 2703.
- (b) Ο αποστολέας θα πρέπει να συμμορφώνεται με τις σχετικές διατάξεις για πριν τη χρήση και πριν τη φόρτωση του περιθωριακού 3710.
- (c) Οποιοσδήποτε διατάξεις στα πιστοποιητικά έγκρισης του σχεδιασμού ή της φόρτωσης που υποβάλλονται από τις εμπλεκόμενες αρμόδιες αρχές πρέπει να τηρούνται.

**12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών**

- (a) Βλέπε περιθωριακό 2703 12. (2), (a) έως (d).
- (b) Εάν η μέση εκροή επιφανειακής θερμότητας από ένα κόλο τύπου Β(Μ) θα μπορούσε να υπερβεί τα  $15 \text{ W/m}^2$ , οποιεσδήποτε ειδικές διατάξεις στοιβάζματος που ορίζονται στο πιστοποιητικό έγκρισης σχεδιασμού του κόλου από την αρμόδια αρχή πρέπει να τηρούνται.
- (c) Εάν η θερμοκρασία της προστιτής επιφάνειας του κόλου τύπου Β(Μ) θα μπορούσε να υπερβεί τους  $50 \text{ }^\circ\text{C}$  υπό σκιά, η μεταφορά επιτρέπεται μόνον υπό αποκλειστική χρήση, για την οποία η επιφανειακή θερμοκρασία περιορίζεται στους  $85 \text{ }^\circ\text{C}$ . Μπορεί να λαμβάνονται υπόψη οι φραγμοί ή τα παραπετάσματα που προορίζονται να δίνουν προστασία στους εργάτες της μεταφοράς χωρίς οι φραγμοί ή τα παραπετάσματα να υπόκεινται σε οποιονδήποτε έλεγχο.

**13. Άλλες Διατάξεις**

Βλέπε περιθωριακό 2703.

## Κλάση 7

2704 Πρόγραμμα 12  
(συνεχ.)

## ΣΧΑΣΙΜΟ ΥΛΙΚΟ

**ΣΗΜΕΙΩΣΗ 1:** Ραδιενεργό υλικό που είναι επίσης σχάσιμο υλικό πρέπει να συσκευάζεται, μεταφέρεται και αποθηκεύεται έτσι ώστε να ικανοποιεί τις διατάξεις για ασφάλεια πυρηνικής κρισιμότητας, όπως αναφέρεται σε αυτό το Πρόγραμμα, και τις διατάξεις τις κατάλληλες για την ραδιοδραστικότητα του, όπως αναφέρεται στα Προγράμματα 6 έως 11, όπως απαιτείται.

**ΣΗΜΕΙΩΣΗ 2:** Για άλλες επικίνδυνες ιδιότητες, βλέπε επίσης τις διατάξεις στο περιθωριακό 3770.

## 1. Υλικά

2918 Ραδιενεργό υλικό, σχάσιμο, ε.α.ο.

2977 Εξαφθοριούχο ουράνιο, σχάσιμο που περιέχει περισσότερο από 1.0% ουράνιο-235.

Σχάσιμο υλικό είναι ουράνιο-233, ουράνιο-235, πλουτόνιο-238, πλουτόνιο-239, πλουτόνιο-241, ή οποιοσδήποτε συνδυασμός των προηγούμενων, εκτός από μη-εκπέμπον φυσικό ή εξαντλημένο ουράνιο και φυσικό ή εξαντλημένο ουράνιο που έχει τεθεί για εκπομπή σε θερμικούς αντιδραστήρες μόνο.

Αποστολές σχάσιμου υλικού θα πρέπει επίσης να είναι σε πλήρη συμμόρφωση με τις διατάξεις ενός από τα άλλα Προγράμματα, όπως απαιτείται για τη ραδιοδραστικότητα της αποστολής.

## 2. Συσκευασία/Κόλο

- (a) Τα παρακάτω υλικά εξαιρούνται από τις ειδικές διατάξεις συσκευασίας που αναφέρονται σε αυτό το Πρόγραμμα, αλλά πρέπει να ικανοποιούν τις διατάξεις ενός από τα άλλα Προγράμματα όπως απαιτείται για τη ραδιοδραστικότητα του υλικού:
- (i) Σχάσιμο υλικό σε ποσότητα όχι μεγαλύτερη από 15 g ανά κόλο υπό συνθήκες που περιγράφονται πλήρως στο περιθωριακό 3741 της προσθήκης Α.7.
  - (ii) Ομοιογενή υδρογονούχα διαλύματα σε συγκεντρώσεις και ποσότητες περιορισμένες σε συμφωνία με τον Πίνακα III του περιθωριακού 3703 της προσθήκης Α.7.
  - (iii) Εμπλουτισμένο ουράνιο κατανεμημένο ομοιογενώς με όχι περισσότερο από 1% ουράνιο-235 και με συνολική περιεκτικότητα σε πλουτόνιο και ουράνιο-233 όχι μεγαλύτερη από το 1% του βάρους του ουράνιου-235, υπό την προϋπόθεση ότι εάν το ουράνιο-235 είναι παρόν σε μορφή μεταλλική, οξειδίου ή καρβιδίου, δεν πρέπει να σχηματίζει διάταξη πλέγματος μέσα στο κόλο.
  - (iv) Υλικό που περιέχει όχι περισσότερο από 5 g σχάσιμου υλικού σε οποιοδήποτε όγκο 10 λίτρων.
  - (v) Κόλα που περιέχουν όχι περισσότερο από 1 kg πλουτονίου στο οποίο όχι περισσότερο από το 20% κατά βάρος συνίσταται από πλουτόνιο-239, πλουτόνιο-241 ή οποιοδήποτε συνδυασμό εκείνων των ραδιονουκλεϊδίων.
  - (vi) Διαλύματα νιτρικού ουρανίου εμπλουτισμένα σε ουράνιο-235 σε μία μέγιστη περιεκτικότητα 2% κατά βάρος με συνολική περιεκτικότητα σε πλουτόνιο και ουράνιο-233 όχι μεγαλύτερη από το 0.1% του βάρους του ουράνιου-235 και ελάχιστη ατομική αναλογία αζώτου προς ουράνιο 2.

## Κλάση 7

- (b) Αλλιώς κόλα για σχάσιμο υλικό θα πρέπει να ικανοποιούν τις διατάξεις σχεδιασμού για τον τύπο κόλου που είναι αναγκαίος για τη ραδιοδραστικότητα του σχάσιμου υλικού και, επιπλέον, θα πρέπει να ικανοποιούν τις πρόσθετες διατάξεις για κόλα που περιέχουν σχάσιμο υλικό που αναφέρονται στο περιθωριακό 3741 της προσθήκης Α.7.
- (c) Κάθε σχεδιασμός κόλου για σχάσιμο υλικό πρέπει να εγκρίνεται από την αρμόδια αρχή της χώρας προέλευσης του σχεδιασμού και από τις αρμόδιες αρχές κάθε χώρας μέσω της οποίας ή στην οποία το κόλο πρόκειται να μεταφερθεί, δηλ. απαιτείται πολυμερής έγκριση.
- (d) Το εξωτερικό των κόλων για σχάσιμο υλικό θα πρέπει να ενσωματώνουν ένα χαρακτηριστικό όπως μία σφραγίδα, που θα είναι όχι άμεσα θραύσιμο και που, όταν είναι άθικτο, θα αποτελεί ένδειξη ότι δεν έχει ανοιχτεί.

## 3. Μέγιστο Επίπεδο ακτινοβολίας

Βλέπε κατάλληλο Πρόγραμμα.

## 4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες

Βλέπε κατάλληλο Πρόγραμμα.

## 5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών

Βλέπε κατάλληλο Πρόγραμμα.

## 6. Μικτή Συσκευασία

Μόνον είδη ή έγγραφα που είναι αναγκαία για τη χρήση του ραδιενεργού υλικού επιτρέπονται στο κόλο, υπό την προϋπόθεση ότι δεν υπάρχει αντίδραση μεταξύ αυτών και της συσκευασίας ή του περιεχομένου της που θα μειώνει την ασφάλεια (συμπεριλαμβανομένης της ασφάλειας πυρηνικής κρισιμότητας) του κόλου.

## 7. Μικτή Φόρτωση

Βλέπε περιθωριακό 2703.

## 8. Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες

- (a) Βλέπε κατάλληλο Πρόγραμμα.
- (b) Τα κόλα θα πρέπει να είναι μαρκαρισμένα εξωτερικά ευανάγνωστα και με τρόπο διαρκείας με:
  - (i) "τύπου Α", "τύπου Β(U)", "τύπου Β(M)" όπως απαιτείται,
  - (ii) χαρακτηριστική ένδειξη της αρμόδιας αρχής.

## 9. Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές

Βλέπε περιθωριακό 2703.

**10. Έγγραφα μεταφοράς**

- (a) Για περιλήψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.
- (b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει την περιγραφή: "2918 Ραδιενεργό υλικό, σχάσιμο, ε.α.ο., σε κόλο Τύπου IF ή Τύπου AF ή Τύπου B(U)F ή Τύπου B(M)F, 7, Πρόγραμμα 12, ADR (ή RID)", ή "2977 Εξαφθοριούχο ουράνιο, σχάσιμο, που περιέχει περισσότερο από 1.0% ουράνιο-235, ραδιενεργό υλικό σε εγκεκριμένο κόλο, 7, Πρόγραμμα 12, ADR (ή RID)", όπως μπορεί να είναι η περίπτωση. Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.
- (c) Τα πιστοποιητικά πολυμερούς έγκρισης για τον σχεδιασμό κόλου σχάσιμου υλικού απαιτούνται.
- (d) Πριν από κάθε φόρτωση οποιουδήποτε κόλου σχάσιμου υλικού, ο αποστολέας θα πρέπει να έχει στη διάθεσή του όλα τα σχετικά πιστοποιητικά έγκρισης.
- (e) Πιστοποιητικά πολυμερούς έγκρισης φόρτωσης απαιτούνται για κόλα που περιέχουν σχάσιμο υλικό εάν το άθροισμα των δεικτών μεταφοράς των κόλων στην αποστολή υπερβαίνει το 50.
- (f) Για πρόσθετες διατάξεις εγγράφων, βλέπε κατάλληλο Πρόγραμμα.

**11. Αποθήκευση και Αποστολή**

Βλέπε περιθωριακό 2703.

**12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών**

- (a) Βλέπε περιθωριακό 2703, 12 (2), (a) έως (d).
- (b) Για αποστολές υπό αποκλειστική χρήση, το όριο του συνολικού δείκτη μεταφοράς θα πρέπει να είναι 100.
- (c) Κόλα σχάσιμου υλικού για τις οποίες ο δείκτης μεταφοράς για έλεγχο της πυρηνικής κρισιμότητας υπερβαίνει το 0, δεν θα πρέπει να μεταφέρονται σε υπερσυσκευασία.

**-13. Άλλες Διατάξεις**

Βλέπε περιθωριακό 2703.

## Κλάση 7

2704 Πρόγραμμα 13

(συνεχ.)

**ΡΑΔΙΕΝΕΡΓΟ ΥΛΙΚΟ ΜΕΤΑΦΕΡΟΜΕΝΟ ΥΠΟ ΕΙΔΙΚΗ ΡΥΘΜΙΣΗ**

**ΣΗΜΕΙΩΣΗ 1:** Αποστολές ραδιενεργού υλικού που δεν ικανοποιεί όλες τις εφαρμόσιμες διατάξεις των Σχεδίων 5 - 12 μπορούν να μεταφέρονται υπό "ειδική ρύθμιση"<sup>β</sup> υποκείμενες στην εφαρμογή ειδικών διατάξεων εγκεκριμένων από τις αρμόδιες αρχές. Αυτές οι διατάξεις θα πρέπει να εξασφαλίζουν ότι το συνολικό επίπεδο ασφάλειας σε μεταφορά και σε διαμετακομιστική αποθήκευση είναι τουλάχιστον ισοδύναμο με εκείνο που θα παρέχονταν εάν είχαν ικανοποιηθεί όλες οι εφαρμόσιμες διατάξεις.

**1. Υλικά:**

Υλικά με χαρακτηριστικούς αριθμούς ύλης 2912, 2913, 2918, 2974, 2975, 2976, 2977, 2978, 2979, 2980, 2981 και 2982, βλέπε περιθωριακό 2701.

Ραδιενεργά υλικά που μπορούν να αποσταλούν υπό ειδική ρύθμιση περιλαμβάνουν οποιαδήποτε από εκείνα τα υλικά που καλύπτονται από τα Προγράμματα 5 - 11 και, εάν εφαρμόζεται, το Πρόγραμμα 12.

**2. Συσκευασία/Κόλα**

(a) Όπως επιτρέπεται από το πιστοποιητικό έγκρισης της αρμόδιας αρχής για την ειδική ρύθμιση.

(b) Πολυμερής έγκριση απαιτείται.

**3. Μέγιστο Επίπεδο ακτινοβολίας**

Όπως επιτρέπεται από το πιστοποιητικό έγκρισης της αρμόδιας αρχής για την ειδική ρύθμιση.

**4. Μόλυνση σε Κόλα, Οχήματα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**

Όπως επιτρέπεται από το πιστοποιητικό έγκρισης της αρμόδιας αρχής για την ειδική ρύθμιση.

**5. Απολύμανση και Χρήση Οχημάτων, Εξαρτημάτων ή Μερών αυτών**

Βλέπε περιθωριακό 2703.

**6. Μικτή Συσκευασία**

Όπως επιτρέπεται από το πιστοποιητικό έγκρισης της αρμόδιας αρχής για την ειδική ρύθμιση.

**7. Μικτή Φόρτωση**

Μικτή φόρτωση επιτρέπεται μόνον εάν επιτρέπεται ειδικά από τις αρμόδιες αρχές.

<sup>β</sup> Η "ειδική ρύθμιση" δεν θα πρέπει να συγχέεται με την "ειδική συμφωνία" όπως καλύπτονται από το Είδος 4, παράγραφο 3, της ADR και από τα περιθωριακά 2010 και 10 602.

2704

Πρόγραμμα 13  
(συνεχ.)

8. **Μαρκάρισμα και Ετικέτες κινδύνου σε Κόλα, Εμπορευματοκιβώτια, Δεξαμενές και Υπερσυσκευασίες**
- (a) Βλέπε περιθωριακό 2703. Όμως αποστολές υπό ειδική ρύθμιση θα πρέπει πάντα να φέρουν ΠΙ-ΚΙΤΡΙΝΕΣ ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7C.
  - (b) Επιπλέον, άλλες διατάξεις επισήμανσης και μαρκαρίσματος εγκεκριμένες από τις αρμόδιες αρχές θα πρέπει να πληρούνται.
9. **Ετικέτες κινδύνου σε Οχήματα άλλα από Οχήματα-δεξαμενές**
- (a) Βλέπε περιθωριακό 2703.
  - (b) Επιπλέον, άλλες διατάξεις εγκεκριμένες από τις αρμόδιες αρχές θα πρέπει να πληρούνται.
10. **Έγγραφα μεταφοράς**
- (a) Για περίληψη των διατάξεων έγκρισης και γνωστοποίησης βλέπε περιθωριακό 2716.
  - (b) Το έγγραφο μεταφοράς θα πρέπει να περιλαμβάνει:
    - (i) τον χαρακτηριστικό αριθμό σύμφωνα με το κεφάλαιο 1 και την ονομασία σύμφωνα με το περιθωριακό 2701, μαζί με τις λέξεις "Ραδιενεργό υλικό, υπό ειδική ρύθμιση, 7, Πρόγραμμα 13, ADR (ή RID)", π.χ. "2976 Νιτρικό θόριο, στερεό, ραδιενεργό υλικό, υπό ειδική ρύθμιση, 7, Πρόγραμμα 13, ADR (ή RID)", ή
    - (ii) στην περίπτωση υλικού όχι αλλιώς οριζόμενου, τον χαρακτηριστικό αριθμό σύμφωνα με το κεφάλαιο 1 και την ονομασία σύμφωνα με το περιθωριακό 2701, μαζί με τις λέξεις "υπό ειδική ρύθμιση, 7, Πρόγραμμα 13, ADR (ή RID)", π.χ. "2918 Ραδιενεργό υλικό, σχάσιμο, ε.α.ο., υπό ειδική ρύθμιση, 7, Πρόγραμμα 13, ADR (ή RID)".
- Περαιτέρω λεπτομέρειες που ορίζονται στα περιθωριακά 2709 και 2710 θα πρέπει επίσης να συμπεριλαμβάνονται.
- (c) Κάθε αποστολή θα πρέπει να απαιτεί πολυμερή έγκριση.
  - (d) Πριν από κάθε φόρτωση, ο αποστολέας θα πρέπει να έχει στη διάθεσή του όλα τα σχετικά πιστοποιητικά έγκρισης.
  - (e) Πριν από κάθε φόρτωση, ο αποστολέας πρέπει να ενημερώνει τις αρμόδιες αρχές όλων των χωρών που επηρεάζονται από τη μετακίνηση, κατά προτίμηση τουλάχιστον επτά ημέρες πριν.

**2704**  
**Πρόγραμμα 13**  
**(συνεχ.)**

**11. Αποθήκευση και Αποστολή**

- (a) Βλέπε περιθωριακό 2703.
- (b) Σχετικές διατάξεις αποθήκευσης και αποστολής εγκεκριμένες από τις αρμόδιες αρχές θα πρέπει να πληρούνται.
- (c) Εκτός εάν εξαιρείται ειδικά από τα πιστοποιητικά έγκρισης της αρμόδιας αρχής, ο αποστολέας θα πρέπει να έχει συμμορφωθεί με τις σχετικές διατάξεις για πριν τη χρήση και πριν τη φόρτωση του περιθωριακού 3710.

**12. Μεταφορά Κόλων, Εμπορευματοκιβωτίων, Δεξαμενών και Υπερσυσκευασιών**

- (a) Βλέπε περιθωριακό 2703.
- (b) Σχετικές διατάξεις μεταφοράς εγκεκριμένες από τις αρμόδιες αρχές θα πρέπει να πληρούνται.

**13. Άλλες Διατάξεις**

Βλέπε περιθωριακό 2703.

**Μαρκάρισμα και Επισημάνση**

***ΣΗΜΕΙΩΣΗ:** Για ραδιενεργά υλικά που έχουν άλλες επικίνδυνες ιδιότητες, η επισημάνση θα πρέπει επίσης να είναι σε συμφωνία με τις διατάξεις για τις άλλες επικίνδυνες ιδιότητες [βλέπε περιθωριακό 3770 (3)].*

## Κλάση 7

**Μαρκάρισμα Κόλων, συμπεριλαμβανομένων Δεξαμενών και Εμπορευματοκιβωτίων**

- 2705** (1) Κάθε κόλο με μικτό βάρος μεγαλύτερο από 50 kg θα πρέπει να έχει το επιτρεπτό μικτό βάρος του ευανάγνωστα και με τρόπο διαρκείας μαρκαρισμένο στο εξωτερικό της συσκευασίας.
- (2) Κάθε κόλο, εκτός από δεξαμενές, εμπορευματοκιβώτια και υπερσυσκευασίες και εξαιρούμενα κόλα των σχεδίων 1 έως 4 θα πρέπει να είναι καθαρό και μαρκαρισμένο με τρόπο διαρκείας με τον χαρακτηριστικό αριθμό των εμπορευμάτων που εγγράφεται στο έγγραφο μεταφοράς μετά από τα γράμματα "UN".
- (3) Κάθε κόλο που συμφωνεί με τον σχεδιασμό ενός κόλου Τύπου Α θα πρέπει να είναι ευανάγνωστα και με τρόπο διαρκείας μαρκαρισμένη στο εξωτερικό της συσκευασίας με "ΤΥΠΟΥ Α".
- (4) Κάθε κόλο που συμφωνεί με έναν σχεδιασμό εγκεκριμένο υπό τα περιθωριακά 3752-3755 θα πρέπει να είναι ευανάγνωστα και με τρόπο διαρκείας μαρκαρισμένη στο εξωτερικό της συσκευασίας με:
- (a) την χαρακτηριστική ένδειξη που δίνεται σε εκείνον τον σχεδιασμό από την αρμόδια αρχή,
  - (b) έναν σειριακό αριθμό για τον μοναδικό προσδιορισμό κάθε συσκευασίας που συμφωνεί με εκείνον τον σχεδιασμό, και
  - (c) στην περίπτωση σχεδιασμού ενός κόλου Τύπου Β(Υ) Τύπου Β(Μ), με "ΤΥΠΟΥ Β(Υ)" ή "ΤΥΠΟΥ Β(Μ)".
- (5) Κάθε κόλο που συμφωνεί με τον σχεδιασμό ενός κόλου Τύπου Β(Υ) ή Τύπου Β(Μ) θα πρέπει να έχει το εξωτερικό του δοχείου που είναι πιο ανθεκτική στις επιδράσεις της φωτιάς και του νερού καθαρά μαρκαρισμένη ανάγλυφα, με σφραγίδα, ή άλλον τρόπο ανθεκτικό στις επιδράσεις της φωτιάς και του νερού με το σύμβολο σε σχήμα τριφυλλίου που φαίνεται στο υπόδειγμα παρακάτω.

Βασικό σύμβολο σε σχήμα τριφυλλίου με αναλογίες βασισμένες σ' έναν κεντρικό κύκλο ακτίνας X. Το ελάχιστο επιτρεπόμενο μέγεθος του X θα πρέπει να είναι 4 mm.

## Κλάση 7

**Επισήμανση Κόλων, συμπεριλαμβανομένων Δεξαμενών και Εμπορευματοκιβωτίων και Υπερσυσκευασιών**

2706

(1) Κάθε κόλο, υπερσυσκευασία, δεξαμενή και εμπορευματοκιβώτιο θα πρέπει να φέρει τις ετικέτες που είναι σύμφωνες με το υπόδειγμα Αριθμ. 7Α, 7Β ή 7C σύμφωνα με την κατάλληλη κατηγορία. Οποιοσδήποτε ετικέτες που δεν σχετίζονται με το περιεχόμενο θα πρέπει να αφαιρούνται ή να καλύπτονται. Για ραδιενεργά υλικά που έχουν άλλες επικίνδυνες ιδιότητες βλέπε περιθωριακό 3770.

(2) Οι ετικέτες θα πρέπει να είναι τοποθετημένες σε δύο αντίθετες πλευρές του εξωτερικού ενός κόλου ή υπερσυσκευασίας, στο εξωτερικό και των τεσσάρων πλευρών ενός εμπορευματοκιβωτίου ή ενός εμπορευματοκιβωτίου-δεξαμενής, ή στην περίπτωση οχήματος-δεξαμενής στα δύο πλευρικά τοιχώματα και στο πίσω τοίχωμα της μονάδας μεταφοράς.

(3) Κάθε ετικέτα θα πρέπει να συμπληρώνεται με τις παρακάτω πληροφορίες με καθαρό και ανεξίτηλο τρόπο:

(a) Περιεχόμενο:

(i) Εκτός εάν πρόκειται για LSA-I υλικό, την ονομασία του ραδιονουκλεϊδίου όπως λαμβάνεται από τον Πίνακα I της προσθήκης Α.7, με τη χρήση των εκεί οριζόμενων συμβόλων. Για μείγματα ραδιονουκλεϊδίων, τα πιο περιοριστικά νουκλεϊδια πρέπει να αναφέρονται στο βαθμό που επιτρέπεται από το διάστημα στη γραμμή. Η ομάδα των LSA ή SCO θα πρέπει να φαίνεται κάτω από την ονομασία του ραδιονουκλεϊδίου. Οι όροι "LSA-II", "LSA-III", "SCO-I" και "SCO-II" θα πρέπει να χρησιμοποιούνται για αυτό το σκοπό,

(ii) Για LSA-I υλικό, μόνον ο όρος "LSA-I" είναι αναγκαίος: η ονομασία του ραδιονουκλεϊδίου δεν είναι αναγκαία.

(b) Δραστηκότητα:

Η μέγιστη δραστηκότητα του ραδιενεργού περιεχομένου κατά τη διάρκεια της μεταφοράς εκφρασμένη σε μονάδες μπεκερέλ (Bq) [και, εάν είναι επιθυμητό κιουρί (Ci)] με το κατάλληλο SI πρόθεμα. [Βλέπε περιθωριακό 2001 (1)]. Για σχάσιμο υλικό, το συνολικό βάρος σε μονάδες γραμμαρίων (g) ή πολλαπλασίων τους, μπορεί να χρησιμοποιείται στη θέση της δραστηκότητας.

(c) Για υπερσυσκευασίες, δεξαμενές και εμπορευματοκιβώτια, οι καταχωρήσεις του 'περιεχομένου' και της 'δραστηκότητας' στην ετικέτα, θα πρέπει να φέρουν τις πληροφορίες που απαιτούνται στα (a) και (b) αυτής της παραγράφου αντίστοιχα, αθροισμένες μαζί για όλο το περιεχόμενο της υπερσυσκευασίας, της δεξαμενής, ή του ενός εμπορευματοκιβωτίου εκτός από εκείνες τις ετικέτες για υπερσυσκευασίες ή εμπορευματοκιβώτια που περιέχουν μικτά φορτία κόλων με διαφορετικά ραδιονουκλεϊδια, τέτοιες καταχωρήσεις μπορούν να γράφουν "βλέπε έγγραφο μεταφοράς".

(d) Δείκτης μεταφοράς:

Βλέπε περιθωριακό 3715 (3) (δεν απαιτείται καταχώρηση του δείκτη μεταφοράς για την κατηγορία I-AEYKH).

**Πρόσθετο Μαρκάρισμα Δεξαμενών και Οχημάτων**

2707

Βλέπε περιθωριακό 10 500 και Προσθήκη Β.5.

## Κλάση 7

**Πρόσθετη Επισήμανση Εμπορευματοκιβωτίων για μεταφορά χύμα, Εμπορευματοκιβωτίων, Δεξαμενών και Οχημάτων**

- 2708** (1) Δεξαμενές και μεγάλα εμπορευματοκιβώτια που μεταφέρουν κόλα άλλα από εξαιρούμενα κόλα θα πρέπει να φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7D. Όμως, αντί για τη χρήση ετικέτας σύμφωνα με το υπόδειγμα Αριθμ. 7A, 7B ή 7C μαζί με ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 7D, επιτρέπεται εναλλακτικά η χρήση μεγεθυμένων ετικετών σύμφωνα με το υπόδειγμα Αριθμ. 7A, 7B ή 7C με τις διαστάσεις του υποδείγματος Αριθμ. 7D. Κάθε ετικέτα θα πρέπει να τοποθετείται σε κάθετο προσανατολισμό και στις τέσσερις πλευρές ενός εμπορευματοκιβωτίου ή ενός εμπορευματοκιβωτίου-δεξαμενής ή, στην περίπτωση οχήματος-δεξαμενής, στα δύο πλευρικά τοιχώματα και στο πίσω τοίχωμα της μονάδας μεταφοράς.
- (2) Οχήματα που μεταφέρουν κόλα, υπερσυσκευασίες, εμπορευματοκιβώτια-δεξαμενές ή εμπορευματοκιβώτια που φέρουν οποιαδήποτε από τις ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 7A, 7B ή 7C, θα πρέπει να έχουν την ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 7D και στις δύο πλευρές και από πίσω. Επιπλέον οχήματα που μεταφέρουν φορτία υπό αποκλειστική χρήση θα πρέπει να έχουν την ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 7D και στις δύο πλευρές και από πίσω.
- (3) Οποιοσδήποτε ετικέτες που δεν σχετίζονται με το περιεχόμενο; θα πρέπει να μην είναι πιά ορατές.

**Πρόσθετα Στοιχεία Αποστολής**

- 2709** Επιπλέον της περιγραφής των εμπορευμάτων που δίνεται στο σχετικό πρόγραμμα, ο αποστολέας θα πρέπει να περιλαμβάνει στο έγγραφο μεταφοράς για κάθε αποστολή ραδιενεργού υλικού τις παρακάτω πληροφορίες:
- (a) τις λέξεις "Η φύση των εμπορευμάτων και η συσκευασία είναι σε συμφωνία με τις διατάξεις της ADR",
- (b) την ονομασία ή το σύμβολο κάθε ραδιονουκλειδίου ή, για μείγμα ραδιονουκλειδίων, μία κατάλληλη γενική περιγραφή ή ένα κατάλογο των πιο περιοριστικών νουκλειδίων,
- (c) μία περιγραφή της φυσικής και χημικής μορφής του υλικού, ή μία αναφορά ότι το υλικό είναι ειδικής μορφής ραδιενεργό υλικό. Μία γενική περιγραφή επιτρέπεται για τη χημική μορφή,
- (d) τη μέγιστη δραστηριότητα του ραδιενεργού περιεχομένου κατά τη διάρκεια της μεταφοράς εκφρασμένη σε μονάδες μπεκερέλ (Bq) [και, εάν είναι επιθυμητό, κιουρί (Ci)] με το κατάλληλο SI πρόθεμα, βλέπε περιθωριακό 2001 (1). Για σχάσιμο υλικό, το συνολικό βάρος του σχάσιμου υλικού σε μονάδες γραμμαρίων (g), ή κατάλληλων πολλαπλασίων τους, μπορεί να χρησιμοποιείται στη θέση της δραστηριότητας,
- (e) την κατηγορία του κόλου, δηλ. I-ΛΕΥΚΗ, II-ΚΙΤΡΙΝΗ ή III-ΚΙΤΡΙΝΗ,
- (f) τον δείκτη μεταφοράς (για κατηγορίες II-ΚΙΤΡΙΝΗ και III-ΚΙΤΡΙΝΗ μόνον),
- (g) για αποστολή σχάσιμου υλικού, όπου όλα τα κόλα στην αποστολή είναι εξαιρούμενα υπό το περιθωριακό 3703, τις λέξεις "Σχάσιμο εξαιρούμενο",
- (h) την χαρακτηριστική ένδειξη για κάθε πιστοποιητικό έγκρισης της αρμόδιας αρχής (ειδικής μορφής ραδιενεργό υλικό, ειδική ρύθμιση, σχεδιασμός κόλου, ή φόρτωση) που μπορεί να εφαρμοστεί στο φορτίο,

## Κλάση 7

- 2709 (i) για αποστολές κόλων σε υπερσυσκευασία ή εμπορευματοκιβώτιο, λεπτομερή αναφορά του περιεχομένου κάθε κόλου στην υπερσυσκευασία ή το εμπορευματοκιβώτιο και, όπου είναι κατάλληλο, κάθε υπερσυσκευασίας ή εμπορευματοκιβωτίου στην αποστολή. Εάν κόλα πρόκειται να μετακινηθούν από την υπερσυσκευασία ή το εμπορευματοκιβώτιο σε ένα σημείο ενδιάμεσης εκφόρτωσης, θα πρέπει να διατίθενται κατάλληλα έγγραφα μεταφοράς,
- (j) όταν ένα φορτίο απαιτείται να αποσταλεί υπό αποκλειστική χρήση, την αναφορά "Αποκλειστικής χρήσης φόρτωση".

## Οδηγία στους Μεταφορείς

- 2710 (1) Ο αποστολέας θα πρέπει να προμηθεύει με το έγγραφο μεταφοράς, πληροφορίες σχετικά με δράσεις, εάν υπάρχουν, που απαιτείται να λαμβάνονται από τον μεταφορέα. Οι πληροφορίες θα πρέπει να περιλαμβάνουν τουλάχιστον τα παρακάτω σημεία:

- (a) συμπληρωματικές λειτουργικές διατάξεις για φόρτωση, στοιβάγμα, μεταφορά, χειρισμό και εκφόρτωση του κόλου, υπερσυσκευασίας, εμπορευματοκιβωτίου, ή δεξαμενής συμπεριλαμβανομένων οποιωνδήποτε ειδικών διατάξεων στοιβάγματος για την ασφαλή διάχυση θερμότητας [βλέπε περιθωριακό 2712 (2)] ή μίας αναφοράς ότι καμία τέτοια διάταξη δεν είναι αναγκαία,
- (b) οποιεσδήποτε αναγκαίες οδηγίες πορείας,
- (c) γραπτές οδηγίες κατάλληλες για την αποστολή. Βλέπε περιθωριακό 10 385 (1), (2) και (3) και περιθωριακό 71 385.

(2) Σε όλες τις περιπτώσεις όπου έγκριση της φόρτωσης ή προηγούμενη ενημέρωση στην αρμόδια αρχή απαιτείται, οι μεταφορείς πρέπει να πληροφορούνται, εάν είναι δυνατόν, τουλάχιστον 15 ημέρες πριν και σε οποιαδήποτε περίπτωση τουλάχιστον 5 ημέρες πριν, ώστε να μπορούν να λαμβάνουν έγκαιρα οποιαδήποτε μέτρα απαιτούνται για τη μεταφορά.

(3) Ο αποστολέας θα πρέπει να είναι σε θέση να προμηθεύει τα πιστοποιητικά των αρμόδιων αρχών στους μεταφορείς πριν την φόρτωση, εκφόρτωση και οποιαδήποτε μεταφόρτωση.

## Μεταφορά

Διαχωρισμός κατά τη διάρκεια της μεταφοράς

- 2711 (1) Κόλα, υπερσυσκευασίες, εμπορευματοκιβώτια και δεξαμενές θα πρέπει να διαχωρίζονται κατά τη διάρκεια της μεταφοράς:

- (a) για σκοπούς ελέγχου της ακτινοβολίας, από θέσεις κατελημμένες από άτομα σε συμφωνία με τον Πίνακα 8 και από μη-εμφανισμένα φωτογραφικά φιλμ και ταχυδρομικούς σάκους, σε συμφωνία με τον Πίνακα 9.

**ΣΗΜΕΙΩΣΗ:** Οι ταχυδρομικοί σάκοι θα πρέπει να θεωρείται ότι περιέχουν μη-εμφανισμένα φιλμ και πλάκες και συνεπώς να διαχωρίζονται από ραδιενεργό υλικό με τον ίδιο τρόπο.

και

- (b) από άλλα επικίνδυνα εμπορεύματα σε συμφωνία με το περιθωριακό 2703, κεφάλαιο 7.

## Κλάση 7

2711 Πίνακας 8: Ελάχιστες αποστάσεις μεταξύ κόλων της κατηγορίας Π-ΚΙΤΡΙΝΗ ή της κατηγορίας (συνεχ.) ΙΙΙ-ΚΙΤΡΙΝΗ και ατόμων

Άθροισμα δεικτών μεταφοράς όχι μεγαλύτερο από	Ελάχιστες αποστάσεις σε μέτρα, χωρίς την παρεμβολή προστατευτικού υλικού, από κατοικίες ή τακτικά κατελημμένο χώρο εργασίας στην περίπτωση χρόνου έκθεσης όχι μεγαλύτερου από 250 ώρες ανά έτος

## Στοιβάγμα για Μεταφορά

- 2712 (1) Τα κόλα θα πρέπει να φορτώνονται έτσι σε οχήματα ώστε να μην μπορούν να μετατοπίζονται επικίνδυνα, να αναποδογυρίζουν ή να πέφτουν.
- (2) Υπό την προϋπόθεση ότι η μέση επιφανειακή εκροή θερμότητάς του δεν υπερβαίνει τα 15 W/m<sup>2</sup> και ότι το αμέσως περιβάλλον φορτίο δεν είναι σε τσουβάλια ή σάκους, ένα κόλο ή υπερσυσκευασία μπορεί να μεταφέρεται ανάμεσα σε συσκευασμένο γενικό φορτίο χωρίς οποιαδήποτε ειδική διάταξη στοιβάγματος εκτός εάν σχετικά απαιτείται από την αρμόδια αρχή σε ένα προς εφαρμογή πιστοποιητικό έγκρισης.
- (3) Εκτός από την περίπτωση φόρτωσης υπό ειδική ρύθμιση, η ανάμειξη κόλων διαφορετικών ειδών ραδιενεργού υλικού, συμπεριλαμβανομένου σχάσιμου υλικού και η ανάμειξη διαφορετικών ειδών κόλων με διαφορετικούς δείκτες μεταφοράς επιτρέπεται χωρίς σχετική έγκριση από αρμόδια αρχή. Στην περίπτωση φορτώσεων υπό ειδική ρύθμιση, ανάμειξη δεν θα πρέπει να επιτρέπεται εκτός εάν σχετικά ορίζεται υπό την ειδική ρύθμιση.
- (4) Οι παρακάτω διατάξεις θα πρέπει να εφαρμόζονται στις φορτώσεις οχημάτων-δεξαμενών και στις φορτώσεις κόλων, υπερσυσκευασιών, εμπορευματοκιβωτίων-δεξαμενών και εμπορευματοκιβωτίων στα οχήματα:
- (a) Ο δείκτης μεταφοράς ενός οχήματος-δεξαμενής δεν θα πρέπει να υπερβαίνει τα όρια στον Πίνακα 10. Ο συνολικός αριθμός κόλων, υπερσυσκευασιών, δεξαμενών και εμπορευματοκιβωτίων πάνω σ' ένα μόνο όχημα θα πρέπει να είναι έτσι περιορισμένος ώστε το συνολικό άθροισμα των δεικτών μεταφοράς πάνω στο όχημα να μην υπερβαίνει τις τιμές που εμφανίζονται στον Πίνακα 10.
- Για αποστολές LSA-I υλικού δεν θα πρέπει να υπάρχει όριο στο άθροισμα των δεικτών μεταφοράς.
- (b) Το επίπεδο ακτινοβολίας υπό συνθήκες πιθανές να συμβούν σε συνήθη μεταφορά δεν θα πρέπει να υπερβαίνει τα 2 mSv/h (200 mrem/h) σε οποιοδήποτε σημείο πάνω στην και 0.1 mSv/h (10 mrem/h) σε 2 m από την, εξωτερική επιφάνεια του οχήματος.
- (5) Οποιοδήποτε κόλο ή υπερσυσκευασία με δείκτη μεταφοράς μεγαλύτερο από 10, θα πρέπει να μεταφέρεται μόνον υπό αποκλειστική χρήση.

Πίνακας 10: Όρια δείκτη μεταφοράς για εμπορευματοκιβώτια και οχήματα

Τύπος εμπορευματοκιβωτίου ή οχήματος	Όριο στο συνολικό άθροισμα δεικτών μεταφοράς σε ένα μόνο εμπορευματοκιβώτιο ή πάνω σε ένα όχημα			
	Όχι υπό αποκλειστική χρήση		Υπό αποκλειστική χρήση	
	Μη-σχάσιμο Υλικό	Σχάσιμο Υλικό	Μη-σχάσιμο Υλικό	Σχάσιμο Υλικό
Μικρό εμπορευματοκιβώτιο	50	50	δεν εφαρμόζεται	δεν εφαρμόζεται
Μεγάλο εμπορευματοκιβώτιο	50	50	δεν υπάρχει όριο	100
Όχημα	50	50	δεν υπάρχει όριο	100

## Κλάση 7

## Πρόσθετες Διατάξεις

- 2713 (1) Για αποστολές υπό αποκλειστική χρήση, το επίπεδο ακτινοβολίας δεν θα πρέπει να υπερβαίνει τα:
- (a) 10 mSv/h (1000 mrem/h) σε οποιοδήποτε σημείο στην εξωτερική επιφάνεια οποιουδήποτε κόλου ή υπερσυσκευασίας και μπορεί μόνον να υπερβαίνει τα 2 mSv/h (200 mrem/h) υπό την προϋπόθεση ότι:
    - (i) το όχημα είναι εφοδιασμένο με ένα φράγμα που παρεμποδίζει μη-εξουσιοδοτημένη προσέγγιση στο φορτίο κατά τη διάρκεια της μεταφοράς και
    - (ii) γίνονται διατάξεις για την ασφάλιση κόλου ή υπερσυσκευασίας έτσι ώστε η θέση της στο όχημα να παραμένει μόνιμη κατά τη διάρκεια συνήθους μεταφοράς και
    - (iii) δεν υπάρχουν λειτουργίες φόρτωσης ή εκφόρτωσης μεταξύ της έναρξης και του τέλους της φόρτωσης.
  - (b) 2 mSv/h (200 mrem/h) σε οποιοδήποτε σημείο στις εξωτερικές επιφάνειες του οχήματος συμπεριλαμβανομένων των υψηλότερων και χαμηλότερων επιφανειών, ή, στην περίπτωση ανοιχτού οχήματος σε οποιοδήποτε σημείο στα κάθετα επίπεδα που προεξέχουν από τις εξωτερικές άκρες του οχήματος, στην υψηλότερη επιφάνεια του φορτίου και στην χαμηλότερη εξωτερική επιφάνεια του οχήματος και
  - (c) 0.1 mSv/h (10 mrem/h) σε οποιοδήποτε σημείο 2 m από τα κάθετα επίπεδα που παρατηρούνται από τις εξωτερικές πλάγιες επιφάνειες του οχήματος, ή, εάν το φορτίο μεταφέρεται σε ανοιχτό όχημα, σε οποιοδήποτε σημείο 2 m από τα κάθετα επίπεδα που προεξέχουν από τις εξωτερικές άκρες του οχήματος.
- (2) Το επίπεδο ακτινοβολίας σε οποιαδήποτε κανονικά κατειλημμένη θέση του οχήματος δεν θα πρέπει να υπερβαίνει τα 0.02 mSv/h (2 mrem/h) εκτός εάν τα άτομα που καταλαμβάνουν τέτοιες θέσεις είναι εφοδιασμένα με προσωπικές συσκευές μέτρησης.

## Αποθήκευση σε διαμετακόμιση

- 2714 (1) Κόλα, υπερσυσκευασίες, εμπορευματοκιβώτια και δεξαμενές θα πρέπει να διαχωρίζονται κατά τη διάρκεια αποθήκευσης σε διαμετακόμιση:
- (a) για σκοπούς ελέγχου της έκθεσης στην ακτινοβολία, από θέσεις κατειλημμένες από άτομα, σε συμφωνία με τον Πίνακα 8 του περιθωριακού 2711 και από μη-εμφανισμένα φωτογραφικά φιλμ και ταχυδρομικούς σάκους, σε συμφωνία με τον Πίνακα 9 του περιθωριακού 2711,
 

***ΣΗΜΕΙΩΣΗ:** Οι ταχυδρομικοί σάκοι θα πρέπει να θεωρείται ότι περιέχουν μη-εμφανισμένα φιλμ και πλάκες και συνεπώς να διαχωρίζονται από ραδιενεργό υλικό με τον ίδιο τρόπο.*
  - (b) από άλλα επικίνδυνα εμπορεύματα σε συμφωνία με το περιθωριακό 2703, κεφάλαιο 7.
- (2) Ο αριθμός των κόλων, υπερσυσκευασιών, δεξαμενών και εμπορευματοκιβωτίων κατηγορίας II-KITPINH και κατηγορίας III-KITPINH, που αποθηκεύονται σε οποιοδήποτε μέρος θα πρέπει να είναι έτσι περιορισμένος ώστε το συνολικό άθροισμα των δεικτών μεταφοράς σε οποιαδήποτε μεμονωμένη ομάδα τέτοιων κόλων, υπερσυσκευασιών, δεξαμενών ή εμπορευματοκιβωτίων να μην υπερβαίνει το 50. Ομάδες τέτοιων κόλων, υπερσυσκευασιών, δεξαμενών και εμπορευματοκιβωτίων θα πρέπει να αποθηκεύονται έτσι ώστε να διατηρούν ένα διάστημα τουλάχιστον 6 m από άλλες ομάδες τέτοιων κόλων, υπερσυσκευασιών, δεξαμενών ή εμπορευματοκιβωτίων.

## Κλάση 7

- 2714** (3) Εάν ο δείκτης μεταφοράς ενός μονού κόλου, υπερσυσκευασίας, δεξαμενής ή (συνεχ.) εμπορευματοκιβωτίου υπερβαίνει το 50 ή ο συνολικός δείκτης μεταφοράς ενός οχήματος υπερβαίνει το 50, όπως επιτρέπεται στον Πίνακα 10, η αποθήκευση θα πρέπει να είναι έτσι ώστε να διατηρεί ένα διάστημα τουλάχιστον 6 m από άλλες ομάδες κόλων, υπερσυσκευασιών, δεξαμενών, εμπορευματοκιβωτίων ή οχημάτων που μεταφέρουν ραδιενεργό υλικό.
- (4) Αποστολές στις οποίες το μόνο ραδιενεργό περιεχόμενο είναι LSA-I υλικά θα πρέπει να εξαιρούνται από τις διατάξεις των παραγράφων (2) και (3) παραπάνω.
- (5) Εκτός από την περίπτωση φόρτωσης υπό ειδική ρύθμιση, μικτή φόρτωση κόλων διαφορετικών ειδών ραδιενεργού υλικού, συμπεριλαμβανομένου σχάσιμου υλικού και μικτή φόρτωση διαφορετικών ειδών κόλων με διαφορετικούς δείκτες μεταφοράς είναι επιτρεπόμενες χωρίς σχετική έγκριση από αρμόδια αρχή. Στην περίπτωση φόρτωσης υπό ειδική ρύθμιση, μικτή φόρτωση δεν θα πρέπει να επιτρέπεται εκτός εάν σχετικά ορίζεται υπό την ειδική ρύθμιση.

**Μη-παραλαμβανόμενες Αποστολές**

- 2715** Εάν ούτε ο αποστολέας ούτε ο παραλήπτης μπορούν να προσδιοριστούν, ή εάν η αποστολή δεν μπορεί να παραδοθεί στον παραλήπτη και ο μεταφορέας δεν έχει οδηγίες από τον αποστολέα η αποστολή θα πρέπει να τοποθετείται σε ασφαλή θέση και θα πρέπει να πληροφορείται η αρμόδια αρχή το συντομότερο δυνατόν και να ζητούνται οδηγίες για περαιτέρω ενέργειες.

**2716** **Περίληψη διατάξεων έγκρισης και προηγούμενης γνωστοποίησης**

**ΣΗΜΕΙΩΣΗ 1:** Πριν την πρώτη φόρτωση οποιονδήποτε κόλου που απαιτεί έγκριση του σχεδιασμού από αρμόδια αρχή, ο αποστολέας πρέπει να εξασφαλίζει ότι ένα αντίγραφο του πιστοποιητικού έγκρισης για εκείνον τον σχεδιασμό έχει υποβληθεί στην αρμόδια αρχή κάθε χώρας του δρομολογίου: βλέπε περιθωριακό 3719 (1).

**ΣΗΜΕΙΩΣΗ 2:** Γνωστοποίηση απαιτείται εάν το περιεχόμενο υπερβαίνει τα  $3 \times 10^3 A_1$ , ή  $3 \times 10^3 A_2$ , ή 1000 TBq (20 kCi), βλέπε περιθωριακό 3719 (2).

**ΣΗΜΕΙΩΣΗ 3:** Πολυμερής έγκριση της φόρτωσης απαιτείται εάν το περιεχόμενο υπερβαίνει τα  $3 \times 10^3 A_1$ , ή  $3 \times 10^3 A_2$ , ή 1000 TBq (20 kCi), ή εάν επιτρέπεται ελεγχόμενος περιοδικός εξαερισμός, βλέπε περιθωριακό 3757.

**ΣΗΜΕΙΩΣΗ 4:** Βλέπε διατάξεις έγκρισης και προηγούμενης γνωστοποίησης για το εφαρμοσμένο κόλο.

## ΚΛΑΣΗ 8. ΔΙΑΒΡΩΤΙΚΕΣ ΥΛΕΣ

## 1. Κατάλογος υλών

- 2800 (1) Ανάμεσα στις ύλες και τα είδη που καλύπτονται από τον τίτλο της κλάσης 8, εκείνα που αναφέρονται στο περιθωριακό 2801 ή καλύπτονται από ένα συγκεντρωτικό κεφάλαιο σε εκείνο το περιθωριακό υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2800 (2) έως 2822 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ:** Για τις ποσότητες υλών που αναφέρονται στο περιθωριακό 2801 που δεν υπόκεινται στις "διατάξεις για αυτήν την Κλάση", είτε σε αυτό το Παράρτημα είτε στο Παράρτημα Β, βλέπε περιθωριακό 2801α.

(2) Ο τίτλος της κλάσης 8 καλύπτει ύλες που με χημική δράση προσβάλλουν τον επιθηλιακό ιστό - του δέρματος ή των βλεννογόνων υμένων - με τον οποίο είναι σε επαφή και ύλες που σε περίπτωση διαρροής είναι ικανές να βλάψουν ή καταστρέψουν άλλα εμπορεύματα, ή μέσα μεταφοράς και μπορούν επίσης να προκαλέσουν άλλους κινδύνους. Ο τίτλος αυτής της κλάσης επίσης καλύπτει άλλες ύλες που σχηματίζουν ένα διαβρωτικό υγρό μόνον με την παρουσία νερού, ή που παράγουν διαβρωτικό ατμό ή νέφος κατά την παρουσία φυσικής υγρασίας του αέρα.

- (3) (α) Οι ύλες και τα είδη της κλάσης 8, υποδιαιρούνται ως εξής:

- A. Ώξινες ύλες,
- B. Βασικές ύλες,
- C. Άλλες διαβρωτικές ύλες,
- D. Είδη που περιέχουν διαβρωτικές ύλες,
- E. Κενές συσκευασίες.

- (b) Ύλες και είδη της κλάσης 8 που ταξινομούνται υπό τα διάφορα είδη του περιθωριακού 2801 άλλα από ύλες των 6°, 14° και 15° θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες που χαρακτηρίζονται με το γράμμα (a), (b) και (c) σύμφωνα με το βαθμό τοξικότητάς τους:

(a) εξαιρετικά διαβρωτικά,

(b) διαβρωτικά,

(c) ελαφρώς διαβρωτικά.

- (c) Η κατάταξη υλών στις ομάδες (a), (b) και (c) έχει γίνει με βάση την εμπειρία λαμβάνοντας υπόψη τέτοιες πρόσθετες παραμέτρους όπως κίνδυνο σε περίπτωση εισπνοής<sup>1/</sup> και δραστηριότητα με το νερό (συμπεριλαμβανομένου του σχηματισμού επικίνδυνων προϊόντων αποσύνθεσης). Ο βαθμός διαβρωτικότητας υλών χωρίς συγκεκριμένη ονομασία, συμπεριλαμβανομένων μειγμάτων, μπορεί να κριθεί από τη διάρκεια του χρόνου επαφής που είναι αναγκαία για την πρόκληση καταστροφής όλου του πάχους του ανθρώπινου δέρματος.

<sup>1/</sup> Μία ύλη ή παρασκευάσμα που ικανοποιούν τα κριτήρια της κλάσης 8 με τοξικότητα εισπνοής σκόνης και νέφους (LC<sub>50</sub>) στο πεδίο της ομάδας (a), αλλά τοξικότητα μέσω στοματικής κατάποσης ή δερματικής επαφής μόνον στο πεδίο της ομάδας (c) ή λιγότερο, θα πρέπει να τοποθετείται στην κλάση 8.

## Κλάση 8

2800  
(συνεχ.)

Ύλες που κρίνονται ως μη προκαλούσες καταστροφή όλου του πάχους του ανθρώπινου δέρματος θα πρέπει εν τούτοις να εξετάζονται για την δυνατότητά τους να προκαλούν διάβρωση σε ορισμένες μεταλλικές επιφάνειες. Για την πραγματοποίηση αυτής της ομαδοποίησης, θα πρέπει να λαμβάνεται υπόψη της ανθρώπινης εμπειρίας σε περίπτωση τυχαίας έκθεσης. Σε περίπτωση απουσίας ανθρώπινης εμπειρίας, η ομαδοποίηση θα πρέπει να βασίζεται σε δεδομένα που λαμβάνονται από πειράματα σε ζώα σε συμφωνία με την OECD Οδηγία 404.<sup>2/</sup>

- (d) Ύλες που προκαλούν καταστροφή όλου του πάχους ανέπαφου δερματικού ιστού μέσα σε μία περίοδο παρακολούθησης έως 60 λεπτών αρχής γενομένης μετά από χρόνο έκθεσης 3 λεπτών ή μικρότερο είναι ύλες της ομάδας (a).
- (e) Ύλες που προκαλούν καταστροφή όλου του πάχους ανέπαφου δερματικού ιστού μέσα σε μία περίοδο παρακολούθησης έως 14 ημέρες αρχής γενομένης μετά από χρόνο έκθεσης μεγαλύτερο από 3 λεπτά αλλά όχι μεγαλύτερο από 60 λεπτά είναι ύλες της ομάδας (b).
- (f) Οι παρακάτω είναι ύλες της ομάδας (c):
- ύλες που προκαλούν καταστροφή όλου του πάχους ανέπαφου δερματικού ιστού μέσα σε μία περίοδο παρακολούθησης έως 14 ημέρες αρχής γενομένης μετά από χρόνο έκθεσης μεγαλύτερο από 60 λεπτά αλλά όχι μεγαλύτερο από 4 ώρες,
  - ύλες που κρίνονται όχι ως προκαλούσες καταστροφή όλου του πάχους ανέπαφου δερματικού ιστού, αλλά που εμφανίζουν ένα ρυθμό διάβρωσης σε χαλύβδινες ή αλουμινένιες επιφάνειες μεγαλύτερο από 6.25 mm ανά έτος σε θερμοκρασία ελέγχου 55 °C. Για τους σκοπούς ελέγχου σε χάλυβα, ο τύπος P3 (ISO 2604 (IV), 1975) ή παρόμοιος τύπος, και για έλεγχο σε αλουμίνιο, μη-επενδεδυμένοι τύποι 7075-T6 ή AZ5GU-T6 θα πρέπει να χρησιμοποιούνται.

(4) Εάν ύλες της κλάσης 8, ως αποτέλεσμα προσμίξεων, μεταπηδούν σε διαφορετικές κατηγορίες κινδύνου από εκείνες στις οποίες οι ύλες με συγκεκριμένη ονομασία στο περιθωριακό 2801 ανήκουν, αυτά τα μείγματα ή διαλύματα θα πρέπει να καταχωρούνται στα είδη και τις ομάδες στις οποίες ανήκουν με βάση τον πραγματικό βαθμό κινδύνου τους.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

(5) Με βάση τα κριτήρια που τίθενται στο (3), μπορεί επίσης να καθορίζεται εάν η φύση ενός διαλύματος ή μείγματος που έχει συγκεκριμένη ονομασία ή που περιέχει μία ύλη με συγκεκριμένη ονομασία είναι τέτοια ώστε το διάλυμα ή το μείγμα να μην υπόκειται στις διατάξεις για αυτήν την κλάση.

(6) Για τις απαιτήσεις συσκευασίας των περιθωριακών 2805 (2), 2806 (3) και 2807 (3), ύλες και μείγματα υλών με σημείο τήξης υψηλότερο από 45 °C θεωρούνται ότι είναι στερεά.

- (7) (a) Εύφλεκτα διαβρωτικά υγρά με σημείο ανάφλεξης χαμηλότερο από 23 °C, αλλά από ύλες των 54° (a) και 68° (a), είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301, είδη 21° έως 26°).
- (b) Εύφλεκτα, ελαφρώς διαβρωτικά υγρά με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C, είναι ύλες της κλάσης 3 (βλέπε περιθωριακό 2301, 33°).

<sup>2/</sup>

OECD Οδηγίες για Έλεγχο των Χημικών, Αριθμ. 404 "Όξυς Δερματικός Ερεθισμός/Διάβρωση" (1992).

## Κλάση 8

2800  
(συνεχ.)

- (c) Διαβρωτικές ύλες που είναι εξαιρετικά τοξικές με την εισπνοή, όπως ορίζεται στο περιθωριακό 2600 (3), είναι ύλες της κλάσης 6.1 (βλέπε περιθωριακό 2601).

(8) Οι χημικά ασταθείς ύλες της κλάσης 8 θα γίνονται δεκτές για μεταφορά μόνον εάν έχουν ληφθεί τα αναγκαία μέτρα για την αποφυγή της επικίνδυνης αποσύνθεσης ή του πολυμερισμού τους κατά τη διάρκεια της μεταφοράς. Για το σκοπό αυτό θα πρέπει ειδικά να βεβαιώνεται ότι εκείνα τα δοχεία δεν περιέχουν οποιαδήποτε ύλη υποκείμενη στην προαγωγή αυτών των αντιδράσεων.

(9) το 1910 οξειδίο του ασβεστίου και το 2812 αργιλικό νάτριο, με χαρακτηριστικούς αριθμούς που καθορίζονται στις Υποδείξεις για τη Μεταφορά Επικίνδυνων Εμπορευμάτων των Ηνωμένων Εθνών, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

(10) Το σημείο ανάφλεξης που αναφέρεται παρακάτω θα πρέπει να προσδιορίζεται με τον τρόπο που περιγράφεται στην προσθήκη A.3.

## A. Ώξινες ύλες

2801

## Ανόργανες ύλες

1° Θεικό οξύ και παρόμοιες ύλες:

- (a) 1829 τριοξειδίο του θείου, αδρανές (θειικός ανυδρίτης, αδρανής), 1831 θειικό οξύ, ατμίζον (oleum), 2240 χρωμοθειικό οξύ,
- (b) 1794 θειικός μολυβδος με περισσότερο από 3 % ελεύθερο οξύ, 1830 θειικό οξύ με περισσότερο από 51 % οξύ, 1832 θειικό οξύ, χρησιμοποιημένο, 1833 θειώδες οξύ, 1906 θειικό οξύ που αποβάλλεται μετά τον καθαρισμό του πετρελαίου, 2308 νιτροδολοθειικό οξύ, 2583 αλκυλοσουλφονικά οξέα, στερεά με περισσότερο από 5 % ελεύθερο θειικό οξύ ή 2583 αρυλοσουλφονικά οξέα, στερεά με περισσότερο από 5 % ελεύθερο θειικό οξύ, 2584 αλκυλοσουλφονικά οξέα, υγρά με περισσότερο από 5 % ελεύθερο θειικό οξύ ή 2584 αρυλοσουλφονικά οξέα, υγρά με περισσότερο από 5 % ελεύθερο θειικό οξύ, 2796 θειικό οξύ με όχι περισσότερο από 51 % οξύ ή 2796 υγρά μπαταρίας, όξινα, 2837 υδατικό διάλυμα διθειικών αλάτων (υδατικό διάλυμα όξινου θειικού άλατος).

**ΣΗΜΕΙΩΣΗ 1:** 2585 αλκυλοσουλφονικά ή αρυλοσουλφονικά οξέα, στερεά και 2586 αλκυλοσουλφονικά ή αρυλοσουλφονικά οξέα, υγρά με όχι περισσότερο από 5 % ελεύθερο θειικό οξύ είναι ύλες του είδους 34°.

**ΣΗΜΕΙΩΣΗ 2:** Θεικός μολυβδος με όχι περισσότερο από 3 % ελεύθερο οξύ δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 3:** Χημικά ασταθή μείγματα θειικού οξέος, χρησιμοποιημένου, δεν θα γίνονται δεκτά για μεταφορά.

- (c) 2837 υδατικά διαλύματα διθειικών αλάτων (υδατικό διάλυμα όξινου θειικού άλατος).

2° Νιτρικά οξέα:

- (a) 1. 2031 νιτρικό οξύ, άλλο από ερυθρό ατμίζον, με περισσότερο από 70 % οξύ.  
2. 2032 νιτρικό οξύ, ερυθρό ατμίζον.
- (b) 2031 νιτρικό οξύ, άλλο από ερυθρό ατμίζον, με όχι περισσότερο από 70 % οξύ.

## Κλάση 8

2801  
(συνεχ.)

3° Μείγματα οξέος □ νίτρωσης:

- (a) 1796 μείγμα οξέος νίτρωσης με περισσότερο από 50 % νιτρικό οξύ, 1826 μείγμα οξέος νίτρωσης, χρησιμοποιημένο με περισσότερο από 50 % νιτρικό οξύ,
- (b) 1796 μείγμα οξέος νίτρωσης με όχι περισσότερο από 50 % νιτρικό οξύ, 1826 μείγμα οξέος νίτρωσης, χρησιμοποιημένο με όχι περισσότερο από 50 % νιτρικό οξύ.

**ΣΗΜΕΙΩΣΗ 1:** 1798 νιτρούδροχλωρικό οξύ δεν θα γίνεται δεκτό για μεταφορά.

**ΣΗΜΕΙΩΣΗ 2:** Χημικώς ασταθή μείγματα οξέος νίτρωσης ή μείγματα υπολειπόμενων θειικών και νιτρικών οξέων, όχι απονιτρωμένα, δεν θα γίνονται δεκτά για μεταφορά.

4° Διάλυμα υπερχλωρικού οξέος:

- (b) 1802 υπερχλωρικό οξύ με όχι περισσότερο από 50 % οξύ, κατά βάρος σε υδατικό διάλυμα.

**ΣΗΜΕΙΩΣΗ 1:** 1873 υδατικό διάλυμα υπερχλωρικού οξέος με περισσότερο από 50 % αλλά όχι περισσότερο από 72 % καθαρό οξύ, κατά βάρος είναι όλες της κλάσης 5.1 [(βλέπε περιθωριακό 2501, είδος 3° (a)].

**ΣΗΜΕΙΩΣΗ 2:** Υδατικό διάλυμα υπερχλωρικού οξέος με περισσότερο από 72 % καθαρό οξύ, κατά βάρος, ή μείγματα υπερχλωρικού οξέος με οποιοδήποτε υγρό άλλο από νερό, δεν θα γίνονται δεκτά για μεταφορά.

5° Υδατικά διαλύματα υδραλογονιδίων, με εξαίρεση το υδροφθορικό οξύ:

- (b) 1787 υδροϊωδικό οξύ, 1788 υδροβρωμικό οξύ, 1789 υδροχλωρικό οξύ,

- (c) 1787 υδροϊωδικό οξύ, 1788 υδροβρωμικό οξύ, 1789 υδροχλωρικό οξύ, 1840 διάλυμα χλωριούχου ψευδάργυρου, 2580 διάλυμα βρωμιούχου αλουμινίου, 2581 διάλυμα χλωριούχου αλουμινίου, 2582 διάλυμα χλωριούχου σιδήρου (III) (διάλυμα τριχλωριούχου σιδήρου).

**ΣΗΜΕΙΩΣΗ:** Υδροβρώμιο, άνυδρο και υδροχλώριο, άνυδρο είναι όλες της κλάσης 2 [βλέπε περιθωριακό 2201, 3° (at) και 5° (at)].

6° Μείγματα υδροφθόριου και υδροφθορικού οξέος με περισσότερο από 85 % υδροφθόριο:

1052 υδροφθόριο, άνυδρο, 1790 υδροφθορικό οξύ με περισσότερο από 85 % υδροφθόριο.

**ΣΗΜΕΙΩΣΗ:** Ειδικές διατάξεις συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακό 2803).

7° Μείγματα υδροφθόριου με όχι περισσότερο από 85 % υδροφθόριο:

- (a) 1786 μείγμα υδροφθορικού οξέος και θειικού οξέος, 1790 υδροφθορικό οξύ με περισσότερο από 60 % αλλά όχι περισσότερο από 85 % υδροφθόριο,

- (b) 1790 υδροφθορικό οξύ με όχι περισσότερο από 60 % υδροφθόριο, 2817 διάλυμα όξινου διφθοριούχου αμμωνίου (διάλυμα διφθοριούχου αμμωνίου),

- (c) 2817 διάλυμα όξινου διφθοριούχου αμμωνίου (διάλυμα διφθοριούχου αμμωνίου).

## Κλάση 8

2801  
(συνεχ.)

8° Φθορο-όξινες ύλες:

- (a) 1777 φθοροσουλφονικό οξύ,
- (b) 1757 διάλυμα χρωμικού φθορίδιου, 1768 διφθοροφωσφορικό οξύ, άνυδρο, 1775 φθοροβορικό οξύ, 1776 φθοροφωσφορικό οξύ, άνυδρο, 1778 φθοροπυριτικό οξύ, 1782 εξαφθοροφωσφορικό οξύ,
- (c) 1757 διάλυμα χρωμικού φθορίδιου.

9° Στερεά φθορίδια και άλλες στερεές φθοριωμένες ύλες που, σε επαφή με υγρό αέρα ή νερό, εκλύουν υδροφθόριο:

- (b) 1727 όξινο διφθοριούχο αμμώνιο, στερεό, 1756 χρωμικό φθορίδιο, στερεό, 1811 όξινο διφθοριούχο κάλιο (διφθοριούχο κάλιο), 2439 όξινο διφθοριούχο νάτριο (διφθοριούχο νάτριο), 1740 όξινα διφθορίδια, ε.α.ο.,
- (c) 1740 όξινα διφθορίδια, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** 2505 φθοριούχο αμμώνιο, 1812 φθοριούχο κάλιο, 1690 φθοριούχο νάτριο, 2674 φθοροπυριτικό νάτριο και 2856 φθοροπυριτικά άλατα, ε.α.ο. είναι ύλες της κλάσης 6.1 [βλέπε περιθωριακό 2601, 63° (c), 64° (c) ή 87° (c)].

10° Υγρά φθορίδια και άλλες υγρές φθοριωμένες ύλες που, σε επαφή με υγρό αέρα ή νερό, εκλύουν υδροφθόριο:

- (b) 1732 πενταφθοριούχο αντιμόνιο, 2851 τριφθοριούχο βόριο διένυδρο

**ΣΗΜΕΙΩΣΗ:** 1745 πενταφθοριούχο βρώμιο, 1746 τριφθοριούχο βρώμιο και 2495 πενταφθοριούχο ιώδιο είναι ύλες της κλάσης 5.1 (βλέπε περιθωριακό 2501, 5°).

11° Στερεά αλογονίδια και άλλες στερεές αλογονωμένες ύλες, με εξαίρεση τις ενώσεις φθορίου, που, σε επαφή με υγρό αέρα ή νερό, εκλύουν όξινους ατμούς:

- (b) 1725 βρωμιούχο αλουμίνιο, άνυδρο, 1726 χλωριούχο αλουμίνιο, άνυδρο, 1733 τριχλωριούχο αντιμόνιο, 1806 πενταχλωριούχος φωσφόρος, 1939 οξυβρωμιούχος φωσφόρος, 2691 πενταβρωμιούχος φωσφόρος, 2869 μείγμα τριχλωριούχου τιτανίου

**ΣΗΜΕΙΩΣΗ:** Στερεές ένυδρες μορφές βρωμιούχου αλουμινίου και χλωριούχου αλουμινίου δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

- (c) 1773 χλωριούχος σίδηρος, άνυδρος (χλωριούχος σίδηρος (III), άνυδρος), 2331 χλωριούχος ψευδάργυρος, άνυδρος, 2440 χλωριούχος κασσίτερος (IV) πενταένυδρος, 2475 τριχλωριούχο βανάδιο, 2503 τετραχλωριούχο ζιρκόνιο, 2508 πενταχλωριούχο μολυβδένιο, 2802 χλωριούχος γαλκός, 2869 μείγμα τριχλωριούχου τιτανίου.

**ΣΗΜΕΙΩΣΗ:** Χλωριούχος σίδηρος (III) εξαένυδρος δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

12° Υγρά αλογονίδια και άλλες υγρές αλογονωμένες ύλες, με εξαίρεση τις ενώσεις φθορίου, που, σε επαφή με υγρό αέρα ή νερό, εκλύουν όξινους ατμούς:

## Κλάση 8

2801  
(συνεχ.)

- (a) 1754 γλωροσουλφονικό οξύ με ή χωρίς τριοξείδιο του θείου, 1758 οξυγλωριούχο χρώμιο (γλωριούχο χρωμύλιο), 1809 τριγλωριούχος φωσφόρος, 1828 θειογλωρίδια, 1834 σουλφουρυλογλωρίδιο, 1836 θειονυλογλωρίδιο, 2444 τετραγλωριούχο βανάδιο, 2692 τριβρωμιούχο βόριο (βρωμιούχο βόριο), 2879 οξυγλωριούχο σελήνιο,
- (b) 1730 πενταγλωριούχο αντιμόνιο, υγρό, 1731 διάλυμα πενταγλωριούχου αντιμόνιου, 1792 μονογλωριούχο ιώδιο, 1808 τριβρωμιούχος φωσφόρος, 1810 οξυγλωριούχος φωσφόρος (φωσφορυλογλωρίδιο), 1817 πυροσουλφουρυλογλωρίδιο, 1818 τετραγλωριούχο πυρίτιο, 1827 γλωριούχος κασσίτερος (IV), άνυδρος, 1837 θειοφωσφορυλογλωρίδιο, 1838 τετραγλωριούχο τιτάνιο, 2443 οξυτριγλωριούχο βανάδιο,
- (c) 1731 διάλυμα πενταγλωριούχου αντιμόνιου

13° Στερεά όξινα θειικά άλατα:

- (b) 2506 όξινο θειικό αμμώνιο (διθειικό αμμώνιο), 2509 όξινο θειικό κάλιο (διθειικό κάλιο).

14° Βρώμιο ή διαλύματα βρωμίου:

1744 βρώμιο ή 1744 διάλυμα βρωμίου.

*ΣΗΜΕΙΩΣΗ: Ειδικές διατάξεις συσκευασίας εφαρμόζονται σ' αυτές τις ύλες (βλέπε περιθωριακό 2804).*

15° Ανόργανη όξινη ύλη σε τετηγμένη μορφή:

2576 οξυβρωμιούχος φωσφόρος, τετηγμένος.

16° Στερεές ανόργανες όξινες ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1905 σεληνικό οξύ, 3260 διαβρωτικά στερεά, όξινα, ανόργανα, ε.α.ο.,
- (b) 1807 πεντοξείδιο του φωσφόρου (φωσφορικό οξύ, άνυδρο), 3260 διαβρωτικά στερεά, όξινα, ανόργανα, ε.α.ο.,
- (c) 2507 γλωροπλατινικό οξύ, στερεό, 2578 τριοξείδιο του φωσφόρου, 2834 φωσφορώδες οξύ, 2865 θειική υδροξυλαμίνη, 2967 σουλφαμικό οξύ, 3260 διαβρωτικά στερεά, όξινα, ανόργανα, ε.α.ο.

17° Υγρές ανόργανες όξινες ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3264 διαβρωτικά υγρά, όξινα, ανόργανα, ε.α.ο.,
- (b) 1755 διάλυμα χρωμικού οξέος, 3264 διαβρωτικά υγρά, όξινα, ανόργανα, ε.α.ο.,
- (c) 1755 διάλυμα χρωμικού οξέος, 1805 φωσφορικό οξύ, 2693 υδατικά διαλύματα διθειωδών αλάτων, ε.α.ο., 3264 διαβρωτικά υγρά, όξινα, ανόργανα, ε.α.ο.

## Κλάση 8

2801  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ:** 1463 τριοξείδιο του χρωμίου, άνυδρο (χρωμικό οξύ, στερεό) είναι ύλη της Κλάσης 5.1 [(βλέπε περιθωριακό 2501, 31° (b)).

## Οργανικές ύλες

31° Στερεά καρβοξυλικά οξέα και ανυδρίτες και στερεά αλογονωμένα καρβοξυλικά οξέα και ανυδρίτες:

- (b) 1839 τριγλωροξικό οξύ, 1938 βρωμοξικό οξύ,  
 (c) 2214 φθαλκός ανυδρίτης με περισσότερο από 0.05 % μηλεϊνικό ανυδρίτη,  
2215 μηλεϊνικός ανυδρίτης, 2698 τετραϋδροφθαλκοί ανυδρίτες με περισσότερο από  
0.05 % μηλεϊνικό ανυδρίτη, 2823 κροτονικό οξύ.

**ΣΗΜΕΙΩΣΗ 1:** Φθαλκός ανυδρίτης και τετραϋδροφθαλκοί ανυδρίτες με όχι περισσότερο από 0.05 % μηλεϊνικό ανυδρίτη δεν υπόκεινται στις διατάξεις αυτής της κλάσης.

**ΣΗΜΕΙΩΣΗ 2:** Φθαλκός ανυδρίτης με όχι περισσότερο από 0.05 % μηλεϊνικό ανυδρίτη μεταφερόμενος ή παραδιδόμενος για μεταφορά στην ττηγμένη κατάσταση σε θερμοκρασία μεγαλύτερη από το σημείο ανάφλεξης του είναι ύλη της κλάσης 3 (βλέπε περιθωριακό 2301, 61°).

32° Υγρά καρβοξυλικά οξέα και ανυδρίτες και υγρά αλογονωμένα καρβοξυλικά οξέα και ανυδρίτες:

- (a) 2699 τριφθοροξικό οξύ,  
 (b) 1. 1764 διγλωροξικό οξύ, 1779 μυρμηκικό οξύ, 1940 θειογλυκολικό οξύ,  
2564 διάλυμα τριγλωροξικού οξέος, 2790 διάλυμα οξικού οξέος με όχι λιγότερο  
από 50 % αλλά όχι περισσότερο από 80 % οξύ, κατά βάρος,  
 2. 1715 οξικός ανυδρίτης, 2218 ακρυλικό οξύ, αδρανές, 2789 οξικό οξύ,  
παγόμορφο ή 2789 διάλυμα οξικού οξέος, με περισσότερο από 80 % οξύ, κατά  
βάρος,  
 (c) 1848 προπιονικό οξύ, 2496 προπιονικός ανυδρίτης,  
2511 2-γλωροπροπιονικό οξύ, 2531 μεθακρυλικό οξύ, αδρανές, 2564 διάλυμα  
τριγλωροξικού οξέος, 2739 βουτυρικός ανυδρίτης, 2790 διάλυμα οξικού οξέος με  
περισσότερο από 25 % αλλά λιγότερο από 50 % οξύ, κατά βάρος, 2820 βουτυρικό οξύ,  
2829 καπρονικό οξύ.

**ΣΗΜΕΙΩΣΗ:** Διαλύματα οξικού οξέος με όχι περισσότερο από 25% καθαρό οξύ κατά βάρος, δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

33° Σύμπλοκες ενώσεις του τριφθοριούχου βορίου:

- (a) 2604 αιθερικός διαιθυλεστέρας του τριφθοριούχου βορίου (αιθερικό σύμπλοκο του  
τριφθοριούχου βορίου),  
 (b) 1742 σύμπλοκο του τριφθοριούχου βορίου με οξικό οξύ, 1743 σύμπλοκο του  
τριφθοριούχου βορίου με προπιονικό οξύ.

**ΣΗΜΕΙΩΣΗ:** 2965 αιθερικός διμεθυλεστέρας του τριφθοριούχου βορίου είναι ύλη της κλάσης 4.3 [βλέπε περιθωριακό 2471, 2° (b)].

## Κλάση 8

2801  
(συνεχ.)

34° Αλκυλοσουλφονικά και αρυλοσουλφονικά οξέα και αλκυλοθειικά οξέα:

- (b) 1803 φαινολοσουλφονικό οξύ, υγρό, 2305 νιτροβενζολοσουλφονικό οξύ, 2571 αλκυλοθειικά οξέα,
- (c) 2585 αλκυλοσουλφονικά οξέα, στερεά με όχι περισσότερο από 5 % ελεύθερο θειικό οξύ ή 2585 αρυλοσουλφονικά οξέα, στερεά με όχι περισσότερο από 5 % ελεύθερο θειικό οξύ, 2586 αλκυλοσουλφονικά οξέα, υγρά με όχι περισσότερο από 5 % ελεύθερο θειικό οξύ ή 2586 αρυλοσουλφονικά οξέα, υγρά με όχι περισσότερο από 5 % ελεύθερο θειικό οξύ.

**ΣΗΜΕΙΩΣΗ:** 2583 αλκυλοσουλφονικά ή αρυλοσουλφονικά οξέα, στερεά και 2584 αλκυλοσουλφονικά ή αρυλοσουλφονικά οξέα, υγρά με περισσότερο από 5 % ελεύθερο θειικό οξύ είναι όλες του 1° (b).

35° Οργανικά όξινα αλογονίδια:

- (b) 1. 1716 ακετυλοβρωμίδιο, 1729 ανισούλοχλωρίδιο, 1736 βενζούλοχλωρίδιο, 1765 διγλωρακετυλοχλωρίδιο, 1780 φουμαρυλοχλωρίδιο, 1898 ακετυλοϊωδιόδιο, 2262 διμεθυλοκαρβαμυλοχλωρίδιο, 2442 τριγλωρακετυλοχλωρίδιο, 2513 βρωμακετυλοβρωμίδιο, 2577 φαινυλακετυλοχλωρίδιο, 2751 διαιθυλοθειοφωσφορυλοχλωρίδιο, 2798 διγλωριούχος φαινυλοφωσφόρος, 2799 θειοδιγλωριούχος φαινυλοφωσφόρος.
2. 2502 βαλεριανυλοχλωρίδιο,
- (c) 2225 βενζολοσουλφονυλοχλωρίδιο.

36° Αλκυλο- και αρυλο-χλωροσιλάνια με σημείο ανάφλεξης μεγαλύτερο από 61 °C:

- (b) 1728 αμυλοτριγλωροσιλάνιο, 1753 γλωροφαινυλοτριγλωροσιλάνιο, 1762 κυκλοεξυλοτριγλωροσιλάνιο, 1763 κυκλοεξυλοτριγλωροσιλάνιο, 1766 διγλωροφαινυλοτριγλωροσιλάνιο, 1769 διφαινυλοδιγλωροσιλάνιο, 1771 δωδεκυλοτριγλωροσιλάνιο, 1781 δεκαεξυλοτριγλωροσιλάνιο, 1784 εξυλοτριγλωροσιλάνιο, 1799 εννεανυλοτριγλωροσιλάνιο, 1800 δεκαοκτυλοτριγλωροσιλάνιο, 1801 οκτυλοτριγλωροσιλάνιο, 1804 φαινυλοτριγλωροσιλάνιο, 2434 διβενζυλοδιγλωροσιλάνιο, 2435 αιθυλοφαινυλοδιγλωροσιλάνιο, 2437 μεθυλοφαινυλοδιγλωροσιλάνιο, 2987 γλωροσιλάνια, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Χλωροσιλάνια που εκλύουν εύφλεκτα αέρια σε επαφή με νερό ή υγρό αέρα είναι όλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 1°).

37° Αλκυλοχλωροσιλάνια και αρυλοχλωροσιλάνια, με σημείο ανάφλεξης μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων:

- (b) 1724 αλκυλοτριγλωροσιλάνιο, σταθεροποιημένο, 1747 βουτυλοτριγλωροσιλάνιο, 1767 διαιθυλοδιγλωροσιλάνιο, 1816 προπυλοτριγλωροσιλάνιο, 2986 γλωροσιλάνια, διαβρωτικά, εύφλεκτα, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Χλωροσιλάνια που εκλύουν εύφλεκτα αέρια σε επαφή με νερό ή υγρό αέρα είναι όλες της κλάσης 4.3 (βλέπε περιθωριακό 2471, 1°).

## Κλάση 8

2801 38° Αλκυλοφωσφορικά οξέα:  
(συνεχ.)

- (c) 1718 βουτυλοφωσφορικό οξύ, 1793 ισοπροπυλοφωσφορικό οξύ, 1902 διίσοοκτυλοφωσφορικό οξύ, 2819 αμυλοφωσφορικό οξύ.

39° Στερεές οργανικές όξινες ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 2430 αλκυλοφαινόλες, στερεές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 3261 διαβρωτικά στερεά, όξινα, οργανικά, ε.α.ο.,

- (b) 2430 αλκυλοφαινόλες, στερεές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 2670 κυανουρικό γλωφίδιο, 3261 διαβρωτικά στερεά, όξινα, οργανικά, ε.α.ο.,

- (c) 2430 αλκυλοφαινόλες, στερεές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 3261 διαβρωτικά στερεά, όξινα, οργανικά, ε.α.ο.

40° Υγρές οργανικές όξινες ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3145 αλκυλοφαινόλες, υγρές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 3265 διαβρωτικά υγρά, όξινα, οργανικά, ε.α.ο.,

- (b) 3145 αλκυλοφαινόλες, υγρές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 3265 διαβρωτικά υγρά, όξινα, οργανικά, ε.α.ο.,

- (c) 3145 αλκυλοφαινόλες, υγρές, ε.α.ο. (συμπεριλαμβανομένων C<sub>2</sub>-C<sub>12</sub> ομολόγων), 3265 διαβρωτικά υγρά, όξινα, οργανικά, ε.α.ο.

## B. Βασικές ύλες

### Ανόργανες ύλες

41° Βασικές στερεές ενώσεις αλκαλικών μετάλλων:

- (b) 1813 υδροξείδιο του καλίου, στερεό (καυστική ποτάσα), 1823 υδροξείδιο του νατρίου, στερεό (καυστική σόδα), 1825 μονοξείδιο του νατρίου (οξείδιο του νατρίου), 2033 μονοξείδιο του καλίου (οξείδιο του καλίου), 2678 υδροξείδιο του ρουβιδίου, 2680 υδροξείδιο του λιθίου μονοένυδρο, 2682 υδροξείδιο του καισίου,

- (c) 1907 νατράσβεστος με περισσότερο από 4 % υδροξείδιο του νατρίου, 3253 τριοξοπυρρικό δινάτριο πενταένυδρο (μεταπυρρικό νάτριο πενταένυδρο).

**ΣΗΜΕΙΩΣΗ:** Νατράσβεστος με όχι περισσότερο από 4 % υδροξείδιο του νατρίου δεν υπόκειται στις διατάξεις αυτής της Οδηγίας.

42° Διαλύματα αλκαλικών υλών:

- (b) 1814 διάλυμα υδροξειδίου του καλίου (καυστική ποτάσα), 1819 διάλυμα αργλικού νατρίου, 1824 διάλυμα υδροξειδίου του νατρίου (καυστική ποτάσα), 2677 διάλυμα υδροξειδίου του ρουβιδίου, 2679 διάλυμα υδροξειδίου του λιθίου, 2681 διάλυμα υδροξειδίου του καισίου, 2797 υγρά μπαταρίας, αλκαλικά,

## Κλάση 8

2801  
(συνεχ.)1719 καυστικά αλκάλια, υγρά, ε.α.ο.,

- (c) 1814 διάλυμα υδροξειδίου του καλίου (καυστική ποτάσα), 1819 διάλυμα αργιλικού νατρίου, 1824 διάλυμα υδροξειδίου του νατρίου (καυστική ποτάσα), 2677 διάλυμα υδροξειδίου του ρουβιδίου, 2679 διάλυμα υδροξειδίου του λιθίου, 2681 διάλυμα υδροξειδίου του καισίου, 1719 καυστικά αλκάλια υγρά, ε.α.ο.

## 43° Διαλύματα αμμωνίας:

- (c) 2672 διάλυμα αμμωνίας, σχετικής πυκνότητας μεταξύ 0.88 και 0.957 στους 15 °C σε νερό με περισσότερο από 10 % αλλά όχι περισσότερο από 35 % αμμωνία.

**ΣΗΜΕΙΩΣΗ 1:** Διαλύματα αμμωνίας με περισσότερο από 35 % αμμωνία είναι ύλες της κλάσης 2 [βλέπε περιθωριακό 2201, 9° (at)].

**ΣΗΜΕΙΩΣΗ 2:** Διαλύματα αμμωνίας με όχι περισσότερο από 10 % αμμωνία δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## 44° Υδραζίνη και υδατικά διαλύματά της:

- (a) 2029 υδραζίνη, άνυδρη,
- (b) 2030 υδραζίνη ένυδρη ή 2030 υδατικό διάλυμα υδραζίνης με όχι λιγότερο από 37 % αλλά όχι περισσότερο από 64 % υδραζίνη, κατά βάρος,

**ΣΗΜΕΙΩΣΗ:** 3293 υδατικό διάλυμα υδραζίνης με όχι περισσότερο από 37 % υδραζίνη, κατά βάρος, είναι ύλη της κλάσης 6.1 [βλέπε περιθωριακό 2601, 65° (c)].

## 45° Σουλφίδια και υδροσουλφίδια και υδατικά διαλύματά τους:

- (b) 1. 1847 θειούχο κάλιο, ένυδρο με όχι λιγότερο από 30 % νερό από κρυστάλλωση, 1849 θειούχο νάτριο, ένυδρο με όχι λιγότερο από 30 % νερό, 2818 διάλυμα πολυθειούχου αμμωνίου, 2949 υδροθειούχο νάτριο, ένυδρο με όχι λιγότερο από 25 % νερό από κρυστάλλωση,
2. 2683 διάλυμα θειούχου αμμωνίου,

- (c) 2818 διάλυμα πολυθειούχου αμμωνίου.

**ΣΗΜΕΙΩΣΗ:** 1382 άνυδρο θειούχο κάλιο και 1385 άνυδρο θειούχο νάτριο και οι ένυδρες μορφές τους με λιγότερο από 30 % νερό από κρυστάλλωση, και 2318 υδροθειούχο νάτριο με λιγότερο από 25 % νερό από κρυστάλλωση είναι ύλες της κλάσης 4.2 [βλέπε περιθωριακό 2431, 13° (b)].

## 46° Στερεές ανόργανες βασικές ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3262 διαβρωτικά στερεά, βασικά, ανόργανα, ε.α.ο.,
- (b) 3262 διαβρωτικά στερεά, βασικά, ανόργανα, ε.α.ο.,
- (c) 3262 διαβρωτικά στερεά, βασικά, ανόργανα, ε.α.ο.

## Κλάση 8

**2801** 47° Υγρές ανόργανες βασικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως (συνεχ.) παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3266 διαβρωτικά υγρά, βασικά, ανόργανα, ε.α.ο.,
- (b) 3266 διαβρωτικά υγρά, βασικά, ανόργανα, ε.α.ο.,
- (c) 3266 διαβρωτικά υγρά, βασικά, ανόργανα, ε.α.ο.

*Οργανικές ύλες*

51° Υδροξείδια του τετρα-αλκυλαμμώνιου:

- (b) 1835 υδροξείδιο του τετραμεθυλαμμώνιου.

52° Στερεές αμίνες και πολυαμίνες:

- (a) 3259 αμίνες, στερεές, διαβρωτικές, ε.α.ο. ή 3259 πολυαμίνες, στερεές, διαβρωτικές, ε.α.ο.,
- (b) 3259 αμίνες, στερεές, διαβρωτικές, ε.α.ο. ή 3259 πολυαμίνες, στερεές, διαβρωτικές, ε.α.ο.,
- (c) 2280 εξαμεθυλενοδιαμίνη, στερεή, 2579 πιπεραζίνη (διαιθυλενοδιαμίνη), 3259 αμίνες, στερεές, διαβρωτικές, ε.α.ο. ή 3259 πολυαμίνες, στερεές, διαβρωτικές, ε.α.ο.

53° Υγρές αμίνες και πολυαμίνες ή αμινο-αλκοόλες, εξαιρετικά διαβρωτικές ή διαβρωτικές, με σημείο ανάφλεξης μεγαλύτερο από 61 °C:

- (a) 2735 αμίνες, υγρές, διαβρωτικές, ε.α.ο. ή 2735 πολυαμίνες, υγρές, διαβρωτικές, ε.α.ο.,
- (b) 1761 διάλυμα κυπριαιθυλενοδιαμίνης, 1783 διάλυμα εξαμεθυλενοδιαμίνης, 2079 διαιθυλενοτριάμίνη, 2259 τριαιθυλενοτετραμίνη, 2735 αμίνες, υγρές, διαβρωτικές, ε.α.ο. ή 2735 πολυαμίνες, υγρές, διαβρωτικές, ε.α.ο.,
- (c) 1761 διάλυμα κυπριαιθυλενοδιαμίνης, 1783 διάλυμα εξαμεθυλενοδιαμίνης, 2269 3,3'-μινωδιπροπυλαμίνη (διταμινοπροπυλαμίνη, διπροπυλενοτριάμίνη), 2289 ισοφορονοδιαμίνη, 2320 τετραιθυλενοπενταμίνη, 2326 τριμεθυλοκυκλοεξυλαμίνη, 2327 τριμεθυλοεξαμεθυλενοδιαμίνες, 2491 αιθανολαμίνη, 2491 διάλυμα αιθανολαμίνης, 2542 τριβουτυλαμίνη, 2565 δικυκλοεξυλαμίνη, 2815 N-αμινοαιθυλοπιπεραζίνη, 3055 2-(2-αμινοαιθοξυ)αιθανόλη, 2735 αμίνες, υγρές, διαβρωτικές, ε.α.ο. ή 2735 πολυαμίνες, υγρές, διαβρωτικές, ε.α.ο.

54° Υγρές αμίνες και πολυαμίνες, εξαιρετικά διαβρωτικές ή διαβρωτικές, εύφλεκτες με σημείο βρασμού μεγαλύτερο από 35 °C:

- (a) 2734 αμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο. ή 2734 πολυαμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο.,
- (b) 1604 αιθυλενοδιαμίνη, 2051 2-διμεθυλαμινοαιθανόλη, 2248 δι-n-βουτυλαμίνη, 2258 1,2-προπυλενοδιαμίνη, 2264 διμεθυλοκυκλοεξυλαμίνη,

## Κλάση 8

2801  
(συνεχ.)

2357 κυκλοεξυλαμίνη, 2619 βενζυλοδιμεθυλαμίνη,  
2685 N,N-διαιθυλαιθυλενοδιαμίνη,  
2734 αμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο. ή  
2734 πολυαμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο.

55° Στερεές οργανικές βασικές ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.,
- (b) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.,
- (c) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.

56° Υγρές οργανικές βασικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.,
- (b) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.,
- (c) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.

## C. Άλλες διαβρωτικές ύλες

61° Διαλύματα χλωριωδών και υποχλωριωδών αλάτων:

- (b) 1791 διάλυμα υποχλωριώδους άλατος με όχι λιγότερο από 16 % διαθέσιμο χλώριο,  
1908 διάλυμα χλωριώδους άλατος, με όχι λιγότερο από 16 % διαθέσιμο χλώριο,
- (c) 1791 διάλυμα υποχλωριώδους άλατος με περισσότερο από 5 % αλλά λιγότερο από 16 % διαθέσιμο  
χλώριο, 1908 διάλυμα χλωριώδους άλατος, με περισσότερο από 5 % αλλά λιγότερο από 16 %  
διαθέσιμο χλώριο.

**ΣΗΜΕΙΩΣΗ 1:** Διαλύματα χλωριωδών και υποχλωριωδών αλάτων με όχι περισσότερο από 5 % διαθέσιμο χλώριο δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Στερεά χλωριώδη άλατα και υποχλωριώδη άλατα είναι ύλες της κλάσης 5.1 (βλέπε περιθωριακό 2501, 14°, 15° και 29°).

62° Χλωροφαινολικά και φαινολικά άλατα:

- (c) 2904 χλωροφαινολικά άλατα, υγρά ή 2904 φαινολικά άλατα, υγρά, 2905 χλωροφαινολικά άλατα,  
στερεά ή 2905 φαινολικά άλατα, στερεά.

63° Διαλύματα φορμαλδεΐδης:

- (c) 2209 διάλυμα φορμαλδεΐδης με όχι λιγότερο από 25 % φορμαλδεΐδη.

**ΣΗΜΕΙΩΣΗ 1:** 1198 διαλύματα φορμαλδεΐδης, εύφλεκτα είναι ύλες της κλάσης 3 [βλέπε περιθωριακό 2301, 33° (c)].

## Κλάση 8.

**2801 ΣΗΜΕΙΩΣΗ 2:** Διαλύματα φορμαλδεΐδης, μη-εύφλεκτα, με λιγότερο από 25 % (συνεχ.) φορμαλδεΐδη δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

64° Χλωροφορμικά και χλωροθειοφορμικά άλατα:

- (a) 1739 χλωροφορμικός βενζυλεστέρας,
- (b) 2826 χλωροθειοφορμικός αιθυλεστέρας.

**ΣΗΜΕΙΩΣΗ:** Χλωροφορμικά άλατα που έχουν κυρίαρχα τοξικές ιδιότητες είναι ύλες της κλάσης 6.1 (βλέπε περιθωριακό 2601, 10°, 17°, 27° και 28°).

65° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1759 διαβρωτικά στερεά, ε.α.ο.,
- (b) 1770 διφαινυλομεθυλοβρωμίδιο,  
1759 διαβρωτικά στερεά, ε.α.ο.,  
3147 βαφές, στερεές, διαβρωτικές, ε.α.ο. ή 3147 ενδιάμεσα βαφών, στερεά, διαβρωτικά, ε.α.ο.,  
3244 στερεά που περιέχουν διαβρωτικά υγρά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Μείγματα στερεών όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας και διαβρωτικά υγρά μπορούν να μεταφέρονται υπό τον αριθμό 3244, χωρίς να υπόκεινται στα κριτήρια ταξινόμησης του περιθωριακού 2800 (3), υπό την προϋπόθεση ότι δεν υπάρχει ελεύθερο υγρό ορατό την ώρα που η ύλη φορτώνεται ή την ώρα που η μονάδα μεταφοράς κλείνεται. Κάθε συσκευασία θα πρέπει να αντιστοιχεί σε έναν τύπο σχεδιασμού που έχει περάσει τον έλεγχο στεγανότητας για το επίπεδο της ομάδας (b).

- (c) 2803 γάλλιο,  
1759 διαβρωτικά στερεά, ε.α.ο.,  
3147 βαφές, στερεές, διαβρωτικές, ε.α.ο. ή 3147 ενδιάμεσα βαφών, στερεά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται στο 2803 γάλλιο [βλέπε περιθωριακό 2807 (4)].

66° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) ~~1760 διαβρωτικά υγρά, ε.α.ο.,~~  
~~1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο.,~~
- (b) 2226 βενζοτριγλωρίδιο (τριγλωρομεθυλοβενζόλιο),  
2705 1-πεντόλη (3-μεθυλο-2-πεντενο-4-iv-1-όλη), 3066 χρώμα (συμπεριλαμβανομένων χρώματος, λάκας, σμάλτου, βαφής, γομαλάκας, βερνικιού, λούστρου, υγρού πληρωτικού μέσου και υγρής βάσης λάκας) ή 3066 υλικά σχετιζόμενα με χρώμα συμπεριλαμβανομένων ενώσεων λέπτυνσης ή μείωσης του χρώματος,  
1760 διαβρωτικά υγρά, ε.α.ο.,  
1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο.,  
2801 βαφές, υγρές, διαβρωτικές, ε.α.ο. ή 2801 ενδιάμεσα βαφών, υγρά, διαβρωτικά, ε.α.ο.,

## Κλάση 8

2801  
(συνεχ.)

- (c) 2809 υδράργυρος, 3066 χρώμα (συμπεριλαμβανομένων χρώματος, λάκας, σμάλτου, βαφής, γομαλάκας, βερνικιού, λούστρου, υγρού πληρωτικού μέσου και υγρής βάσης λάκας) ή 3066 υλικά σχετιζόμενα με χρώμα συμπεριλαμβανομένων ενώσεων λέπτυνσης ή μείωσης του χρώματος, 1760 διαβρωτικά υγρά, ε.α.ο., 1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο., 2801 βαφές, υγρές, διαβρωτικές, ε.α.ο. ή 2801 ενδιάμεσα βαφών, υγρά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** *Ειδικές συνθήκες συσκευασίας εφαρμόζονται στον 2809 υδράργυρο [βλέπε περιθωριακό 2807 (4)].*

**ΣΗΜΕΙΩΣΗ 2:** *Οποιαδήποτε ύλη αυτής της Οδηγίας που αναφέρεται με συγκεκριμένη ονομασία υπό άλλα είδη δεν μπορεί να μεταφέρεται υπό τις καταχωρήσεις για 3066 χρώμα ή 3066 υλικά σχετιζόμενα με χρώμα.*

*Υλές μεταφερόμενες υπό αυτές τις καταχωρήσεις μπορούν να περιέχουν 20 % ή λιγότερο νιτροκυταρίνη υπό την προϋπόθεση η νιτροκυταρίνη να περιέχει όχι περισσότερο από 12,6 % άζωτο.*

- 67° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα), εύφλεκτες, που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 2921 διαβρωτικά στερεά, εύφλεκτα, ε.α.ο.
- (b) 2921 διαβρωτικά στερεά, εύφλεκτα, ε.α.ο.
- 68° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα), εύφλεκτες, με σημείο βρασμού μεγαλύτερο από 35 °C, που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 2920 διαβρωτικά υγρά, εύφλεκτα, ε.α.ο.
- (b) 2920 διαβρωτικά υγρά, εύφλεκτα, ε.α.ο.
- 69° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, αυτοθερμαινόμενες, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3095 διαβρωτικά στερεά, αυτοθερμαινόμενα, ε.α.ο.
- (b) 3095 διαβρωτικά στερεά, αυτοθερμαινόμενα, ε.α.ο.
- 70° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, αυτοθερμαινόμενες, (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3301 διαβρωτικά υγρά, αυτοθερμαινόμενα, ε.α.ο.
- (b) 3301 διαβρωτικά υγρά, αυτοθερμαινόμενα, ε.α.ο.
- 71° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3096 διαβρωτικά στερεά, ενεργά με το νερό, ε.α.ο.

## Κλάση 8

2801  
(συνεχ.)

(b) 3096 διαβρωτικά στερεά, ενεργά με το νερό, ε.α.ο.

*ΣΗΜΕΙΩΣΗ: Ο όρος "Ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.*

72° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3094 διαβρωτικά υγρά, ενεργά με το νερό, ε.α.ο.

(b) 3094 διαβρωτικά υγρά, ενεργά με το νερό, ε.α.ο.

*ΣΗΜΕΙΩΣΗ: Ο όρος "ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.*

73° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, οξειδωτικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3084 διαβρωτικά στερεά, οξειδωτικά, ε.α.ο.

(b) 3084 διαβρωτικά στερεά, οξειδωτικά, ε.α.ο.

74° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, οξειδωτικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3093 διαβρωτικά υγρά, οξειδωτικά, ε.α.ο.

(b) 3093 διαβρωτικά υγρά, οξειδωτικά, ε.α.ο.

75° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, τοξικές (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.

(b) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.

(c) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.

76° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, τοξικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.

(b) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.

(c) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.

## Κλάση 8

2801 D. Είδη που περιέχουν διαβρωτικές ύλες  
(συνεχ.)

81° Μπαταρίες:

- (c) 2794 μπαταρίες, υγρές, γεμισμένες με οξύ, ηλεκτρικής συσσώρευσης,  
2795 μπαταρίες, υγρές, γεμισμένες με αλκαλι, ηλεκτρικής συσσώρευσης,  
2800 μπαταρίες, υγρές, χωρίς διαρροή, ηλεκτρικής συσσώρευσης,  
3028 μπαταρίες, ξηρές που περιέχουν υδροξείδιο του καλίου στερεό, ηλεκτρικής  
συσσώρευσης.

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτά τα είδη [βλέπε περιθωριακό 2807 (5)]

**ΣΗΜΕΙΩΣΗ 2:** Μπαταρίες (χαρακτηριστικός αριθμός 2800) μπορούν να θεωρούνται ότι είναι χωρίς διαρροή υπό την προϋπόθεση ότι είναι ικανές να αντέξουν τους διαφορικούς ελέγχους δόνησης και πίεσης που δίνονται παρακάτω, χωρίς διαρροή υγρών μπαταρίας.

Έλεγχος δόνησης: Η μπαταρία συνδέεται άκαμπτα στην πλατφόρμα μίας μηχανής δόνησης και εφαρμόζεται μία απλή αρμονική κίνηση με πλάτος 0.8 mm (1.6 mm μέγιστη συνολική διαδρομή). Η συχνότητα μεταβάλλεται με ρυθμό 1 Hz/min μεταξύ των ορίων 10 Hz έως 55 Hz. Όλο το εύρος συχνοτήτων και η επιστροφή διατρέχεται σε  $95 \pm 5$  λεπτά για κάθε θέση (διεύθυνση δόνησης) της μπαταρίας. Η μπαταρία ελέγχεται σε τρεις αμοιβαία κάθετες θέσεις (ώστε να συμπεριληφθεί έλεγχος με ανοίγματα πλήρωσης και εξαεριστήρες, εάν υπάρχουν, σε ανεστραμμένη θέση) για ίσες χρονικές περιόδους.

Διαφορικός έλεγχος πίεσης: Μετά από τον έλεγχο δόνησης, η μπαταρία αποθηκεύεται για έξι ώρες στους  $24 \text{ }^\circ\text{C} \pm 4 \text{ }^\circ\text{C}$  ενώ υπόκειται σε διαφορική πίεση τουλάχιστον 88 kPa. Η μπαταρία ελέγχεται σε τρεις αμοιβαία κάθετες θέσεις (ώστε να συμπεριληφθεί έλεγχος με ανοίγματα πλήρωσης και εξαεριστήρες, εάν υπάρχουν, σε ανεστραμμένη θέση) για τουλάχιστον έξι ώρες σε κάθε θέση.

82° Άλλα είδη που περιέχουν διαβρωτικές ύλες:

- (b) 1774 φορτία πυροσβεστήρων, διαβρωτικά υγρά, 2028 βόμβες, καπνογόνες, μη-εκρηκτικές με  
διαβρωτικό υγρό, χωρίς πυροκροτικό μηχανισμό.

E. Κενές συσκευασίες

91° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για  
μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμιολογούμενων δεξαμενών,  
κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, καθώς και κενά οχήματα για μεταφορά  
χύμα και κενά μικρά εμπορευματοκιβώτια για μεταφορά χύμα, ακαθάριστα, που περιείχαν ύλες της  
κλάσης 8.

2801a Ούτε οι διατάξεις αυτής της κλάσης που περιέχονται σε αυτό το Παράρτημα, ούτε εκείνες που περιέχονται στο παράρτημα Β εφαρμόζονται στα:

(1) Ύλες των 1° έως 5°, 7° έως 13°, 16°, 17°, 31° έως 47°, 51° έως 56° και 61° έως 76°, μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις:

- (a) Ύλες ταξινομημένες στο (a) κάθε είδους:

Υγρά: όχι περισσότερο από 100 ml ανά εσωτερική συσκευασία και όχι περισσότερο από 400 ml ανά κόλο,

## Κλάση 8

2801a  
(συνεχ.)

Στερεά: όχι περισσότερο από 500 g ανά εσωτερική συσκευασία και όχι περισσότερο από 2 kg ανά κόλο.

(b) Ύλες ταξινομημένες στο (b) κάθε είδους:

Υγρά: όχι περισσότερο από 1 λίτρο ανά εσωτερική συσκευασία και όχι περισσότερο από 4 λίτρα ανά κόλο,

Στερεά: όχι περισσότερο από 3 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 12 kg ανά κόλο.

(c) Ύλες ταξινομημένες στο (c) κάθε είδους:

Υγρά: όχι περισσότερο από 3 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 12 λίτρα ανά κόλο,

Στερεά: όχι περισσότερο από 6 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που ικανοποιούν τουλάχιστον τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

(2) Μπαταρίες χωρίς διαρροή με χαρακτηριστικό αριθμό 2800 της 81° εάν σε θερμοκρασία 55 °C, ο υλεκτρολύτης δεν θα ρέει από ένα ραγισμένο ή σπασμένο κιβώτιο και δεν υπάρχει ελεύθερο υγρό για να ρέει και εάν όταν είναι συσκευασμένες για μεταφορά, οι πόλοι είναι προστατευμένοι από βραχυκυκλώματα.

(3) Κατασκευασμένα είδη ή όργανα που περιέχουν όχι περισσότερο από 1 kg υδράργυρο της 66° (c).

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

2802 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στα περιθωριακά 2803 έως 2808.

(2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2800 (3) (b) και 3511 (2) ή 3611 (2) αντίστοιχα, θα πρέπει να χρησιμοποιούνται τα παρακάτω:

- συσκευασίες της ομάδας συσκευασίας I, μαρκαρισμένες με το γράμμα "X", για τις εξαιρετικά διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (a) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (b) κάθε είδους,

## Κλάση 8

- 2802 (συνεχ.) - συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις ελαφρώς διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 8 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα Β.

## 2. Ειδικές συνθήκες για συσκευασία ορισμένων υλών

- 2803 Υδροφθόριο, άνυδρο και διάλυμα υδροφθορικού οξέος που περιέχει περισσότερο από 85 % υδροφθόριο της 6<sup>ο</sup> θα πρέπει να συσκευάζονται σε δοχεία πίεσης κατασκευασμένα από ανθρακούχο χάλυβα ή κατάλληλο κράμα χάλυβα. Θα πρέπει να επιτρέπονται τα παρακάτω δοχεία πίεσης:

- κύλινδροι με χωρητικότητα όχι μεγαλύτερη από 150 λίτρα,
- δοχεία με χωρητικότητα όχι μικρότερη από 100 λίτρα και όχι μεγαλύτερη από 1,000 λίτρα (για παράδειγμα, κυλινδρικά δοχεία εφοδιασμένα με κυλιόμενα τσέρκια ή δοχεία τοποθετημένα πάνω σε δοκούς).

Τα δοχεία πίεσης θα πρέπει να ικανοποιούν τις σχετικές απαιτήσεις της κλάσης 2 (βλέπε περιθωριακά 2211, 2213 (1) και (2), 2215, 2216 και 2218).

Το πάχος τοιχωμάτων των δοχείων πίεσης δεν θα πρέπει να είναι μικρότερο από 3 mm.

Πριν χρησιμοποιηθούν για πρώτη φορά, τα δοχεία πίεσης θα πρέπει να υπόκεινται σε έλεγχο υδραυλικής πίεσης σε πίεση όχι μικρότερη από 1 MPa (10 bar) πίεση πιεζομέτρου. Ο έλεγχος πίεσης θα πρέπει να επαναλαμβάνεται κάθε οκτώ χρόνια και θα πρέπει να συνοδεύεται από μία εσωτερική επιθεώρηση των δοχείων πίεσης και έναν έλεγχο των εξαρτημάτων τους. Επιπλέον, η αντίσταση των δοχείων πίεσης στη διάβρωση θα πρέπει να ελέγχεται με κατάλληλα όργανα (π.χ. με υπερήχους), και η κατάσταση των εξαρτημάτων να επιβεβαιώνεται, κάθε δύο χρόνια.

Οι έλεγχοι και επιθεωρήσεις θα πρέπει να διεξάγονται υπό την επίβλεψη ενός εμπειρογνώμονα εγκεκριμένου από την αρμόδια αρχή.

Το μέγιστο βάρος του περιεχομένου ανά λίτρο χωρητικότητας για υδροφθόριο, άνυδρο ή διάλυμα υδροφθορικού οξέος δεν θα πρέπει να υπερβαίνει τα 0.84 kg.

- 2804 (1) Βρώμιο και διάλυμα βρωμίου της 14<sup>ο</sup> θα πρέπει να συσκευάζονται σε γυάλινες εσωτερικές συσκευασίες, που περιέχουν όχι περισσότερο από 2.5 λίτρα κάθε μία, ή σε εσωτερικές συσκευασίες φθοριούχου πολυβινυλιδενίου (PVDF) που περιέχουν όχι περισσότερο από 15 λίτρα κάθε μία, που θα πρέπει να τοποθετούνται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538. Οι συνδυασμένες συσκευασίες θα πρέπει να ελέγχονται και εγκρίνονται σε συμφωνία με την προσθήκη A.5 για την ομάδα συσκευασίας I.

(2) Βρώμιο που περιέχει λιγότερο από 0.005 % νερό, ή μεταξύ 0.005 % και 0.2 % νερό, υπό την προϋπόθεση ότι στην τελευταία περίπτωση λαμβάνονται μέτρα για την αποφυγή διάβρωσης της επένδυσης των δοχείων, μπορεί επίσης να μεταφέρεται σε δοχεία που ικανοποιούν τις παρακάτω συνθήκες:

- τα δοχεία θα πρέπει να είναι κατασκευασμένα από χάλυβα και εξοπλισμένα με στεγανή επένδυση κατασκευασμένη από μόλυβδο ή από κάποιο άλλο υλικό που παρέχει ισοδύναμη προστασία και με ερμητικό πώμα. Δοχεία κατασκευασμένα από μέταλλο μονέλ ή νικέλιο, ή με νικέλινη επένδυση, θα πρέπει επίσης να επιτρέπονται,
- η χωρητικότητα των δοχείων δεν θα πρέπει να υπερβαίνει τα 450 λίτρα,

## Κλάση 8

2804  
(συνεχ.)

- (c) τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από το 92 % της χωρητικότητας τους ή περισσότερο από 2.86 kg ανά λίτρο χωρητικότητας,
- (d) τα δοχεία θα πρέπει να είναι οξυγονοκολλημένα και σχεδιασμένα για υπολογιζόμενη πίεση όχι μικρότερη από 2.1 MPa (21 bar) πίεση πιεζομέτρου. Τα υλικά και η εργασία θα πρέπει κατά τα άλλα να ικανοποιούν τις σχετικές απαιτήσεις της κλάσης 2 [βλέπε περιθωριακό 2211 (1)]. Ο αρχικός έλεγχος μη-επενδεδυμένων χαλύβδινων δοχείων θα πρέπει να υπόκειται στις διατάξεις της κλάσης 2 [βλέπε περιθωριακά 2215 (1) και 2216 (1)],
- (e) τα πώματα θα πρέπει να προεξέχουν όσο το λιγότερο δυνατόν από το δοχείο και να είναι εφοδιασμένα με προστατευτικά καλύμματα. Τα πώματα και τα καλύμματα θα πρέπει να είναι εφοδιασμένα με φλάντζες κατασκευασμένες από υλικό όχι ικανό να προσβληθεί από το βρώμιο. Τα πώματα θα πρέπει να είναι στο πιο πάνω μέρος των δοχείων με τέτοιο τρόπο ώστε να μην μπορούν σε καμία περίπτωση να είναι σε μόνιμη επαφή με την υγρή φάση,
- (f) τα δοχεία θα πρέπει να είναι εφοδιασμένα με εξαρτήματα που θα τους επιτρέπουν να στέκονται σταθερά όρθια και με εξαρτήματα ανύψωσης (δακτυλίους, στεφάνες κ.λπ.) στην κορυφή, που θα πρέπει να ελέγχονται σε φορτίο διπλάσιο από το φορτίο εργασίας.

(3) Πριν τεθούν σε υπηρεσία, δοχεία σε συμφωνία με το (2) παραπάνω θα πρέπει να υπόκεινται σε έλεγχο στεγανότητας σε πίεση τουλάχιστον 200 kPa (2 bar) πίεση πιεζομέτρου. Ο έλεγχος στεγανότητας θα πρέπει να επαναλαμβάνεται κάθε δύο χρόνια και θα πρέπει να συνοδεύεται από μία εσωτερική επιθεώρηση του δοχείου και έλεγχο του απόβαρου του. Ο έλεγχος και η επιθεώρηση θα πρέπει να διεξάγονται υπό την επίβλεψη ενός εμπειρογνώμονα εγκεκριμένου από την αρμόδια αρχή.

(4) Δοχεία σε συμφωνία με το (2) θα πρέπει να φέρουν, με καθαρά ευανάγνωστους και διαρκείας χαρακτήρες:

- την ονομασία του κατασκευαστή ή την μάρκα κατασκευής και τον αριθμό του δοχείου,
- τη λέξη "Βρώμιο",
- απόβαρο του δοχείου και το επιτρεπτό μέγιστο βάρος του γεμισμένου δοχείου,
- ημερομηνία (μήνα, χρόνο) του αρχικού ελέγχου και του τελευταίου περιοδικού ελέγχου,
- σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις επιθεωρήσεις.

—2805— (1) Υλεις ταξινομημένες στο (a) των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μιπόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια μη-μετακινούμενης κεφαλής χωρητικότητας όχι μεγαλύτερης από 60 λίτρα ή πλαστικά μιπόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή

## Κλάση 8

2805  
(συνεχ.)

- (f) συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από γυαλί, πλαστικό ή μέταλλο σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539.

**ΣΗΜΕΙΩΣΗ 1** στο (d): Η επιτρεπτή περίοδος χρήσης για συσκευασίες που προορίζονται για τη μεταφορά νιτρικού οξέος της 2<sup>ο</sup> (a) και διάλυμα υδροφθορικού οξέος θα πρέπει να είναι δύο χρόνια από την ημερομηνία κατασκευής τους.

της 7<sup>ο</sup> (a)

**ΣΗΜΕΙΩΣΗ 2** στα (f) και (g): Οι εσωτερικές συσκευασίες ή τα δοχεία από γυαλί δεν να επιτρέπονται για φθορίδια της 7<sup>ο</sup> (a), 8<sup>ο</sup> (a) ή 33<sup>ο</sup> (a).

θα πρέπει

(2) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορούν επίσης να συσκευάζονται σε:

- (a) βαρέλια μετακινούμενης κεφαλής σύμφωνα με τα περιθωριακά 3520 για 3521 για αλουμίνιο, 3523 για κόντρα-πλακέ, 3525 για φύλλο ή 3526 για πλαστικό υλικό, ή σε μπιτόνια μετακινούμενης σύμφωνα με τα περιθωριακά 3522 για χάλυβα ή 3526 για εάν είναι αναγκαίο με έναν ή περισσότερους εσωτερικούς σάκους, ή
- (b) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους.

χάλυβα,  
φάϊμπερ,  
κεφαλής  
πλαστικό υλικό,  
αδιαπέραστους

2806

(1) Ύλες ταξινομημένες στο (b) των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539.

**ΣΗΜΕΙΩΣΗ 1** στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται σε βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).

**ΣΗΜΕΙΩΣΗ 2** στο (d): Η επιτρεπτή περίοδος χρήσης για συσκευασίες που προορίζονται για τη μεταφορά νιτρικού οξέος που περιέχει περισσότερο από 55 % καθαρό οξύ της 2<sup>ο</sup> (b) και διάλυμα υδροφθορικού οξέος της 7<sup>ο</sup> (b) θα πρέπει να είναι δύο χρόνια από την ημερομηνία κατασκευής τους.

**ΣΗΜΕΙΩΣΗ 3** στα (f) και (g): Εσωτερικές συσκευασίες ή δοχεία από γυαλί δεν θα πρέπει να επιτρέπονται για φθορίδια των 7<sup>ο</sup> (b), 8<sup>ο</sup> (b), 9<sup>ο</sup> (b), 10<sup>ο</sup> (b) ή 33<sup>ο</sup> (b).

## Κλάση 8

**2806** (2) Υγες ταξινομημένες στο (b) των διαφόρων ειδών που έχουν τάση ατμών στους 50 °C όχι (συνεχ.) μεγαλύτερη από 110 kPa (1.10 bar) μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορεί επίσης να συσκευάζονται σε:

- (a) βαρέλια σύμφωνα με τα περιθωριακά 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένο πλαστικό υλικό, 3535 για πλαστικό φιλμ ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή οι σάκοι είναι ασφαλισμένοι πάνω σε παλέτες, ή
- (c) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627, ή
- (d) εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13H1, 13L1 και 13M1 και υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

(4) Είδη της 82° θα πρέπει να συσκευάζονται ως εξής:

- (a) φορτία πυροσβεστήρων, διαβρωτικού υγρού, σε ξύλινα κιβώτια σύμφωνα με τα περιθωριακά 3527, 3528 ή 3529, ή κιβώτια από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3530, ή κιβώτια τεταμένου πλαστικού τύπου 4H1 σύμφωνα με το περιθωριακό 3531.
- (b) βόμβες, καπνογόνες, μη-εκρηκτικές με διαβρωτικό υγρό, χωρίς πυροκροτικό μηχανισμό, μονωμένες με προστατευτικό υλικό σε κιβώτια, σωλήνες ή χωρισμένα τμήματα είτε σε ξύλινα κιβώτια σύμφωνα με τα περιθωριακά 3527, 3528 ή 3529, είτε σε χαλύβδινα κιβώτια του τύπου 4A σύμφωνα με το περιθωριακό 3532.

**2807** (1) Υγες ταξινομημένες στο (c) εκτός από γάλλιο της 65° (c) και υδράργυρο της 66° (c), των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια ή πλαστικά μπτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργγλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540.

## Κλάση 8

**2807 ΣΗΜΕΙΩΣΗ** στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια, μπιτόνια και ελαφρού περιτυπώματος μεταλλικές συσκευασίες μετακινούμενης κεφαλής για ιξώδεις ύλες με (συνεχ.) ιξώδες μεγαλύτερο από 200 mPa·s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560).

(2) Ύλες ταξινομημένες στο (c) εκτός από γάλλιο της 65° (c) και υδράργυρο της 66° (c), των διαφόρων ειδών που έχουν τάση ατμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar) μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, IBC άκαμπτου πλαστικού σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια σύμφωνα με τα περιθωριακά 3523 για κόντρα-πλακέ, ή 3525 για φύλλο φάϊμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
- (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικό υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά ή 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, ή
- (c) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13H1, 13L1 και 13M1 ή σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625 ή σε IBC από φύλλο φάϊμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627.
- (4) (a) Γάλλιο της 65° (c) και υδράργυρος της 66° (c) θα πρέπει να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538. Αυτές οι συνδυασμένες συσκευασίες μπορούν να συνίστανται από γυαλί, πορσελάνη, ψαμμάργιλο ή πλαστικές εσωτερικές συσκευασίες, μέγιστης καθαρής ποσότητας 10 kg. Μπορούν να χρησιμοποιούνται οι παρακάτω εξωτερικές συσκευασίες:

κιβώτια από φυσικό ξύλο σύμφωνα με το περιθωριακό 3527, κιβώτια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3528, κιβώτια από ανασυσταμένο ξύλο σύμφωνα με το περιθωριακό 3529, κιβώτια από φύλλο φάϊμπερ σύμφωνα με το περιθωριακό 3530, πλαστικά κιβώτια σύμφωνα με το περιθωριακό 3531 χαλύβδινα βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, χαλύβδινα μπιτόνια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523, βαρέλια από φάϊμπερ σύμφωνα με το περιθωριακό 3525, ή σε πλαστικά βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526.

- (b) Υδράργυρος μπορεί επίσης να συσκευάζεται σε οξυγονοκολλημένες χαλύβδινες φιάλες με εσωτερικούς θολωτούς πάτους ως μεμονωμένες συσκευασίες. Το πάμα θα πρέπει να είναι ένας κοχλιάς με κωνικό σπείρωμα και το άνοιγμα δεν θα πρέπει να υπερβαίνει τα 20 mm.
- (5) (a) Είδη της 81°, εκτός από μπαταρίες, υγρές, χωρίς διαρροή, θα πρέπει να δένονται με αδρανές προστατευτικό υλικό ή με έναν ισοδύναμο τρόπο σε ξύλινα κιβώτια ή σε κιβώτια από άκαμπτο πλαστικό ή σε ξύλινο δικτυωτό κιβώτιο. Οι μπαταρίες θα πρέπει να μονώνονται έναντι βραχυκυκλώματος.
- (b) Μπαταρίες του τύπου χωρίς διαρροή (χαρακτηριστικός αριθμός 2800) θα πρέπει να προστατεύονται έναντι βραχυκυκλωμάτων και θα πρέπει να συσκευάζονται με ασφάλεια σε γερές εξωτερικές συσκευασίες.

## Κλάση 8

**2807** **ΣΗΜΕΙΩΣΗ:** Μπαταρίες χωρίς διαρροή που είναι μέρος αναπόσπαστο και αναγκαίο για τη λειτουργία μηχανικού ή ηλεκτρονικού εξαρτήματος, θα πρέπει να δένονται με ασφάλεια στη θήκη μπαταρίας (συνεχ.) στο εξάρτημα και να προστατεύονται με τέτοιο τρόπο για την αποφυγή φθοράς και βραχυκυκλώματος.

(e) Είδη της 81° μπορούν να μεταφέρονται σε παλέτες. Θα πρέπει να στοιβάζονται και να ασφαίζονται επαρκώς σε δέτες διαχωριζόμενους από ένα στρώμα μη-αγώγιμου υλικού. Οι πόλοι της μπαταρίας δεν θα πρέπει, σε οποιαδήποτε περίπτωση, να στηρίζουν το βάρος άλλων στοιχείων που έχουν τοποθετηθεί από πάνω. Οι μπαταρίες θα πρέπει να απομονώνονται με τέτοιο τρόπο ώστε να αποφεύγονται βραχυκυκλώματα. Κάθε μπαταρία δεν χρειάζεται να είναι μαρκαρισμένη και επισημασμένη εάν το φορτίο της παλέτας φέρει ένα μαρκάρισμα και μία ετικέτα κινδύνου.

**2808** Συσκευασίες, συμπεριλαμβανομένων IBC, που περιέχουν 1791 διάλυμα υποχλωριώδους άλατος της 61° θα πρέπει να είναι εφοδιασμένες με εξαεριστήρα σύμφωνα με τα περιθωριακά 3500 (8) ή 3601 (6) αντίστοιχα.

**2809** Τετηγμένους οξυβρωμιούχος φωσφόρος της 15° μπορεί να μεταφέρεται μόνον σε οχήματα-δεξαμενές (βλέπε Προσθήκη B.1a) ή σε εμπορευματοκιβώτια-δεξαμενές (βλέπε Προσθήκη B.1b).

**2810**

### 3. Μικτή συσκευασία

**2811** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό ειδών μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες διαφορετικών ειδών αυτής της κλάσης σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα όχι υποκειμένα στις διατάξεις αυτής της Οδηγίας [βλέπε περιθωριακό 2800 (8)], σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(3) Ύλες της 4° δεν θα πρέπει να συσκευάζονται μαζί με άλλα εμπορεύματα, εκτός από ύλες της 3° της κλάσης 5.1, περιθωριακό 2501. Ύλες των 6° και 14° δεν θα πρέπει να συσκευάζονται μαζί με άλλα εμπορεύματα.

(4) Ύλες ταξινομημένες στο (a) των διαφόρων ειδών δεν θα πρέπει να συσκευάζονται μαζί με ύλες και είδη των κλάσεων 1 και 5.2 και υλικά της κλάσης 7.

(5) Εκτός εάν αλλιώς ειδικά ορίζεται, υγρές ύλες ταξινομημένες στο (a) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες από 0.5 λίτρο ανά εσωτερική συσκευασία και 1 λίτρο ανά κόλο και ύλες ταξινομημένες στο (b) ή (c) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με ύλες ή είδη άλλων Κλάσεων, υπό την προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για τις ύλες και τα είδη αυτών των Κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας [βλέπε περιθωριακό 2800 (8)], υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(6) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:

- (a) ανάφλεξη και/ή εκπομπή σημαντικής θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

## Κλάση 8

**2811** (7) Η μικτή συσκευασία όξινων υλών με βασικές ύλες σε ένα κόλο δεν θα πρέπει να (συνεχ.) επιτρέπεται εάν οι δύο ύλες είναι συσκευασμένες σε εύθραυστες συσκευασίες.

(8) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2802 θα πρέπει να ισχύουν.

(9) Εάν χρησιμοποιούνται ξύλινα κιβώτια ή κιβώτια από φύλλο φάιμπερ, ένα κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

**4. Μαρκάρισμα και ετικέτες κινδύνου στα κόλα**

**2812 Μαρκάρισμα**

(1) Κάθε κόλο θα πρέπει να είναι καθαρά μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα καταχωρείται στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

**Ετικέτες κινδύνου**

(2) Κόλα που περιέχουν ύλες ή είδη της κλάσης 8 θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.

(3) Κόλα που περιέχουν ύλες των 32° (b) 2., 33° (a), 35° (b) 2., 37°, 54°, 64° (b) και 68° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.

(4) Κόλα που περιέχουν ύλες των 44° (a) και 45° (b) 2. θα πρέπει επιπλέον να φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 3 και 6.1.

(5) Κόλα που περιέχουν ύλες της 67° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.1.

(6) Κόλα που περιέχουν ύλες των 69° και 70° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2.

(7) Κόλα που περιέχουν ύλες των 71° και 72° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.3.

(8) Κόλα που περιέχουν ύλες των 3° (a), 4°, 73° και 74° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 05.

(9) Κόλα που περιέχουν ύλες της 2° (a) 2. θα πρέπει επιπλέον να φέρουν ετικέτες σύμφωνα με το υποδείγματα Αριθμ. 05 και 6.1.

(10) Κόλα που περιέχουν ύλες που αναφέρονται παρακάτω θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1:

Αριθμός είδους	Χαρακτηριστικός αριθμός ύλης	Υλη
1° (a)	1831	Θειικό οξύ, αμιζόν (oleum)
6°		Όλες οι ύλες
7°		Όλες ύλες
9° (b)	1811	Όξινο διφθοριούχο κάλιο (διφθοριούχο κάλιο)

Αριθμός είδους	Χαρακτηριστικός αριθμός ύλης	Ύλη
10° (b)	1732	Πενταφθοριούχο αντιμόνιο
12° (a)	1809	Τριγλωριούχος φωσφόρος
	2879	Οξυγλωριούχο σελήνιο
14°		Όλες οι ύλες
44° (b)		Όλες οι ύλες
45° (b) 1. και (c)	2818	Διάλυμα πολυθειούχου αμμωνίου
53° (b) και (c)	1761	Διάλυμα κυπριαιθυλενοδιαμίνης
75°		Όλες οι ύλες
76°		Όλες οι ύλες

(11) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(12) Κόλα που περιέχουν υγρά σε δοχεία, τα πάματα των οποίων δεν είναι ορατά από έξω, καθώς και κόλα που περιέχουν εξαεριζόμενα δοχεία ή εξαεριζόμενα δοχεία χωρίς εξωτερική συσκευασία, θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

## 2813

**B. Στοιχεία στο έγγραφο μεταφοράς**

2814 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς ύλης και με μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2801.

Εάν η ύλη δεν αναφέρεται με συγκεκριμένη ονομασία αλλά είναι καταγεγραμμένη σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από τη χημική ή τεχνική ονομασία.<sup>3/</sup>

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "8, 1°(a), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)] η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα, που περιέχουν ..." και το(τα) συστατικό(ά) που έχει(έχουν) χρησιμοποιηθεί για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα καταχωρείται(ονται) με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα που περιέχουν 1824 διάλυμα υδροξειδίου του νατρίου, 8, 42°(b) ADR".

<sup>3/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν το σκοπό.

## Κλάση 8

**2814** Για τη μεταφορά διαλυμάτων ή μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν (συνεχ.) διάφορα συστατικά υποκείμενα σ' αυτήν την Οδηγία, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κυρίως συμβάλλουν στον κίνδυνο ή τους κινδύνους του διαλύματος και του μείγματος. Για τη μεταφορά διαλυμάτων και μειγμάτων που περιέχουν μόνον ένα συστατικό υποκείμενο στις διατάξεις αυτής της Οδηγίας, οι λέξεις "διάλυμα" ή "μείγμα" θα πρέπει να προστίθενται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Όταν μία στερεή ύλη παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει να συμπληρώνεται από τη λέξη "τετηγμένο", εκτός εάν ήδη συμπεριλαμβάνεται στην ονομασία.

Εάν ένα διάλυμα ή μείγμα με συγκεκριμένη ονομασία ή που περιέχει μία ύλη με συγκεκριμένη ονομασία δεν υπόκειται στις συνθήκες αυτής της κλάσης, σε συμφωνία με το περιθωριακό 2800 (5), ο αποστολέας μπορεί να εγγράψει στο έγγραφο μεταφοράς: "Όχι Εμπορεύματα της κλάσης 8".

**2815-  
2821**

## C. Κενές συσκευασίες

- 2822** (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 91° θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.
- (2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 91° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.
- (3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 91°, π.χ. "Κενές συσκευασίες, 8, 91°, ADR".

Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων για μεταφορά χύμα, ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 1830 θειικό οξύ, 1° (b)".

**2823-  
2824**

## D. Μεταβατικά μέτρα

- 2825** Όλες της κλάσης 8 μπορούν να μεταφέρονται μέχρι τις 30 Ιουνίου 1995 σε συμφωνία με τις απαιτήσεις για την Κλάση 8 που εφαρμόζεται μέχρι τις 31 Δεκεμβρίου 1994. Το έγγραφο μεταφοράς θα πρέπει, σε τέτοιες περιπτώσεις, να φέρει την επιγραφή "Μεταφορά σε συμφωνία με την ADR που ισχύει πριν την 1 Ιανουαρίου 1995".

**2826-  
2899**

**ΚΛΑΣΗ 9. ΔΙΑΦΟΡΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΥΛΕΣ ΚΑΙ ΕΙΔΗ****1. Κατάλογος υλών**

**2900** Το κεφάλαιο της κλάσης 9 καλύπτει ύλες και είδη που, κατά τη διάρκεια της μεταφοράς, παρουσιάζουν έναν κίνδυνο που δεν καλύπτεται από τα κεφάλαια άλλων κλάσεων. Εκείνες οι ύλες και τα είδη που αναφέρονται στο περιθωριακό 2901 υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2901 έως 2920 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας<sup>1/</sup>.

Υλες της κλάσης 9 που αναφέρονται στα διάφορα είδη του περιθωριακού 2901 θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες που χαρακτηρίζονται από το γράμμα (b) ή (c) σύμφωνα με το βαθμό κινδύνου τους:

γράμμα (b) - επικίνδυνες ύλες

γράμμα (c) - ύλες που παρουσιάζουν έναν μικρότερο κίνδυνο.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

**2901** Α. Υλες που, σε περίπτωση εισπνοής ως λεπτή σκόνη, μπορούν να θέσουν σε κίνδυνο την υγεία

1° Αμίαντος και μείγματα που περιέχουν αμίαντο, όπως:

(b) 2212 Μπλε αμίαντος (κροκιδολίτης), 2212 καφέ αμίαντος (αμοσίτης ή μυσσορίτης),

(c) 2590 Λευκός αμίαντος (χρυσοσίτη, ακτινολίτης, ανθοφυλίτης ή τρεμολίτης)

**ΣΗΜΕΙΩΣΗ:** Τάλης που περιέχει τρεμολίτη και/ή ακτινολίτη είναι ύλη της 1° (c), Αριθμ. 2590.

**B. Υλες και συσκευές που σε περίπτωση φωτιάς μπορούν να σχηματίσουν διοξίνες**

2° Πολυχλωρωμένα και πολυαλογονωμένα διφαινύλια (PCBs) και τερφαινύλια (PCTs) και μείγματα που περιέχουν αυτές τις ύλες:

(b) 2315 πολυχλωρωμένα διφαινύλια, 3151 πολυαλογονωμένα διφαινύλια, υγρά ή 3151 πολυαλογονωμένα τερφαινύλια, υγρά, 3152 πολυαλογονωμένα διφαινύλια, στερεά ή 3152 πολυαλογονωμένα τερφαινύλια, στερεά.

**ΣΗΜΕΙΩΣΗ:** Μείγματα με περιεκτικότητα σε PCB ή PCT όχι μεγαλύτερη από 50 mg/kg δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

3° Συσκευές όπως μετασχηματιστές, πυκνωτές και συσκευές που περιέχουν ύλες της 2° (b) ή μείγματα αυτών.

<sup>1/</sup> Για τις ποσότητες υλών ή ειδών του περιθωριακού 2901 που δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται είτε σε αυτό το Παράρτημα είτε στο παράρτημα Β, βλέπε περιθωριακό 2901a.

## Κλάση 9

## 2901 C. Υλεις που παράγουν εύφλεκτο ατμό

(συνεχ.)

4° Διαστελλόμενα πολυμερή που περιέχουν εύφλεκτα υγρά με σημείο ανάφλεξης όχι μεγαλύτερο από 55 °C.

(c) 2211 πολυμερικές κλίνες, διαστελλόμενες, που παράγουν εύφλεκτο ατμό.

## D. Μπαταρίες λιθίου

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σε αυτά τα είδη (βλέπε περιθωριακό 2906).

5° 3090 μπαταρίες λιθίου, 3091 μπαταρίες λιθίου που περιέχονται σε εξαρτήματα

**ΣΗΜΕΙΩΣΗ 1:** Κάθε στοιχείο δεν θα πρέπει να περιέχει περισσότερο από 12 g λιθίου. Η ποσότητα λιθίου που περιέχεται σε κάθε μπαταρία δεν θα πρέπει να είναι μεγαλύτερη από 500 g.

Με την έγκριση της αρμόδιας αρχής της χώρας προέλευσης, η ποσότητα λιθίου σε κάθε στοιχείο μπορεί να αυξηθεί σε 60 g και ένα κόλο μπορεί να περιέχει έως 2500 g λιθίου. Η αρμόδια αρχή θα πρέπει να προσδιορίζει τις συνθήκες μεταφοράς καθώς και τον τύπο και τη διάρκεια του ελέγχου.

**ΣΗΜΕΙΩΣΗ 2:** Στοιχεία και μπαταρίες θα πρέπει να είναι εφοδιασμένα με ένα αποτελεσματικό μέσο πρόληψης των εξωτερικών βραχυκυκλωμάτων. Κάθε στοιχείο και μπαταρία θα πρέπει να έχει ενσωματωμένη μία συσκευή εξαερισμού ασφαλείας ή να είναι σχεδιασμένο με τέτοιο τρόπο ώστε να προλαμβάνεται η βίαιη θραύση υπό κανονικές συνθήκες μεταφοράς. Μπαταρίες που περιέχουν στοιχεία ή σειρά στοιχείων συνδεδεμένων παράλληλα θα πρέπει να είναι εφοδιασμένες με διόδους για την αποφυγή αντίστροφης ροής ρεύματος. Μπαταρίες που περιέχονται σε εξαρτήματα θα πρέπει να προστατεύονται έναντι βραχυκυκλωμάτων και να κρατούνται με ασφάλεια στη θέση τους.

**ΣΗΜΕΙΩΣΗ 3:** Τα στοιχεία και οι μπαταρίες θα πρέπει να είναι έτσι σχεδιασμένα και κατασκευασμένα ώστε να είναι ικανά να ικανοποιούν τους παρακάτω ελέγχους:

**Έλεγχος 1:** το στοιχείο ή η μπαταρία θα πρέπει να υπόκεινται σε έλεγχο θερμικής σταθερότητας στους 75 °C για 48 ώρες και να μην εμφανίζουν εμφανή παραμόρφωση, διαρροή ή εσωτερική θέρμανση.

Αυτός ο έλεγχος θα πρέπει να εκτελείται σε τουλάχιστον 10 στοιχεία και μία μπαταρία από κάθε τύπο λαμβανόμενο από την παραγωγή κάθε εβδομάδα.

**Έλεγχος 2:** ως αποτέλεσμα σκόπιμου βραχυκυκλώματος, το στοιχείο ή η μπαταρία θα πρέπει να καθίσταται αδρανές, κατά προτίμηση χωρίς εξαερισμό (μέσω της χρήσης εσωτερικών συσκευιών ασφαλείας). Εάν λαμβάνει χώρα εξαερισμός, μία ανοιχτή φλόγα θα πρέπει να εφαρμόζεται στις αναθυμιάσεις του εξαερισμού για να αποδειχθεί ότι δεν υπάρχει εκρηκτική κατάσταση.

Αυτός ο έλεγχος θα πρέπει να εκτελείται σε τουλάχιστον τρία στοιχεία και μία μπαταρία από κάθε τύπο λαμβανόμενο από την παραγωγή κάθε εβδομάδα.

**ΣΗΜΕΙΩΣΗ 4:** Στοιχεία που έχουν αποφορτιστεί στο βαθμό που η τάση ανοιχτού κυκλώματος να είναι μικρότερη από δύο volts ή ίση με τα δύο τρίτα της τάσης του μη-αποφορτισμένου στοιχείου, όποια τιμή από τις δύο είναι μικρότερη, ή μπαταρίες που περιέχουν ένα ή περισσότερα τέτοια στοιχεία δεν θα γίνονται δεκτά για μεταφορά.

## Κλάση 9

2901  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 5:** Στοιχεία από μπαταρίες που περιέχονται σε εξαρτήματα δεν θα πρέπει να είναι ικανά να αποφορτίζονται κατά τη διάρκεια της μεταφοράς στο βαθμό που η τάση ανοιχτού κυκλώματος να πέφτει κάτω από 2 volts ή τα δύο τρίτα της τάσης του μη-αποφορτισμένου στοιχείου, όποια τιμή από τις δύο είναι μικρότερη.

**ΣΗΜΕΙΩΣΗ 6:** Είδη της 5<sup>ο</sup> που δεν ικανοποιούν αυτές τις συνθήκες δεν θα γίνονται δεκτά για μεταφορά.

## Ε. Σωστικά μέσα

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτά τα είδη (βλέπε περιθωριακό 2907).

6<sup>ο</sup> 2990 σωστικά μέσα, αυτοδιογκούμενα, όπως γλίστρες εκκένωσης αεροσκαφών και εξαρτήσεις επιβίωσης αεροσκαφών.

**ΣΗΜΕΙΩΣΗ:** Αυτά τα μέσα παρουσιάζουν έναν κίνδυνο εάν η αυτοδιογκούμενη συσκευή ενεργοποιηθεί κατά τη διάρκεια της μεταφοράς και μπορεί επίσης να περιλαμβάνει μία ή περισσότερες από τις παρακάτω ύλες ή είδη αυτής της Οδηγίας ως εξαρτήματα:

συσκευές σηματοδότησης της κλάσης 1, όπως καπνογόνες και φωτιστικές βολίδες σηματοδότησης:

μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2,

εύφλεκτες ύλες των κλάσεων 3 ή 4.1,

οργανικά υπεροξειδία της κλάσης 5.2, ως συστατικά επισκευαστικών εξαρτήσεων,

μπαταρίες ηλεκτρικής συσσώρευσης της κλάσης 8.

7<sup>ο</sup> 3072 σωστικά μέσα, όχι αυτοδιογκούμενα, που περιλαμβάνουν μία ή περισσότερες από τις παρακάτω ύλες ή είδη της ADR ως εξαρτήματα:

συσκευές σηματοδότησης της κλάσης 1, όπως καπνογόνες ή φωτιστικές βολίδες σηματοδότησης,

μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2,

εύφλεκτες ύλες των κλάσεων 3 ή 4.1,

οργανικά υπεροξειδία της κλάσης 5.2, ως συστατικά επισκευαστικών εξαρτημάτων,

μπαταρίες ηλεκτρικής συσσώρευσης ή διαβρωτικά στερεά της κλάσης 8.

8<sup>ο</sup> Μέρη μηχανοκίνητων οχημάτων

3268 συσκευές φουσκώματος αερόσακκων ή 3268 θάλαμοι αερόσακκων ή 3268 προ-εντατές ζωνών ασφαλείας ή 3268 θάλαμοι ζωνών ασφαλείας

**ΣΗΜΕΙΩΣΗ 1:** Αυτό το είδος εφαρμόζεται στα είδη που μπορούν να ταξινομηθούν στην Κλάση 1 σε συμφωνία με το περιθωριακό 2100 (2) (b), που χρησιμοποιούνται ως σωστικοί αερόσακκοι ή ζώνες ασφαλείας των οχημάτων, όταν μεταφέρονται ως συστατικά μέρη και όταν οι 'συσκευές φουσκώματος αερόσακκων', 'προ-εντατές ζωνών ασφαλείας', 'θάλαμοι αερόσακκων' ή 'θάλαμοι ζωνών ασφαλείας' συσκευασμένα όπως για μεταφορά έχουν ελεγχθεί σε συμφωνία με τη σειρά ελέγχου 6 (c) του τμήματος I των Ελέγχων και Κριτηρίων των

## Κλάση 9

2901  
(συνεχ.)

Υποδείξεων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων,<sup>2/</sup> χωρίς έκρηξη της συσκευής, χωρίς θρυμματισμό των περιβλημάτων της συσκευής και χωρίς προβολή επικίνδυνης ή θερμικής επίδρασης, που θα δυσχέρανε σημαντικά τις προσπάθειες πυρόσβεσης ή αντίδρασης σε άλλες καταστάσεις κινδύνου στην άμεσα κοντινή περιοχή.

**ΣΗΜΕΙΩΣΗ 2:** Τέτοιοι αερόσακκοι ή ζώνες ασφαλείας που εγκαθίστανται σε οχήματα ή σε πλήρη μέρη οχημάτων όπως άξονες τιμονιού, φύλλα πόρτας κ.λπ. δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## F. Περιβαλλοντικά επικίνδυνες ύλες

**ΣΗΜΕΙΩΣΗ:** Η καταχώρηση μίας ύλης στην 11<sup>ο</sup> ή 12<sup>ο</sup> θα πρέπει να είναι όπως υποδεικνύεται στην προσθήκη Α.3, μέρος G, περιθωριακά 3390 έως 3396.

- 11<sup>ο</sup> Υγρές ύλες ρυπογόνες για το θαλάσσιο περιβάλλον και διαλύματα και μείγματα τέτοιων υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν στις άλλες κλάσεις, ή στα είδη 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup> αυτής της κλάσης.

(c) 3082 Περιβαλλοντικά επικίνδυνη ύλη, υγρή, ε.α.ο., όπως:

πολυ (3-6) αιθοξυλική αλκοόλη C<sub>6</sub>-C<sub>17</sub> (δευτεροταγής)

πολυ (1-3) αιθοξυλική αλκοόλη C<sub>12</sub>-C<sub>15</sub>

πολυ (1-6) αιθοξυλική αλκοόλη C<sub>13</sub>-C<sub>15</sub>

alfa-cypermethrin

φθαλικό βουτυλοβενζύλιο

χλωριωμένες παραφίνες (C<sub>10</sub>-C<sub>13</sub>)

1-γλωροοκτάνιο

φωσφορικό κρεζυλοδιφαινύλιο

cyfluthrin

ακρυλικός δεκυλεστέρας

φθαλικό δι-η-βουτύλιο

1, 6-διγλωροεξάνιο

δύσοπροπιλοβενζόλια

ακρυλικός ισοδεκυλεστέρας

φωσφορικός ισοδεκυλοδιφαινύλιο

νιτρικό ισοκτύλιο

malathion

resmethrin

φωσφορικά τριαρύλια

φωσφορικά τρικρεζύλια

τριαιθυλοβενζόλιο

φωσφορικό τριξυλενύλιο

- 12<sup>ο</sup> Στερεές ύλες ρυπογόνες για το θαλάσσιο περιβάλλον και μείγματα τέτοιων υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν στις άλλες κλάσεις, ή στα είδη 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup> αυτής της κλάσης.

<sup>2/</sup> Υποδείξεις για τη Μεταφορά Επικίνδυνων Εμπορευμάτων, Έλεγχος και Κριτήρια (Δεύτερη έκδοση), δημοσιευμένες από τον Οργανισμό Ηνωμένων Εθνών υπό το σύμβολο ST/SG/AC.10/11/Rev.1.

## 13° Γενετικά τροποποιημένοι μικρο-οργανισμοί.

**ΣΗΜΕΙΩΣΗ 1:** Γενετικά τροποποιημένοι μικρο-οργανισμοί είναι μικρο-οργανισμοί στους οποίους το γενετικό υλικό έχει σκοπίμα μεταβληθεί με τεχνικά μέσα ή με τέτοια μέσα που δεν μπορούν να συμβούν φυσικά.

**ΣΗΜΕΙΩΣΗ 2:** Γενετικά τροποποιημένοι μικρο-οργανισμοί που είναι μολυσματικοί είναι ύλες της κλάσης 6.2 (βλέπε περιθωριακό 2651, είδη 1° έως 3°, χαρακτηριστικοί αριθμοί 2814 και 2900).

**ΣΗΜΕΙΩΣΗ 3:** Γενετικά τροποποιημένοι μικρο-οργανισμοί κατά την έννοια αυτού του είδους είναι εκείνοι που δεν είναι επικίνδυνοι για ανθρώπους και ζώα, αλλά που θα μπορούσαν να μεταβάλλουν ζώα, φυτά, μικροβιολογικές ύλες και οικοσυστήματα με τέτοιον τρόπο που δεν μπορεί να συμβεί φυσικά.

- (b)
- 3245 Γενετικά τροποποιημένοι μικρο-οργανισμοί

**ΣΗΜΕΙΩΣΗ 1:** Γενετικά τροποποιημένοι μικρο οργανισμοί που έχουν λάβει συγκατάθεση για σκόπιμη απελευθέρωση στο περιβάλλον, <sup>3/</sup> δεν υπόκεινται στις διατάξεις αυτής της κλάσης αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Για το σκοπό των απαιτήσεων συσκευασίας του περιθωριακού 2903, ύλες και μείγματα υλών θεωρούνται ότι είναι στερεά εάν δεν περιέχουν ελεύθερο υγρό σε θερμοκρασία χαμηλότερη από 45 °C.

**ΣΗΜΕΙΩΣΗ 3:** Ζωντανά σπονδυλωτά ή ασπόνδυλα ζώα δεν θα πρέπει να χρησιμοποιούνται για τη μεταφορά υλών ταξινομημένων υπό αυτό το είδος εκτός εάν η ύλη δεν μπορεί να μεταφερθεί με άλλον τρόπο.

## 14° Γενετικά τροποποιημένοι οργανισμοί

**ΣΗΜΕΙΩΣΗ:** Γενετικά τροποποιημένοι οργανισμοί, για τους οποίους είναι γνωστό ή υπάρχει η υποψία ότι είναι επικίνδυνοι για το περιβάλλον θα πρέπει να μεταφέρονται σε συμφωνία με τις συνθήκες που ορίζονται από την αρμόδια αρχή της χώρας προέλευσης.

## G. Κενές συσκευασίες

**ΣΗΜΕΙΩΣΗ 1:** Κενές συσκευασίες με υπολείμματα από το προηγούμενο περιεχόμενο τους κολλημένα στο εξωτερικό δεν θα γίνονται δεκτά για μεταφορά.

<sup>3/</sup> Βλέπε ειδικά το Μέρος C της Οδηγίας 90/220/EEC (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας, Αριθμ. L 117, της 8 Μαΐου 1990, σελ. 18-20), που εκθέτει τις διαδικασίες εξουσιοδότησης για της Ευρωπαϊκή Κοινότητα.

## Κλάση 9

2901  
(συνεχ.)**ΣΗΜΕΙΩΣΗ 2:** Ακαθάριστα κενά δοχεία συγκράτησης για συσκευές της 3<sup>ο</sup> δεν θα γίνονται δεκτά για μεταφορά.

21<sup>ο</sup> Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστες, που περιείχαν ύλες της 1<sup>ο</sup> ή 2<sup>ο</sup> της κλάσης 9.

2901a (1) Ύλες ταξινομημένες στο (b) ή (c) των 1<sup>ο</sup>, 2<sup>ο</sup>, 4<sup>ο</sup> και 11<sup>ο</sup> έως 13<sup>ο</sup> μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις δεν υπόκεινται στις διατάξεις για αυτήν την κλάση που περιέχεται σε αυτό το Παράρτημα ή στο παράρτημα Β:

(a) Ύλες ταξινομημένες υπό το γράμμα (b) κάθε είδους:

υγρά, έως 500 ml ανά εσωτερική συσκευασία και έως 2 λίτρα ανά κόλο,

στερεά, έως 1 kg ανά εσωτερική συσκευασία και έως 4 kg ανά κόλο.

(b) Ύλες ταξινομημένες υπό το γράμμα (c) κάθε είδους:

υγρά, έως 3 λίτρα ανά εσωτερική συσκευασία και έως 12 λίτρα ανά κόλο:

στερεά, έως 6 kg ανά εσωτερική συσκευασία και έως 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες σύμφωνα τουλάχιστον με τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να ισχύουν.

(2) Οι παρακάτω ύλες και είδη της 1<sup>ο</sup> είναι επιπλέον υποκείμενες στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το παράρτημα και στο παράρτημα Β:

(a) αμιάντος έτσι εμβαπτισμένος ή τοποθετημένος σε ένα φυσικό ή τεχνητό δεσμευτικό υλικό (όπως τσιμέντο, πλαστικό, άσφαλτος, ρητίνες ή ορυκτό μέταλλο) ώστε να μην μπορεί να σημειωθεί διαφυγή επικίνδυνων ποσοτήτων αναπνεύσιμων ινών αμιάντου κατά τη διάρκεια της μεταφοράς,

(b) τελικά προϊόντα που περιέχουν αμιάντο όταν είναι έτσι συσκευασμένα ώστε να μην μπορεί να σημειωθεί διαφυγή επικίνδυνων ποσοτήτων αναπνεύσιμων ινών αμιάντου κατά τη διάρκεια της μεταφοράς.

(3) Συσκευές της 3<sup>ο</sup> που περιέχουν υγρά της 2<sup>ο</sup> (b), έως 500 ml ανά συσκευή και έως 2 λίτρα ανά κόλο, δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα ή στο παράρτημα Β. Οι συσκευές θα πρέπει, όμως, να συσκευάζονται σε συμφωνία με το περιθωριακό 2905 (1) (a).

(4) Μπαταρίες λιθίου της 5<sup>ο</sup> σύμφωνα με τις παρακάτω διατάξεις και εξαρτήματα που περιέχουν μόνον τέτοιες μπαταρίες, δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα και στο παράρτημα Β:

(a) κάθε στοιχείο με υγρή κάθοδο περιέχει όχι περισσότερο από 0.5 g λιθίου ή κράμα λιθίου και κάθε στοιχείο με στερεή κάθοδο περιέχει όχι περισσότερο από 1 g λιθίου ή κράμα λιθίου,

## Κλάση 9

- 2901a (συνεχ.)
- (b) κάθε μπαταρία με στερεή κάθοδο περιέχει όχι περισσότερο από μία συνολική ποσότητα 2 g λίθιο ή κράμα λιθίου και κάθε μπαταρία με υγρή κάθοδο περιέχει όχι περισσότερο από μία συνολική ποσότητα 1 g λίθιο ή κράμα λιθίου,
  - (c) κάθε στοιχείο ή μπαταρία που περιέχει υγρή κάθοδο είναι ερμητικά σφραγισμένο,
  - (d) τα στοιχεία είναι διαχωρισμένα έτσι ώστε να αποφεύγονται βραχυκυκλώματα,
  - (e) οι μπαταρίες είναι διαχωρισμένες έτσι ώστε να αποφεύγονται βραχυκυκλώματα και είναι συσκευασμένες σε γερές συσκευασίες, εκτός από όταν είναι εγκαταστημένες σε ηλεκτρονικές συσκευές,
  - (f) εάν μία μπαταρία υγρής καθόδου περιέχει περισσότερο από 0.5 g λίθιο ή κράμα λιθίου, ή μία μπαταρία στερεής καθόδου περιέχει περισσότερο από 1 g λίθιο ή κράμα λιθίου, δεν περιέχει υγρό ή αέριο που θεωρείται επικίνδυνο εκτός εάν το υγρό ή το αέριο, εάν είναι ελεύθερο, θα ήταν πλήρως απορροφημένο ή εξουδετερωμένο από άλλα υλικά στη μπαταρία.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

- 2902
- (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στο τμήμα A.2.
  - (2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.
  - (3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2900 και 3511 (2) ή 3611 (2) θα πρέπει να χρησιμοποιούνται τα παρακάτω:

συσκευασίες των ομάδων συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις επικίνδυνες ύλες που είναι ταξινομημένες υπό το γράμμα (b) κάθε είδους,

συσκευασίες των ομάδων συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις λιγότερο επικίνδυνες ύλες που είναι ταξινομημένες υπό το γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 9 σε οχήματα-δεξαμενές, αποσυναρμολογημένες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα B.

## 2. Ειδικές συνθήκες συσκευασίας

- 2903
- (1) Υλεις ταξινομημένες στο (b) των διαφόρων ειδών του περιθωριακού 2901 θα πρέπει να συσκευάζονται:
    - (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
    - (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
    - (c) σε χαλύβδινα μπτόνια σύμφωνα με το περιθωριακό 3522, ή
    - (d) σε πλαστικά βαρέλια ή πλαστικά μπτόνια σύμφωνα με το περιθωριακό 3526, ή

## Κλάση 9

2903  
(συνεχ.)

- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με ένα άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις υλεις με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C (βλέπε περιθωριακά 3512, 3553, 3554 και 3560) και για στερεά.*

(2) Στερεές υλεις με σημείο τήξης μεγαλύτερο από 45 °C μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπεράστους εσωτερικούς σάκους, ή
- (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα αποστέλλονται ως πλήρες φορτίο ή οι σάκοι είναι ασφαλισμένοι πάνω σε παλέτες, ή
- (c) σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627, ή
- (d) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13L1 και 13M1, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

2904

(1) Υλεις ταξινομημένες στο (c) των διαφόρων ειδών του περιθωριακού 2901 θα πρέπει να συσκευάζονται:

- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) σε πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) σε ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540, ή
- (i) σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC σύμφωνα με το περιθωριακό 3625.

## Κλάση 9

2904  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ** στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται σε βαρέλια, μπιτόνια και ελαφρού περιττώματος μεταλλικές συσκευασίες μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560) και για στερεά.

- (2) Στερεές ύλες με σημείο τήξης μεγαλύτερο από 45 °C μπορούν επίσης να συσκευάζονται:
- (a) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, ή
  - (c) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627.

**ΣΗΜΕΙΩΣΗ:** IBC σύμφωνα με το περιθωριακό 3626 που περιέχουν ύλες της 4° (c) και μεταφέρονται ως πλήρες φορτίο χρειάζεται μόνον να ικανοποιούν τις απαιτήσεις του περιθωριακού 3621 (1) έως (3), (5) και (6).

(3) Ύλες της 4° (c) μπορούν επίσης να συσκευάζονται σε σφιχτά κλεισμένες στεγανές συσκευασίες που χρειάζεται μόνον να ικανοποιούν τις συνθήκες του περιθωριακού 3500 (1), (2) και (5) έως (7).

(4) Είδη της 8° (c) θα πρέπει να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 και με έναν τύπο σχεδιασμού ελεγμένο και εγκεκριμένο για την ομάδα συσκευασίας III.

2905

(1) Συσκευές της 3° θα πρέπει να συσκευάζονται:

- (a) σε στεγανές συσκευασίες, ή
- (b) σε στεγανά εμπορευματοκιβώτια.

(2) Συσκευές της 3° μπορούν επίσης να μεταφέρονται σε στεγανά δοχεία (δοχεία συγκράτησης) που πρέπει να είναι ικανά να κρατήσουν, επιπλέον των συσκευών, τουλάχιστον 1.25 φορές τις ύλες της 2° (b) που βρίσκονται στις συσκευές. Πρέπει να υπάρχει επαρκές αδρανές υλικό στα δοχεία για να απορροφά τουλάχιστον 1.1 φορές τις ύλες της 2° (b) που περιέχονται στις συσκευές. Οι συσκευές και τα δοχεία θα πρέπει να είναι έτσι σχεδιασμένα ώστε να αποφεύγεται οποιαδήποτε διαρροή υγρού υπό κανονικές συνθήκες μεταφοράς.

2906

(1) Είδη της 5° θα πρέπει να συσκευάζονται σε:

- (a) κιβώτια σύμφωνα με το περιθωριακό 3527 για φυσικό ξύλο, 3528 για κόντρα-πλακέ ή 3530 για φύλλο φάιμπερ, ή
- (b) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ, 3525 για φάιμπερ ή 3526 για πλαστικό, μετακινούμενης κεφαλής, ή
- (c) σε συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από φύλλο φάιμπερ και εξωτερικές συσκευασίες από χάλυβα ή αλουμίνιο σύμφωνα με το περιθωριακό 3538. Οι εσωτερικές συσκευασίες θα πρέπει να είναι διαχωρισμένες η μία από την άλλη και από τις εσωτερικές επιφάνειες των εξωτερικών συσκευασιών με τη χρήση μη-εύφλεκτου προστατευτικού υλικού με τουλάχιστον 25 mm πάχος.

## Κλάση 9

**2906** (συνεχ.) Οι συνδυασμένες συσκευασίες θα πρέπει να συμφωνούν με έναν τύπο σχεδιασμού που είναι ελεγμένος και εγκεκριμένος, σε συμφωνία με την προσθήκη Α.5, για την ομάδα συσκευασίας Π. Καμία ξεχωριστή συσκευασία ή εσωτερική συσκευασία μίας συνδυασμένης συσκευασίας δεν θα πρέπει να περιέχει περισσότερο από 500 g λίθιο (βλέπε, όμως, περιθωριακό 2901, 5°, Σημείωση 1).

(2) Μπαταρίες λιθίου της 5° θα πρέπει να συσκευάζονται και να στοιβάζονται με ασφάλεια έτσι ώστε να αποφεύγεται η μετακίνηση που θα μπορούσε να οδηγήσει σε βραχυκυκλώματα.

(3) Εξαρτήματα που περιέχουν μπαταρίες λιθίου της 5° θα πρέπει να ασφαίζονται έναντι μετακίνησης μέσα στη συσκευασία και να είναι έτσι συσκευασμένα ώστε να αποφεύγεται η τυχαία λειτουργία κατά τη διάρκεια της μεταφοράς.

**2907** (1) Σωστικά μέσα της 6° θα πρέπει να συσκευάζονται, μεμονωμένα, σε γερές εξωτερικές συσκευασίες.

(2) Ύλες και είδη αυτής της Οδηγίας που περιέχονται σε σωστικά μέσα της 6° ή 7° ως εξαρτήματα θα πρέπει να συσκευάζονται σε εσωτερικές συσκευασίες. Αυτές οι εσωτερικές συσκευασίες θα πρέπει να στοιβάζονται έτσι ώστε να αποφεύγεται οποιαδήποτε μετακίνηση μέσα στα μέσα.

(3) Μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2 θα πρέπει να περιέχονται σε κυλίνδρους σύμφωνα με το περιθωριακό 2202 που μπορούν να συνδεθούν με το σωστικό μέσο.

(4) Συσκευές σηματοδότησης της κλάσης 1 θα πρέπει να συσκευάζονται σε πλαστικές ή από φύλλο φάιμπερ εσωτερικές συσκευασίες.

(5) Σπίρτα που ανάβουν παντού της κλάσης 4.1 (περιθωριακό 2401, 2° (c), Αριθμ. 1331) θα πρέπει να συσκευάζονται σε εσωτερικές συσκευασίες για την αποφυγή οποιασδήποτε μετακίνησης.

**2908** (1) Εάν ύλες της 13° μεταφέρονται σε βαθιά κατεψυγμένο άζωτο, οι εσωτερικές συσκευασίες θα πρέπει να είναι σύμφωνες με τις διατάξεις αυτής της κλάσης και τα δοχεία για το άζωτο θα πρέπει να ικανοποιούν τις διατάξεις της κλάσης 2.

(2) Ζωντανά ζώα σε συμφωνία με την 13°, ΣΗΜΕΙΩΣΗ 3, θα πρέπει να συσκευάζονται, μαρκάρονται, περιγράφονται και μεταφέρονται σε συμφωνία με τους σχετικούς κανονισμούς για τη μεταφορά ζώων<sup>4/</sup>.

**2909-  
2910**

### 3. Μικτή συσκευασία

**2911** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες διαφορετικών ειδών της κλάσης 9 εκτός από ύλες της 13°, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας, σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

**2911** (συνεχ.) (3) Ύλες της κλάσης 9 εκτός από ύλες της 13°, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με ύλες ή είδη άλλων κλάσεων, υπό την

<sup>4/</sup> Τέτοιοι κανονισμοί περιέχονται π.χ., στην Οδηγία 91/628/ΕΕΚ (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας Αριθμ. L340 της 11 Δεκεμβρίου 1992, σ.17) και στις Υπαδείξεις που Συμβουλίου της Ευρώπης (Υπουργική Επιτροπή) για τη μεταφορά αραιμένων ειδών ζώων.

## Κλάση 9

προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για τις ύλες και τα είδη αυτών των κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

(4) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:

- (a) ανάφλεξη και/ή εκπομπή σημαντικής θερμότητας,
- (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμός διαβρωτικών υγρών,
- (d) σχηματισμός ασταθών υλών.

(5) Ύλες της 13<sup>ο</sup> δεν θα πρέπει να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με άλλα εμπορεύματα. Αυτό δεν θα πρέπει να εφαρμόζεται σε ύλες προστιθέμενες ως ψυκτικά μέσα, π.χ. πάγος, ξηρός πάγος ή βαθιά κατεψυγμένο υγρό άζωτο.

(6) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2902 θα πρέπει να ισχύουν.

(7) Εάν χρησιμοποιούνται ξύλινα ή από φύλλο φάιμπερ κιβώτια, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

#### 4. *Μαρκάρισμα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη A.9)*

##### *Μαρκάρισμα*

2912

(1) Κάθε κόλο θα πρέπει να είναι καθαρά και με τρόπο διαρκείας μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που εγγράφεται στο έγγραφο μεταφοράς, μετά από τα γράμματα 'UN'.

(2) Συσκευασίες που περιέχουν ύλες της 4<sup>ο</sup> (c) θα πρέπει να φέρουν το παρακάτω μαρκάρισμα: "Διατηρείται μακριά από οποιαδήποτε πηγή ανάφλεξης". Αυτό το μαρκάρισμα θα πρέπει να είναι σε μία επίσημη γλώσσα της χώρας αποστολής και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά, εκτός εάν οποιεσδήποτε συμφωνίες μεταξύ των ενδιαφερόμενων για τη μεταφορά χωρών, ορίζουν διαφορετικά.

##### *Ετικέτες κινδύνου*

(3) Κόλα που περιέχουν ύλες ή είδη αυτής της κλάσης, με εξαίρεση τις ύλες της 4<sup>ο</sup> (c), θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9.

(4) Κόλα που περιέχουν ύλες της 2<sup>ο</sup> (b) με σημείο ανάφλεξης έως και 61 °C θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.

(5) Κόλα που περιέχουν είδη της 6<sup>ο</sup> ή 7<sup>ο</sup> δεν θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9 εκτός εάν το είδος είναι πλήρως κλεισμένο από συσκευασία, ξύλινο δικτυωτό κιβώτιο ή άλλο μέσο που παρεμποδίζει τον άμεσο προσδιορισμό του είδους.

(6) Νέα κόλα που περιέχουν ύλες της 13<sup>ο</sup> μεταφερόμενες σε βαθιά κατεψυγμένο άζωτο θα πρέπει επίσης να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 2.

## Κλάση 9

**2912** (7) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω θα πρέπει να φέρουν σε δύο (συνεχ.) αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(8) Κόλα που περιέχουν υγρά σε δοχεία τα πάματα των οποίων δεν είναι ορατά από έξω θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

**2913**

**B. Στοιχεία στο έγγραφο μεταφοράς**

**2914** (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς - εκτός για ύλες της 14<sup>ο</sup> - και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2901. Εάν η ύλη δεν αναφέρεται με ονομασία, αλλά είναι καταγεγραμμένη σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από την χημική ή τεχνική <sup>5/</sup> ονομασία της ύλης, ή για ύλες της 13<sup>ο</sup>, από τη βιολογική ονομασία 5/ της ύλης.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "9, 1<sup>ο</sup> (b), ADR".

Για τη μεταφορά αποβλήτων (βλέπε περιθωριακό 2000 (5)), η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα, που περιέχουν ..." και το συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων υπό το περιθωριακό 2002 (8) θα καταχωρείται(ζονται) με την(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα που περιέχουν 2212 καφέ αμιάντο, 9,1<sup>ο</sup> (b), ADR".

Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κατά κύριο λόγο συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και των μειγμάτων.

Για τη μεταφορά διαλυμάτων και μειγμάτων που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις αυτής της Οδηγίας, οι λέξεις 'διάλυμα' ή 'μείγμα' θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Όταν μία στερεή ύλη παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει να συμπληρώνεται από τη λέξη 'τετηγμένο', εκτός εάν ήδη συμπεριλαμβάνεται στην ονομασία.

Για τη μεταφορά εύκολα αλλοιωσίμων υλών της 13<sup>ο</sup> κατάλληλες πληροφορίες θα πρέπει να δίνονται, π.χ.: 'Ψύξη στους +2/+4 °C' ή 'Μεταφέρεται σε κατενυγμένη κατάσταση' ή 'Να μην καταψύχεται'.

(2) Για τη μεταφορά ειδών της 5<sup>ο</sup> με την έγκριση της αρμόδιας αρχής (βλέπε Σημείωση 1 στο περιθωριακό 2901, 5<sup>ο</sup>), ένα αντίγραφο της έγκρισης με τις συνθήκες μεταφοράς θα πρέπει να επισυνάπτεται στο έγγραφο μεταφοράς. Αυτή η έγκριση θα πρέπει να συντάσσεται σε μία επίσημη γλώσσα της χώρας αποστολής και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά, εκτός εάν οποιεσδήποτε συμφωνίες μεταξύ των ενδιαφερόμενων για τη μεταφορά χωρών ορίζουν διαφορετικά.

<sup>5/</sup> Η τεχνική ή βιολογική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν τον σκοπό. Στην περίπτωση παρασιτοκτόνων, η ονομασία που θα εγγραφεί θα πρέπει να είναι εκείνη που δίνεται στο Πρότυπο ISO 1750: 1981 εάν αναφέρεται.

## Κλάση 9

2915-  
2920

## C. Κενές συσκευασίες

- 2921 (1) Εάν οι κενές συσκευασίες συμπεριλαμβανομένων IBC, ακαθάριστων, της 21° είναι σάκοι, αυτές θα πρέπει να τοποθετούνται σε κιβώτια ή αδιάβροχους σάκους για την αποφυγή οποιασδήποτε διαρροής της ύλης.
- (2) Άλλες κενές συσκευασίες συμπεριλαμβανομένων IBC, ακαθάριστων, της 21° θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και να παρουσιάζουν τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.
- (3) Κενές συσκευασίες, ακαθάριστες, της 21° θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.
- (4) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στην 21°, π.χ. "Κενή συσκευασία, 9, 21°, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 2212 καφέ αμιάντος, 1° (b)".

2922-  
2999

**Μέρος III. ΠΡΟΣΘΗΚΕΣ ΣΤΟ ΠΑΡΑΡΤΗΜΑ Α**

## ΠΡΟΣΘΗΚΗ Α.1

3000-  
3099

**Α. Όροι σταθερότητας και ασφάλειας σχετικοί με εκρηκτικές ύλες και είδη, εύφλεκτα στερεά και οργανικά υπεροξειδία**

**Γενικά**

**3100** Οι παρακάτω όροι είναι οι ελάχιστοι για ύλες και είδη δεκτά για μεταφορά.

**Όροι σχετικοί με εκρηκτικές ύλες και είδη**

**3101** (1) *Έλεγχος για καταχώρηση στην Κλάση 1*

Οποιαδήποτε ύλη ή είδος που έχει ή για το οποίο υπάρχει η υπόψια ότι έχει εκρηκτικές ιδιότητες θα πρέπει να εξετάζεται για καταχώρηση στην Κλάση 1 σε συμφωνία με τους ελέγχους, τις διαδικασίες και τα κριτήρια που ορίζονται στο Μέρος Ι ("Έλεγχοι και κριτήρια για την ταξινόμηση των εκρηκτικών υλών και ειδών") των "Υποδείξεων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων: Έλεγχοι και Κριτήρια" όπως δημοσιεύτηκε από τον Οργανισμό Ηνωμένων Εθνών ως έγγραφο ST/SG/AC.10/11, πρώτη έκδοση (εδώ καλείται Εγχειρίδιο Ελέγχου).

Μία ύλη ή ένα είδος καταχωρημένο στην Κλάση 1 μπορεί να γίνεται δεκτό για μεταφορά μόνο όταν έχει καταχωρηθεί σε μία ονομασία ή ε.α.ο. καταχώρηση που αναφέρεται στο περιθωριακό 2101 και ικανοποιεί τα κριτήρια του Εγχειριδίου Ελέγχου.

(2) *Ταξινόμηση*

Οι ύλες και τα είδη της Κλάσης 1 θα πρέπει να καταχωρούνται στην κατάλληλη υποδιαίρεση και ομάδα συμβατότητας σε συμφωνία με τις διαδικασίες και τα κριτήρια που ορίζονται στο Εγχειρίδιο Ελέγχου.

(3) *Καταχώρηση σ' έναν αριθμό είδους, χαρακτηριστικό αριθμό και ονομασία*

Οι ύλες και είδη της Κλάσης 1 θα πρέπει να καταχωρούνται σ' έναν αριθμό είδους, έναν χαρακτηριστικό αριθμό και μία ονομασία ή ε.α.ο. καταχώρηση που αναφέρεται στον Πίνακα 1 του περιθωριακού 2101.

Ερμηνεία των ονομασιών υλών και ειδών στους χαρακτηριστικούς αριθμούς είδους του Πίνακα 1 του περιθωριακού 2101 θα πρέπει να βασίζεται στο λεξικό όρων του περιθωριακού 3170.

Εκρηκτικές ύλες και είδη θα πρέπει να καταχωρούνται μόνον σε μία ε.α.ο. καταχώρηση εάν δεν μπορούν να καταχωρηθούν σε μία ονομασία του Πίνακα 1 του περιθωριακού 2101. Καταχώρηση σε μία ε.α.ο. καταχώρηση θα πρέπει να γίνεται από την αρμόδια αρχή της χώρας προέλευσης.

(4) *Έλεγχος έκκρισης*

(a) Ύλες του είδους 4°, χαρακτηριστικός αριθμός 0081 (Εκρηκτικά για ανατινάξεις, τύπου Α) θα πρέπει, εάν περιέχουν περισσότερο από 40 % υγρό νιτρικό εστέρα, επιπλέον του ελέγχου που ορίζεται παραπάνω, να ικανοποιούν τον παρακάτω έλεγχο έκκρισης.

(b) Η συσκευή για τον έλεγχο ενός εκρηκτικού για ανατινάξεις για έκκριση (σχήματα. 1 έως 3) συνίσταται από έναν μπρούτζινο κύλινδρο. Αυτός ο κύλινδρος, που είναι κλειστός στο ένα άκρο με μία πλάκα του ίδιου μετάλλου, έχει εσωτερική διάμετρο 15.7 mm και βάθος 40 mm. Είναι διάτρητος με 20 σπές 0.5 mm σε διάμετρο (τέσσερεις πεντάδες από σπές) στην περιφέρεια. Ένα μπρούτζινο πιστόνι,

## Προσθήκη Α.1

3101  
(συνεχ.)

κυλινδρικά διαμορφωμένο πάνω σ' ένα μήκος 48 mm και με συνολικό μήκος 52 mm, ολισθαίνει μέσα στον κάθετα τοποθετημένο κύλινδρο. Το πιστόνι, του οποίου η διάμετρος είναι 15.6 mm, φορτώνεται με ένα βάρος 2,220 g έτσι ώστε μία πίεση 120 kPa (1.20 bar) να ασκείται στη βάση του κυλίνδρου.

- (c) Ένα πώμα εκρηκτικού για ανατινάξεις βάρους 5 έως 8 g, 30 mm μακρύ και 15 mm σε διάμετρο, τυλίγεται σε πολύ λεπτή γάζα και τοποθετείται στον κύλινδρο. Το πιστόνι και το φερόμενο βάρος του τοποθετούνται πάνω του έτσι ώστε το εκρηκτικό για ανατινάξεις να υπόκειται σε μία πίεση 120 kPa (1.20 bar). Σημειώνεται ο χρόνος που απαιτείται για την εμφάνιση των πρώτων σημείων ελαιωδών σταγονιδίων (νιτρογλυκερίνη) στα εξωτερικά ανοίγματα των οπών του κυλίνδρου.
- (d) Το εκρηκτικό για ανατινάξεις θεωρείται ικανοποιητικό εάν ο χρόνος που μεσολαβεί πριν την εμφάνιση των υγρών εκκρίσεων είναι μεγαλύτερος από πέντε λεπτά, όταν ο έλεγχος έχει διεξαχθεί σε θερμοκρασία 15 °C έως 25 °C.

## Έλεγχος εκρηκτικού για ανατινάξεις για έκκριση

Σχήμα 1: Γόμωση σε μορφή καμπάνας, βάρους 2220 g., ικανή να αναρτάται από ένα μπρούτζινο πιστόνι

Σχήμα 2: Κοίλος μπρούτζινος κύλινδρος, κλειστός στο ένα άκρο. Σχήμα 3: Κυλινδρικό μπρούτζινο πιστόνι. Διαστάσεις σχεδίου και τομής σε mm

- (1) 4 σειρές των 5 οπών με 0.5 Z
- (2) χαλκός
- (3) σιδερένια πλάκα με κεντρικό κώνο στην κατώτερη επιφάνεια
- (4) 4 ανοίγματα, περίπου 46 x 56, τοποθετημένα σε κανονικές αποστάσεις στην περιφέρεια.

## Προσθήκη Α.1

## Όροι σχετικοί με μείγματα νιτρομένης κυτταρίνης της Κλάσης 4.1

3102

(1) Νιτροκυτταρίνη του περιθωριακού 2401, 24° (a) θερμαινόμενη για μισή ώρα στους 132 °C δεν πρέπει να εκπέμπει ορατούς κίτρινωπούς-καφέ νιτρώδεις ατμούς (νιτρώδη αέρια). Η θερμοκρασία ανάφλεξης πρέπει να είναι μεγαλύτερη από 180 °C. Βλέπε παραγράφους (3) έως (8), (9) (a) και (10) παρακάτω.

(2) 3 g πλαστικοποιημένης νιτροκυτταρίνης, θερμαινόμενα για μία ώρα στους 132 °C, δεν πρέπει να εκπέμπουν ορατούς κίτρινωπούς-καφέ νιτρώδεις ατμούς (νιτρώδη αέρια). Η θερμοκρασία ανάφλεξης πρέπει να είναι μεγαλύτερη από 170 °C. Βλέπε παραγράφους (3) έως (8), (9) (b) και (10) παρακάτω.

(3) Οι διαδικασίες ελέγχου που τίθενται παρακάτω θα ισχύουν όταν εμφανίζονται διαφορές γνώμης ως προς την δυνατότητα αποδοχής των υλών για μεταφορά οδικώς.

(4) Εάν άλλες μέθοδοι ή διαδικασίες ελέγχου χρησιμοποιούνται για την επιβεβαίωση των όρων σταθερότητας που ορίζονται παραπάνω σε αυτήν την προσθήκη, εκείνες οι μέθοδοι πρέπει να οδηγούν στα ίδια αποτελέσματα με τις μεθόδους που ορίζονται παρακάτω.

(5) Στη διεξαγωγή των ελέγχων σταθερότητας με θέρμανση που περιγράφονται παρακάτω, η θερμοκρασία του φούρνου που περιέχει το δείγμα υπό έλεγχο δεν πρέπει να αποκλίνει περισσότερο από 2 °C από την οριζόμενη θερμοκρασία. Η οριζόμενη διάρκεια ενός 30-λεπτου ή 60-λεπτου ελέγχου πρέπει να τηρείται με διαφορά δύο λεπτών. Ο φούρνος πρέπει να είναι τέτοιος ώστε η απαιτούμενη θερμοκρασία αποκαθίσταται όχι περισσότερο από πέντε λεπτά μετά την εισαγωγή του δείγματος.

(6) Πριν την διεξαγωγή των ελέγχων στις παραγράφους (9) και (10), τα δείγματα πρέπει να ξηραίνονται για όχι λιγότερο από 15 ώρες στη θερμοκρασία περιβάλλοντος σε έναν υπό κενό ξηραντήρα που περιέχει τετηγμένο και κοκκώδες γλωριούχο ασβέστιο, ενώ το δείγμα ύλης απλώνεται σ' ένα λεπτό στρώμα. Για αυτόν τον σκοπό, ύλες που δεν είναι ούτε σε μορφή σκόνης ούτε ινώδεις θα πρέπει να είναι τριμμένες, ή ξυσιμένες, ή κομμένες σε μικρά κομμάτια. Η πίεση στον ξηραντήρα πρέπει να φέρεται κάτω από τα 6.5 kPa (0.065 bar).

(7) Πριν ξηρανθούν όπως ορίζεται στην παράγραφο (6) παραπάνω, ύλες σύμφωνα με την παράγραφο (2) θα πρέπει να υπόκεινται σε αρχική ξήρανση σε έναν καλά εξαεριζόμενο φούρνο, με τη θερμοκρασία του στους 70 °C, μέχρι η απώλεια βάρους ανά τέταρτο της ώρας να είναι μικρότερη από το 0.3 % του αρχικού βάρους.

(8) Ελαφρά νιτρομένη νιτροκυτταρίνη σύμφωνα με την παράγραφο (1) θα πρέπει πρώτα να υπόκειται σε αρχική ξήρανση όπως ορίζεται στην παράγραφο (7) παραπάνω. Η ξήρανση θα πρέπει τότε να συμπληρώνεται με διατήρηση της νιτροκυτταρίνης για τουλάχιστον 15 ώρες πάνω από συμπυκνωμένο θειικό οξύ σε έναν ξηραντήρα.

## (9) Έλεγχος της χημικής σταθερότητας υπό θέρμανση

(a) Έλεγχος της ύλης που αναφέρεται στην παράγραφο (1) παραπάνω.

(i) Σε καθένα από δύο γυάλινους δοκιμαστικούς σωλήνες που έχουν τις παρακάτω διαστάσεις:

μήκος 350 mm  
εσωτερική διάμετρος .....16 mm  
πάχος τοιχώματος .....1.5 mm

τοποθετείται 1 g ύλης ξηραμένο πάνω από γλωριούχο ασβέστιο (εάν είναι απαραίτητο η ξήρανση πρέπει να διεξάγεται μετά από τεμαχισμό της ύλης σε κομμάτια βάρους όχι μεγαλύτερου από 0.05 g το καθένα). Και οι δύο δοκιμαστικοί σωλήνες, πλήρως καλυμμένοι με χαλαρά πόματα, τοποθετούνται

## Προσθήκη Α.1

3102  
(συνεχ.)

έτσι σε έναν φούρνο ώστε τουλάχιστον τα τέσσερα πέμπτα του μήκους τους να είναι ορατά και διατηρούνται σε σταθερή θερμοκρασία 132 °C για 30 λεπτά. Παρατηρείται εάν εκπέμπονται νιτρόδη αέρια με τη μορφή κιτρινωπών-καφέ ατμών ορατών έναντι λευκού φόντου κατά τη διάρκεια αυτού του χρόνου.

(ii) Σε περίπτωση απουσίας τέτοιων ατμών η ύλη θεωρείται ότι είναι σταθερή.

(b) Έλεγχος πλαστικοποιημένης νιτροκυτταρίνης (παράγραφος (2) παραπάνω).

(i) 3 g πλαστικοποιημένης νιτροκυτταρίνης τοποθετούνται σε γυάλινους δοκιμαστικούς σωλήνες, όμοιους με εκείνους που αναφέρονται στο (a), που τοποθετούνται στη συνέχεια σε έναν φούρνο που διατηρείται σε σταθερή θερμοκρασία 132 °C.

(ii) Οι δοκιμαστικοί σωλήνες που περιέχουν την πλαστικοποιημένη νιτροκυτταρίνη διατηρούνται στον φούρνο για μία ώρα. Κατά τη διάρκεια αυτού του χρόνου δεν πρέπει να είναι ορατοί κιτρινωποί-καφέ νιτρόδεις αέριοι ατμοί (νιτρόδη αέρια). Παρατήρηση και εκτίμηση όπως στο (a).

(10) Θερμοκρασία ανάφλεξης (βλέπε παραγράφους (1) και (2) παραπάνω).

(i) Η θερμοκρασία ανάφλεξης προσδιορίζεται με θέρμανση 0.2 g ύλης κλεισμένης σε έναν γυάλινο δοκιμαστικό σωλήνα εμβαπτισμένου σε ένα λουτρό από κράμα Wood. Ο δοκιμαστικός σωλήνας τοποθετείται στο λουτρό όταν το τελευταίο έχει φτάσει τους 100 °C. Η θερμοκρασία του λουτρού αυξάνεται βαθμιαία κατά 5 °C ανά λεπτό.

(ii) Οι δοκιμαστικοί σωλήνες πρέπει να έχουν τις παρακάτω διαστάσεις:

μήκος 125 mm  
εσωτερική διάμετρος .....15 mm  
πάχος τοιχώματος .....0.5 mm

και πρέπει να εμβαπτίζεται σε βάθος 20 mm.

(iii) Ο έλεγχος πρέπει να επαναλαμβάνεται τρεις φορές και κάθε φορά σημειώνεται η θερμοκρασία στην οποία συμβαίνει ανάφλεξη της ύλης, δηλ., αργή ή γρήγορη καύση, ανάφλεξη ή έκρηξη.

(iv) Η χαμηλότερη θερμοκρασία που καταγράφεται στους τρεις ελέγχους είναι η θερμοκρασία ανάφλεξης.

Όροι σχετικοί με αυτενεργές ύλες της Κλάσης 4.1

*Έλεγχος για την καταχώρηση στο τμήμα E του περιθωριακού 2401*

3103

Αυτενεργές ύλες των ειδών 31° έως 50° μπορούν να γίνονται δεκτές για μεταφορά μόνο όταν ικανοποιούνται και τα σχετικά κριτήρια στα Μέρη II και III των Υποδείξεων για τη Μεταφορά των Επικίνδυνων Εμπορευμάτων: Έλεγχος και Κριτήρια' (δεύτερη έκδοση δημοσιευμένη από τον Οργανισμό Ηνωμένων Εθνών υπό την αναφορά (ST/SG/AC.10/11/Rev.1). Οι αρχές για την ταξινόμηση των αυτενεργών υλών δίνονται στο περιθωριακό 3104. Ο έλεγχος που επιλέγεται για τον προσδιορισμό της θερμοκρασίας αυτο-επιταχυνόμενης αποσύνθεσης (SADT) θα πρέπει να διεξάγεται με έναν τρόπο που να είναι αντιπροσωπευτικός, τόσο για το μέγεθος όσο και για το υλικό, του κόλου που πρόκειται να μεταφερθεί.

## Προσθήκη Α.1

*Αρχές για την ταξινόμηση των αυτενεργών υλών της Κλάσης 4.1*

- 3104 (1) Μία αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης θα πρέπει να θεωρείται ως έχουσα εκρηκτικές ιδιότητες όταν σε εργαστηριακό έλεγχο υπόκειται σε έκρηξη, σε γρήγορη ανάφλεξη ή σε εμφάνιση βίαιου αποτελέσματος όταν θερμαίνεται υπό περιορισμό.
- (2) Οι παρακάτω αρχές θα πρέπει να ισχύουν για την ταξινόμηση μίας αυτενεργής ύλης και σύνθεσης αυτενεργής ύλης που δεν αναφέρεται στο περιθωριακό 2401:
- (a) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που μπορεί να εκραγεί ή να αναφλεγεί γρήγορα, όπως είναι συσκευασμένη για μεταφορά, θα πρέπει να αποκλείεται από μεταφορά σε εκείνη τη συσκευασία υπό την Κλάση 4.1 (οριζόμενη ως αυτενεργή ύλη τύπου Α, πλαίσιο εξόδου Α του σχήματος 4).
- (b) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που έχει εκρηκτικές ιδιότητες και που, όπως είναι συσκευασμένη για μεταφορά, ούτε εκρήγνυται ούτε αναφλέγεται γρήγορα, αλλά υπόκειται σε θερμική έκρηξη σε εκείνη τη συσκευασία, θα πρέπει επίσης να φέρει ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01. Τέτοια αυτενεργή ύλη μπορεί να συσκευάζεται σε ποσότητες έως 25 kg εκτός εάν η μέγιστη ποσότητα πρέπει να περιοριστεί σε χαμηλότερο επίπεδο για την πρόληψη έκρηξης ή γρήγορης ανάφλεξης στο κόλο (οριζόμενη ως αυτενεργή ύλη τύπου Β, πλαίσιο εξόδου Β του σχήματος 4).
- (c) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που έχει εκρηκτικές ιδιότητες μπορεί να μεταφέρεται χωρίς ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01 όταν η ύλη όπως είναι συσκευασμένη (μέγιστη ποσότητα 50 kg) για μεταφορά δεν μπορεί να εκραγεί ή να αναφλεγεί γρήγορα ή να υποστεί θερμική έκρηξη (οριζόμενη ως αυτενεργή ύλη τύπου C, πλαίσιο εξόδου C του σχήματος 4).
- (d) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που σε εργαστηριακό έλεγχο:
- εκρήγνυται μερικώς, δεν αναφλέγεται γρήγορα και δεν εμφανίζει βίαιο αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ή
  - δεν εκρήγνυται καθόλου, αναφλέγεται αργά και δεν εμφανίζει βίαιο αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ή
  - δεν εκρήγνυται ή αναφλέγεται καθόλου και εμφανίζει μέτριο αποτέλεσμα όταν θερμαίνεται υπό περιορισμό
- μπορεί να γίνεται δεκτή για μεταφορά σε κόλα που περιέχουν όχι περισσότερο από 50 kg (οριζόμενη ως αυτενεργή ύλη τύπου D, πλαίσιο εξόδου D του σχήματος 4).
- (e) οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται ούτε αναφλέγεται καθόλου και εμφανίζει χαμηλό ή καθόλου αποτέλεσμα όταν θερμαίνεται υπό περιορισμό μπορεί να γίνεται δεκτή για μεταφορά σε κόλα που περιέχουν όχι περισσότερο από 400 kg/450 λίτρα (οριζόμενη ως αυτενεργή ύλη τύπου E, πλαίσιο εξόδου E του σχήματος 4).
- (f) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται στην τυρβώδη κατάσταση ούτε αναφλέγεται καθόλου και εμφανίζει μόνον χαμηλό ή καθόλου αποτέλεσμα όταν θερμαίνεται υπό περιορισμό καθώς και χαμηλή ή καθόλου εκρηκτική ισχύ μπορεί να γίνεται δεκτή για μεταφορά σε IBC (οριζόμενη ως αυτενεργή ύλη τύπου F, πλαίσιο εξόδου F του σχήματος 4).

## Προσθήκη Α.1

3104  
(συνεχ.)

- (g) Οποιαδήποτε αυτενεργή ύλη ή σύνθεση αυτενεργής ύλης που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται στην τυρβώδη κατάσταση ούτε αναφλέγεται καθόλου και δεν εμφανίζει κανένα αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ούτε οποιαδήποτε εκρηκτική ισχύ δεν θα πρέπει να θεωρείται ως αυτενεργή ύλη της Κλάσης 4.1, υπό την προϋπόθεση ότι η σύνθεση είναι θερμικά σταθερή (η θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης είναι 60 °C έως 75 °C για ένα κόλο των 50 kg) και οποιοσδήποτε συμβατός διαλύτης ικανοποιεί τις απαιτήσεις του περιθωριακού 2 400 (19) (οριζόμενη ως αυτενεργή ύλη τύπου G, πλαίσιο εξόδου G του σχήματος 4). Εάν η σύνθεση δεν είναι θερμικά σταθερή ή ένας διαλύτης που έχει σημείο βρασμού χαμηλότερο από 15 °C χρησιμοποιείται για απευαισθητοποίηση, η σύνθεση θα πρέπει να ορίζεται ως αυτενεργή τύπου F.

(3) Η παράγραφος (2) αναφέρεται μόνον σε εκείνες τις ιδιότητες της αυτενεργής ύλης που είναι αποφασιστικές για την ταξινόμηση. Ένα διάγραμμα ροής, που παρουσιάζει τις αρχές ταξινόμησης στη μορφή ενός γραφικά φτιαγμένου σχεδίου ερωτήσεων που αφορούν στις αποφασιστικές ιδιότητες μαζί με τις δυνατές απαντήσεις, δίνεται στο σχήμα 4). Αυτές οι ιδιότητες θα πρέπει να προσδιορίζονται πειραματικά σε συμφωνία με το περιθωριακό 3103.

**Σχήμα 4: Ταξινόμηση και σχέδιο διαγράμματος ροής για αυτενεργές ύλες.**

## Προσθήκη Α.1

**Όροι σχετικοί με οργανικά υπεροξειδία****Έλεγχοι για καταχώρηση στην Κλάση 5.2**

- 3105** Υγες και είδη της Κλάσης 5.2 μπορούν να γίνονται δεκτά για μεταφορά μόνο όταν ικανοποιούνται τα σχετικά κριτήρια στα Μέρη II και III των "Υποδείξεων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων: Έλεγχοι και Κριτήρια" (δημοσιευμένες από τον Οργανισμό Ηνωμένων Εθνών υπό την αναφορά ST/SG/AC.10/11/Rev.1, δεύτερη έκδοση). Ο έλεγχος που επιλέγεται για τον προσδιορισμό της θερμοκρασίας αυτο-επιταχυνόμενης αποσύνθεσης (SADT) θα πρέπει να διεξάγεται με τρόπο που να είναι αντιπροσωπευτικός, τόσο για το μέγεθος όσο και για το υλικό, του κόλου που πρόκειται να μεταφερθεί.

**Αρχές για την ταξινόμηση**

- 3106** (1) Ένα οργανικό υπεροξειδίο ή μία σύνθεση οργανικού υπεροξειδίου θα πρέπει να θεωρείται ως έχουσα εκρηκτικές ιδιότητες όταν σε εργαστηριακό έλεγχο υπόκειται σε έκρηξη, σε γρήγορη ανάφλεξη ή σε εμφάνιση βίαιου αποτελέσματος όταν θερμαίνεται υπό περιορισμό.
- (2) Οι παρακάτω αρχές θα πρέπει να ισχύουν για την ταξινόμηση ενός οργανικού υπεροξειδίου ή μίας σύνθεσης οργανικού υπεροξειδίου που δεν αναφέρεται στο περιθωριακό 2551:
- (a) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που μπορεί να εκρήγνυται ή να αναφλέγεται γρήγορα, όπως είναι συσκευασμένη για μεταφορά, θα πρέπει να αποκλείεται από μεταφορά σε εκείνη τη συσκευασία υπό την Κλάση 5.2 (οριζόμενο ως οργανικό υπεροξειδίο τύπου Α, πλαίσιο εξόδου Α του Σχήματος 5).
  - (b) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που έχει εκρηκτικές ιδιότητες και που, όπως είναι συσκευασμένη για μεταφορά, ούτε εκρήγνυται ούτε αναφλέγεται γρήγορα, αλλά υπόκειται σε θερμική έκρηξη σε εκείνη τη συσκευασία, θα πρέπει επίσης να φέρει ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01. Τέτοιο οργανικό υπεροξειδίο μπορεί να συσκευάζεται σε ποσότητες έως 25 kg εκτός εάν η μέγιστη ποσότητα πρέπει να περιοριστεί σε χαμηλότερο επίπεδο για την πρόληψη έκρηξης ή γρήγορης ανάφλεξης στο κόλο (οριζόμενο ως οργανικό υπεροξειδίο τύπου Β, πλαίσιο εξόδου Β του Σχήματος 5).
  - (c) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που έχει εκρηκτικές ιδιότητες μπορεί να μεταφέρεται χωρίς ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 01 όταν η ύλη όπως είναι συσκευασμένη (μέγιστη ποσότητα 50 kg) για μεταφορά δεν μπορεί να εκρήγνυται ή να αναφλέγεται γρήγορα ή να υπόκειται σε θερμική έκρηξη (οριζόμενο ως οργανικό υπεροξειδίο τύπου C, πλαίσιο εξόδου C του Σχήματος 5).
  - (d) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που σε εργαστηριακό έλεγχο:
    - εκρήγνυται μερικώς, δεν αναφλέγεται γρήγορα και δεν εμφανίζει αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ή
    - δεν εκρήγνυται καθόλου, αναφλέγεται αργά και δεν εμφανίζει βίαιο αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ή
    - δεν εκρήγνυται ή αναφλέγεται καθόλου και εμφανίζει μέτριο αποτέλεσμα όταν θερμαίνεται υπό περιορισμό

μπορεί να γίνεται δεκτό για μεταφορά σε κόλα που περιέχουν όχι περισσότερο από 50 kg (οριζόμενο ως οργανικό υπεροξειδίο τύπου D, πλαίσιο εξόδου D του Σχήματος 5).

## Προσθήκη Α.1

3106  
(συνεχ.)

- (e) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται ούτε αναφλέγεται καθόλου και εμφανίζει χαμηλό ή καθόλου αποτέλεσμα όταν θερμαίνεται υπό περιορισμό μπορεί να γίνεται δεκτό για μεταφορά σε κόλα που περιέχουν όχι περισσότερο από 400 kg/450 λίτρα (οριζόμενο ως οργανικό υπεροξειδίο τύπου E, πλαίσιο εξόδου E του Σχήματος 5).
- (f) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται στην τυρβώδη κατάσταση ούτε αναφλέγεται καθόλου και εμφανίζει μόνον χαμηλό ή καθόλου αποτέλεσμα όταν θερμαίνεται υπό περιορισμό καθώς και χαμηλή ή καθόλου εκρηκτική ισχύ μπορεί να γίνεται δεκτό για μεταφορά σε ενδιάμεσα δοχεία για μεταφορά χύμα (IBC) ή δεξαμενές (οριζόμενο ως οργανικό υπεροξειδίο τύπου F, πλαίσιο εξόδου F του Σχήματος 5).
- (g) Οποιοδήποτε οργανικό υπεροξειδίο ή σύνθεση οργανικού υπεροξειδίου που, σε εργαστηριακό έλεγχο, ούτε εκρήγνυται στην τυρβώδη κατάσταση ούτε αναφλέγεται καθόλου και δεν εμφανίζει αποτέλεσμα όταν θερμαίνεται υπό περιορισμό, ούτε οποιαδήποτε εκρηκτική ισχύ θα πρέπει να εξαιρείται από την Κλάση 5.2, υπό την προϋπόθεση ότι η σύνθεση είναι θερμικά σταθερή (η θερμοκρασία αυτο-επιταχυνόμενης αποσύνθεσης είναι 60 °C ή υψηλότερη για ένα κόλο των 50 kg) και για υγρές συνθέσεις, ένας διαλύτης τύπου A χρησιμοποιείται για απευαισθητοποίηση (οριζόμενο ως οργανικό υπεροξειδίο τύπου G, πλαίσιο εξόδου G του Σχήματος 5).
- (3) Η παράγραφος (2) αναφέρεται μόνον σε εκείνες τις ιδιότητες των οργανικών υπεροξειδίων που είναι αποφασιστικές για την ταξινόμηση. Ένα διάγραμμα ροής, που παρουσιάζει τις αρχές ταξινόμησης στη μορφή ενός γραφικά φτιαγμένου σχεδίου ερωτήσεων σχετικά με τις αποφασιστικές ιδιότητες μαζί με τις δυνατές απαντήσεις, δίνεται στο Σχήμα 5. Αυτές οι ιδιότητες θα πρέπει να προσδιορίζονται πειραματικά σε συμφωνία με το περιθωριακό 3105.

**Σχήμα 5: Ταξινόμηση και σχέδιο διαγράμματος ροής για οργανικά υπεροξείδια.**

## Προσθήκη Α.1

## B. Λεξικό όρων στο περιθωριακό 2101 [βλέπε επίσης περιθωριακό 3101 (3)]

**3170 ΣΗΜΕΙΩΣΗ 1:** Οι περιγραφές στο λεξικό όρων δεν προορίζονται για αντικατάσταση των διαδικασιών ελέγχου, ούτε για προσδιορισμό της ταξινόμησης κινδύνου μίας ύλης ή ενός είδους της Κλάσης 1. Η καταχώρηση στις σωστές υποδιαρέσεις και μία απόφαση για το εάν η Ομάδα συμβατότητας S είναι κατάλληλη πρέπει να βασίζεται σε έλεγχο του προϊόντος σε συμφωνία με το Εγχειρίδιο Ελέγχου που αναφέρεται στο περιθωριακό 3101 (1) ή σε αναλογία με παρόμοια προϊόντα που έχουν ήδη ελεγχθεί και καταχωρηθεί σε συμφωνία με τις διαδικασίες του Εγχειριδίου Ελέγχου.

**ΣΗΜΕΙΩΣΗ 2:** Οι τιμές που δίνονται μετά από τις ονομασίες αναφέρονται στους σχετικούς αριθμούς είδους (στήλη 1) και χαρακτηριστικούς αριθμούς (στήλη 2) του Πίνακα 1 σε συμφωνία με το περιθωριακό 2101, διαχωρισμένους με μία κάθετο (π.χ. 21°/0171).

Για τον κωδικό ταξινόμησης, βλέπε περιθωριακό 2100 (4).

Πυρομαχικά, φωτιστικά, με ή χωρίς ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 21°/0171, 30°/0254, 43°/0297.

Πυρομαχικά σχεδιασμένα να παράγουν μία μοναδική πηγή έντονου φωτός για τον φωτισμό μίας περιοχής. Ο όρος περιλαμβάνει φωτιστικά φυσίγγια, βομβίδες και βλήματα και φωτιστικές βόμβες και βόμβες αναγνώρισης στόχου.

**ΣΗΜΕΙΩΣΗ:** Τα παρακάτω είδη: φυσίγγια, σηματοδότησης, σηματοδοτικές συσκευές χειρός, σηματοδότες κινδύνου, φωτοβολίδες, αέρος, φωτοβολίδες, επιφάνειες δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται ξεχωριστά.

Πυρομαχικά, εμπρηστικά, υγρά ή σε μορφή ζελατίνας, με ρήγμα, διαρροή γόμωσης ή προωθητική γόμωση 32°/0247.

Πυρομαχικά που περιέχουν υγρή ή ζελατινώδη εμπρηστική ύλη. Εκτός απ' όταν η εμπρηστική ύλη είναι ένα εκρηκτικό καθ' αυτή, επίσης περιέχει ένα ή περισσότερα από τα παρακάτω: μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης.

Πυρομαχικά, εμπρηστικά, λευκού φωσφόρου με ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 22°/0243, 31°/0244.

Πυρομαχικά που περιέχουν λευκό φωσφόρο ως εμπρηστική ύλη. Επίσης περιέχει ένα ή περισσότερα από τα παρακάτω: μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης.

Πυρομαχικά, εμπρηστικά με ή χωρίς ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 21°/0009, 30°/0010, 43°/0300.

Πυρομαχικά που περιέχουν εμπρηστική σύνθεση. Εκτός απ' όταν η σύνθεση είναι ένα εκρηκτικό καθ' αυτή, επίσης περιέχει ένα ή περισσότερα από τα παρακάτω: μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης.

Πυρομαχικά, γυμνασίων 30°/0488, 43°/0362

Πυρομαχικά χωρίς κύρια εκρηκτική γόμωση, που περιέχει διαρρήκτη ή διαρροή γόμωσης. Κανονικά επίσης περιέχει έναν πυροσωλήνα και μία προωθητική γόμωση.

**ΣΗΜΕΙΩΣΗ:** Βομβίδες, γυμνασίων δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτές αναφέρονται ξεχωριστά.

## Προσθήκη Α.1

3170 Πυρομαχικά, δοκιμών 43°/0363  
(συνεχ.)

Πυρομαχικά που περιέχουν πυροτεχνικές ύλες, που χρησιμοποιούνται για τον έλεγχο της απόδοσης ή της ισχύος νέων πυρομαχικών, εξαρτημάτων ή συνδεσμολογιών όπλων.

Πυρομαχικά, καπνού, λευκού φωσφόρου, με ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 22°/0245, 31°/0246

Πυρομαχικά που περιέχουν λευκό φωσφόρο ως καπνογόνο ύλη. Επίσης περιέχει ένα ή περισσότερα από τα παρακάτω: μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης. Ο όρος περιλαμβάνει βομβίδες, καπνού.

Πυρομαχικά, καπνού με ή χωρίς ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 21°/0015, 30°/0016, 43°/0303

Πυρομαχικά που περιέχουν μία καπνογόνο ύλη τέτοια όπως μέγμα χλωροσουλφονικού οξέος ή τετραχλωριούχο τιτάνιο, ή μία καπνογόνο πυροτεχνική σύνθεση βασισμένη στο εξαχλωροαιθάνιο ή στον κόκκινο φωσφόρο. Εκτός απ' όταν η ύλη είναι ένα εκρηκτικό καθ' αυτή, τα πυρομαχικά επίσης περιέχουν ένα ή περισσότερα από τα παρακάτω: μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης. Ο όρος περιλαμβάνει βομβίδες, καπνού.

**ΣΗΜΕΙΩΣΗ:** Σηματοδότες, καπνού δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτοί αναφέρονται ξεχωριστά.

Πυρομαχικά, δακρυγόνα, με ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 21°/0018, 30°/0019, 43°/0301

Πυρομαχικά που περιέχουν μία δακρυγόνο ύλη. Επίσης περιέχει ένα ή περισσότερα από τα παρακάτω: μία πυροτεχνική ύλη, μία προωθητική γόμωση με εγχυτή και πυροδοτική γόμωση, έναν πυροσωλήνα με διαρρήκτη ή διαρροή γόμωσης.

Είδη, εκρηκτικά, εξαιρετικά μη-ευαίσθητα (Είδη EEI) 50°/0486

Είδη που περιέχουν μόνον εξαιρετικά μη-ευαίσθητες εκρηκτικές ύλες (EIDS) που παρουσιάζουν αμελητέα πιθανότητα τυχαίας πυροδότησης ή εξάπλωσης υπό κανονικές συνθήκες μεταφοράς και που έχουν περάσει τη Σειρά Ελέγχου 7.

Είδη, πυροφορικά 25°/0380

Είδη που περιέχουν μία πυροφορική ύλη (ικανά για αυτόματη ανάφλεξη όταν εκτίθενται στον αέρα) και μία εκρηκτική ύλη ή συστατικό. Ο όρος δεν περιλαμβάνει είδη που περιέχουν λευκό φωσφόρο.

Είδη, πυροτεχνικά, για τεχνικούς σκοπούς 9°/0428, 21°/0429, 30°/0430, 43°/0431, 47°/0432

Είδη που περιέχουν πυροτεχνικές ύλες και χρησιμοποιούνται για τεχνικούς σκοπούς τέτοια όπως παραγωγή θερμότητας, παραγωγή αερίου, θεατρικά εφέ, κ.λπ.

**ΣΗΜΕΙΩΣΗ:** Τα παρακάτω είδη: όλα τα πυρομαχικά, φωσίγγια, σηματοδότησης, κοπτικά καλωδίων, εκρηκτικά, πυροτεχνήματα, φωτοβολίδες, αέρος, φωτοβολίδες, επιφάνειας, συσκευές απελευθέρωσης, εκρηκτικές, καθηλωτικά, εκρηκτικά, σηματοδοτικές συσκευές, χειρός, σηματοδότες, κινδύνου, σηματοδότες, σιδηροδρομικών γραμμών, εκρηκτικά, σηματοδότες, καπνού δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται ξεχωριστά.

## Προσθήκη Α.1

**3170** Μαύρη πυρίτιδα (μπαρούτι), πεπεσμένη ή Μαύρη πυρίτιδα (μπαρούτι), σε σβόλους 4°/0028  
(συνεχ.)

Υλη που συνίσταται από σβολιασμένη μορφή μαύρης πυρίτιδας.

Μαύρη πυρίτιδα (μπαρούτι), κοκκώδης ή ως άλευρο 4°/0027

Υλη που συνίσταται από ένα ιδιαίτερο μείγμα ξυλάνθρακα ή άλλου άνθρακα και είτε νιτρικό κάλιο είτε νιτρικό νάτριο, με ή χωρίς θείο.

Βόμβες με άφλεκτο υγρό, με εκρηκτική γόμωση 10°/0399, 23°/0400

Είδη που πέφτουν από αεροσκάφος, συνιστάμενα από μία δεξαμενή γεμάτη με άφλεκτο υγρό και εκρηκτική γόμωση.

Βόμβες φωτιστικές 5°/0038

Εκρηκτικά είδη που πέφτουν από αεροσκάφος για την παραγωγή σύντομου, έντονου φωτισμού για φωτογράφιση. Περιέχουν μία γόμωση εκρηκτικού χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Βόμβες φωτιστικές 7°/0037

Εκρηκτικά είδη που πέφτουν από αεροσκάφος για την παραγωγή σύντομου, έντονου φωτισμού για φωτογράφιση. Περιέχουν μία γόμωση εκρηκτικού με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Βόμβες φωτιστικές 21°/0039, 30°/0299

Εκρηκτικά είδη που πέφτουν από αεροσκάφος για την παραγωγή σύντομου, εντόνου φωτισμού για φωτογράφιση. Περιέχουν μία φωτιστική σύνθεση.

Βόμβες, με εκρηκτική γόμωση 5°/0034, 17°/0035

Εκρηκτικά είδη που πέφτουν από αεροσκάφος, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Βόμβες με εκρηκτική γόμωση 7°/0033, 19°/0291

Εκρηκτικά είδη που πέφτουν από αεροσκάφος, με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Ενισχυτές, με πυροκροτητή 1°/0225, 13°/0268

Είδη συνιστάμενα από μία γόμωση εκρηκτικού με μέσον πυροδότησης. Χρησιμοποιούνται για την αύξηση της πυροδοτικής ισχύος των πυροκροτητών ή εκρηκτικών καλωδίων.

Ενισχυτές, χωρίς πυροκροτητή 5°/0042, 17°/0283

Είδη συνιστάμενα από μία γόμωση εκρηκτικού χωρίς μέσον πυροδότησης. Χρησιμοποιούνται για αύξηση της πυροδοτικής ισχύος των πυροκροτητών ή εκρηκτικών καλωδίων.

## Προσθήκη Α.1

3170 Διαρρήκτες, εκρηκτικοί 5°/0043  
(συνεχ.)

Είδη συνιστάμενα από μία μικρή γόμωση εκρηκτικού που χρησιμοποιούνται για το άνοιγμα βλημάτων ή άλλων πυρομαχικών για τη διασπορά του περιεχομένου τους.

Φυσίγγια, ανάφλεξης 9°/0049, 30°/0050

Είδη συνιστάμενα από ένα περίβλημα, έναν εγχυτή και πυρίτιδα ανάφλεξης, όλα συνδεδεμένα σε ένα κομμάτι έτοιμο για πυροδότηση.

Φυσίγγια για όπλα, άσφαιρα 3°/0326, 15°/0413, 27°/0327, 37°/0338, 47°/0014

Πυρομαχικά συνιστάμενα από μία κλειστή θήκη φυσιγγίων με ένα κεντρικό ή περιφερειακό εγχυτή πυρός και μία γόμωση άκαπνης ή μαύρης πυρίτιδας αλλά όχι βλήμα. Παράγει ισχυρό θόρυβο και χρησιμοποιείται για εκπαίδευση, χαιρετισμό, ως προωθητική γόμωση, πιστόλι εκκίνησης κ.λπ. Ο όρος περιλαμβάνει πυρομαχικά, άσφαιρα.

Φυσίγγια για όπλα, αδρανούς βλήματος 15°/0328, 27°/0417, 37°/0339, 47°/0012

Πυρομαχικά συνιστάμενα από ένα βλήμα χωρίς εκρηκτική γόμωση αλλά με μία προωθητική γόμωση με ή χωρίς εγχυτή. Τα είδη μπορούν να περιλαμβάνουν έναν ανιχνευτή, υπό την προϋπόθεση ότι ο κυρίαρχος κίνδυνος είναι εκείνος της προωθητικής γόμωσης.

Φυσίγγια για όπλα, με εκρηκτική γόμωση 6°/0006, 18°/0321, 40°/0412

Πυρομαχικά συνιστάμενα από ένα βλήμα με μία εκρηκτική γόμωση χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά και μία προωθητική γόμωση με ή χωρίς εγχυτή. Ο όρος περιλαμβάνει μόνιμα (συνδεδεμένα) πυρομαχικά, ημι-μόνιμα (μερικώς συνδεδεμένα) πυρομαχικά και ξεχωριστά γομωτικά πυρομαχικά όταν τα συστατικά συσχευάζονται μαζί.

Φυσίγγια για όπλα, με εκρηκτική γόμωση 7°/0005, 19°/0007, 41°/0348

Πυρομαχικά συνιστάμενα από ένα βλήμα με μία εκρηκτική γόμωση με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά και μία προωθητική γόμωση με ή χωρίς εγχυτή. Ο όρος περιλαμβάνει μόνιμα (συνδεδεμένα) πυρομαχικά, ημι-μόνιμα (μερικώς συνδεδεμένα) πυρομαχικά και ξεχωριστά γομωτικά πυρομαχικά όταν τα συστατικά συσχευάζονται μαζί.

Φυσίγγια, πετρελαιοπηγών 27°/0277, 37°/0278

Είδη συνιστάμενα από ένα λεπτό περίβλημα από φύλλο φάιμπερ, μέταλλο ή άλλο υλικό που περιέχει μόνον προωθητική ισχύ που εκτοξεύει ένα σκληρό βλήμα για τη διάτρηση ενός περιβλήματος μίας πετρελαιοπηγής.

**ΣΗΜΕΙΩΣΗ:** Γομώσεις, μορφοποιημένες, εμπορικές δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτές αναφέρονται ξεχωριστά.

Φυσίγγια, συσκευών ισχύος 15°/0381, 27°/0275, 37°/0276, 47°/0323

Είδη σχεδιασμένα για την εκτέλεση μηχανικών ενεργειών. Συνίστανται από ένα περίβλημα με μία γόμωση αναφλεκτικού εκρηκτικού και ενός μέσου ανάφλεξης. Τα αερίδια προϊόντα της ανάφλεξης παράγουν διάγκωση, ευθεία ή περιστροφική κίνηση ή ενεργοποιούν διαφράγματα, βαλβίδες ή διακόπτες ή εκτοξεύουν συσκευές δεσμίματος ή παράγοντες απόσβεσης.

## Προσθήκη Α.1

**3170** Φυσίγγια, σηματοδότησης 30°/0054, 43°/0312, 47°/0405  
(συνεχ.)

Είδη σχεδιασμένα να πυροδοτούν έγχρωμες φωτοβολίδες ή άλλους σηματοδοτές από πιστόλια σηματοδότησης κ.λπ.

Φυσίγγια μικρών όπλων 27°/0417, 37°/0339, 47°/0012

Πυρομαχικά συνιστάμενα από μία θήκη φυσιγγίων εξοπλισμένη με έναν κεντρικό ή περιφερειακό εγγυτή πυρός και που περιέχουν και προωθητική γόμωση και στερεό βλήμα. Είναι σχεδιασμένα να πυροδοτούνται σε όπλα διαμέτρηματος όχι μεγαλύτερου από 19.1 mm. Φυσίγγια κινηγητικών όπλων οποιουδήποτε διαμετρήματος περιλαμβάνονται σε αυτήν την περιγραφή.

**ΣΗΜΕΙΩΣΗ:** Φυσίγγια μικρών όπλων, άσφαιρα, δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται ξεχωριστά. Μερικά φυσίγγια στρατιωτικών μικρών όπλων δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται στα φυσίγγια για όπλα, αδρανούς βλήματος.

Φυσίγγια, για όπλα, άσφαιρα, 27°/0338, 47°/0014

Πυρομαχικά συνιστάμενα από μία κλειστή θήκη φυσιγγίων με έναν κεντρικό ή περιφερειακό εγγυτή πυρός και μία γόμωση από άκαπνη ή μαύρη πυρίτιδα. Οι θήκες φυσιγγίων δεν περιέχουν βλήματα. Τα φυσίγγια είναι σχεδιασμένα να πυροδοτούνται από όπλα με διάμετρο το πολύ 19.1 mm και χρησιμεύουν στην παραγωγή δυνατού θορύβου και χρησιμοποιούνται για εκπαίδευση, χαιρετισμό, ως προωθητική γόμωση, σε πιστόλια εκκίνησης κ.λπ.

Θήκες, φυσιγγίων, κενές, με εγγυτή 37°/0379, 47°/0055

Είδη συνιστάμενα από μία θήκη φυσιγγίων κατασκευασμένη από μέταλλο, πλαστικό ή άλλο μη-άφλεκτο υλικό, στα οποία το μόνο εκρηκτικό συστατικό είναι ο εγγυτής.

Θήκες, εύφλεκτες, κενές, χωρίς εγγυτή 27°/0447, 37°/0446

Είδη συνιστάμενα από μία θήκη φυσιγγίων κατασκευασμένη μερικώς ή ολικώς από νιτροκυτταρίνη.

Γομώσεις, εκρηκτικές, με πλαστικούς συνδέσμους 5°/0457, 17°/0458, 39°/0459, 47°/0460

Είδη συνιστάμενα από μία γόμωση εκρηκτικού, με πλαστικούς συνδέσμους, κατασκευασμένη σε ειδική μορφή χωρίς περιβλήμα και χωρίς μέσον πυροδότησης. Είναι σχεδιασμένα ως εξαρτήματα πυρομαχικών τέτοιων όπως οι κεφαλές.

Γομώσεις, κατεδαφίσεων 5°/0048

Είδη που περιέχουν μία γόμωση ενός εκρηκτικού σε περιβλήμα από φύλλο φάιμπερ, πλαστικό, μέταλλο ή άλλο υλικό. Τα είδη είναι χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

**ΣΗΜΕΙΩΣΗ:** Τα παρακάτω είδη: βόμβες, νάρκες, βλήματα δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται ξεχωριστά.

Γομώσεις, βυθού 5°/0056

Είδη συνιστάμενα από μία γόμωση εκρηκτικού που περιέχεται σε βαρέλι ή βλήμα χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα να εκρήγνυνται κάτω από νερό.

## Προσθήκη Α.1

**3170** Γομώσεις, εκρηκτικές, εμπορικές, χωρίς πυροκροτητή 5°/0442, 17°/0443, 39°/0444, 47°/0445  
(συνεχ.)

Είδη συνιστάμενα από μία γόμωση εκρηκτικού χωρίς μέσον πυροδότησης, που χρησιμοποιούνται για εκρηκτική συγκόλληση, ένωση, φορμάρισμα και άλλες μεταλλουργικές κατεργασίες.

Γομώσεις, προωθητικές, για κανόνια 3°/0279, 15°/0414, 27°/0242

Γομώσεις προωθητικού σε οποιαδήποτε φυσική μορφή για ξεχωριστής γόμωσης πυρομαχικά για κανόνια.

Γομώσεις, προωθητικά 3°/0271, 15°/0415, 27°/0272, 37°/0491

Είδη συνιστάμενα από μία γόμωση ή μία προωθητική γόμωση σε οποιαδήποτε φυσική μορφή, με ή χωρίς περιβλήμα, ως εξάρτημα κινητήρων πυραύλου ή για μείωση της οπισθέλκουσας των βλημάτων.

Γομώσεις, μορφοποιημένες, εμπορικές, χωρίς πυροκροτητή 5°/0059, 17°/0439, 39°/0440, 47°/0441

Είδη συνιστάμενα από ένα περιβλήμα που περιέχει μία γόμωση εκρηκτικού με κούλωμα επενδεδυμένη με άκαμπτο υλικό, χωρίς μέσον πυροδότησης. Είναι σχεδιασμένα να παράγουν ένα ισχυρό, διεισδυτικό αποτέλεσμα αερίωθσης.

Γομώσεις, μορφοποιημένες, εύκαμπτες, ευθύγραμμες, 5°/0288, 39°/0237

Είδη συνιστάμενα από ένα έναν πυρήνα εκρηκτικού σε σχήμα V επενδεδυμένο με εύκαμπτη θήκη.

Γομώσεις, συμπληρωματικές, εκρηκτικές 5°/0060

Είδη συνιστάμενα από έναν μικρό μετακινούμενο ενισχυτή τοποθετημένο στην κοιλότητα ενός βλήματος μεταξύ του πυροσωλήνα και της εκρηκτικής γόμωσης.

Εξαρτήματα, γραμμών εκρηκτικών, ε.α.ο. 1°/0461, 13°/0382, 35°/0383, 47°/0384

Είδη που περιέχουν ένα εκρηκτικό σχεδιασμένο να μεταφέρει έκρηξη ή ανάφλεξη μέσα σε μία γραμμή εκρηκτικών.

Συσσκευές, ενεργοποιημένες με νερό με ρήγμα, διαρροή γόμωσης ή προωθητικής γόμωσης 25°/0248, 34°/0249

Είδη των οποίων η λειτουργία εξαρτάται από την φυσικο-χημική αντίδραση του περιεχομένου τους με το νερό.

Καλώδιο, εκρηκτικό, εύκαμπτο 5°/0065, 39°/0289

Είδος συνιστάμενο από έναν πυρήνα εκρηκτικού κλεισμένου σε ύφασμα και μία πλαστική ή άλλη επικάλυψη. Η επικάλυψη δεν είναι απαραίτητη εάν το ύφασμα είναι αδιαπέραστο.

Καλώδιο (πυροσωλήνα) εκρηκτικό, με μεταλλική επένδυση 5°/0290, 17°/0102

Είδος συνιστάμενο από έναν πυρήνα εκρηκτικού επενδεδυμένο με έναν μαλακό μεταλλικό σωλήνα με ή χωρίς προστατευτικό κάλυμμα.

## Προσθήκη Α.1

**3170** Καλώδιο (πυροσωλήνα) εκρηκτικό, ήπιου αποτελέσματος, με μεταλλική επένδυση 39°/0104  
(συνεχ.)

Είδος συνιστάμενο από έναν πυρήνα εκρηκτικού επικαλυμμένου με έναν μαλακό μεταλλικό σωλήνα με ή χωρίς προστατευτικό κάλυμμα. Η ποσότητα εκρηκτικής ύλης είναι τόσο μικρή ώστε μόνον ένα ήπιο αποτέλεσμα να εκδηλώνεται έξω από το καλώδιο.

Καλώδιο, αναφλεκτήρα 43°/0066

Είδος συνιστάμενο από υφασμάτινο νήμα που καλύπτεται με μαύρη πυρίτιδα ή άλλη γρήγορης καύσης πυροτεχνική σύνθεση και από ένα εύκαμπτο προστατευτικό κάλυμμα, ή συνίσταται από έναν πυρήνα μαύρης πυρίτιδας περιβαλλόμενο από ένα εύκαμπτο πλεγμένο ύφασμα. Καίγεται προοδευτικά κατά το μήκος του με εξωτερική φλόγα και χρησιμοποιείται για τη μετάδοση ανάφλεξης από μία συσκευή σε μία γόμωση ή έναν εγχυτή.

Κοπτικές συσκευές, καλωδίων, εκρηκτικές 47°/0070

Είδη συνιστάμενα από μία αιχμηρή συσκευή που κινείται από μία μικρή γόμωση εύφλεκτου εκρηκτικού σε ένα αμόνι.

Συνδεσμολογίες πυροκροτητών, μη-ηλεκτρικοί, για ανατινάξεις 1°/0360, 35°/0361

Μη-ηλεκτρικοί πυροκροτητές συνδεδεμένοι με και ενεργοποιημένοι με τέτοιο μέσον όπως πυροσωλήνα ασφάλειας, σωλήνα κρούσης, σωλήνα ανάφλεξης ή εκρηκτικό καλώδιο. Μπορεί να είναι ακαριαίου σχεδιασμού ή να έχουν ενσωματωμένα στοιχεία καθυστέρησης. Εκρηκτικά ρελαί που έχουν ενσωματωμένο εκρηκτικό καλώδιο περιλαμβάνονται.

Πυροκροτητές, ηλεκτρικοί, για ανατινάξεις 1°/0030, 35°/0255, 47°/0456

Είδη ειδικά σχεδιασμένα για την πυροδότηση εκρηκτικών για ανατινάξεις. Αυτοί οι πυροκροτητές μπορεί να κατασκευάζονται για να εκρήγνυται ακαριαία ή μπορεί να περιέχουν ένα στοιχείο καθυστέρησης. Ηλεκτρικοί πυροκροτητές ενεργοποιούνται με ηλεκτρικό ρεύμα.

Πυροκροτητές για πυρομαχικά 1°/0073, 13°/0364, 35°/0365, 47°/0366

Είδη συνιστάμενα από έναν μικρό μεταλλικό ή πλαστικό σωλήνα που περιέχουν εκρηκτικά τέτοια όπως αζίδιο του μολύβδου, PETN ή συνδυασμούς εκρηκτικών. Είναι σχεδιασμένα για να ξεκινάνε μία γραμμική εκρήξεις.

Πυροκροτητές, μη-ηλεκτρικοί, για ανατινάξεις 1°/0029, 35°/0267, 47°/0455

Είδη ειδικά σχεδιασμένα για την πυροδότηση εκρηκτικών ανατινάξεων. Αυτοί οι πυροκροτητές μπορεί να είναι κατασκευασμένοι για να εκρήγνυται ακαριαία ή μπορεί να περιέχει ένα στοιχείο καθυστέρησης. Οι μη-ηλεκτρικοί πυροκροτητές ενεργοποιούνται με τέτοια μέσα όπως σωλήνας κρούσης, σωλήνας ανάφλεξης, πυροσωλήνας ασφάλειας, άλλη αναφλεκτική συσκευή ή εύκαμπτο εκρηκτικό καλώδιο. Εκρηκτικά ρελαί χωρίς εκρηκτικό καλώδιο περιλαμβάνονται.

Εκρηκτικά, για ανατινάξεις, τύπου Α 4°/0081

Υλεις συνιστάμενες από υγρά οργανικά νιτρικά άλατα τέτοια όπως νιτρογλυκερίνη ή ένα μείγμα τέτοιων συστατικών με ένα ή περισσότερα από τα παρακάτω: νιτροκυτταρίνη, νιτρικό αμμώνιο ή άλλα ανόργανα νιτρικά άλατα, αρωματικά νιτρο-παράγωγα, ή καύσιμα υλικά, τέτοια όπως αλεσμένο ξύλο και αλουμίνιο σε σκόνη. Μπορεί να περιέχουν αδρανή συστατικά τέτοια όπως διατομίτη και πρόσθετα τέτοια όπως χρωματικούς παράγοντες και σταθεροποιητές. Τέτοια εκρηκτικά θα πρέπει να είναι σε κονιώδη, ζελατινώδη ή ελαστική μορφή. Ο όρος περιλαμβάνει δυναμίτη, ζελατίνη, δυναμίτες για ανατινάξεις και ζελατίνης.

## Προσθήκη Α.1

3170 Εκρηκτικά, για ανατινάξεις, τύπου Β 4°/0082, 48°/0331

(συνεχ.)

Υλεις συνιστάμενες από

- (a) ένα μείγμα νιτρικού αμμωνίου ή άλλων ανόργανων νιτρικών αλάτων με ένα εκρηκτικό τέτοιο όπως τρινιτροτολουόλιο, με ή χωρίς άλλες ύλες τέτοιες όπως αλεσμένο ξύλο και αλουμίνιο σε σκόνη, ή
- (b) ένα μείγμα νιτρικού αμμωνίου ή άλλων ανόργανων νιτρικών αλάτων με άλλες καύσιμες ύλες που δεν είναι εκρηκτικά συστατικά. Και στις δύο περιπτώσεις μπορούν να περιέχουν αδρανή συστατικά τέτοια όπως πυριτικό άλευρο και πρόσθετα τέτοια όπως χρωστικούς παράγοντες και σταθεροποιητές. Τέτοια εκρηκτικά δεν πρέπει να περιέχουν νιτρογλυκερίνη, παρόμοια υγρά οργανικά νιτρικά ή χλωρικά άλατα.

Εκρηκτικά, για ανατινάξεις, τύπου C 4°/0083

Υλεις συνιστάμενες από ένα μείγμα ή χλωρικού καλίου ή χλωρικού νατρίου ή υπερχλωρικού καλίου, νατρίου ή αμμωνίου με οργανικά νιτρο-παράγωγα ή καύσιμα υλικά τέτοια όπως αλεσμένο ξύλο ή αλουμίνιο σε σκόνη ή έναν υδρογονάνθρακα. Μπορούν να περιέχουν αδρανή συστατικά τέτοια όπως πυριτικό άλευρο και πρόσθετα τέτοια όπως χρωστικούς παράγοντες και σταθεροποιητές. Τέτοια εκρηκτικά δεν πρέπει να περιέχουν νιτρογλυκερίνη ή παρόμοια υγρά οργανικά νιτρικά άλατα.

Εκρηκτικά, για ανατινάξεις, τύπου D 4°/0084

Υλεις συνιστάμενες από ένα μείγμα οργανικών νιτρωμένων ενώσεων και καύσιμων υλικών τέτοιων όπως υδρογονάνθρακες και αλουμίνιο σε σκόνη. Μπορούν να περιέχουν αδρανή συστατικά τέτοια όπως πυριτικό άλευρο και πρόσθετα τέτοια όπως χρωστικοί παράγοντες και σταθεροποιητές. Τέτοια εκρηκτικά δεν πρέπει να περιέχουν νιτρογλυκερίνη, παρόμοια υγρά οργανικά νιτρικά άλατα, χλωρικά άλατα και νιτρικό αμμώνιο. Ο όρος γενικά περιλαμβάνει πλαστικά εκρηκτικά.

Εκρηκτικά, για ανατινάξεις, τύπου E 4°/0241, 48°/0332

Υλεις συνιστάμενες από νερό ως ουσιώδες συστατικό και υψηλές αναλογίες νιτρικού αμμωνίου ή άλλων οξειδωτικών, μερικά ή όλα από τα οποία είναι σε διάλυμα. Τα άλλα συστατικά μπορούν να περιλαμβάνουν νιτρο-παράγωγα τέτοια όπως τρινιτροτολουόλιο, υδρογονάνθρακες ή αλουμίνιο σε σκόνη. Μπορούν να περιέχουν αδρανή συστατικά τέτοια όπως πυριτικό άλευρο και πρόσθετα τέτοια όπως χρωστικοί παράγοντες και σταθεροποιητές. Ο όρος περιλαμβάνει εκρηκτικά, σε γαλάκτωμα, εκρηκτικά, χυλώδη και εκρηκτικά, υδατικές ζελατίνες.

Πυροτεχνήματα 9°/0333, 21°/0334, 30°/0335, 43°/0336, 47°/0337

Πυροτεχνικά είδη σχεδιασμένα για ψυχαγωγία.

Φωτοβολίδες, αέρος 9°/0420, 21°/0421, 30°/0093, 43°/0403, 47°/0404

Είδη που περιέχουν πυροτεχνικές ύλες που είναι σχεδιασμένες για να πέφτουν από ένα αεροσκάφος για φωτισμό, αναγνώριση, σηματοδότηση ή προειδοποίηση.

Φωτοβολίδες, επιφάνειας 9°/0418, 21°/0419, 30°/0092

Είδη που περιέχουν πυροτεχνικές ύλες που είναι σχεδιασμένες για χρήση στην επιφάνεια για φωτισμό, αναγνώριση, σηματοδότηση ή προειδοποίηση.

## Προσθήκη Α.1

3170 Πυρίτιδα ανάφλεξης 8°/0094, 29°/0305

(συνεχ.)

Πυροτεχνική ύλη που, όταν πυροδοτείται, παράγει ένα έντονο φως.

Θραυστικές συσκευές, εκρηκτικές, χωρίς πυροκροτητή, για πετρελαιοπηγές, 5°/0099

Είδη συνιστάμενα από μία γόμωση εκρηκτικού περιεχόμενη σε ένα περίβλημα χωρίς μέσον πυροδότησης. Χρησιμοποιούνται για θραύση πετρωμάτων γύρω από τον άξονα ενός τρυπανιού για διευκόλυνση της ροής του αργού πετρελαίου από το πέτρωμα.

Πυροσωλήνας, αναφλεκτήρα, σωληνοειδής, με μεταλλική επένδυση 43°/0103

Είδος συνιστάμενο από ένα μεταλλικό σωλήνα με έναν πυρήνα αναφλέξιμου εκρηκτικού.

Πυροσωλήνας, ακαριαίος, όγλ-εκρηκτικός (quickmatch) 30°/0101

Είδος συνιστάμενο από βαμβακερά νήματα διαποτισμένα με λεπτή μαύρη πυρίτιδα. Καίγεται με εξωτερική φλόγα και χρησιμοποιείται σε γραμμές ανάφλεξης για πυροτεχνήματα, κ.λπ.

Πυροσωλήνας, ασφάλειας 47°/0105

Είδος συνιστάμενο από έναν πυρήνα λεπτά αλεσμένης μαύρης πυρίτιδας περιβεβλημένος από ένα εύκαμπτο πλεγμένο ύφασμα με ένα ή περισσότερα προστατευτικά εξωτερικά καλύμματα. Όταν πυροδοτείται, καίγεται σε προκαθορισμένο βαθμό χωρίς οποιοδήποτε εξωτερικό εκρηκτικό αποτέλεσμα.

Πυροσωλήνες, εκρηκτικοί 1°/0106, 13°/0107, 35°/0257, 47°/0367

Είδη με εκρηκτικά συστατικά σχεδιασμένα να προκαλούν έκρηξη σε πυρομαχικά. Έχουν ενσωματωμένα μηχανικά, ηλεκτρικά, χημικά ή υδροστατικά εξαρτήματα για την αρχή της έκρηξης. Γενικά έχουν ενσωματωμένα προστατευτικά χαρακτηριστικά.

Πυροσωλήνες, εκρηκτικοί, με προστατευτικά χαρακτηριστικά 5°/0408, 17°/0409, 39°/0410

Είδη με εκρηκτικά συστατικά σχεδιασμένα να προκαλούν έκρηξη σε πυρομαχικά. Έχουν ενσωματωμένα μηχανικά, ηλεκτρικά, χημικά ή υδροστατικά εξαρτήματα για την αρχή της έκρηξης. Οι εκρηκτικοί πυροσωλήνες πρέπει να έχουν ενσωματωμένα δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Πυροσωλήνες, πυροδότησης 30°/0316, 43°/0317, 47°/0368

Είδη με κύρια εκρηκτικά συστατικά σχεδιασμένα να προκαλούν ανάφλεξη σε πυρομαχικά. Έχουν ενσωματωμένα μηχανικά, ηλεκτρικά, χημικά ή υδροστατικά εξαρτήματα για την αρχή της ανάφλεξης. Γενικά έχουν ενσωματωμένα προστατευτικά χαρακτηριστικά.

Βομβίδες, χειρός ή όπλου, με εκρηκτική γόμωση 5°/0284, 17°/0285

Είδη που είναι σχεδιασμένα για να ρίχνονται με το χέρι ή να εκτοξεύονται από ένα όπλο. Είναι χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Βομβίδες, χειρός ή όπλου, με εκρηκτική γόμωση 7°/0292, 19°/0293

Είδη που είναι σχεδιασμένα για να ρίχνονται με το χέρι ή να εκτοξεύονται από ένα όπλο. Είναι με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

## Προσθήκη Α.1

**3170** Βομβίδες, γυμνασίων, χειρός ή όπλου 21°/0372, 30°/0318, 43°/0452, 47°/0110  
(συνεχ.)

Είδη χωρίς κύρια εκρηκτική γόμωση που είναι σχεδιασμένα για να ρίχνονται με το χέρι ή να εκτοξεύονται από ένα όπλο. Περιέχουν την συσκευή γόμωσης και μπορούν να περιέχουν μία γόμωση εντοπισμού.

Εξοτονάλη 4°/0393

Υψηλή συνιστάμενη από ένα εσωτερικό μείγμα κυκλοτρεμεθυλενο-τρινιτραμίνης (RDX), τρινιτροτολουολίου (TNT) και αλουμινίου.

Εξολίτης (εξοτόλη), ξηρός ή νωπός με λιγότερο από 15 % νερό, κατά βάρος 4°/0118

Υψηλή συνιστάμενη από ένα εσωτερικό μείγμα κυκλοτρεμεθυλενο-τρινιτραμίνης (RDX) και τρινιτροτολουολίου (TNT). Ο όρος περιλαμβάνει "Σύνθεση Β".

Αναφλεκτήρες 9°/0121, 21°/0314, 30°/0315, 43°/0325, 47°/0454

Είδη που περιέχουν μία ή περισσότερες εκρηκτικές ύλες σχεδιασμένα να προκαλούν ανάφλεξη σε μία γραμμική εκρηκτικών. Μπορούν να ενεργοποιηθούν χημικά, ηλεκτρικά ή μηχανικά.

**ΣΗΜΕΙΩΣΗ:** Τα παρακάτω είδη: καλώδιο, αναφλεκτήρα πυροσωλήνας, αναφλεκτήρα πυροσωλήνας, ακαριαίος, όγι-εκρηκτικός, πυροσωλήνες, πυροδότησης, αναπτίρες πυροσωλήνων, εγχυτές, τύπου καυολλίου, εγχυτές, σωληνοειδείς δεν περιλαμβάνονται σε αυτόν τον ορισμό. Αυτά αναφέρονται ξεχωριστά.

Αεριοθούμενα διατρητικά όπλα, γομωμένα, πετρελαιοπηγών, χωρίς πυροκροτητή 5°/0124, 39°/0494

Είδη συνιστάμενα από ένα χαλύβδινο σωλήνα ή μία μεταλλική ταινία, μέσα στην οποία εισάγονται μορφοποιημένες γομώσεις συνδεδεμένες με εκρηκτικό καλώδιο, χωρίς μέσον πυροδότησης.

Αναπτίρες πυροσωλήνων 47°/0131

Είδη διαφόρων σχεδιασμών που ενεργοποιούνται με τριβή, κρούση ή ηλεκτρισμό και που χρησιμοποιούνται για την πυροδότηση καυσίμων ασφάλειας.

Νάρκες, με εκρηκτική γόμωση 5°/0137, 17°/0138

Είδη συνιστάμενα κανονικά από μεταλλικά ή σύνθετα δοχεία γεμισμένα με ένα εκρηκτικό, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για να τίθενται σε λειτουργία με το πέρασμα πλοίων, οχημάτων ή ανθρώπων. Ο όρος περιλαμβάνει "τορπίλες Bangalore".

Νάρκες, με εκρηκτική γόμωση 7°/0136, 19°/0294

Είδη συνιστάμενα κανονικά από μεταλλικά ή σύνθετα δοχεία γεμισμένα με ένα εκρηκτικό, με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για να τίθενται σε λειτουργία με το πέρασμα πλοίων, οχημάτων ή ανθρώπων. Ο όρος περιλαμβάνει "τορπίλες Bangalore".

Οκτολίτης (Οκτόλη), ξηρός ή νωπός με λιγότερο από 15 % νερό, κατά βάρος 4°/0266

Υψηλή συνιστάμενη από ένα εσωτερικό μείγμα κυκλοτετραμεθυλενο-τετρανιτραμίνης (HMX) και τρινιτροτολουολίου (TNT).

## Προσθήκη Α.1

3170 Οκτιονάλη 4°/0496  
(συνεχ.)

Υγλη συνιστάμενη από ένα εσωτερικό μείγμα κυκλοτετραμεθυλενοτετρανιτραμίνης (ΗΜΧ), τρινιτροτολουολίου (ΤΝΤ) και αλουμινίου.

Πεντολίτης, ξηρός ή νωπός με λιγότερο από 15 % νερό, κατά βάρος 4°/0151

Υγλη συνιστάμενη από ένα εσωτερικό μείγμα τετρανιτρικού πενταερυθρίτη (ΡΕΤΝ) και τρινιτροτολουολίου (ΤΝΤ).

Συσσωματωμένη πυρίτιδα (πάστα πυρίτιδας), νωπή με όχι λιγότερο από 17 % αλκοόλη, κατά βάρος.  
Συσσωματωμένη πυρίτιδα (πάστα πυρίτιδας), νωπή με όχι λιγότερο από 25 % νερό, κατά βάρος 2°/0433, 26°/0159

Υγλη συνιστάμενη από νιτροκυτταρίνη διαποτισμένη με όχι περισσότερο από 60 % νιτρογλυκερίνη ή άλλα υγρά οργανικά νιτρικά άλατα ή μείγμα αυτών.

Πυρίτιδα άκαυνη 2°/0160, 26°/0161

Υγλη βασισμένη στην νιτροκυτταρίνη που χρησιμοποιείται ως προωθητικό. Ο όρος περιλαμβάνει προωθητικά με μία μόνη βάση (νιτροκυτταρίνη (NC) μόνη), με διπλή βάση (τέτοια όπως NC και νιτρογλυκερίνη/(NG)) και με τριπλή βάση (τέτοια όπως NC/NG/νιτρογουανιδίνη).

**ΣΗΜΕΙΩΣΗ:** *Άχρηστη, πεπεσμένη ή γομωμένη σε σάκους άκαυνη πυρίτιδα αναφέρεται στις γομώσεις προωθητικές.*

Εγχυτές τύπου καρυλλίου 1°/0377, 35°/0378, 47°/0044

Είδη συνιστάμενα από ένα μεταλλικό ή πλαστικό καρυλλίο που περιέχουν μία μικρή ποσότητα κύριου εκρηκτικού μείγματος που πυροδοτείται άμεσα με χτύπημα. Χρησιμοποιούνται ως πυροδοτικά στοιχεία σε μικρά φυσίγγια όπλων και σε εγχυτές κρούσης για προωθητικές γομώσεις.

Εγχυτές σωληνοειδείς 30°/0319, 43°/0320, 47°/0376

Είδη συνιστάμενα από έναν εγχυτή για ανάφλεξη και μία βοηθητική γόμωση αναφλέξιμου εκρηκτικού τέτοιου όπως μαύρης πυρίτιδας που χρησιμοποιείται για την πυροδότηση της προωθητικής γόμωσης σε μία θήκη φυσιγγίων για κανόνια κ.λπ.

Βλήματα, αδρανή με ανιχνευτή 30°/0424, 43°/0425, 47°/0345

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο, τουφέκι ή άλλο μικρό όπλο.

Βλήματα με διαρρήκτη ή διαρροή γόμωσης 17°/0346, 39°/0347

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο. Είναι χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Χρησιμοποιούνται για τη διάλυση χρωμάτων για ένδειξη ή άλλων αδρανών υλικών.

Βλήματα, με διαρρήκτη ή διαρροή γόμωσης 19°/0426, 41°/0427

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο. Είναι με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Χρησιμοποιούνται για τη διάλυση χρωμάτων για ένδειξη ή άλλων αδρανών υλικών.

## Προσθήκη Α.1

**3170** Βλήματα, με διαρρήκτη ή διαρροή γόμωσης 21°/0434, 43°/0435

(συνεχ.)

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο, τουφέκι ή άλλο μικρό όπλο. Χρησιμοποιούνται για τη διάλυση χρωμάτων για ένδειξη ή άλλων αδρανών υλικών.

Βλήματα, με εκρηκτική γόμωση 5°/0168, 17°/0169, 39°/0344

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο. Είναι χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Βλήματα, με εκρηκτική γόμωση 7°/0167, 19°/0324

Είδη τέτοια όπως ένας κάλυκας ή μία σφαίρα, που εκτοξεύονται από ένα κανόνι ή άλλο όπλο. Είναι με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Προωθητικό, υγρό 2°/0497, 26°/0495

Υψηλ συνιστάμενη από ένα αναφλέξιμο υγρό εκρηκτικό, που χρησιμοποιείται για προώθηση.

Προωθητικό, στερεό 2°/0498, 26°/0499

Υψηλ συνιστάμενη από ένα αναφλέξιμο στερεό εκρηκτικό, που χρησιμοποιείται για προώθηση.

Συσκευές απελευθέρωσης, εκρηκτικές 47°/0173

Είδη συνιστάμενα από μία μικρή γόμωση εκρηκτικού με μέσον πυροδότησης και ράβδους ή κρίκους. Αποσπών τις ράβδους ή τους κρίκους για την απελευθέρωση της συσκευής γρήγορα.

Στελέχη, εκρηκτικά 47°/0174

Είδη συνιστάμενα από μία μικρή γόμωση εκρηκτικού μέσα σ' ένα μεταλλικό στέλεχος.

Κινητήρες πυραύλων 3°/0280, 15°/0281, 27°/0186

Είδη συνιστάμενα από μία γόμωση εκρηκτικού, γενικά ένα στερεό προωθητικό, που περιέχονται σ' έναν κύλινδρο εξοπλισμένο με ένα ή περισσότερα ακροφύσια. Είναι σχεδιασμένα να προωθούν έναν πύραυλο ή ένα κατευθυνόμενο βλήμα.

Κινητήρες πυραύλων, υγρών καυσίμων 23°/0395, 32°/0396

Είδη συνιστάμενα από ένα υγρό καύσιμο μέσα σε έναν κύλινδρο εξοπλισμένο με ένα ή περισσότερα ακροφύσια. Είναι σχεδιασμένα να προωθούν έναν πύραυλο ή ένα κατευθυνόμενο βλήμα.

Κινητήρες πυραύλων με υπεργολικά υγρά με ή χωρίς διαρροή γόμωσης 25°/0322, 34°/0250

Είδη συνιστάμενα από ένα υπεργολικό καύσιμο που περιέχεται σε έναν κύλινδρο εξοπλισμένο με ένα ή περισσότερα ακροφύσια. Είναι σχεδιασμένα να προωθούν έναν πύραυλο ή ένα κατευθυνόμενο βλήμα.

Πύραυλοι, σχηματισμού γραμμής 21°/0238, 30°/0240, 43°/0453

Είδη συνιστάμενα από έναν κινητήρα πυραύλων που είναι σχεδιασμένος να σχηματίζει μία γραμμή.

## Προσθήκη Α.1

**3170** Πύραυλοι, υγρών καυσίμων, με εκρηκτική γόμωση 10°/0397, 23°/0398

(συνεχ.)

Είδη συνιστάμενα από ένα υγρό καύσιμο μέσα σε έναν κύλινδρο εξοπλισμένο με ένα ή περισσότερα ακροφύσια και εξοπλισμένο με μία κεφαλή. Ο όρος περιλαμβάνει κατευθυνόμενα βλήματα.

Πύραυλοι με εκρηκτική γόμωση 6°/0181, 18°/0182

Είδη συνιστάμενα από έναν κινητήρα πυραύλων και μία κεφαλή χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Ο όρος περιλαμβάνει κατευθυνόμενα βλήματα.

Πύραυλοι, με εκρηκτική γόμωση 7°/0180, 19°/0295

Είδη συνιστάμενα από ένα κινητήρα πυραύλων και μία κεφαλή με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Ο όρος περιλαμβάνει κατευθυνόμενα βλήματα.

Πύραυλοι, με διαρροή γόμωσης 15°/0436, 27°/0437, 37°/0438

Είδη συνιστάμενα από έναν κινητήρα πυραύλων και μία γόμωση για την διαρροή του ωφέλιμου φορτίου από μία κεφαλή πυραύλου. Ο όρος περιλαμβάνει κατευθυνόμενα βλήματα.

Πύραυλοι, με αδρανή κεφαλή 27°/0183

Είδη συνιστάμενα από ένα κινητήρα πυραύλων και μία αδρανή κεφαλή. Ο όρος περιλαμβάνει κατευθυνόμενα βλήματα.

Συσκευές σηματοδότησης, χειρός 43°/0191, 47°/0373

Φορητά είδη που περιέχουν πυροτεχνικές ύλες που παράγουν οπτικά σήματα ή προειδοποιητικά σήματα. Ο όρος περιλαμβάνει μικρής επιφάνειας φωτοβολίδες τέτοιες όπως φωτοβολίδες λεωφόρων ή σιδηροδρομικών γραμμών και μικρές φωτοβολίδες κινδύνου.

Σηματοδότες, κινδύνου, πλοίων 9°/0194, 30°/0195

Είδη που περιέχουν πυροτεχνικές ύλες σχεδιασμένα να παράγουν σήματα με ήχο, φλόγα ή καπνό ή οποιονδήποτε συνδυασμό αυτών.

Σηματοδότες, σιδηροδρομικών γραμμών, εκρηκτικοί 9°/0192, 30°/0492, 43°/0493, 47°/0193

Είδη που περιέχουν μία πυροτεχνική ύλη που εκρήγνυται με δυνατό κρότο όταν το είδος συνθλίβεται. Είναι σχεδιασμένα να τοποθετούνται πάνω σε σιδηροτροχιά.

Σηματοδότες, καπνού, 9°/0196, 19°/0313, 30°/0487, 43°/0197

Είδη που περιέχουν πυροτεχνικές ύλες που εκπέμπουν καπνό. Επιπλέον μπορούν να περιέχουν συσκευές για εκπομπή ακουστικών σημάτων.

Συσκευές βολιδοσκόπησης, εκρηκτικές 5°/0374, 17°/0375

Είδη συνιστάμενα από μία γόμωση εκρηκτικού, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Ρίχνονται από πλοία και λειτουργούν όταν φτάνουν ένα προκαθορισμένο βάθος ή τον πυθμένα της θάλασσας.

## Προσθήκη Α.1

3170 Συσκευές βολιδοσκοπίησης, εκρηκτικές 7°/0296, 19°/0204

(συνεχ.)

Είδη συνιστάμενα από μία γόμωση εκρηκτικού με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Ρίχνονται από πλοία και λειτουργούν όταν φτάνουν ένα προκαθορισμένο βάθος ή τον πυθμένα της θάλασσας.

Υλες, εκρηκτικές, πολύ μη-ευαίσθητες (ΥΛ, EVI 48°/0482)

Υλες που παρουσιάζουν έναν κίνδυνο έκρηξης μάζας αλλά που είναι τόσο μη-ευαίσθητες που υπάρχει πολύ μικρή πιθανότητα πυροδότησης ή μετάβασης από την καύση στην έκρηξη υπό κανονικές συνθήκες μεταφοράς και που έχουν περάσει τη Σειρά Ελέγχου 5.

Τορπίλες, υγρών καυσίμων, με αδρανή κεφαλή 32°/0450

Είδη συνιστάμενα από ένα υγρό εκρηκτικό σύστημα για την προώθηση της τορπίλης στο νερό, με μία αδρανή κεφαλή.

Τορπίλες, υγρών καυσίμων, με ή χωρίς εκρηκτική γόμωση 10°/0449

Είδη συνιστάμενα από είτε ένα υγρό εκρηκτικό σύστημα για την προώθηση της τορπίλης στο νερό, με ή χωρίς κεφαλή, είτε ένα υγρό μη-εκρηκτικό σύστημα για την προώθηση της τορπίλης στο νερό, με κεφαλή.

Τορπίλες, με εκρηκτική γόμωση 5°/0451

Είδη συνιστάμενα από ένα μη-εκρηκτικό σύστημα για την προώθηση της τορπίλης στο νερό, και μία κεφαλή χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Τορπίλες, με εκρηκτική γόμωση 6°/0329

Είδη συνιστάμενα από ένα εκρηκτικό σύστημα για την προώθηση της τορπίλης στο νερό, και μία κεφαλή χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Τορπίλες, με εκρηκτική γόμωση 7°/0330

Είδη συνιστάμενα από ένα εκρηκτικό ή μη-εκρηκτικό σύστημα για την προώθηση της τορπίλης μέσα στο νερό και μία κεφαλή με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά.

Ανιχνευτές για πυρομαχικά 30°/0212, 43°/0306

Σφραγισμένα είδη που περιέχουν πυροτεχνικές ύλες, σχεδιασμένα να αποκαλύπτουν την τροχιά ενός βλήματος.

Τριτονόλη 4°/0390

Ύλη συνιστάμενη από τρινιτρολουόλιο (TNT) αναμεμιγμένο με αλουμίνιο.

## Προσθήκη Α.1

**3170** Κεφαλές πυραύλων, με διαρρήκτη ή διαρροή γόμωσης 39°/0370  
(συνεχ.)

Είδη συνιστάμενα από ένα αδρανές ωφέλιμο φορτίο και μία μικρή γόμωση εκρηκτικού ή αναφλέξιμου εκρηκτικού, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για τον εξοπλισμό ενός κινητήρα πυραύλων για τη διάλυση αδρανών υλικών. Ο όρος περιλαμβάνει κεφαλές για κατευθυνόμενα βλήματα.

Κεφαλές πυραύλων, με διαρρήκτη ή διαρροή γόμωσης 41°/0371

Είδη συνιστάμενα από ένα αδρανές ωφέλιμο φορτίο και μία μικρή γόμωση εκρηκτικού ή αναφλέξιμου εκρηκτικού, με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για τον εξοπλισμό ενός κινητήρα πυραύλων για τη διάλυση αδρανών υλικών. Ο όρος περιλαμβάνει κεφαλές για κατευθυνόμενα βλήματα.

Κεφαλές πυραύλων, με εκρηκτική γόμωση 5°/0286, 17°/0287

Είδη συνιστάμενα από ένα εκρηκτικό, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για τον εξοπλισμό ενός πυραύλου. Ο όρος περιλαμβάνει κεφαλές για κατευθυνόμενα βλήματα.

Κεφαλές πυραύλων, με εκρηκτική γόμωση 7°/0369

Είδη συνιστάμενα από ένα εκρηκτικό, με μέσον πυροδότησης που δεν περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για τον εξοπλισμό ενός πυραύλου. Ο όρος περιλαμβάνει κεφαλές για κατευθυνόμενα βλήματα.

Κεφαλές τορπιλών, με εκρηκτική γόμωση 5°/0221

Είδη συνιστάμενα από ένα εκρηκτικό, χωρίς μέσον πυροδότησης ή με μέσον πυροδότησης που περιέχει δύο ή περισσότερα αποτελεσματικά προστατευτικά χαρακτηριστικά. Είναι σχεδιασμένα για τον εξοπλισμό μίας τορπίλης.

## ΠΡΟΣΘΗΚΗ Α.2

Α. Διατάξεις σχετικές με τη φύση δοχείων από κράμα αλουμινίου για ορισμένα αέρια της Κλάσης 2

## I. Ποιότητα του υλικού

3200 (1) Τα υλικά των δοχείων από κράμα αλουμινίου που θα γίνονται δεκτά για τα αέρια που αναφέρονται στο περιθωριακό 2203 (2) (b) θα πρέπει να ικανοποιούν τις παρακάτω απαιτήσεις:

	A	B	C	D
Δύναμη εφελκυσμού, Rm, σε MPa (=N/mm <sup>2</sup> )	49 έως 186	196 έως 372	196 έως 372	343 έως 490
Όριο εμφανούς ελαστικότητας, Re, σε MPa (=N/mm <sup>2</sup> ) μόνιμη παραμόρφωση l = 0.2 %	10 έως 167	59 έως 314	137 έως 334	206 έως 412
Μόνιμη επιμήκυνση στη ρήξη (l = 5d) επί τοις εκατό	12 έως 40	12 έως 30	12 έως 30	11 έως 16
Δοκιμή λυγίσματος (διάμετρος τόννου d = nXe, όπου e είναι το πάχος του τεμαχίου δοκιμής)	n=5(Rm≤98) n=6(Rm>98)	n=6(Rm≤325) n=7(Rm>325)	n=6(Rm≤325) n=6(Rm>325)	n=7(Rm≤392) n=8(Rm>392)
Αριθμός Σειράς του Συνδέσμου Αλουμινίου <sup>1/</sup>	1 000	5 000	6 000	2 000

Οι πραγματικές ιδιότητες θα εξαρτώνται από τη σύνθεση του συγκεκριμένου κράματος και από την τελική επεξεργασία του δοχείου, αλλά οποιοδήποτε κράμα κι αν χρησιμοποιείται το πάχος του δοχείου θα πρέπει να υπολογίζεται από τους παρακάτω τύπους:

$$e = \frac{P_{MPa} \times D}{\frac{2 \times Re}{1,30} + P_{MPa}}$$

ή

$$e = \frac{P_{bar} \times D}{\frac{20 \times Re}{1,30} + P_{bar}}$$

όπου e = ελάχιστο πάχος τοιχώματος του δοχείου, σε mm,

<sup>1/</sup> Βλέπε "Πρότυπα και δεδομένα για το Αλουμίνιο", Πέμπτη έκδοση, Ιανουάριος 1976, δημοσιευμένα από τον Σύνδεσμο Αλουμινίου, 750 Third Avenue, New York.

## Προσθήκη Α.2

3200  
(συνεχ.)

- $R_{MPa}$  = πίεση ελέγχου, σε MPa ( $P_{bar}$  = πίεση ελέγχου, σε bar),  
 $D$  = ονομαστική εξωτερική διάμετρος του δοχείου, σε mm και  
 $Re$  = εγγυημένη ελάχιστη 0.2 % αντοχή σε εφελκυσμό, σε MPa ( $=N/mm^2$ ).

Επιπλέον, η τιμή της ελάχιστης εγγυημένης αντοχής σε εφελκυσμό ( $Re$ ) στον τύπο δεν υπάρχει περίπτωση να είναι μεγαλύτερη από 0.85 φορές την εγγυημένη ελάχιστη δύναμη εφελκυσμού ( $Rm$ ), ανεξαρτήτως του τύπου του κράματος που χρησιμοποιείται.

**ΣΗΜΕΙΩΣΗ 1:** Τα παραπάνω χαρακτηριστικά βασίζονται σε προηγούμενη εμπειρία με τα παρακάτω υλικά που χρησιμοποιούνται για δοχεία:

- Στήλη Α: Αλουμίνιο, όχι σε κράμα, 99.5 % καθαρό,  
 Στήλη Β: Κράματα αλουμινίου και μαγνησίου,  
 Στήλη C: Κράματα αλουμινίου, πυριτίου και μαγνησίου, τέτοια όπως ISO/R209-A1-Si-Mg (Σύνδεσμος Αλουμινίου 6351),  
 Στήλη D: Κράματα αλουμινίου, χαλκού και μαγνησίου.

**ΣΗΜΕΙΩΣΗ 2:** Η μόνιμη επιμήκυνση στη ρήξη ( $l = 5d$ ) μετράται με δοκιμαστικά τεμάχια κυκλικής τομής στα οποία το μήκος περιτυπώματος  $l$  είναι ίσο με πέντε φορές τη διάμετρο  $d$ , εάν χρησιμοποιούνται δοκιμαστικά τεμάχια ορθογώνιας τομής το μήκος περιτυπώματος πρέπει να υπολογίζεται από τον τύπο:

$$l = 5.65 \sqrt{F_0}$$

όπου  $F_0$  είναι το αρχικό εμβαδό της εγκάρσιας τομής του δοκιμαστικού τεμαχίου.

- ΣΗΜΕΙΩΣΗ 3:** (a) Η δοκιμή λυγίσματος (βλέπε διάγραμμα) θα πρέπει να διεξάγεται σε δείγματα που λαμβάνονται με κοπή σε δύο ίσα μέρη πλάτους  $3e$ , αλλά σε καμία περίπτωση μικρότερου από 25 mm, ενός κυλίνδρου δακτυλιοειδούς τομής. Τα δείγματα θα πρέπει να επεξεργάζονται μηχανικά αλλού εκτός από τις ακμές.
- (b) Η δοκιμή λυγίσματος θα πρέπει να διεξάγεται μεταξύ μίας ατράκτου τόννου διαμέτρου ( $d$ ) και δύο κυκλικών υποστηριγμάτων που απέχουν απόσταση ( $d + 3e$ ). Κατά τη διάρκεια της δοκιμής οι εσωτερικές όψεις θα πρέπει να απέχουν απόσταση όχι μεγαλύτερη από τη διάμετρο της ατράκτου του τόννου.
- (c) Το δείγμα δεν θα πρέπει να εμφανίζει ρωγμές όταν έχει λυγιστεί προς τα μέσα γύρω από την άτρακτο του τόννου μέχρι οι εσωτερικές όψεις να απέχουν απόσταση όχι μεγαλύτερη από τη διάμετρο της ατράκτου.
- (d) Ο λόγος ( $n$ ) μεταξύ της διαμέτρου της ατράκτου και του πάχους του δείγματος θα πρέπει να συμφωνεί με τις τιμές που δίνονται στον πίνακα.

## Προσθήκη Α.2

3200  
(συνεχ.)

d + 3 e περίπου

## Διάγραμμα της δοκιμής λυγίσματος

(2) Μία χαμηλότερη τιμή της ελάχιστης επιμήκυνσης είναι αποδεκτή υπό τον όρο ότι μία πρόσθετη δοκιμή εγκεκριμένη από την αρμόδια αρχή της χώρας στην οποία τα δοχεία κατασκευάζονται αποδεικνύει ότι εξασφαλίζεται ασφάλεια μεταφοράς στον ίδιο βαθμό όπως στην περίπτωση των δοχείων που κατασκευάζονται να συμφωνούν με τα χαρακτηριστικά που δίνονται στον πίνακα της παραγράφου (1).

(3) Το πάχος τοιχωμάτων των δοχείων στο λεπτότερο σημείο θα πρέπει να είναι το παρακάτω:

όπου διάμετρος του δοχείου είναι μικρότερη από 50 mm: όχι μικρότερο από 1.5 mm,

όπου η διάμετρος του δοχείου είναι από 50 έως 150 mm: όχι μικρότερο από 2 mm και

όπου η διάμετρος του δοχείου είναι μεγαλύτερη από 150 mm: όχι μικρότερο από 3 mm.

(4) Τα άκρα των δοχείων θα πρέπει να έχουν ημικυκλική, ελλειπτική ή "ημισελήνοειδή" τομή. Θα πρέπει να παρέχουν τον ίδιο βαθμό ασφάλειας όπως το σώμα του δοχείου.

## II. Πρόσθετες επίσημες δοκιμές για κράματα αλουμινίου

3201 (1) Επιπλέον των δοκιμών που απαιτούνται από τα περιθωριακά 2215, 2216 και 2217, είναι απαραίτητη η δοκιμή για πιθανή μεσοκρυσταλλικής διάβρωσης του εσωτερικού τοιχώματος του δοχείου όπου γίνεται χρήση ενός κράματος αλουμινίου που περιέχει χαλκό, ή όπου γίνεται χρήση ενός κράματος αλουμινίου που περιέχει μαγνήσιο και μαγγάνιο και η περιεκτικότητά σε μαγνήσιο είναι μεγαλύτερη από 3.5 % ή η περιεκτικότητά σε μαγγάνιο χαμηλότερη από 0.5 %.

(2) Στην περίπτωση ενός κράματος αλουμινίου/χαλκού η δοκιμή θα πρέπει να διεξάγεται από τον κατασκευαστή κατά το χρόνο της έγκρισης ενός νέου κράματος από την αρμόδια αρχή. Θα πρέπει μετά να επαναλαμβάνεται, κατά την παραγωγή, για κάθε ποσότητα του κράματος.

## Προσθήκη Α.2

3201 (3) Στην περίπτωση ενός κράματος αλουμινίου/μαγνησίου η δοκιμή θα πρέπει να διεξάγεται από τον κατασκευαστή κατά τον χρόνο της έγκριση ενός νέου κράματος και της παραγωγικής διαδικασίας από την αρμόδια αρχή. Η δοκιμή θα πρέπει να επαναλαμβάνεται όποτε γίνεται αλλαγή στη σύνθεση του κράματος ή στην παραγωγική διαδικασία.

(4) (a) Προετοιμασία των κραμάτων αλουμινίου/χαλκού

Πριν το κράμα αλουμινίου/χαλκού υποβληθεί στη δοκιμή διάβρωσης, τα δείγματα θα πρέπει να καθαρίζονται από τα λάδια με έναν κατάλληλο διαλύτη, και να στεγνώνονται.

(b) Προετοιμασία των κραμάτων αλουμινίου/μαγνησίου

Πριν το κράμα αλουμινίου/μαγνησίου υποβληθεί στη δοκιμή διάβρωσης, τα δείγματα θα πρέπει να θερμαίνονται για επτά ημέρες στους 100 °C. Θα πρέπει μετά να καθαρίζονται από τα λάδια με έναν κατάλληλο διαλύτη, και να στεγνώνονται.

(c) Εκτέλεση της δοκιμής

Η εσωτερική πλευρά ενός δείγματος επιφάνειας 1 000 mm<sup>2</sup> (33.3 x 30 mm) από το υλικό που περιέχει χαλκό θα πρέπει να κατεργάζεται σε θερμοκρασία περιβάλλοντος, για 24 ώρες, με 1 000 ml ενός υδατικού διαλύματος που περιέχει 3 % NaCl και 0.5 % HCl.

(d) Εξέταση

Αφού πλυθεί και στεγνώσει, ένα τμήμα του δείγματος 20 mm μακρύ θα πρέπει να εξετάζεται μικρογραφικά σε μεγέθυνση 100 έως 500 X, κατά προτίμηση μετά από ηλεκτρολυτική στίλβωση.

Το βάθος της προσβολής δεν θα πρέπει να προχωράει πέρα από το δεύτερο στρώμα κόκκων από την επιφάνεια που υποβάλλεται στη δοκιμή διάβρωσης. Κατ' αρχήν, εάν προσβληθεί όλο το πρώτο στρώμα κόκκων, μόνον μέρος της δεύτερης σειράς θα πρέπει να προσβληθεί.

Στην περίπτωση τομών, θα πρέπει να γίνεται εξέταση σε ορθές γωνίες ως προς στην επιφάνεια.

Όπου μετά από ηλεκτρολυτική στίλβωση βρίσκεται απαραίτητη η παράσταση των ορίων των κόκκων ιδιαίτερα ορατά για περαιτέρω εξέταση, αυτό θα πρέπει να γίνεται με μία μέθοδο αποδεκτή από την αρμόδια αρχή.

### III. Προστασία της εσωτερικής επιφάνειας

3202 Η εσωτερική επιφάνεια των δοχείων από κράμα αλουμινίου θα πρέπει να παρέχεται με μία κατάλληλη αντιδιαβρωτική επικάλυψη εάν οι αρμόδιοι σταθμοί δοκιμής το θεωρούν απαραίτητο.

3203-  
3249

## Προσθήκη Α.2

**Β. Απαιτήσεις σχετικές με τα υλικά και την κατασκευή των δοχείων που προορίζονται για τη μεταφορά βαθιά κατενυγμένων υγροποιημένων αερίων της Κλάσης 2**

- 3250** (1) Τα δοχεία θα πρέπει να κατασκευάζονται από χάλυβα, αλουμίνιο, κράμα αλουμινίου, χαλκό, ή κράμα χαλκού, π.χ. ορείχαλκο. Πάντως, δοχεία, κατασκευασμένα από χαλκό ή κράμα χαλκού θα πρέπει να γίνονται δεκτά μόνον για αέρια που δεν περιέχουν ακετυλένιο.
- (2) Μόνον υλικά κατάλληλα στην χαμηλότερη θερμοκρασία εργασίας των δοχείων και των εξαρτημάτων τους και εξοπλισμών τους, μπορούν να χρησιμοποιούνται.
- 3251** Τα παρακάτω υλικά θα πρέπει να γίνονται δεκτά για την κατασκευή των δοχείων:
- (a) χάλυβες που δεν υπόκεινται σε εύκολη θραύση στην χαμηλότερη θερμοκρασία εργασίας (βλέπε περιθωριακό 3265).
1. Λεπτοτριμμένοι αμιγείς χάλυβες, έως θερμοκρασία - 60 °C,
  2. Νικελιούχοι χάλυβες (με περιεκτικότητα σε νικέλιο 0.5 έως 9 %) έως θερμοκρασία - 196 °C, ανάλογα με την περιεκτικότητα σε νικέλιο.
  3. ωστενιτικοί χρωμο-νικελιούχοι χάλυβες, έως θερμοκρασία - 270 °C.
- (b) αλουμίνιο όχι περισσότερο από 99.5 % καθαρό, ή κράματα αλουμινίου (βλέπε περιθωριακό 3266),
- (c) ανοιγμένος χαλκός όχι λιγότερο από 99.9 % καθαρός, ή κράματα χαλκού που έχουν περιεκτικότητα σε χαλκό μεγαλύτερη από 56 % (βλέπε περιθωριακό 3267).
- 3252** (1) Τα δοχεία θα πρέπει να είναι είτε χωρίς ραφές είτε οξυγονοκόλλημένα.
- (2) Τα δοχεία του περιθωριακού 2207 κατασκευασμένα από ωστενιτικό χάλυβα, από χαλκό ή από κράμα χαλκού μπορούν εναλλακτικά να είναι σκληρής συγκόλλησης.
- 3253** Τα εξαρτήματα και οι εξοπλισμοί μπορούν είτε να είναι βιδωμένοι στα δοχεία, είτε να είναι προσαρτημένοι σ' αυτά ως εξής:
- (a) δοχεία κατασκευασμένα από χάλυβα, αλουμίνιο ή κράμα αλουμινίου: με οξυγονοκόλληση,
- (b) δοχεία κατασκευασμένα από ωστενιτικό χάλυβα, από χαλκό ή από κράμα χαλκού: με οξυγονοκόλληση ή σκληρή συγκόλληση.
- 3254** Η κατασκευή των δοχείων και ο τρόπος προσάρτησής τους στο όχημα, στο πλαίσιο ή μέσα στο πλαίσιο του εμπορευματοκιβωτίου θα πρέπει να είναι τέτοια ώστε να αποκλείει με βεβαιότητα οποιαδήποτε μείωση στη θερμοκρασία των εξαρτημάτων στήριξης που πιθανώς να τα καθιστούσε εύθραυστα. Τα δεσμάτα των δοχείων θα πρέπει να είναι από μόνα τους έτσι σχεδιασμένα ώστε ακόμα κι όταν το δοχείο είναι στην χαμηλότερη θερμοκρασία εργασίας του να έχουν ακόμα τις απαραίτητες μηχανικές ιδιότητες.

## Προσθήκη Α.2

3255-  
3264

## 1. Υλικά, δοχεία

## (a) Χαλύβδινα δοχεία

3265 Τα υλικά που χρησιμοποιούνται για την κατασκευή των δοχείων και τα κορδόνια συγκόλλησης, θα πρέπει στις χαμηλότερες θερμοκρασίες εργασίας τους να ικανοποιούν τουλάχιστον τις παρακάτω απαιτήσεις ως προς τη δύναμη κρούσης.

Οι δοκιμές μπορούν να διεξάγονται με δοκιμαστικά τεμάχια που έχουν χαραγή είτε σε σχήμα U είτε σε σχήμα V.

Υλικό	Δύναμη κρούσης <sup>a/</sup> φύλλων μετάλλων και κορδονιών συγκόλλησης στις χαμηλότερες θερμοκρασίες εργασίας	
	J/cm <sup>2b/</sup>	J/cm <sup>2c/</sup>
Αμιγής καθησυχασμένος χάλυβας	34.3	27.4
Φεριτικό κράμα χάλυβα Ni < 5 %	34.3	21.6
Φεριτικό κράμα χάλυβα 5 % < Ni < 9 %	44.1	34.3
Ωστενιτικός Cr Ni χάλυβας	39.2	31.4

<sup>a/</sup> Δυνάμεις κρούσης προσδιορισμένες με διαφορετικά δοκιμαστικά τεμάχια δεν είναι αμοιβαία συγκρίσιμα. Βλέπε επίσης περιθωριακό 3275 έως 3277.

<sup>b/</sup> Οι τιμές σχετίζονται με δοκιμαστικά τεμάχια με χαραγή σε σχήμα U όπως φαίνεται παρακάτω.

<sup>c/</sup> Οι τιμές σχετίζονται με δοκιμαστικά τεμάχια με χαραγή σε σχήμα V σύμφωνα με την ISO R 148.

## Προσθήκη Α.2

3265  
(συνεχ.)

Στην περίπτωση ωστενιτικών χαλύβων, μόνον το κορδόνι συγκόλλησης είναι ανάγκη να υποβάλλεται σε δοκιμή της δύναμης κρούσης.

Για θερμοκρασίες εργασίας κάτω από - 196 °C, η δοκιμή δύναμης κρούσης δεν διεξάγεται στη χαμηλότερη θερμοκρασία εργασίας, αλλά στους - 196 °C.

(b) Δοχεία κατασκευασμένα από αλουμίνιο ή κράμα αλουμινίου

3266 Οι ραφές των δοχείων θα πρέπει σε θερμοκρασία περιβάλλοντος να ικανοποιούν τις παρακάτω απαιτήσεις ως προς τον συντελεστή λυγίσματος:

Πάχος φύλλου e σε mm	Συντελεστής λυγίσματος k <sup>#</sup> για τη ραφή	
	Βάση σε ζώνη συμπίεσης	Βάση σε ζώνη τάσης
≤ 12	≥ 15	≥ 12
> 12 έως 20	≥ 12	≥ 10
> 20	≥ 9	≥ 8

<sup>#</sup> Βλέπε περιθωριακό 3285.

(c) Δοχεία κατασκευασμένα από χαλκό ή κράμα χαλκού

3267 Δεν είναι απαραίτητη η διεξαγωγή δοκιμών για να προσδιοριστεί εάν η δύναμη κρούσης είναι αρκετή.

3268-  
3274

## Προσθήκη Α.2

## 2. Δοκιμές

## (α) Δοκιμές δύναμης κρούσης

3275 Η δύναμη κρούσης που εμφανίζεται στο περιθωριακό 3265 σχετίζεται με δοκιμαστικά τεμάχια επιφάνειας 10 x 10 mm και που έχουν χαραγή σε σχήμα U ή V.

**ΣΗΜΕΙΩΣΗ 1:** Όσον αφορά στο σχήμα των δοκιμαστικών τεμαχίων, βλέπε περιθωριακό 3265 (πίνακας, σημειώσεις *b/* και *c/*).

**ΣΗΜΕΙΩΣΗ 2:** Για φύλλα πάχους μικρότερου από 10 mm αλλά όχι μικρότερου από 5 mm, θα πρέπει να χρησιμοποιούνται δοκιμαστικά τεμάχια που έχουν τομή 10 x e mm, όπου "e" αναπαριστά το πάχος του φύλλου. Τέτοιες δοκιμές δύναμης κρούσης δίνουν γενικά υψηλότερες τιμές από αυτές που δίνουν τέτοιες δοκιμές σε κοινά δοκιμαστικά τεμάχια.

**ΣΗΜΕΙΩΣΗ 3:** Καμία δοκιμή δύναμης κρούσης δεν θα πρέπει να διεξάγεται σε φύλλα πάχους μικρότερου από 5 mm, ή πάνω στις ραφές τους.

3276 (1) Για δοκιμή φύλλων μετάλλου η δύναμη κρούσης θα πρέπει να προσδιορίζεται σε τρία δοκιμαστικά τεμάχια. Τα δοκιμαστικά τεμάχια θα πρέπει να μετακινούνται σε ορθές γωνίες ως προς την κατεύθυνση κύλισης στην περίπτωση δοκιμαστικών τεμαχίων με χαραγή σε σχήμα U και στην κατεύθυνση κύλισης στην περίπτωση δοκιμαστικών τεμαχίων με χαραγή σε σχήμα V.

(2) Για δοκιμή των ραφών τα δοκιμαστικά τεμάχια θα πρέπει να λαμβάνονται ως εξής:

$e \leq 10 \text{ mm}$

- τρία δοκιμαστικά τεμάχια από το κέντρο της συγκόλλησης,
- τρία δοκιμαστικά τεμάχια από τη ζώνη αλλοίωσης λόγω της συγκόλλησης (η χαραγή θα πρέπει να είναι πλήρως έξω από την τετηγμένη περιοχή αλλά όσο το δυνατόν πιο κοντά της).

Κέντρο της  
συγκόλλησης

Ζώνη της  
αλλοίωσης

δηλ. έξι δοκιμαστικά τεμάχια συνολικά.

## Προσθήκη Α.2

3276 Τα δοκιμαστικά τεμάχια θα πρέπει να είναι έτσι καταργασμένα ώστε να έχουν το μέγιστο δυνατό πάχος.  
(συνεχ.)

$$10 < e \leq 20$$

- τρία δοκιμαστικά τεμάχια από το κέντρο της συγκόλλησης,
- τρία δοκιμαστικά τεμάχια από τη ζώνη αλλοίωσης,

Κέντρο της συγκόλλησης

•

Ζώνη της αλλοίωσης

δηλ. έξι δοκιμαστικά τεμάχια συνολικά.

$$e > 20$$

δύο τριάδες δοκιμαστικών τεμαχίων (μία στην πάνω όψη, μία στην χαμηλότερη όψη) σε καθένα από τα σημεία που υποδεικνύονται παρακάτω,

Κέντρο της συγκόλλησης

## Προσθήκη Α.2

3276  
(συνεχ.)

## Ζώνη της αλλοίωσης

δηλ. δώδεκα δοκιμαστικά τεμάχια συνολικά.

- 3277 (1) Για φύλλο μετάλλου ο μέσος όρος των τριών δοκιμών θα πρέπει να ικανοποιεί τις ελάχιστες τιμές που δίνονται στο περιθωριακό 3265. Καμία από τις τιμές δεν μπορεί να είναι μεγαλύτερη από 30 % κάτω από το οριζόμενο ελάχιστο.
- (2) Για συγκολλήσεις οι μέσες τιμές που λαμβάνονται από τρία από τα δοκιμαστικά τεμάχια που λαμβάνονται στα διαφορετικά σημεία, κέντρο της συγκόλλησης και ζώνη της αλλοίωσης, θα πρέπει να αντιστοιχούν στις ελάχιστες τιμές που εμφανίζονται. Καμία από τις τιμές δεν μπορεί να είναι μεγαλύτερη από 30 % κάτω από το οριζόμενο ελάχιστο.

3278-  
3284

(b) Προσδιορισμός του συντελεστή λυγίσματος

- 3285 (1) Ο συντελεστής λυγίσματος  $k$  που αναφέρεται στο περιθωριακό 3266 ορίζεται ως εξής:

$$k = 50 \frac{e}{r}$$

όπου  $e$  = πάχος του φύλλου σε mm και  
 $r$  = μέση ακτίνα καμπυλότητας σε mm του δοκιμαστικού τεμαχίου όταν εμφανίζεται η πρώτη ραγμή στη ζώνη τάσης.

- (2) Ο συντελεστής λυγίσματος  $k$  θα πρέπει να προσδιορίζεται για τη ραφή. Το πλάτος του δοκιμαστικού τεμαχίου θα πρέπει να είναι ίσο με  $3e$ .

## Προσθήκη Α.2

3285 (3) Τέσσερις δοκιμές θα πρέπει να διεξάγονται στη ραφή, δύο με τη βάση στη ζώνη (synex.) συμπίεσης (σχ. 1) και δύο με τη βάση στη ζώνη τάσης (σχ. 2). Όλες οι τιμές που λαμβάνονται θα πρέπει να ικανοποιούν τις απαιτήσεις ελάχιστων τιμών του περιθωριακού 3266.

Σχήμα 1

Σχήμα 2

3286-  
3290

C: Διατάξεις σχετικές με δοκιμές σε διανεμητές αεροζόλ και μη-επαναγεμιζόμενα εμπορευματοκιβώτια για αέρια υπό πίεση της Κλάσης 2, 10° και 11°

1. Δοκιμές πίεσης και έκρηξης σε υπόδειγμα δοχείου

3291 Οι δοκιμές υδραυλικής πίεσης θα πρέπει να διεξάγονται σε τουλάχιστον πέντε κενά δοχεία από κάθε υπόδειγμα,

(a) μέχρι την οριζόμενη πίεση ελέγχου, κατά τον οποίο χρόνο καμία διαρροή ή ορατή μόνιμη αλλοίωση δεν θα πρέπει να έχει συμβεί και

(b) μέχρι να συμβεί διαρροή ή έκρηξη. Το κοίλο άκρο, εάν υπάρχει, θα πρέπει να υποχωρεί πρώτο και το δοχείο δεν θα πρέπει να παρουσιάζει διαρροή ή να ανατινάζεται μέχρι μία πίεση ίση ή μεγαλύτερη από 1.2 φορές την πίεση ελέγχου.

2. Δοκιμές σφίξιματος (στεγανότητας) σε όλα τα δοχεία

3292 (1) Για τη δοκιμή σε διανεμητές αεροζόλ (10°) και μη-επαναγεμιζόμενων εμπορευματοκιβωτίων για αέριο υπό πίεση (11°) σε λουτρό ζεστού νερού, η θερμοκρασία του λουτρού και η διάρκεια της δοκιμής θα πρέπει να είναι τέτοιες ώστε η εσωτερική πίεση κάθε δοχείου να φτάνει τουλάχιστον το 90 % της εσωτερικής πίεσης που θα μπορούσε να επιτευχθεί στους 55 °C.

Πάντως, εάν το περιεχόμενο είναι ευαίσθητο στη θερμότητα ή εάν τα δοχεία είναι κατασκευασμένα από πλαστικό υλικό που μαλακώνει σ' αυτή τη θερμοκρασία δοκιμής, η θερμοκρασία του λουτρού θα πρέπει να είναι από 20 °C έως 30 °C, επιπλέον, ένας διανεμητής κάθε 2 000 θα πρέπει να ελέγχεται στη θερμοκρασία που ορίζεται στην προηγούμενη παράγραφο.

(2) Καμία διαρροή ή μόνιμη αλλοίωση των δοχείων δεν θα πρέπει να συμβαίνει. Η διάταξη που αφορά στη μόνιμη αλλοίωση δεν ισχύει για δοχεία που, κατασκευασμένα από πλαστικό υλικό, μαλακώνουν.

3293-  
3299

## ΠΡΟΣΘΗΚΗ Α.3

## Α. Έλεγχοι σχετικοί με εύφλεκτα υγρά των Κλάσεων 3, 6.1 και 8

## Έλεγχος για τον προσδιορισμό του σημείου ανάφλεξης

- 3300 (1) Το σημείο ανάφλεξης θα πρέπει να προσδιορίζεται με έναν από τους παρακάτω τύπους συσκευών:
- (a) για χρήση σε θερμοκρασίες όχι μεγαλύτερες από 50 °C: Abel, Abel-Pensky, Luchaire-Finances, Tag,
  - (b) για χρήση σε θερμοκρασίες μεγαλύτερες από 50 °C: Pensky-Martens, Luchaire-Finances,
  - (c) ελλείψει αυτών, οποιαδήποτε άλλη συσκευή τύπου κλειστού καψυλλίου ικανή να δίνει αποτελέσματα που δεν διαφέρουν περισσότερο από 2 °C από εκείνα που θα έδινε μία συσκευή που αναφέρεται παραπάνω στο ίδιο μέρος.
- (2) Για τον προσδιορισμό του σημείου ανάφλεξης χρωμάτων, κόμμεων και παρόμοιων ιξωδών προϊόντων που περιέχουν διαλύτες, μόνον συσκευές και μέθοδοι ελέγχου κατάλληλοι για τον προσδιορισμό του σημείου ανάφλεξης ιξωδών υγρών θα πρέπει να χρησιμοποιούνται, τέτοιες όπως μέθοδος Α του προτύπου IP 170/94 ή περισσότερο πρόσφατα πρότυπα IP<sup>1/</sup> ή γερμανικό πρότυπο DIN 53 213.
- 3301 Η διαδικασία ελέγχου θα πρέπει να είναι:
- (a) για τη συσκευή Abel, εκείνη του προτύπου IP<sup>1/</sup> 170/94. Αυτό το πρότυπο μπορεί επίσης να χρησιμοποιείται με την συσκευή Abel-Pensky,
  - (b) για τη συσκευή Pensky-Martens, εκείνη του προτύπου IP<sup>1/</sup> 34/88, ή εκείνη του προτύπου ASTM<sup>2/</sup> D.93/80,
  - (c) για τη συσκευή Tag, εκείνη του προτύπου ASTM<sup>2/</sup> D.56/87,
  - (d) για τη συσκευή Luchaire, εκείνη του γαλλικού προτύπου NFT 60.103.

Εάν χρησιμοποιείται οποιαδήποτε άλλη συσκευή, οι παρακάτω προφυλάξεις θα πρέπει να λαμβάνονται:

1. Ο έλεγχος θα πρέπει να διεξάγεται σε ένα μέρος ελεύθερο από ρεύματα.
2. Ο ρυθμός αύξησης της θερμοκρασίας του υγρού υπό έλεγχο δεν θα πρέπει ποτέ να υπερβαίνει τους 5 °C ανά λεπτό.
3. Η φλόγα λυχνίας θα πρέπει να είναι 5 mm ( $\pm$  0.5 mm) μακριά.
4. Η φλόγα λυχνίας θα πρέπει να εφαρμόζεται στο άνοιγμα του δοχείου σε κάθε αύξηση κατά 1 °C της θερμοκρασίας του υγρού.

<sup>1/</sup> Το Ινστιτούτο Πετρελαίου, 61 New Cavendish Street, London, W1M 8AR.

<sup>2/</sup> Αμερικάνικος Σύλλογος για Δοκιμές και Υλικά, 1916 Race Street, Philadelphia 3, (Pa.).

## Προσθήκη Α.3

- 3302** Σε περίπτωση διαφωνίας ως προς την ταξινόμηση ενός εύφλεκτου υγρού, ο αριθμός είδους που προτείνεται από τον αποστολέα θα πρέπει να γίνεται δεκτός εάν ένας έλεγχος του σημείου ανάφλεξης, δίνει ένα αποτέλεσμα που δεν διαφέρει περισσότερο από 2 °C από τα όρια (23 °C, και 61 °C αντίστοιχα) που αναφέρονται στο περιθωριακό 2301. Εάν η διαφορά είναι μεγαλύτερη από 2 °C ένας δεύτερος έλεγχος θα πρέπει να διεξάγεται και η υψηλότερη λαμβανόμενη τιμή θα πρέπει να υιοθετείται.

*Έλεγχος για τον προσδιορισμό της περιεκτικότητας σε υπεροξείδιο*

- 3303** Για τον προσδιορισμό της περιεκτικότητας σε υπεροξείδιο ενός υγρού, η διαδικασία έχει ως εξής:

Μία ποσότητα  $p$  (περίπου 5 g, ζυγισμένη με ακρίβεια 0.01 g) του υγρού προς τιτλοδότηση τοποθετείται σε μία φιάλη Erlenmeyer. 20 cm<sup>3</sup> οξικού ανυδρίτη και περίπου 1 g σκόνης στερεού ιωδιούχου καλίου προστίθενται. Η φιάλη ανακινείται και, μετά από 10 λεπτά, θερμαίνεται για 3 λεπτά σε περίπου 60 °C θερμοκρασία. Όταν έχει αφεθεί για κρύωμα για 5 λεπτά, 25 cm<sup>3</sup> νερού προστίθενται. Μετά απ' αυτό, αφήνεται σε ηρεμία για μισή ώρα και μετά το απελευθερωμένο ιώδιο τιτλοδοτείται με ένα δεκατονικό διάλυμα θειοθειικού νατρίου χωρίς την προσθήκη δείκτη. Πλήρης απόχρωματισμός δείχνει το τέλος της αντίδρασης. Εάν  $n$  είναι ο αριθμός των cm<sup>3</sup> θειοθειικού διαλύματος που απαιτούνται, το ποσοστό του υπεροξειδίου (υπολογιζόμενο ως H<sub>2</sub>O<sub>2</sub>) που υπάρχει στο δείγμα λαμβάνεται από τον τύπο 77  $n / 100 p$ .

*Μέθοδος ελέγχου για ευφλεκτότητα*

- 3304** (1) Η μέθοδος περιγράφει μία διαδικασία για να προσδιοριστεί εάν η ύλη, όταν θερμαίνεται υπό τις συνθήκες ελέγχου και εκτίθεται σε μία εξωτερική πηγή φλόγας που εφαρμόζεται με έναν συγκεκριμένο τρόπο, αναφλέγεται.

(2) *Αρχή της μεθόδου:* ένα μεταλλικό κομμάτι με ένα κοίλωμα (κοίλωμα τμήματος ελέγχου) θερμαίνεται σε μία προκαθορισμένη θερμοκρασία. Ένας προκαθορισμένος όγκος της ύλης υπό έλεγχο μεταφέρεται στο κοίλωμα και σημειώνεται η ικανότητα του να αναφλέγεται μετά από εφαρμογή και στη συνέχεια απομάκρυνση μιας συγκεκριμένης φλόγας υπό προκαθορισμένες συνθήκες.

(3) *Συσκευή:* Χρησιμοποιείται ένας δοκιμαστήρας ευφλεκτότητας που συνίσταται από ένα κομμάτι κράματος αλουμινίου ή άλλου ανθεκτικού στη διάβρωση μετάλλου υψηλής θερμικής αγωγιμότητας. Το κομμάτι έχει ένα κοίλωμα και μία υποδοχή για θερμόμετρο. Μία μικρή συναρμολόγηση αεριοπρόωθησης αερίου πάνω σ' έναν στροφέα προσαρμόζεται στο κομμάτι. Η χειρολαβή και η είσοδος αερίου για τον αεριοπρόωθητή αερίου μπορούν να είναι σε οποιαδήποτε κατάλληλη γωνία ως προς τον αεριοπρόωθητή αερίου. Μία κατάλληλη συσκευή εμφανίζεται στο σχήμα 1 και οι κύριες διαστάσεις δίνονται στα σχήματα 1 και 2.

Απαιτούνται τα παρακάτω εξαρτήματα:

- (a) *Μετρητής,* για να ελέγχεται ότι το ύψος του κέντρου του αεριοπρόωθητή αερίου πάνω από την κορυφή του κοιλώματος του τμήματος ελέγχου είναι 2.2 mm (βλέπε σχήμα 1).
- (b) *Θερμόμετρο,* υδραργύρου από γυαλί, για οριζόντια λειτουργία, με ευαισθησία όχι μικρότερη από 1mm/°C, ή άλλη συσκευή μέτρησης αντίστοιχης ευαισθησίας που επιτρέπει ανάγνωση διαφορών 0.5 °C. Όταν βρίσκεται στη θέση του στο κομμάτι, ο βολβός του θερμομέτρου θα πρέπει να περιβάλλεται από θερμικώς αγωγήμη θερμοπλαστική ένωση.
- (c) *Εστία θέρμανσης,* εξοπλισμένη με συσκευή ελέγχου της θερμοκρασίας. (Άλλοι τύποι συσκευής με κατάλληλα εξαρτήματα για τον έλεγχο της θερμοκρασίας μπορούν να χρησιμοποιηθούν για τη θέρμανση του μεταλλικού κομματιού).
- (d) *Χρονόμετρο,* ή άλλη κατάλληλη συσκευή μέτρησης του χρόνου.

## Προσθήκη Α.3

3304  
(συνεχ.)

- (e) Σύριγγα, ικανή για λήψη 2 ml με ακρίβεια  $\pm 0.1$  ml και
- (f) Πηγή καυσίμου, καύσιμο δοκιμών βουτανίου.

(4) *Δειγματοληψία:* Το δείγμα θα πρέπει να είναι αντιπροσωπευτικό της ύλης υπό έλεγχο και θα πρέπει να λαμβάνεται και διατηρείται σε ένα σφικτά κλειστό περιέκτη πριν τον έλεγχο. Λόγω της πιθανότητας απώλειας πτητικών συστατικών, το δείγμα θα πρέπει να υπόκειται μόνον στην ελάχιστη επεξεργασία για την εξασφάλιση της ομοιογένειάς του. Μετά από απομάκρυνση του κάθε τμήματος ελέγχου, ο περιέκτης δειγμάτων θα πρέπει αμέσως να κλείνεται σφικτά ώστε να εξασφαλίζεται ότι δεν διαφεύγουν πτητικά συστατικά από τον περιέκτη. Εάν αυτό το κλείσιμο είναι ατελές, ένα εντελώς νέο δείγμα θα πρέπει να λαμβάνεται.

(5) *Διαδικασία:* Διεξαγωγή του προσδιορισμού εις τριπλούν.

**ΠΡΟΕΙΔΟΠΟΙΗΣΗ** - Ο έλεγχος δεν πρέπει να διεξάγεται σε μικρό περιορισμένο χώρο (για παράδειγμα εφαρμοστό κιβώτιο), λόγω του κινδύνου εκρήξεων.

- (a) Είναι βασικό η συσκευή να στήνεται σε έναν πλήρως ελεύθερο από ρεύματα χώρο (βλέπε προειδοποίηση) και με απουσία δυνατού φωτισμού, για διευκόλυνση της παρατήρησης της λάμψης, της φλόγας κ.λπ.
- (b) Τοποθετούμε το μεταλλικό κομμάτι πάνω στην εστία θέρμανσης ή θερμαίνουμε το μεταλλικό κομμάτι με άλλον κατάλληλο τρόπο έτσι ώστε η θερμοκρασία του, όπως υποδεικνύεται από το θερμόμετρο που είναι τοποθετημένο στο μεταλλικό κομμάτι, να παραμένει στην προκαθορισμένη θερμοκρασία με ανοχή  $\pm 1$  °C. Η θερμοκρασία ελέγχου είναι 60.5/75 °C [βλέπε (h)]. Διορθώνουμε αυτή τη θερμοκρασία για τη διαφορά σε βαρομετρική πίεση από την κανονική ατμοσφαιρική πίεση (101.3 kPa) με αύξηση της θερμοκρασίας ελέγχου για μία υψηλή πίεση ή με μείωση της θερμοκρασίας ελέγχου για μία χαμηλότερη πίεση κατά 1.0 °C για κάθε 4 kPa διαφορά. Εξασφαλίζουμε ότι η κορυφή του μεταλλικού κομματιού είναι ακριβώς οριζόντια. Χρησιμοποιούμε τον μετρητή για να ελέγξουμε ότι ο αεριοπροωθητής είναι 2.2 mm πάνω από την κορυφή του κοιλώματος όταν βρίσκεται στη θέση ελέγχου.
- (c) Ανάβουμε το καύσιμο δοκιμών βουτανίου με τον αεριοπροωθητή μακριά από τη θέση ελέγχου (δηλ. στη θέση "εκτός", μακριά από το κοίλωμα). Ρυθμίζουμε το μέγεθος της φλόγας έτσι ώστε να είναι 8 mm έως 9 mm υψηλή και περίπου 5 mm πλατιά.
- (d) Με τη χρήση της σύριγγας, παίρνουμε από τον περιέκτη δείγματος τουλάχιστον 2 ml από το δείγμα και γρήγορα μεταφέρουμε ένα τμήμα ελέγχου 2 ml  $\pm 0.1$  ml στο κοίλωμα του δοκιμαστήρα ευφλεκτότητας και αμέσως ξεκινάμε τη χρονομετρική συσκευή.
- (e) Μετά από χρόνο θέρμανσης 60 s, κατά τον οποίο χρόνο το τμήμα ελέγχου κρίνεται ότι έχει φτάσει τη θερμοκρασία ισορροπίας του και εάν το ρευστό ελέγχου δεν έχει αναφλεγεί, περιστρέφουμε τη φλόγα ελέγχου μέσα στο τμήμα ελέγχου πάνω από την άκρη του κοιλώματος του υγρού. Τη διατηρούμε σ' αυτή τη θέση για 15 s και μετά την επιστρέφουμε στη θέση "εκτός" ενώ παρατηρούμε τη συμπεριφορά του τμήματος ελέγχου. Η φλόγα ελέγχου θα πρέπει να παραμένει αναμμένη καθ' όλη τη διάρκεια του ελέγχου.
- (f) Για κάθε έλεγχο παρατηρούμε και καταγράφουμε:
- (i) εάν υπάρχει ανάφλεξη και συντηρούμενη ανάφλεξη ή λάμψη, ή τίποτα απ' τα δύο, του τμήματος ελέγχου πριν η φλόγα ελέγχου μετακινηθεί μέσα στη θέση ελέγχου,

1756

**Προσθήκη Α.3**

**3304  
(συνεχ.)**

(ii) εάν το τμήμα ελέγχου αναφλεγεί ενώ η φλόγα ελέγχου είναι στη θέση ελέγχου και, εάν συμβαίνει αυτό, για πόσο διατηρείται η ανάφλεξη μετά την επιστροφή της φλόγας ελέγχου στη θέση "εκτός".

(g) Εάν δεν παρατηρηθεί διατηρούμενη ανάφλεξη σε συμφωνία με την παράγραφο (6) , επαναλαμβάνουμε όλη τη διαδικασία με νέα τμήματα ελέγχου, αλλά με χρόνο θέρμανσης 30 s.

(h) Εάν δεν παρατηρηθεί διατηρούμενη ανάφλεξη σε συμφωνία με την παράγραφο (6) σε θερμοκρασία ελέγχου 60.5 °C, επαναλαμβάνουμε όλη τη διαδικασία με νέα τμήματα ελέγχου, αλλά σε θερμοκρασία ελέγχου 75 °C.

**3305-  
3309**

Σχέδιο και διαστάσεις της συσκευής ελέγχου για τον προσδιορισμό της ευφλεκτότητας εύφλεκτων υγρών.

Διαστάσεις σε χιλιοστά

Σχήμα 1 - Δοκιμαστήρας ευφλεκτότητας

Σχήμα 2 - Αεριοπροωθητής αερίου ελέγχου και φλόγα

## Προσθήκη Α.3

**Β. Έλεγχος για τον προσδιορισμό ρευστότητας**

**3310** Για τον προσδιορισμό της ρευστότητας υγρών ή ιξωδών υλών και μειγμάτων της Κλάσης 3 και κολλωδών υλών της Κλάσης 4.1, η παρακάτω μέθοδος ελέγχου θα πρέπει να χρησιμοποιείται.

**(a) Συσκευή ελέγχου**

Εμπορικό πεντρόμετρο σύμφωνα με το Πρότυπο ISO 2137-1985, με ράβδο-οδηγό  $47.5 \text{ g} \pm 0.05 \text{ g}$ , κόσκινο από σκληραλουμίνιο με κωνικές σπές και βάρος  $102.5 \text{ g} \pm 0.05 \text{ g}$  (βλέπε Σχήμα 1), δοχείο διείσδυσης με εσωτερική διάμετρο 72 mm έως 80 mm για λήψη του δείγματος.

**(b) Διαδικασία ελέγχου**

Το δείγμα χύνεται μέσα στο δοχείο διείσδυσης όχι λιγότερο από μισή ώρα πριν τη μέτρηση. Το δοχείο κλείνεται μετά ερμητικά και αφήνεται σε ηρεμία μέχρι τη μέτρηση. Το δείγμα στο ερμητικά κλειστό δοχείο διείσδυσης θερμαίνεται στους  $35 \text{ }^\circ\text{C} \pm 0.5 \text{ }^\circ\text{C}$  και τοποθετείται πάνω στον πίνακα του πεντρόμετρου αμέσως πριν τη μέτρηση (όχι περισσότερο από δύο λεπτά). Το σημείο S του κόσκινου φέρεται μετά σ' επαφή με την επιφάνεια του υγρού και μετράται ο ρυθμός διείσδυσης.

**(c) Αξιολόγηση των αποτελεσμάτων του ελέγχου**

Μία ύλη δεν υπόκειται στις διατάξεις της Κλάσης 3 αλλά σε εκείνες της Κλάσης 4.1 αυτής της Οδηγίας εάν, αφού το κέντρο S έχει έλθει σ' επαφή με την επιφάνεια του δείγματος, η διείσδυση που λαμβάνεται από τον πίνακα του μετρητή:

- (i) μετά από χρόνο πίεσης  $5 \text{ s} \pm 0.1 \text{ s}$ , είναι μικρότερη από  $15.0 \text{ mm} \pm 0.3 \text{ mm}$ , ή
- (ii) μετά από χρόνο πίεσης  $5 \text{ s} \pm 0.1 \text{ s}$ , είναι μεγαλύτερη από  $15.0 \text{ mm} \pm 0.3 \text{ mm}$ , αλλά η πρόσθετη διείσδυση μετά από άλλα  $55 \text{ s} \pm 0.5 \text{ s}$  είναι μικρότερη από  $5.0 \text{ mm} \pm 0.5 \text{ mm}$ .

**ΣΗΜΕΙΩΣΗ:** Στην περίπτωση δειγμάτων που έχουν σημείο ροής, είναι συχνά αδύνατη η επίτευξη επιφάνειας σταθερού επιπέδου στο δοχείο διείσδυσης και, επομένως, ικανοποιητικών αρχικών συνθηκών μέτρησης για την επαφή του σημείου S. Επιπλέον, με μερικά δείγματα, η πρόσκρουση του κόσκινου μπορεί να προκαλέσει μία ελαστική αλλοίωση της επιφάνειας και, στα πρώτα λίγα δευτερόλεπτα, να δημιουργήσει μία βαθύτερη διείσδυση. Σε όλες αυτές τις περιπτώσεις, μπορεί να πρέπει να γίνει η αξιολόγηση του (b) παραπάνω.

1759

Προσθήκη Α.3

**Σχήμα 3 - Πενετρόμετρο**

## Προσθήκη Α.3

## C. Έλεγχοι σχετικοί με εύφλεκτα στερεά της Κλάσης 4.1

## Μέθοδοι ελέγχου για άμεσα καύσιμα στερεά

## 3320 (1) Προκαταρκτικός έλεγχος κοσκινίσματος

- (a) Η ύλη στην εμπορική του μορφή θα πρέπει να μορφοποιείται σε ακέραια λωρίδα ή λωρίδα σκόνης με περίπου 250 mm μήκος, 20 mm πλάτος και 10 mm ύψος σε μία ψυχρή, στεγανή, χαμηλής θερμικής αγωγιμότητας πλάκα-βάση.
- (b) Μία θερμή φλόγα (ελάχιστης θερμοκρασίας 1 000 °C) από έναν καυστήρα αερίου (ελάχιστης διαμέτρου 5 mm) εφαρμόζεται στο ένα άκρο της λωρίδας σκόνης μέχρι η σκόνη να αναφλεγεί ή για μέγιστο χρόνο 2 λεπτά (5 λεπτά για σκόνες μετάλλων ή κραμάτων μετάλλων). Θα πρέπει να σημειωθεί εάν η ανάφλεξη μεταδίδεται σε μήκος 200 mm της λωρίδας μέσα στην διλεπτη περίοδο ελέγχου (ή 20-λεπτη για σκόνες μετάλλων).
- (c) Εάν η ύλη δεν αναφλέγεται και μεταδίδει την ανάφλεξη είτε καιγόμενη με φλόγα είτε σιγοκαίγοντας σε μήκος 200 mm της λωρίδας σκόνης μέσα στην διλεπτη (ή 20-λεπτη) περίοδο ελέγχου, η ύλη δεν θα πρέπει να ταξινομείται ως εύφλεκτο στερεό και δεν απαιτείται περαιτέρω έλεγχος.
- (d) Εάν η ύλη μεταδίδει την καύση πάνω από 200 mm σε μήκος της λωρίδας σκόνης σε λιγότερο από δύο λεπτά, ή λιγότερο από 20 λεπτά για σκόνες μετάλλων, θα πρέπει να διεξάγεται το πλήρες πρόγραμμα ελέγχου παρακάτω.

## (2) Έλεγχος ρυθμού καύσης

Για τη διαφοροποίηση μεταξύ οποιασδήποτε ύλης που μπορεί να αναφλεγεί και εκείνων που καίγονται γρήγορα ή των οποίων η συμπεριφορά καύσης είναι ιδιαίτερα επικίνδυνη, μόνον ύλες των οποίων ο ρυθμός καύσης υπερβαίνει ένα ορισμένο όριο θα πρέπει να ταξινομούνται στην Κλάση 4.1. Ένας χρόνος καύσης μικρότερος από 45 s μετρημένος πάνω σ' ένα μήκος 100 mm σύμφωνα με τη διαδικασία στο περιθωριακό 3320 (3) λαμβάνεται ως κριτήριο. Γίνεται μία προσπάθεια να αναφλεγεί η ύλη υπό τις συνθήκες που ορίζονται παρακάτω και μετράται ο χρόνος καύσης. Ο σωρός βρέχεται πέρα από τη ζώνη πάνω από την οποία μετράται ο ρυθμός καύσης και σημειώνεται το αποτέλεσμα στην μετάδοση της φλόγας.

## (3) Διαδικασία ελέγχου

- (a) Η σε μορφή σκόνης ή κοκκώδης ύλη, στην εμπορική της μορφή, γεμίζεται χαλαρά σε μία φόρμα 250 mm μήκους με τριγωνική τομή εσωτερικού ύψους 10 mm και πλάτους 20 mm. Και στις δύο πλευρές της φόρμας, στη διαμήκη διάσταση, δύο μεταλλικά φύλλα τοποθετούνται ως πλευρικοί περιορισμοί που εκτείνονται 2 mm πέρα από την πάνω άκρη της τριγωνικής τομής (βλέπε Σχήμα 2). Φόρμα και εξαρτήματα για την προετοιμασία του σωρού). Η φόρμα μετά πέφτει τρεις φορές από ένα ύψος 2 cm πάνω σε μία στερεή επιφάνεια. Οι πλευρικοί περιορισμοί αφαιρούνται τότε και μία στεγανή, μη-καύσιμη, χαμηλής θερμικής αγωγιμότητας πλάκα τοποθετείται πάνω από την φόρμα, η συσκευή αναστρέφεται και η φόρμα απομακρύνεται. Κολλώδεις ύλες απλώνονται πάνω σε μία μη-καύσιμη επιφάνεια στη μορφή σχοινού 250 mm σε μήκος με τομή περίπου 1 cm<sup>2</sup>. Οποιαδήποτε κατάλληλη πηγή ανάφλεξης τέτοια όπως μία μικρή φλόγα ή ένα θερμό σύρμα ελάχιστης θερμοκρασίας 1000 °C χρησιμοποιείται για την ανάφλεξη του σωρού στο ένα άκρο. Στην περίπτωση μίας ευαίσθητης στην υγρασία ύλης, ο έλεγχος θα πρέπει να διεξάγεται όσο το δυνατόν γρηγορότερα, μετά την αφαίρεση της ύλης από τον περιέκτη.
- (b) Ο σωρός θα πρέπει να τοποθετείται εγκάρσια του ρεύματος σ' ένα ντουλάπι καπνίσματος. Η ταχύτητα του αέρα θα πρέπει να είναι αρκετή για την παρεμπόδιση

## Προσθήκη Α.3

3320  
(συνεχ.)

των καπνών να διαφύγουν μέσα στο εργαστήριο και θα πρέπει να μην μεταβάλλεται κατά τη διάρκεια του ελέγχου. Ένα παραπέτασμα για το ρεύμα μπορεί να στήνεται γύρω από τη συσκευή.

- (c) 1 ml διαλύματος διάβρωσης θα πρέπει να προστίθεται στο σωρό 30-40 mm πέρα από την ζώνη χρονομέτρησης των 100 mm. Προσθέτουμε το διάλυμα διάβρωσης στο διάκενο σταγόνα-σταγόνα, προσέχοντας όλη τη τομή του σωρού να είναι νωπή χωρίς απώλεια υγρού από τα πλάγια <sup>3/</sup>. Το υγρό θα πρέπει να προστίθεται πάνω από το κοντότερο δυνατόν μήκος του σωρού προσέχοντας πάντα να μην υπάρχει απώλεια από τα πλάγια. Αυτό το μέρος του ελέγχου δεν εφαρμόζεται σε σκόνες μετάλλων.
- (d) Ένα άκρο του σωρού αναφέγεται. Όταν ο σωρός έχει καεί πάνω από ένα μήκος 80 mm, μετράμε το ρυθμό καύσης πάνω από τα επόμενα 100 mm. Σημειώνουμε εάν ή όχι η νωπή ζώνη σταματάει τη μετάδοση της φλόγας. Ο έλεγχος θα πρέπει να εκτελείται έξι φορές με τη χρήση καθαρής ψυχρής πλάκας κάθε φορά, εκτός εάν παρατηρηθεί θετικό αποτέλεσμα ναυρίτερα.

## Κριτήρια για ταξινόμηση

3321

(1) Ύλες σε σκόνη, κοκκώδεις ή κολλώδεις θα πρέπει να ταξινομούνται στην Κλάση 4.1 όταν ο χρόνος καύσης ενός ή περισσότερων ελέγχων, σε συμφωνία με τη μέθοδο ελέγχου που περιγράφεται στο περιθωριακό 3320 (2), είναι μικρότερος από 45 s ή ο ρυθμός καύσης είναι μεγαλύτερος από 2.2 mm s. Σκόνες μετάλλων ή κράματα μετάλλων θα πρέπει να ταξινομούνται σε αυτήν την κλάση όταν μπορούν να αναφλέγονται και η αντίδραση εξαπλώνεται πάνω απ' όλο το μήκος του δείγματος σε 10 λεπτά ή λιγότερο.

(2) Καταχώρηση σ' ένα γράμμα στα διάφορα είδη

(a) Οποιοδήποτε στερεό, κανονικά νωπό, που εάν ήταν σε ξηρή κατάσταση θα ταξινομηθεί ως ένα εκρηκτικό θα πρέπει να καταχωρείται στο γράμμα (a).

(b) Τα παρακάτω θα πρέπει να καταχωρούνται στο γράμμα (b):

οποιαδήποτε αυτενεργή ύλη, οποιοδήποτε καύσιμο στερεό (άλλο από σκόνες μετάλλων) που ελέγχεται σε συμφωνία με το περιθωριακό 3320 εάν ο χρόνος καύσης είναι μικρότερος από 45 s και η φλόγα περνάει τη νωπή ζώνη και σκόνες μετάλλων ή κράματα μετάλλων εάν η αντίδραση εξαπλώνεται πάνω απ' όλο το μήκος του δείγματος σε 5 λεπτά ή λιγότερο.

(c) Τα παρακάτω θα πρέπει να καταχωρούνται στο γράμμα (c):

οποιοδήποτε καύσιμο στερεό (άλλο από σκόνες μετάλλων) που ελέγχεται σε συμφωνία με το περιθωριακό 3320 εάν ο χρόνος καύσης είναι μικρότερος από 45 s και η νωπή ζώνη σταματάει τη διάδοση της φλόγας για τουλάχιστον 4 λεπτά και σκόνες μετάλλων εάν η αντίδραση εξαπλώνεται πάνω απ' όλο το μήκος του δείγματος σε περισσότερο από 5 λεπτά.

(d) Για στερεά που μπορούν να προκαλέσουν ή να συμβάλλουν σε μία φωτιά μέσω τριβής, ένα γράμμα στα διάφορα είδη θα πρέπει να καταχωρούνται σε αναλογία με υπάρχουσες ταξινομήσεις ή σε συμφωνία με οποιονδήποτε κατάλληλο ειδικό όρο.

3322-  
3329

<sup>3/</sup> Εάν νερό κυλάει από τα πλάγια του σωρού, η προσθήκη παραγόντων διάβρωσης είναι απαραίτητη. Οι παράγοντες διάβρωσης που χρησιμοποιούνται θα πρέπει να είναι ελεύθεροι από καύσιμους διαλύτες και η συνολική ενεργή ύλη στο διάλυμα διάβρωσης δεν θα πρέπει να υπερβαίνει το 1%. Αυτό το υγρό μπορεί να προστίθεται σ' ένα κοίλωμα έως 3 mm βαθύ και 5 mm σε διάμετρο στην κορυφή του σωρού.

1762

Προσθήκη Α.3

**Σχήμα 4 - Φόρμα και εξαρτήματα για την προετοιμασία του σφαιρού  
(Όλες οι διαστάσεις σε χιλιοστά)**

Διατομή φόρμας 250 mm  
Υλικό: Αλουμίνιο

## Προσθήκη Α.3

## D. Έλεγχοι σχετικοί με ύλες υποκείμενες σε αυτόματη ανάφλεξη της Κλάσης 4.2

## 3330 (1) Μέθοδος ελέγχου και διαδικασία για στερεές πυροφορικές ύλες

1 έως 2 cm<sup>3</sup> της ύλης σε σκόνη υπό έλεγχο χύνεται από ένα ύψος περίπου 1 m πάνω σε μία μη-καύσιμη επιφάνεια και παρατηρείται εάν η ύλη αναφλέγεται κατά τη διάρκεια της πτώσης ή μέσα σε 5 λεπτά σταθεροποίησης. Αυτή η διαδικασία θα πρέπει να επαναλαμβάνεται έξι φορές εκτός εάν ληφθεί θετικό αποτέλεσμα νωρίτερα.

## (2) Μέθοδος ελέγχου για υγρές πυροφορικές ύλες

Ο έλεγχος για υγρές ύλες θα πρέπει να γίνεται σε δύο μέρη. Το πρώτο για να προσδιοριστεί εάν η ύλη αναφλέγεται όταν προστίθεται σ' έναν αδρανή φορέα και εκτίθεται στον αέρα, το δεύτερο εάν αρνητικό αποτέλεσμα λαμβάνεται στο πρώτο. Το δεύτερο μέρος προσδιορίζει εάν η ύλη απανθρακώνει ή αναφλέγει ένα χάρτινο φίλτρο.

## (3) Διαδικασία ελέγχου για υγρές πυροφορικές ύλες

(a) Μέρος 1 - Μία πορσελάνινη κάψουλα με περίπου 10 cm διάμετρο γεμίζεται με γη διατόμων ή σιλικάζελ σε θερμοκρασία δωματίου σ' ένα ύψος περίπου 5 mm. Περίπου 5 ml του υγρού υπό έλεγχο χύνονται μέσα στην προετοιμασμένη πορσελάνινη κάψουλα και παρατηρείται εάν η ύλη αναφλέγεται μέσα σε πέντε λεπτά. Αυτή η διαδικασία θα πρέπει να επαναλαμβάνεται έξι φορές εκτός εάν ληφθεί θετικό αποτέλεσμα νωρίτερα.

(b) Μέρος 2 - Ένα 0.5 ml δείγμα ελέγχου λαμβάνεται με μία σύριγγα σ' ένα προσδιορισμένο ξηρό χάρτινο φίλτρο Αριθμ. 3 Whatman. Ο έλεγχος διεξάγεται στους 25 °C ± 2 °C και σε σχετική υγρασία 50 % ± 5 %. Γίνονται παρατηρήσεις για να βλέπουμε εάν συμβαίνει ανάφλεξη ή απανθράκωση στο χάρτινο φίλτρο μέσα σε πέντε λεπτά μετά την τοποθέτηση του υγρού υπό έλεγχο. Αυτή η διαδικασία θα πρέπει να επαναλαμβάνεται τρεις φορές, με τη χρήση νέου χάρτινου φίλτρου κάθε φορά, εκτός εάν ληφθεί θετικό αποτέλεσμα νωρίτερα.

## Κριτήρια για ταξινόμηση

3331 (1) Μία στερεή ύλη θα πρέπει να ταξινομείται στην Κλάση 4.2 και να θεωρείται ως πυροφορική εάν το δείγμα αναφλέγεται σε έναν από τους ελέγχους. Ένα υγρό θα πρέπει να ταξινομείται στην Κλάση 4.2 και να θεωρείται ως πυροφορική ύλη εάν αναφλέγεται στο Μέρος 1 του ελέγχου, ή εάν το χάρτινο φίλτρο αναφλέγεται ή απανθρακώνεται στο Μέρος 2 του ελέγχου.

(2) Καταχώρηση σ' ένα γράμμα στα διάφορα είδη

Όλα τα πυροφορικά στερεά και υγρά θα πρέπει να καταχωρούνται στο γράμμα (a).

## 3332 (1) Μέθοδος ελέγχου για αυτοθερμαινόμενες ύλες

Δείγματα σε κύβους των 2.5 cm και 10 cm διατηρούνται σε σταθερή θερμοκρασία για 24 ώρες και γίνονται παρατηρήσεις εάν η θερμοκρασία του δείγματος υπερβαίνει τους 200 °C. (Η μέθοδος ελέγχου είναι μία τροποποιημένη έκδοση του ελέγχου κλωβού Bowes-Cameron που είναι μία μέθοδος ελέγχου αυτοθέρμανσης για τον άνθρακα.)

(2) Διαδικασία ελέγχου

(a) Ένας τύπος φούρνου κυκλοφορίας θερμού αέρα με εσωτερικό όγκο μεγαλύτερο από 9 λίτρα και κανός να ελέγχει την εσωτερική θερμοκρασία στους 140 °C ± 2 °C θα πρέπει να χρησιμοποιείται.

## Προσθήκη Α.3

- 3332**  
(συνεχ.)
- (b) Κυβικοί περιέκτες δειγμάτων πλευράς 2.5 cm και 10 cm, κατασκευασμένα από ανοξείδωτο χάλυβα καθαρό με μέγεθος πλέγματος 0.053 mm,<sup>4/</sup> με την επάνω επιφάνειά τους ανοιχτή, θα πρέπει να χρησιμοποιούνται. Κάθε περιέκτης είναι τοποθετημένος σε ένα κυβικό επικαλυπτικό περιέκτη κατασκευασμένο από ανοξείδωτο χάλυβα καθαρό με μέγεθος πλέγματος 0.595 mm<sup>4/</sup> και ελαφρά μεγαλύτερο από τον περιέκτη δειγμάτων, έτσι ώστε ο περιέκτης να ταιριάζει σε αυτό το κάλυμμα. Για την αποφυγή του αποτελέσματος της κυκλοφορίας του αέρα, αυτό το κάλυμμα εγκαθίσταται σ' ένα δεύτερο κλωβό από ανοξείδωτο χάλυβα, κατασκευασμένο από ένα δίχτυ με μέγεθος πλέγματος 0.595 mm<sup>4/</sup> και μέγεθος 15 cm x 15 cm x 25 cm.
- (c) Θερμοστοιχεία Chromel-Alumel με 0.3 mm διάμετρο θα πρέπει να χρησιμοποιούνται για τη μέτρηση της θερμοκρασίας. Ένα τοποθετείται στο κέντρο του δείγματος και ένα άλλο μεταξύ του περιέκτη δειγμάτων και του τοιχώματος του φούρνου. Οι θερμοκρασίες θα πρέπει να μετρούνται συνεχώς.
- (d) Το δείγμα, σε σκόνη ή κοκκώδες, προετοιμάζεται στην εμπροχική του μορφή και γεμίζεται μέχρι τα χείλη στον περιέκτη δειγμάτων και χτυπάμε τον περιέκτη μερικές φορές. Εάν το δείγμα καθίσει, προστίθεται περισσότερο. Εάν το δείγμα ξεχειλίσει, το επίπεδο του μειώνεται στα χείλη του δοχείου. Ο περιέκτης τοποθετείται στο κάλυμμα και κρεμάται στο κέντρο του φούρνου.
- (e) Η θερμοκρασία του φούρνου αυξάνεται στους 140 °C θερμοκρασία ελέγχου και διατηρείται για 24 ώρες. Η θερμοκρασία του δείγματος καταγράφεται. Ο πρώτος έλεγχος θα πρέπει να διεξάγεται με ένα δείγμα κύβου 10 cm. Παρατηρήσεις γίνονται για να προσδιοριστεί εάν συμβαίνει αυτόματη ανάφλεξη ή εάν η θερμοκρασία του δείγματος υπερβαίνει τους 200 °C. Εάν ληφθούν αρνητικά αποτελέσματα δεν είναι απαραίτητος περαιτέρω έλεγχος. Εάν ληφθούν θετικά αποτελέσματα, ένας δεύτερος έλεγχος θα πρέπει να διεξάγεται με ένα δείγμα κύβου 2.5 cm για τον προσδιορισμό της καταχώρησης της ομάδας συσκευασίας.

*Κριτήρια για ταξινόμηση*

- 3333**
- (1) Μία ύλη θα πρέπει να ταξινομείται στην Κλάση 4.2 εάν, στον πρώτο έλεγχο με τη χρήση ενός κυβικού δείγματος των 10 cm, συμβαίνει αυτόματη ανάφλεξη ή η θερμοκρασία του δείγματος υπερβαίνει τους 200 °C κατά τη διάρκεια της 24ωρης περιόδου ελέγχου. Αυτό το κριτήριο βασίζεται στη θερμοκρασία αναανάφλεξης του ξυλάνθρακα, που είναι 50 °C για έναν κυβικό όγκο 27 m<sup>3</sup> και 140 °C για ένα δείγμα ενός λίτρου. ύλες με θερμοκρασίες αναανάφλεξης υψηλότερες από 50 °C για 27 m<sup>3</sup> δεν θα πρέπει να ταξινομούνται στην Κλάση 4.2.
- (2) Καταχώρηση σ' ένα γράμμα στα διάφορα είδη
- (a) Οποιαδήποτε ύλη που δίνει θετικό αποτέλεσμα όταν ελέγχεται με το κυβικό δείγμα των 2.5 cm θα πρέπει να καταχωρείται στο γράμμα (b).
- (b) Οποιαδήποτε ύλη που δίνει θετικό αποτέλεσμα όταν ελέγχεται με το κυβικό δείγμα των 10 cm αλλά που δίνει αρνητικό αποτέλεσμα με ένα κυβικό δείγμα των 2.5 cm θα πρέπει να καταχωρείται στο γράμμα (c).

**3334-**  
**3339**

<sup>4/</sup> Αυτό το μέγεθος πλέγματος βασίζεται στα κόσκινα Tyler, όπου το μέγεθος πλέγματος ποικίλει σε αναλογία προς το τετράγωνο της γραμμικής απόστασης μεταξύ των συρμάτων.

## Προσθήκη Α.3

**Ε. Έλεγχος σχετικός με ύλες της Κλάσης 4.3 που, σε επαφή με το νερό, αναδίδουν εύφλεκτα αέρια**

**3340 (1) Μέθοδος ελέγχου**

Αυτή η μέθοδος ελέγχου χρησιμοποιείται για να προσδιοριστεί εάν η αντίδραση μίας ύλης με το νερό οδηγεί στην ανάπτυξη μίας επικίνδυνης ποσότητας εύφλεκτων αερίων. Η μέθοδος ελέγχου μπορεί να εφαρμόζεται σε στερεές και υγρές ύλες. Δεν εφαρμόζεται σε πυροφορικές ύλες. Η ύλη θα πρέπει να ελέγχεται στην εμπορική του μορφή σε θερμοκρασία περιβάλλοντος (20 °C) ερχόμενη σε επαφή με το νερό. Εάν συμβεί αυτόματη ανάφλεξη του αερίου σε οποιοδήποτε στάδιο, κανένας περαιτέρω έλεγχος δεν είναι απαραίτητος.

**(2) Διαδικασία ελέγχου**

- (a) Μία μικρή ποσότητα (περίπου 2 mm διάμετρος) της ύλης ελέγχου τοποθετείται σε μία λεκάνη απεσταγμένου νερού στους 20 °C. Σημειώνεται (i) εάν οποιοδήποτε αέριο εκλύεται και (ii) εάν συμβαίνει αυτόματη ανάφλεξη του αερίου.
- (b) Μία μικρή ποσότητα της ύλης ελέγχου (περίπου 2 mm διάμετρος) τοποθετείται στο κέντρο ενός χάρτινου φίλτρου που επιπλέει οριζόντια πάνω στην επιφάνεια του απεσταγμένου νερού στους 20 °C σε ένα κατάλληλο δοχείο, π.χ. ένα πιάτο εξάμιση με 100 mm διάμετρο. Το χάρτινο φίλτρο είναι για να διατηρεί την ύλη σε μία θέση, υπό συνθήκες που κάνουν μέγιστη την πιθανότητα για αυτόματη ανάφλεξη οποιουδήποτε αερίου. Σημειώνεται (i) εάν οποιοδήποτε αέριο εκλύεται και (ii) εάν συμβαίνει αυτόματη ανάφλεξη του αερίου.
- (c) Η ύλη ελέγχου φτιάχνεται σε σφρό ύψους περίπου 2 cm και διαμέτρου 3 cm με ένα κοίλωμα στην κορυφή. Λίγες σταγόνες νερού προστίθενται στο κοίλωμα. Σημειώνεται (i) εάν οποιοδήποτε αέριο εκλύεται και (ii) εάν συμβαίνει αυτόματη ανάφλεξη.
- (d) Για στερεές ύλες, το κόλλο θα πρέπει να επιθεωρείται για οποιαδήποτε σκόνη < 500 μm. Εάν εκείνη η σκόνη συνιστά περισσότερο από το 1 % (κατά βάρος) του συνόλου, ή εάν η ύλη είναι εύθρυπτη, τότε όλο το δείγμα θα πρέπει να τρίβεται σε σκόνη πριν τον έλεγχο για να λαμβάνεται υπόψη η μείωση του μεγέθους των σωματιδίων κατά τη διάρκεια της διακίνησης και της μεταφοράς. Αλλιώς, όπως για υγρά, η ύλη θα πρέπει να ελέγχεται στην εμπορική του κατάσταση. Ο έλεγχος θα πρέπει να πραγματοποιείται σε θερμοκρασία περιβάλλοντος (20 °C) και ατμοσφαιρική πίεση και να επαναλαμβάνεται τρεις φορές.
- (e) Νερό τοποθετείται μέσα στη χοάνη σταξίματος και αρκετή ποσότητα της ύλης (μέχρι ένα μέγιστο βάρος 25 g) για την παραγωγή μεταξύ 100 cm<sup>3</sup> και 250 cm<sup>3</sup> αερίου ζυγίζονται και τοποθετούνται σε μία κωνική φιάλη. Η στρόφιγγα της χοάνης σταξίματος ανοίγεται για τη ροή του νερού μέσα στην κωνική φιάλη και ένα χρονόμετρο ξεκινάει. Ο όγκος αερίου που εκλύεται μετράται με οποιοδήποτε κατάλληλο τρόπο. Σημειώνεται ο χρόνος που απαιτείται για την έκλυση όλου του αερίου και, όπου είναι δυνατόν, λαμβάνονται ενδιάμεσες τιμές. Ο ρυθμός έκλυσης αερίου υπολογίζεται σε επτά ώρες με διαλείμματα μίας ώρας. Εάν ο ρυθμός έκλυσης είναι ασταθής ή αυξάνεται μετά από επτά ώρες, η μέτρηση του χρόνου θα πρέπει να παρατείνεται σε ένα μέγιστο πέντε ημερών. Ο πενήντημος έλεγχος μπορεί να σταματήσει εάν ο ρυθμός έκλυσης γίνει σταθερός ή συνεχώς μειώνεται και έχουν ληφθεί αρκετά δεδομένα για τη καταχώρηση της ύλης σε μία ομάδα ή για να αποφασιστεί ότι η ύλη δεν μπορεί να ταξινομηθεί στην Κλάση 4.3. Εάν η χημική ταυτότητα του αερίου είναι άγνωστη, το αέριο θα πρέπει να ελέγχεται για ευφλεκτότητα.

## Προσθήκη Α.3

**Κριτήρια για ταξινόμηση**

- 3341 (1) Μία ύλη θα πρέπει να ταξινομείται στην Κλάση 4.3 εάν συμβαίνει αυτόματη ανάφλεξη σε οποιοδήποτε στάδιο της διαδικασίας ελέγχου, ή εάν εκλύεται εύφλεκτο αέριο μ' έναν ρυθμό μεγαλύτερο από 1 λίτρο ανά κιλό της ύλης ανά ώρα.
- (2) Καταχώρηση σ' ένα γράμμα στα διάφορα είδη
- (a) Τα παρακάτω θα πρέπει να καταχωρούνται στο γράμμα (a):
- οποιαδήποτε ύλη που αντιδρά ζωηρά με το νερό σε θερμοκρασία περιβάλλοντος και εκλύει αέριο υποκείμενο σε αυτόματη ανάφλεξη, ή που αντιδρά άμεσα με το νερό σε θερμοκρασία περιβάλλοντος τέτοια ώστε ο ρυθμός έκλυσης εύφλεκτου αερίου σε ένα λεπτό είναι ίσος με ή μεγαλύτερος από 10 λίτρα ανά κιλό ύλης.
- (b) Τα παρακάτω θα πρέπει να καταχωρούνται στο γράμμα (b):
- οποιαδήποτε ύλη που αντιδρά άμεσα με το νερό σε θερμοκρασία περιβάλλοντος τέτοια ώστε ο μέγιστος ρυθμός έκλυσης εύφλεκτου αερίου είναι ίσος με ή μεγαλύτερος από 20 λίτρα ανά κιλό ύλης ανά ώρα και που δεν ικανοποιεί τα κριτήρια για το γράμμα (a).
- (c) Τα παρακάτω θα πρέπει να καταχωρούνται στο γράμμα (c):
- οποιαδήποτε ύλη που αντιδρά αργά με το νερό σε θερμοκρασία περιβάλλοντος τέτοια ώστε ο μέγιστος ρυθμός έκλυσης εύφλεκτου αερίου είναι ίσος με ή μεγαλύτερος από 1 λίτρο ανά κιλό ύλης ανά ώρα και που δεν ικανοποιεί τα κριτήρια για τα γράμματα (a) και (b).

3342-  
3349

## Προσθήκη Α.3

## F. Έλεγχος σχετικός με στερεές οξειδωτικές ύλες της Κλάσης 5.1

## 3350 (1) Μέθοδος ελέγχου

Αυτή η μέθοδος ελέγχου είναι σχεδιασμένη για τη μέτρηση της δυνατότητας μίας στερεής ύλης να αυξάνει το ρυθμό καύσης ή την ένταση καύσης μίας καύσιμης ύλης όταν οι δύο αυτές ύλες αναμειγνύονται πλήρως. Δύο έλεγχοι θα πρέπει να διεξάγονται για κάθε ύλη προς αξιολόγηση, ένας με έναν 1 προς 1 λόγο (βάρους), δείγματος προς πριονίδι και ένας με έναν 4 προς 1 λόγο (βάρους), δείγματος προς πριονίδι. Τα χαρακτηριστικά καύσης κάθε μείγματος συγκρίνονται με τον πρότυπο 1 προς 1 λόγο (βάρους), υπερθεϊκού αμμωνίου.

## (2) Διαδικασία ελέγχου

- (a) Το υπερθεϊκό αμμώνιο, το υπερχλωρικό κάλιο και το βρωμικό κάλιο είναι οι ύλες αναφοράς. Αυτές οι ύλες θα πρέπει να περνάνε μέσα από ένα μέγεθος πλέγματος 0.3 mm και θα πρέπει να μην τριβονται. Οι ύλες αναφοράς ξηραίνονται στους 65 °C για 12 ώρες και διατηρούνται σ' έναν ξηραντήρα όσο απαιτείται.
- (b) Το πριονίδι από μαλακό ξύλο είναι το καύσιμο υλικό σε αυτόν τον έλεγχο. Θα πρέπει να περνάει μέσα από ένα μέγεθος πλέγματος μικρότερο από 1.6 mm και να περιέχει λιγότερο από 5 % νερό (κατά βάρος). Εάν είναι απαραίτητο, φτιάχνεται σε στρώμα λιγότερο από 25 mm παχύ, ξηραίνεται στους 105 °C για 4 ώρες και διατηρείται σε ξηραντήρα όσο απαιτείται.
- (c) Ένα μείγμα 30.0 g ± 0.1 g της ύλης αναφοράς με πριονίδι ξύλου παρασκευάζεται σε μία 1 προς 1 αναλογία (βάρους). Δύο μείγματα 30.0 g ± 0.1 g της ύλης προς έλεγχο, στο μέγεθος σωματιδίου στο οποίο θα μεταφέρεται με το πριονίδι ξύλου παρασκευάζεται σε αναλογίες 1 προς 1 (βάρους), και 4 προς 1 (βάρους). Κάθε μείγμα θα πρέπει να αναμιγνύεται μηχανικά χωρίς υπερβολική ένταση όσο το δυνατόν πιο καλά.
- (d) Ο έλεγχος θα πρέπει να διεξάγεται σε ρεύμα ή σε έναν χώρο εξοπλισμένο με εξαεριστήρα.
- (e) Οι συνθήκες σε κανονική ατμοσφαιρική πίεση είναι: θερμοκρασία 20 °C ± 5 °C, υγρασία 50 % ± 110 %.
- (f) Καθένα από τα μείγματα θα πρέπει να μορφοποιείται σε κωνικό σωρό με διαστάσεις περίπου 70 mm διάμετρο βάσης και 60 mm ύψος σε μία ψηρή, στεγανή, χαμηλής θερμικής αγωγιμότητας επιφάνεια. Η ανάφλεξη θα πρέπει να δίνεται με ένα σύρμα αδρανούς μετάλλου στη μορφή ενός κυκλικού βρόγχου με 40 mm διάμετρο τοποθετημένου μέσα στο σωρό 1 mm πάνω από την επιφάνεια ελέγχου. Το σύρμα θα πρέπει να θερμαίνεται ηλεκτρικά στους 1000 °C μέχρι να παρατηρηθούν τα πρώτα σημάδια ανάφλεξης ή μέχρι να γίνει ξεκάθαρο ότι ο σωρός δεν μπορεί να αναφλεγεί. Η ηλεκτρική ισχύς κλείνει μόλις υπάρξει ανάφλεξη.
- (g) Ο χρόνος θα πρέπει να καταγράφεται από τα πρώτα παρατηρήσιμα σημάδια ανάφλεξης μέχρι το τέλος όλης της αντίδρασης: καπνός, φλόγα, πυράκτωση.
- (h) Ο έλεγχος θα πρέπει να επαναλαμβάνεται τρεις φορές για καθεμία από τις αναλογίες ανάμειξης.

## Κριτήρια για ταξινόμηση

- 3351 (1) Μία στερεή ύλη θα πρέπει να ταξινομείται στην Κλάση 5.1, εάν σε οποιαδήποτε συγκέντρωση που ελέγχθηκε, ο μέσος χρόνος καύσης του πριονιδίου, που λαμβάνεται από τρεις ελέγχους, είναι ίσος με ή μικρότερος από τον μέσο όρο των τριών ελέγχων με μείγμα υπερθεϊκού αμμωνίου.

## Προσθήκη Α.3

3351 (2) Καταχώρηση σε ένα γράμμα στα διάφορα είδη  
(συνεχ.)

- (a) Οποιαδήποτε ύλη που, σε οποιαδήποτε συγκέντρωση που ελέγχθηκε, παρουσιάζει χρόνο καύσης μικρότερο από εκείνον με βρωμικό κάλιο θα πρέπει να καταχωρείται στο γράμμα (a).
- (b) Οποιαδήποτε ύλη που, σε οποιαδήποτε συγκέντρωση που ελέγχθηκε, παρουσιάζει χρόνο καύσης ίσο με ή μικρότερο από εκείνον με υπερχλωρικό κάλιο και δεν ικανοποιεί τα κριτήρια για την ομάδα (a) θα πρέπει να καταχωρείται στο γράμμα (b).
- (c) Οποιαδήποτε ύλη που, σε οποιαδήποτε συγκέντρωση που ελέγχθηκε, παρουσιάζει χρόνο καύσης ίσο με ή μικρότερο από εκείνον με υπερθεϊκό αμμώνιο και δεν ικανοποιεί τα κριτήρια για τα γράμματα (a) και (b) θα πρέπει να καταχωρείται στο γράμμα (c).

3352-  
3389

## Προσθήκη Α.3

**Γ. Έλεγχος για τον προσδιορισμό της οικοτοξικότητας, παραμονής και βιοσυσσώρευσης υλών στο θαλάσσιο περιβάλλον για καταχώρηση στην Κλάση 9**

**ΣΗΜΕΙΩΣΗ:** Οι μέθοδοι ελέγχου που χρησιμοποιούνται θα πρέπει να είναι οι υιοθετημένες από τον Οργανισμό για Οικονομική Συνεργασία και Ανάπτυξη (OECD) και την Ευρωπαϊκή Οικονομική Αντιπροσωπεία (EEC). Εάν άλλες μέθοδοι χρησιμοποιούνται, θα πρέπει να είναι διεθνώς αναγνωρισμένες, να είναι ισοδύναμες με τους ελέγχους OECD/EEC και να αναφέρονται σε εκθέσεις ελέγχου.

**3390 Ισχυρή τοξικότητα για τα ψάρια**

Το αντικείμενο είναι ο προσδιορισμός της συγκέντρωσης που προκαλεί 50 % θνησιμότητα στα είδη ελέγχου. Αυτή είναι η τιμή (LC<sub>50</sub>), δηλαδή, η συγκέντρωση της ύλης στο νερό που θα προκαλέσει το θάνατο του 50 % μίας ομάδας ελέγχου ψαριών κατά τη διάρκεια μίας συνεχούς περιόδου ελέγχου τουλάχιστον 96 ωρών. Στους κατάλληλους τύπους ψαριών περιλαμβάνονται: ριγωτός ρόμβος (*Brachydanio rerio*), χοντροκέφαλος φοξίνος (*Pimephales promelas*) και πολύχρωμη πέστροφα (*Oncorhynchus mykiss*).

Τα ψάρια εκτίθενται στην ύλη ελέγχου που προστίθεται στο νερό σε μεταβαλλόμενες συγκεντρώσεις (+1 μάρτυρας). Παρατηρήσεις καταγράφονται τουλάχιστον κάθε 24 ώρες. Στο τέλος της 96-ωρης δραστηριότητας και, εάν είναι δυνατόν, σε κάθε παρατήρηση, η συγκέντρωση που προκαλεί το θάνατο του 50 % των ψαριών υπολογίζεται. Η συγκέντρωση μη-παρατηρούμενου αποτελέσματος (NOEC) στις 96 ώρες επίσης προσδιορίζεται.

**3391 Ισχυρή τοξικότητα για τα δάφνια**

Το αντικείμενο είναι ο προσδιορισμός της αποτελεσματικής συγκέντρωσης της ύλης στο νερό που καθιστά το 50 % των δάφνιων ανίκανα να κολυμπούν (EC<sub>50</sub>). Οι κατάλληλοι οργανισμοί ελέγχου είναι τα *daphnia magna* και τα *daphnia pulex*. Τα δάφνια εκτίθενται για 48 ώρες στην ύλη ελέγχου που προστίθεται στο νερό σε μεταβαλλόμενες συγκεντρώσεις. Η συγκέντρωση μη-παρατηρούμενου αποτελέσματος (NOEC) σε 48 ώρες επίσης προσδιορίζεται.

**3392 Παρεμπόδιση της ανάπτυξης φυκιών**

Το αντικείμενο είναι ο προσδιορισμός του αποτελέσματος ενός χημικού πάνω στην ανάπτυξη ενός φυκιού υπό πρότυπες συνθήκες. Η αλλαγή στη βιομάζα και ο ρυθμός της ανάπτυξης με φύκια υπό τις ίδιες συνθήκες, αλλά χωρίς την παρουσία του χημικού ελέγχου, συγκρίνεται για 72 ώρες. Τα αποτελέσματα εκφράζονται ως η αποτελεσματική συγκέντρωση που μειώνει τον ρυθμό της ανάπτυξης των φυκιών κατά 50 %, IC<sub>50f</sub>, και επίσης τον σχηματισμό της βιομάζας, IC<sub>50b</sub>.

**3393 Έλεγχος για γρήγορη βιοαποικοδομησιμότητας**

Το αντικείμενο είναι ο προσδιορισμός του βαθμού βιοαποικοδόμησης υπό πρότυπες αερόβιες συνθήκες. Η ύλη ελέγχου προστίθεται σε χαμηλές συγκεντρώσεις σ' ένα θρεπτικό διάλυμα που περιέχει αερόβια βακτήρια. Η πρόοδος της αποικοδόμησης παρακολουθείται για 28 ημέρες με τον προσδιορισμό της παραμέτρου που προκαθορίζεται στη μέθοδο ελέγχου που χρησιμοποιείται. Διάφορες ισοδύναμες μέθοδοι ελέγχου είναι διαθέσιμες. Οι παράμετροι περιλαμβάνουν μείωση του διαλυμένου οργανικού άνθρακα (DOC), διοξειδίου του άνθρακα (CO<sub>2</sub>) δημιουργία μείωσης του οξυγόνου (O<sub>2</sub>).

Μία ύλη θεωρείται ότι είναι άμεσα βιοαποικοδομήσιμη εάν μέσα σε όχι περισσότερο από 28 ημέρες τα παρακάτω κριτήρια ικανοποιούνται - μέσα σε 10 ημέρες από όταν η αποικοδόμηση πρώτα φτάνει το 10 %:

Μείωση του DOC: 70 %  
 Δημιουργία του CO<sub>2</sub> 60 % της θεωρητικής παραγωγής CO<sub>2</sub>  
 Μείωση του O<sub>2</sub> 60 % του θεωρητικά απαιτούμενου O<sub>2</sub>.

## Προσθήκη Α.3

**3393** (συνεχ.) Ο έλεγχος μπορεί να συνεχίζεται πέρα από τις 28 ημέρες εάν τα παραπάνω κριτήρια δεν ικανοποιούνται, αλλά το αποτέλεσμα θα αντιπροσωπεύει την ενυπάρχουσα βιοαποικοδομησιμότητα της ύλης ελέγχου. Για λόγους καταχώρησης, απαιτείται κανονικά το "άμεσο" αποτέλεσμα.

Όπου μόνον δεδομένα για το COD και BOD5 είναι διαθέσιμα, μία ύλη θεωρείται ότι είναι άμεσα βιοαποικοδομήσιμα εάν:

$$\frac{\text{BOD5}}{\text{COD}} \geq 0.5$$

BOD (Βιοχημικά Απαιτούμενο Οξυγόνο) ορίζεται ως το βάρος του διαλυμένου οξυγόνου που απαιτείται από έναν συγκεκριμένο όγκο διαλύματος της ύλης για την πραγματοποίηση βιοχημικής οξειδωσης υπό καθορισμένες συνθήκες. Το αποτέλεσμα εκφράζεται ως γραμμάρια BOD ανά γραμμάριο ύλης ελέγχου. Η κανονική περίοδος ελέγχου είναι πέντε ημέρες με τη χρήση μίας εθνικής πρότυπης διαδικασίας ελέγχου.

COD (Χημικός Απαιτούμενο Οξυγόνο) είναι ένα μέτρο της οξειδωσιμότητας μίας ύλης, εκφρασμένη ως η ισοδύναμη ποσότητα σε οξυγόνο ενός οξειδωτικού αντιδραστηρίου που καταναλώνεται από την ύλη υπό καθορισμένες εργαστηριακές συνθήκες. Τα αποτελέσματα εκφράζονται σε γραμμάρια COD ανά γραμμάριο ύλης. Μία εθνική πρότυπη διαδικασία μπορεί να χρησιμοποιηθεί.

**3394** *Έλεγχοι για δυνατότητα βιοσυσσώρευσης*

(1) Το αντικείμενο είναι ο προσδιορισμός της δυνατότητας για βιοσυσσώρευση είτε από τον λόγο σε ισορροπία της συγκέντρωσης (c) μίας ύλης σε έναν διαλύτη προς εκείνη σε νερό είτε από το συντελεστή βιοσυγκέντρωσης (BCF).

(2) Ο λόγος σε ισορροπία της συγκέντρωσης (c) μίας ύλης σε έναν διαλύτη προς εκείνη σε νερό εκφράζεται κανονικά ως ένας  $\log_{10}$ . Ο διαλύτης και το νερό θα πρέπει να έχουν αμελητέα αναμειξιμότητα και η ύλη δεν θα πρέπει να ιονίζεται στο νερό. Ο διαλύτης που κανονικά χρησιμοποιείται είναι η-οκτανόλη.

Στην περίπτωση η-οκτανόλης και νερού, το αποτέλεσμα είναι:

$$\log P_{ow} = \log_{10} [c_o/c_w]$$

όπου  $P_{ow}$  είναι ο συντελεστής κατανομής που λαμβάνεται με τη διαίρεση της συγκέντρωσης της ύλης σε η-οκτανόλη ( $c_o$ ) με τη συγκέντρωση της ύλης σε νερό ( $c_w$ ). Εάν  $\log P_{ow} \geq 3.0$  τότε η ύλη έχει πιθανότητα συσσωμάτωσης.

(3) Ο συντελεστής βιοσυγκέντρωσης (BCF) ορίζεται ως ο λόγος της συγκέντρωσης της ύλης ελέγχου στα ψάρια ελέγχου ( $c_f$ ) προς τη συγκέντρωση στο νερό ελέγχου ( $c_w$ ) σε σταθερή κατάσταση:

$$\text{BCF} = (c_f) / (c_w).$$

Η αρχή του ελέγχου περιλαμβάνει έκθεση των ψαριών σ' ένα διάλυμα ή διασπορά σε γνωστές συγκεντρώσεις της ύλης ελέγχου σε νερό. Συνεχής ροή, στατικές ή ημι-στατικές διαδικασίες μπορούν να χρησιμοποιούνται σύμφωνα με τις διαδικασίες ελέγχου που επιλέγονται, βάσει των ιδιοτήτων της ύλης ελέγχου. Τα ψάρια εκτίθενται στην ύλη ελέγχου για μία δεδομένη περίοδο χρόνου, ακολουθούμενη από μία περίοδο μη περαιτέρω έκθεσης. Κατά τη διάρκεια της δεύτερης περιόδου, γίνονται μετρήσεις του ρυθμού αύξησης στο νερό της ύλης ελέγχου (δηλ. του ρυθμού των εκκρινμάτων καθαρισμού).

## Προσθήκη Α.3

**3394** (Πλήρεις λεπτομέρειες των διάφορων διαδικασιών ελέγχου και της μεθόδου υπολογισμού (συνεχ.) για τον BCF δίνονται στις Οδηγίες για τον Έλεγχο των Χημικών του OECD, μέθοδοι 305A έως 305E, 12 Μαΐου 1981).

(4) Μία ύλη μπορεί να έχει έναν  $\log P_{ow}$  μεγαλύτερο από 3 και έναν BCF μικρότερο από 100 που θα έδειχνε μικρή ή καθόλου πιθανότητα για βιοσυσσώρευση. Σε περιπτώσεις αμφιβολίας, η τιμή του BCF λαμβάνει προτεραιότητα έναντι του  $\log P_{ow}$ , όπως υποδεικνύεται στο διάγραμμα ροής που εμφανίζεται στο περιθωριακό 3396.

**3395** *Κριτήρια*

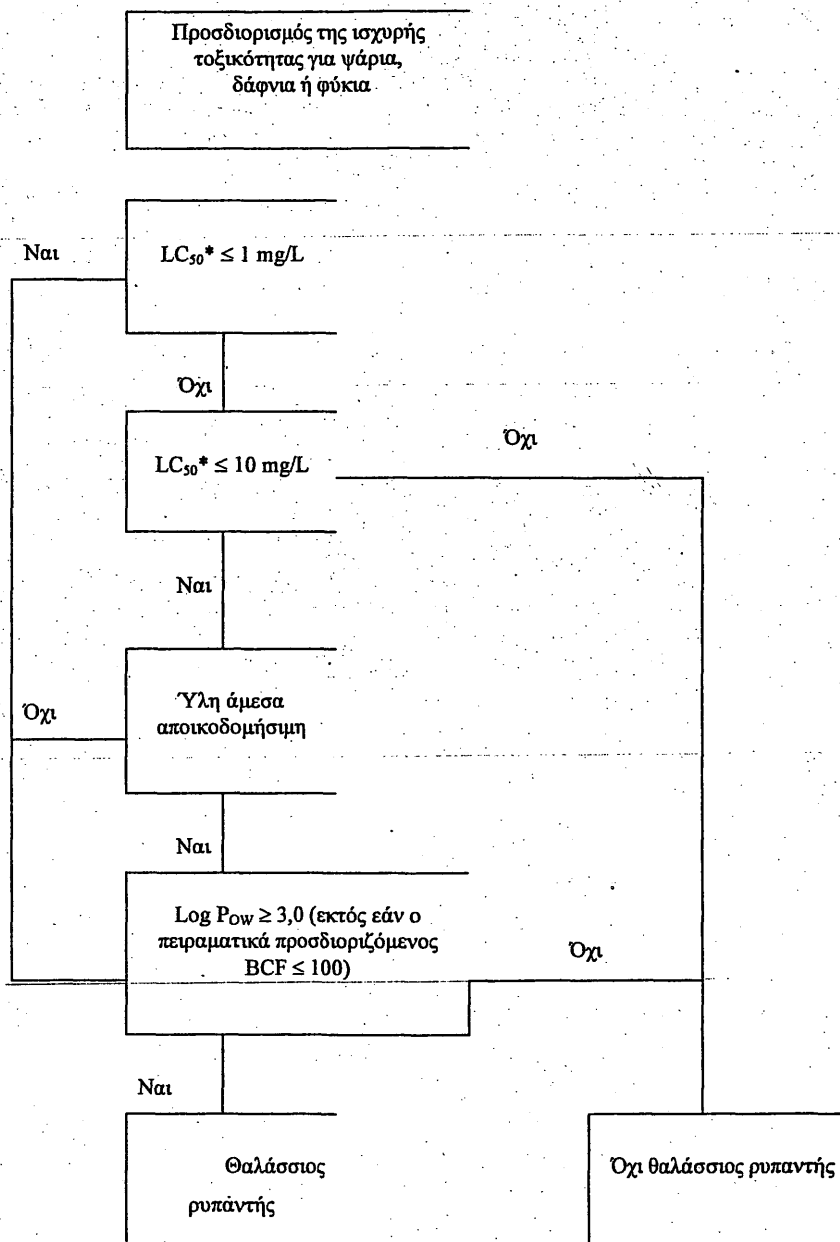

Μία ύλη μπορεί να θεωρείται ως ρυπαντική για το θαλάσσιο περιβάλλον εάν ικανοποιεί ένα από τα παρακάτω κριτήρια:

Η χαμηλότερη μεταξύ των τιμών της 96-ωρης  $LC_{50}$  για τα ψάρια, της 48-ωρης  $EC_{50}$  για τα δάφνια ή της 72-ωρης  $IC_{50}$  για τα φύκια

- είναι μικρότερη από ή ίση με 1 mg/L,
- είναι μεγαλύτερη από 1 mg/L αλλά μικρότερη από ή ίση με 10 mg/L, και η ύλη δεν είναι βιοαποικοδομήσιμη,
- είναι μεγαλύτερη από 1 mg/L αλλά μικρότερη από ή ίση με 10 mg/L, και ο  $\log P_{ow}$  είναι μεγαλύτερος από ή ίσος με 3.0 (εκτός εάν ο πειραματικά προσδιοριζόμενος BCF είναι μικρότερος από ή ίσος με 100).

## Προσθήκη Α.3

3396 Διαδικασία που πρέπει να ακολουθείται

\* Η χαμηλότερη μεταξύ των τιμών της 96-ωρης  $LC_{50}$ , της 48-ωρης  $EC_{50}$  ή της 72-ωρης  $IC_{50}$ .

BCF = συντελεστής βιοσυγκέντρωσης.

1773

**ΠΡΟΣΘΗΚΗ Α.4**

**3400-**

**3499** Επιφυλασσόμενο

## ΠΡΟΣΘΗΚΗ Α.5

**ΓΕΝΙΚΟΙ ΟΡΟΙ ΣΥΣΚΕΥΑΣΙΑΣ, ΤΥΠΟΙ ΣΥΣΚΕΥΑΣΙΑΣ,  
ΑΠΑΙΤΗΣΕΙΣ ΠΟΥ ΙΣΧΥΟΥΝ ΓΙΑ ΣΥΣΚΕΥΑΣΙΕΣ  
ΚΑΙ ΑΠΑΙΤΗΣΕΙΣ ΕΛΕΓΧΟΥ ΓΙΑ ΣΥΣΚΕΥΑΣΙΕΣ**

**ΣΗΜΕΙΩΣΗ:** Αυτές οι απαιτήσεις ισχύουν για συσκευασίες που περιέχουν ύλες και είδη των Κλάσεων 1, 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.2, 8 και 9.

**Μέρος I: Γενικοί όροι συσκευασίας**

- 3500** (1) Οι συσκευασίες θα πρέπει να είναι έτσι κατασκευασμένες και κλεισμένες ώστε να αποφεύγεται οποιαδήποτε διαρροή του περιεχομένου από ένα κόλλο προετοιμασμένο για αποστολή που θα μπορούσε να προκληθεί σε κανονικές συνθήκες μεταφοράς ιδιαίτερα από δόνηση ή αλλαγές στη θερμοκρασία, την υγρασία ή την πίεση. Καμία επικίνδυνη ύλη δεν θα πρέπει να προσκολλάται στο εξωτερικό των κόλλων. Αυτές οι διατάξεις ισχύουν τόσο για νέες όσο και για επαναχρησιμοποιούμενες συσκευασίες.
- (2) Τα μέρη των συσκευασιών που είναι σε άμεση επαφή με επικίνδυνες ύλες δεν θα πρέπει να προσβάλλονται από χημική ή άλλη δράση εκείνων των υλών. Όπου είναι απαραίτητο, θα πρέπει να έχουν κατάλληλη εσωτερική επικάλυψη ή επεξεργασία. Τέτοια μέρη των συσκευασιών δεν θα πρέπει να έχουν ενσωματωμένα εξαρτήματα υποκείμενα σε επικίνδυνη αντίδραση με το περιεχόμενο, σε σχηματισμό επικίνδυνων προϊόντων, ή σημαντική εξασθένησή του.
- (3) Κάθε συσκευασία εκτός εσωτερικών συσκευασιών συνδυασμένων συσκευασιών θα πρέπει να συμφωνεί σε έναν τύπο σχεδιασμού ελεγμένο και εγκεκριμένο σε συμφωνία με τις απαιτήσεις που τίθενται στο μέρος IV. Μαζικά παραγόμενες συσκευασίες θα πρέπει να συμφωνούν με τον εγκεκριμένο τύπο σχεδιασμού.
- (4) Όπου οι συσκευασίες είναι γεμισμένες με υγρές ύλες, αρκετό κενό θα πρέπει να αφήνεται ώστε να εξασφαλίζεται η μη ύπαρξη διαρροής της υγρής ύλης και μόνιμης παραμόρφωσης της συσκευασίας ως αποτέλεσμα της διαστολής της υγρής ύλης, λόγω των θερμοκρασιών που μπορούν να σημειωθούν κατά τη διάρκεια της μεταφοράς. Για θερμοκρασία πλήρωσης 15 °C, ο βαθμός πλήρωσης θα πρέπει να προσδιορίζεται ως ακολούθως, εκτός εάν αλλιώς ορίζεται σε συγκεκριμένη κλάση, είτε:

(a)

Σημείο βρασμού (αρχικό σημείο βρασμού) της ύλης σε °C	< 60	≥ 60	≥ 100	≥ 200	
		< 100	< 200	< 300	≥ 300
Βαθμός πλήρωσης ως ποσοστό της χωρητικότητας της συσκευασίας	90	92	94	96	98

είτε

(b) Βαθμός πλήρωσης =  $\frac{98}{1 + \alpha(50 - t_F)}$  % της χωρητικότητας της συσκευασίας.

## Προσθήκη Α.5

3500  
(συνεχ.)

Σε αυτόν τον τύπο το  $\alpha$  αντιπροσωπεύει τον μέσο συντελεστή κυβικής διαστολής της γρηής ύλης μεταξύ 15 °C και 50 °C, δηλαδή, για μία μέγιστη αύξηση στη θερμοκρασία 35 °C, το  $\alpha$  υπολογίζεται σύμφωνα με τον τύπο:

$$\alpha = \frac{d_{15} - d_{50}}{35 \cdot d_{50}}$$

όπου  $d_{15}$  και  $d_{50}$  είναι οι σχετικές πυκνότητες<sup>1/</sup> του υγρού στους 15 °C και 50 °C και  $t_f$  η μέση θερμοκρασία του υγρού στο χρόνο πλήρωσης.

(5) Οι εσωτερικές συσκευασίες θα πρέπει να είναι συσκευασμένες σε μία εξωτερική συσκευασία με τέτοιο τρόπο ώστε, υπό κανονικές συνθήκες μεταφοράς, να μην μπορούν να σπάσουν, να τρυπηθούν ή να παρουσιάσουν διαρροή του περιεχομένου τους μέσα στην εξωτερική συσκευασία. Οι εσωτερικές συσκευασίες που είναι υποκείμενες σε θραύση ή εύκολο τρύπημα, τέτοιες όπως εκείνες που είναι κατασκευασμένες από γυαλί, πορσελάνη ή ψαμμάργιλο ή από ορισμένα πλαστικά υλικά κ.λπ., θα πρέπει να ασφαλιζονται σε εξωτερικές συσκευασίες με κατάλληλο προστατευτικό υλικό. Οποιαδήποτε διαρροή του περιεχομένου δεν θα πρέπει να μειώνει ουσιαστικά τις προστατευτικές ιδιότητες του προστατευτικού υλικού ή της εξωτερικής συσκευασίας.

(6) Οι εσωτερικές συσκευασίες που περιέχουν διαφορετικές ύλες που μπορούν να αντιδράσουν επικίνδυνα με μία άλλη και να προκαλέσουν:

- (a) ανάφλεξη και/ή ανάπτυξη σημαντικής θερμότητας,
- (b) έκλυση εύφλεκτων και/ή τοξικών αερίων,
- (c) σχηματισμό διαβρωτικών υλών, ή
- (d) σχηματισμό ασταθών υλών,

δεν θα πρέπει να τοποθετούνται στην ίδια εξωτερική συσκευασία (βλέπε επίσης τις διατάξεις μκτής συσκευασίας στις διάφορες κλάσεις).

(7) Το κλείσιμο των συσκευασιών που περιέχουν ναπές ή διαλυμένες ύλες θα πρέπει να είναι τέτοιο ώστε το ποσοστό του υγρού (νερό, διαλύτης ή αδρανποιητής) να μην πέφτει κάτω από τα οριζόμενα όρια κατά τη διάρκεια της μεταφοράς.

(8) Όπου μπορεί να αναπτυχθεί υπερπίεση σε ένα κύκλο μέσω της έκλυσης αερίου από το περιεχόμενο (ως αποτέλεσμα αύξησης της θερμοκρασίας ή άλλων αιτιών), η συσκευασία μπορεί να είναι εξοπλισμένη με εξαεριστήρα υπό την προϋπόθεση ότι το αέριο που εκλύεται δεν θα προκαλέσει οποιοδήποτε κίνδυνο εξαιτίας της τοξικότητάς του, της ευφλεκτότητάς του, της απελευθερούμενης ποσότητας κ.λπ. Ο εξαεριστήρας θα πρέπει να είναι έτσι σχεδιασμένος ώστε, όταν η συσκευασία είναι στην κατάσταση στην οποία είναι προοριζόμενη να μεταφερθεί, διαρροές του υγρού και διεύδυση ξένης ύλης να αποφεύγονται υπό κανονικές συνθήκες μεταφοράς. Πάντως, μία ύλη μπορεί να μεταφέρεται σε τέτοια συσκευασία μόνον όπου ένας εξαεριστήρας ρητά ορίζεται για εκείνη την ύλη στους όρους μεταφοράς της σχετικής κλάσης.

(9) Νέες, επανακατασκευασμένες, επαναχρησιμοποιούμενες ή επιδιορθωμένες συσκευασίες θα πρέπει να είναι ικανές να περάσουν τους ελέγχους που ορίζονται στο μέρος IV. Πριν γεμιστεί και παραδοθεί για μεταφορά, κάθε συσκευασία θα πρέπει να επιθεωρείται και να επιβεβαιώνεται η απουσία διάβρωσης, μόλυνσης ή άλλης ζημιάς. Οποιαδήποτε συσκευασία που εμφανίζει σημάδια μειωμένης αντοχής σε σύγκριση με τον εγκεκριμένο τύπο σχεδιασμού δεν θα πρέπει να

<sup>1/</sup> Η σχετική πυκνότητα ( $d$ ) θεωρείται ότι είναι συνώνυμη με το ειδικό βάρος (SG) και θα χρησιμοποιείται σ' όλη αυτή την προσθήκη.

## Προσθήκη Α.5

**3500** χρησιμοποιούνται περαιτέρω ή θα πρέπει να επιδιορθώνονται έτσι ώστε να είναι ικανές να (συνεχ.) αντέχουν τους ελέγχους του τύπου σχεδιασμού.

(10) Συσκευασίες που χρησιμοποιούνται για υγρά θα πρέπει να υποβάλλονται σε έλεγχο στεγανότητας εάν έτσι απαιτείται από και στους όρους που ορίζονται στο περιθωριακό 3560.

(11) Τα υγρά θα πρέπει να γεμίζονται μόνον σε συσκευασίες που έχουν μία κατάλληλη αντοχή στην εσωτερική πίεση που μπορεί να αναπτυχθεί υπό κανονικές συνθήκες μεταφοράς. Συσκευασίες μαρκαρισμένες με την υδραυλική πίεση ελέγχου όπως ορίζεται στο περιθωριακό 3512 (1) (d) θα πρέπει να γεμίζονται μόνον με υγρό που έχει πίεση ατμών:

- (a) τέτοια ώστε η συνολική πίεση πιεζομέτρου στη συσκευασία (δηλ. η πίεση ατμών της πληρωτικής ύλης συν η μερική πίεση του αέρα ή άλλων αδρανών αερίων, μείον 100 kPa) στους 55 °C προσδιορισμένη πάνω στη βάση ενός μέγιστου βαθμού πλήρωσης σε συμφωνία με το (4) παραπάνω και μία θερμοκρασία πλήρωσης 15 °C, δεν θα υπερβαίνει τα δύο τρίτα της μαρκαρισμένης πίεσης ελέγχου, ή
- (b) στους 50 °C μικρότερη από τα τέσσερα εβδομα του αθροίσματος της μαρκαρισμένης πίεσης ελέγχου συν 100 kPa, ή
- (c) στους 55 °C μικρότερη από τα δύο τρίτα του αθροίσματος της μαρκαρισμένης πίεσης ελέγχου συν 100 kPa.

(12) Συσκευασίες που χρησιμοποιούνται για στερεά που μπορούν να γίνουν υγρά σε θερμοκρασίες που είναι πιθανόν να σημειωθούν κατά τη διάρκεια της μεταφοράς θα πρέπει να είναι επίσης ικανές να περιέχουν την ύλη στην υγρή κατάσταση.

(13) Οι συσκευασίες θα πρέπει να είναι κατασκευασμένες και ελεγμένες κάτω από ένα πρόγραμμα εξασφάλισης της ποιότητας που ικανοποιεί την αρμόδια αρχή για να εξασφαλίζεται ότι κάθε κατασκευασμένη συσκευασία ικανοποιεί τις απαιτήσεις αυτής της προσθήκης.

(14) Οι απαιτήσεις για συσκευασίες στο μέρος III βασίζονται σε συσκευασίες που ήδη χρησιμοποιούνται. Για να λαμβάνεται υπόψη η πρόοδος στην επιστήμη και την τεχνολογία, οι συσκευασίες που έχουν προδιαγραφές διαφορετικές από εκείνες στο μέρος III μπορούν να χρησιμοποιούνται υπό την προϋπόθεση ότι είναι εξίσου αποτελεσματικές, είναι αποδεκτές στην αρμόδια αρχή και είναι ικανές να αντέχουν επιτυχώς τους ελέγχους που περιγράφονται στην παράγραφο (10) και το μέρος IV.

Παραδείγματα απαιτούμενων μαρκαρισμένων πιέσεων ελέγχου υπολογιζόμενων όπως στο 3500 (11) (ε)

Αριθμ. Ο.Η.Ε.	Υγρό		Ομάδα συσκευασίας	$V_{ps}$ (kPa)	$V_{ps} \times 1.5$ (kPa)	$(V_{ps} \times 1.5)$ μείον 100 (kPa)	Απαιτούμενη ελάχιστη πίεση πιεζομέτρου ελέγχου, υπό το περιθωριακό 3554 (4) (ε) (kPa)	Ελάχιστη πίεση πιεζομέτρου ελέγχου που πρέπει να είναι μαρκαρισμένη πάνω στη συσκευασία (kPa)
	Ονομασία	Κλάση						
2056	Τετραυδροφουράνιο	3	II	70	105	5	100	100
2247	n-Δεκάνιο	3	III	1.4	2.1	- 97.9	100	100
1593	Διχλωρομεθάνιο	6.1	III	164	246	146	146	150
1155	Διαθλατιθέρας	3	I	199	299	199	199	250

**ΣΗΜΕΙΩΣΗ 1:** Για καθαρά υγρά η πίεση ατμών στους 55 °C ( $V_{ps}$ ) μπορεί συχνά να λαμβάνεται από επιστημονικούς πίνακες.

**ΣΗΜΕΙΩΣΗ 2:** Οι μέγιστες πιέσεις ατμών στις παραγράφους (b) και (c) αναφέρονται στη βάση του τύπου.

**ΣΗΜΕΙΩΣΗ 3:** Ο πίνακας αναφέρεται στη χρήση της παραγράφου (c) μόνον, το οποίο σημαίνει ότι η μαρκαρισμένη πίεση ελέγχου θα πρέπει να υπερβάνει 1.5 φορές την πίεση ατμών στους 55 °C μείον 100 kPa. Όταν, για παράδειγμα, η πίεση ελέγχου για το n-Δεκάνιο είναι προοδριωμένη σύμφωνα με το περιθωριακό 3554 (4) (α) η ελάχιστη μαρκαρισμένη πίεση ελέγχου μπορεί να είναι μικρότερη.

**ΣΗΜΕΙΩΣΗ 4:** Για τον διαιθυλαθέρα (1155) (Ομάδα συσκευασίας I), η απαιτούμενη ελάχιστη πίεση ελέγχου υπό το περιθωριακό 3554 (4) είναι 250 kPa.

## Προσθήκη Α.5

## Μέρος ΙΙ: Τύποι συσκευασίας

## Ορισμοί

- 3510 (1) Υποκείμενες στις ειδικές διατάξεις για κάθε κλάση, οι συσκευασίες που αναφέρονται παρακάτω μπορούν να χρησιμοποιούνται:

Βαρέλια:

επίπεδων άκρων ή κυρτών άκρων κυλινδρικές συσκευασίες κατασκευασμένες από μέταλλο, φάιμπερ, πλαστικό, κόντρα πλακέ ή άλλα κατάλληλα υλικά. Αυτός ο ορισμός επίσης περιλαμβάνει συσκευασίες άλλων σχημάτων, π.χ. κυλινδρικές συσκευασίες με κωνικό λαμμό, ή συσκευασίες σε μορφή κάδου. Ξύλινα βαρέλια και μπιτόνια δεν καλύπτονται από αυτόν τον ορισμό.

Ξύλινα βαρέλια:

συσκευασίες κατασκευασμένες από φυσικό ξύλο, κυκλικής τομής, που έχουν κυρτά τοιχώματα, συνιστάμενες από σανίδες και κεφαλές και εξοπλισμένες με τσέρκια.

Μπιτόνια:

μεταλλικές ή πλαστικές συσκευασίες ορθογώνιας ή πολυγωνικής τομής με ένα ή περισσότερα στόμια.

Κιβώτια:

συσκευασίες με πλήρεις ορθογώνιες ή πολυγωνικές όψεις, κατασκευασμένες από μέταλλο, ξύλο, κόντρα πλακέ, ανασυσταμένο ξύλο, φύλλο φάιμπερ, πλαστικό ή άλλο κατάλληλο υλικό. Μικρές οπές για σκοπούς τέτοιους όπως εύκολο χειρισμό ή άνοιγμα, ή για την ικανοποίηση απαιτήσεων ταξινόμησης, επιτρέπονται εφ' όσον δεν θέτουν σε κίνδυνο την ακεραιότητα της συσκευασίας κατά τη διάρκεια της μεταφοράς,

Σάκοι:

εύκαμπτες συσκευασίες κατασκευασμένες από χαρτί, πλαστικό φιλμ, υφάσματα, πλεγμένο υλικό ή άλλα κατάλληλα υλικά.

Σύνθετες συσκευασίες (πλαστικού υλικού):

συσκευασίες συνιστάμενες από ένα εσωτερικό πλαστικό δοχείο και μία εξωτερική συσκευασία (κατασκευασμένη από μέταλλο, φύλλο φάιμπερ, κόντρα πλακέ, κ.λπ.). Αφού συναρμολογηθεί, τέτοια συσκευασία παραμένει μετέπειτα μία αδιαχώριστη μονάδα. Γεμίζεται, αποθηκεύεται, αποστέλλεται και αδειάζεται ως τέτοια.

Σύνθετες συσκευασίες (από γυαλί, πορσελάνη ή ψαμμάργιο):

συσκευασίες συνιστάμενες από ένα εσωτερικό δοχείο από γυαλί, πορσελάνη ή ψαμμάργιο και μία εξωτερική συσκευασία (κατασκευασμένη από μέταλλο, ξύλο, φύλλο φάιμπερ, πλαστικό υλικό, τεταμένο πλαστικό υλικό κ.λπ.). Αφού συναρμολογηθεί, τέτοια συσκευασία παραμένει μετέπειτα μία αδιαχώριστη μονάδα. Γεμίζεται, αποθηκεύεται, αποστέλλεται και αδειάζεται ως τέτοια. Θα πρέπει να ελέγχεται σε συμφωνία με τα περιθωριακά 3552 (1) (a) ή (b), 3553 και 3554.

## Προσθήκη Α.5

3510  
(συνεχ.)Συνδυασμένες συσκευασίες:

ένας συνδυασμός συσκευασιών για λόγους μεταφοράς, συνιστάμενος από μία ή περισσότερες εσωτερικές συσκευασίες ασφαλισμένες σε μία εξωτερική συσκευασία σε συμφωνία με το περιθωριακό 3500 (5).

(2) Επιδιορθωμένες συσκευασίες περιλαμβάνουν μεταλλικά βαρέλια που είναι:

- (i) καθαρισμένα στα αρχικά υλικά κατασκευής, με απομάκρυνση όλων των προηγούμενων περιεχομένων, εσωτερικών και εξωτερικών διαβρώσεων και εξωτερικών επικαλύψεων και ετικετών,
- (ii) αποκαταστημένα στο αρχικό σχήμα και περίγραμμα, με χτυπήματα (εάν χρειαστεί) ισωμένα και σφραγισμένα και με αντικατεστημένες όλες τις μη-ακέραιες φλάντζες και
- (iii) επιθεωρημένα μετά τον καθαρισμό αλλά πριν τη βαφή, με απόρριψη των συσκευασιών με ορατό σκάσιμο, σημαντική μείωση στο πάχος του υλικού, κόπωση του μετάλλου, κατεστραμμένα σπειρώματα ή πόματα, ή άλλα σημαντικά ελαττώματα.

Ανακατασκευασμένη συσκευασία περιλαμβάνει μεταλλικά βαρέλια που:

- (i) παράγονται ως ένας τύπος Ο.Η.Ε. από έναν τύπο όχι Ο.Η.Ε.,
- (ii) μετατρέπονται από έναν τύπο Ο.Η.Ε. σ' έναν άλλο τύπο Ο.Η.Ε., ή
- (iii) υποβάλλονται στην αντικατάσταση ακέραιων δομικών εξαρτημάτων (τέτοιων όπως οι μη-μετακινούμενες κεφαλές).

Η ανακατασκευασμένη συσκευασία υπόκειται στις ίδιες απαιτήσεις αυτής της Προσθήκης που ισχύουν για μία νέα συσκευασία του ίδιου τύπου.

Επαναγρησιμοποιούμενες συσκευασίες:

συσκευασίες που έχουν εξεταστεί και βρεθεί ελεύθερες από ελαττώματα που επηρεάζουν την ικανότητα να αντέχουν τον έλεγχο απόδοσης. Ο όρος περιλαμβάνει εκείνες που ξαναγεμίζονται με το ίδιο ή παρόμοιο συμβατό περιεχόμενο και μεταφέρονται σε αλυσίδες διανομής που ελέγχονται από τον αποστολέα του προϊόντος.

(3) Υποκείμενες στις ειδικές διατάξεις για κάθε κλάση, οι παρακάτω συσκευασίες μπορούν επίσης να χρησιμοποιούνται:Σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος):

εάν ελέγχονται σε συμφωνία με το περιθωριακό 3552 (1) (ε).

Ελαφρού περιτυπώματος μεταλλικές συσκευασίες:

συσκευασίες κυκλικής, ελλειπτικής, ορθογώνιας ή πολυγωνικής τομής, (επίσης κωνικής) και με κωνικό λαιμό και συσκευασίες σε μορφή κάδου κατασκευασμένες από λευκοσίδηρο ή ελαφρύ μέταλλο, που έχει πάχος τοιχωμάτων μικρότερο από 0.5 mm, με επίπεδο ή κυρτό πυθμένα και με ένα ή περισσότερα στόμια, που δεν καλύπτονται στο περιθωριακό 3510 (1) ως βαρέλια ή μπτόνια.

## (4) Οι παρακάτω ορισμοί ισχύουν για συσκευασίες στο (1) και (2) παραπάνω:

## Προσθήκη Α.5

3510  
(συνεχ.)Πώματα:

συσκευές που κλείνουν ένα άνοιγμα σ' ένα δοχείο,

Εσωτερικές συσκευασίες:

συσκευασίες για τις οποίες μία εξωτερική συσκευασία απαιτείται για μεταφορά.

Εσωτερικά δοχεία:

δοχεία που απαιτούν μία εξωτερική συσκευασία για να αποδώσουν τη λειτουργία συγκράτησής τους.

Μέγιστη χωρητικότητα (όπως χρησιμοποιείται στο Μέρος III):

ο μέγιστος εσωτερικός όγκος των δοχείων ή των συσκευασιών εκφρασμένος σε λίτρα.

Μέγιστο καθαρό βάρος:

το μέγιστο καθαρό βάρος περιεχομένου σε μία μόνη συσκευασία ή το μέγιστο συνδυασμένο βάρος εσωτερικών συσκευασιών και του περιεχομένου αυτών εκφρασμένο σε κιλά.

Εξωτερική συσκευασία:

η εξωτερική προστασία μίας σύνθετης ή συνδυασμένης συσκευασίας μαζί με οποιαδήποτε απορροφητικά υλικά, προστατευτικά και οποιαδήποτε άλλα εξαρτήματα απαραίτητα για να περιέχουν και να προστατεύουν εσωτερικά δοχεία ή εσωτερικές συσκευασίες.

Κόλα:

το πλήρες προϊόν της πράξης της συσκευασίας, συνιστάμενο από τη συσκευασία και το περιεχόμενο του προετοιμασμένο για αποστολή.

Συσκευασίες:

δοχεία και οποιαδήποτε άλλα εξαρτήματα ή υλικά απαραίτητα για το δοχείο για να επιτελέσει τη λειτουργία συγκράτησής του.

Δοχεία:

δοχεία συγκράτησης για την υποδοχή και το κράτημα υλών ή ειδών, συμπεριλαμβανομένων οποιωνδήποτε μέσων κλεισίματος.

Αδιαπέραστες συσκευασίες

συσκευασίες στεγανές σε ξηρό περιεχόμενο συμπεριλαμβανομένων λεπτών στερεών υλικών που παράγονται κατά τη διάρκεια της μεταφοράς.

**ΣΗΜΕΙΩΣΗ:** Τα "εσωτερικά" των "συνδυασμένων συσκευασιών" πάντα ορίζονται "εσωτερικές συσκευασίες" όχι "εσωτερικά δοχεία". Μία γυάλινη φιάλη είναι ένα παράδειγμα μίας τέτοιας "εσωτερικής συσκευασίας". Τα "εσωτερικά" των "σύνθετων συσκευασιών" κανονικά ορίζονται "εσωτερικά δοχεία". Για παράδειγμα, το "εσωτερικό" μίας σύνθετης συσκευασίας 6HA1 (πλαστικού υλικού) είναι ένα τέτοιο "εσωτερικό δοχείο" εφ' όσον είναι κανονικά όχι σχεδιασμένο να εκτελεί μία λειτουργία συγκράτησης χωρίς την "εξωτερική συσκευασία" του και δεν είναι συνεπώς μία "εσωτερική συσκευασία".

## Προσθήκη Α.5

**Κωδικοποίηση των τύπων σχεδιασμού για συσκευασίες σύμφωνα με το περιθωριακό 3510 (1) και (2)**

3511 (1) Ο κωδικός αριθμός συνίσταται από:

έναν αραβικό αριθμό που δείχνει το είδος της συσκευασίας, π.χ. βαρέλι, μπιτόνι, κ.λπ.,

ένα κεφαλαίο γράμμα ή γράμματα (λατινικοί χαρακτήρες) που δείχνουν την φύση του υλικού, π.χ. χάλυβας, ξύλο κ.λπ.,

όπου είναι απαραίτητο, ένας αραβικός αριθμός που δείχνει την κατηγορία συσκευασίας μέσα στον τύπο στον οποίο η συσκευασία ανήκει.

Στην περίπτωση σύνθετων συσκευασιών, δύο κεφαλαία γράμματα (λατινικοί χαρακτήρες) θα πρέπει να χρησιμοποιούνται. Το πρώτο θα δείχνει το υλικό του εσωτερικού δοχείου και το δεύτερο εκείνο της εξωτερικής συσκευασίας.

Στην περίπτωση συνδυασμένων συσκευασιών, μόνον ο κωδικός αριθμός για την εξωτερική συσκευασία θα πρέπει να χρησιμοποιείται.

Οι παρακάτω αριθμοί θα πρέπει να χρησιμοποιούνται για το είδος της συσκευασίας:

1. Βαρέλι
2. Ξύλινο βαρέλι
3. Μπιτόνι
4. Κιβώτιο
5. Σάκος
6. Σύνθετη συσκευασία
0. Ελαφρού περιτυπώματος μεταλλικές συσκευασίες

Τα παρακάτω κεφαλαία γράμματα θα πρέπει να χρησιμοποιούνται για τους τύπους του υλικού:

- A. Χάλυβας (όλοι οι τύποι και επεξεργασίες της επιφάνειας)
- B. Αλουμίνιο
- C. Φυσικό ξύλο
- D. Κόντρα πλακέ
- F. Ανάσυσταμένο ξύλο
- G. Φύλλο φάιμπερ
- H. Πλαστικό υλικό, συμπεριλαμβανομένου τεταμένου πλαστικού υλικού
- L. Ύφασμα
- M. Χαρτί, πολλαπλών τοιχωμάτων
- N. Μέταλλο (άλλο από χάλυβα ή αλουμίνιο)
- P. Γυαλί, πορσελάνη ή ψαμμάργιλος

(2) Τρεις ομάδες συσκευασίας προσφέρονται για τις ειδικές απαιτήσεις για κάθε κλάση, σύμφωνα με τον βαθμό κινδύνου που παρουσιάζεται από τις προς μεταφορά ύλες:

- |                   |      |   |
|-------------------|------|---|
| Ομάδα συσκευασίας | I :  | για ύλες της ομάδας (a),                              |
| Ομάδα συσκευασίας | II : | για ύλες της ομάδας (b),                              |
| Ομάδα συσκευασίας | III: | για ύλες της ομάδας (c) των ειδών στον κατάλογο υλών. |

Ο κωδικός αριθμός της συσκευασίας θα πρέπει να ακολουθείται στο μαρκάρισμα από ένα γράμμα που δείχνει τις ομάδες υλών για τις οποίες ο τύπος σχεδιασμού είναι εγκεκριμένος ως ακολούθως:

- |   |   |
|---|---|
| X | για συσκευασίες για ύλες στις ομάδες συσκευασίας I έως III,     |
| Y | για συσκευασίες για ύλες στις ομάδες συσκευασίας II και III και |
| Z | για συσκευασίες για ύλες στην ομάδα συσκευασίας III.            |

## Προσθήκη Α.5

## Μαρκάρισμα

3512

**ΣΗΜΕΙΩΣΗ:** Το μαρκάρισμα δείχνει ότι η συσκευασία που το φέρει αντιστοιχεί σ' έναν επιτυχώς ελεγμένο τύπο σχεδιασμού και ότι συμφωνεί με τις διατάξεις αυτής της Προσθήκης που σχετίζονται με την κατασκευή, αλλά όχι με τη χρήση, της συσκευασίας. Από μόνο του, συνεπώς, το σήμα δεν επιβεβαιώνει απαραίτητα ότι η συσκευασία μπορεί να χρησιμοποιείται για οποιαδήποτε ύλη: γενικά ο τύπος συσκευασίας (π.χ. χαλύβδινο βαρέλι), η μέγιστη χωρητικότητα του και/ή βάρος, και οποιεσδήποτε ειδικές απαιτήσεις είναι προκαθορισμένες για κάθε ύλη στα κατάλληλα περιθωριακά συσκευασίας στις κλάσεις.

(1) Κάθε συσκευασία θα πρέπει να φέρει μαρκάρια που να είναι διαρκή, ευανάγνωστα και τοποθετημένα σε μία τοποθεσία και τέτοιου μεγέθους σχετικού με τη συσκευασία ώστε να είναι άμεσα ορατά. Για κόλα με μικτό βάρος μεγαλύτερο από 30 kg, τα μαρκάρια ή ένα αντίτυπο αυτών θα πρέπει να εμφανίζονται πάνω στην κορυφή ή σε μία πλευρά της συσκευασίας. Γράμματα, αριθμοί και σύμβολα θα πρέπει να έχουν ύψος τουλάχιστον 12 mm, εκτός από τις συσκευασίες των 30 λίτρων ή 30 kg χωρητικότητας ή λιγότερο, όπου θα πρέπει να είναι τουλάχιστον 6 mm σε ύψος και τις συσκευασίες των 5 λίτρων ή 5 kg ή λιγότερο όπου θα πρέπει να είναι κατάλληλου μεγέθους. Το μαρκάρισμα για νέες συσκευασίες κατασκευασμένες σε συμφωνία με τον εγκεκριμένο τύπο σχεδιασμού συνίσταται από:

- (a) (i) το σύμβολο  για συσκευασίες σύμφωνα με το περιθωριακό 3510 (1).

Για μεταλλικές συσκευασίες πάνω στις οποίες το μαρκάρισμα είναι σφραγισμένο, τα γράμματα O.H.E. μπορούν να ισχύουν αντί του συμβόλου.

- (ii) το  σύμβολο "ADR" (ή "RID/ADR" για συσκευασίες εγκεκριμένες για σιδηροδρομική μεταφορά καθώς και για οδική μεταφορά) αντί του συμβόλου

για συσκευασίες  σύμφωνα με το περιθωριακό 3510 (2),

- (b) τον κωδικό αριθμό της συσκευασίας σε συμφωνία με το περιθωριακό 3511 (1),

- (c) έναν κωδικό σε δύο μέρη:

- (i) ένα γράμμα (X, Y ή Z) που να δείχνει την(τις) ομάδα(ες) συσκευασίας για την(τις) οποία(ες) ο τύπος σχεδιασμού έχει εγκριθεί,

- (ii) για συσκευασίες χωρίς εσωτερικές συσκευασίες, προοριζόμενες να περιέχουν υγρά που έχουν ιξώδες στους 23 °C 200 mm<sup>2</sup>/s ή μικρότερο, η σχετική πυκνότητα (στρογγυλοποιημένη στο πρώτο δεκαδικό), στην οποία ο τύπος σχεδιασμού έχει ελεγχθεί εάν είναι μεγαλύτερη από 1.2.

Για συσκευασίες προοριζόμενες να περιέχουν υγρά που έχουν ιξώδες στους 23 °C μεγαλύτερο από 200 mm<sup>2</sup>/s, στερεά ή εσωτερικές συσκευασίες και για ελαφρού περιτυπώματος μεταλλικές συσκευασίες, μετακινούμενης κεφαλής, προοριζόμενες για ύλες της Κλάσης 3, 5<sup>ο</sup>(c), το μέγιστο μικτό βάρος σε κιλά,

- (iii) για συσκευασίες προοριζόμενες να περιέχουν ύλες της Κλάσης 6.2, 1<sup>ο</sup> και 2<sup>ο</sup>, 'Κλάση 6.2' θα πρέπει να χρησιμοποιείται αντί των πληροφοριών που απαιτούνται στο (i) ή (ii),

## Προσθήκη Α.5

3512  
(συνεχ.)

- (d) είτε ένα γράμμα "S" που δείχνει ότι η συσκευασία είναι προοριζόμενη να περιέχει υγρά που έχουν ιξώδες στους 23 °C μεγαλύτερο από 200 mm<sup>2</sup>/s, στερεά ή εσωτερικές συσκευασίες και για ελαφρού περιτυπώματος μεταλλικές συσκευασίες, μετακινούμενης κεφαλής, προοριζόμενες για ύλες της Κλάσης 3, 5<sup>(c)</sup>, είτε, όπου ένας έλεγχος υδραυλικής πίεσης έχει επιτυχώς περαστεί, η πίεση ελέγχου σε kPa στρογγυλοποιημένη στα πλησιέστερα 10 kPa.,
- (e) τον χρόνο κατασκευής (τα τελευταία δύο ψηφία). Επιπλέον για συσκευασίες των τύπων IH και 3H, τον μήνα κατασκευής. Αυτό το μέρος του μαρκαρίσματος μπορεί να τοποθετηθεί σε μία διαφορετική θέση από τα άλλα στοιχεία. Μία κατάλληλη μέθοδος είναι:

- (f) το σήμα <sup>2/</sup> του κράτους στο οποίο είχε εκδοθεί η έγκριση,
- (g) είτε έναν αριθμό εγγραφής και την ονομασία ή σήμα του κατασκευαστή είτε κάποιο άλλο χαρακτηριστικό σήμα της συσκευασίας που προκαθορίζεται από τις αρμόδιες αρχές.

(2) Κάθε επαναχρησιμοποιήσιμη συσκευασία υποκείμενη στην υποβολή σε διαδικασία επιδιόρθωσης που θα μπορούσε να σβήσει τα μαρκαρίσματα της συσκευασίας θα πρέπει να φέρει τα σήματα που υποδεικνύονται στο (1) (a) έως (e) σε μόνιμη μορφή. Τα σήματα είναι μόνιμα εάν είναι ικανά να αντέχουν στην διαδικασία επιδιόρθωσης (π.χ. ανάγλυφα). Για συσκευασίες άλλες από μεταλλικά βαρέλια χωρητικότητας μεγαλύτερης από 100 λίτρα, αυτά τα μόνιμα σήματα μπορούν να αντικαταστήσουν τα αντίστοιχα διαρκή μαρκαρίσματα που ορίζονται στο (1). Επιπλέον των διαρκών μαρκαρισμάτων που ορίζονται στο (1), κάθε νέο μεταλλικό βαρέλι χωρητικότητας μεγαλύτερης από 100 λίτρα θα πρέπει να φέρει τα σήματα που περιγράφονται στο (1) (a) έως (e) πάνω στη βάση, με μία ένδειξη του ονομαστικού πάχους τουλάχιστον του μετάλλου που χρησιμοποιείται στο σώμα (σε mm, έως 0.1 mm), σε μόνιμη μορφή (π.χ. ανάγλυφα). Όταν το ονομαστικό πάχος οποιασδήποτε κεφαλής ενός μεταλλικού βαρελιού είναι λεπτότερο από εκείνο ενός σώματος, τα ονομαστικά πάχη της κορυφιαίας κεφαλής, του σώματος, και της κεφαλής του πυθμένα θα πρέπει να είναι μαρκαρισμένα πάνω στον πυθμένα σε μόνιμη μορφή (π.χ. ανάγλυφα), για παράδειγμα 1.0 - 1.2 - 1.0' ή 0.9 - 1.0 - 1.0'. Τα ονομαστικά πάχη του μετάλλου θα πρέπει να προσδιορίζονται σύμφωνα με το κατάλληλο πρότυπο ISO, π.χ. ISO 3574 : 1986 χαλύβδινα βαρέλια. Τα σήματα που υποδεικνύονται στο (1) (f) και (g) δεν θα πρέπει να εφαρμόζονται σε μόνιμη μορφή (π.χ. ανάγλυφα) εκτός όπως ορίζεται για παρακάτω.

Για κατασκευασμένα μεταλλικά βαρέλια, εάν δεν υπάρχει αλλαγή στον τύπο συσκευασίας και αντικατάσταση ή απομάκρυνση ακεραίων δομικών εξαρτημάτων, τα απαιτούμενα μαρκαρίσματα δεν χρειάζεται να είναι μόνιμα (π.χ. ανάγλυφα). Κάθε άλλο επανακατασκευασμένο μεταλλικό βαρέλι θα πρέπει να φέρει τα μαρκαρίσματα στο (1) (a) έως (e) σε μόνιμη μορφή (π.χ. ανάγλυφα) πάνω στην κορυφιαία κεφαλή ή πλευρά.

<sup>2/</sup> Διακριτικό σήμα για μηχανοκίνητα οχήματα σε διεθνή διακίνηση που ορίστηκε στο Συνέδριο της Βιέννης για την Οδική Διακίνηση (1968).

## Προσθήκη Α.5

**3512** Μεταλλικά βαρέλια κατασκευασμένα από υλικά (π.χ. ανοξείδωτο χάλυβα) σχεδιασμένα για να (συνεχ.) επαναχρησιμοποιούνται επανειλημμένα μπορούν να φέρουν τα μαρκαρίσματα που υποδεικνύονται στο 1 (f) και (g) σε μόνιμη μορφή (π.χ. ανάγλυφα).

(3) Ο αριθμός καταχώρησης ισχύει για μόνον έναν τύπο σχεδιασμού ή σειρά τύπων σχεδιασμού. Διαφορετικές επιφανειακές επεξεργασίες μπορούν να πέσουν μέσα στον ίδιο τύπο σχεδιασμού.

Μία "σειρά τύπων σχεδιασμού" σημαίνει συσκευασίες του ίδιου δομικού σχεδιασμού, πάχους τοιχωμάτων, υλικού και τομής, που διαφέρουν μόνον στα μικρότερα ύψη σχεδιασμού τους από τον εγκεκριμένο τύπο σχεδιασμού.

Τα πάματα των δοχείων θα πρέπει να μπορούν να καθορίζονται ως εκείνα που αναφέρονται στην αναφορά ελέγχου.

(4) Μετά την επιδιόρθωση μίας συσκευασίας ο επιδιορθωτής θα πρέπει να τοποθετεί πάνω σ' αυτήν, κοντά στα διαρκή σήματα που απαιτούνται από τα (a) έως (e) την παρακάτω ακολουθία σημάτων:

- (h) το σήμα <sup>2/</sup> του κράτους στην επικράτεια του οποίου διεξήχθη η επιδιόρθωση,
- (i) την ονομασία ή επίσημο σύμβολο του επιδιορθωτή,
- (j) το έτος της επιδιόρθωσης, το γράμμα "R" και για κάθε συσκευασία που έχει επιτυχώς υποβληθεί στον έλεγχο στεγανότητας σε συμφωνία με το περιθωριακό 3500 (10), το πρόσθετο γράμμα "L".

Όταν, μετά την επιδιόρθωση, τα μαρκαρίσματα που απαιτούνται από το (1) (a) έως (d) δεν φαίνονται πιά πάνω στην κορυφαία κεφαλή ή την πλευρά ενός μεταλλικού βαρελιού, ο επιδιορθωτής θα πρέπει να τα εφαρμόζει σε μία διαρκή μορφή ακολουθούμενα από τα μαρκαρίσματα που απαιτούνται στα (h), (i) και (j). Αυτά τα μαρκαρίσματα δεν θα πρέπει να προσδιορίζουν μία μεγαλύτερη ικανότητα λειτουργίας από εκείνη για την οποία ο αρχικός τύπος σχεδιασμού έχει ελεγχθεί και μαρκαριστεί.

(5) Τα γράμματα "V" ή "W" μπορούν να ακολουθούν τον κώδικα συσκευασίας. Το γράμμα "V" υποδηλώνει μία ειδική συσκευασία [βλέπε 3550 (8)]. Το γράμμα "W" υποδηλώνει ότι η συσκευασία, παρ' ότι του ίδιου τύπου που υποδεικνύεται από τον κώδικα, είναι κατασκευασμένη με προδιαγραφές διαφορετικές από εκείνες στο μέρος III και θεωρείται ισοδύναμη υπό τις διατάξεις του περιθωριακού 3500 (14).

(6) Συσκευασίες μαρκαρισμένες σε συμφωνία με αυτό το περιθωριακό αλλά οι οποίες είχαν εγκριθεί σ' ένα Κράτος που δεν είναι Κράτος Μέλος μπορούν παρ' όλα αυτά να χρησιμοποιούνται για μεταφορά σύμφωνα μ' αυτήν την Οδηγία.

(7) Παραδείγματα των μαρκαρισμάτων

Για νέο χάλυβινο βαρέλι:

1A1/Y1.4/150/83 (a) (i), (b), (c), (d) και (e)  
 (u) NL/VL123 (f) και (g)

<sup>2/</sup> Διακριτικό σήμα για μηχανοκίνητα οχήματα σε διεθνή διακίνηση που ορίστηκε στο Συνέδριο της Βιέννης για την Οδική Διακίνηση (1968).

## Προσθήκη Α.5

**3512** Για επιδιορθωμένο χαλύβδινο βαρέλι:  
(συνεχ.)

1A1/Y1.4/150/83 (a) (i), (b), (c), (d) και (e)

NL/RB/84/RL (h), (i) και (j)

Για χαλύβδινο κιβώτιο ισοδύναμης προδιαγραφής

4AW/Y136/S/90 (a), (b), (c), (d), (e),

GB/MC123 (f) και (g)

Για νέες ελαφρού περιτυπώματος μεταλλικές συσκευασίες:

RID/ADR/0A2/Y20/S/83 (a) (ii), (b), (c), (d) και (e) Μη-μετακινούμενης κεφαλής

NL/VL 123 (f) και (g)

RID/ADR/0A2/Y/83 (a) (ii), (b), (c) και (e)

Μετακινούμενης κεφαλής,  
προοριζόμενες για υγρά με  
ιξώδες στους 23 °C  
που υπερβαίνει τα 200 mm<sup>2</sup>/s  
και για ύλες της Κλάσης 3,  
5°(c).

NL/VL 124 (f) και (g)

Για επανακατασκευασμένο χαλύβδινο βαρέλι προοριζόμενο για μεταφορά υγρών:

1A2/Y/100/91 (a) (b), (c), (d) και (e)

USA/MM5 (f) και (g)

Για κιβώτιο από φύλλο φάιμπερ προοριζόμενο να περιέχει ύλες των 1° και 2° της Κλάσης 6.2:

4G/Κλάση 6.2/S/92 (a) (i), (b), (c) (iii),

SP-9969-ERIKSSON (d), (e), (f), (g)

Για κιβώτιο από φύλλο φάιμπερ προοριζόμενο να περιέχει εσωτερικές συσκευασίες ή στερεά:

4G/Y145/S/83 (a), (b), (c), (d), (e)

NL/VL823 (f) και (g)

### Πιστοποίηση

**3513** Ο κατασκευαστής πιστοποιεί, με τοποθέτηση μαρκαρίσματος σε συμφωνία με το περιθωριακό 3512 (1) ότι οι μαζικά παραγόμενες συσκευασίες αντιστοιχούν στον εγκεκριμένο τύπο σχεδιασμού και ότι οι απαιτήσεις που αναφέρονται στην έγκριση έχουν ικανοποιηθεί.

## Προσθήκη Α.5

## Πίνακας συσκευασιών

3514 Οι παρακάτω τύποι και κωδικοί συσκευασίας καταχωρούνται:

Είδος	Υλικό	Κατηγορία	Κωδικός	Περιθωριακό
<b>Α. Σύμφωνα με το περιθωριακό 3510 (1) και μαρκαρισμένα με "Ο.Η.Ε."</b>				
1. Βαρέλια	Α. Χάλυβας	μη-μετακινούμενης κεφαλής	1A1	3520
		μετακινούμενης κεφαλής	1A2	3520 <sup>3/</sup>
	Β. Αλουμίνιο	μη-μετακινούμενης κεφαλής	1B1	3521

## Προσθήκη Α.5

3515-  
3519

## Μέρος III: Απαιτήσεις για συσκευασίες

## Α. Συσκευασίες σύμφωνα με το περιθωριακό 3510 (1)

## 3520 Χαλύβδινα βαρέλια

1A1 μη-μετακινούμενης κεφαλής

1A2 μετακινούμενης κεφαλής

- (a) Το φύλλο μετάλλου για το σώμα και τα άκρα θα πρέπει να είναι από κατάλληλο χάλυβα και περιτυπώματος κατάλληλου για τη χωρητικότητα του βαρελιού και την προοριζόμενη χρήση.
- (b) Οι ραφές του σώματος θα πρέπει να είναι συγκολλημένες στα βαρέλια που είναι προοριζόμενα να περιέχουν περισσότερο από 40 λίτρα υγρού. Οι ραφές του σώματος θα πρέπει να είναι μηχανικά ραμμένες ή συγκολλημένες στα βαρέλια που είναι προοριζόμενα να περιέχουν στερεά ή υγρά 40 λίτρων ή λιγότερο.
- (c) Οι ραφές της κεφαλής και του στομίου θα πρέπει να είναι μηχανικά ραμμένες ή συγκολλημένες.
- (d) Εάν υπάρχουν κυλιόμενα τσέρκια με βάσεις θα πρέπει να είναι προσαρμοσμένα σφιχτά πάνω στο σώμα και έτσι ασφαλισμένα ώστε να μην μπορούν να μετακινούνται. Τα κυλιόμενα τσέρκια δεν θα πρέπει να είναι στιγματικά συγκολλημένα.
- (e) Εσωτερικές επικαλύψεις μολύβδου, ψευδαργύρου, κασσιτέρου, λάκας και τα όμοια θα πρέπει να είναι σκληρές και ανθεκτικές και θα πρέπει να προσκολλούνται στο χάλυβα σε κάθε σημείο, συμπεριλαμβανομένων των πωμάτων.
- (f) Ανοίγματα για γέμισμα, άδειασμα και εξαερισμό στα σώματα ή τις κεφαλές των μη-μετακινούμενης κεφαλής (1A1) βαρελιών δεν θα πρέπει να υπερβαίνουν τα 7 cm σε διάμετρο. Βαρέλια με μεγαλύτερα ανοίγματα θεωρούνται ότι είναι του τύπου μετακινούμενης κεφαλής (1A2).
- (g) Τα πώματα θα πρέπει να έχουν ενσωματωμένη μία στεγανή φλάντζα εκτός όπου ένα κωνικό σπείρωμα εξασφαλίζει συγκρίσιμη στεγανότητα.
- (h) Πώματα των μη-μετακινούμενης κεφαλής βαρελιών θα πρέπει είτε να είναι τύπου βιδωτού σπειρώματος είτε να είναι ικανά να ασφαλίζονται από μία συσκευή βιδωτού σπειρώματος ή μία συσκευή τουλάχιστον εξίσου αποτελεσματική.
- (i) Οι συσκευές σπειρώματος για μετακινούμενης κεφαλής βαρέλια θα πρέπει να είναι έτσι σχεδιασμένες και εφαρμοσμένες ώστε να παραμένουν ασφαλείς και τα βαρέλια να παραμένουν στεγανά υπό κανονικές συνθήκες μεταφοράς. Οι φλάντζες ή άλλα στοιχεία σφραγίσματος θα πρέπει να χρησιμοποιούνται με όλες τις μετακινούμενες κεφαλές.
- (j) Μέγιστη χωρητικότητα βαρελιού: 450 λίτρα.
- (k) Μέγιστο καθαρό βάρος: 400 kg.

## 3521 Αλουμινένια βαρέλια

1B1 μη-μετακινούμενης κεφαλής

1B2 μετακινούμενης κεφαλής

## Προσθήκη Α.5

- 3521 (συνεχ.)**
- (a) Το σώμα και οι κεφαλές θα πρέπει να είναι από αλουμίνιο τουλάχιστον 99 % καθαρό, ή από ένα κράμα με βάση το αλουμίνιο που έχει αντίσταση στη διάβρωση και μηχανικές ιδιότητες κατάλληλες για τη χωρητικότητα του βαρελιού και της προοριζόμενης χρήσης του.
- (b) Ανοίγματα για γέμισμα, άδειασμα και εξαερισμό στα σώματα ή τις κεφαλές των μη-μετακινούμενης κεφαλής (1B1) βαρελιών δεν θα πρέπει να υπερβαίνουν τα 7 cm σε διάμετρο. Βαρέλια με μεγαλύτερα ανοίγματα θεωρούνται ότι είναι του τύπου μετακινούμενης κεφαλής (1B2).
- (c) Αλουμινένια βαρέλια 1B1.
- Οι ραφές στα άκρα, εάν υπάρχουν, θα πρέπει να είναι επαρκώς ενισχυμένες για την προστασία τους. Εάν υπάρχουν οποιοσδήποτε ραφές στο σώμα και τα άκρα θα πρέπει να είναι συγκολλημένες. Το πόμα θα πρέπει είτε να είναι τύπου βιδωτού σπειρώματος είτε να είναι ικανό να ασφαρίζεται με μία συσκευή βιδωτού σπειρώματος ή μία συσκευή τουλάχιστον εξίσου αποτελεσματική. Τα πόματα θα πρέπει να έχουν ενσωματωμένη μία στεγανή φλάντζα εκτός όπου ένα κωνικό σπείρωμα εξασφαλίζει συγκρίσιμη στεγανότητα.
- (d) Αλουμινένια βαρέλια 1B2.
- Το σώμα του βαρελιού θα πρέπει είτε να είναι χωρίς ραφές είτε να έχει μία συγκολλημένη ραφή. Τα πόματα θα πρέπει να είναι έτσι σχεδιασμένα και προσαρμοσμένα ώστε να παραμένουν ασφαλή και τα βαρέλια να παραμένουν στεγανά υπό κανονικές συνθήκες μεταφοράς. Φλάντζες ή άλλα σφραγιστικά στοιχεία θα πρέπει να χρησιμοποιούνται με όλες τις μετακινούμενες κεφαλές.
- (e) Μέγιστη χωρητικότητα βαρελιού : 450 λίτρα.
- (f) Μέγιστο καθαρό βάρος: 400 kg.
- 3522 Χαλύβδινα μπιτόνια**
- 3A1 μη-μετακινούμενης κεφαλής  
3A2 μετακινούμενης κεφαλής
- (a) Το σώμα και οι κεφαλές θα πρέπει να είναι κατασκευασμένες από φύλλο χάλυβα κατάλληλου τύπου και επαρκούς πάχους σε σχέση με τη χωρητικότητα του μπιτονιού και της προοριζόμενης χρήσης του.
- (b) Τα στόμια όλων των μπιτονιών θα πρέπει να είναι μηχανικά ραμμένα ή συγκολλημένα. Ραφές στο σώμα μπιτονιών προοριζόμενων να περιέχουν περισσότερο από 40 λίτρα υγρού θα πρέπει να είναι συγκολλημένες. Ραφές στο σώμα μπιτονιών προοριζόμενων να μεταφέρουν 40 λίτρα ή λιγότερο θα πρέπει να είναι μηχανικά ραμμένες ή συγκολλημένες.
- (c) Ανοίγματα σε μπιτόνια (3A1) δεν θα πρέπει να υπερβαίνουν τα 7 cm σε διάμετρο. Μπιτόνια με μεγαλύτερα ανοίγματα θεωρούνται ότι είναι του τύπου μετακινούμενης κεφαλής (3A2).
- (d) Πόματα μη-μετακινούμενης κεφαλής μπιτονιών (3A1) θα πρέπει είτε να είναι του τύπου βιδωτού σπειρώματος είτε να είναι ικανά να ασφαρίζονται με μία συσκευή βιδωτού σπειρώματος ή μία συσκευή τουλάχιστον εξίσου αποτελεσματική. Η συσκευή κλεισίματος μετακινούμενης κεφαλής μπιτονιών (3A2) θα πρέπει να είναι έτσι σχεδιασμένη και προσαρμοσμένη ώστε να παραμένει ασφαλής και τα μπιτόνια να παραμένουν στεγανά υπό κανονικές συνθήκες μεταφοράς.
- (e) Μέγιστη χωρητικότητα μπιτονιού: 60 λίτρα.
- (f) Μέγιστο καθαρό βάρος: 120 kg.

## Προσθήκη Α.5

## 3523 Βαρέλια από κόντρα πλακέ

1D

- (a) Το ξύλο που χρησιμοποιείται θα πρέπει να είναι καλά ωριμασμένο, εμπορικά ξηρό και ελεύθερο από οποιοδήποτε ελάττωμα που είναι πιθανόν να μειώσει την αποτελεσματικότητα του βαρελιού για τον προοριζόμενο σκοπό. Εάν ένα υλικό άλλο από κόντρα πλακέ χρησιμοποιείται για την κατασκευή των άκρων, θα πρέπει να είναι ποιότητας ισοδύναμης με το κόντρα πλακέ.
- (b) Κόντρα πλακέ δύο φύλλων θα πρέπει να χρησιμοποιείται για το σώμα και κόντρα πλακέ τουλάχιστον τριών φύλλων για τα άκρα. Τα φύλλα θα πρέπει να είναι σφιχτά κολλημένα μαζί, με τις ίνες τους εγκάρσιες, με μία αδιάβροχη κόλλα.
- (c) Το σώμα και τα άκρα θα πρέπει να είναι σχεδιασμού κατάλληλου για τη χωρητικότητα του βαρελιού και την προοριζόμενη χρήση του.
- (d) Για αποφυγή της μετακίνησης του περιεχομένου, τα καπάκια θα πρέπει να είναι επένδεδυμένα με χαρτί kraft ή κάποιο άλλο ισοδύναμο υλικό που θα πρέπει να είναι με ασφάλεια δεμένο στο καπάκι και να επεκτείνεται στο εξωτερικό κατά μήκος όλης της περιφέρειάς του.
- (e) Μέγιστη χωρητικότητα βαρελιού: 250 λίτρα.
- (f) Μέγιστο καθαρό βάρος: 400 kg.

## 3524 Εύλινα βαρέλια

2C1 τύπου φελλού

2C2 μετακινούμενης κεφαλής

- (a) Το ξύλο που χρησιμοποιείται θα πρέπει να είναι καλής ποιότητας, με ίσιες ίνες, καλά ωριμασμένο και ελεύθερο από ρόζους, φλοιό, σάπιο ξύλο, σομφό ξύλο ή άλλα ελαττώματα που είναι πιθανόν να μειώσουν την αποτελεσματικότητα του βαρελιού για τον προοριζόμενο σκοπό.
- (b) Το σώμα και τα άκρα θα πρέπει να είναι σχεδιασμού κατάλληλου για τη χωρητικότητα του βαρελιού και της προοριζόμενης χρήσης του.
- (c) Οι σανίδες και τα άκρα θα πρέπει να είναι κομμένα ή σχισμένα με τις ίνες έτσι ώστε να μην προεξέχει δακτύλιος περισσότερο από το μισό του πάχους μίας σανίδας ή κεφαλής.
- (d) Τα τσέρκια των βαρελιών θα πρέπει να είναι από χάλυβα ή σίδηρο και καλής ποιότητας. Τα τσέρκια των 2C2 βαρελιών με μετακινούμενες κεφαλές μπορούν να είναι από κατάλληλο σκληρό ξύλο.
- (e) Εύλινα βαρέλια 2C1:
- Η διάμετρος της οπής του φελλού δεν θα πρέπει να υπερβαίνει το μισό του πλάτους της σανίδας στην οποία βρίσκεται.
- (f) Εύλινα βαρέλια 2C2:

Οι κεφαλές θα πρέπει να προσαρμόζονται σφιχτά μέσα στα πλαίσια.

## Προσθήκη Α.5

- 3524 (g) Μέγιστη χωρητικότητα βαρελιού: 250 λίτρα.  
(συνεχ.) (h) Μέγιστο καθαρό βάρος: 400 kg.

## 3525 Βαρέλια από φάιμπερ

1G

- (a) Το σώμα του βαρελιού θα πρέπει να συνίσταται από πολλαπλά φύλλα από βαρύ χαρτί ή φύλλο φάιμπερ (χωρίς αυλακώσεις) σφιχτά κολλημένα ή φυλλαρισμένα μαζί και μπορεί να περιλαμβάνει ένα ή περισσότερα προστατευτικά στρώματα από βιτούμιο, κερωμένο χαρτί kraft, φύλλο μετάλλου, πλαστικό υλικό κ.λπ.
- (b) Οι κεφαλές θα πρέπει να είναι από φυσικό ξύλο, φύλλο φάιμπερ, μέταλλο, κόντρα πλακέ, πλαστικό ή άλλο κατάλληλο υλικό και μπορούν να περιλαμβάνουν ένα ή περισσότερα προστατευτικά στρώματα από βιτούμιο, κερωμένο χαρτί kraft, φύλλο μετάλλου, πλαστικό υλικό κ.λπ.
- (c) Το σώμα και οι κεφαλές του βαρελιού και οι συνδέσεις τους θα πρέπει να είναι σχεδιασμού κατάλληλου για τη χωρητικότητα του βαρελιού και την προοριζόμενη χρήση του.
- (d) Η συναρμολογημένη συσκευασία θα πρέπει να είναι επαρκώς αδιάβροχη έτσι ώστε να μην αποφυλώνεται υπό κανονικές συνθήκες μεταφοράς.
- (e) Μέγιστη χωρητικότητα βαρελιού: 450 λίτρα.
- (f) Μέγιστο καθαρό βάρος: 400 kg.

## 3526 Πλαστικά βαρέλια και μπιτόνια

- 1H1 βαρέλια, μη-μετακινούμενης κεφαλής  
1H2 βαρέλια, μετακινούμενης κεφαλής  
3H1 μπιτόνια, μη-μετακινούμενης κεφαλής  
3H2 μπιτόνια, μετακινούμενης κεφαλής

- (a) Οι συσκευασίες θα πρέπει να είναι ικανές να αντέχουν τις φυσικές (συγκεκριμένα μηχανικές και θερμικές) και χημικές καταπονήσεις που είναι αναμενόμενες στη μεταφορά και να παραμένουν στεγανές. Θα πρέπει να είναι ικανές να αντέχουν επικίνδυνες ύλες και τους ατμούς τους. Θα πρέπει επίσης να έχουν τον απαραίτητο βαθμό αντίστασης στη γήρανση και την υπεριώδη ακτινοβολία. Οι συσκευασίες θα πρέπει να είναι ασφαλείς στον χειρισμό.
- (b) Εκτός εάν αλλιώς έχει εγκριθεί από την αρμόδια αρχή, η επιτρεπόμενη περίοδος χρήσης για τη μεταφορά επικίνδυνων υλών δεν θα πρέπει να υπερβαίνει τα πέντε χρόνια, από την ημερομηνία κατασκευής της συσκευασίας, εκτός όπου μία βραχύτερη περίοδος χρήσης ορίζεται λόγω της φύσης της προς μεταφορά ύλης.
- (c) Εάν απαιτείται προστασία έναντι υπεριώδους ακτινοβολίας, θα πρέπει να δίνεται με την προσθήκη αιθάλης ή άλλων κατάλληλων χρωστικών ή αναστολέων. Αυτά τα πρόσθετα θα πρέπει να είναι συμβατά με το περιεχόμενο και να παραμένουν αποτελεσματικά καθ' όλη τη ζωή της συσκευασίας. Όπου χρησιμοποιείται αιθάλη, χρωστικές ή αναστολείς άλλοι από εκείνους που χρησιμοποιούνται στην κατασκευή του ελεγμένου τύπου σχεδιασμού, ο επανέλεγχος μπορεί να παραλείπεται εάν η περιεκτικότητα σε αιθάλη δεν υπερβαίνει το 2 % κατά βάρος ή εάν η περιεκτικότητα σε χρωστική δεν υπερβαίνει το 3 % κατά βάρος. Δεν υπάρχει όριο για την περιεκτικότητα σε αναστολείς της υπεριώδους ακτινοβολίας.

## Προσθήκη Α.5

- 3526 (d)** Πρόσθετα που εξηηρετούν σκοπούς άλλους από την προστασία έναντι υπερϊδους ακτινοβολίας μπορούν να συμπεριλαμβάνονται στη σύνθεση του πλαστικού υλικού υπό την προϋπόθεση ότι δεν επηρεάζουν δυσμενώς τις χημικές και φυσικές ιδιότητες του υλικού της συσκευασίας. Σε τέτοιες περιπτώσεις, ο επανέλεγχος μπορεί να παραλείπεται.
- (e)** Κατάλληλα μέτρα θα πρέπει να λαμβάνονται ώστε να εξασφαλίζεται ότι το πλαστικό υλικό που πρόκειται να χρησιμοποιηθεί στην κατασκευή της συσκευασίας είναι χημικώς συμβατό με τα εμπορεύματα που η συσκευασία είναι προοριζόμενη να περιέχει, [βλέπε περιθωριακό 3551 (5)].
- (f)** Οι συσκευασίες θα πρέπει να είναι κατασκευασμένες από κατάλληλο πλαστικό υλικό γνωστής προέλευσης και προδιαγραφών. Η κατασκευή τους θα πρέπει να είναι πλήρως κατάλληλη για πλαστικά υλικά και σε συμφωνία με τις τεχνολογικές εξελίξεις. Για νέες συσκευασίες, κανένα μεταχειρισμένο υλικό πέραν από υπόλοιπα παραγωγής ή τορναρίσματα από την ίδια παραγωγική διαδικασία δεν μπορούν να χρησιμοποιούνται.
- (g)** Το πάχος τοιχωμάτων σε κάθε σημείο της συσκευασίας θα πρέπει να είναι κατάλληλο για την χωρητικότητα της και την προοριζόμενη χρήση της, λαμβανομένων πάντως υπόψη των καταπονήσεων στις οποίες κάθε σημείο υπόκειται.
- (h)** Τα ανοίγματα για γέμισμα, άδειασμα και εξαερισμό στα σώματα ή τις κεφαλές των μη-μετακινούμενης κεφαλής βαρελιών (1H1) και μπιτονιών (3H1) δεν θα πρέπει να υπερβαίνουν τα 7 cm σε διάμετρο. Βαρέλια και μπιτόνια με μεγαλύτερα ανοίγματα θεωρούνται ότι είναι του τύπου μετακινούμενης κεφαλής (1H2, 3H2).
- (i)** Μετακινούμενης κεφαλής βαρέλια (1H2) και μπιτόνια (3H2) που χρησιμοποιούνται για στερεές ύλες θα πρέπει να παραμένουν στεγανά σε κάθε σημείο αναφορικά με την πληρωτική ύλη.

Τα πάματα των μη-μετακινούμενης κεφαλής βαρελιών και μπιτονιών (1H1, 3H1) θα πρέπει είτε να είναι του τύπου βιδωτού σπειρώματος είτε να είναι ικανά να ασφαλιζονται με μία συσκευή βιδωτού σπειρώματος ή μία συσκευή τουλάχιστον εξίσου αποτελεσματική. Η συσκευή κλεισίματος των μετακινούμενης κεφαλής βαρελιών και μπιτονιών (1H2, 3H2) θα πρέπει να είναι έτσι σχεδιασμένη και προσαρμοσμένη ώστε να παραμένει ασφαλής και τα βαρέλια ή μπιτόνια να παραμένουν στεγανά υπό κανονικές συνθήκες μεταφοράς.

Οι φλάντζες θα πρέπει να χρησιμοποιούνται με όλες τις μετακινούμενες κεφαλές εκτός εάν ο σχεδιασμός του βαρελιού ή μπιτονιού είναι τέτοιος ώστε, όπου η μετακινούμενη κεφαλή είναι σωστά ασφαλισμένη, το βαρέλι ή μπιτόνι να είναι από μόνο του στεγανό.

- (j)** Η μέγιστη επιτρεπτή διείσδυση για άφλεκτα υγρά θα πρέπει να είναι 0.008g/l.h στους 23 °C (βλέπε περιθωριακό 3556).
- (k)** Μέγιστη χωρητικότητα βαρελιών και μπιτονιών:
- |           |           |
|-----------|-----------|
| 1H1, 1H2: | 450 λίτρα |
| 3H1, 3H2: | 60 λίτρα  |
- (l)** Μέγιστο καθαρό βάρος:
- |           |         |
|-----------|---------|
| 1H1, 1H2: | 400 kg  |
| 3H1, 3H2: | 120 kg. |

**3527 Κιβώτια από φυσικό ξύλο**

- 4C1 κοινά  
4C2 με αδιαπέραστα τοιχώματα

## Προσθήκη Α.5

**3527 ΣΗΜΕΙΩΣΗ:** Για κιβώτια από κόντρα πλακέ, βλέπε περιθωριακό 3528: για κιβώτια από (συνεχ.) ανασυσταμένο ξύλο, βλέπε περιθωριακό 3529.

- (a) Το ξύλο που χρησιμοποιείται θα πρέπει να είναι καλά ωριμασμένο, εμπορικά ξηρό και ελεύθερο από ελαττώματα που θα μπορούσαν σημαντικά να μειώσουν την ισχύ οποιουδήποτε μέρους του κιβωτίου. Η ισχύς του υλικού που χρησιμοποιείται και η μέθοδος κατασκευής θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του κιβωτίου και της προοριζόμενης χρήσης του. Οι κορυφές και οι πυθμένες μπορούν να είναι κατασκευασμένοι από αδιάβροχο ανασυσταμένο ξύλο τέτοιου όπως σκληρό ξύλο, νοβοπάν ή άλλος κατάλληλος τύπος.

Τα στερεώματα θα πρέπει να είναι ανθεκτικά στη δόννηση που συμβαίνει υπό κανονικές συνθήκες μεταφοράς. Κάρφωμα των ινών των άκρων θα πρέπει να αποφεύγεται όποτε είναι πρακτικώς δυνατόν. Οι συνδέσεις που είναι πιθανόν να καταπονηθούν σημαντικά θα πρέπει να είναι κατασκευασμένες με τη χρήση πριτσινωμένων ή δακτυλιοειδών καρφιών ή ισοδύναμων στερεωμάτων.

- (b) Κιβώτια με αδιαπέραστα τοιχώματα 4C2:

Κάθε μέρος του κιβωτίου θα πρέπει να είναι μονοκόμματο ή κάτι ισοδύναμο. Ένα μέρος θα πρέπει να θεωρείται ισοδύναμο με ένα μονοκόμματο μέρος εάν είναι κολλημένο με μία από τις παρακάτω μεθόδους: Άρθρωση Lindermann (χελιδονουρά), άρθρωση τύπου γλώσσα-και-εγκοπή, άρθρωση ship-lap ή άρθρωση αρμού, ή σύνδεση λαβής με τουλάχιστον δύο αυλακωτά μεταλλικά στερεώματα σε κάθε άρθρωση.

- (c) Μέγιστο καθαρό βάρος: 400 kg.

**3528 Κιβώτια από κόντρα πλακέ.**

4D

- (a) Το κόντρα πλακέ που χρησιμοποιείται θα πρέπει να έχει τουλάχιστον τρία φύλλα. Θα πρέπει να είναι κατασκευασμένο από καλά ωριμασμένο περιστροφικά κομμένο, σε φέτες ή πριονισμένο φύλλο αντικολλητού εμπορικά ξηρό και ελεύθερο από ελαττώματα που είναι πιθανόν να μειώσουν την ισχύ του κιβωτίου. Όλα τα φύλλα θα πρέπει να είναι κολλημένα με αδιάβροχη κόλλα. Άλλα κατάλληλα υλικά μπορούν να χρησιμοποιούνται μαζί με κόντρα πλακέ στην κατασκευή των κιβωτίων. Τα κιβώτια θα πρέπει να είναι σφικτά καρφωμένα ή ασφαλισμένα στις γωνίες ή τα άκρα ή να είναι μονταρισμένα με άλλη εξίσου κατάλληλη συσκευή.

- (b) Μέγιστο καθαρό βάρος: 400 kg.

**3529 Κιβώτια από ανασυσταμένο ξύλο**

4F

- (a) Τα τοιχώματα των κιβωτίων θα πρέπει να είναι κατασκευασμένα από αδιάβροχο ανασυσταμένο ξύλο τέτοιου όπως σκληρό ξύλο, νοβοπάν ή άλλον κατάλληλο τύπο. Η ισχύς του υλικού που χρησιμοποιείται και η μέθοδος κατασκευής θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του κιβωτίου και της προοριζόμενης χρήσης του.

- (b) Άλλα μέρη των κιβωτίων μπορούν να είναι κατασκευασμένα από άλλο κατάλληλο υλικό.

- (c) Τα κιβώτια θα πρέπει να είναι με ασφάλεια μονταρισμένα με κατάλληλη συσκευή.

- (d) Μέγιστο καθαρό βάρος: 400 kg.

## Προσθήκη Α.5

3530 *Κιβώτια από φύλλο φάιμπερ*

4G

- (a) Καλής ποιότητας στερεό ή διπλής όψης (μονών ή πολλαπλών τοιχωμάτων) αυλακωτό φύλλο φάιμπερ κατάλληλο για τη χωρητικότητα και την προοριζόμενη χρήση των κιβωτίων θα πρέπει να χρησιμοποιείται. Η αντίσταση στο νερό της εξωτερικής επιφάνειας θα πρέπει να είναι τέτοια ώστε η αύξηση σε βάρος, όπως μετράται σε έναν έλεγχο που διεξάγεται σε μία περίοδο 30 λεπτών με τη μέθοδο προσδιορισμού της απορρόφησης νερού Cobb, να μην είναι μεγαλύτερη από  $155 \text{ g/m}^2$  (σε συμφωνία με το Διεθνές Πρότυπο ISO 535:1991). Το φύλλο φάιμπερ θα πρέπει να είναι ικανό να λυγίζει επαρκώς χωρίς να σπάει. Θα πρέπει να είναι κομμένο, ζαρωμένο χωρίς ραγμές και αυλακωμένο έτσι ώστε να επιτρέπει το μοντάρισμα χωρίς τσάκισμα και χωρίς αδικαιολόγητο σχίσμο ή φουσκώμα των επιφανειών του. Η ράβδωση του αυλακωτού φύλλου φάιμπερ θα πρέπει να είναι σφιχτά κολλημένη στις όψεις.
- (b) Τα άκρα των κιβωτίων μπορούν να έχουν ένα ξύλινο πλαίσιο ή να είναι εξ ολοκλήρου από ξύλο ή άλλο κατάλληλο υλικό. Ενισχύσεις των ξύλινων ράβδων στερέωσης ή άλλο κατάλληλο υλικό μπορεί να χρησιμοποιείται.
- (c) Οι συνδέσεις των κιβωτίων θα πρέπει να είναι τυλιγμένες με κολλητική ταινία, να είναι περιτυλιγμένες και κολλημένες, ή να είναι περιτυλιγμένες και μεταλλικά συνδεδεμένες. Οι περιτυλιγμένες συνδέσεις θα πρέπει να έχουν κατάλληλη επικάλυψη. Όπου επενεργείται κλείσιμο με κόλλημα ή εφαρμογή κολλητικής ταινίας, η κόλλα θα πρέπει να είναι αδιάβροχη.
- (d) Οι διαστάσεις του κιβωτίου θα πρέπει να είναι κατάλληλες για το περιεχόμενο.
- (e) Μέγιστο καθαρό βάρος: 400 kg.

3531 *Πλαστικά κιβώτια*

4H1 κιβώτια από τεταμένο πλαστικό

4H2 κιβώτιο από στερεό πλαστικό

- (a) Το κιβώτιο θα πρέπει να είναι κατασκευασμένο από κατάλληλο πλαστικό υλικό και να είναι επαρκούς αντοχής σε σχέση με τη χωρητικότητα και την προοριζόμενη χρήση του. Το κιβώτιο θα πρέπει να είναι επαρκώς ανθεκτικό στη γήρανση και στην υποβάθμιση που δημιουργείται είτε από την περιεχόμενη ύλη είτε από υπεριώδη ακτινοβολία.
- (b) Ένα κιβώτιο από τεταμένο πλαστικό θα πρέπει να περιλαμβάνει δύο μέρη κατασκευασμένα από ένα χιτό τεταμένο πλαστικό υλικό, ένα κατώτερο μέρος που περιέχει κοιλώματα για τις εσωτερικές συσκευασίες και ένα κορυφαίο μέρος που καλύπτει και συνδέεται με το κατώτερο μέρος. Οι κορυφαίοι και κατώτεροι τομείς θα πρέπει να είναι σχεδιασμένοι έτσι ώστε οι εσωτερικές συσκευασίες να προσαρμόζονται άνετα. Το κάλυμμα του κλεισίματος για οποιαδήποτε εσωτερική συσκευασία δεν θα πρέπει να είναι σε επαφή με το εσωτερικό του κορυφαίου μέρους αυτού του κιβωτίου.
- (c) Για αποστολή, ένα κιβώτιο από τεταμένο πλαστικό θα πρέπει να είναι κλεισμένο με αυτοκόλλητη ταινία που έχει αρκετή ελαστική αντοχή για την παρεμπόδιση του ανοίγματος του κιβωτίου. Η κολλητική ταινία θα πρέπει να είναι ανθεκτική στις καιρικές συνθήκες και η κόλλα της να είναι συμβατή με το τεταμένο πλαστικό υλικό του κιβωτίου. Άλλες συσκευές κλεισίματος τουλάχιστον εξίσου αποτελεσματικές μπορούν να χρησιμοποιούνται.
- (d) Για κιβώτια από στερεό πλαστικό, η προστασία έναντι υπεριώδους ακτινοβολίας, εάν απαιτείται, θα πρέπει να δίνεται με την προσθήκη αιθάλης ή άλλων κατάλληλων χρωστικών ή αναστολέων. Αυτά τα πρόσθετα θα πρέπει να είναι συμβατά με το

## Προσθήκη Α.5

3531  
(συνεχ.)

περιεχόμενο και να παραμένουν αποτελεσματικά καθ' όλη τη ζωή του κιβωτίου. Όπου χρησιμοποιείται αιθάλη, χρωστικές ή αναστολείς πέραν εκείνων που χρησιμοποιούνται στην κατασκευή του ελεγμένου τύπου σχεδιασμού, ο επανέλεγχος μπορεί να παραλείπεται εάν η περιεκτικότητα σε αιθάλη δεν υπερβαίνει το 2 % κατά βάρος ή εάν η περιεκτικότητα σε χρωστική δεν υπερβαίνει το 3 % κατά βάρος. Δεν υπάρχει περιορισμός για την περιεκτικότητα σε αναστολείς της υπεριώδους ακτινοβολίας.

- (e) Τα κιβώτια από στερεό πλαστικό θα πρέπει να έχουν συσκευές κλεισίματος κατασκευασμένες από κατάλληλο υλικό επαρκούς αντοχής και έτσι σχεδιασμένες ώστε να παρεμποδίζεται τυχόν ακούσιο άνοιγμα του κιβωτίου.
- (f) Πρόσθετα που εξυπηρετούν σκοπούς πέραν από την προστασία έναντι υπεριώδους ακτινοβολίας μπορούν να συμπεριλαμβάνονται στη σύνθεση του πλαστικού υλικού των κιβωτίων 4H1 και 4H2 υπό την προϋπόθεση ότι δεν επηρεάζουν δυσμενώς τις χημικές και φυσικές ιδιότητες του υλικού. Σε τέτοιες περιπτώσεις, ο επανέλεγχος μπορεί να παραλείπεται.
- (g) Μέγιστο καθαρό βάρος:

4H1:	60 kg.
4H2:	400 kg.

3532 *Κιβώτια από χάλυβα ή αλουμίνιο*4A χάλυβας  
4B αλουμίνιο

- (a) Η αντοχή του μετάλλου και η κατασκευή του κιβωτίου θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του κιβωτίου και την προοριζόμενη χρήση του.
- (b) Τα κιβώτια θα πρέπει να είναι επενδεδυμένα με φύλλο φάιμπερ ή τσόχινα κομμάτια συσκευασίας όπως απαιτείται ή θα πρέπει να έχουν εσωτερική επένδυση ή επικάλυψη κατάλληλου υλικού. Εάν διπλής ραφής μεταλλική επένδυση χρησιμοποιείται, μέτρα θα πρέπει να λαμβάνονται για την παρεμπόδιση της εισόδου των υλών μέσα στις εσοχές των ραφών.
- (c) Τα πάματα μπορούν να είναι οποιουδήποτε κατάλληλου τύπου. Θα πρέπει να παραμένουν ασφαλισμένα υπό κανονικές συνθήκες μεταφοράς.
- (d) Μέγιστο καθαρό βάρος: 400 kg.

3533 *Υφασμάτινοι σάκοι*5L1 χωρίς εσωτερική επένδυση ή επικάλυψη  
5L2 αδιαπέραστοι  
5L3 αδιάβροχοι

- (a) Τα υφάσματα που χρησιμοποιούνται θα πρέπει να είναι καλής ποιότητας. Η αντοχή του υφάσματος και η κατασκευή του σάκου θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του σάκου και της προοριζόμενης χρήσης του.
- (b) Σάκοι, αδιαπέραστοι, 5L2.

Ο σάκος θα πρέπει να είναι φτιαγμένος αδιαπέραστος, για παράδειγμα με τη χρήση:

χαρτιού προσκολλημένου στην εσωτερική επιφάνεια του σάκου με αδιάβροχη κόλλα τέτοια όπως το βιτούμιο, ή

## Προσθήκη Α.5

3533  
(συνεχ.)

πλαστικού φιλμ προσκολλημένου στην εσωτερική επιφάνεια του σάκου, ή

μίας ή περισσότερων εσωτερικών επενδύσεων κατασκευασμένων από χαρτί ή πλαστικό υλικό.

## (c) Σάκοι, αδιάβροχοι, 5L3

Για την παρεμπόδιση οποιασδήποτε εισόδου υγρασίας ο σάκος θα πρέπει να είναι φτιαγμένος αδιάβροχος, για παράδειγμα με τη χρήση:

ξεχωριστών εσωτερικών επενδύσεων αδιάβροχου χαρτιού (π.χ. κερωμένο χαρτί kraft, πισσωμένο χαρτί ή χαρτί kraft επικαλυμμένο με πλαστικό), ή

πλαστικού φιλμ προσκολλημένου στην εσωτερική επιφάνεια του σάκου, ή

μίας ή περισσότερων εσωτερικών επενδύσεων κατασκευασμένων από πλαστικό υλικό.

## (d) Μέγιστο καθαρό βάρος:

50 kg.

## 3534 Σάκοι από πλεγμένο πλαστικό

5H1 χωρίς εσωτερική επένδυση ή επικάλυψη

5H2 αδιαπέραστοι

5H3 αδιάβροχοι

(a) Οι σάκοι θα πρέπει να είναι κατασκευασμένοι από τεντωμένες ταινίες ή τεντωμένα μονά νήματα κατάλληλου πλαστικού υλικού. Η αντοχή του υλικού που χρησιμοποιείται και η κατασκευή του σάκου θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του σάκου και την προοριζόμενη χρήση του.

(b) Οι σάκοι μπορούν να είναι εξοπλισμένοι με εσωτερική επένδυση από πλαστικό φιλμ ή να έχουν μία λεπτή εσωτερική επικάλυψη πλαστικού υλικού.

(c) Εάν η ύφανση είναι επίπεδη, οι σάκοι θα πρέπει να σχηματίζονται με ράψιμο ή κάποια άλλη μέθοδο που να εξασφαλίζει το κλείσιμο του πυθμένα και μίας πλευράς. Εάν η ύφανση είναι σωληνοειδής, ο πυθμένας του σάκου θα πρέπει να είναι κλεισμένος με ραφή, πλέξιμο ή κάποια άλλη εξίσου ανθεκτική μέθοδο κλεισίματος.

## (d) Σάκοι, αδιαπέραστοι, 5H2:

Οι σάκοι θα πρέπει να είναι φτιαγμένοι αδιαπέραστοι, για παράδειγμα με:

χαρτί ή ένα πλαστικό φιλμ προσκολλημένο στην εσωτερική επιφάνεια του σάκου, ή

μία ή περισσότερες ξεχωριστές εσωτερικές επενδύσεις κατασκευασμένες από χαρτί ή πλαστικό υλικό.

## (e) Σάκοι, αδιάβροχοι, 5H3

Για την παρεμπόδιση οποιασδήποτε εισόδου υγρασίας, ο σάκος θα πρέπει να είναι φτιαγμένος αδιάβροχος, π.χ. με:

ξεχωριστές εσωτερικές επενδύσεις από αδιάβροχο χαρτί (π.χ. κερωμένο χαρτί kraft, διπλά πισσωμένο χαρτί kraft ή χαρτί kraft με πλαστική επικάλυψη),

## Προσθήκη Α.5

**3534** πλαστικό φιλμ προσκολλημένο στην εσωτερική ή εξωτερική επιφάνεια του σάκου, ή  
(συνεχ.) μία ή περισσότερες εσωτερικές πλαστικές επενδύσεις.

(f) Μέγιστο καθαρό βάρος: 50 kg.

**3535** Σάκοι από πλαστικό φιλμ

5H4

(a) Οι σάκοι θα πρέπει να είναι κατασκευασμένοι από κατάλληλο πλαστικό υλικό. Η αντοχή του υλικού που χρησιμοποιείται και η κατασκευή του σάκου θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του σάκου και την προοριζόμενη χρήση του. Οι ραφές θα πρέπει να αντέχουν πιέσεις και χτυπήματα που σημειώνονται σε κανονικές συνθήκες μεταφοράς.

(b) Μέγιστο καθαρό βάρος: 50 kg.

**3536** Σάκοι από χαρτί

5M1, πολλαπλών τοιχωμάτων

5M2, πολλαπλών τοιχωμάτων, αδιάβροχοι

(a) Οι σάκοι θα πρέπει να είναι κατασκευασμένοι από κατάλληλο χαρτί kraft ή από ένα ισοδύναμο χαρτί με τουλάχιστον τρία φύλλα. Η αντοχή του χαρτιού και η κατασκευή των σάκων θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του σάκου και την προοριζόμενη χρήση του. Οι συνδέσεις και τα πόματα θα πρέπει να είναι αδιαπέραστα.

(b) Σάκοι από χαρτί 5M2:

Για την παρεμπόδιση της εισόδου υγρασίας, ένας σάκος τεσσάρων φύλλων ή περισσότερων θα πρέπει να είναι φτιαγμένος αδιάβροχος με τη χρήση είτε ενός ανθεκτικού στο νερό φύλλου ως ένα από τα δύο ακριανά φύλλα είτε ενός φραγμού του νερού κατασκευασμένου από κατάλληλο προστατευτικό υλικό μεταξύ των δύο ακριανών φύλλων. Ένας σάκος τριών φύλλων θα πρέπει να είναι φτιαγμένος αδιάβροχος με τη χρήση ανθεκτικού στο νερό φύλλου ως ακριανό φύλλο. Όπου υπάρχει κίνδυνος η περιεχόμενη ύλη να αντιδράσει με τη υγρασία ή όπου είναι συσκευασμένος ατμός, ένα αδιάβροχο φύλλο ή φραγμός, τέτοιος όπως διπλά πισσωμένο χαρτί kraft, χαρτί kraft με πλαστική επικάλυψη, πλαστικό φιλμ προσκολλημένο στην εσωτερική επιφάνεια του σάκου, ή μία ή περισσότερες εσωτερικές πλαστικές επενδύσεις, θα πρέπει επίσης να τοποθετούνται διπλά στην ύλη. Οι συνδέσεις και τα πόματα θα πρέπει να είναι αδιάβροχα.

(c) Μέγιστο καθαρό βάρος: 50 kg.

**3537** Σύνθετες συσκευασίες (πλαστικού υλικού)

6HA1 πλαστικό δοχείο με εξωτερικό χαλύβδινο βαρέλι

6HA2 πλαστικό δοχείο με εξωτερικό χαλύβδινο κλωβό<sup>5/</sup> ή κιβώτιο

6HB1 πλαστικό δοχείο με εξωτερικό αλουμινένιο βαρέλι

6HB2 πλαστικό δοχείο με εξωτερικό αλουμινένιο κλωβό<sup>5/</sup> ή κιβώτιο

6HC πλαστικό δοχείο με εξωτερικό ξύλινο κιβώτιο

6HD1 πλαστικό δοχείο με εξωτερικό βαρέλι από κόντρα πλακέ

6HD2 πλαστικό δοχείο με εξωτερικό κιβώτιο από κόντρα πλακέ

6HG1 πλαστικό δοχείο με εξωτερικό βαρέλι από φάιμπερ

6HG2 πλαστικό δοχείο με εξωτερικό κιβώτιο από φύλλο φάιμπερ

<sup>5/</sup>

Οι κλωβοί είναι εξωτερικές συσκευασίες με μη-πλήρεις επιφάνειες.

## Προσθήκη Α.5

3537 6HH1 πλαστικό δοχείο με εξωτερικό πλαστικό βαρέλι  
(συνεχ.) 6HH2 πλαστικό δοχείο με εξωτερικό κιβώτιο από στερεό πλαστικό κιβώτιο

(a) *Εσωτερικό δοχείο*

- (1) Οι διατάξεις του περιθωριακού 3526 (a) και (c) έως (h) θα πρέπει να ισχύουν για πλαστικά εσωτερικά δοχεία.
- (2) Το πλαστικό εσωτερικό δοχείο θα πρέπει να προσαρμόζεται άνετα μέσα στην εξωτερική συσκευασία, που θα πρέπει να είναι ελεύθερη από οποιαδήποτε προεξοχή που θα μπορούσε να γδάρει το πλαστικό υλικό.
- (3) Μέγιστη χωρητικότητα του εσωτερικού δοχείου:
 

6HA1, 6HB1, 6HD1, 6HG1, 6HH1:	250 λίτρα
6HA2, 6HB2, 6HC, 6HD2, 6HG2, 6HH2:	60 λίτρα.
- (4) Μέγιστο καθαρό βάρος:
 

6HA1, 6HB1, 6HD1, 6HG1, 6HH1:	400 κλά
6HA2, 6HB2, 6HC, 6HD2, 6HG2, 6HH2:	75 κλά.

(b) *Εξωτερική συσκευασία*

- (1) Πλαστικό δοχείο με εξωτερικό χαλύβδινο ή αλουμινένιο βαρέλι 6HA1 ή 6HB1. Οι διατάξεις του περιθωριακού 3520 (a) έως (i) ή 3521 (a) έως (d), όποιο είναι κατάλληλο, θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (2) Πλαστικό δοχείο με εξωτερικό χαλύβδινο ή αλουμινένιο κλωβό ή κιβώτιο 6HA2 ή 6HB2. Οι διατάξεις του περιθωριακού 3532 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (3) Πλαστικό δοχείο με εξωτερικό ξύλινο κιβώτιο 6HC. Οι διατάξεις του περιθωριακού 3527 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (4) Πλαστικό δοχείο με εξωτερικό βαρέλι από κόντρα πλακέ 6HD1. Οι διατάξεις του περιθωριακού 3523 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (5) Πλαστικό δοχείο με εξωτερικό κιβώτιο από κόντρα πλακέ 6HD2. Οι διατάξεις του περιθωριακού 3528 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (6) Πλαστικό δοχείο με εξωτερικό βαρέλι από φάιμπερ 6HG1. Οι διατάξεις του περιθωριακού 3525 (a) έως (d) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (7) Πλαστικό δοχείο με εξωτερικό κιβώτιο από φύλλο φάιμπερ 6HG2. Οι διατάξεις του περιθωριακού 3530 (a) έως (c) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.
- (8) Πλαστικό δοχείο με εξωτερικό πλαστικό βαρέλι 6HH1. Οι διατάξεις του περιθωριακού 3526 (a) και (c) έως (h) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## Προσθήκη Α.5

3537 (9) Πλαστικό δοχείο με εξωτερικό κιβώτιο από στερεό πλαστικό 6ΗΗ2. Οι σχετικές (συνεχ.) διατάξεις του περιθωριακού 3531 (a), (d), (e) και (f) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

3538 *Συνδυασμένες συσκευασίες*(a) *Εσωτερικές συσκευασίες*

Τα παρακάτω μπορούν να χρησιμοποιούνται:

συσκευασίες από γυαλί, πορσελάνη ή ψαμμάργλιο με μέγιστη επιτρεπτή χωρητικότητα 5 λίτρα για υγρά ή 5 kg για στερεά,

πλαστικές συσκευασίες με μέγιστη επιτρεπτή χωρητικότητα 30 λίτρα για υγρά ή 30 kg για στερεά,

μεταλλικές συσκευασίες με μέγιστη επιτρεπτή χωρητικότητα 40 λίτρα για υγρά ή 40 kg για στερεά,

σακούλια και σάκοι από χαρτί, ύφασμα, πλεγμένο πλαστικό ή πλαστικό φιλμ με μέγιστη επιτρεπτή χωρητικότητα 5 kg για στερεά σε σακούλια και 50 kg σε σάκους,

τενεκέδες, πτυσσόμενα χαρτοκιβώτια και κιβώτια κατασκευασμένα από φύλλο φάϊμπερ ή πλαστικό με μέγιστη επιτρεπτή χωρητικότητα 10 kg για στερεά,

άλλοι τύποι μικρών συσκευασιών τέτοιοι όπως σωλήνες με μέγιστη επιτρεπτή χωρητικότητα 1 λίτρο για υγρά ή 1 kg για στερεά.

(b) *Εξωτερική συσκευασία*

Τα παρακάτω μπορούν να χρησιμοποιούνται:

χαλύβδινα βαρέλια, μετακινούμενης κεφαλής (περιθωριακό 3520),

αλουμινένια βαρέλια, μετακινούμενης κεφαλής (περιθωριακό 3521),

χαλύβδινα μπιτόνια, μετακινούμενης κεφαλής (περιθωριακό 3522),

βαρέλια από κόντρα πλακέ (περιθωριακό 3523),

βαρέλια από φάϊμπερ (περιθωριακό 3525),

πλαστικά βαρέλια, μετακινούμενης κεφαλής (περιθωριακό 3526),

πλαστικά μπιτόνια, μετακινούμενης κεφαλής (περιθωριακό 3526),

κιβώτια από φυσικό ξύλο (περιθωριακό 3527),

κιβώτια από κόντρα πλακέ (περιθωριακό 3528),

κιβώτια από ανασυσταμένο ξύλο (περιθωριακό 3529),

κιβώτια από φύλλο φάϊμπερ (περιθωριακό 3530),

πλαστικά κιβώτια (περιθωριακό 3531),

χαλύβδινα ή αλουμινένια κιβώτια (περιθωριακό 3532).

## Προσθήκη Α.5

## B. Συσκευασίες που μπορούν να συμφωνούν με το περιθωριακό 3510 (1) ή (2)

3539

*Σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος)*

- 6PA1 δοχείο με εξωτερικό χαλύβδινο βαρέλι
- 6PA2 δοχείο με εξωτερικό χαλύβδινο κλωβό<sup>8/</sup> ή κιβώτιο
- 6PB1 δοχείο με εξωτερικό αλουμινένιο βαρέλι
- 6PB2 δοχείο με εξωτερικό αλουμινένιο κλωβό<sup>8/</sup> ή κιβώτιο
- 6PC δοχείο με εξωτερικό ξύλινο κιβώτιο
- 6PD1 δοχείο με εξωτερικό βαρέλι από κόντρα πλακέ
- 6PD2 δοχείο με εξωτερικό ψάθινο σκεπαστό κοφίνι
- 6PG1 δοχείο με εξωτερικό βαρέλι από φάιμπερ
- 6PG2 δοχείο με εξωτερικό κιβώτιο από φύλλο φάιμπερ
- 6PH1 δοχείο με εξωτερική συσκευασία από τεταμένο πλαστικό
- 6PH2 δοχείο με εξωτερική συσκευασία από στερεό πλαστικό

(a) *Εσωτερικό δοχείο*

- (1) Το δοχείο θα πρέπει να είναι κατάλληλα μορφοποιημένο (με μορφή κυλίνδρου ή αχλαδιού) και να είναι κατασκευασμένο από καλής ποιότητας υλικό ελεύθερο από οποιοδήποτε ελάττωμα που θα μπορούσε να μειώσει την αντοχή του. Τα τοιχώματα θα πρέπει να είναι επαρκώς παχιά σε κάθε σημείο και ελεύθερα από εσωτερικές καταπονήσεις.
- (2) Πλαστικά πώματα βιδωτού σπειρώματος, πώματα από τριμμένο γυαλί ή πώματα τουλάχιστον εξίσου αποτελεσματικά θα πρέπει να χρησιμοποιούνται ως πώματα για τα δοχεία. Οποιοδήποτε μέρος του πώματος που είναι πιθανόν να έλθει σε επαφή με το περιεχόμενο του δοχείου θα πρέπει να είναι ανθεκτικό σ' εκείνο το περιεχόμενο.

Μέρμινια θα πρέπει να λαμβάνεται ώστε να εξασφαλίζεται ότι τα πώματα να είναι έτσι προσαρμοσμένα ώστε να είναι στεγανά και να είναι κατάλληλα ασφαλισμένα και να αποφεύγεται οποιαδήποτε χαλαρότητα κατά τη διάρκεια της μεταφοράς.

Εάν εξαιρεζόμενα πώματα είναι απαραίτητα, αυτά θα πρέπει να είναι στεγανά.

- (3) Το δοχείο θα πρέπει να είναι σταθερά ασφαλισμένο στην εξωτερική συσκευασία με προστατευτικά και/ή απορροφητικά υλικά.
- (4) Μέγιστη χωρητικότητα δοχείου: 60 λίτρα
- (5) Μέγιστο καθαρό βάρος: 75 kg.

(b) *Εξωτερική συσκευασία*

- (1) Δοχείο με εξωτερικό χαλύβδινο βαρέλι 6PA1

Οι διατάξεις του περιθωριακού 3520 (a) έως (i) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας. Το μετακινούμενο καπάκι που απαιτείται για αυτόν τον τύπο συσκευασίας μπορεί πάντως να είναι της μορφής ενός καφυλλίου.

<sup>8/</sup>

*Οι κλωβοί είναι εξωτερικές συσκευασίες με μη-πλήρεις επιφάνειες.*

## Προσθήκη Α.5

3539  
(συνεχ.)

## (2) Δοχείο με εξωτερικό χαλύβδινο κλωβό κιβώτιο 6PA2

Οι διατάξεις του περιθωριακού 3532 (a) έως (c) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας. Για κυλινδρικά δοχεία η εξωτερική συσκευασία θα πρέπει, όταν είναι όρθια, να στηκώνεται πάνω από το δοχείο και το πόμα του. Εάν ο προστατευτικός κλωβός περιβάλλει ένα αχλαδόμορφο δοχείο και είναι ταιριαστού σχήματος, η εξωτερική συσκευασία θα πρέπει να είναι εξοπλισμένη με ένα προστατευτικό κάλυμμα (καψύλλιο).

## (3) Δοχείο με εξωτερικό αλουμινένιο βαρέλι 6PB1

Οι διατάξεις του περιθωριακού 3521 (a) έως (d) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (4) Δοχείο με εξωτερικό αλουμινένιο κλωβό ή κιβώτιο 6PB2

Οι διατάξεις του περιθωριακού 3532 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (5) Δοχείο με εξωτερικό ξύλινο κιβώτιο 6PC

Οι διατάξεις του περιθωριακού 3527 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (6) Δοχείο με εξωτερικό βαρέλι από κόντρα πλακέ 6PD1

Οι διατάξεις του περιθωριακού 3523 θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (7) Δοχείο με εξωτερικό ψάθινο κοφίνι 6PD2

Το ψάθινο κοφίνι θα πρέπει να είναι σώστα φτιαγμένο με υλικό καλής ποιότητας. Θα πρέπει να είναι εξοπλισμένο με προστατευτικό κάλυμμα (καψύλλιο) έτσι ώστε να προλαμβάνεται φθορά στο δοχείο.

## (8) Δοχείο με εξωτερικό βαρέλι από φάιμπερ 6PG1

Οι διατάξεις του περιθωριακού 3525 (a) έως (d) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (9) Δοχείο με εξωτερικό κιβώτιο από φύλλο φάιμπερ 6PG2

Οι διατάξεις του περιθωριακού 3530 (a) έως (c) θα πρέπει να ισχύουν για την κατασκευή της εξωτερικής συσκευασίας.

## (10) Δοχείο με εξωτερική συσκευασία από τεταμένο πλαστικό ή στερεό πλαστικό 6PH1 ή 6PH2.

Τα υλικά και των δύο εξωτερικών συσκευασιών θα πρέπει να ικανοποιούν τις διατάξεις του περιθωριακού 3531 (a) έως (f). Συσκευασία από στερεό πλαστικό θα πρέπει να είναι κατασκευασμένη από υψηλής πυκνότητας πολυαιθυλένιο ή άλλο συγκρίσιμο πλαστικό υλικό. Το μετακινούμενο καπάκι για αυτόν τον τύπο συσκευασίας μπορεί πάντως να είναι της μορφής καψυλλίου.

## Προσθήκη Α.5

## C. Συσκευασίες σύμφωνες μόνον με το περιθωριακό 3510 (2)

## 3540 Ελαφρού περιτυπώματος μεταλλικές συσκευασίες

OA1 μη-μετακινούμενης κεφαλής

OA2 μετακινούμενης κεφαλής

- (a) Το φύλλο μετάλλου για το σώμα και τα άκρα θα πρέπει να είναι από κατάλληλο χάλυβα και ενός περιτυπώματος κατάλληλου για τη χωρητικότητα και την προοριζόμενη χρήση της συσκευασίας.
- (b) Οι συνδέσεις θα πρέπει να είναι συγκολλημένες, τουλάχιστον με διπλή ραφή με τοποθέτηση λωρίδας ή παραγόμενες με μία μέθοδο που εξασφαλίζει έναν παρόμοιο βαθμό αντοχής και στεγανότητας.
- (c) Εσωτερικές επικαλύψεις από ψευδάργυρο, κασίτερο, λάκα κ.λπ. θα πρέπει να είναι σκληρές και θα πρέπει να επκολλούνται στον χάλυβα σε κάθε σημείο, συμπεριλαμβανομένων των πωμάτων.
- (d) Ανοίγματα για γέμισμα, άδειασμα και εξαερισμό στα σώματα ή τις κεφαλές των μη-μετακινούμενης κεφαλής (OA1) συσκευασιών δεν θα πρέπει να υπερβαίνουν τα 7 cm σε διάμετρο. Συσκευασίες με μεγαλύτερα ανοίγματα θα πρέπει να θεωρούνται ότι είναι του τύπου μετακινούμενης κεφαλής (OA2).
- (e) Τα πώματα των μη-μετακινούμενης κεφαλής συσκευασιών (OA1) θα πρέπει είτε να είναι του τύπου βιδωτού σπειρώματος είτε να είναι ικανά να ασφαρίζονται με μία βιδωτή συσκευή ή μία συσκευή τουλάχιστον εξίσου αποτελεσματική. Τα πώματα των μετακινούμενης κεφαλής συσκευασιών (OA2) θα πρέπει να είναι έτσι σχεδιασμένα και προσαρμοσμένα ώστε να μένουν σταθερά κλεισμένα και οι συσκευασίες να παραμένουν στεγανές σε κανονικές συνθήκες μεταφοράς.
- (f) Μέγιστη χωρητικότητα συσκευασιών: 40 λίτρα
- (g) Μέγιστο καθαρό βάρος: 50 kg.

3541-  
3549

## Προσθήκη Α.5

## Μέρος IV: Απαιτήσεις ελέγχου για συσκευασίες

## Α. Έλεγχοι τύπου σχεδιασμού

*Εκτέλεση και συχνότητα των ελέγχων*

- 3550 (1) Ο τύπος σχεδιασμού κάθε συσκευασίας θα πρέπει να ελέγχεται και εγκρίνεται από την αρμόδια αρχή ή από ένα σώμα που καθορίζεται από εκείνη την αρχή.
- (2) Έλεγχοι σε συμφωνία με το (1) θα πρέπει να διεξάγονται πάλι μετά από οποιαδήποτε τροποποίηση του τύπου σχεδιασμού εκτός εάν το αρμόδιο σώμα ελέγχου έχει συμφωνήσει στην τροποποίηση του τύπου σχεδιασμού. Στην τελευταία περίπτωση μία νέα έγκριση του τύπου σχεδιασμού δεν απαιτείται. Ένας τύπος σχεδιασμού συσκευασίας ορίζεται από το σχέδιο, το μέγεθος, το υλικό και το πάχος, τον τρόπο κατασκευής και συσκευασίας, αλλά μπορεί να περιλαμβάνει διάφορες επιφανειακές επεξεργασίες. Επίσης περιλαμβάνει συσκευασίες που διαφέρουν από τον τύπο σχεδιασμού μόνον στο μικρότερο ύψος σχεδιασμού.
- (3) Η αρμόδια αρχή μπορεί σε οποιοδήποτε χρόνο να απαιτήσει απόδειξη, μέσω ελέγχων σε συμφωνία με αυτό το μέρος, ότι οι μαζικά παραγόμενες συσκευασίες ικανοποιούν τις απαιτήσεις των ελέγχων του τύπου ελέγχου. Για τέτοιους ελέγχους σε συσκευασίες από χαρτί ή φύλλο φάμπερ, η προετοιμασία σε συνθήκες περιβάλλοντος θα πρέπει να θεωρείται ισοδύναμη με τις απαιτήσεις του περιθωριακού 3551 (3).
- (4) Για λόγους επιβεβαίωσης το αρμόδιο σώμα ελέγχου θα πρέπει να κρατάει έναν φάκελο των υλικών που χρησιμοποιούνται, μέσω ελέγχου των υλικών ή με διατήρηση δειγμάτων ή κομματιών των υλικών.
- (5) Εάν μία εσωτερική επικάλυψη απαιτείται για λόγους ασφάλειας, θα πρέπει να διατηρεί τις προστατευτικές της ιδιότητες ακόμα και μετά τους ελέγχους.
- (6) Η αρμόδια αρχή μπορεί να επιτρέπει τον δειγματοληπτικό έλεγχο των συσκευασιών που διαφέρουν μόνον σε δευτερεύοντα σημεία από τον ελεγχόμενο τύπο, π.χ. μικρότερα μεγέθη εσωτερικών συσκευασιών ή εσωτερικές συσκευασίες μικρότερου καθαρού βάρους και συσκευασίες τέτοιες όπως βαρέλι, σάκοι και κιβώτια που παράγονται με μικρές μειώσεις στην(στις) εξωτερική(ές) διάσταση(διαστάσεις).
- (7) Υπό την προϋπόθεση ότι η ισχύς των αποτελεσμάτων του ελέγχου δεν επηρεάζονται και με την έγκριση της αρμόδιας αρχής, διάφοροι έλεγχοι μπορούν να γίνουν σε ένα δείγμα.

*Προετοιμασία των κόλων για έλεγχο*

- 3551 (1) Οι έλεγχοι θα πρέπει να διεξάγονται σε συσκευασίες προετοιμασίες όπως για μεταφορά συμπεριλαμβανομένων, όσον αφορά σε συνδυασμένες συσκευασίες, των εσωτερικών συσκευασιών που χρησιμοποιούνται. Εσωτερικά ή μόνα δοχεία ή συσκευασίες θα πρέπει να γεμίζονται έως όχι λιγότερο από το 98 % της μέγιστης χωρητικότητας του για υγρά ή το 95 % για στερεά. Για συνδυασμένες συσκευασίες όπου η εσωτερική συσκευασία είναι σχεδιασμένη να μεταφέρει υγρά και στερεά, ξεχωριστός έλεγχος απαιτείται τόσο για υγρό, όσο και για στερεό περιεχόμενο. Οι ύλες ή τα είδη προς μεταφορά στις συσκευασίες μπορούν να αντικαθίστανται από άλλες ύλες ή είδη εκτός όπου αυτά θα καθιστούσαν τα αποτελέσματα των ελέγχων μη ισχύοντα. Για στερεά, όταν μία άλλη ύλη χρησιμοποιείται, αυτή θα πρέπει να έχει τα ίδια φυσικά χαρακτηριστικά (βάρος, κόκκο, μέγεθος κ.λπ.) όπως η ύλη προς μεταφορά. Επιτρέπεται η χρήση προσθέτων, τέτοιων όπως σάκοι από μολυβένια σκάγια, για την απόκτηση του απαραίτητου συνολικού βάρους κόλου, για όσο είναι τοποθετημένα έτσι ώστε τα αποτελέσματα του ελέγχου να μην επηρεάζονται. Κατάλληλα μείγματα στερεών σε σκόνη, τέτοιων όπως πολυαιθυλένιο ή PVC σε σκόνη με πριονίδι, λεπτή άμμο κ.λπ., μπορούν να χρησιμοποιούνται ως υποκατάστατη πληρωτική ύλη για ύλες που έχουν ιξώδες μεγαλύτερο από 2680 mm<sup>2</sup>/s στους 23 °C.

## Προσθήκη Α.5.

3551 (2) Στους ελέγχους πτώσης για υγρά, όταν μία άλλη ύλη χρησιμοποιείται η σχετική πυκνότητα και το ιξώδες θα πρέπει να είναι παρόμοια με εκείνα της ύλης προς μεταφορά. Νερό μπορεί επίσης να χρησιμοποιείται για τον έλεγχο πτώσης υγρού υπό τους όρους στο περιθωριακό 3552 (4).

(3) Συσκευασίες από χαρτί ή φύλλο φάιμπερ θα πρέπει να τοποθετούνται για τουλάχιστον 24 ώρες σε μία ατμόσφαιρα που έχει ελεγχόμενη θερμοκρασία και σχετική υγρασία (r.h.). Υπάρχουν τρεις δυνατότητες, μία από τις οποίες θα πρέπει να επιλέγεται. Η προτιμώμενη ατμόσφαιρα είναι  $23\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  και  $50\% \pm 2\% \text{ r.h.}$  Οι δύο άλλες δυνατότητες είναι  $20\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  και  $65\% \pm 2\% \text{ r.h.}$  ή  $27\text{ }^{\circ}\text{C} \pm 2\text{ }^{\circ}\text{C}$  και  $65\% \pm 2\% \text{ r.h.}$

**ΣΗΜΕΙΩΣΗ:** Οι μέσες τιμές θα πρέπει να πέφτουν μέσα σ' αυτά τα όρια. Βραχυπρόθεσμες διακυμάνσεις και περιορισμοί στη μέτρηση μπορούν να προκαλούν διαφοροποίηση των μεμονωμένων μετρήσεων κατά έως  $\pm 5\%$  σχετική υγρασία χωρίς σημαντική επίδραση στην επαναληψιμότητα του ελέγχου.

(4) Βαρέλια τύπου φελλού κατασκευασμένα από φυσικό ξύλο θα πρέπει να αφήνονται γεμισμένα με νερό για τουλάχιστον 24 ώρες πριν τους ελέγχους.

(5) Για να ελεγχθεί ότι η χημική συμβατότητά τους με τα υγρά είναι αρκετή, πλαστικά βαρέλια και μπιτόνια σε συμφωνία με το περιθωριακό 3526 και εάν είναι απαραίτητο σύνθετες συσκευασίες (πλαστικού υλικού) σε συμφωνία με το περιθωριακό 3537 θα πρέπει να υπόκεινται σε αποθήκευση σε θερμοκρασία περιβάλλοντος για έξι μήνες, κατά τη διάρκεια του οποίου χρόνου τα δείγματα ελέγχου θα πρέπει να διατηρούνται γεμισμένα με τα εμπορεύματα που είναι προοριζόμενα να μεταφέρουν.

Για τις πρώτες και τις τελευταίες 24 ώρες αποθήκευσης, τα δείγματα ελέγχου θα πρέπει να τοποθετούνται με το πόμα προς τα κάτω. Πάντως, συσκευασίες εξοπλισμένες με εξαεριστήρα θα πρέπει να είναι έτσι τοποθετημένες σε κάθε περίπτωση για πέντε λεπτά μόνον. Μετά από αυτήν την αποθήκευση τα δείγματα ελέγχου θα πρέπει να υποβάλλονται στους ελέγχους που ορίζονται στα περιθωριακά 3552 έως 3556.

Όταν είναι γνωστό ότι οι ιδιότητες αντοχής του πλαστικού υλικού των εσωτερικών δοχείων των σύνθετων συσκευασιών (πλαστικού υλικού) δεν μεταβάλλονται σημαντικά από τη δράση της πληρωτικής ύλης, δεν θα είναι απαραίτητο να ελέγχεται ότι η χημική συμβατότητα είναι αρκετή.

Μία σημαντική μεταβολή στις ιδιότητες αντοχής σημαίνει:

- (a) Σαφής αύξηση της ευθραυστότητας, ή
- (b) σημαντική μείωση στην ελαστικότητα, εκτός εάν σχετίζεται με μία όχι μικρότερη από ανάλογη αύξηση στην επιμήκυνση υπό φορτίο.

Όπου η συμπεριφορά του πλαστικού υλικού έχει αποδειχθεί με άλλα μέσα, ο παραπάνω έλεγχος της συμβατότητας μπορεί να παραλείπεται. Τέτοιες διαδικασίες θα πρέπει να είναι τουλάχιστον ισοδύναμες με τον παραπάνω έλεγχο συμβατότητας και να είναι αναγνωρισμένες από την αρμόδια αρχή.

**ΣΗΜΕΙΩΣΗ:** Για πλαστικά βαρέλια και μπιτόνια και σύνθετες συσκευασίες (πλαστικού υλικού) κατασκευασμένες από υψηλού μοριακού βάρους πολυαιθυλένιο, βλέπε επίσης (6) παρακάτω.

(6) Για βαρέλια και μπιτόνια από υψηλού μοριακού βάρους πολυαιθυλένιο σε συμφωνία με το περιθωριακό 3526 και εάν είναι απαραίτητο σύνθετες συσκευασίες από υψηλού μοριακού βάρους πολυαιθυλένιο σε συμφωνία με το περιθωριακό 3537, σύμφωνα με τις παρακάτω προδιαγραφές:

## Προσθήκη Α.5

- 3551 (συνεχ.) - σχετική πυκνότητα στους 23 °C μετά από θερμική εξισορρόπηση για μία ώρα στους 100 °C  $\geq 0.940$ , σε συμφωνία με το Πρότυπο ISO 1183,
- ρυθμός ροής τετηγμένου στους 190 °C/21.6 kg φορτίο  $\leq 12$  g/10 min. σε συμφωνία με το Πρότυπο ISO 1133,

η χημική συμβατότητα με τα υγρά που αναφέρονται στο μέρος II του παραρτήματος σ' αυτήν την προσθήκη μπορεί να επιβεβαιώνεται ως ακολούθως με πρότυπα υγρά (βλέπε μέρος I του παραρτήματος σ' αυτήν την προσθήκη).

Η αρκετή χημική συμβατότητα αυτών των συσκευασιών μπορεί να επιβεβαιώνεται με αποθήκευση για τρεις εβδομάδες στους 40 °C με το κατάλληλο πρότυπο υγρό. Όπου αυτό το πρότυπο υγρό είναι νερό, απόδειξη της χημικής συμβατότητας δεν απαιτείται.

Για τις πρώτες και τις τελευταίες 24 ώρες αποθήκευσης, τα δείγματα ελέγχου θα πρέπει να τοποθετούνται με το πόμα προς τα κάτω. Πάντως, συσκευασίες εξοπλισμένες με εξαεριστήρα θα πρέπει να είναι έτσι τοποθετημένες σε κάθε περίπτωση για πέντε λεπτά μόνον. Μετά από αυτήν την αποθήκευση, τα δείγματα ελέγχου θα πρέπει να υποβάλλονται στους ελέγχους που ορίζονται στα περιθωριακά 3552 έως 3556.

Όταν ένας τύπος σχεδιασμού συσκευασίας έχει ικανοποιήσει τους ελέγχους έγκρισης με ένα πρότυπο υγρό, οι συγκρίσιμες πληρωτικές ύλες που αναφέρονται στο μέρος II του παραρτήματος σ' αυτήν την προσθήκη μπορούν να γίνουν δεκτές για μεταφορά χωρίς περαιτέρω έλεγχο, υποκειμένες στους παρακάτω όρους:

οι σχετικές πυκνότητες των πληρωτικών υλών δεν θα πρέπει να υπερβαίνουν εκείνη που χρησιμοποιείται για τον προσδιορισμό του ύψους για τον έλεγχο πτώσης και του βάρους για τον έλεγχο στοιβάγματος

οι τάσεις ατμών των πληρωτικών υλών στους 50 °C ή 55 °C δεν θα πρέπει να υπερβαίνουν εκείνη που χρησιμοποιείται για τον προσδιορισμό της πίεσης για τον έλεγχο εσωτερικής πίεσης.

(7) Για βαρέλια και μπιτόνια σύμφωνα με το περιθωριακό 3526, και όπου είναι απαραίτητο σύνθετες συσκευασίες σύμφωνα με το περιθωριακό 3537, κατασκευασμένες από υψηλού μοριακού βάρους πολυαιθυλένιο, που έχει περάσει τον έλεγχο στην παράγραφο (6) αυτού του περιθωριακού, πληρωτικές ύλες πέραν εκείνων που αναφέρονται στο μέρος II του παραρτήματος μπορούν επίσης να εγκρίνονται. Τέτοια έγκριση θα πρέπει να βασίζεται σε εργαστηριακούς ελέγχους που αποδεικνύουν ότι το αποτέλεσμα τέτοιων πληρωτικών υλών πάνω στα δείγματα ελέγχου είναι μικρότερο από εκείνο των πρότυπων υγρών. Οι διαδικασίες φθοράς που πρέπει να λαμβάνονται υπόψη θα πρέπει να είναι οι παρακάτω: μαλάκωμα μέσω φουσκώματος, σπάσιμο υπό καταπόνηση και μοριακή αποικοδόμηση. Οι ίδιοι όροι όπως εκείνοι που τίθενται στο (6) παραπάνω, θα πρέπει να ισχύουν όσον αφορά στη σχετική πυκνότητα και την πίεση ατμών.

*Έλεγχος πτώσης<sup>2/</sup>*

- 3552 (1) Αριθμός δειγμάτων ελέγχου (ανά τύπο σχεδιασμού και κατασκευαστή) και κλίση πτώσης.

Για άλλες πέραν από επίπεδες πτώσεις το κέντρο βάρους θα πρέπει να είναι κάθετα πάνω από το σημείο κρούσης.

<sup>2/</sup> Βλέπε Πρότυπο ISO 2248.

Συσκευασία	Αριθμ. δειγμάτων ελέγχου	Κλίση πτώσης
(a) Χαλύβδινα βαρέλια Αλουμινένια βαρέλια Χαλύβδινα μπιτόνια Βαρέλια από κόντρα πλακέ Ξύλινα βαρέλια Βαρέλια από φάιμπερ Πλαστικά βαρέλια και μπιτόνια Σύνθετες συσκευασίες (πλαστικού υλικού) που είναι στο σχήμα βαρελιού Σύνθετες συσκευασίες (από γυαλί, ψαμμάργιλο, ή πορσελάνη) σύμφωνα με το περιθωριακό 3510 (1) και που είναι στο σχήμα βαρελιού Ελαφρού περιτυπώματος μεταλλικές συσκευασίες	Έξι  (τρία για κάθε πτώση)	Πρώτη πτώση (με τη χρήση τριών δειγμάτων): η συσκευασία θα πρέπει χτυπάει το στόχο διαγώνια με την κεφαλή ή, εάν η συσκευασία δεν έχει κεφαλή, με μία περιφερειακή ραφή ή μία ακμή. Δεύτερη πτώση (με τη χρήση των άλλων τριών δειγμάτων): η συσκευασία θα πρέπει να χτυπάει το στόχο με το ασθενέστερο μέρος που δεν έχει ελεγχθεί με την πρώτη πτώση, για παράδειγμα ένα πόμα ή, για μερικά κυλινδρικά βαρέλια, η συγκολλημένη διαμήκης ραφή του σώματος του βαρελιού.
(b) Κιβώτια από φυσικό ξύλο Κιβώτια από κόντρα πλακέ Κιβώτια από ανασυσταμένο ξύλο Κιβώτια από φύλλο φάιμπερ Πλαστικά κιβώτια Χαλύβδινα ή αλουμινένια κιβώτια Σύνθετες συσκευασίες (πλαστικού υλικού) που είναι στο σχήμα κιβωτίου Σύνθετες συσκευασίες (από γυαλί, ψαμμάργιλο, πορσελάνη) σύμφωνα με το περιθωριακό 3510 (1) και που είναι στο σχήμα κιβωτίου	Πέντε  (ένα για κάθε πτώση)	Πρώτη πτώση: με τον πυθμένα Δεύτερη πτώση: με την κορυφή Τρίτη πτώση: με την μακριά πλευρά Τέταρτη πτώση: με την κοντή πλευρά Πέμπτη πτώση: με μία γωνία
(c) Υφασμάτινοι σάκοι Χάρτινοι σάκοι	Τρία (δύο πτώσεις ανά σάκο)	Πρώτη πτώση: με μία όψη του σάκου Δεύτερη πτώση: με το άκρο του σάκου
(d) Σάκοι από πλεγμένο πλαστικό Σάκοι από πλαστικό φιλμ	Τρία  (τρία ανά σάκο)	Πρώτη πτώση: με μία πλατιά όψη Δεύτερη πτώση: με μία στενή όψη Τρίτη πτώση: με το άκρο του σάκου
(e) Σύνθετες συσκευασίες (γυαλί, ψαμμάργιλος ή πορσελάνη) σύμφωνα με το περιθωριακό 3510 (2) και που είναι στο σχήμα βαρελιού ή κιβωτίου	Τρία  (ένα για κάθε πτώση)	Διαγώνια με το κάτω στόμιο, ή, εάν δεν υπάρχει στόμιο, με μία περιφερειακή ραφή ή την ακμή του πυθμένα.

## Προσθήκη Α.5

3552 Όπου περισσότερες από μία κλίσεις είναι δυνατές για έναν δεδομένο έλεγχο πτώσης, η κλίση (συνεχ.) που είναι πιο πιθανόν να υπάρξει σε περίπτωση πτώσης της συσκευασίας θα πρέπει να χρησιμοποιείται.

(2) *Ειδική προετοιμασία των δειγμάτων ελέγχου για τον έλεγχο πτώσης:*

Η θερμοκρασία του δείγματος ελέγχου και του περιεχομένου του θα πρέπει να μειώνεται στους  $-18^{\circ}\text{C}$  ή χαμηλότερα για τις παρακάτω συσκευασίες:

- (a) πλαστικά βαρέλια (βλέπε 3526)
- (b) πλαστικά μπιτόνια (βλέπε 3526)
- (c) πλαστικά κιβώτια άλλα εκτός από κιβώτια από τεταμένο πολυστυρένιο (βλέπε 3531)
- (d) σύνθετες συσκευασίες (πλαστικού υλικού) (βλέπε 3537)
- (e) συνδυασμένες συσκευασίες με πλαστικές εσωτερικές συσκευασίες (βλέπε 3538)
- (f) σάκοι από ύφασμα με εσωτερική πλαστική επένδυση (βλέπε 3533)
- (g) σάκοι από πλεγμένο πλαστικό (βλέπε 3534) και
- (h) σάκοι από πλαστικό φιλμ (βλέπε 3535).

Όπου τα δείγματα ελέγχου προετοιμάζονται με αυτόν τον τρόπο, η εξισορρόπηση στο περιθωριακό 3551 (3) μπορεί να παραλείπεται. Τα υγρά ελέγχου θα πρέπει να διατηρούνται στην υγρή κατάσταση με την προσθήκη αντιψυκτικών εάν είναι απαραίτητο.

(3) *Στόχος*

Ο στόχος θα πρέπει να είναι μία άκαμπτη, μη-ελαστική, επίπεδη και οριζόντια επιφάνεια.

(4) *Υψος πτώσης*

Για στερεά:

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
1.8 m	1.2 m	0.8 m

Για υγρά:

Εάν ο έλεγχος εκτελείται με νερό:

- (a) όπου οι ύλες προς μεταφορά έχουν σχετική πυκνότητα όχι μεγαλύτερη από 1.2

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
1.8 m	1.2 m	0.8 m

## Προσθήκη Α.5

3552  
(συνεχ.)

- (b) όπου οι ύλες προς μεταφορά έχουν σχετική πυκνότητα που υπερβαίνει το 1.2, το ύψος πτώσης θα πρέπει να υπολογίζεται στη βάση της σχετικής πυκνότητας της ύλης προς μεταφορά, στρογγυλοποιημένης στο πρώτο δεκαδικό, ως ακολούθως:

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
σχετική πυκνότητα x 1.5 (m)	σχετική πυκνότητα x 1.0 (m)	σχετική πυκνότητα x 0.67 (m)

- (c) για ελαφρού περιτυπώματος μεταλλικές συσκευασίες προοριζόμενες για τη μεταφορά υλών που έχουν ιξώδες στους 23 °C μεγαλύτερο από 200 mm<sup>2</sup>/s (που αντιστοιχεί σ' ένα χρόνο ροής 30 δευτέρα με ένα ISO καψύλλιο ροής που έχει στόμιο αεριοπρώθησης με 6 mm διάμετρο σε συμφωνία με το Πρότυπο ISO 2431-1980) και για ύλες της Κλάσης 3, 5°(c).

- (i) εάν η σχετική πυκνότητα δεν υπερβαίνει το 1.2:

Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
0.6 m	0.4 m

- (ii) όπου οι ύλες προς μεταφορά έχουν σχετική πυκνότητα που υπερβαίνει το 1.2 το ύψος πτώσης θα πρέπει να υπολογίζεται πάνω στη βάση της σχετικής πυκνότητας της ύλης προς μεταφορά, στρογγυλοποιημένης στο πρώτο δεκαδικό, ως ακολούθως:

Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
σχετική πυκνότητα 0.5 m	σχετική πυκνότητα 0.33 m

Εάν ο έλεγχος εκτελείται με την ύλη προς μεταφορά ή με ένα υγρό τουλάχιστον ίσης σχετικής πυκνότητας:

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
1.8 m	1.2 m	0.8 m

## (5) Κριτήρια για πέρασμα του ελέγχου:

- (a) Κάθε συσκευασία που περιέχει υγρό θα πρέπει να είναι στεγανή όταν έχει υπάρξει ισορροπία μεταξύ των εσωτερικών και εξωτερικών πιέσεων, εκτός από εσωτερικές συσκευασίες συνδυασμένων συσκευασιών ή σύνθετων συσκευασιών (από γυαλί, πορσελάνη ή ψαμμάργιλο) όταν δεν είναι απαραίτητο οι πιέσεις να είναι εξισωμένες.
- (b) Όπου μετακινούμενης κεφαλής βαρέλια για στερεά υποβάλλονται σε έλεγχο πτώσης και οι επάνω όψεις τους χτυπάνε το στόχο, το δείγμα ελέγχου περνάει τον έλεγχο εάν όλο το περιεχόμενο συγκρατείται από μία εσωτερική συσκευασία (π.χ. έναν πλαστικό σάκο) ακόμα κι εάν το πάμα πάνω στην κορυφαία όψη του βαρελιού δεν είναι πιά αδιαπέραστο.
- (c) Το ακριανό φύλλο ενός σάκου δεν θα πρέπει να παρουσιάζει οποιαδήποτε φθορά ικανή να επηρεάσει την ασφάλεια στη μεταφορά.

## Προσθήκη Α.5

- 3552 (συνεχ.)
- (d) Η εξωτερική συσκευασία μίας σύνθετης ή συνδυασμένης συσκευασίας δεν θα πρέπει να παρουσιάζει οποιαδήποτε φθορά ικανή να επηρεάσει την ασφάλεια στη μεταφορά. Δεν θα πρέπει να υπάρχει διαρροή της πληρωτικής ύλης από την εσωτερική συσκευασία.
  - (e) Μία μικρή έκκριση από το(τα) πόμα(τα) κατά την κρούση δεν θα πρέπει να θεωρείται ότι είναι αστοχία της συσκευασίας υπό την προϋπόθεση ότι δεν υπάρχει περαιτέρω διαρροή.
  - (f) Δεν επιτρέπεται ρήγμα σε συσκευασίες για εμπορεύματα της Κλάσης 1 που θα προκαλούσε το χύσιμο ελεύθερων εκρηκτικών υλών ή ειδών από την εξωτερική συσκευασία.

*Έλεγχος στεγανότητας*

- 3553 (1) Ο έλεγχος στεγανότητας θα πρέπει να πραγματοποιείται σε όλους τους τύπους συσκευασιών προοριζόμενων να περιέχουν υγρά, πάντως, αυτός ο έλεγχος δεν απαιτείται για:

- εσωτερικές συσκευασίες συνδυασμένων συσκευασιών,
- εσωτερικά δοχεία σύνθετων συσκευασιών (από γυαλί, πορσελάνη ή ψαμμάργλιο) σύμφωνα με το περιθωριακό 3510 (2),
- μετακινούμενης κεφαλής συσκευασίες προοριζόμενες για ύλη με ιξώδες στους 23 °C που υπερβαίνει τα 200 mm<sup>2</sup>/s.
- ελαφρού περιτυπώματος μεταλλικές συσκευασίες, μετακινούμενης κεφαλής, προοριζόμενες για ύλες της Κλάσης 3, 5<sup>ο</sup>(c).

- (2) *Αριθμός δειγμάτων ελέγχου:*

Τρία δείγματα ελέγχου ανά τύπο σχεδιασμού και κατασκευαστή.

- (3) *Ειδική προετοιμασία δειγμάτων ελέγχου για τον έλεγχο:*

Τα δείγματα ελέγχου θα πρέπει να τρυπώνται για την είσοδο του πεπιεσμένου αέρα σ' ένα ουδέτερο σημείο, έτσι ώστε επίσης να ελέγχεται το σφίξιμο του πόματος. Τα εξαεριζόμενα πόματα συσκευασιών θα πρέπει να αντικαθίστανται από μη-εξαεριζόμενα πόματα.

- (4) *Μέθοδος ελέγχου:*

Τα δείγματα ελέγχου συμπεριλαμβανομένων των πωμάτων θα πρέπει να βυθίζονται κάτω από το νερό για 5 λεπτά ενώ μία εσωτερική πίεση αέρα εφαρμόζεται, η μέθοδος της βύθισης δεν θα πρέπει να επηρεάζει τα αποτελέσματα του ελέγχου. Άλλες μέθοδοι τουλάχιστον εξίσου αποτελεσματικές μπορούν να χρησιμοποιούνται.

- (5) *Πίεση αέρα που πρέπει να εφαρμόζεται:*

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
Όχι μικρότερη από 30 kPa	Όχι μικρότερη από 20 kPa	Όχι μικρότερη από 20 kPa

- (6) *Κριτήριο για πέραςμα του ελέγχου:*

Δεν θα πρέπει να υπάρχει διαρροή.

## Προσθήκη Α.5

*Έλεγχος εσωτερικής πίεσης (υδραυλικής)*

**3554** (1) Ο έλεγχος υδραυλικής πίεσης θα πρέπει να διεξάγεται σε όλους τους τύπους συσκευασιών από χάλυβα, αλουμίνιο και πλαστικό και σε όλες τις σύνθετες συσκευασίες τις προοριζόμενες να περιέχουν υγρά. Πάντως, αυτός ο έλεγχος δεν απαιτείται για:

- εσωτερικές συσκευασίες συνδυασμένων συσκευασιών,
- εσωτερικά δοχεία σύνθετων συσκευασιών (από γυαλί, πορσελάνη ή ψαμμάργιλο) σύμφωνα με το περιθωριακό 3510 (2),
- μετακινούμενης κεφαλής συσκευασίες προοριζόμενες για ύλες με ιξώδες στους 23 °C που υπερβαίνει τα 200 mm<sup>2</sup>/s.
- ελαφρού περιτυπώματος μεταλλικές συσκευασίες, μετακινούμενης κεφαλής, προοριζόμενες για ύλες της Κλάσης 3, 5°(c).

(2) *Αριθμός δειγμάτων ελέγχου:*

Τρία δείγματα ελέγχου ανά τύπο σχεδιασμού και κατασκευαστή.

(3) *Ειδική προετοιμασία συσκευασιών για τον έλεγχο:*

Τα δείγματα ελέγχου θα πρέπει να τρυπώνται για την είσοδο της πίεσης σε ένα ουδέτερο σημείο, έτσι ώστε επίσης να ελέγχεται το σφίξιμο του πώματος. Τα εξαεριζόμενα πώματα συσκευασιών θα πρέπει να αντικαθίστανται από μη-εξαεριζόμενα πώματα.

(4) *Μέθοδος ελέγχου και πίεση που πρέπει να εφαρμόζεται:*

Οι συσκευασίες θα πρέπει να υπόκεινται για πέντε λεπτά (30 λεπτά στην περίπτωση πλαστικών συσκευασιών) σε μία υδραυλική πίεση πιεζομέτρου όχι μικρότερη από:

- (a) την συνολική πίεση πιεζομέτρου που μετρείται στη συσκευασία (δηλ. την τάση ατμών της πληρωτικής ύλης και τη μερική πίεση του αέρα ή άλλων αδρανών αερίων, μείον 100 kPa) στους 55 °C, πολλαπλασιασμένη με έναν συντελεστή ασφάλειας 1.5. Αυτή η συνολική πίεση πιεζομέτρου θα πρέπει να προσδιορίζεται στη βάση ενός μέγιστου βαθμού πλήρωσης σε συμφωνία με το περιθωριακό 3500 (4) και μία θερμοκρασία πλήρωσης 15 °C,

ή

- (b) 1.75 φορές την τάση ατμών της πληρωτικής ύλης στους 50 °C, μείον 100 kPa, αλλά σε πίεση πιεζομέτρου όχι μικρότερη από 100 kPa,

ή

- (c) 1.5 φορές την τάση ατμών της πληρωτικής ύλης στους 55 °C, μείον 100 kPa, αλλά σε πίεση πιεζομέτρου όχι μικρότερη από 100 kPa.

Ο τρόπος με τον οποίο οι συσκευασίες διατηρούνται στη θέση τους δεν θα πρέπει να παραποιεί τα αποτελέσματα του ελέγχου. Η πίεση θα πρέπει να εφαρμόζεται συνεχώς και ομοιόμορφα. Η πίεση ελέγχου θα πρέπει να διατηρείται σταθερή καθ' όλη την περίοδο ελέγχου.

Η ελάχιστη πίεση ελέγχου για συσκευασίες για την Ομάδα Συσκευασίας I θα πρέπει να είναι 250 kPa.

(5) *Κριτήριο για το πέρασμα του ελέγχου:*

## Προσθήκη Α.5

3554 Καμία συσκευασία δεν θα πρέπει να έχει διαρροή.

(συνεχ.)

*Έλεγχος στοιβάγματος*

3555 (1) Όλες οι συσκευασίες πέραν των σάκων και των μη-στοιβάξιμων σύνθετων συσκευασιών (από γυαλί, πορσελάνη ή ψαμμάργιλο) σύμφωνα με το περιθωριακό 3510 (2), θα πρέπει να υπόκεινται σ' έναν έλεγχο στοιβάγματος.

(2) *Αριθμός δειγμάτων ελέγχου:*

Τρία δείγματα ελέγχου ανά τύπο σχεδιασμού και κατασκευαστή.

(3) *Μέθοδος ελέγχου:*

Το δείγμα ελέγχου θα πρέπει να υπόκειται σε μία δύναμη εφαρμοζόμενη στην κορυφαία επιφάνεια του δείγματος ελέγχου ισοδύναμη με το συνολικό βάρος ίδιων κόλων που θα μπορούσαν να είναι στοιβαγμένες πάνω σ' αυτό κατά τη διάρκεια της μεταφοράς.

Η διάρκεια του ελέγχου θα πρέπει να είναι 24 ώρες, εκτός του ότι πλαστικά βαρέλια και μπιτόνια σε συμφωνία με το περιθωριακό 3526 και σύνθετες συσκευασίες 6HH1 και 6HH2, προοριζόμενες για υγρά, θα πρέπει να υπόκεινται στον έλεγχο στοιβάγματος για μία περίοδο 28 ημερών σε μία θερμοκρασία όχι μικρότερη από 40 °C.

Το ελάχιστο ύψος της στοιβάδας συμπεριλαμβανομένου του δείγματος ελέγχου θα πρέπει να είναι 3 μέτρα.

Για τον έλεγχο σε συμφωνία με το περιθωριακό 3551 (5), η αρχική πληρωτική ύλη θα πρέπει να χρησιμοποιείται. Για τον έλεγχο σε συμφωνία με το περιθωριακό 3551 (6), ένας έλεγχος στοιβάγματος θα πρέπει να διεξάγεται με ένα πρότυπο υγρό.

Όπου το περιεχόμενο των δειγμάτων ελέγχου είναι μη-επικίνδυνα υγρά με σχετική πικνότητα διαφορετική από εκείνη του υγρού προς μεταφορά, η δύναμη θα πρέπει να υπολογίζεται σε σχέση με την τελευταία.

(4) *Κριτήρια για πέρασμα του ελέγχου:*

Κανένα δείγμα ελέγχου δεν θα πρέπει να έχει διαρροή. Σε σύνθετες συσκευασίες ή συνδυασμένες συσκευασίες, δεν θα πρέπει να υπάρχει διαρροή της πληρωτικής ύλης από το εσωτερικό δοχείο ή την εσωτερική συσκευασία.

Κανένα δείγμα ελέγχου δεν θα πρέπει να εμφανίζει οποιαδήποτε φθορά που θα μπορούσε δυσμενώς να επηρεάσει την ασφάλεια της μεταφοράς ή οποιαδήποτε παραμόρφωση που θα μπορούσε να μειώσει την αντοχή του ή να προκαλέσει αστάθεια στις στοιβες των κόλων.

Η σταθερότητα στοιβάγματος θα πρέπει να θεωρείται αρκετή όταν, μετά από τον έλεγχο στοιβάγματος και στην περίπτωση πλαστικών συσκευασιών, μετά από ψύξη στη θερμοκρασία περιβάλλοντος, δύο γεμισμένες συσκευασίες του ίδιου τύπου τοποθετημένες πάνω στο δείγμα ελέγχου διατηρούν τη θέση τους για μία ώρα.

*Συμπληρωματικός έλεγχος διαπερατότητας για πλαστικά βαρέλια και μπιτόνια σε συμφωνία με το περιθωριακό 3526 και για σύνθετες συσκευασίες (πλαστικού υλικού) σε συμφωνία με το περιθωριακό 3537 προοριζόμενες για τη μεταφορά υγρών που έχει σημείο ανάφλεξης  $\leq 61$  °C, πέραν από συσκευασίες 6HA1*

3556 (1) Συσκευασίες από πολυαιθυλένιο χρειάζεται να υπόκεινται σ' αυτό τον έλεγχο μόνον εάν είναι να εγκριθούν για τη μεταφορά βενζολίου, τολουολίου, ξυλένιου ή μειγμάτων και παρασκευασμάτων που περιέχουν εκείνες τις ύλες.

## Προσθήκη Α.5

3556 (2) Αριθμός δειγμάτων ελέγχου:

(συνεχ.)

Τρεις συσκευασίες ανά τύπο σχεδιασμού και κατασκευαστή.

(3) Ειδική προετοιμασία του δείγματος ελέγχου για τον έλεγχο:

Τα δείγματα ελέγχου θα προ-αποθηκεύονται με την αρχική πληρωτική ύλη σε συμφωνία με το περιθωριακό 3551 (5), ή, για συσκευασίες από υψηλού μοριακού βάρους πολυαιθυλένιο, με το πρότυπο υγρό μείγμα υδρογονανθράκων (λευκό οινόπνευμα) σε συμφωνία με το περιθωριακό 3551 (6).

(4) Μέθοδος ελέγχου:

Τα δείγματα ελέγχου γεμισμένα με την ύλη για την οποία η συσκευασία είναι να εγκριθεί θα πρέπει να ζυγίζεται πριν και μετά από την αποθήκευση για 28 ημέρες στους 23 °C και 50 % σχετική ατμοσφαιρική υγρασία. Για συσκευασίες από υψηλού μοριακού βάρους πολυαιθυλένιο, ο έλεγχος μπορεί να διεξάγεται με το πρότυπο υγρό μείγμα υδρογονανθράκων (λευκό οινόπνευμα) στη θέση του βενζολίου, του τολουολίου ή του ξυλένιου.

(5) Κριτήριο για πέρασμα του ελέγχου:

Η διαπερατότητα δεν θα πρέπει να υπερβαίνει τα 0.008 g/l.h

**Συμπληρωματικός έλεγχος για βαρέλια τύπου φελλού από φυσικό ξύλο**

3557 (1) Αριθμός δειγμάτων ελέγχου:

Ένα βαρέλι ανά τύπο σχεδιασμού και κατασκευαστή.

(2) Μέθοδος ελέγχου:

Αφαιρούμε όλα τα τσέρκια πάνω από την κοιλιά ενός κενού βαρελιού που έχει προηγουμένως στηθεί μονταρισμένο για τουλάχιστον δύο ημέρες.

(3) Κριτήριο για πέρασμα του ελέγχου:

Η διάμετρος του επάνω μέρους του βαρελιού δεν θα πρέπει να αυξάνεται περισσότερο από 10 %.

**Έγκριση συνδυασμένων συσκευασιών**

**ΣΗΜΕΙΩΣΗ:** Οι συνδυασμένες συσκευασίες θα πρέπει να ελέγχονται σε συμφωνία με τις διατάξεις που ισχύουν για τις εξωτερικές συσκευασίες.

3558 (1) Κατά τη διάρκεια ελέγχων του τύπου σχεδιασμού συνδυασμένων συσκευασιών, έγκριση μπορεί στον ίδιο χρόνο να δίνεται για συσκευασίες:

(a) που περιέχουν εσωτερικές συσκευασίες μικρότερου όγκου,

(b) που έχουν μικρότερο καθαρό βάρος από εκείνο του τύπου σχεδιασμού που ελέγχεται.

(2) Όπου διάφοροι τύποι συνδυασμένης συσκευασίας που έχει διαφορετικούς τύπους εσωτερικής συσκευασίας έχει εγκριθεί, οι διάφορες εσωτερικές συσκευασίες μπορούν επίσης να μοντάρονται σε μία μόνη εξωτερική συσκευασία εάν ο αποστολέας πιστοποιεί ότι αυτό το κόλο ικανοποιεί τις απαιτήσεις ελέγχου.

## Προσθήκη Α.5

3558 (3) Υπό την προϋπόθεση ότι οι ιδιότητες αντοχής των πλαστικών εσωτερικών συσκευασιών (συνεχ.) μίας συνδυασμένης συσκευασίας δεν μεταβάλλεται σημαντικά από τη δράση της πληρωτικής ύλης, απόδειξη της χημικής συμβατότητας δεν είναι απαραίτητη. Μία σημαντική μεταβολή στις ιδιότητες αντοχής σημαίνει:

- (a) Σαφής αύξηση της ευθραυστότητας,
- (b) σημαντική μείωση στην ελαστικότητα, εκτός εάν σχετίζεται με μία όχι λιγότερο από ανάλογη αύξηση σε ελαστική επιμήκυνση.

(4) Όπου μία εξωτερική συσκευασία μίας συνδυασμένης συσκευασίας έχει επιτυχώς ελεγχθεί με διαφορετικούς τύπους εσωτερικών συσκευασιών, μία ποικιλία τέτοιων διαφορετικών εσωτερικών συσκευασιών θα πρέπει επίσης να μοντάρονται σε αυτή την εξωτερική συσκευασία. Επιπλέον, υπό την προϋπόθεση ότι ένα ισοδύναμο επίπεδο λειτουργίας διατηρείται, οι παρακάτω παρεκκλίσεις στις εσωτερικές συσκευασίες επιτρέπονται χωρίς περαιτέρω έλεγχο του κόλου:

- (a) Εσωτερικές συσκευασίες ισοδύναμου μικρότερου μεγέθους θα πρέπει να χρησιμοποιούνται υπό την προϋπόθεση ότι:
  - (i) Οι εσωτερικές συσκευασίες είναι παρόμοιου σχεδιασμού με τις ελεγχόμενες εσωτερικές συσκευασίες (π.χ. σχήμα - κυκλικό, ορθογώνιο, κ.λπ.),
  - (ii) Το υλικό κατασκευής των εσωτερικών συσκευασιών (γυαλί, πλαστικό, μέταλλο κ.λπ.) προσφέρει αντίσταση σε δυνάμεις κρούσης και στοιβάγματος ίσες με ή μεγαλύτερες από εκείνη της αρχικά ελεγμένης συσκευασίας,
  - (iii) Οι εσωτερικές συσκευασίες έχουν τα ίδια ή μικρότερα ανοίγματα και το πάμα είναι παρόμοιου σχεδιασμού (π.χ. βιδωτό κάλυμμα, καπάκι τριβής κ.λπ.),
  - (iv) Αρκετό πρόσθετο προστατευτικό υλικό χρησιμοποιείται για την κατάληψη των κενών χώρων και για την αποφυγή σημαντικής κίνησης των εσωτερικών συσκευασιών και
  - (v) Οι εσωτερικές συσκευασίες είναι προσανατολισμένες μέσα στην εξωτερική συσκευασία με τον ίδιο τρόπο όπως στο ελεγχθέν κόλο.
- (b) Ένας μικρότερος αριθμός των ελεγμένων εσωτερικών συσκευασιών, ή των εναλλακτικών τύπων εσωτερικών συσκευασιών που προσδιορίζονται στο (a) παραπάνω, θα πρέπει να χρησιμοποιούνται υπό την προϋπόθεση ότι αρκετό προστατευτικό προστίθεται για το γέμισμα του(ών) κενού(ών) χώρου(ων) και για την αποφυγή σημαντικής κίνησης των εσωτερικών συσκευασιών.

(5) Είδη ή εσωτερικές συσκευασίες οποιουδήποτε τύπου για στερεά ή υγρά θα πρέπει να μοντάρονται και παρουσιάζονται για μεταφορά χωρίς έλεγχο σε μία εξωτερική συσκευασία υπό τους παρακάτω όρους:

- (a) Η εξωτερική συσκευασία θα πρέπει να έχει επιτυχώς ελεγχθεί σε συμφωνία με το περιθωριακό 3552 με εύθραυστες (π.χ. γυάλινες) εσωτερικές συσκευασίες που περιέχουν υγρά με τη χρήση του ύψους πτώσης για την ομάδα συσκευασίας I.
- (b) Το συνολικό συνδυασμένο μικτό βάρος των εσωτερικών συσκευασιών δεν θα πρέπει να υπερβαίνει το μισό του μικτού βάρους των εσωτερικών συσκευασιών που χρησιμοποιούνται για τον έλεγχο πτώσης στο (a) παραπάνω.
- (c) Το πάχος του προστατευτικού υλικού μεταξύ των εσωτερικών συσκευασιών και του εξωτερικού της συσκευασίας δεν θα πρέπει να μειώνεται κάτω από το αντίστοιχο πάχος στην αρχικά ελεγχόμενη συσκευασία. Και εάν μία μόνη εσωτερική συσκευασία είχε χρησιμοποιηθεί στον αρχικό έλεγχο, το πάχος του προστατευτικού

## Προσθήκη Α.5

3558  
(συνεχ.)

μεταξύ των εσωτερικών συσκευασιών δεν θα πρέπει να είναι μικρότερο από το πάχος του προστατευτικού μεταξύ του εξωτερικού της συσκευασίας και της εσωτερικής συσκευασίας στον αρχικό έλεγχο. Εάν είτε λιγότερες είτε μικρότερες εσωτερικές συσκευασίες χρησιμοποιούνται (συγκρινόμενες με τις εσωτερικές συσκευασίες που χρησιμοποιούνται στον έλεγχο πτώσης) αρκετό πρόσθετο προστατευτικό υλικό θα πρέπει να χρησιμοποιείται για την κατάληψη των κενών χώρων.

- (d) Η εξωτερική συσκευασία θα πρέπει να έχει περάσει επιτυχώς τον έλεγχο στοιβάγματος στο περιθωριακό 3555 όταν είναι κενή. Το συνολικό βάρος ιδίων κόλων θα πρέπει να βασίζεται στο συνδυασμένο βάρος των εσωτερικών συσκευασιών που χρησιμοποιούνται για τον έλεγχο πτώσης στο (a) παραπάνω.
- (e) Εσωτερικές συσκευασίες που περιέχουν υγρά θα πρέπει να είναι πλήρως περιβλημένες με αρκετή ποσότητα απορροφητικού υλικού για την απορρόφηση όλου του υγρού περιεχομένου των εσωτερικών συσκευασιών.
- (f) Εάν η εξωτερική συσκευασία είναι προοριζόμενη να περιέχει εσωτερικές συσκευασίες για υγρά και δεν είναι στεγανή, ή είναι προοριζόμενη να περιέχει εσωτερικές συσκευασίες για στερεά και δεν είναι αδιαπέραστη, ένα μέσον συγκράτησης οποιουδήποτε υγρού ή στερεού περιεχομένου στην περίπτωση διαρροής θα πρέπει να υπάρχει στη μορφή στεγανής επένδυσης, πλαστικού σάκου ή άλλου εξίσου αποτελεσματικού μέσου συγκράτησης. Για συσκευασίες που περιέχουν υγρά, το απορροφητικό υλικό που απαιτείται στο (e) θα πρέπει να τοποθετείται μέσα στο μέσον συγκράτησης του υγρού περιεχομένου.
- (g) Οι συσκευασίες θα πρέπει να είναι μαρκαρισμένες σε συμφωνία με το περιθωριακό 3512 ως ελεγμένες για λειτουργία συνδυασμένων συσκευασιών της Ομάδας Συσκευασίας Ι. Το μαρκαρισμένο μικτό βάρος σε κιλά θα πρέπει να είναι το άθροισμα του βάρους των εξωτερικών συσκευασιών συν το μισό του βάρους της(των) εσωτερικής(ών) συσκευασίας(ών) όπως χρησιμοποιούνται για τον έλεγχο πτώσης που αναφέρεται στο (a) παραπάνω. Το σήμα θα πρέπει να περιέχει ένα γράμμα "V" σε συμφωνία με το περιθωριακό 3512 (5) ως ειδική συσκευασία.

#### Αναφορά ελέγχου

3559 Μία αναφορά ελέγχου που περιέχει τουλάχιστον τα παρακάτω στοιχεία θα πρέπει να συντάσσεται και θα πρέπει να είναι διαθέσιμη στους χρήστες της συσκευασίας:

1. Σώμα ελέγχου,
2. Αιτών,
3. Κατασκευαστής της συσκευασίας,
4. Περιγραφή της συσκευασίας (π.χ. χαρακτηριστικά γνωρίσματα τέτοια όπως υλικό, εσωτερική επένδυση, διαστάσεις, πάχος τοιχωμάτων, βάρος, πόματα, χρωματισμός των πλαστικών υλικών),
5. Σχέδια της συσκευασίας και των πωμάτων (εάν είναι απαραίτητο, φωτογραφίες),
6. Μέθοδος κατασκευής,
7. Μέγιστη χωρητικότητα,
8. Χαρακτηριστικά του περιεχομένου ελέγχου, π.χ. ιξώδες και σχετική πυκνότητα για υγρά και μέγεθος σωματιδίων για στερεά,
9. Ύψος πτώσης,

## Προσθήκη Α.5

- 3559 10. Πίεση ελέγχου στον έλεγχο στεγανότητας σε συμφωνία με το περιθωριακό 3553, (συνεχ.)
11. Πίεση ελέγχου στον έλεγχο εσωτερικής πίεσης σε συμφωνία με το περιθωριακό 3554,
12. Ύψος στοιβάγματος,
13. Αποτελέσματα ελέγχου,
14. Ένας μοναδικός προσδιορισμός της αναφοράς ελέγχου,
15. Ημερομηνία της αναφοράς ελέγχου,
16. Η αναφορά ελέγχου θα πρέπει να υπογράφεται με το όνομα και τη θέση του υπογράφοντος.

Η αναφορά ελέγχου θα πρέπει να περιέχει δηλώσεις ότι η συσκευασία προετοιμασμένη όπως για μεταφορά ελέγχθηκε σε συμφωνία με τις κατάλληλες διατάξεις της Προσθήκης Α.5 και ότι η χρήση άλλων μεθόδων συσκευασίας μπορούν να την καταστήσουν μη-ισχύουσα. Ένα αντίγραφο της αναφοράς ελέγχου θα πρέπει να είναι διαθέσιμη στην αρμόδια αρχή.

**Β. Έλεγχος στεγανότητας για όλες τις νέες, επανακατασκευασμένες ή επιδιορθωμένες συσκευασίες που προορίζονται να περιέχουν υγρά.**

3560 (1) *Ισχύς του ελέγχου*

Κάθε συσκευασία προοριζόμενη να περιέχει υγρά θα πρέπει να υποβάλλεται στον έλεγχο στεγανότητας:

- πριν χρησιμοποιηθεί πρώτη φορά για μεταφορά,
- μετά από την επανακατασκευή ή την επιδιόρθωση, πριν επαναχρησιμοποιηθεί για μεταφορά.

Για αυτόν τον έλεγχο, οι συσκευασίες δεν χρειάζεται να έχουν προσαρμοσμένα τα δικά τους πώματα.

Το εσωτερικό δοχείο των σύνθετων συσκευασιών μπορεί να ελέγχεται χωρίς την εξωτερική συσκευασία υπό την προϋπόθεση ότι τα αποτελέσματα ελέγχου δεν επηρεάζονται.

Αυτός ο έλεγχος δεν απαιτείται για:

- εσωτερικές συσκευασίες συνδυασμένων συσκευασιών,
- εσωτερικά δοχεία σύνθετων συσκευασιών (από γυαλί, πορσελάνη ή ψαμμάργιλο) σύμφωνα με το περιθωριακό 3510 (2),
- μετακινούμενης κεφαλής συσκευασίες προοριζόμενες για ύλες με ιξώδες στους 23 °C που υπερβαίνει τα 200 mm<sup>2</sup>/s,

ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3510 (2).

## Προσθήκη Α.5

3560 (2) Μέθοδος ελέγχου:  
(συνεχ.)

Πέπιεσμένος αέρας εισάγεται μέσω του στομίου πλήρωσης κάθε συσκευασίας. Η συσκευασία εμβαπτίζεται στο νερό. Διατηρείται κάτω από το νερό με τέτοιο τρόπο ώστε να μην αλλοιώνεται το αποτέλεσμα του ελέγχου. Η συσκευασία μπορεί επίσης να καλύπτεται με διάλυμα σαπουνιού, βαρύ λάδι ή άλλο κατάλληλο υγρό στις ραφές της ή σε οποιαδήποτε άλλη θέση όπου μπορεί να σημειωθεί διαρροή. Άλλες μέθοδοι τουλάχιστον εξίσου αποτελεσματικές μπορούν επίσης να χρησιμοποιούνται.

Οι συσκευασίες δεν χρειάζεται να είναι εξοπλισμένες με τα δικά τους πόματα.

(3) Πίεση αέρα που πρέπει να εφαρμόζεται:

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
Όχι μικρότερη από 30 kPa	Όχι μικρότερη από 20 kPa	Όχι μικρότερη από 20 kPa

(4) Κριτήριο για πέρασμα του ελέγχου:

Δεν θα πρέπει να υπάρχει διαρροή.

3561-  
3599

## ΠΑΡΑΡΤΗΜΑ ΣΤΗΝ ΠΡΟΣΘΗΚΗ Α.5

## Μέρος Ι

Πρότυπα υγρά για την επαλήθευση της χημικής συμβατότητας συσκευασιών από υψηλού μοριακού βάρους πολυαιθυλένιο σε συμφωνία με το περιθωριακό 3551 (6).

Τα παρακάτω πρότυπα υγρά θα πρέπει να χρησιμοποιούνται για αυτό το πλαστικό υλικό.

- (a) *Διάλυμα διάβρωσης* για ύλες που προκαλούν σοβαρή θραύση στο πολυαιθυλένιο υπό καταπόνηση, ειδικά για όλα τα διαλύματα και παρασκευάσματα που περιέχουν παράγοντες διάβρωσης.

Ένα υδατικό διάλυμα 1 έως 10 % ενός παράγοντα διάβρωσης θα πρέπει να χρησιμοποιείται. Η επιφανειακή τάση αυτού του διαλύματος θα πρέπει να είναι 31 έως 35 mN/m στους 23 °C.

Ο έλεγχος στοιβάγματος θα πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μικρότερης από 1.20.

Ένας έλεγχος συμβατότητας με οξικό οξύ δεν απαιτείται εάν επαρκή χημική συμβατότητα αποδεικνύεται με ένα διάλυμα διάβρωσης.

- (b) *Οξικό οξύ* για ύλες και παρασκευάσματα που προκαλούν θραύση στο πολυαιθυλένιο υπό καταπόνηση, ειδικά για μονοκαρβοξυλικά οξέα και μονοσθενείς αλκοόλες.

Οξικό οξύ σε συγκέντρωση 98 έως 100 % θα πρέπει να χρησιμοποιείται.

Σχετική πυκνότητα = 1.05

Ο έλεγχος στοιβάγματος θα πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μικρότερης από 1.1.

Στην περίπτωση πληρωτικών υλών που προκαλούν φούσκωμα στο πολυαιθυλένιο περισσότερο από το οξικό οξύ και σε τέτοιο βαθμό ώστε το βάρος του πολυαιθυλενίου αυξάνεται κατά έως 4 %, επαρκής χημική συμβατότητα μπορεί να αποδεικνύεται μετά από προκαταρκτική αποθήκευση για τρεις εβδομάδες στους 40 °C, σε συμφωνία με το περιθωριακό 3551 (6) αλλά με την αρχική πληρωτική ύλη.

- (c) *Διάλυμα διάβρωσης κανονικού οξικού βουτυλεστέρα/κανονικού οξικού βουτυλεστέρα-κορεσμένου* για ύλες και παρασκευάσματα που προκαλούν φούσκωμα στο πολυαιθυλένιο σε τέτοιο βαθμό ώστε το βάρος του πολυαιθυλενίου να αυξάνεται κατά περίπου 4 % και στον ίδιο χρόνο προκαλούν θραύση υπό καταπόνηση, ειδικά για φυτικά-υγιεινά προϊόντα, υγρά χρώματα και εστέρες. Κανονικός οξικός βουτυλεστέρας σε συγκέντρωση 98 έως 100 % θα πρέπει να χρησιμοποιείται για προκαταρκτική αποθήκευση σε συμφωνία με το περιθωριακό 3551 (6).

Για τον έλεγχο στοιβάγματος σε συμφωνία με το περιθωριακό 3555, ένα υγρό ελέγχου συνιστάμενο από ένα 1 έως 10 % υδατικό διάλυμα διάβρωσης αναμεμιγμένο με 2 % κανονικό οξικό βουτυλεστέρα σύμφωνα με το (a) παραπάνω θα πρέπει να χρησιμοποιείται.

Ο έλεγχος στοιβάγματος θα πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μικρότερης από 1.0.

## Παράρτημα στην Προσθήκη Α.5

Παράρτημα  
(συνεχ.)

Στην περίπτωση πληρωτικών υλών που προκαλούν φούσκωμα στο πολυαιθυλένιο περισσότερο από τον κανονικό οξικό βουτυλεστέρα και σε τέτοιο βαθμό ώστε το βάρος του πολυαιθυλενίου να αυξάνεται κατά έως 7.5 %, επαρκής χημική συμβατότητα μπορεί να αποδεικνύεται μετά από προκαταρκτική αποθήκευση για τρεις εβδομάδες στους 40 °C, σε συμφωνία με το περιθωριακό 3551 (6) αλλά με την αρχική πληρωτική ύλη.

- (d) *Μείγμα υδρογονανθράκων (λευκό οινόπνευμα)* για ύλες και παρασκευάσματα που προκαλούν φούσκωμα σε πολυαιθυλένιο, ειδικά για υδρογονάνθρακες, εστέρες και κετόνες.

Ένα μείγμα υδρογονανθράκων που έχει σημείο βρασμού από 160 °C έως 220 °C, σχετική πυκνότητα 0.78-0.80, σημείο ανάφλεξης >50 °C και περιεκτικότητα σε αρωματικά 16 % έως 21 % θα πρέπει να χρησιμοποιείται.

Ο έλεγχος στοιβάγματος θα πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μικρότερης από 1.0.

Στην περίπτωση πληρωτικών υλών που προκαλούν φούσκωμα στο πολυαιθυλένιο σε τέτοιο βαθμό ώστε το βάρος του πολυαιθυλενίου να αυξάνεται κατά περισσότερο από 7.5 %, επαρκής χημική συμβατότητα μπορεί να αποδεικνύεται μετά από προκαταρκτική αποθήκευση για τρεις εβδομάδες στους 40 °C, σε συμφωνία με το περιθωριακό 3551 (6) αλλά με την αρχική πληρωτική ύλη.

- (e) *Νιτρικό οξύ* για όλες τις ύλες και παρασκευάσματα που έχουν οξειδωτική επίδραση στο πολυαιθυλένιο και που προκαλούν μοριακή αποικοδόμηση ίδια με ή μικρότερη από 55 % νιτρικό οξύ.

Νιτρικό οξύ σε συγκέντρωση όχι μικρότερη από 55 % θα πρέπει να χρησιμοποιείται.

Ο έλεγχος στοιβάγματος πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μικρότερης από 1.4.

Στην περίπτωση πληρωτικών υλών περισσότερο ισχυρά οξειδωτικών από 55 % νιτρικό οξύ ή που προκαλούν αποικοδόμηση του μοριακού βάρους συνεχίζουμε σε συμφωνία με το περιθωριακό 3551 (5).

- (f) *Νερό* για ύλες που δεν προσβάλλουν το πολυαιθυλένιο σε οποιαδήποτε από τις περιπτώσεις που αναφέρονται στα (a) έως (e), ειδικά για ανόργανα οξέα και αλισίβες, υδατικά αλατούχα διαλύματα, πολυσθενείς αλκοόλες και οργανικές ύλες σε υδατικό διάλυμα.

Ο έλεγχος στοιβάγματος θα πρέπει να διεξάγεται στη βάση μίας σχετικής πυκνότητας όχι μεγαλύτερης από 1.2.

## Παράρτημα στην Προσθήκη Α.5

Παράρτημα Μέρος II  
(συνεχ.)

Κατάλογος υλών με τις οποίες τα πρότυπα υγρά μπορούν να θεωρούνται ως ισοδύναμα σε συμφωνία με το περιθωριακό 3551 (6).

Για υποχλωριώδη διαλύματα, εξαεριστήρες του ίδιου τύπου σχεδιασμού, ανθεκτικοί σε υποχλωριώδη άλατα (π.χ. από πυριτιούχο καουτσούκ) αλλά όχι ανθεκτικοί στο νιτρικό οξύ, επιτρέπονται επίσης.

## ΠΡΟΣΘΗΚΗ Α.6

**ΓΕΝΙΚΟΙ ΟΡΟΙ ΓΙΑ ΤΗ ΧΡΗΣΗ ΕΝΔΙΑΜΕΣΩΝ ΕΜΠΟΡΕΥΜΑΤΟΚΙΒΩΤΙΩΝ ΓΙΑ ΜΕΤΑΦΟΡΑ ΧΥΜΑ (IBC), ΤΥΠΟΙ IBC, ΑΠΑΙΤΗΣΕΙΣ ΣΧΕΤΙΚΕΣ ΜΕ ΤΗΝ ΚΑΤΑΣΚΕΥΗ IBC ΚΑΙ ΠΡΟΔΙΑΓΡΑΦΕΣ ΕΛΕΓΧΟΥ ΓΙΑ IBC**

3600 "Ενδιάμεσο Εμπορευματοκιβώτιο για μεταφορά χύμα" (IBC) σημαίνει μία άκαμπτη, ημι-άκαμπτη ή εύκαμπτη φορητή συσκευασία, πέραν από εκείνες που προκαθορίζονται στην Προσθήκη Α.5, που:

- (a) έχει χωρητικότητα
- (i) όχι μεγαλύτερη από 3.0 m<sup>3</sup> (3,000 λίτρα) για στερεά και υγρά των Ομάδων Συσκευασίας II και III,
  - (ii) όχι μεγαλύτερη από 1.5 m<sup>3</sup> για στερεά της Ομάδας Συσκευασίας I όταν είναι συσκευασμένα σε εύκαμπτα, άκαμπτου πλαστικού, σύνθετα, φύλλου φάιμπερ και ξύλινα IBC,
  - (iii) όχι μεγαλύτερη από 3.0 m<sup>3</sup> για στερεά της Ομάδας Συσκευασίας I όταν είναι συσκευασμένα σε μεταλλικά IBC,
- (b) είναι σχεδιασμένη για μηχανικό χειρισμό,
- (c) είναι ανθεκτική στις καταπονήσεις που παράγονται κατά το χειρισμό και τη μεταφορά όπως προσδιορίζεται από τους ελέγχους που προκαθορίζονται σε αυτήν την Προσθήκη.

**ΣΗΜΕΙΩΣΗ 1:** Οι διατάξεις αυτής της Προσθήκης ισχύουν για ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) η χρήση των οποίων ρητά επιτρέπεται στις σχετικές κλάσεις για τη μεταφορά ορισμένων επικίνδυνων υλών.

**ΣΗΜΕΙΩΣΗ 2:** Εμπορευματοκιβώτια-δεξαμενές που ικανοποιούν τις διατάξεις της Προσθήκης Β.1b δεν θεωρούνται ότι είναι ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC).

**ΣΗΜΕΙΩΣΗ 3:** Ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) που ικανοποιούν τους όρους αυτής της Προσθήκης δεν θεωρούνται ότι είναι εμπορευματοκιβώτια για τους σκοπούς αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 4:** Τα γράμματα IBC μόνον θα χρησιμοποιούνται στο υπόλοιπο κείμενο για αναφορά σε ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα.

**Μέρος 1: Γενικοί όροι που ισχύουν για τα IBC**

3601 (1) Τα IBC θα πρέπει να είναι σχεδιασμένα, κατασκευασμένα και ελεγμένα κάτω από ένα πρόγραμμα εξασφάλισης ποιότητας που ικανοποιεί την αρμόδια αρχή, για να εξασφαλίζεται ότι κάθε IBC ικανοποιεί τις διατάξεις αυτής της Προσθήκης.

(2) Κάθε IBC θα πρέπει να αντιστοιχεί απ' όλες τις απόψεις στον τύπο σχεδιασμού του.

Η αρμόδια αρχή μπορεί σε οποιονδήποτε χρόνο να απαιτήσει απόδειξη, με διεξαγωγή ελέγχων σε συμφωνία με τις διατάξεις αυτής της Προσθήκης, ότι τα IBC ικανοποιούν τις απαιτήσεις για τους ελέγχους του τύπου σχεδιασμού.

(3) Πριν γεμιστεί και παραδοθεί για μεταφορά, κάθε IBC θα πρέπει να επιθεωρείται ώστε να εξασφαλίζεται ότι είναι ελεύθερο από διάβρωση, μόλυνση ή άλλη φθορά και σχετικά με την σωστή λειτουργία των εξαρτημάτων εξυπηρέτησης. Οποιοδήποτε IBC που εμφανίζει σημάδια μειωμένης αντοχής σε σύγκριση με τον ελεγμένο τύπο σχεδιασμού δεν θα πρέπει να

## Προσθήκη Α.6

5.5.1 χρησιμοποιείται περαιτέρω ή θα πρέπει να επισκευάζεται έτσι ώστε να είναι καινό να αντέχει (συνεχ.) τους ελέγχους του τύπου σχεδιασμού.

(4) Όπου δύο ή περισσότερα συστήματα κλεισίματος είναι προσαρμοσμένα σε σειρά, εκείνο που είναι πιο κοντά στην ύλη που μεταφέρεται θα πρέπει να κλείνεται πρώτο.

(5) Κατά τη διάρκεια της μεταφοράς, κανένα επικίνδυνο υπόλειμμα δεν θα πρέπει να επκολλάται στο εξωτερικό του IBC.

(6) Όπου υπερπίεση μπορεί να αναπτυχθεί σε ένα IBC μέσω της έκλυσης αερίου από το περιεχόμενο (ως αποτέλεσμα αύξησης της θερμοκρασίας ή άλλων αιτιών), το IBC μπορεί να είναι εξοπλισμένο με έναν εξαεριστήρα υπό την προϋπόθεση ότι το αέριο που εκλύεται δεν θα προκαλέσει οποιονδήποτε κίνδυνο εξαιτίας της τοξικότητάς του, της ευφλεκτότητάς του, της απελευθερούμενης ποσότητας κ.λπ. Ο εξαεριστήρας θα πρέπει να είναι έτσι σχεδιασμένος ώστε, όταν το IBC είναι στη θέση στην οποία προορίζεται να μεταφερθεί, διαρροές υγρού και η διείσδυση ξένης ύλης παρεμποδίζεται υπό κανονικές συνθήκες μεταφοράς. Πάντως, μία ύλη μπορεί να μεταφέρεται σε τέτοια IBC μόνον όπου ένας εξαεριστήρας ορίζεται για εκείνη την ύλη στους όρους μεταφοράς της σχετικής κλάσης.

(7) Όταν τα IBC είναι γεμισμένα με υγρά, αρκετό κενό θα πρέπει να αφήνεται ώστε να εξασφαλίζεται ότι καμία διαρροή υγρού και μόνιμη παραμόρφωση του IBC δεν συμβαίνει ως αποτέλεσμα της διαστολής του υγρού, λόγω των θερμοκρασιών που μπορούν να αναπτυχθούν κατά τη διάρκεια της μεταφοράς.

Για θερμοκρασία πλήρωσης 15 °C, ο μέγιστος βαθμός πλήρωσης θα πρέπει να προσδιορίζεται ως ακολούθως, εκτός εάν αλλιώς ορίζεται σε μία συγκεκριμένη κλάση:

Είτε (a)

Σημείο βρασμού (αρχικό σημείο βρασμού) της ύλης σε °C	> 35 < 60	≥ 60 < 100	≥ 100 < 200	≥ 200 < 300	≥ 300
Βαθμός πλήρωσης ως ποσοστό της χωρητικότητας του IBC	90	92	94	96	98

Είτε (b)

$$\text{Βαθμός πλήρωσης} = \frac{98}{1 + \alpha(50 - t_f)} \text{ της χωρητικότητας του IBC.}$$

Σε αυτόν τον τύπο, το  $\alpha$  αντιπροσωπεύει τον μέσο συντελεστή κυβικής διαστολής του υγρού μεταξύ 15 °C και 50 °C, δηλαδή, για μία μέγιστη αύξηση στη θερμοκρασία 35 °C,

$$\text{το } \alpha \text{ υπολογίζεται σύμφωνα με τον τύπο: } \alpha = \frac{d_{15} - d_{50}}{35 \cdot d_{50}}$$

όπου  $d_{15}$  και  $d_{50}$  είναι οι σχετικές πυκνότητες του υγρού στους 15 °C και 50 °C και  $t_f$  η μέση θερμοκρασία του υγρού στο χρόνο πλήρωσης.

(8) Όταν τα IBC χρησιμοποιούνται για τη μεταφορά υγρών με σημείο ανάφλεξης 55 °C (κλειστό καψύλλιο) ή χαμηλότερο, ή σκόνης υποκείμενες σε έκρηξη σκόνης, θα πρέπει να λαμβάνονται μέτρα ώστε να παρεμποδίζεται μία επικίνδυνη ηλεκτροστατική απόφορτιση κατά τη διάρκεια του γεμίσματος και του αδειάσματος.

## Προσθήκη Α.6

3901 (9) Το πόμα των IBC που περιέχουν ναπές ή διαλυμένες ύλες θα πρέπει να είναι τέτοιο ώστε (συνεχ.) το ποσοστό του υγρού (νερό, διαλύτης ή αδρανοποιητής) να μην πέφτει κάτω από τα οριζόμενα όρια κατά τη διάρκεια της μεταφοράς.

(10) Υγρά θα πρέπει να φορτώνονται μόνον μέσα σε άκαμπτα πλαστικά IBC ή σύνθετα IBC που έχουν επαρκή αντίσταση στην εσωτερική πίεση που μπορεί να αναπτυχθεί υπό κανονικές συνθήκες μεταφοράς. Τα IBC που είναι μαρκαρισμένα με την υδραυλική πίεση ελέγχου όπως ορίζεται στο περιθωριακό 3612 (2) θα πρέπει να είναι γεμισμένα μόνον με ένα υγρό που έχει πίεση ατμών:

- (a) τέτοια ώστε η συνολική πίεση πιεζομέτρου στη συσκευασία (δηλ. η πίεση ατμών της πληρωτικής ύλης συν η μερική πίεση του αέρα ή άλλων αδρανών αερίων, μείον 100 kPa) στους 55 °C που προσδιορίζεται στη βάση ενός μέγιστου βαθμού πλήρωσης σε συμφωνία με την παράγραφο (7) και μία θερμοκρασία πλήρωσης 15 °C, δεν θα υπερβαίνει τα δύο τρίτα της μαρκαρισμένης πίεσης ελέγχου, ή
- (b) στους 50 °C μικρότερη από τα τέσσερα έβδομα του αθροίσματος της μαρκαρισμένης πίεσης ελέγχου συν 100 kPa, ή
- (c) στους 55 °C μικρότερη από τα δύο τρίτα του αθροίσματος της μαρκαρισμένης πίεσης ελέγχου συν 100 kPa.

(11) Κατά τη διάρκεια της μεταφοράς, τα IBC θα πρέπει να είναι με ασφάλεια στερεωμένα ή συγκρατημένα μέσα στη μονάδα μεταφοράς έτσι ώστε να αποφεύγεται πλάγια ή διαμήκης κίνηση ή κρούση και έτσι ώστε να προσφέρεται επαρκής εξωτερική υποστήριξη.

3602-  
3609

## Μέρος 2: Τύποι IBC

## Ορισμοί

3610 (1) Υποκείμενα στις συγκεκριμένες διατάξεις κάθε κλάσης, τα IBC που αναφέρονται παρακάτω μπορούν να χρησιμοποιούνται:

Μεταλλικά IBC

Τα μεταλλικά IBC συνίστανται από ένα μεταλλικό σώμα μαζί με κατάλληλο εξοπλισμό εξυπηρέτησης και δόμησης.

Εύκαμπτα IBC

Τα εύκαμπτα IBC συνίστανται από ένα σώμα που συνίσταται από φιλμ, από πλεγμένο ύφασμα ή οποιοδήποτε άλλο εύκαμπτο υλικό ή συνδυασμό αυτών και εάν είναι απαραίτητο, μία εσωτερική επικάλυψη ή επένδυση, μαζί με οποιοδήποτε κατάλληλο εξοπλισμό εξυπηρέτησης και συσκευή διακίνησης.

IBC από άκαμπτο πλαστικό

Τα IBC από άκαμπτο πλαστικό συνίστανται από ένα σώμα από άκαμπτο πλαστικό, που μπορεί να έχει δομικό εξοπλισμό μαζί με κατάλληλο εξοπλισμό εξυπηρέτησης.

Σύνθετα IBC με πλαστικό εσωτερικό δοχείο

Τα σύνθετα IBC συνίστανται από δομικό εξοπλισμό στη μορφή ενός άκαμπτου εξωτερικού περιβλήματος που περιυκλείει ένα πλαστικό εσωτερικό δοχείο μαζί με οποιοδήποτε εξοπλισμό εξυπηρέτησης ή άλλου δομικού είδους. Είναι έτσι δομημένο ώστε το

## Προσθήκη Α.6

3610

(συνεχ.)

εσωτερικό δοχείο και το εξωτερικό περίβλημα αφού μονταριστούν σχηματίζουν και χρησιμοποιούνται ως μία ακέραια μονοκόμματη μονάδα και πρέπει να γεμίζεται, αποθηκεύεται, μεταφέρεται ή αδειάζεται ως τέτοια.

IBC από φύλλο φάιμπερ

Τα IBC από φύλλο φάιμπερ συνίστανται από ένα σώμα από φύλλο φάιμπερ με ή χωρίς ξεχωριστά καπάκια κορυφής και πυθμένα, εάν είναι απαραίτητο μία εσωτερική επένδυση (αλλά χωρίς εσωτερική συσκευασία) και κατάλληλο εξοπλισμό εξυπηρέτησης και δόμησης.

Ξύλινα IBC

Τα ξύλινα IBC συνίστανται από ένα άκαμπτο ή πτυσσόμενο ξύλινο σώμα, μαζί με μία εσωτερική επένδυση (αλλά χωρίς εσωτερική συσκευασία) και κατάλληλο εξοπλισμό εξυπηρέτησης και δόμησης.

- (2) Οι παρακάτω ορισμοί ισχύουν για τα IBC που αναφέρονται στο (1):

Σώμα (για όλες τις κατηγορίες IBC πέραν από σύνθετα IBC) σημαίνει το δοχείο σκέτο, συμπεριλαμβανομένων των ανοιγμάτων και των πωμάτων, αλλά χωρίς να περιλαμβάνει τον εξοπλισμό εξυπηρέτησης (βλέπε παρακάτω).

Εξοπλισμός εξυπηρέτησης (για όλες τις κατηγορίες IBC) σημαίνει τις συσκευές γεμίσματος και αδειάσματος και, σύμφωνα με την κατηγορία του IBC, συσκευές εκτόνωσης της πίεσης ή εξαερισμού, ασφάλειας, θέρμανσης και θερμικής μόνωσης και όργανα μέτρησης.

Δομικός εξοπλισμός (για όλες τις κατηγορίες IBC εκτός από εύκαμπτα IBC) σημαίνει τα ενισχυτικά, στερεωτικά, χειριστικά, προστατευτικά ή σταθεροποιητικά μέλη του σώμα (συμπεριλαμβανομένης της παλέτας βάσης για σύνθετα IBC με πλαστικό εσωτερικό δοχείο).

Μέγιστο επιτρεπτό μικτό βάρος (για όλες τις κατηγορίες IBC πέραν από εύκαμπτα IBC) σημαίνει το βάρος του σώματος, του εξοπλισμού εξυπηρέτησης και του δομικού εξοπλισμού και το μέγιστο επιτρεπτό φορτίο.

Μέγιστο επιτρεπτό φορτίο (για εύκαμπτα IBC) σημαίνει το μέγιστο καθαρό βάρος για το οποίο το IBC είναι προορισμένο να χρησιμοποιείται και που είναι επιτρεπτό να μεταφέρει.

Προστατευμένο (για μεταλλικά IBC) σημαίνει εφοδιασμένο με πρόσθετη προστασία έναντι κρούσης, όπου η προστασία λαμβάνει τη μορφή, για παράδειγμα, μίας κατασκευής πολλαπλού στρώματος (σάντουιτς) ή διπλού τοιχώματος, ή ενός πλαισίου με ένα μεταλλικό δικτυωτό περίβλημα.

Πλεγμένο πλαστικό (για εύκαμπτα IBC) σημαίνει ένα υλικό φτιαγμένο από τεντωμένες ταινίες ή μονονήματα από κατάλληλο πλαστικό υλικό.

Πλαστικό (για σύνθετα IBC με πλαστικό εσωτερικό δοχείο), όταν χρησιμοποιείται σε σχέση με εσωτερικά δοχεία για σύνθετα IBC, λαμβάνεται ότι περιλαμβάνει άλλα πολυμερή υλικά τέτοια όπως καουτσούκ κ.λπ.

Συσκευή διακίνησης (για εύκαμπτα IBC) σημαίνει οποιαδήποτε χειρολαβή, θηλιά, μικρό άνοιγμα ή πλαίσιο προσαρτημένα στο σώμα του IBC ή σχηματοποιημένα από επέκταση του υλικού του σώματος του IBC.

## Προσθήκη Α.6

**3610** *Επένδυση* (για εύκαμπτο φύλλο φάιμπερ και ξύλινα IBC) σημαίνει έναν ξεχωριστό σωλήνα ή σάκο που είναι ένθετος στο σώμα αλλά χωρίς να σχηματίζει ένα ακέραιο μέρος αυτού, συμπεριλαμβανομένων των πομάτων των ανοιγμάτων του.

(συνεχ.)

**Κωδικοποίηση των τύπων σχεδιασμού ενός IBC**

**3611** (1) Κωδικό σύστημα για IBC

Ο κωδικός συνίσταται από:

- δύο αραβικούς αριθμούς που δείχνουν τον τύπο του IBC όπως προκαθορίζεται στο (α) παρακάτω,
- ένα κεφαλαίο γράμμα ή γράμματα (λατινικοί χαρακτήρες) όπως προκαθορίζεται στο (β) παρακάτω, που δείχνει τη φύση του υλικού (π.χ. μέταλλο, πλαστικό, κ.λπ.),
- όπου είναι απαραίτητο, έναν αραβικό αριθμό που δείχνει την κατηγορία του IBC μέσα στον τύπο στον οποίο το IBC ανήκει.

Για σύνθετα IBC, θα πρέπει να χρησιμοποιούνται δύο κεφαλαία γράμματα (λατινικοί χαρακτήρες). Το πρώτο θα πρέπει να δείχνει το υλικό του εσωτερικού δοχείου του IBC και το δεύτερο εκείνο της εξωτερικής συσκευασίας του IBC.

(a)

Τύπος	Για στερεά, που φορτώνονται και/ή ξεφορτώνονται		για υγρά
	με τη βαρύτετητα	υπό πίεση μεγαλύτερη από 10 kPa (0.1 bar)	
Άκαμπτο	11	21	31
Ημι-άκαμπτο	12	22	32
Εύκαμπτο	13	-	-

- (b) A. Χάλυβας (όλοι οι τύποι και οι επιφανειακές επεξεργασίες)  
 B. Αλουμίνιο  
 C. Φυσικό ξύλο  
 D. Κόντρα πλακέ  
 F. Ανασυσταμένο ξύλο  
 G. Φύλλο φάιμπερ  
 H. Πλαστικό υλικό  
 L. Υφάσμα  
 M. Χαρτί, πολλαπλών τοιχωμάτων  
 N. Μέταλλο (πέραν από χάλυβα ή αλουμίνιο).

(2) Ο κωδικός του IBC θα πρέπει να ακολουθείται στο μαρκάρισμα από ένα γράμμα που δείχνει τις ομάδες υλών για τις οποίες ο τύπος σχεδιασμού είναι εγκεκριμένος, δηλ.:

- X για όλες των ομάδων συσκευασίας I, II και III (IBC για στερεά μόνον)
- Y για όλες των ομάδων συσκευασίας II και III,
- Z για όλες της ομάδας συσκευασίας III.

**ΣΗΜΕΙΩΣΗ:** Για ομάδες συσκευασίας, βλέπε περιθωριακό 3511 (2).

## Προσθήκη Α.6

## Μαρκάρισμα

## 3612 (1) Κύριο μαρκάρισμα

Όλα τα IBC που κατασκευάζονται και προορίζονται για χρήση σε συμφωνία με αυτές τις διατάξεις θα πρέπει να φέρουν ένα διαρκές και ευανάγνωστο μαρκάρισμα που δίνει τα παρακάτω στοιχεία:

- (a) το σύμβολο συσκευασίας των Ηνωμένων Εθνών  (για μεταλλικά IBC πάνω στα οποία το μαρκάρισμα είναι σφραγισμένο ή ανάγλυφο, τα γράμματα Ο.Η.Ε. μπορούν να εφαρμόζονται αντί του συμβόλου),
- (b) τον κωδικό που υποδεικνύει τον τύπο του IBC σύμφωνα με το περιθωριακό 3611 (1),
- (c) ένα γράμμα (X, Y ή Z) που υποδεικνύει την(τις) ομάδα(ες) συσκευασίας(ς) για τη(τις) οποία(ες) ο τύπος σχεδιασμού έχει εγκριθεί,
- (d) τον μήνα και χρόνο (τα τελευταία δύο ψηφία) κατασκευής,
- (e) το σήμα <sup>1/</sup> του κράτους στο οποίο η έγκριση είχε δοθεί,
- (f) την ονομασία ή το σύμβολο του κατασκευαστή ή οποιοδήποτε άλλο χαρακτηριστικό στοιχείο του IBC όπως προκαθορίζεται από την αρμόδια αρχή,
- (g) το φορτίο ελέγχου στοιβάγματος σε kg,
- (h) το μέγιστο επιτρεπτό μκτό βάρος ή, για εύκαμπτα IBC, το μέγιστο επιτρεπτό φορτίο, σε kg.

Το κύριο μαρκάρισμα που απαιτείται παραπάνω θα πρέπει να ισχύει για τη σειρά των υποπαραγράφων παραπάνω. Το μαρκάρισμα που απαιτείται από την παράγραφο (2) και οποιοδήποτε περαιτέρω μαρκάρισμα που επιτρέπεται από μία αρμόδια αρχή θα πρέπει να τακτοποιείται έτσι ώστε να καθιστά τα διάφορα μέρη του μαρκαρίσματος σωστά προσδιορισμένα.

## Παραδείγματα κύριου μαρκαρίσματος

11C/X/01 93 Για ένα ξύλινο IBC για στερεά με εσωτερική  
S/Auriga  876 επένδυση και επιτρεπόμενη για στερεά της 3000/910  
ομάδας συσκευασίας I.

 11A/Y/0289 007/5500/1500 Μεταλλικό IBC κατασκευασμένο από χάλυβα NL/Mulder για στερεά που ξεφορτώνονται, για παράδειγμα, με τη βαρύτητα για τις Ομάδες Συσκευασίας II και III κατασκευασμένο τον Φεβρουάριο του 1989 εγκεκριμένο από την Ολλανδία κατασκευασμένο από την Mulder σε συμφωνία με έναν τύπο σχεδιασμού στον οποίο η αρμόδια αρχή έχει διαθέσει τον σειριακό αριθμό 007 φορτίο που χρησιμοποιείται για τον έλεγχο στοιβάγματος σε kg μέγιστο επιτρεπτό μκτό βάρος σε kg.

<sup>1/</sup> Διακριτικό σήμα για μηχανοκίνητα οχήματα σε διεθνή διακίνηση που ορίστηκε στο Συνέδριο της Βιέννης για την Οδική Διακίνηση (1968).

## Προσθήκη Α.6

3612  
(συνεχ.)

13H3/Z/0389  
 F/Meunier 1713/1000/500

Εύκαμπτο IBC για στερεά που ξεφορτώνεται, για παράδειγμα, με τη βαρύτητα και κατασκευασμένο από πλεγμένο πλαστικό με επένδυση.

31H1/Y/0489  
 GB/9099/10800/1200

Άκαμπτο πλαστικό IBC για υγρά, κατασκευασμένο από πλαστικό με δομικό εξοπλισμό που να αντέχει στο φορτίο στοιβάγματος.

31HA1/Y/0589  
 D/Muller 183/10800/1200

Σύνθετο IBC για υγρά με άκαμπτο πλαστικό εσωτερικό δοχείο και χαλύβδινο εξωτερικό περίβλημα.

(2) Πρόσθετο μαρκάρισμα<sup>2/</sup>

Για όλες τις κατηγορίες των IBC εκτός από εύκαμπτα IBC:

(i) απόβαρο σε kg<sup>3/</sup>

Για μεταλλικά IBC, άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικά εσωτερικά δοχεία:

(j) χωρητικότητα σε λίτρα<sup>3/</sup> στους 20 °C,

(k) ημερομηνία του τελευταίου ελέγχου στεγανότητας (μήνα και χρόνο), εάν υπάρχει,

(l) ημερομηνία της τελευταίας επιθεώρησης (μήνα και χρόνο),

(m) μέγιστη πίεση αδειάσματος του περιεχομένου σε kPa (ή σε bar)<sup>3/</sup>, εάν υπάρχει,

Για μεταλλικά IBC:

(n) υλικό του σώματος και το ελάχιστο πάχος του σε mm,

(o) σειριακός αριθμός του κατασκευαστή,

Για άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο:

(p) Πίεση ελέγχου (πεζομέτρου) σε kPa (ή bar)<sup>3/</sup>, εάν υπάρχει.

(3) IBC μαρκιαρισμένα σε συμφωνία με αυτήν την Προσθήκη αλλά εγκεκριμένα σε ένα κράτος που δεν είναι Κράτος Μέλος μπορούν επίσης να χρησιμοποιούνται για μεταφορά υπό αυτήν την Οδηγία.

**Πιστοποίηση**

3613 Ο κατασκευαστής θα πρέπει να πιστοποιεί, με προσάρτηση μαρκιαρίσματος σε συμφωνία με αυτήν την Προσθήκη, ότι τα μαζικά παραγόμενα IBC αντιστοιχούν στον εγκεκριμένο τύπο σχεδιασμού και ότι οι όροι που αναφέρονται στο πιστοποιητικό έγκρισης έχουν ικανοποιηθεί.

<sup>2/</sup> Κάθε εύκαμπτο IBC μπορεί επίσης να φέρει ένα πικτόγραμμα που να δείχνει τις προτεινόμενες μεθόδους ανύψωσης.

<sup>3/</sup> Η μονάδα που χρησιμοποιείται θα πρέπει να υποδεικνύεται.

## Προσθήκη Α.6

## Πίνακας των IBC

3614 Οι κωδικοί που αντιστοιχούν στους διάφορους τύπους των IBC είναι ως ακολούθως:

1. IBC για στερεά που φορτώνονται και ξεφορτώνονται με τη βαρύτητα :

Τύπος	Υλικό	Κατηγορία	Κωδικός	Περιθωριακά	
11 άκαμπτο	χάλυβας	μεταλλικό	11A	3622	
	αλουμίνιο		11B		
	φυσικό ξύλο	ξύλινο	11C	3627	
	κόντρα πλακέ		11D		
	ανασυσταμένο ξύλο		11F		
	φύλλο φάιμπερ	από φύλλο φάιμπερ	11G	3626	
	πλαστικό		από άκαμπτο πλαστικό (εξοπλισμένο με δομικό εξοπλισμό)	11H1	3624
			από άκαμπτο πλαστικό (που στέκεται ελεύθερο)	11H2	
			σύνθετο με πλαστικό εσωτερικό δοχείο (άκαμπτο)	11HZ1 <sup>4/</sup>	3625
			σύνθετο με πλαστικό εσωτερικό δοχείο (εύκαμπτο)	11HZ2 <sup>4/</sup>	
άλλο μέταλλο	μεταλλικό	11N	3622		
12 ημι-άκαμπτο		επιφυλασσόμενο			
13 εύκαμπτο	πλεγμένο πλαστικό χωρίς επικάλυψη ή επένδυση	εύκαμπτο	13H1	3623	
	πλεγμένο πλαστικό, επικαλυμμένο		13H2		
	πλεγμένο πλαστικό, με επένδυση		13H3		
	πλεγμένο πλαστικό, επικαλυμμένο και με επένδυση		13H4		
	πλαστικό φιλμ		13H5		
	ύφασμα χωρίς επικάλυψη ή επένδυση		13L1		
	ύφασμα, επικαλυμμένο		13L2		
	ύφασμα με επένδυση		13L3		
	ύφασμα, επικαλυμμένο και με επένδυση		13L4		
	χαρτί, πολλαπλών τοιχωμάτων		13M1		
	χαρτί, πολλαπλών τοιχωμάτων ανθεκτικό στο νερό		13M2		

<sup>4/</sup> Αναφορικά με το γράμμα Z, βλέπε περιθωριακό 3625 (1) (b).

## Προσθήκη Α.6

3614 2. IBC για στερεά που φορτώνονται ή ξεφορτώνονται υπό πίεση μεγαλύτερη από 10 kPa (0.1 bar) (συνεχ.)

Τύπος	Υλικό	Κατηγορία	Κωδικός	Περιθωριακά	
21 άκαμπτο	χάλυβας	μεταλλικό	21A	3622

άλλο μέταλλο	μεταλλικό	31N	3622		
32 ημι- άκαμπτο	επιφυλασσόμενο				

3615-  
3620<sup>4/</sup> Αναφορικά με το γράμμα "Z", βλέπε περιθωριακό 3625 (1) (b).

**Μέρος 3: Απαιτήσεις κατασκευής για IBC****Γενικές διατάξεις**

- 3621 (1) Τα IBC θα πρέπει να είναι ανθεκτικά ή επαρκώς προστατευμένα έναντι καταστροφής λόγω του περιβάλλοντος.
- (2) Τα IBC θα πρέπει να είναι έτσι δομημένα και κλεισμένα ώστε κανένα από τα περιεχόμενα να μην μπορεί να διαφύγει υπό κανονικές συνθήκες μεταφοράς.
- (3) Τα IBC και τα πάμιατά τους θα πρέπει να είναι κατασκευασμένα από υλικά συμβατά με το περιεχόμενο τους, ή να είναι προστατευμένα εσωτερικά, έτσι ώστε να μην υπόκεινται:
- (a) σε προσβολή από το περιεχόμενο έτσι ώστε να γίνεται η χρήση τους επικίνδυνη,
  - (b) σε πρόκληση του περιεχομένου να αντιδράσει ή να αποσυντεθεί, ή να σχηματίσει βλαβερές ή επικίνδυνες ενώσεις με τα IBC.
- (4) Οι φλάντζες, όπου χρησιμοποιούνται, θα πρέπει να είναι κατασκευασμένες από υλικά που δεν υπόκεινται σε προσβολή από το περιεχόμενο των IBC.
- (5) Όλος ο εξοπλισμός εξυπηρέτησης θα πρέπει να είναι έτσι τοποθετημένος ή προστατευμένος ώστε να ελαχιστοποιείται ο κίνδυνος διαφυγής του περιεχομένου εξαιτίας φθοράς κατά τη διάρκεια της διακίνησης και της μεταφοράς.
- (6) Τα IBC, τα εξαρτήματά τους και ο εξοπλισμός εξυπηρέτησης και δόμησής τους θα πρέπει να είναι σχεδιασμένα να αντέχουν, χωρίς απώλεια περιεχομένου, την εσωτερική πίεση του περιεχομένου και τις καταπονήσεις της κανονικής διακίνησης και μεταφοράς. Τα IBC που προορίζονται για στοίβαγμα θα πρέπει να είναι σχεδιασμένα για στοίβαγμα. Οποιαδήποτε χαρακτηριστικά ανύψωσης ή ασφάλισης των IBC θα πρέπει να είναι αρκετής αντοχής ώστε να αντέχουν τις κανονικές συνθήκες διακίνησης και μεταφοράς χωρίς ολική παραμόρφωση ή βλάβη και θα πρέπει να είναι έτσι τοποθετημένα ώστε να μην προκαλείται αδικαιολόγητη καταπόνηση σε οποιοδήποτε μέρος του IBC.
- (7) Όπου ένα IBC συνίσταται από ένα σώμα μέσα σ' ένα πλαίσιο, θα πρέπει να είναι έτσι δομημένο ώστε:
- το σώμα να μην τρίβεται ή γδέρνεται στο πλαίσιο έτσι ώστε να προκαλείται υλική φθορά στο σώμα,
  - το σώμα να διατηρείται μέσα στο πλαίσιο συνεχώς,
  - τα μέρη του εξοπλισμού είναι προσαρμοσμένα με τέτοιον τρόπο ώστε να μην μπορούν να φθαρούν εάν οι συνδέσεις μεταξύ του σώματος και του πλαισίου επιτρέπουν σχετική διαστολή ή κίνηση.
- (8) Όπου μία βαλβίδα αδειάσματος στον πυθμένα είναι εξοπλισμένη, θα πρέπει να είναι ικανή να καθίσταται ασφαλής στην κλειστή θέση και όλο το σύστημα αδειάσματος θα πρέπει να είναι κατάλληλα προστατευμένο από φθορά. Βαλβίδες που έχουν πάμιατα με μοχλό θα πρέπει να είναι ικανές να ασφαλιζονται έναντι τυχαίου ανοίγματος και η ανοιχτή ή κλειστή θέση θα πρέπει να είναι άμεσα εμφανής. Για IBC που περιέχουν υγρά, ένα δευτερεύον μέσο σφραγίσματος του ανοίγματος αδειάσματος θα πρέπει επίσης να υπάρχει, π.χ. με μία καθαρή φλάντζα ή ισοδύναμη συσκευή.
- (9) Νέα, επαναχρησιμοποιούμενα ή επισκευασμένα IBC θα πρέπει να είναι ικανά να περνάνε τους οριζόμενους ελέγχους.

## Προσθήκη Α.6

*Ειδικές διατάξεις για μεταλλικά IBC*

**3622** (1) Αυτές οι διατάξεις ισχύουν για μεταλλικά IBC προοριζόμενα για τη μεταφορά στερεών ή υγρών. Αυτά τα IBC είναι των παρακάτω τύπων:

11A, 11B, 11N.

Για στερεά που φορτώνονται ή ξεφορτώνονται με τη βαρύτητα.

21A, 21B, 21N.

Για στερεά που φορτώνονται ή ξεφορτώνονται υπό πίεση πιεζομέτρου μεγαλύτερη από 10 kPa (0.1 bar).

31A, 31B, 31N.

Για υγρά. Μεταλλικά IBC προοριζόμενα για τη μεταφορά υγρών και που συμμορφώνονται με τις διατάξεις αυτής της Προσθήκης δεν θα πρέπει να χρησιμοποιούνται για τη μεταφορά υγρών που έχουν τάση ατμών μεγαλύτερη από 110 kPa (1.1 bar) στους 50 °C ή μεγαλύτερη από 130 kPa (1.3 bar) στους 55 °C.

(2) Τα σώματα θα πρέπει να είναι κατασκευασμένα από κατάλληλο ελατό μέταλλο του οποίου η δυνατότητα συγκόλλησης έχει πλήρως αποδειχθεί. Οι συγκολλήσεις θα πρέπει να είναι δεξιοτεχνικά πραγματοποιημένες και να παρέχουν πλήρη ασφάλεια.

(3) Εάν επαφή μεταξύ της ύλης που μεταφέρεται και του υλικού που χρησιμοποιείται για την κατασκευή του σώματος συνεπάγεται προοδευτική μείωση στο πάχος των τοιχωμάτων, αυτό το πάχος θα πρέπει να αυξάνεται κατά την κατασκευή με κατάλληλη ποσότητα. Αυτό το επιπλέον πάχος για να λαμβάνει υπόψη τη διάβρωση θα πρέπει να προστίθεται στο πάχος των τοιχωμάτων όπως προσδιορίζεται σύμφωνα με την παράγραφο (7) [βλέπε επίσης περιθωριακό 3621 (3)].

(4) Μέρμινα θα πρέπει να λαμβάνεται για αποφυγή φθοράς από γαλβανική δράση λόγω αντιπαράθεσης ανόμοιων μετάλλων.

(5) Αλουμινένια IBC προοριζόμενα για τη μεταφορά εύφλεκτων υγρών με σημείο ανάφλεξης όχι μεγαλύτερο από 55 °C θα πρέπει να μην έχουν κινητά μέρη, τέτοια όπως καλύμματα, πόματα κ.λπ., κατασκευασμένα από απροστάτευτο χάλυβα υποκειμένο σε σκουριά, που θα μπορούσε να προκαλέσει επικίνδυνη αντίδραση με το να έλθει σε επαφή τριβής ή κρούσης με το αλουμίνιο.

(6) Τα μεταλλικά IBC θα πρέπει να είναι κατασκευασμένα από μέταλλα που ικανοποιούν τις παρακάτω απαιτήσεις:

(a) για χάλυβα η επιμήκυνση σε θραύση, σε επί τοις εκατό, δεν θα πρέπει να είναι μικρότερη από  $\frac{10\ 000}{Rm}$  με απόλυτη ελάχιστη τιμή 20 %.

όπου  $Rm$  = εγγυώμενη ελάχιστη αντοχή εφελκυσμού του χάλυβα που χρησιμοποιείται σε  $N/mm^2$ ,

(b) για αλουμίνιο και κράματά του η επιμήκυνση σε θραύση, σε επί τοις εκατό, δεν θα πρέπει να είναι μικρότερη από  $\frac{10\ 000}{6 Rm}$  με απόλυτη ελάχιστη τιμή 8 %.

Δείγματα που χρησιμοποιούνται για τον προσδιορισμό της επιμήκυνσης σε θραύση θα πρέπει να λαμβάνονται εγκάρσια στην κατεύθυνση κύλισης και να είναι έτσι ασφαλισμένα ώστε:

## Προσθήκη Α.6

3622  
(συνεχ.)

$$L_o = 5d$$

ή

$$L_o = 5.65\sqrt{A}$$

όπου:  $L_o$  = μήκος περιτυλώματος του δείγματος πριν τον έλεγχο $d$  = διάμετρος $A$  = εμβαδό διατομής του δείγματος ελέγχου.

## (7) Ελάχιστο πάχος τοιχωμάτων:

- (a) Για έναν χάλυβα αναφοράς που έχει γινόμενο  $R_m \times A_o = 10000$ , το πάχος τοιχωμάτων δεν θα πρέπει να είναι μικρότερο από:

Χωρητικότητα σε $m^3$	Πάχος τοιχωμάτων σε mm			
	Τύποι: 11A, 11B, 11N		Τύποι: 21A, 21B, 21N, 31A, 31B, 31N	
	Μη προστα- τευμένο	Προστα- τευμένο	Μη προστα- τευμένο	Προστα- τευμένο
$> 0.25 \leq 1.0$	2.0	1.5	2.5	2.0
$> 1.0 \leq 2.0$	2.5	2.0	3.0	2.5
$> 2.0 \leq 3.0$	3.0	2.5	4.0	3.0

όπου:  $A_o$  = ελάχιστη επιμήκυνση (ως ποσοστό) του χάλυβα αναφοράς που χρησιμοποιείται σε θραύση υπό καταπόνηση εφελκυσμού [βλέπε παράγραφο (6)].

- (b) Για μέταλλα πέραν από το χάλυβα αναφοράς που περιγράφεται στο (a), το ελάχιστο πάχος τοιχωμάτων υπολογίζεται με τον παρακάτω τύπο ισότητας:

$$e_1 = \frac{21.4 \times e_o}{\sqrt[3]{R_{m1} \times A_1}}$$

όπου:

 $e_1$  = απαιτούμενο ισοδύναμο πάχος τοιχωμάτων του μετάλλου προς χρήση (σε mm), $e_o$  = απαιτούμενο ελάχιστο πάχος τοιχωμάτων για τον χάλυβα αναφοράς (σε mm), $R_{m1}$  = εγγυώμενη ελάχιστη αντοχή εφελκυσμού του μετάλλου προς χρήση (σε  $N/mm^2$ ), $A_1$  = ελάχιστη επιμήκυνση (ως ποσοστό) του μετάλλου προς χρήση σε θραύση υπό καταπόνηση εφελκυσμού [βλέπε παράγραφο (6)].

Πάντως, σε καμία περίπτωση δεν θα πρέπει το πάχος τοιχωμάτων να είναι μικρότερο από 1.5 mm.

## Προσθήκη Α.6

**3622** (8) *Απαιτήσεις για εκτόνωσης της πίεσης*  
(συνεχ.)

Τα IBC για υγρά θα πρέπει να είναι ικανά να απελευθερώνουν αρκετή ποσότητα ατμού ώστε να εξασφαλίζεται ότι, στην περίπτωση φωτιάς, δεν θα σημειώνεται ρήγμα του σώματος. Αυτό μπορεί να επιτυγχάνεται με συμβατική συσκευή εκτόνωσης της πίεσης ή με άλλα δομικά μέσα.

Η πίεση έναρξης αδειάσματος δεν θα πρέπει να είναι μεγαλύτερη από 65 kPa (0.65 bar) και όχι μικρότερη από την συνολική πίεση πιεζομέτρου που υφίσταται στο IBC [δηλ. την πίεση ατμών της πληρωτικής ύλης συν τη μερική πίεση του αέρα ή άλλων αδρανών αερίων, μείον 100 kPa (1 bar)] στους 55 °C, προσδιοριζόμενη στη βάση ενός μέγιστου βαθμού πλήρωσης όπως ορίζονται στο περιθωριακό 3601 (7). Η απαιτούμενη συσκευή εκτόνωσης θα πρέπει να είναι τοποθετημένη στο χώρο ατμού.

*Ειδικές διατάξεις για εύκαμπτα IBC***3623** (1) Αυτές οι διατάξεις ισχύουν για εύκαμπτα IBC προοριζόμενα για τη μεταφορά στερεών. Αυτά τα IBC είναι των παρακάτω τύπων:

- 13H1 πλεγμένο πλαστικό χωρίς επικάλυψη ή επένδυση
- 13H2 πλεγμένο πλαστικό, επικαλυμμένο
- 13H3 πλεγμένο πλαστικό με επένδυση
- 13H4 πλεγμένο πλαστικό, επικαλυμμένο και με επένδυση
- 13H5 πλαστικό φιλμ
- 13L1 ύφασμα χωρίς επικάλυψη ή επένδυση
- 13L2 ύφασμα, επικαλυμμένο
- 13L3 ύφασμα με επένδυση
- 13L4 ύφασμα, επικαλυμμένο και με επένδυση
- 13M1 χαρτί, πολλαπλών τοιχωμάτων
- 13M2 χαρτί, πολλαπλών τοιχωμάτων, ανθεκτικό στο νερό.

(2) Τα σώματα θα πρέπει να είναι κατασκευασμένα από κατάλληλα υλικά. Η αντοχή του υλικού και η κατασκευή του εύκαμπτου IBC θα πρέπει να είναι κατάλληλη για την χωρητικότητα του την προοριζόμενη χρήση του.

(3) Όλα τα υλικά που χρησιμοποιούνται στην κατασκευή των εύκαμπτων IBC των τύπων 13M1 και 13M2 θα πρέπει, μετά από πλήρη εμβάπτιση σε νερό για όχι λιγότερο από 24 ώρες, να διατηρεί τουλάχιστον το 85 % της αντοχής εφελκυσμού όπως μετράται αρχικά πάνω στο υλικό που εξισορροπείται σε 67 % σχετική υγρασία ή λιγότερο.

(4) Οι ραφές θα πρέπει να σχηματίζονται με ράμματα, θερμικό σφράγισμα, κόλλημα ή οποιαδήποτε ισοδύναμη μέθοδο. Όλα τα άκρα των ραφών θα πρέπει να ασφαίζονται.

(5) Τα εύκαμπτα IBC θα πρέπει να παρέχουν επαρκή αντίσταση στη γήρανση και αποικοδόμηση προκαλούμενη από την υπεριώδη ακτινοβολία, τις κλιματικές συνθήκες ή την περιεχόμενη ύλη και με αυτόν τον τρόπο να παραμένουν κατάλληλα για την προοριζόμενη χρήση.

(6) Για πλαστικά εύκαμπτα IBC, όπου προστασία έναντι υπεριώδους ακτινοβολίας απαιτείται, αυτή θα πρέπει να παρέχεται με την προσθήκη αιθάλης ή άλλων κατάλληλων χρωστικών ή αναστολέων. Αυτά τα πρόσθετα θα πρέπει να είναι συμβατά με το περιεχόμενο και να παραμένουν αποτελεσματικά καθ' όλη τη ζωή του σώματος. Όπου χρησιμοποιούνται αιθάλη, χρωστικές ή αναστολείς πέραν εκείνων που χρησιμοποιούνται στην κατασκευή του ελεγμένου τύπου σχεδιασμού, ο επανέλεγχος μπορεί να παραλείπεται εάν αλλαγές στην περιεκτικότητα σε αιθάλη, σε χρωστική ή σε αναστολέα δεν επηρεάζουν δυσμενώς τις φυσικές ιδιότητες του υλικού κατασκευής.

## Προσθήκη Α.6

**3623** (7) Τα πρόσθετα μπορούν να ενσωματώνονται μέσα στο υλικό του σώματος για τη βελτίωση της αντίστασης στη γήρανση ή για την εξυπηρέτηση άλλων σκοπών, υπό την προϋπόθεση ότι αυτά δεν επηρεάζουν δυσμενώς τις φυσικές ή χημικές ιδιότητες του υλικού.  
(συνεχ.)

(8) Υλικό που ανακτάται από χρησιμοποιημένα δοχεία δεν θα πρέπει να χρησιμοποιείται στην κατασκευή των σωμάτων του IBC. Υπολείμματα παραγωγής ή απορρίμματα από την ίδια διαδικασία κατασκευής μπορούν, πάντως, να χρησιμοποιούνται. Συστατικά μέρη τέτοια όπως εξαρτήματα και βάσεις παλετών μπορούν επίσης να χρησιμοποιούνται, υπό την προϋπόθεση ότι τέτοια συστατικά δεν έχουν φθαρεί με οποιονδήποτε τρόπο σε προηγούμενη χρήση.

(9) Όταν γεμιστούν, ο λόγος ύψους προς πλάτος θα πρέπει να μην είναι μεγαλύτερος από 2:1.

(10) Η επένδυση θα πρέπει να είναι κατασκευασμένη από κατάλληλο υλικό. Η αντοχή του υλικού που χρησιμοποιείται και η κατασκευή της επένδυσης θα πρέπει να είναι κατάλληλες για τη χωρητικότητα του IBC και την προοριζόμενη χρήση. Οι συνδέσεις και τα πάματα θα πρέπει να είναι αδιαπέραστα και ικανά να αντέχουν πιέσεις και κρούσεις υποκείμενες να συμβούν υπό κανονικές συνθήκες διακίνησης και μεταφοράς.

*Ειδικές διατάξεις για άκαμπτα πλαστικά IBC*

**3624** (1) Αυτές οι διατάξεις ισχύουν για άκαμπτα πλαστικά IBC προοριζόμενα για τη μεταφορά στερεών ή υγρών. Αυτά τα IBC είναι των παρακάτω τύπων:

11H1 για στερεά που φορτώνονται και ξεφορτώνονται με τη βαρύτητα, εξοπλισμένα με δομικό εξοπλισμό σχεδιασμένο να αντέχει όλο το φορτίο όταν τα IBC είναι στοιβαγμένα,

11H2 για στερεά που φορτώνονται και ξεφορτώνονται με τη βαρύτητα, που στέκονται ελεύθερα,

21H1 για στερεά που φορτώνονται ή ξεφορτώνονται υπό πίεση μεγαλύτερη από 10 kPa (0.1 bar), εξοπλισμένα με δομικό εξοπλισμό σχεδιασμένο να αντέχουν όλο το φορτίο όταν τα IBC είναι στοιβαγμένα,

21H2 για στερεά που φορτώνονται ή ξεφορτώνονται υπό πιέσεις μεγαλύτερες από 10 kPa (0.1 bar), που στέκονται ελεύθερα,

31H1 για υγρά, εξοπλισμένα με δομικό εξοπλισμό σχεδιασμένο να αντέχει όλο το φορτίο όταν τα IBC είναι στοιβαγμένα,

31H2 για υγρά, που στέκονται ελεύθερα.

(2) Το σώμα θα πρέπει να είναι κατασκευασμένο από κατάλληλο πλαστικό υλικό γνωστών προδιαγραφών και να είναι επαρκούς αντοχής σε σχέση με τη χωρητικότητα του και την προοριζόμενη χρήση. Το υλικό θα πρέπει να είναι επαρκώς ανθεκτικό στη γήρανση και στην αποικοδόμηση που προκαλείται από την περιεχόμενη ύλη ή, όπου είναι σχετικό, από την υπεριώδη ακτινοβολία. Οποιαδήποτε διείσδυση της περιεχόμενης ύλης δεν θα πρέπει να συνιστά κίνδυνο υπό κανονικές συνθήκες μεταφοράς.

(3) Όπου προστασία έναντι υπεριώδους ακτινοβολίας απαιτείται, αυτή θα πρέπει να παρέχεται με την προσθήκη αιθάλης ή άλλων κατάλληλων χρωστικών ή αναστολέων. Αυτά τα πρόσθετα θα πρέπει να είναι συμβατά με το περιεχόμενο και να παραμένουν αποτελεσματικά καθ' όλη τη ζωή του σώματος. Όπου χρησιμοποιούνται αιθάλη, χρωστικές ή αναστολείς, πέραν εκείνων που χρησιμοποιούνται στην κατασκευή του ελεγχμένου τύπου σχεδιασμού, ο επανέλεγχος μπορεί να παραλείπεται εάν αλλαγές στην περιεκτικότητα σε αιθάλη, χρωστική ή αναστολέα δεν επηρεάζουν δυσμενώς τις φυσικές ιδιότητες του υλικού κατασκευής.

## Προσθήκη Α.6

3624 (4) Τα πρόσθετα μπορούν να ενσωματώνονται στο υλικό του σώματος για βελτίωση της (συνεχ.) αντιστασης στη γήρανση ή την εξυπηρέτηση άλλων σκοπών, υπό την προϋπόθεση ότι αυτά δεν επηρεάζουν δυσμενώς τις φυσικές ή χημικές ιδιότητες του υλικού.

(5) Χρησιμοποιημένο υλικό πέραν από υπολείμματα της παραγωγής ή απορρίμματα από την ίδια διαδικασία κατασκευής δεν μπορεί να χρησιμοποιείται στην κατασκευή των άκαμπτων πλαστικών IBC.

(6) Τα άκαμπτα πλαστικά IBC για υγρά θα πρέπει να είναι ικανά να απελευθερώνουν αρκετή ποσότητα ατμού ώστε να εξασφαλίζεται ότι δεν θα σημειωθεί ρήγμα του σώματος. Αυτό μπορεί να επιτυγχάνεται με συμβατική συσκευή εκτόνωσης της πίεσης ή με άλλα κατασκευαστικά μέσα. Η πίεση αρχής του αδειάσματος δεν θα πρέπει να είναι μεγαλύτερη από την πίεση που χρησιμοποιείται στον έλεγχο υδραυλικής πίεσης.

(7) Εκτός εάν αλλιώς εγκρίνεται από την αρμόδια αρχή, η επιτρεπόμενη περίοδος χρήσης για τη μεταφορά επικίνδυνων υγρών δεν θα πρέπει να υπερβαίνει τα πέντε χρόνια από την ημερομηνία κατασκευής του δοχείου του IBC εκτός όπου μία βραχύτερη περίοδος χρήσης ορίζεται λόγω της φύσης του υγρού προς μεταφορά.

*Ειδικές διατάξεις για σύνθετα IBC με πλαστικό εσωτερικό δοχείο*

3625 (1) Αυτές οι διατάξεις ισχύουν για σύνθετα IBC προοριζόμενα για τη μεταφορά στερεών ή υγρών. Αυτά τα IBC είναι των παρακάτω τύπων:

- |     |       |  |
|-----|-------|--|
| (a) | 11HZ1 | για στερεά που φορτώνονται και ξεφορτώνονται με τη βαρύτητα, εξοπλισμένα με άκαμπτο πλαστικό εσωτερικό δοχείο,                           |
|     | 11HZ2 | για στερεά που φορτώνονται και ξεφορτώνονται με τη βαρύτητα, εξοπλισμένα με εύκαμπτο πλαστικό εσωτερικό δοχείο,                          |
|     | 21HZ1 | για στερεά που φορτώνονται ή ξεφορτώνονται υπό πίεση μεγαλύτερη από 10 kPa (0.1 bar), εξοπλισμένα με άκαμπτο πλαστικό εσωτερικό δοχείο,  |
|     | 21HZ2 | για στερεά που φορτώνονται ή ξεφορτώνονται υπό πίεση μεγαλύτερη από 10 kPa (0.1 bar), εξοπλισμένα με εύκαμπτο πλαστικό εσωτερικό δοχείο, |
|     | 31HZ1 | για υγρά, εξοπλισμένα με άκαμπτο πλαστικό εσωτερικό δοχείο,  |
|     | 31HZ2 | για υγρά, εξοπλισμένα με εύκαμπτο πλαστικό εσωτερικό δοχείο.   |
- (b) Αυτός ο κωδικός θα πρέπει να συμπληρώνεται με αντικατάσταση του γράμματος Z με ένα κεφαλαίο γράμμα σε συμφωνία με το περιθωριακό 3611 (1) (b) για να δείχνει τη φύση του υλικού που χρησιμοποιείται για το εξωτερικό περίβλημα.

## (2) Γενικά

- (a) Το εσωτερικό δοχείο δεν προορίζεται να εκτελεί λειτουργία συγκράτησης χωρίς το εξωτερικό περίβλημά του.
- (b) Το εξωτερικό περίβλημα κανονικά συνίσταται από άκαμπτο υλικό μορφοποιημένο έτσι ώστε να προστατεύει το εσωτερικό δοχείο από φυσική φθορά κατά τη διάρκεια της διακίνησης και της μεταφοράς αλλά δεν προορίζεται να εκτελεί τη λειτουργία συγκράτησης. Περιλαμβάνει την παλέτα βάσης όπου είναι κατάλληλη.

## Προσθήκη Α.6

3625  
(συνεχ.)

- (c) Ένα σύνθετο IBC με πλήρως περιβάλλον εξωτερικό περιβλήμα θα πρέπει να είναι έτσι σχεδιασμένο ώστε η ακεραιότητα του εσωτερικού εμπορευματοκιβωτίου να μπορεί άμεσα να εκτιμάται από τους ελέγχους στεγανότητας και τους υδραυλικούς ελέγχους.

(3) *Εσωτερικό δοχείο*

Οι ίδιες απαιτήσεις όπως καλύπτονται στο περιθωριακό 3624 (2) έως (6) για άκαμπτα πλαστικά IBC ισχύουν για το εσωτερικό δοχείο, υπό την προϋπόθεση ότι, σε αυτήν την περίπτωση, οι απαιτήσεις που ισχύουν για το σώμα των άκαμπτων πλαστικών IBC ισχύουν για το εσωτερικό δοχείο των σύνθετων IBC.

(4) *Εξωτερικό περίβλημα*

- (a) Η αντοχή του υλικού και η κατασκευή του εξωτερικού περιβλήματος θα πρέπει να είναι κατάλληλη για τη χωρητικότητα του σύνθετου IBC και της προοριζόμενης χρήσης του.
- (b) Το εξωτερικό περίβλημα θα πρέπει να είναι ελεύθερο από οποιαδήποτε προεξοχή που θα μπορούσε να βλάψει το εσωτερικό δοχείο.
- (c) Μεταλλικά εξωτερικά περιβλήματα με πλήρη τοιχώματα ή μορφής κόσκινου θα πρέπει να είναι κατασκευασμένα από ένα κατάλληλο υλικό επαρκούς πάχους.
- (d) Εξωτερικά περιβλήματα από φυσικό ξύλο θα πρέπει να είναι από καλά ωριμασμένο ξύλο, εμπορικά ξηρό και ελεύθερο από ελαττώματα που θα μειώναν ουσιαστικά την αντοχή οποιουδήποτε μέρους του περιβλήματος. Οι κορυφές και οι πυθμένες μπορούν να είναι κατασκευασμένοι από αδιάβροχο ανασυσταμένο ξύλο τέτοιου όπως σκληρό ξύλο, νοβοπάν ή άλλο κατάλληλο τύπο.
- (e) Εξωτερικά περιβλήματα από κόντρα πλακέ θα πρέπει να είναι κατασκευασμένα από καλά ωριμασμένο περιστροφικά κομμένο, τεμαχισμένο ή πριονισμένο καπλαμά, εμπορικά ξηρό και ελεύθερο από ελαττώματα που θα μειώναν ουσιαστικά την αντοχή του περιβλήματος. Όλα τα διπλάνα φύλλα θα πρέπει να είναι κολλημένα με αδιάβροχη κόλλα. Άλλα κατάλληλα υλικά μπορούν να χρησιμοποιούνται με κόντρα πλακέ για την κατασκευή περιβλημάτων. Τα περιβλήματα θα πρέπει να είναι σταθερά καρφωμένα ή ασφαλισμένα στις γωνίες ή τα άκρα ή να είναι μονταρισμένα με εξίσου κατάλληλη συσκευή.
- (f) Τα τοιχώματα των εξωτερικών περιβλημάτων από ανασυσταμένο ξύλο θα πρέπει να είναι κατασκευασμένα από αδιάβροχο ανασυσταμένο ξύλο τέτοιου όπως σκληρό ξύλο, νοβοπάν ή άλλον κατάλληλο τύπο. Άλλα μέρη των περιβλημάτων μπορούν να είναι κατασκευασμένα από άλλο κατάλληλο υλικό.
- (g) Για εξωτερικά περιβλήματα από φύλλο φάιμπερ, γερό και καλής ποιότητας στερεό ή διπλής όψης ζαρωμένο φύλλο φάιμπερ (μονών ή πολλαπλών τοιχωμάτων) θα πρέπει να χρησιμοποιείται κατάλληλο για τη χωρητικότητα του περιβλήματος και της προοριζόμενης χρήσης του. Η αντίσταση στο νερό της εξωτερικής επιφάνειας θα πρέπει να είναι τέτοια ώστε η αύξηση στο βάρος, όπως προσδιορίζεται σε έναν έλεγχο που διεξάγεται για 30 λεπτά με τη μέθοδο Cobb για τον προσδιορισμό της απορρόφησης του νερού, να μην είναι μεγαλύτερη από  $155 \text{ g/m}^2$  - βλέπε Διεθνές Πρότυπο ISO 535-1976 (E). Θα πρέπει να έχει κατάλληλη ποιότητα λυγίσματος. Το φύλλο φάιμπερ θα πρέπει να είναι κομμένο, ζαρωμένο χωρίς χαραγές και σχισμένο έτσι ώστε να επιτρέπει το μοντάρισμα χωρίς ρωγμή, επιφανειακά σπασίματα ή αδικαιολόγητο λυγισμό. Η ράβδωση του ζαρωμένου φύλλου φάιμπερ θα πρέπει να είναι σταθερά κολλημένη στις επιφάνειες.

## Προσθήκη Α.6

3625  
(συνεχ.)

- (h) Τα άκρα των περιβλημάτων από φύλλο φάιμπερ μπορούν να έχουν ξύλινο πλαίσιο ή να είναι πλήρως από ξύλο. Ενισχύσεις από ξύλινες σανίδες μπορούν να χρησιμοποιούνται.
- (i) Οι κατασκευαστικές συνδέσεις στα περιβλήματα από φύλλο φάιμπερ θα πρέπει να είναι στερεωμένες με ταινία, περιτυλιγμένες και κολλημένες, ή περιτυλιγμένες και ραμμένες με μεταλλικούς συνδετήρες. Οι περιτυλιγμένες συνδέσεις θα πρέπει να έχουν ένα κατάλληλο κάλυμμα. Όπου το κλείσιμο επιτυγχάνεται με κόλλημα ή περιτύλιγμα με ταινία, μία αδιάβροχη κόλλα θα πρέπει να χρησιμοποιείται.
- (j) Όπου το εξωτερικό περίβλημα είναι από πλαστικό υλικό, οι σχετικές διατάξεις του περιθωριακού 3624 (2) έως (5) για άκαμπτα πλαστικά IBC ισχύουν, υπό την προϋπόθεση ότι, σ' αυτή την περίπτωση, οι απαιτήσεις που ισχύουν για το σώμα των άκαμπτων πλαστικών IBC ισχύουν για το εξωτερικό περίβλημα των σύνθετων IBC.
- (5) Άλλος δομικός εξοπλισμός
- (a) Οποιαδήποτε ακέραια βάση παλέτας που σχηματίζει μέρος ενός IBC ή οποιαδήποτε αποσπώμενη παλέτα θα πρέπει να είναι κατάλληλη για μηχανικό χειρισμό του IBC γεμισμένου στο μέγιστο επιτρεπτό μκτό βάρος του.
- (b) Η παλέτα ή ακέραια βάση θα πρέπει να είναι σχεδιασμένη έτσι ώστε να αποφεύγεται οποιαδήποτε προεξοχή της βάσης του IBC που θα μπορούσε να είναι υποκείμενη στην πρόκληση φθοράς στη διακίνηση.
- (c) Το εξωτερικό περίβλημα θα πρέπει να ασφαρίζεται σε οποιαδήποτε αποσπώμενη παλέτα ώστε να εξασφαλίζεται σταθερότητα στη διακίνηση και τη μεταφορά. Όπου μία αποσπώμενη παλέτα χρησιμοποιείται, η κορυφαία επιφάνειά της θα πρέπει να είναι ελεύθερη από κοφτερές προεξοχές που θα μπορούσαν να φθείρουν το IBC.
- (d) Ενισχυτικές συσκευές τέτοιες όπως ξύλινα υποστηρίγματα για αύξηση της λειτουργίας του στοιβάγματος μπορούν να χρησιμοποιούνται, αλλά θα πρέπει να είναι εξωτερικές του εσωτερικού δοχείου.
- (e) Όπου τα IBC προορίζονται για στοιβάγμα, η φέρουσα επιφάνεια θα πρέπει να είναι τέτοια ώστε να κατανέμει το φορτίο με ασφαλή τρόπο. Τέτοια IBC θα πρέπει να είναι σχεδιασμένα έτσι ώστε το φορτίο να μην στηρίζεται από το εσωτερικό δοχείο.
- (6) Εκτός εάν αλλιώς εγκρίνεται από την αρμόδια αρχή, η επιτρεπόμενη περίοδος χρήσης για τη μεταφορά επικίνδυνων υγρών δεν θα πρέπει να υπερβαίνει τα πέντε χρόνια από την ημερομηνία κατασκευής του δοχείου του IBC εκτός όπου μία βραχύτερη περίοδος χρήσης ορίζεται λόγω της φύσης του υγρού προς μεταφορά.

*Ειδικές διατάξεις για IBC από φύλλο φάιμπερ*

3626

- (1) Αυτές οι διατάξεις ισχύουν για IBC από φύλλο φάιμπερ για τη μεταφορά στερεών που φορτώνονται και ξεφορτώνονται με τη βαρύτητα. IBC από φύλλο φάιμπερ είναι των παρακάτω τύπων: 11G.
- (2) IBC από φύλλο φάιμπερ δεν θα πρέπει να έχουν ενσωματωμένη κορυφαία συσκευή ανύψωσης.
- (3) Σώμα
- (a) Γερό και καλής ποιότητας στερεό ή διπλής όψης ζαρωμένο φύλλο φάιμπερ (μονών ή πολλαπλών τοιχομάτων) θα πρέπει να χρησιμοποιείται, κατάλληλο για τη χωρητικότητα του IBC και της προοριζόμενης χρήσης του. Η αντίσταση στο νερό της εξωτερικής επιφάνειας θα πρέπει να είναι τέτοια ώστε η αύξηση σε βάρος, όπως προσδιορίζεται σ' έναν έλεγχο που διεξάγεται σε μία περίοδο 30 λεπτών με τη

3626

## Προσθήκη Α.6

(συνεχ.)

μέθοδο Cobb για τον προσδιορισμό της απορρόφησης του νερού, να μην είναι μεγαλύτερη από  $155 \text{ g/m}^2$  - βλέπε το Διεθνές Πρότυπο ISO 535:1991. Το φύλλο φάϊμπερ θα πρέπει να έχει κατάλληλη ποιότητα λυγίσματος. Θα πρέπει να είναι κομμένο, ζαρωμένο χωρίς χαραγές και σχισμένο έτσι ώστε να επιτρέπει το μοντάρισμα χωρίς ραγμές, επιφανειακά σπασίματα ή αδικαιολόγητο λύγισμα. Η ράβδωση του ζαρωμένου φύλλου φάϊμπερ θα πρέπει να είναι σταθερά κολλημένη στις επιφάνειες.

- (b) Τα τοιχώματα, συμπεριλαμβανομένης της κορυφής και του πυθμένα, θα πρέπει να έχουν ελάχιστη αντίσταση στη διάτρηση  $15 \text{ J}$  μετρημένη σύμφωνα με το Διεθνές Πρότυπο ISO 3036 : 1975.
- (c) Οι κατασκευαστικές συνδέσεις στο σώμα των IBC θα πρέπει να είναι φτιαγμένες με μία κατάλληλη επικάλυψη και θα πρέπει να είναι τυλιγμένες με ταινία, κολλημένες, ραμμένες με μεταλλικούς συνδετήρες, ή στερεωμένες με άλλο μέσον τουλάχιστον εξίσου αποτελεσματικό. Όπου οι συνδέσεις γίνονται με κόλληση ή τύλιγμα με ταινία, μία αδιάβροχη κόλλα θα πρέπει να χρησιμοποιείται. Οι μεταλλικοί συνδετήρες θα πρέπει να περνάνε πλήρως μέσω όλων των κομματιών προς στερέωση και να μορφοποιούνται ή προστατεύονται έτσι ώστε οποιαδήποτε εσωτερική επένδυση να μην μπορεί να γδέρνεται ή να τρυπώνεται από αυτούς.

(4) *Επένδυση*

Η επένδυση θα πρέπει να είναι κατασκευασμένη από ένα κατάλληλο υλικό. Η αντοχή του υλικού που χρησιμοποιείται και η κατασκευή της επένδυσης θα πρέπει να είναι κατάλληλες για τη χωρητικότητα και την προοριζόμενη χρήση του IBC. Οι συνδέσεις και τα πάματα θα πρέπει να είναι αδιαπέραστες και ικανές να αντέχουν πιέσεις και κρούσεις υποκείμενες να σημειωθούν υπό κανονικές συνθήκες διακίνησης και μεταφοράς.

(5) *Δομικός εξοπλισμός*

- (a) Οποιαδήποτε ακέραια βάση παλέτας που σχηματίζει μέρος ενός IBC ή οποιαδήποτε αποσπώμενη παλέτα θα πρέπει να είναι κατάλληλη για μηχανική διακίνηση του IBC γεμισμένου στο μέγιστο επιτρεπτό βάρος του.
- (b) Η παλέτα ή ακέραια βάση θα πρέπει να είναι σχεδιασμένη έτσι ώστε να αποφεύγεται οποιαδήποτε προεξοχή της βάσης του IBC που θα μπορούσε να είναι υποκείμενη σε φθορά στη διακίνηση.
- (c) Το σώμα θα πρέπει να ασφαρίζεται σε οποιαδήποτε αποσπώμενη παλέτα ώστε να εξασφαλίζεται σταθερότητα στη διακίνηση και τη μεταφορά. Όπου μία αποσπώμενη παλέτα χρησιμοποιείται, η κορυφαία επιφάνειά της θα πρέπει να είναι ελεύθερη από κοφτερές προεξοχές που θα μπορούσαν να βλάψουν το IBC.
- (d) Ενισχυτικές συσκευές τέτοιες όπως ξύλινα υποστηρίγματα για αύξηση της επιτέλεσης του στοιβάγματος μπορούν να χρησιμοποιούνται αλλά θα πρέπει να είναι εξωτερικές της επένδυσης.
- (e) Όπου τα IBC προορίζονται για στοιβάγμα, η φέρουσα επιφάνεια θα πρέπει να είναι τέτοια ώστε να κατανέμει το φορτίο με ασφαλή τρόπο.

*Ειδικές διατάξεις για ξύλινα IBC*

3627

(1) Αυτές οι διατάξεις ισχύουν για ξύλινα IBC για τη μεταφορά στερεών που φορτώνονται και ξεφορτώνονται με τη βαρύτητα. Τα ξύλινα IBC είναι των παρακάτω τύπων:

## Προσθήκη Α.6

3627  
(συνεχ.)

- 11C Φυσικό ξύλο με εσωτερική επένδυση  
 11D Κόντρα πλακέ με εσωτερική επένδυση  
 11F Ανασυσταμένο ξύλο με εσωτερική επένδυση.

(2) Ξύλινα IBC δεν θα πρέπει να έχουν ενσωματωμένες κορυφαίες συσκευές ανύψωσης.

(3) Σώμα

- (a) Η αντοχή των υλικών που χρησιμοποιούνται και η μέθοδος κατασκευής θα πρέπει να είναι κατάλληλες για τη χωρητικότητα και την προοριζόμενη χρήση του IBC.
- (b) Εάν τα σώματα είναι από φυσικό ξύλο, αυτό θα πρέπει να είναι καλά ωριμασμένο, εμπορικά ξηρό και ελεύθερο από ελαττώματα που θα μειώναν ουσιαστικά την αντοχή οποιουδήποτε μέρους του IBC. Κάθε μέρος του IBC θα πρέπει να συνίσταται από ένα κομμάτι ή να είναι ισοδύναμο με αυτό. Μέρη θεωρούνται ισοδύναμα με ένα κομμάτι όταν μία κατάλληλη μέθοδος κολλημένου μονταρίσματος (όπως για παράδειγμα σύνδεση Lindermann, σύνδεση γλώσσας και αυλακιού, σύνδεση ship-lap ή rabbet), σύνδεση λαβής με τουλάχιστον δύο ζαρωμένα μεταλλικά στερεώματα σε κάθε σύνδεση, ή άλλες μέθοδοι τουλάχιστον εξίσου αποτελεσματικές, χρησιμοποιούνται.
- (c) Εάν τα σώματα είναι από κόντρα πλακέ, αυτό θα πρέπει να είναι τουλάχιστον 3-φύλλο. Θα πρέπει να είναι κατασκευασμένο από καλά ωριμασμένο περιστροφικά κομμένο, τεμαχισμένο ή πριονισμένο καπλαμά, εμπορικά ξηρό και ελεύθερο από ελαττώματα που θα μειώναν ουσιαστικά την αντοχή του σώματος. Όλα τα δυπλανά φύλλα θα πρέπει να είναι κολλημένα με αδιάβροχη κόλλα. Άλλα κατάλληλα υλικά μπορούν να χρησιμοποιούνται με κόντρα πλακέ για την κατασκευή του σώματος.
- (d) Σώματα από ανασυσταμένο ξύλο θα πρέπει να είναι κατασκευασμένα από αδιάβροχο ανασυσταμένο ξύλο τέτοιου όπως σκληρό ξύλο, νοβοπάν ή άλλο κατάλληλο τύπο.
- (e) Τα IBC θα πρέπει να είναι σταθερά καρφωμένα ή ασφαλισμένα στις γωνίες ή τα άκρα ή να είναι μονταρισμένα με εξίσου κατάλληλες συσκευές.

(4) Επένδυση

Η επένδυση θα πρέπει να είναι κατασκευασμένη από ένα κατάλληλο υλικό. Η αντοχή του υλικού που χρησιμοποιείται και η κατασκευή της επένδυσης θα πρέπει να είναι κατάλληλες για τη χωρητικότητα και την προοριζόμενη χρήση του IBC. Οι συνδέσεις και τα πόματα θα πρέπει να είναι αδιαπέραστες και ικανές να αντέχουν πιέσεις και κρούσεις υποκειμένες να συμβούν υπό κανονικές συνθήκες διακίνησης και μεταφοράς.

(5) Δομικός εξοπλισμός

- (a) Οποιαδήποτε ακέραια βάση παλέτας που σχηματίζει μέρος ενός IBC ή οποιαδήποτε αποσπώμενη παλέτα θα πρέπει να είναι κατάλληλη για μηχανική διακίνηση του IBC γεμισμένου στο μέγιστο επιτρεπτό μικτό βάρος του.
- (b) Η παλέτα ή ακέραια βάση θα πρέπει να είναι σχεδιασμένη έτσι ώστε να αποφεύγεται οποιαδήποτε προεξοχή της βάσης του IBC που θα μπορούσε να είναι υποκείμενη σε φθορά στη διακίνηση.
- (c) Το σώμα θα πρέπει να ασφαρίζεται σε οποιαδήποτε αποσπώμενη παλέτα ώστε να εξασφαλίζεται η σταθερότητα στη διακίνηση και τη μεταφορά. Η κορυφαία επιφάνεια της αποσπώμενης παλέτας θα πρέπει να είναι ελεύθερη από κοφτερές προεξοχές που θα μπορούσαν να βλάψουν το IBC.

## Προσθήκη Α.6

- 3627 (d) Ενισχυτικές συσκευές τέτοιες όπως ξύλινα υποστηρίγματα για αύξηση της (συνεχ.) λειτουργίας του στοιβάγματος μπορούν να χρησιμοποιούνται αλλά θα πρέπει να είναι εξωτερικές της επένδυσης.
- (e) Όπου τα IBC προορίζονται για στοιβάγμα, η φέρουσα επιφάνεια θα πρέπει να είναι τέτοια ώστε να κατανέμει το φορτίο με ασφαλή τρόπο.

3628-  
3649

## Μέρος 4: Απαιτήσεις ελέγχου για IBC

## Α. Έλεγχοι τύπου σχεδιασμού

## Γενικές απαιτήσεις

- 3650 (1) Ο τύπος σχεδιασμού κάθε IBC θα πρέπει να ελέγχεται και εγκρίνεται από την αρμόδια αρχή ή από ένα σώμα που καθορίζεται από εκείνη την αρχή.

(2) Για κάθε τύπο σχεδιασμού, ένα μόνο IBC θα πρέπει να υπόκειται επιτυχώς στους ελέγχους που αναφέρονται στο (5) παρακάτω με τη σειρά που αναφέρεται στον πίνακα και σύμφωνα με τις διατάξεις που προκαθορίζονται στα περιθωριακά 3652 έως 3660, (και, για εύκαμπτα IBC, σε συμφωνία με τις διαδικασίες που επιβάλλονται από την αρμόδια αρχή) πριν χρησιμοποιηθεί ένα τέτοιο IBC. Ένας τύπος σχεδιασμού IBC ορίζεται από τον σχεδιασμό, το μέγεθος, το υλικό και το πάχος, τον τρόπο κατασκευής και το μέσο πλήρωσης και ξεφορτώματος αλλά μπορεί να περιλαμβάνει διάφορες επιφανειακές επεξεργασίες. Επίσης περιλαμβάνει IBC που διαφέρουν από τον τύπο σχεδιασμού μόνον στις μικρότερες εξωτερικές διαστάσεις τους.

Η αρμόδια αρχή μπορεί παρ' όλα αυτά να επιτρέπει τον επιλεκτικό έλεγχο των IBC που διαφέρουν από έναν τύπο ήδη ελεγμένο μόνον σε δευτερεύοντα σημεία, για παράδειγμα, μικρές μειώσεις στις εξωτερικές διαστάσεις.

(3) Έλεγχοι θα πρέπει να διεξάγονται σε IBC προετοιμασμένα όπως για αποστολή. Τα IBC θα πρέπει να είναι γεμισμένα όπως υποδεικνύεται για τους διάφορους ελέγχους. Οι ύλες προς μεταφορά στα IBC μπορούν να αντικαθίστανται από άλλες ύλες, εκτός όπου αυτό θα καθιστούσε τα αποτελέσματα των ελέγχων μη ισχύοντα. Για στερεά, εάν μία άλλη ύλη χρησιμοποιείται, θα πρέπει να έχει τα ίδια φυσικά χαρακτηριστικά (βάρος, μέγεθος κόκκου κ.λπ.) όπως η ύλη προς μεταφορά. Επιτρέπεται η χρήση πρόσθετων, τέτοιων όπως σακοί από μολυβένια σκάγια, για να επιτυγχάνεται το απαραίτητο συνολικό βάρος κόλου, υπό την προϋπόθεση ότι τοποθετούνται έτσι ώστε τα αποτελέσματα του ελέγχου δεν επηρεάζονται.

(4) Στον έλεγχο πτώσης για υγρά, εάν μία άλλη ύλη χρησιμοποιείται, η σχετική πυκνότητα και το ιξώδες θα πρέπει να είναι παρόμοια με εκείνα της ύλης προς μεταφορά. Νερό μπορεί επίσης να χρησιμοποιείται για τον έλεγχο πτώσης υγρού υπό τους παρακάτω όρους:

- (a) εάν οι ύλες προς μεταφορά έχουν σχετική πυκνότητα που δεν υπερβαίνει το 1.2, τα ύψη πτώσης θα πρέπει να είναι εκείνα που εμφανίζονται υπό τα σχετικά μέρη για τους διάφορους τύπους IBC,
- (b) όπου οι ύλες προς μεταφορά έχουν σχετική πυκνότητα που υπερβαίνει το 1.2, τα ύψη πτώσης θα πρέπει να υπολογίζονται στη βάση της σχετικής πυκνότητας (d) της ύλης προς μεταφορά στρογγυλοποιημένης στο πρώτο δεκαδικό ως ακολούθως:

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
d x 1.5 m	d x 1.0 m	d x 0.67 m

## Προσθήκη Α.6

3650 (5) Έλεγχοι που απαιτούνται για κάθε τύπο σχεδιασμού IBC.  
(συνεχ.)

Κάθε X δείχνει ότι η κατηγορία IBC που εμφανίζεται στην κορυφή της στήλης πρέπει να υπόκειται στον έλεγχο που υποδεικνύεται πάνω στη συγκεκριμένη σειρά, με τη σειρά που αναφέρεται.

	Μεταλλικά IBC	Εύκαμπτα IBC	Άκαμπτα πλαστικά IBC	Σύνθετα IBC με πλαστικό εσωτερικό δοχείο	IBC από φύλλο φάιμπερ	Εύλινα IBC
Ανόψωση πυθμένα	X <sup>α'</sup>		X	X	X	X
Ανόψωση κορυφής	X <sup>α'</sup>	X <sup>α'</sup>	X <sup>α'</sup>	X <sup>α'</sup>		
Σχίσμο		X				
Στοιβαγμα	X	X	X	X	X	X
Στεγανότητα	X <sup>ε'</sup>		X <sup>ε'</sup>	X <sup>ε'</sup>		
Εσωτερική υδραυλική πίεση	X <sup>β'</sup>		X <sup>β'</sup>	X <sup>β'</sup>		
Πτώση	X <sup>ε'</sup>	X	X	X <sup>ε'</sup>	X	X
Ανατροπή		X				
Ανόρθωση		X <sup>α'</sup>				

<sup>α'</sup> Για IBC σχεδιασμένα να διακινούνται με αυτόν τον τρόπο.

<sup>β'</sup> Ο έλεγχος εσωτερικής υδραυλικής πίεσης δεν απαιτείται για IBC του τύπου 11A, 11B, 11N, 11H1, 11H2, 11HZ1 ή 11HZ2.

<sup>ε'</sup> Ένα άλλο IBC του ίδιου σχεδιασμού μπορεί να χρησιμοποιείται για τον έλεγχο πτώσης.

<sup>α'</sup> Όταν τα IBC είναι σχεδιασμένα να ανοψώνονται από την κορυφή ή από τα πλάγια.

<sup>ε'</sup> Ο έλεγχος στεγανότητας δεν απαιτείται για IBC του τύπου 11A, 11B, 11N, 11H1, 11H2, 11HZ1 ή 11HZ2.

#### Προετοιμασία των IBC για τον έλεγχο

3651 (1) Εύκαμπτα IBC, IBC από φύλλο φάιμπερ και σύνθετα IBC με εξωτερικό περίβλημα από φύλλο φάιμπερ

Χάρτινα IBC, IBC από φύλλο φάιμπερ και σύνθετα IBC με εξωτερικά περιβλήματα από φύλλο φάιμπερ θα πρέπει να εξισορροπούνται για τουλάχιστον 24 ώρες σε μία ατμόσφαιρα που έχει ελεγχόμενη θερμοκρασία και σχετική υγρασία (r.h.). Υπάρχουν τρεις δυνατότητες, μία από τις οποίες θα πρέπει να επιλέγεται. Η προτιμώμενη ατμόσφαιρα είναι 23 °C ± 2 °C και 50 % ± 2 % r.h. Οι άλλες δύο δυνατότητες είναι 20 °C ± 2 °C και 65 % ± 2 % r.h. ή 27 °C ± 2 °C και 65 % ± 2 % r.h.

**ΣΗΜΕΙΩΣΗ:** Αυτές οι τιμές αντιστοιχούν σε μέσες τιμές. Βραχυπρόθεσμα οι τιμές της σχετικής υγρασίας μπορούν να διαφέρουν κατά ± 5 % χωρίς αυτό να έχει επίδραση πάνω στον έλεγχο.

(2) Άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο

## Προσθήκη Α.6

**3651** Μέτρα θα πρέπει να λαμβάνονται ώστε να εξακριβώνεται ότι το πλαστικό υλικό που (συνεχ.) χρησιμοποιείται στην κατασκευή άκαμπτων πλαστικών IBC και σύνθετων IBC είναι σύμφωνο με τις διατάξεις του περιθωριακού 3624.

Για να αποδειχθεί ότι υπάρχει αρκετή χημική συμβατότητα με τα περιεχόμενα εμπορεύματα, το δείγμα IBC θα πρέπει να υπόκειται σε μία προκαταρκτική αποθήκευση για έξι μήνες, κατά τη διάρκεια των οποίων τα δείγματα παραμένουν γεμισμένα με τις ύλες που προορίζονται να περιέχουν ή με ύλες που είναι γνωστό ότι έχουν τουλάχιστον ίδια σοβαρότητα επίδραση σπασίματος λόγω καταπόνησης, εξασθένησης ή μοριακής αποικοδόμησης πάνω στα συγκεκριμένα πλαστικά υλικά και μετά από τις οποίες τα δείγματα θα πρέπει να υπόκεινται στους ισχύοντες ελέγχους που αναφέρονται στο περιθωριακό 3650 (5).

Όπου η συμπεριφορά του πλαστικού υλικού έχει αποδειχθεί με άλλα μέσα, ο παραπάνω έλεγχος συμβατότητας μπορεί να παραλείπεται. Τέτοιες διαδικασίες θα πρέπει να είναι τουλάχιστον ισοδύναμες με τον παραπάνω έλεγχο συμβατότητας και να είναι αναγνωρισμένες από την αρμόδια αρχή.

*Διαδικασίες ελέγχου*

**3652** Έλεγχος ανύψωσης πυθμένα

(1) Δυνατότητα ισχύος

Για όλους τους τύπους IBC που είναι εξοπλισμένοι με μέσα για ανύψωση από τη βάση.

(2) Προετοιμασία των IBC για έλεγχο

Το IBC γεμίζεται έως 1.25 φορές το μέγιστο επιτρεπτό μκτό βάρος του, ενώ το φορτίο κατανέμεται ομοιόμορφα.

(3) Μέθοδος ελέγχου

Το IBC ανυψώνεται και κατεβαίνει δύο φορές με ανυψωτικό όχημα με τα πηρούνια κεντρικά τοποθετημένα και με απόσταση ίση με τα τρία τέταρτα της διάστασης της πλευράς εισόδου (εκτός εάν τα σημεία εισόδου είναι κανονισμένα). Τα πηρούνια θα πρέπει να διεισδύουν στα τρία τέταρτα της διάστασης εισόδου. Ο έλεγχος θα πρέπει να επαναλαμβάνεται από κάθε δυνατή διάσταση εισόδου.

(4) Κριτήρια για πέρασμα του ελέγχου

Καμία μόνιμη παραμόρφωση που καθιστά το IBC (συμπεριλαμβανομένης της βάσης παλέτας για σύνθετα IBC με πλαστικό εσωτερικό δοχείο, IBC από φύλλο φάιμπερ και ξύλινα IBC) ανασφαλές για μεταφορά και καμία απώλεια περιεχομένου.

**3653** Έλεγχος ανύψωσης κορυφής

(1) Δυνατότητα ισχύος

Για όλους του τύπους IBC που είναι εξοπλισμένοι με μέσα ανύψωσης από την κορυφή ή, όπου είναι κατάλληλο, από τα πλάγια για εύκαμπτα IBC.

(2) Προετοιμασία των IBC για έλεγχο

Μεταλλικά IBC, άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο:

Το IBC γεμίζεται έως δύο φορές το μέγιστο επιτρεπτό μκτό βάρος του.

## Προσθήκη Α.6

**3653** Εύκαμπτα IBC:  
(συνεχ.)

Το IBC γεμίζεται έως έξι φορές το μέγιστο επιτρεπτό φορτίο του και το φορτίο κατανέμεται ομοιόμορφα.

**(3) Μέθοδος ελέγχου**

Μεταλλικά και εύκαμπτα IBC:

Το IBC ανυψώνεται με τον τρόπο για τον οποίο είναι σχεδιασμένο μέχρι να ανασηκωθεί τελείως από το δάπεδο και παραμένει σ' εκείνη τη θέση για μία περίοδο πέντε λεπτών.

Για εύκαμπτα IBC άλλες μέθοδοι ελέγχου ανύψωσης κορυφής και προετοιμασία τουλάχιστον εξίσου αποτελεσματική μπορούν να χρησιμοποιούνται.

Άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο:

Το IBC ανυψώνεται από κάθε ζευγάρι διαγωνίως αντίθετων συσκευών ανύψωσης, έτσι ώστε οι δυνάμεις ανύψωσης να εφαρμόζονται κάθετα, για μία περίοδο πέντε λεπτών και

Το IBC ανυψώνεται από κάθε ζευγάρι διαγωνίως αντίθετων συσκευών ανύψωσης, έτσι ώστε οι δυνάμεις ανύψωσης να εφαρμόζονται προς το κέντρο σε 45° γωνία με την κάθετο, για μία περίοδο πέντε λεπτών.

**(4) Κριτήρια για πέραςμα του ελέγχου**

Μεταλλικά IBC, άκαμπτα πλαστικά IBC, σύνθετα IBC με πλαστικό εσωτερικό δοχείο:

Καμία μόνιμη παραμόρφωση που να καθιστά το IBC (συμπεριλαμβανομένης της βάσης παλέτας για σύνθετα IBC) ανασφαλές για μεταφορά και καμία απώλεια περιεχομένου.

Εύκαμπτα IBC:

Καμία φθορά στο IBC ή την συσκευή ανύψωσής του που να καθιστά το IBC ανασφαλές για μεταφορά ή διακίνηση.

**3654 Έλεγχος σχισίματος****(1) Δυνατότητα ισχύος**

Για όλους τους τύπους εύκαμπτων IBC:

**(2) Προετοιμασία των IBC για έλεγχο**

Το IBC γεμίζεται έως όχι λιγότερο από το 95 % της χωρητικότητας του και έως το μέγιστο επιτρεπτό φορτίο του, ενώ το φορτίο κατανέμεται ομοιόμορφα.

**(3) Μέθοδος ελέγχου**

Αφού το IBC τοποθετείται πάνω στο δάπεδο, γίνεται μία χαραγή 100 mm με μαχαίρι, που διεισδύει πλήρως στο τοίχωμα μίας πλατιάς πλευράς, σε 45° γωνία στον κύριο άξονα του IBC, στα μισά μεταξύ της επιφάνειας του πυθμένα και του κορυφαίου επιπέδου του περιεχομένου. Το IBC στη συνέχεια υπόκειται σε ομοιόμορφα κατανεμημένο από επάνω φορτίο ισοδύναμο με δύο φορές το μέγιστο επιτρεπτό φορτίο. Το φορτίο θα πρέπει να εφαρμόζεται για τουλάχιστον πέντε λεπτά.

## Προσθήκη Α.6

**3654** Τα IBC που είναι σχεδιασμένα να ανυψώνονται από την κορυφή ή τα πλάγια, στη συνέχεια, (συνεχ.) μετά την απομάκρυνση του από επάνω φορτίου, ανυψώνονται τελείως από το δάπεδο και παραμένουν σ' εκείνη τη θέση για μία περίοδο πέντε λεπτών. Άλλες ισοδύναμες μέθοδοι μπορούν να χρησιμοποιούνται.

(4) *Κριτήριο για πέρασμα του ελέγχου*

Η τομή δεν θα πρέπει να πολλαπλασιάζεται περισσότερο από το 25 % του αρχικού μήκους της.

**3655** *Έλεγχος στοιβάγματος*

(1) *Δυνατότητα ισχύος*

Για όλους τους τύπους IBC.

(2) *Προετοιμασία των IBC για έλεγχο*

Όλες οι κατηγορίες IBC πέραν από εύκαμπτα IBC:

Το IBC γεμίζεται έως το μέγιστο επιτρεπτό μκτό βάρος του.

Εύκαμπτο IBC:

Το IBC γεμίζεται έως όχι λιγότερο από το 95 % της χωρητικότητάς του και έως το μέγιστο επιτρεπτό φορτίο του, ενώ το φορτίο κατανέμεται ομοιόμορφα.

(3) *Μέθοδος ελέγχου*

Το IBC τοποθετείται στη βάση του σε επίπεδο σκληρό έδαφος και υπόκειται σε ομοιόμορφα κατανεμημένο από επάνω φορτίο ελέγχου (βλέπε (4) παρακάτω).

Κατηγορίες και Τύποι IBC	Χρόνος ελέγχου
Μεταλλικά IBC	5 λεπτά
Εύκαμπτα IBC, άκαμπτα πλαστικά IBC των τύπων 11H1, 21H1 και 31H1 Σύνθετα IBC με πλαστικό εσωτερικό δοχείο των τύπων 11HZ1, 21HZ1 και 31HZ1 IBC από φύλλο φάιμπερ, ξύλινα IBC	24 ώρες
Άκαμπτα πλαστικά IBC των τύπων 11H2, 21H2 και 31H2 Σύνθετα IBC με πλαστικό εσωτερικό δοχείο των τύπων 11HZ2, 21HZ2 και 31HZ2	28 ημέρες στους 40 °C

Για όλες τις κατηγορίες IBC πέραν από μεταλλικά IBC, το από επάνω φορτίο ελέγχου θα πρέπει να εφαρμόζεται με μία από τις παρακάτω μεθόδους:

- Ένα ή περισσότερα IBC του ίδιου τύπου που φορτώνονται έως το μέγιστο επιτρεπτό μκτό βάρος τους (μέγιστο επιτρεπτό φορτίο στην περίπτωση εύκαμπτων IBC) στοιβάζονται πάνω στο ελεγχόμενο IBC,

## Προσθήκη Α.6

3655 (συνεχ.) - κατάλληλα βάρη φορτώνονται πάνω σε μία επίπεδη πλάκα ή ένα αντίγραφο της βάσης του IBC, που τοποθετείται πάνω στο ελεγχόμενο IBC.

## (4) Υπολογισμός του από επάνω εφαρμοζόμενου φορτίου ελέγχου

Το φορτίο προς τοποθέτηση πάνω στο IBC θα πρέπει να είναι τουλάχιστον 1,8 φορές το συνδυασμένο μέγιστο επιτρεπτό μικτό βάρος του αριθμού παρόμοιων IBC που μπορούν να στοιβάζονται στην κορυφή του IBC κατά τη διάρκεια της μεταφοράς.

## (5) Κριτήρια για πέρασμα του ελέγχου

- IBC πέραν από εύκαμπτα IBC:

Καμία μόνιμη παραμόρφωση που καθιστά το IBC (συμπερίλαμβανομένης της βάσης παλέτας για σύνθετα IBC, IBC από φύλλο φάιμπερ ή ξύλινα IBC) ανασφαλές για μεταφορά και καμία απώλεια περιεχομένου.

- Εύκαμπτα IBC:

Καμία φθορά του σώματος που καθιστά το IBC ανασφαλές για μεταφορά και καμία απώλεια περιεχομένου.

## 3656 Έλεγχος στεγανότητας

## (1) Δυνατότητα ισχύος

Για όλους τους τύπους μεταλλικού IBC και για τύπους πλαστικού IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο για τη μεταφορά στερεών που φορτώνονται ή ξεφορτώνονται υπό πίεση ή για τη μεταφορά υγρών.

## (2) Προετοιμασία των IBC για έλεγχο

Τα εξαεριζόμενα πάματα είτε αντικαθίστανται από παρόμοια μη-εξαεριζόμενα πάματα είτε ο εξαεριστήρας σφραγίζεται. Επιπλέον, για μεταλλικά IBC, ο έλεγχος του τύπου σχεδιασμού θα πρέπει να διεξάγεται πριν την τοποθέτηση οποιασδήποτε συσκευής θερμικής μόνωσης.

Για αυτόν τον έλεγχο το IBC δεν χρειάζεται να έχει τα πάματα του τοποθετημένα. Το εσωτερικό δοχείο των σύνθετων IBC μπορεί να ελέγχεται χωρίς την εξωτερική συσκευασία υπό την προϋπόθεση ότι τα αποτελέσματα του ελέγχου δεν επηρεάζονται.

## (3) Μέθοδος ελέγχου και πίεση που πρέπει να εφαρμόζεται

Ο έλεγχος διεξάγεται για μία περίοδο τουλάχιστον 10 λεπτών με τη χρήση αέρα σε μία συνεχή πίεση πεζομέτρου όχι μικρότερη από 20 kPa (0,2 bar). Η αεροστεγανότητα του IBC προσδιορίζεται με μία κατάλληλη μέθοδο τέτοια όπως ο έλεγχος του διαφορικού της πίεσης αέρα ή με εμβάπτιση του IBC σε νερό. Στην τελευταία περίπτωση ένας συντελεστής διόρθωσης θα πρέπει να εφαρμόζεται για την υδροστατική πίεση. Άλλες μέθοδοι τουλάχιστον ίδιας αποτελεσματικότητας μπορούν να χρησιμοποιούνται για άκαμπτα πλαστικά IBC και για σύνθετα IBC.

## (4) Κριτήριο για πέρασμα του ελέγχου

Καμία διαρροή αέρα.

## Προσθήκη Α.6

## 3657 Έλεγχος εσωτερικής (υδραυλικής) πίεσης

## (1) Δυνατότητα ισχύος

Για IBC των τύπων:

- 21A, 21B, 21N, 31A, 31B, 31N
- 21H1, 21H2, 31H1, 31H2
- 21HZ1, 21HZ2, 31HZ1, 31HZ2.

## (2) Προετοιμασία των IBC για έλεγχο

Οι συσκευές εκτόνωσης της πίεσης απομακρύνονται και τα ανοίγματά τους βουλώνονται, ή καθίστανται ανενεργές. Επιπλέον, για μεταλλικά IBC, ο έλεγχος διεξάγεται πριν την τοποθέτηση οποιασδήποτε συσκευής θερμικής μόνωσης.

## (3) Μέθοδος ελέγχου

Ο έλεγχος διεξάγεται για μία περίοδο τουλάχιστον 10 λεπτών εφαρμόζοντας υδραυλική πίεση όχι μικρότερη από εκείνη που υποδεικνύεται στο (4). Τα IBC δεν θα πρέπει να συγκρατούνται μηχανικά κατά τη διάρκεια του ελέγχου.

## (4) Πιέσεις που πρέπει να εφαρμόζονται

## (a) Μεταλλικά IBC:

1. Για IBC των τύπων 21A, 21B και 21N, για στερεά της Ομάδας Συσκευασίας I, πίεση πιεζομέτρου 250 kPa (2.5 bar),
2. Για IBC των τύπων 21A, 21B, 21N, 31A, 31B και 31N, για ύλης της Ομάδας Συσκευασίας II ή III, πίεση πιεζομέτρου 200 kPa (2 bar),
3. Επιπλέον, για IBC των τύπων 31A, 31B και 31N, πίεση πιεζομέτρου 65 kPa (0.65 bar). Αυτός ο έλεγχος θα πρέπει να πραγματοποιείται πριν τον έλεγχο των 2 bar.

## (b) Άκαμπτα πλαστικά IBC και σύνθετα IBC με εσωτερικό πλαστικό δοχείο:

1. Για IBC των τύπων 21H1, 21H2, 21HZ1 και 21HZ2: πίεση πιεζομέτρου 75 kPa (0.75 bar)
2. Για IBC των τύπων 31H1, 31H2, 31HZ1 και 31HZ2: η μεγαλύτερη από τις τιμές στο (i) ή (ii):
  - (i) Η συνολική πίεση πιεζομέτρου που μετράται στο IBC (δηλ. η τάση ατμών της πληρωτικής ύλης και η μερική πίεση του αέρα ή άλλων αδρανών αερίων, μείον 100 kPa) στους 55 °C πολλαπλασιασμένη με έναν συντελεστή ασφάλειας 1.5. Αυτή η συνολική πίεση πιεζομέτρου θα πρέπει να προσδιορίζεται στη βάση ενός μέγιστου βαθμού πλήρωσης σε συμφωνία με το 3601 (7) και μία θερμοκρασία πλήρωσης 15 °C, ή
    - 1.75 φορές την τάση ατμών στους 50 °C της ύλης προς μεταφορά μείον 100 kPa, αλλά με ελάχιστη πίεση ελέγχου 100 kPa, ή
    - 1.5 φορές την τάση ατμών στους 55 °C της ύλης προς μεταφορά μείον 100 kPa, αλλά με ελάχιστη τάση ελέγχου 100 kPa,

## Προσθήκη Α.6

3657  
(συνεχ.)

(ii) δύο φορές την στατική πίεση της ύλης προς μεταφορά, με ελάχιστη τιμή δύο φορές την στατική πίεση του νερού.

(5) *Κριτήρια για πέραςμα του(των) ελέγχου(ων)*

- Μεταλλικά IBC:

Για IBC των τύπων 21A, 21B, 21N, 31A, 31B και 31N, όταν υπόκεινται στην πίεση ελέγχου που προκαθορίζεται στο (4) (a) 1. ή 2.: καμία διαρροή.

Για IBC των τύπων 31A, 31B και 31N, όταν υπόκεινται στην πίεση ελέγχου που προκαθορίζεται στο (4) (a) 3.: ούτε μόνιμη παραμόρφωση που θα καθιστούσε το IBC ανασφαλές για μεταφορά, ούτε διαρροή.

- Άκαμπτα πλαστικά IBC και σύνθετα IBC:

Ούτε μόνιμη παραμόρφωση που θα καθιστούσε το IBC ανασφαλές για μεταφορά, ούτε απώλεια περιεχομένου.

3658 *Έλεγχος πτώσης*(1) *Δυνατότητα ισχύος*

Για όλους τους τύπους IBC.

(2) *Προετοιμασία των IBC για έλεγχο*

Τα IBC γεμίζονται:

Για στερεά,

έως όχι λιγότερο από το 95 % της χωρητικότητας του,

Για υγρά,

έως όχι λιγότερο από το 98 % της χωρητικότητάς του στην περίπτωση μεταλλικών IBC ή άκαμπτων πλαστικών IBC και έως όχι λιγότερο από το 90 % της χωρητικότητάς του στην περίπτωση σύνθετων IBC με πλαστικό εσωτερικό δοχείο.

Το IBC περαιτέρω γεμίζονται έως το μέγιστο επιτρεπτό φορτίο του σε συμφωνία με τον τύπο σχεδιασμού.

Για μεταλλικά IBC, άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο, οι συσκευές εκτόνωσης της πίεσης θα πρέπει να απομακρύνονται και τα ανοίγματά τους να βουλώνονται, ή θα πρέπει να καθίστανται ανενεργές.

Για άκαμπτα πλαστικά IBC και σύνθετα IBC με πλαστικό εσωτερικό δοχείο, ο έλεγχος θα πρέπει να διεξάγεται όταν η θερμοκρασία του δείγματος ελέγχου και του περιεχομένου του έχει μειωθεί στους -18 °C ή χαμηλότερα. Όπου δείγματα ελέγχου προετοιμάζονται με αυτόν τον τρόπο, η εξισορρόπηση που προκαθορίζεται στο 3651 (2) μπορεί να παραλείπεται.

## Προσθήκη Α.6

**3658** Τα δοκιμαστικά υγρά θα πρέπει να διατηρούνται στην υγρή κατάσταση, εάν είναι  
(συνεχ.) απαραίτητο με την προσθήκη αντιψυκτικού.

Αυτή η εξισορρόπηση μπορεί να παραβλέπεται εάν η αντοχή ελατότητας και εφελκυσμού των συγκεκριμένων υλικών δεν μειώνεται σημαντικά στους  $-18\text{ }^{\circ}\text{C}$  ή χαμηλότερα.

## (3) Μέθοδος ελέγχου

Το IBC πέφτει πάνω σε μία άκαμπτη, μη-ελαστική, λεία, επίπεδη και οριζόντια επιφάνεια, με τη βάση του (για εύκαμπτα IBC) ή με τέτοιο τρόπο ώστε να εξασφαλίζεται ότι το σημείο κρούσης είναι σ' εκείνο το μέρος της βάσης του IBC που θεωρείται ότι είναι το πιο ευαίσθητο (για όλους τους άλλους τύπους IBC).

IBC χωρητικότητας  $0.45\text{ m}^3$  ή μικρότερης θα πρέπει επίσης να υπόκεινται σ' έναν έλεγχο πτώσης πάνω στο πιο ευαίσθητο μέρος πέραν από το μέρος της βάσης του IBC που ελέγχεται στην πρώτη πτώσης (για μεταλλικά IBC), πάνω στην πιο ευαίσθητη πλευρά (για εύκαμπτα IBC), επίπεδα με μία πλευρά, επίπεδα με την κορυφή και με μία γωνία (για όλους τους άλλους τύπους IBC). Τα ίδια ή διαφορετικά IBC μπορούν να χρησιμοποιούνται για κάθε πτώση.

## (4) Ύψος πτώσης

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
1.8 m	1.2 m	0.8 m

## (5) Κριτήρια για πέρασμα του ελέγχου

- Όλα τα IBC:

Καμία απώλεια περιεχομένου.

- IBC πέραν από μεταλλικά IBC:

Μία μικρή διαρροή από τα πώματα (ή τις τρύπες των ραφών στην περίπτωση εύκαμπτων IBC) κατά την κρούση δεν θα πρέπει να θεωρείται ότι είναι αστοχία του IBC, υπό την προϋπόθεση ότι δεν σημαίνει περαιτέρω διαρροή.

**3659** Έλεγχος ανατροπής

## (1) Δυνατότητα ισχύος

Για όλους τους τύπους εύκαμπτων IBC.

## (2) Προετοιμασία των IBC για έλεγχο

Το IBC γεμίζεται έως όχι λιγότερο από το 95 % της χωρητικότητάς του και έως το μέγιστο επιτρεπτό φορτίο του και το φορτίο κατανέμεται ομοιόμορφα.

## (3) Μέθοδος ελέγχου

Προκαλείται στο IBC ανατροπή με οποιοδήποτε μέρος της κορυφής του πάνω σε μία άκαμπτη, μη-ελαστική, λεία, επίπεδη και οριζόντια επιφάνεια.

## Προσθήκη Α.6

3659 (4) Υψος ανατροπής  
(συνεχ.)

Ομάδα συσκευασίας I	Ομάδα συσκευασίας II	Ομάδα συσκευασίας III
1.8 m	1.2 m	0.8 m

(5) Κριτήρια για πέρασμα του ελέγχου

Καμία απώλεια περιεχομένου. Μία πολύ μικρή διαρροή, π.χ. από τα πόματα ή τις οπές των ραφών, κατά την κρόση δεν θα πρέπει να θεωρείται ότι είναι αστοχία του IBC, υπό την προϋπόθεση ότι δεν συμβαίνει περαιτέρω διαρροή.

3660 Έλεγχος ανόρθωσης

(1) Δυνατότητα ισχύος

Για όλα τα IBC που είναι σχεδιασμένα να ανυψώνονται από την κορυφή ή τα πλάγια.

(2) Προετοιμασία των IBC για έλεγχο

Το IBC γεμίζεται έως όχι λιγότερο από το 95 % της χωρητικότητας του και έως το μέγιστο επιτρεπτό φορτίο του και το φορτίο κατανέμεται ομοιόμορφα.

(3) Μέθοδος ελέγχου

Το IBC, που στέκεται σε μία πλευρά του, ανυψώνεται με μία ταχύτητα τουλάχιστον 0.1 m/s στην όρθια θέση, πλήρως από το δάπεδο, με μία συσκευή ανύψωσης, ή με δύο συσκευές ανύψωσης όταν διαθέτει τέσσερεις.

(4) Κριτήριο για πέρασμα του ελέγχου

Καμία φθορά στο IBC ή τη συσκευή ανύψωσής του που να καθιστά το IBC ανασφαλές για μεταφορά ή διακίνηση.

*Αναφορά ελέγχου*

3661 (1) Μία αναφορά ελέγχου που περιέχει τουλάχιστον τα παρακάτω στοιχεία θα πρέπει να συντάσσεται και θα πρέπει να είναι διαθέσιμη στους χρήστες του IBC:

1. Ονομασία και διεύθυνση των εγκαταστάσεων για τον έλεγχο,
2. Ονομασία και διεύθυνση του αιτούντος (όπου είναι κατάλληλο),
3. Ένα μοναδικό χαρακτηριστικό στοιχείο της αναφοράς ελέγχου,
4. Ημερομηνία της αναφοράς ελέγχου,
5. Κατασκευαστής του IBC,
6. Περιγραφή του τύπου σχεδιασμού του IBC (π.χ. διαστάσεις, υλικά, πόματα, πάχος, κ.λπ.) συμπεριλαμβανομένης της μεθόδου κατασκευής (π.χ. καλούπωμα με φύσημα) και που μπορεί να περιλαμβάνει σχέδιο(α) και/ή φωτογραφία(ες),
7. Μέγιστη χωρητικότητα,

## Προσθήκη Α.6

- 3661** (συνεχ.) 8. Χαρακτηριστικά του δοκιμαστικού περιχομένου, π.χ. ιξώδες και σχετική πυκνότητα για υγρά και μέγεθος σωματιδίων για στερεά,
9. Περιγραφές και αποτελέσματα του ελέγχου,
10. Η αναφορά ελέγχου θα πρέπει να υπογράφεται με το όνομα και τη θέση του υπογράφοντος.

(2) Η αναφορά ελέγχου θα πρέπει να περιέχει δηλώσεις ότι το IBC προετοιμασμένο όπως για μεταφορά ελέγχθηκε σε συμφωνία με τις κατάλληλες διατάξεις της Προσθήκη Α.6 και ότι η χρήση άλλων μεθόδων συσκευασίας ή συστατικών μπορεί να την καταστήσει μη ισχύουσα. Ένα αντίγραφο της αναφοράς ελέγχου θα πρέπει να είναι διαθέσιμο στην αρμόδια αρχή.

**B. Έλεγχοι και επιθεώρηση για κάθε μεταλλικό IBC, άκαμπτο πλαστικό IBC και σύνθετο IBC με πλαστικό εσωτερικό δοχείο**

*Αρχικοί και περιοδικοί έλεγχοι*

**3662** (1) Όλα τα μεταλλικά IBC του τύπου 21A, 21B, 21N, 31A, 31B και 31N, όλα τα άκαμπτα πλαστικά IBC του τύπου 21H1, 21H2, 31H1 και 31H2 και όλα τα σύνθετα IBC με πλαστικό εσωτερικό δοχείο του τύπου 21HZ1, 21HZ2, 31HZ1 και 31HZ2 θα πρέπει να υποβάλλονται επιτυχώς στον έλεγχο στεγανότητας και να είναι ικανά να ικανοποιούν τα κατάλληλα επίπεδα σύμφωνα με το περιθωριακό 3656 (3) πριν χρησιμοποιηθούν για μεταφορά για την πρώτη φορά.

(2) Ο έλεγχος στεγανότητας που αναφέρεται στο (1) θα πρέπει να επαναλαμβάνεται

- τουλάχιστον μία φορά κάθε δύομισι χρόνια
- μετά από οποιαδήποτε επισκευή, πριν επαναχρησιμοποιηθεί για μεταφορά.

(3) Τα αποτελέσματα των ελέγχων θα πρέπει να καταγράφονται στις αναφορές ελέγχου που πρέπει να διατηρούνται από τον ιδιοκτήτη του IBC.

*Επιθεώρηση*

**3663** (1) Όλα τα μεταλλικά IBC, όλα τα άκαμπτα πλαστικά IBC και όλα τα σύνθετα IBC με πλαστικό εσωτερικό δοχείο θα πρέπει να επιθεωρούνται προς ικανοποίηση της αρμόδιας αρχής πριν τεθούν σε υπηρεσία, και μετά απ' αυτό σε διαστήματα που δεν υπερβαίνουν τα πέντε χρόνια, όσον αφορά στα παρακάτω:

- συμφωνία με τον τύπο σχεδιασμού συμπεριλαμβανομένου του μαρκαρίσματος,
- εσωτερική και εξωτερική κατάσταση,
- σωστή λειτουργία του εξοπλισμού εξυπηρέτησης.

Για μεταλλικά IBC, η θερμική μόνωση χρειάζεται να αφαιρείται μόνον στο βαθμό που είναι απαραίτητο για μία σωστή εξέταση του σώματος του IBC.

(2) Όλα τα IBC που αναφέρονται στο (1) θα πρέπει να επιθεωρούνται οπτικά προς ικανοποίηση της αρμόδιας αρχής μετά από όχι περισσότερο από δύομισι χρόνια, αναφορικά με την εξωτερική κατάσταση του IBC και τη σωστή λειτουργία του εξοπλισμού εξυπηρέτησης.

## Προσθήκη Α.6

3663 Για μεταλλικά IBC, η μόνωση χρειάζεται να αφαιρεθεί μόνον εάν αυτό είναι ουσιαστικό για μία (συνεχ.) σωστή εξέταση του σώματος του IBC.

(3) Κάθε επιθεώρηση θα πρέπει να είναι το αντικείμενο μίας αναφοράς που θα πρέπει να διατηρείται από τον ιδιοκτήτη τουλάχιστον μέχρι την επόμενη ημερομηνία επιθεώρησης.

(4) Εάν τα δομικά χαρακτηριστικά ενός IBC έχουν εξασθενήσει από μία βίαιη κρούση (για παράδειγμα, ένα ατύχημα) ή άλλη αιτία, το IBC θα πρέπει να επισκευάζεται και να υπόκειται στον έλεγχο στεγανότητας σύμφωνα με το περιθωριακό 3656, εάν απαιτείται για τον τύπο σχεδιασμού και στην επιθεώρηση που ορίζεται στην παράγραφο (1) παραπάνω.

## Προσθήκη Α.7

Προσδιορισμός των  $A_1$  και  $A_2$ 

- 3701 (1) Για μεμονωμένα ραδιονουκλεΐδια των οποίων οι ταυτότητες είναι γνωστές, αλλά που δεν αναφέρονται στον Πίνακα I, ο προσδιορισμός των τιμών των  $A_1$  και  $A_2$  θα πρέπει να απαιτεί πολυμερή έγκριση. Εναλλακτικά, οι τιμές των  $A_1$  και  $A_2$  στον Πίνακα II μπορούν να χρησιμοποιούνται χωρίς τη λήψη έγκρισης της αρμόδιας αρχής.

Πίνακας II: Γενικές τιμές για  $A_1$  και  $A_2$ 

Περιεχόμενο	A1		A2	
	TBq	(Ci) <sup>5/</sup>	TBq	(Ci) <sup>5/</sup>
Μόνον βήτα ή γάμα εκπέμποντα νουκλεΐδια είναι γνωστό ότι είναι παρόντα.	0.2	5	0.02	0.5
Άλφα εκπέμποντα νουκλεΐδια είναι γνωστό ότι είναι παρόντα ή δεν υπάρχουν σχετικά δεδομένα διαθέσιμα	0.1	2	$2 \times 10^{-5}$	$5 \times 10^{-4}$

- (2) Στους υπολογισμούς των  $A_1$  και  $A_2$  για ένα ραδιονουκλεΐδιο που δεν είναι στον Πίνακα I, μία μόνη ραδιενεργή αλυσίδα διάσπασης στην οποία τα ραδιονουκλεΐδια είναι παρόντα στις φυσικά απαντώμενες αναλογίες και στην οποία κανένα θυγατρικό νουκλεΐδιο δεν έχει χρόνο ημιζωής είτε μεγαλύτερο από 10 ημέρες είτε μεγαλύτερο από εκείνον του μητρικού νουκλεΐδιου θα πρέπει να θεωρείται ως ένα μόνο ραδιονουκλεΐδιο και η δραστηκότητα που θα λαμβάνεται υπόψη και οι τιμές  $A_1$  ή  $A_2$  που θα ισχύουν θα πρέπει να είναι εκείνες που αντιστοιχούν στο μητρικό νουκλεΐδιο εκείνης της αλυσίδας. Στην περίπτωση ραδιενεργών αλυσίδων διάσπασης στις οποίες οποιοδήποτε θυγατρικό νουκλεΐδιο έχει χρόνο ημιζωής είτε μεγαλύτερο από 10 ημέρες είτε μεγαλύτερο από εκείνον του μητρικού νουκλεΐδιου, τα μητρικά και τέτοια θυγατρικά νουκλεΐδια θα πρέπει να θεωρούνται ως μείγματα διαφορετικών νουκλεϊδίων.

- (3) Για μείγματα ραδιονουκλεϊδίων των οποίων οι ταυτότητες και οι αντίστοιχες δραστηκότητες είναι γνωστές, οι παρακάτω όροι θα πρέπει να ισχύουν:

- (a) Για ειδικής μορφής ραδιενεργό υλικό:

$$\sum_i \frac{B(i)}{A_1(i)} \leq 1$$

- (b) Για άλλες μορφές ραδιενεργού υλικού:

$$\sum_i \frac{B(i)}{A_2(i)} \leq 1$$

όπου  $B(i)$  είναι η δραστηκότητα του ραδιονουκλεΐδιου  $i$  και  $A_1(i)$  και  $A_2(i)$  είναι οι τιμές  $A_1$  και  $A_2$  για το ραδιονουκλεΐδιο  $i$ , αντίστοιχα.

Εναλλακτικά, μία τιμή  $A_2$  για μείγματα μπορεί να προσδιορίζεται ως ακολούθως:

$$\text{Για ένα μείγμα, } A_2 = \frac{1}{\sum_i \frac{f(i)}{A_2(i)}}$$

<sup>5/</sup> Οι τιμές curie που παρατίθενται λαμβάνονται με στρογγυλοποίηση προς τα κάτω, από την τιμή TBq μετά από μετατροπή σε Ci.

## Προσθήκη Α.7

**3701** όπου  $f(i)$  είναι το τμήμα της δραστηριότητας του νουκλειδίου  $i$  στο μείγμα και  $A_2(i)$  είναι η (συνεχ.) κατάλληλη τιμή  $A_2$  για το νουκλείδιο  $i$ .

(4) Όταν η ταυτότητα κάθε ραδιονουκλειδίου είναι γνωστή αλλά οι μεμονωμένες δραστηριότητες μερικών από τα ραδιονουκλείδια δεν είναι γνωστές, τα ραδιονουκλείδια μπορούν να ομαδοποιούνται και η χαμηλότερη τιμή  $A_1$  ή  $A_2$ , ως κατάλληλη, για τα ραδιονουκλείδια σε κάθε ομάδα μπορεί να χρησιμοποιείται στην εφαρμογή των τύπων στην παράγραφο (3) παραπάνω. Οι ομάδες μπορούν να βασίζονται πάνω στη συνολική άλφα δραστηριότητα και τη συνολική βήτα/γάμμα δραστηριότητα όταν αυτές είναι γνωστές, με τη χρήση της χαμηλότερης τιμής  $A_1$  ή  $A_2$  για τους άλφα εκπομπούς ή βήτα/γάμμα εκπομπούς, αντίστοιχα.

(5) Για μεμονωμένα ραδιονουκλείδια ή για μείγματα ραδιονουκλειδίων για τα οποία επαρκή δεδομένα δεν είναι διαθέσιμα, οι τιμές που εμφανίζονται στον Πίνακα II θα πρέπει να χρησιμοποιούνται.

**Όρια περιεχομένου για κόλα**

**3702** Η ποσότητα ραδιενεργού υλικού σε ένα κόλο δεν θα πρέπει να υπερβαίνει τα σχετικά όρια που προκαθορίζονται σε αυτό το περιθωριακό.

**(1) Εξαιρούμενα κόλα**

(a) Για ραδιενεργό υλικό πέραν από είδη κατασκευασμένα από φυσικό ουράνιο, εξατλημένο ουράνιο ή φυσικό θόριο, ένα εξαιρούμενο κόλο δεν θα πρέπει να περιέχει δραστηριότητες μεγαλύτερες από τις παρακάτω:

(i) Όπου το ραδιενεργό υλικό περικλείεται σε ή αποτελεί ένα συστατικό μέρος ενός οργάνου ή άλλου κατασκευασμένου είδους, τέτοιου όπως ένα ρολόι ή μία ηλεκτρονική συσκευή, τα όρια που προκαθορίζονται στο περιθωριακό 3713 (4) για κάθε μεμονωμένο είδος και κάθε κόλο, αντίστοιχα, και

(ii) Όπου το ραδιενεργό υλικό δεν είναι έτσι εγκλεισμένο ή κατασκευασμένο, τα όρια που προκαθορίζονται στο περιθωριακό 3713 (5).

(b) Για είδη κατασκευασμένα από φυσικό ουράνιο, εξατλημένο ουράνιο ή φυσικό θόριο, ένα εξαιρούμενο κόλο μπορεί να περιέχει οποιαδήποτε ποσότητα τέτοιου υλικού υπό την προϋπόθεση ότι η εξωτερική επιφάνεια του ουρανίου ή θορίου περικλείονται σε ένα ανενεργό περίβλημα κατασκευασμένο από μέταλλο ή κάποιο άλλο στέρεο υλικό.

**(2) Βιομηχανικά κόλα**

Η συνολική δραστηριότητα σε ένα μόνο κόλο LSA υλικού ή σε ένα μόνο κόλο SCO θα πρέπει να είναι έτσι περιορισμένη ώστε το επίπεδο ακτινοβολίας που προκαθορίζεται στο περιθωριακό 3714 (1) να μην υπερβαίνεται και η δραστηριότητα σε ένα μόνο κόλο θα πρέπει επίσης να είναι έτσι περιορισμένη ώστε τα όρια δραστηριότητας για ένα όχημα που προκαθορίζονται στο περιθωριακό 3714 (6) να μην υπερβαίνονται.

**(3) Κόλα τύπου Α**

Τα κόλα τύπου Α δεν θα πρέπει να περιέχουν δραστηριότητες μεγαλύτερες από τις παρακάτω:

(a) Για ειδικής μορφής ραδιενεργό υλικό -  $A_1$ , ή

(b) Για όλα τα άλλα ραδιενεργά υλικά -  $A_2$ .

## Προσθήκη Α.7

**3702** Οι τιμές για τα Α<sub>1</sub> και Α<sub>2</sub> αναφέρονται στους Πίνακες Ι και ΙΙ των περιθωριακών 3700 και 3701 (συνεχ.) αντίστοιχα.

(4) *Κόλα τύπου Β*

Τα κόλα τύπου Β δεν θα πρέπει να περιέχουν:

- (a) δραστικότητες μεγαλύτερες από εκείνες που επιτρέπονται για τον σχεδιασμό του κόλου,
- (b) ραδιονουκλεΐδια διαφορετικά από εκείνα που επιτρέπονται για τον σχεδιασμό του κόλου, ή
- (c) περιεχόμενο σε μορφή, ή φυσική ή χημική κατάσταση διαφορετική από εκείνες που επιτρέπονται για τον σχεδιασμό κόλου, όπως προκαθορίζονται στα πιστοποιητικά έγκρισής τους.

(5) *Συσκευασίες που περιέχουν σχάσιμο υλικό*

Όλες οι συσκευασίες που περιέχουν σχάσιμο υλικό θα πρέπει να συμμορφώνονται με τα ισχύοντα όρια δραστικότητας για τα κόλα που προκαθορίζονται στις παραγράφους (1) έως (4) παραπάνω.

Συσκευασίες που περιέχουν σχάσιμο υλικό, πέραν από εκείνες που περιέχουν υλικά που συμμορφώνονται με τις διατάξεις του περιθωριακού 3703 δεν θα πρέπει να περιέχουν:

- (a) βάρος σχάσιμου υλικού μεγαλύτερο από εκείνο που επιτρέπεται για τον σχεδιασμό του κόλου,
- (b) οποιοδήποτε ραδιονουκλεΐδιο ή σχάσιμο υλικό διαφορετικό από εκείνο που επιτρέπεται για τον σχεδιασμό του κόλου, ή
- (c) περιεχόμενο σε μορφή ή φυσική ή χημική κατάσταση, ή σε χωρική τακτοποίηση, διαφορετική από εκείνες που επιτρέπονται για τον σχεδιασμό του κόλου, όπως προκαθορίζονται στα πιστοποιητικά έγκρισής τους.

**3703** Κόλα που ικανοποιούν έναν από τους όρους αυτού του περιθωριακού θα πρέπει να εξαιρούνται από τις διατάξεις που προκαθορίζονται στο περιθωριακό 3741 και από τις άλλες διατάξεις αυτής της Προσθήκης που ισχύουν ειδικά για το σχάσιμο υλικό. Τέτοια κόλα, πάντως, θα πρέπει να ρυθμίζονται ως κόλα μη-σχάσιμου ραδιενεργού υλικού, όπως ισχύουν και θα πρέπει ακόμα να υπόκεινται σ' εκείνες τις διατάξεις αυτής της Προσθήκης που αφορούν στη ραδιενεργή φύση και τις ιδιότητες τους:

- (a) Κόλα που περιέχουν μεμονωμένα όχι περισσότερο από 15 g σχάσιμου υλικού, υπό την προϋπόθεση ότι η μικρότερη εξωτερική διάσταση κάθε κόλου δεν είναι μικρότερη από 10 cm. Για μη-συσκευασμένο υλικό, ο περιορισμός της ποσότητας θα πρέπει να ισχύει για το φορτίο που μεταφέρεται μέσα ή πάνω στο όχημα.
- (b) Κόλα που περιέχουν ομογενή υδρογονούχα διαλύματα ή μείγματα που ικανοποιούν τους όρους που αναφέρονται στον Πίνακα ΙΙΙ. Για μη-συσκευασμένο υλικό, οι περιορισμοί της ποσότητας στον Πίνακα ΙΙΙ θα πρέπει να ισχύουν για το φορτίο που μεταφέρεται μέσα ή πάνω στο όχημα.

## Προσθήκη Α.7

3703  
(συνεχ.)

- (c) Κόλα που περιέχουν ουράνιο εμπλουτισμένο σε ουράνιο-235 έως ένα μέγιστο 1 % κατά βάρος, και με συνολική περιεκτικότητα σε πλουτώνιο και ουράνιο-233 που δεν υπερβαίνει το 1 % του βάρους του ουρανίου-235, υπό την προϋπόθεση ότι το σχάσιμο υλικό είναι κατανεμημένο βασικά ομογενώς σ' όλο το υλικό. Επιπλέον, εάν ουράνιο-235 είναι παρόν σε μορφές μεταλλικές, οξειδίου, ή καρβιδίου δεν θα πρέπει να σχηματίζει πλέγμα μέσα στο κόλο.
- (d) Κόλα που περιέχουν όχι περισσότερο από 5 g σχάσιμου υλικού σε οποιοδήποτε όγκο 10 λίτρων, υπό την προϋπόθεση ότι το ραδιενεργό υλικό περιέχεται σε κόλα που θα διατηρήσουν τους περιορισμούς στην κατανομή του σχάσιμου υλικού υπό συνθήκες που είναι πιθανόν να συμβούν κατά τη διάρκεια συνήθους μεταφοράς.
- (e) Κόλα που περιέχουν μεμονωμένα όχι περισσότερο από 1 kg συνολικού πλουτωνίου, από το οποίο όχι περισσότερο από 20 % κατά βάρος μπορεί να συνίσταται από πλουτώνιο-239, πλουτώνιο-241, ή οποιοδήποτε συνδυασμό εκείνων των ραδιονουκλειδίων.
- (f) Κόλα που περιέχουν υγρά διαλύματα νιτρικού ουρανωλίου εμπλουτισμένα σε ουράνιο-235 έως ένα μέγιστο 2 % κατά βάρος, με συνολική περιεκτικότητα σε πλουτώνιο και ουράνιο-233 που δεν υπερβαίνει το 0.1 % του βάρους του ουρανίου-235 και με ελάχιστη ατομική αναλογία αζώτου προς ουράνιο (N/U) 2.

## Πίνακας III. Περιορισμοί σε ομογενή υδρογονούχα διαλύματα ή μείγματα σχάσιμου υλικού

Παράμετροι	Ουράνιο-235 μόνον	Οποιοδήποτε άλλο σχάσιμο υλικό (συμπεριλαμβανομένων μειγμάτων)
Ελάχιστο H/X <sup>β'</sup>	5200	5200
Μέγιστη συγκέντρωση σχάσιμου υλικού (g/l)	5	5
Μέγιστο βάρος σχάσιμου υλικού σε ένα κόλο ή όχημα (g)	800 <sup>γ'</sup>	500

3704-  
3709

<sup>β'</sup> Όπου H/X είναι ο λόγος του αριθμού των ατόμων υδρογόνου προς τον αριθμό των ατόμων του σχάσιμου νουκλειδίου.

<sup>γ'</sup> Με συνολική περιεκτικότητα πλουτωνίου και ουρανίου-233 όχι μεγαλύτερη από το 1 % του βάρους του ουρανίου-235.

## Προσθήκη Α.7

## ΜΕΡΟΣ ΙΙ

**ΠΡΟΒΛΕΨΕΙΣ ΓΙΑ ΤΗΝ ΠΡΟΕΤΟΙΜΑΣΙΑ ΚΑΙ ΕΛΕΓΧΟΙ ΓΙΑ ΦΟΡΤΩΣΗ  
ΚΑΙ ΓΙΑ ΑΠΟΘΗΚΕΥΣΗ ΥΠΟ ΜΕΤΑΦΟΡΑ**

**Διατάξεις για την επιθεώρηση του κόλου**

- 3710** (1) Πριν από την πρώτη φόρτωση οποιουδήποτε κόλου, οι παρακάτω διατάξεις θα πρέπει να πληρούνται:
- (a) Εάν η πίεση σχεδιασμού του συστήματος συγκράτησης υπερβαίνει τα 35 kPa (0.35 bar πίεση πιεζομέτρου), θα πρέπει να εξασφαλίζεται ότι το σύστημα συγκράτησης κάθε κόλου συμφωνεί με τις εγκεκριμένες διατάξεις σχεδιασμού που είναι σχετικές με την ικανότητα εκείνου του συστήματος να διατηρεί την ακεραιότητά του υπό πίεση.
  - (b) Για κάθε κόλο Τύπου Β και για κάθε συσκευασία που περιέχει σχάσιμο υλικό, θα πρέπει να εξασφαλίζεται ότι η αποτελεσματικότητα της θωράκισης και συγκράτησής της και, όπου είναι απαραίτητο, τα χαρακτηριστικά μεταφοράς της θερμότητας, είναι μέσα στα όρια που ισχύουν ή προκαθορίζονται για τον εγκεκριμένο σχεδιασμό.
  - (c) Για κάθε συσκευασία που περιέχει σχάσιμο υλικό, όπου, για να συμμορφώνεται με τις διατάξεις του περιθωριακού 3741, δηλητήρια νετρονίων περιλαμβάνονται ειδικά ως συστατικά του κόλου, έλεγχοι θα πρέπει να πραγματοποιούνται ώστε να επιβεβαιώνεται η παρουσία και η κατανομή εκείνων των δηλητηρίων νετρονίων.
- (2) Πριν από κάθε φόρτωση οποιουδήποτε κόλου, οι παρακάτω διατάξεις θα πρέπει να πληρούνται:
- (a) Θα πρέπει να εξασφαλίζεται ότι τα εξαρτήματα ανύψωσης που δεν ικανοποιούν τις διατάξεις του περιθωριακού 3732 έχουν αφαιρεθεί ή αλλιώς καταστεί ανίκανα για χρήση για την ανύψωση του κόλου.
  - (b) Για κάθε κόλο Τύπου Β και για κάθε συσκευασία που περιέχει σχάσιμο υλικό, θα πρέπει να εξασφαλίζεται ότι όλες οι απαιτήσεις που προκαθορίζονται στα πιστοποιητικά έγκρισης και τις σχετικές διατάξεις αυτής της Προσθήκης έχουν ικανοποιηθεί.
  - (c) Κάθε κόλο Τύπου Β θα πρέπει να κρατείται μέχρι την προσέγγιση των συνθηκών ισορροπίας αρκετά κοντά ώστε να εμφανίζει συμφωνία με τις διατάξεις φόρτωσης για θερμοκρασία και πίεση εκτός εάν εξαίρεση από αυτές τις διατάξεις έχει λάβει μονομερή έγκριση.
  - (d) Για κάθε κόλο Τύπου Β, θα πρέπει να εξασφαλίζεται με εξέταση και/ή κατάλληλους ελέγχους ότι όλα τα πάματα, οι βαλβίδες και άλλα ανοίγματα του συστήματος συγκράτησης μέσω των οποίων το ραδιενεργό περιεχόμενο θα μπορούσε να διαφύγει είναι σωστά κλεισμένα και, όπου είναι κατάλληλο, σφραγισμένα με τον τρόπο για τον οποίο οι επιδείξεις συμφωνίας με τις διατάξεις του περιθωριακού 3738 είχαν γίνει.

**Μεταφορά άλλων εμπορευμάτων**

- 3711** (1) Ένα κόλο δεν θα πρέπει να περιέχει οποιαδήποτε άλλα είδη εκτός από τέτοια είδη και έγγραφα που είναι απαραίτητα για τη χρήση του ραδιενεργού υλικού. Αυτή η διάταξη δεν θα πρέπει να αποκλείει τη μεταφορά υλικού χαμηλής ειδικής δραστηριότητας ή επιφανειακά μολυσμένων αντικειμένων με άλλα είδη. Η μεταφορά τέτοιων ειδών και εγγράφων σε ένα κόλο, ή υλικού χαμηλής ειδικής δραστηριότητας ή επιφανειακά μολυσμένων αντικειμένων με άλλα είδη μπορεί να επιτρέπεται υπό την προϋπόθεση ότι δεν υπάρχει αντίδραση μεταξύ αυτών και της συσκευασίας ή του περιεχομένου της που θα μείωνε την ασφάλεια του κόλου.

## Προσθήκη Α.7

3711 (2) Δεξαμενές που χρησιμοποιούνται για τη μεταφορά ραδιενεργού υλικού δεν θα πρέπει να (συνεχ.) χρησιμοποιούνται για την αποθήκευση ή τη μεταφορά άλλων εμπορευμάτων.

(3) Η μεταφορά άλλων εμπορευμάτων με φορτώσεις που μεταφέρονται υπό αποκλειστική χρήση θα πρέπει να επιτρέπεται υπό την προϋπόθεση ότι διευθετήσεις ελέγχονται μόνον από τον αποστολέα και δεν απαγορεύεται από άλλες διατάξεις.

(4) Τα φορτία θα πρέπει να είναι απομονωμένα από άλλα επικίνδυνα εμπορεύματα κατά τη διάρκεια μεταφοράς και αποθήκευσης σε συμφωνία με τις διατάξεις του περιθωριακού 2703 υπό το τμήμα 7. και 71 403.

(5) Το ραδιενεργό υλικό θα πρέπει να είναι επαρκώς απομονωμένο από μη εμφανισμένα φωτογραφικά φιλμ. Η βάση για τον προσδιορισμό των αποστάσεων απομόνωσης για αυτό το σκοπό θα πρέπει να είναι ότι η έκθεση στην ακτινοβολία ενός μη εμφανισμένου φωτογραφικού φιλμ λόγω της μεταφοράς ραδιενεργού υλικού πρέπει να περιορίζεται σε 0.1 mSv (10 mrem) ανά φορτίο τέτοιων φιλμ σε συμφωνία με το περιθωριακό 2711.

## Απαιτήσεις και έλεγχοι για μόλυνση και για κόλα με διαρροή

3712 (1) Η μη-σταθερή μόλυνση πάνω στις εξωτερικές επιφάνειες ενός κόλου θα πρέπει να διατηρείται όσο χαμηλότερη είναι πρακτικά δυνατόν και, υπό συνθήκες που είναι πιθανόν να συμβούν σε συνήθη μεταφορά, δεν θα πρέπει να υπερβαίνει τα επίπεδα που προκαθορίζονται στον Πίνακα IV.

(2) Στην περίπτωση υπερσυσκευασιών και εμπορευματοκιβωτίων, το επίπεδο της μη-σταθερής μόλυνσης πάνω στις εξωτερικές και τις εσωτερικές επιφάνειες δεν θα πρέπει να υπερβαίνει τα όρια που προκαθορίζονται στον Πίνακα IV.

## Πίνακας IV. Όρια της μη-σταθερής μόλυνσης σε επιφάνειες

Τύπος κόλου, υπερσυσκευασίας, εμπορευματοκιβωτίου, δεξαμενής ή οχήματος και εξοπλισμός τους	Μολυντής			
	Όριο <sup>Bq</sup> των βήτα και γάμα εκπομπών και των χαμηλής τοξικότητας άλφα εκπομπών		Όριο <sup>Bq</sup> όλων των άλλων άλφα εκπομπών	
	Bq/cm <sup>2</sup>	(mCi/cm <sup>2</sup> )	Bq/cm <sup>2</sup>	(mCi/cm <sup>2</sup> )
Εξωτερικές επιφάνειες των: εξαιρουμένων κόλων άλλων από εξαιρούμενα κόλα	0.4 4	(10 <sup>-5</sup> ) (10 <sup>-4</sup> )	0.04 0.4	(10 <sup>-6</sup> ) (10 <sup>-5</sup> )
Εξωτερικές και εσωτερικές επιφάνειες υπερσυσκευασιών, εμπορευματοκιβωτίων, οχημάτων και των εξαρτημάτων τους όταν μεταφέρουν ή προετοιμάζονται για να μεταφέρουν:				
Φορτία συμπεριλαμβανομένων εξαιρουμένων κόλων και/ή μη- ραδιενεργών εμπορευμάτων	0.4	(10 <sup>-5</sup> )	0.04	(10 <sup>-6</sup> )

<sup>Bq</sup> Τα όρια ισχύουν όταν τίθενται ως μέσος όρος σε οποιοδήποτε εμβαδό 300 cm<sup>2</sup> οποιοδήποτε μέρους της επιφάνειας.

## Προσθήκη Α.7

Τύπος κόλου, υπερσυσκευασίας, εμπορευματοκιβωτίου, δεξαμενής ή οχήματος και εξοπλισμός τους	Μολυντής			
	Όριο <sup>B</sup> των βήτα και γάμα εκπομπών και των χαμηλής τοξικότητας άλφα εκπομπών		Όριο <sup>B</sup> όλων των άλλων άλφα εκπομπών	
	Bq/cm <sup>2</sup>	(mCi/cm <sup>2</sup> )	Bq/cm <sup>2</sup>	(mCi/cm <sup>2</sup> )
Φορτία συνιστάμενα μόνον από ραδιενεργό υλικό σε κόλα πέραν των εξαιρουμένων κόλων	4	(10 <sup>-4</sup> )	0.4	(10 <sup>-5</sup> )
Εξωτερικές επιφάνειες εμπορευ- ματοκιβωτίων, δεξαμενών και οχημάτων και των εξαρτημάτων τους που χρησιμοποιούνται στη μεταφορά μη-συσκευασμένου ραδιενεργού υλικού	4	(10 <sup>-4</sup> )	0.4	(10 <sup>-5</sup> )

(3) Εάν είναι εμφανές ότι ένα κόλο είναι φθαρμένο ή παρουσιάζει διαρροή, ή εάν υπάρχει ή υποψία ότι το κόλο μπορεί να έχει παρουσιάσει διαρροή ή να έχει φθαρεί, η πρόσβαση στο κόλο θα πρέπει να απαγορεύεται και ένα αρμόδιο άτομο θα πρέπει, όσο το δυνατόν συντομότερα, να εκτιμά τον βαθμό της μόλυνσης και το προκύπτον επίπεδο ακτινοβολίας του κόλου.

Η έκταση της έρευνας θα πρέπει να περιλαμβάνει το κόλο, το όχημα, τις γειτονικές περιοχές φόρτωσης και εκφόρτωσης και, εάν είναι απαραίτητο, όλα τα άλλα υλικά που έχουν μεταφερθεί στο όχημα. Όταν είναι απαραίτητο, πρόσθετα μέτρα για την προστασία της ανθρώπινης υγείας, σε συμφωνία με τις διατάξεις που επιβάλλονται από την αρμόδια αρχή, θα πρέπει να λαμβάνονται για το ξεπέρασμα και την ελαχιστοποίηση των επιπτώσεων τέτοιας διαρροής ή φθοράς.

(4) Κόλα που παρουσιάζουν διαρροή ραδιενεργού περιεχομένου πέραν των επιτρεπόμενων ορίων για κανονικές συνθήκες μεταφοράς μπορούν να απομακρύνονται υπό επίβλεψη αλλά δεν θα πρέπει να προωθούνται προς αποστολή μέχρι να επισκευαστούν ή επιδιορθωθούν και απολυμανθούν.

(5) Ένα όχημα και ο εξοπλισμός που χρησιμοποιείται συνήθως για τη μεταφορά ραδιενεργού υλικού θα πρέπει να ελέγχονται περιοδικά ώστε να προσδιορίζεται το επίπεδο μόλυνσης. Η συχνότητα τέτοιων ελέγχων θα πρέπει να σχετίζεται με την πιθανότητα μόλυνσης και την έκταση στην οποία ραδιενεργό υλικό μεταφέρεται.

(6) Εκτός από τις περιπτώσεις εκείνες που δίνονται στην παράγραφο (7) παρακάτω, οποιοδήποτε όχημα, εξοπλισμός, ή μέρος αυτών που έχει μολυνθεί παραπάνω από τα όρια που προκαθορίζονται στον Πίνακα IV ή που εμφανίζει επίπεδο ακτινοβολίας μεγαλύτερο από 5 mSv/h (0.5 mrem/h) κατά την εξέλιξη της μεταφοράς ραδιενεργού υλικού θα πρέπει να απολυμαίνεται όσο το δυνατόν συντομότερα από αρμόδιο άτομο και δεν θα πρέπει να επαναχρησιμοποιείται εκτός εάν η μη-σταθερή ραδιενεργή μόλυνση δεν υπερβαίνει τα επίπεδα που προκαθορίζονται στον Πίνακα IV, και το επίπεδο ακτινοβολίας που απορρέει από τη σταθερή μόλυνση σε επιφάνειες μετά την απολύμανση είναι μικρότερο από 5 mSv/h (0.5 mrem/h).

<sup>B</sup>  
επιφάνειας.

Τα όρια ισχύουν όταν τίθενται ως μέσος όρος σε οποιοδήποτε εμβαδό 300 cm<sup>2</sup> οποιοδήποτε μέρους της

## Προσθήκη Α.7

- 3712** (7) Μία υπερσυσκευασία, εμπορευματοκιβώτιο ή όχημα αφιερωμένο στη μεταφορά χαμηλής ειδικής δραστηριότητας υλικού ή επιφανειακά μολυσμένων αντικειμένων υπό αποκλειστική χρήση θα πρέπει να εξαιρείται από τις παραγράφους (2) και (6) παραπάνω αποκλειστικά όσον αφορά στην εσωτερική επιφάνεια του και μόνον για όσο παραμένει υπό εκείνη την συγκεκριμένη αποκλειστική χρήση.

## Απαιτήσεις και έλεγχοι για τη μεταφορά εξαιρούμενων κόλων

- 3713** (1) Τα εξαιρούμενα κόλα θα πρέπει να υπόκεινται μόνον στις παρακάτω διατάξεις:
- (a) Στα τμήματα II, III και V, μόνον στις διατάξεις που προκαθορίζονται:
- (i) στις παραγράφους (2) έως (6) αυτού του περιθωριακού, όπως ισχύουν και στο περιθωριακό 3770 και
- (ii) στις γενικές διατάξεις για όλες τις συσκευασίες και τα κόλα που προκαθορίζονται στο περιθωριακό 3732,
- (b) Εάν το εξαιρούμενο κόλο περιέχει σχάσιμο υλικό, στις διατάξεις του περιθωριακού 3703.
- (c) Στην διάταξη του περιθωριακού 2705 (1).
- (2) Το επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο πάνω στην εξωτερική επιφάνεια ενός εξαιρούμενου κόλου δεν θα πρέπει να υπερβαίνει τα 5 mSv/h (0.5 mrem/h).
- (3) Η μη-σταθερή ραδιενεργή μόλυνση σε οποιαδήποτε εξωτερική επιφάνεια ενός εξαιρούμενου κόλου δεν θα πρέπει να υπερβαίνει τα όρια που προκαθορίζονται στον Πίνακα IV.
- (4) Ραδιενεργό υλικό που περικλείεται σε ή αποτελεί συστατικό μέρος ενός οργάνου ή άλλου κατασκευασμένου είδους, με δραστηριότητα όχι μεγαλύτερη από τα όρια του είδους και του κόλου που προκαθορίζονται στις στήλες 2 και 3 αντίστοιχα στον Πίνακα V, μπορεί να μεταφέρεται σε ένα εξαιρούμενο κόλο υπό την προϋπόθεση ότι:
- (a) το επίπεδο ακτινοβολίας σε 10 cm από οποιοδήποτε σημείο πάνω στην εξωτερική επιφάνεια οποιουδήποτε μη-συσκευασμένου οργάνου ή είδους δεν είναι μεγαλύτερο από 0.1 mSv/h (10 mrem/h) και
- (b) κάθε όργανο ή είδος (εκτός από ραδιοεκπέμποντα ρολόγια ή συσκευές) φέρει το μαρκάρισμα "Ραδιενεργό".

Πίνακας V. Όρια δραστηριότητας για εξαιρούμενα κόλα

Φυσική κατάσταση του περιεχομένου	Όργανα και είδη		Υλικό
	Όρια είδους	Όρια κόλου	Όρια κόλου
Στερεά: ειδικής μορφής άλλων μορφών	$10^{-2} A_1$ $10^{-2} A_1$	$A_1$ $A_2$	$10^{-3} A_1$ $10^{-3} A_2$
Υγρά:	$10^{-3} A_2$	$10^{-1} A_2$	$10^{-4} A_2$
Αέρια: τρίτιο ειδικών μορφών άλλων μορφών	$2 \times 10^{-2} A_2$ $10^{-3} A_1$ $10^{-3} A_2$	$2 \times 10^{-1} A_2$ $10^{-2} A_1$ $10^{-2} A_2$	$2 \times 10^{-2} A_2$ $10^{-3} A_1$ $10^{-3} A_1$

## Προσθήκη Α.7

**3713 ΣΗΜΕΙΩΣΗ:** Για μείγματα ραδιονουκλειδίων, βλέπε περιθωριακό 3701 (3) έως (5).  
(συνεχ.)

(5) Ραδιενεργό υλικό σε μορφές άλλες από αυτές που προκαθορίζονται στην παράγραφο (4) παραπάνω, με δραστηριότητα που δεν υπερβαίνει το όριο που προκαθορίζεται στη στήλη 4 του Πίνακα V, μπορεί να μεταφέρεται σε ένα εξαιρούμενο κόλο υπό την προϋπόθεση ότι:

- (a) το κόλο διατηρεί το περιεχόμενο της υπό συνθήκες που είναι πιθανόν να συμβαίνουν σε συνήθη μεταφορά και
- (b) το κόλο φέρει το μαρκάρισμα "Ραδιενεργό" σε μία εσωτερική επιφάνεια με τέτοιο τρόπο ώστε μία προειδοποίηση για την παρουσίαση ραδιενεργού υλικού να είναι ορατή με το άνοιγμα του κόλου.

(6) Ένα κατασκευασμένο είδος στο οποίο το μόνο ραδιενεργό υλικό είναι μη-αναγεννημένο φυσικό ουράνιο, μη-αναγεννημένο εξαντλημένο ουράνιο ή μη-αναγεννημένο φυσικό θόριο μπορεί να μεταφέρεται ως ένα εξαιρούμενο κόλο υπό την προϋπόθεση ότι η εξωτερική επιφάνεια του ουρανίου ή θορίου είναι εγκλεισμένη σε ένα ανενεργό περίβλημα κατασκευασμένο από μέταλλο ή κάποιο άλλο στέρεο υλικό.

**Απαιτήσεις και έλεγχοι για τη μεταφορά LSA υλικού και SCO σε βιομηχανικά κόλα ή μη-συσκευασμένο**

**3714** (1) Η ποσότητα του LSA υλικού ή SCO σε ένα μόνο βιομηχανικό κόλο (IP-1, IP-2 ή IP-3) ή αντικείμενο ή σύνολο αντικειμένων, οτιδήποτε είναι κατάλληλο, θα πρέπει να είναι έτσι περιορισμένη ώστε το επίπεδο εξωτερικής ακτινοβολίας σε 3 m από το μη-προστατευμένο υλικό ή αντικείμενο ή σύνολο αντικειμένων να μην υπερβαίνει τα 10 mSv/h (1 000  $\mu$ rem/h).

(2) Το LSA υλικό και SCO που είναι ή περιέχει σχάσιμο υλικό θα πρέπει να ικανοποιεί τις ισχύουσες διατάξεις των περιθωριακών 2714 (2) και (3) και 3741.

(3) Κόλα, συμπεριλαμβανομένων δεξαμενών ή εμπορευματοκιβωτίων, που περιέχουν LSA υλικό ή SCO θα πρέπει να υπόκεινται στις διατάξεις του περιθωριακού 3712 (1) και (2).

(4) LSA υλικό και SCO στις ομάδες LSA-I και SCO-I μπορεί να μεταφέρεται μη-συσκευασμένο υπό τους παρακάτω όρους:

- (a) Όλα τα μη-συσκευασμένα υλικά εκτός από μεταλλεύματα που περιέχουν μόνον φυσικά απαντώμενα ραδιονουκλεΐδια θα πρέπει να μεταφέρονται με τέτοιο τρόπο ώστε υπό συνθήκες που είναι πιθανόν να συμβούν σε συνήθη μεταφορά δεν θα υπάρχει διαφυγή του περιεχομένου από το όχημα ούτε θα υπάρχει οποιαδήποτε απώλεια του περιβλήματος.
- (b) Κάθε όχημα θα πρέπει να είναι υπό αποκλειστική χρήση, εκτός μόνον όταν μεταφορά SCO-I στην οποία η μόλυνση πάνω στις προσβάσιμες και τις προσβάσιμες επιφάνειες δεν είναι μεγαλύτερη από δέκα φορές το ισχύον επίπεδο που προκαθορίζεται στο περιθωριακό 2700 (2).
- (c) Για SCO-I όπου υπάρχει υποψία ότι μη-σταθερή μόλυνση υπάρχει σε μη-προσβάσιμες επιφάνειες σε μεγαλύτερες τιμές από αυτές που προκαθορίζονται στο περιθωριακό 2700 (2), μετρήσεις θα πρέπει να λαμβάνονται ώστε να εξασφαλίζεται ότι το ραδιενεργό υλικό δεν απελευθερώνεται μέσα στο όχημα.

## Προσθήκη Α.7

- 3714 (5) LSA υλικό και SCO, εκτός από τις περιπτώσεις για τις οποίες αλλιώς προκαθορίζεται στην παράγραφο (4) παραπάνω, θα πρέπει να είναι συσκευασμένο σε συμφωνία με τα επίπεδα ακεραιότητας του κόλου που προκαθορίζονται στον πίνακα VI με τέτοιον τρόπο ώστε, υπό συνθήκες που είναι πιθανόν να συμβούν σε συνήθη μεταφορά, δεν θα υπάρχει διαφυγή περιεχομένου από τα κόλα, ούτε θα υπάρχει οποιαδήποτε απώλεια περιβλήματος που προσφέρεται από τη συσκευασία. LSA-Πυλικά, LSA-III υλικό και SCO-II δεν θα πρέπει να μεταφέρονται μη-συσκευασμένα.

Πίνακας VI. Διατάξεις για βιομηχανικά κόλα των LSA υλικών και SCO

Περιεχόμενο	Τύπος βιομηχανικού κόλου <sup>9/</sup>	
	Αποκλειστική χρήση	Όχι υπό αποκλειστική χρήση
LSA-I <sup>10/</sup> Στερεό Υγρό	IP-1 IP-2	IP-1 IP-2
LSA-II Στερεό Υγρό και αέριο	IP-2 IP-2	IP-2 IP-3
LSA-III	IP-2	IP-3
SCO-I <sup>10/</sup> SCO-II	IP-1 IP-2	IP-1 IP-2

- (6) Η συνολική δραστηριότητα των LSA υλικών και SCO σε οποιοδήποτε μόνο όχημα δεν θα πρέπει να υπερβαίνει τα όρια που εμφανίζονται στον πίνακα VII.

Πίνακας VII. Όρια για τη δραστηριότητα οχημάτων για LSA υλικά και SCO σε βιομηχανικά κόλα ή μη-συσκευασμένα

Φύση του υλικού	Όριο δραστηριότητας για το όχημα
LSA-I	Χωρίς όριο
LSA-II και LSA-III μη-καύσιμα στερεά	Χωρίς όριο
LSA-II και LSA-III καύσιμα στερεά, και όλα τα υγρά και αέρια	100 A <sub>2</sub>
SCO	100 A <sub>2</sub>

## Προσδιορισμός του δείκτη μεταφοράς (TI)

- 3715 (1) Ο δείκτης μεταφοράς (TI) που βασίζεται στον έλεγχο της έκθεσης σε ακτινοβολία για ένα κόλο, υπερσυσκευασία, δεξαμενή, εμπορευματοκιβώτιο, ή για μη-συσκευασμένα LSA-I ή SCO-I, θα πρέπει να είναι ο αριθμός που απορρέει σε συμφωνία με την παρακάτω διαδικασία:

<sup>9/</sup> Βλέπε περιθωριακό 2700 (2).

<sup>10/</sup> Υπό τους όρους που προκαθορίζονται στην παράγραφο (4) παραπάνω, LSA-I υλικά και SCO-I μπορούν να μεταφέρονται ασυσκευασμένα.

## Προσθήκη Α.7

3715  
(συνεχ.)

- (a) Προσδιορίζεται το μέγιστο επίπεδο ακτινοβολίας σε μία απόσταση 1 m από τις εξωτερικές επιφάνειες του κόλου, της υπερσυσκευασίας, της δεξαμενής, του εμπορευματοκιβωτίου, ή των μη-συσκευασμένων LSA-I και SCO-I. Όπου το επίπεδο ακτινοβολίας προσδιορίζεται σε μονάδες millisievert ανά ώρα (mSv/h), οι τιμή που προσδιορίζεται θα πρέπει να πολλαπλασιάζεται με 100. Όπου το επίπεδο ακτινοβολίας προσδιορίζεται σε μονάδες millirem ανά ώρα (mrem/h), η προσδιοριζόμενη τιμή δεν αλλάζει.

Για μεταλλεύματα και συμπυκνώματα ουρανίου και θορίου, ο μέγιστος ρυθμός δόσης ακτινοβολίας σε οποιοδήποτε σημείο 1 m από την εξωτερική επιφάνεια του φορτίου μπορεί να λαμβάνεται ως:

0.4 mSv/h (40 mrem/h)	για τα μεταλλεύματα και τα φυσικά συμπυκνώματα ουρανίου και θορίου,
0.3 mSv/h (30 mrem/h)	για χημικά συμπυκνώματα θορίου,
0.02 mSv/h (2 mrem/h)	για χημικά συμπυκνώματα ουρανίου, εκτός από εξαφθοριούχο ουράνιο.

- (b) Για δεξαμενές, εμπορευματοκιβώτια και μη-συσκευασμένα LSA-I και SCO-I, η τιμή που προσδιορίζεται στο στάδιο (a) παραπάνω θα πρέπει να πολλαπλασιάζεται με τον κατάλληλο συντελεστή από τον Πίνακα VIII.
- (c) Η τιμή που λαμβάνεται στα στάδια (a) και (b) παραπάνω θα πρέπει να στρογγυλοποιείται στην πρώτη δεκαδική θέση (π.χ. το 1.13 γίνεται 1.2), εκτός του ότι μία τιμή 0.05 ή μικρότερη μπορεί να θεωρείται ως μηδέν.

## Πίνακας VIII. Συντελεστές πολλαπλασιασμού για φορτία μεγάλης διάστασης

Μέγεθος φορτίου (Μέτρηση του εμβαδού της μέγιστης διατομής του φορτίου)	Συντελεστής πολλαπλασιασμού
Μέγεθος φορτίου < 1 m <sup>2</sup>	1
1 m <sup>2</sup> < μέγεθος φορτίου ≤ 5 m <sup>2</sup>	2
5 m <sup>2</sup> < μέγεθος φορτίου ≤ 20 m <sup>2</sup>	3
20 m <sup>2</sup> < μέγεθος φορτίου	10

(2) Ο δείκτης μεταφοράς (Π) που βασίζεται σε έλεγχο της πυρηνικής κρισιμότητας θα πρέπει να λαμβάνεται με διαίρεση του αριθμού 50 με την τιμή του N που απορρέει με τη χρήση των διαδικασιών που προκαθορίζονται στο περιθωριακό 3741 (δηλ. Δείκτης μεταφοράς = 50/N). Η τιμή του δείκτη μεταφοράς για τον έλεγχο της πυρηνικής κρισιμότητας μπορεί να είναι μηδέν, υπό την προϋπόθεση ότι ένας απερίριστος αριθμός κλών είναι υποκρίσιμος (δηλ. N είναι ουσιαστικά ίσο με το άπειρο).

(3) Ο δείκτης μεταφοράς για κάθε φορτίο θα πρέπει να προσδιορίζεται σε συμφωνία με τον Πίνακα IX.

## Προσθήκη Α.7

3715 Πίνακας ΙΧ. Προσδιορισμός του δείκτη μεταφοράς  
(συνεχ.)

Είδος	Περιεχόμενο	Μέθοδος προσδιορισμού του Δείκτη Μεταφοράς (ΤΙ)
Κόλα	Μη-σχάσιμο υλικό	ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία
	Σχάσιμο υλικό	Ο μεγαλύτερος μεταξύ του ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία και του ΤΙ για έλεγχο της πυρηνικής κρισιμότητας
Μη-άκαμπτες Υπερσυσκευασίες	Κόλα	Άθροισμα των ΤΙ όλων των κόλων που περιέχονται
Άκαμπτες Υπερσυσκευασίες	Κόλα	Το άθροισμα των ΤΙ όλων των κόλων που περιέχονται, ή, για τον αρχικό αποστολέα είτε ο ΤΙ για τον έλεγχο της έκθεσης σε ακτινοβολία είτε το άθροισμα των ΤΙ όλων των κόλων
Εμπορευματο-κιβώτια	Κόλα ή Υπερσυσκευασίες	Άθροισμα των ΤΙ όλων των κόλων και των υπερσυσκευασιών που περιέχονται
	LSA υλικό ή SCO	Είτε το άθροισμα των ΤΙ είτε ο μεγαλύτερος μεταξύ του ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία και του ΤΙ για έλεγχο της πυρηνικής κρισιμότητας
Εμπορευματο-κιβώτια υπό αποκλειστική χρήση	Κόλα ή Υπερσυσκευασίες	Είτε το άθροισμα των ΤΙ είτε ο μεγαλύτερος μεταξύ του ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία και του ΤΙ για έλεγχο της πυρηνικής κρισιμότητας
Δεξαμενές	Μη-σχάσιμο υλικό	ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία
	Σχάσιμο υλικό	Ο μεγαλύτερος μεταξύ του ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία και του ΤΙ για έλεγχο της πυρηνικής κρισιμότητας
Μη-συσκευασμένο	LSA-I και SCO-I	Ο ΤΙ για έλεγχο της έκθεσης σε ακτινοβολία

## Πρόσθετες διατάξεις για υπερσυσκευασίες

3716 Οι παρακάτω πρόσθετες διατάξεις θα πρέπει να ισχύουν για τις υπερσυσκευασίες:

- Τα κόλα σχάσιμου υλικού για τις οποίες ο δείκτης μεταφοράς για έλεγχο της πυρηνικής κρισιμότητας είναι Ο και τα κόλα μη-σχάσιμου ραδιενεργού υλικού μπορούν να συνδυάζονται μαζί σε μία υπερσυσκευασία για μεταφορά, υπό την προϋπόθεση ότι κάθε κόλο που περιέχεται σ' αυτήν ικανοποιεί την ισχύουσα διάταξη αυτής της Προσθήκης.
- Τα κόλα σχάσιμου υλικού για τις οποίες ο δείκτης μεταφοράς για έλεγχο της πυρηνικής κρισιμότητας υπερβαίνει το 0 δεν θα πρέπει να μεταφέρονται σε μία υπερσυσκευασία.
- Μόνον ο αρχικός αποστολέας των κόλων που περιέχονται μέσα στις υπερσυσκευασίες θα πρέπει να επιτρέπεται να χρησιμοποιεί τη μέθοδο άμεσης μέτρησης του επιπέδου ακτινοβολίας για τον προσδιορισμό του δείκτη μεταφοράς μίας άκαμπτης υπερσυσκευασίας.

## Προσθήκη Α.7

**Όρια στον δείκτη μεταφοράς και το επίπεδο ακτινοβολίας για κόλα και υπερσυσκευασίες**

- 3717** (1) Εκτός από την περίπτωση φορτίων υπό αποκλειστική χρήση, ο δείκτης μεταφοράς οποιουδήποτε μεμονωμένου κόλου ή υπερσυσκευασίας δεν θα πρέπει να υπερβαίνει το 10.
- (2) Εκτός από την περίπτωση κόλων ή υπερσυσκευασιών που μεταφέρονται υπό αποκλειστική χρήση υπό τους όρους που προκαθορίζονται στο περιθωριακό 2713 (1) (α), το μέγιστο επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο σε οποιαδήποτε εξωτερική επιφάνεια ενός κόλου ή υπερσυσκευασίας δεν θα πρέπει να υπερβαίνει τα 2 mSv/h (200 mrem/h).
- (3) Το μέγιστο επίπεδο ακτινοβολίας σε οποιοδήποτε σημείο σε οποιαδήποτε εξωτερική επιφάνεια ενός κόλου που μεταφέρεται υπό αποκλειστική χρήση δεν θα πρέπει να υπερβαίνει τα 10 mSv/h (1 000 mrem/h).

**Κατηγορίες**

- 3718** Τα κόλα και υπερσυσκευασίες θα πρέπει να καταχωρούνται σε μία από τις κατηγορίες I-ΛΕΥΚΗ, II-ΚΙΤΡΙΝΗ ή III-ΚΙΤΡΙΝΗ σε συμφωνία με τους όρους που προκαθορίζονται στους πίνακες X και XI, όπως ισχύουν και με τις παρακάτω διατάξεις:

- (a) Για ένα κόλο, τόσο ο δείκτης μεταφοράς όσο και οι όροι για το επίπεδο επιφανειακής ακτινοβολίας θα πρέπει να λαμβάνονται υπόψη στον προσδιορισμό της κατάλληλης κατηγορίας. Όπου ο δείκτης μεταφοράς ικανοποιεί τους όρους για μία κατηγορία αλλά το επίπεδο επιφανειακής ακτινοβολίας ικανοποιεί τους όρους για μία διαφορετική κατηγορία, το κόλο θα πρέπει να καταχωρείται στην υψηλότερη κατηγορία από τις δύο. Για αυτό το σκοπό, η κατηγορία I-ΛΕΥΚΗ θα πρέπει να θεωρείται ως η χαμηλότερη κατηγορία.
- (b) Ο δείκτης μεταφοράς θα πρέπει να προσδιορίζεται ακολουθώντας τις διαδικασίες που προκαθορίζονται στο περιθωριακό 3715 και υπόκεινται στον περιορισμό του περιθωριακού 3716 (c).
- (c) Εάν ο δείκτης μεταφοράς είναι μεγαλύτερος από 10, το κόλο ή υπερσυσκευασία θα πρέπει να μεταφέρεται υπό αποκλειστική χρήση.
- (d) Εάν το επίπεδο επιφανειακής ακτινοβολίας είναι μεγαλύτερο από 2 mSv/h (200 mrem/h), το κόλο ή υπερσυσκευασία θα πρέπει να μεταφέρεται υπό αποκλειστική χρήση και υπό τις διατάξεις του περιθωριακού 2713 (1) (α).
- (e) Ένα κόλο που μεταφέρεται υπό μία ειδική ρύθμιση θα πρέπει να καταχωρείται στην κατηγορία III-ΚΙΤΡΙΝΗ.
- (f) Μία υπερσυσκευασία που περιέχει κόλα που μεταφέρονται υπό ειδική ρύθμιση θα πρέπει να καταχωρείται στην κατηγορία III-ΚΙΤΡΙΝΗ.

## Προσθήκη Α.7

3718 Πίνακας Χ. Κατηγορίες κόλων  
(συνεχ.)

Όροι		
Δείκτης μεταφοράς	Μέγιστο επίπεδο ακτινοβολίας οποιουδήποτε σημείου στην εξωτερική επιφάνεια	Κατηγορία
0 <sup>11/</sup>	Όχι μεγαλύτερο από 0.005 mSv/h (0.5 mrem/h)	I-ΛΕΥΚΗ
Μεγαλύτερος από 0 αλλά όχι μεγαλύτερος από 1 <sup>11/</sup>	Μεγαλύτερο από 0.5 mSv/h (0.5 mrem/h) αλλά όχι μεγαλύτερο από 0.5 mSv/h (50 mrem/h)	II-ΚΙΤΡΙΝΗ
Μεγαλύτερος από 1 αλλά όχι μεγαλύτερος από 10	Μεγαλύτερο από 0.5 mSv/h (50 mrem/h) αλλά όχι μεγαλύτερο από 2 mSv/h (200 mrem/h)	III-ΚΙΤΡΙΝΗ
Μεγαλύτερος από 10	Μεγαλύτερο από 2 mSv/h (200 mrem/h) αλλά όχι μεγαλύτερο από 10 mSv/h (1000 mrem/h)	III-ΚΙΤΡΙΝΗ και επίσης υπό αποκλειστική χρήση

Πίνακας XI. Κατηγορίες υπερσυσκευασιών συμπεριλαμβανομένων εμπορευματοκιβωτίων όταν χρησιμοποιούνται ως υπερσυσκευασίες

Δείκτης μεταφοράς	Κατηγορία
0	I-ΛΕΥΚΗ
Μεγαλύτερος από 0 αλλά μικρότερος από ή ίσος με 1	II-ΚΙΤΡΙΝΗ
Μεγαλύτερος από 1	III-ΚΙΤΡΙΝΗ

## Ενημέρωση των αρμοδίων αρχών

- 3719 (1) Πριν από την πρώτη φόρτωση οποιουδήποτε κόλου που απαιτεί έγκριση από αρμόδια αρχή, ο αποστολέας θα πρέπει να εξασφαλίζει ότι αντίγραφα κάθε ισχύοντος πιστοποιητικού της αρμόδιας αρχής που ισχύει για εκείνον τον σχεδιασμό κόλου έχουν υποβληθεί στην αρμόδια αρχή κάθε χώρας μέσω της οποίας ή στην οποία το φορτίο πρόκειται να μεταφερθεί. Ο αποστολέας δεν απαιτείται να περιμένει γνωστοποίηση από την αρμόδια αρχή, ούτε η αρμόδια αρχή απαιτείται να κάνει τέτοια γνωστοποίηση παραλαβής του πιστοποιητικού.
- (2) Για κάθε φόρτωση που αναφέρεται στα (a), (b) ή (c) παρακάτω, ο αποστολέας θα πρέπει να ειδοποιεί την αρμόδια αρχή κάθε χώρας μέσω της οποίας ή στην οποία το φορτίο πρόκειται να μεταφερθεί. Αυτή η ειδοποίηση θα πρέπει να είναι στα χέρια κάθε αρμόδιας αρχής πριν το ξεκίνημα της φόρτωσης και κατά προτίμηση τουλάχιστον 7 ημέρες πριν.
- (a) Κόλα τύπου B(U) που περιέχουν ραδιενεργό υλικό με δραστηριότητα μεγαλύτερη από  $3 \times 10^3$  A<sub>1</sub> ή  $3 \times 10^3$  A<sub>2</sub>, όποια τιμή είναι κατάλληλη, ή 1000 TBq (20 kCi), όποια τιμή είναι η χαμηλότερη.

<sup>11/</sup> Εάν ο μετρημένος Π δεν είναι μεγαλύτερος από 0.05, η τιμή που παρατίθεται μπορεί να είναι μηδέν σε συμφωνία με το περιθωριακό 3715 (1) (c).

## Προσθήκη Α.7

3719  
(συνεχ.)

- (b) Κόλα τύπου Β(Μ).
  - (c) Μεταφορά υπό ειδική ρύθμιση.
- (3) Η ειδοποίηση για το φορτίο θα πρέπει να περιλαμβάνει:
- (a) Αρκετές πληροφορίες ώστε να καθίσταται δυνατός ο προσδιορισμός του κόλου συμπεριλαμβανομένων όλων των ισχυρόνων αριθμών πιστοποιητικού και χαρακτηριστικών μαρκαρισμάτων.
  - (b) Πληροφορίες για την ημερομηνία φόρτωσης, την αναμενόμενη ημερομηνία άφιξης και το προτεινόμενο δρομολόγιο.
  - (c) Την ονομασία του ραδιενεργού υλικού ή νουκλεϊδίου.
  - (d) Μία περιγραφή της φυσικής και χημικής μορφής του ραδιενεργού υλικού, ή εάν είναι ειδικής μορφής ραδιενεργό υλικό και
  - (e) Τη μέγιστη δραστηριότητα του ραδιενεργού περιεχομένου κατά τη διάρκεια της μεταφοράς εκφρασμένη σε μονάδες becquerel (Bq) [και, εάν επιθυμείται, curie (Ci)] με ένα κατάλληλο SI πρόθεμα [βλέπε περιθωριακό 2001 (1)]. Για σχάσιμο υλικό, το συνολικό βάρος του σχάσιμου υλικού σε μονάδες γραμμαρίων (g), ή πολλαπλασίων αυτών, μπορεί να χρησιμοποιείται στη θέση της δραστηριότητας.
- (4) Ο αποστολέας δεν απαιτείται να στείλει ξεχωριστή ειδοποίηση εάν οι απαιτούμενες πληροφορίες έχουν συμπεριληφθεί στην αίτηση για έγκριση της φόρτωσης. [Βλέπε περιθωριακό 3757 (3)].

**Κατοχή πιστοποιητικών και οδηγίες λειτουργίας**

Ο αποστολέας θα πρέπει να έχει στην κατοχή του ένα αντίγραφο κάθε πιστοποιητικού που απαιτείται στο Μέρος III αυτής της Προσθήκης και ένα αντίγραφο των οδηγιών αναφορικά με το σωστό κλείσιμο του κόλου και άλλες προετοιμασίες για τη φόρτωση πριν κάνει οποιαδήποτε φόρτωση υπό τους όρους των πιστοποιητικών.

3720-  
3729

## Προσθήκη Α.7

## ΜΕΡΟΣ ΙΙΙ

**ΠΡΟΒΛΕΨΕΙΣ ΓΙΑ ΡΑΔΙΟΕΝΕΡΓΑ ΥΛΙΚΑ, ΓΙΑ ΣΥΣΚΕΥΑΣΙΕΣ ΚΑΙ ΚΟΛΑ  
ΚΑΙ ΔΙΑΔΙΚΑΣΙΕΣ ΕΛΕΓΧΟΥ**

**ΣΗΜΕΙΩΣΗ:** Οι διατάξεις στο ΜΕΡΟΣ ΙΙΙ είναι οι ίδιες όπως εκείνες που ορίζονται στην Έκδοση του 1985 των Ρυθμίσεων της ΙΑΕΑ για την ασφαλή μεταφορά ραδιενεργού υλικού και το Συμπλήρωμα του 1988. Οι αριθμοί παραγράφων που αναφέρονται στα περιθωριακά 3730 έως 3742 είναι οι αριθμοί των ισχύοντων παραγράφων της Έκδοσης του 1985.

- 3730 Διατάξεις για LSA-III υλικό  
παράγραφος 501
- 3731 Διατάξεις για ειδικής μορφής ραδιενεργό υλικό  
παράγραφοι 502 - 504
- 3732 Γενικές διατάξεις για όλες τις συσκευασίες και τα κόλα  
παράγραφοι 505 - 514
- 3733 Διατάξεις για βιομηχανικά κόλα τύπου 1 (IP-1)  
παράγραφος 518
- 3734 Πρόσθετες διατάξεις για βιομηχανικά κόλα τύπου 2 (IP-2)  
παράγραφος 519
- 3735 Πρόσθετες διατάξεις για βιομηχανικά κόλα τύπου 3 (IP-3)  
παράγραφος 520
- 3736 Εναλλακτικές διατάξεις για δεξαμενές και εμπορευματοκιβώτια για χαρακτηρισμό ως IP-2 και IP-3  
παράγραφοι 521 - 523
- 3737 Διατάξεις για κόλα Τύπου Α  
παράγραφοι 524 - 540
- 3738 Διατάξεις για κόλα Τύπου Β  
παράγραφοι 541 - 548
- 3739 Διατάξεις για κόλα Τύπου Β(U)  
παράγραφοι 549 - 556
- 3740 Διατάξεις για κόλα Τύπου Β(M)  
παράγραφοι 557 - 558
- 3741 Διατάξεις για κόλα που περιέχουν σχάσιμο υλικό  
παράγραφοι 559 - 568
- 3742 Διαδικασίες ελέγχου  
παράγραφοι 601 - 633
- 3743-  
3749

## Προσθήκη Α.7

## ΜΕΡΟΣ IV

## ΕΓΚΡΙΣΗ ΚΑΙ ΔΙΟΙΚΗΤΙΚΕΣ ΠΡΟΒΛΕΨΕΙΣ

**ΣΗΜΕΙΩΣΗ:** Όπου οι διατάξεις στο ΜΕΡΟΣ IV είναι οι ίδιες όπως εκείνες που ορίζονται στην Έκδοση του 1985 των Ρυθμίσεων της ΙΑΕΑ για την Ασφαλή Μεταφορά Ραδιενεργού Υλικού (όπως διορθώθηκε το 1990) οι αριθμοί που αναφέρονται υπό τα περιθωριακά 3761 έως 3764 είναι οι αριθμοί των ισχύοντων παραγράφων της Έκδοσης του 1985.

## Γενικά

3750 Έγκριση της αρμόδιας αρχής θα πρέπει να απαιτείται για τα παρακάτω:

- (a) Ειδικής μορφής ραδιενεργό υλικό (βλέπε περιθωριακό 3751).
- (b) Όλα τα κόλλα που περιέχουν σχάσιμο υλικό (βλέπε περιθωριακά 3754 και 3755).
- (c) Κόλλα Τύπου Β - Τύπου Β(U) και Τύπου Β(M) (βλέπε περιθωριακά 3752, 3753 και 3755).
- (d) Ειδικές ρυθμίσεις (βλέπε περιθωριακό 3758).
- (e) Ορισμένες φορτώσεις (βλέπε περιθωριακό 3757).
- (f) Υπολογισμός των μη αναφερομένων τιμών  $A_1$  και  $A_2$  [βλέπε περιθωριακό 3701 (1)].

## Έγκριση ειδικής μορφής ραδιενεργού υλικού

3751 (1) Ο σχεδιασμός για ειδικής μορφής ραδιενεργό υλικό θα πρέπει να απαιτεί μονομερή έγκριση. Μία αίτηση για έγκριση θα πρέπει να περιλαμβάνει:

- (a) Μία λεπτομερή περιγραφή του ραδιενεργού υλικού ή, εάν είναι μία κάψουλα, του περιεχομένου. Συγκεκριμένη αναφορά θα πρέπει να γίνεται τόσο στις φυσικές όσο και στις χημικές καταστάσεις.
- (b) Μία λεπτομερή έκθεση του σχεδιασμού οποιασδήποτε κάψουλας προς χρήση.
- (c) Μία έκθεση των ελέγχων που έχουν γίνει και των αποτελεσμάτων τους, ή στοιχεία βασισμένα σε υπολογιστικές μεθόδους που να δείχνουν ότι το ραδιενεργό υλικό είναι ικανό να ικανοποιεί τα πρότυπα απόδοσης, ή άλλα στοιχεία ότι το ειδικής μορφής ραδιενεργό υλικό ικανοποιεί τις ισχύουσες διατάξεις αυτής της Προσθήκης.
- (d) Στοιχεία ενός προγράμματος εξασφάλισης της ποιότητας.

(2) Η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης που να αναφέρει ότι ο εγκεκριμένος σχεδιασμός ικανοποιεί τις διατάξεις για ειδικής μορφής ραδιενεργό υλικό και θα πρέπει να δίνει σ' αυτόν τον σχεδιασμό ένα χαρακτηριστικό σήμα. Το πιστοποιητικό θα πρέπει να καθορίζει τις λεπτομέρειες του ειδικής μορφής ραδιενεργού υλικού.

## Προσθήκη Α.7

## Έγκριση σχεδιασμών κόλου

## Έγκριση σχεδιασμών κόλου Τύπου Β(U)

3752

(1) Οποιοσδήποτε σχεδιασμός κόλου Τύπου Β(U) που προέρχεται από ένα Κράτος Μέλος θα πρέπει να είναι εγκεκριμένος από την αρμόδια αρχή αυτού του Κράτους. Εάν το Κράτος όπου το κόλο έχει σχεδιαστεί δεν είναι Κράτος Μέλος η μεταφορά είναι δυνατή υπό τον όρο ότι:

- (a) ένα πιστοποιητικό έχει δοθεί από αυτό το Κράτος, αποδεικνύοντας ότι το κόλο ικανοποιεί τις τεχνικές διατάξεις αυτής της Οδηγίας και ότι αυτό το πιστοποιητικό προσυπογράφεται από την αρμόδια αρχή του πρώτου Κράτους Μέλους που προσεγγίζεται από την αποστολή,
- (b) εάν κανένα πιστοποιητικό δεν έχει δοθεί, ο σχεδιασμός του κόλου εγκρίνεται από την αρμόδια αρχή του πρώτου Κράτους Μέλους που προσεγγίζεται από την αποστολή.

Οποιοσδήποτε σχεδιασμός κόλου Τύπου Β(U) για σχάσιμο υλικό, που υπόκειται επίσης στο περιθωριακό 3741 θα πρέπει να απαιτεί πολυμερή έγκριση.

(2) Μία αίτηση για έγκριση θα πρέπει να περιλαμβάνει:

- (a) Μία λεπτομερή περιγραφή του προτεινόμενου ραδιενεργού περιεχομένου με συγκεκριμένη αναφορά στις φυσικές και χημικές καταστάσεις του και στη φύση της εκπεμπόμενης ακτινοβολίας.
- (b) Μία λεπτομερή έκθεση του σχεδιασμού, συμπεριλαμβανομένων πλήρων μηχανολογικών σχεδίων και καταστάσεων των υλικών και μεθόδων κατασκευής προς χρήση.
- (c) Μία έκθεση των ελέγχων που έχουν γίνει και των αποτελεσμάτων τους, ή στοιχεία βασισμένα σε υπολογιστικές μεθόδους ή άλλα στοιχεία ότι ο σχεδιασμός είναι επαρκής για την ικανοποίηση των ισχυουσών διατάξεων.
- (d) Τις προτεινόμενες οδηγίες λειτουργίας και συντήρησης για τη χρήση της συσκευασίας.
- (e) Εάν το κόλο είναι σχεδιασμένο να έχει μέγιστη κανονική πίεση λειτουργίας μεγαλύτερη από 100 kPa (1.0 bar) πίεση πιεζομέτρου, η αίτηση για έγκριση θα πρέπει, συγκεκριμένα, να αναφέρει, σε σχέση με τα υλικά κατασκευής του συστήματος συγκράτησης, τις προδιαγραφές, τα δείγματα προς λήψη και τους ελέγχους προς διεξαγωγή.
- (f) Όπου το προτεινόμενο ραδιενεργό περιεχόμενο είναι εκπέμπον καύσιμο, ο αιτών θα πρέπει να αναφέρει και να δικαιολογεί οποιαδήποτε παραδοχή στην ανάλυση ασφάλειας σχετική με τα χαρακτηριστικά του καυσίμου.
- (g) Οποιοσδήποτε ειδικές διατάξεις στοιβάγματος απαραίτητες για την εξασφάλιση της ασφαλούς διάχυσης της θερμότητας από το κόλο, προσοχή θα πρέπει να δίνεται στους διάφορους τρόπους μεταφοράς προς χρήση και τον τύπο του σχήματος ή του εμπορευματοκιβωτίου.
- (h) Ένα αναπαραγόμενο σχήμα όχι μεγαλύτερο από 21 cm x 30 cm που να εμφανίζει τη διαρρύθμιση του κόλου και
- (i) Στοιχεία ενός προγράμματος εξασφάλισης της ποιότητας.

## Προσθήκη Α.7

- 3752 (3) Η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης που να αναφέρει ότι ο (συνεχ.) σχεδιασμός ικανοποιεί τις διατάξεις για κόλα Τύπου Β(U).

*Έγκριση σχεδιασμών κόλου Τύπου Β (Μ)*

- 3753 (1) Κάθε σχεδιασμός κόλου Τύπου Β(Μ), συμπεριλαμβανομένων εκείνων για σχάσιμο υλικό που υπόκεινται επίσης στο περιθωριακό 3754 θα πρέπει να απαιτούν πολυμερή έγκριση.
- (2) Μία αίτηση για έγκριση ενός σχεδιασμού κόλου Τύπου Β(Μ) θα πρέπει να περιλαμβάνει, επιπλέον των πληροφοριών που απαιτούνται στο περιθωριακό 3752 (2) για κόλα Τύπου Β(U):

- (a) Έναν κατάλογο των συγκεκριμένων διατάξεων για κόλα Τύπου Β(U) που προκαθορίζονται στα περιθωριακά 3738 και 3739 με τις οποίες το κόλο δεν συμφωνεί.
- (b) Οποιοσδήποτε προτεινόμενος συμπληρωματικός λειτουργικούς ελέγχους προς εφαρμογή κατά τη διάρκεια μεταφοράς που δεν δίνονται συνήθως σε αυτήν την Προσθήκη, αλλά που είναι απαραίτητοι για την εξασφάλιση της ασφάλειας του κόλου ή την αντιστάθμιση για τις ελλείψεις που αναφέρονται στο παραπάνω, τέτοιοι όπως ανθρώπινη παρέμβαση για μετρήσεις της θερμοκρασίας ή της πίεσης ή για περιοδικό εξερισμό, λαμβάνοντας υπόψη την πιθανότητα μη-αναμενόμενης καθυστέρησης.
- (c) Περιγραφή των οποιωνδήποτε περιορισμών πάνω στον τρόπο μεταφοράς και των οποιωνδήποτε ειδικών διαδικασιών φόρτωσης, μεταφοράς, εκφόρτωσης ή διακίνησης και
- (d) Τις μέγιστες και ελάχιστες συνθήκες περιβάλλοντος (θερμοκρασία, ηλιακή ακτινοβολία) που αναμένεται να προκύψουν κατά τη διάρκεια της μεταφοράς και που έχουν ληφθεί υπόψη στο σχεδιασμό.

- (3) Η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης που να αναφέρει ότι ο σχεδιασμός ικανοποιεί τις ισχύουσες διατάξεις για κόλα Τύπου Β(Μ).

*Έγκριση σχεδιασμών κόλου για σχάσιμο υλικό*

- 3754 (1) Κάθε σχεδιασμός κόλου για σχάσιμο υλικό θα πρέπει να απαιτεί πολυμερή έγκριση.
- (2) Μία αίτηση για έγκριση θα πρέπει να περιλαμβάνει όλες τις πληροφορίες που είναι απαραίτητες για την ικανοποίηση της αρμόδιας αρχής ότι ο σχεδιασμός ικανοποιεί τις διατάξεις του περιθωριακού 3741 και στοιχεία ενός προγράμματος εξασφάλισης της ποιότητας.
- (3) Η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης που να αναφέρει ότι ο σχεδιασμός ικανοποιεί τις ισχύουσες διατάξεις του περιθωριακού 3741.

*Μεταβατικές ρυθμίσεις*

- 3755 Κόλα Τύπου Β(U) και Τύπου Β(Μ) και συσκευασίες που περιέχουν σχάσιμο υλικό που δεν συμφωνούν πλήρως με τις διατάξεις αυτής της Προσθήκης αλλά που παρ' όλα αυτά θα μπορούσαν να χρησιμοποιούνται σε συμφωνία με τις διατάξεις της ADR που ισχύουν στις 31 Δεκεμβρίου 1989 για το αντίστοιχο υλικό της Κλάσης 7 μπορούν ακόμα να χρησιμοποιούνται υπό τους παρακάτω όρους για τη μεταφορά αυτού του υλικού:

- (a) Πολυμερές έγκριση θα πρέπει να απαιτείται πάνω στη λήξη της μονομερούς έγκρισης και
- (b) ένας σειριακός αριθμός σύμφωνα με τις διατάξεις του περιθωριακού 2705 (3) θα πρέπει να καταχωρείται και να μαρκάρισμα πάνω στο εξωτερικό κάθε συσκευασίας.

## Προσθήκη Α.7

**3755** Αλλαγές στο σχεδιασμό της συσκευασίας ή στη φύση ή την ποσότητα του επιτρεπόμενου (συνεχ.) ραδιενεργού περιεχομένου που, όπως προσδιορίζεται από την αρμόδια αρχή, θα επηρέαζε σημαντικά την ασφάλεια θα πρέπει να ικανοποιούν τις διατάξεις αυτής της Προσθήκης.

**Ειδοποίηση και καταχώρηση των σειριακών αριθμών**

**3756** Η αρμόδια αρχή της χώρας προέλευσης της έγκρισης του σχεδιασμού θα πρέπει να ενημερώνεται για τον σειριακό αριθμό κάθε συσκευασίας κατασκευασμένης με έναν σχεδιασμό εγκεκριμένο υπό τα περιθωριακά 3752, 3753 (1), 3754 (1) και 3755: Η αρμόδια αρχή θα πρέπει να διατηρεί ένα μητρώο τέτοιων σειριακών αριθμών.

**Έγκριση φορτώσεων**

**3757** (1) Εκτός από τις περιπτώσεις όπου επιτρέπεται στην παράγραφο (2) παρακάτω, πολυμερής έγκριση θα πρέπει να απαιτείται για:

- (a) Τη φόρτωση κόλων Τύπου Β(Μ) ειδικά σχεδιασμένων να επιτρέπουν ελεγχόμενο περιοδικό εξαερισμό.
- (b) Τη φόρτωση κόλων Τύπου Β(Μ) που περιέχουν ραδιενεργό υλικό με δραστηριότητα μεγαλύτερη από  $3 \times 10^3 A_1$  ή  $3 \times 10^3 A_2$ , όποια τιμή είναι κατάλληλη, ή 1000 TBq (20 kCi), όποια τιμή είναι η χαμηλότερη.
- (c) Τη φόρτωση κόλων που περιέχουν σχάσιμο υλικό εάν το άθροισμα των δεικτών μεταφοράς των μεμονωμένων κόλων υπερβαίνει το 50 όπως δίνεται στο περιθωριακό 2712 (4).

(2) Μία αρμόδια αρχή μπορεί να επιτρέπει μεταφορά μέσα στην ή μέσω της χώρας της χωρίς έγκριση φόρτωσης, με μία συγκεκριμένη διάταξη στην έγκριση σχεδιασμού της (βλέπε περιθωριακό 3759).

(3) Μία αίτηση για έγκριση φόρτωσης θα πρέπει να περιλαμβάνει:

- (a) Την περίοδο χρόνου, που σχετίζεται με τη φόρτωση για την οποία ζητείται η έγκριση.
- (b) Το πραγματικό ραδιενεργό περιεχόμενο, οι αναμενόμενοι τρόποι μεταφοράς, ο τύπος οχήματος και το πιθανό ή προτεινόμενο δρομολόγιο και
- (c) Τις λεπτομέρειες του πώς οι ειδικές προφυλάξεις και οι ειδικοί διοικητικοί ή λειτουργικοί έλεγχοι, που αναφέρονται στα πιστοποιητικά έγκρισης του σχεδιασμού του κόλου που εκδίδονται υπό τα περιθωριακά 3752.(3), 3753.(3) και 3754.(3) θα τίθενται σε εφαρμογή.

(4) Μετά την έγκριση της φόρτωσης, η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης.

**Έγκριση της φόρτωσης υπό ειδικές ρυθμίσεις**

**3758** (1) Κάθε φορτίο που αποστέλλεται υπό ειδική ρύθμιση θα πρέπει να απαιτεί πολυμερή έγκριση.

(2) Μία αίτηση για έγκριση μίας φόρτωσης υπό ειδική ρύθμιση θα πρέπει να περιλαμβάνει όλες τις πληροφορίες που είναι απαραίτητες για την ικανοποίηση της αρμόδιας αρχής ότι το όλο επίπεδο ασφάλειας σε μεταφορά είναι τουλάχιστον ισοδύναμο μ' εκείνο που θα ήταν εάν όλες οι ισχύουσες διατάξεις αυτής της Προσθήκης είχαν ικανοποιηθεί. Η αίτηση θα πρέπει να περιλαμβάνει:

## Προσθήκη Α.7

- 3758 (συνεχ.)
- (a) Μία έκθεση των παραγόντων σχετικά με τους οποίους, και των λόγων για τους οποίους, η φόρτωση δεν μπορεί να γίνει σε πλήρη συμφωνία με τις ισχύουσες διατάξεις αυτής της Προσθήκης και
  - (b) Μία έκθεση οποιωνδήποτε ειδικών προφυλάξεων ή ειδικών διοικητικών ή λειτουργικών ελέγχων που θα υιοθετούνται κατά τη διάρκεια της μεταφοράς για την αντιστάθμιση της αδυναμίας ικανοποίησης των ισχυουσών διατάξεων αυτής της Προσθήκης.
- (3) Μετά την έγκριση μίας φόρτωσης υπό ειδική ρύθμιση, η αρμόδια αρχή θα πρέπει να εκδίδει ένα πιστοποιητικό έγκρισης.

## Πιστοποιητικά έγκρισης της αρμόδιας αρχής

- 3759 Τέσσερις τύποι πιστοποιητικών έγκρισης μπορούν να εκδίδονται: ειδικής μορφής ραδιενεργού υλικού, ειδικής ρύθμισης, σχεδιασμού φόρτωσης και κόλου. Ο σχεδιασμός και τα πιστοποιητικά έγκρισης της φόρτωσης του κόλου μπορούν να συνδυάζονται σ' ένα μόνο πιστοποιητικό.

## Χαρακτηριστικά σήματα της αρμόδιας αρχής

- 3760 (1) Σε κάθε πιστοποιητικό έγκρισης που εκδίδεται από μία αρμόδια αρχή θα πρέπει να καταχωρείται ένα χαρακτηριστικό σήμα. Το σήμα θα πρέπει να είναι του παρακάτω γενικευμένου τύπου:

Σύμβολο εθνικότητας της χώρας/αριθμός/κωδικός τύπου:

- (a) Το σύμβολο εθνικότητας αντιπροσωπεύει το διακριτικό σήμα για μηχανοκίνητα οχήματα σε διεθνή διακίνηση στο Συνέδριο της Βιέννης για την Οδική Διάκριση (1968).
- (b) Ο αριθμός θα πρέπει να καταχωρείται από την αρμόδια αρχή και θα πρέπει να είναι μοναδικός και συγκεκριμένος αναφορικά με το συγκεκριμένο σχεδιασμό ή φόρτωση. Το χαρακτηριστικό σήμα της έγκρισης φόρτωσης θα πρέπει να σχετίζεται καθαρά με το χαρακτηριστικό σήμα της έγκρισης σχεδιασμού.
- (c) Οι παρακάτω κωδικοί τύπου θα πρέπει να χρησιμοποιούνται κατά σειρά που αναφέρονται για την ένδειξη των τύπων των πιστοποιητικών έγκρισης που εκδίδονται:

AF Σχεδιασμός κόλου Τύπου Α για σχάσιμο υλικό

B(U) Σχεδιασμός κόλου Τύπου Β(U). Β(U)F εάν είναι για σχάσιμο υλικό

B(M) Σχεδιασμός κόλου Τύπου Β(M). Β(M)F εάν είναι για σχάσιμο υλικό

IF Σχεδιασμός βιομηχανικού κόλου για σχάσιμο υλικό

S Ειδικής μορφής ραδιενεργό υλικό

T Φόρτωση

X Ειδική ρύθμιση.

## Προσθήκη Α.7

3760  
(συνεχ.)

- (d) Για πιστοποιητικά έγκρισης σχεδιασμού κόλου, εκτός από εκείνα που εκδίδονται υπό τις διατάξεις του περιθωριακού 3755, το σύμβολο "-85"<sup>12/</sup> θα πρέπει να προστίθεται στον κωδικό τύπου του σχεδιασμού κόλου.

(2) Αυτοί οι κωδικοί τύπου θα πρέπει να εφαρμόζονται ως εξής:

- (a) Κάθε πιστοποιητικό και κάθε κόλο θα πρέπει να φέρει το κατάλληλο χαρακτηριστικό σήμα, που να περιλαμβάνει τα σύμβολα που ορίζονται στην παράγραφο (1) παραπάνω, εκτός του ότι, για κόλα, μόνον οι ισχύοντες κωδικοί τύπου σχεδιασμού συμπεριλαμβανομένου, εάν ισχύει, του συμβόλου "-85"<sup>12/</sup> θα πρέπει να εμφανίζονται μετά τη δεύτερη κύβητο, πράγμα που σημαίνει ότι, τα 'Γ' ή 'Χ' δεν θα πρέπει να εμφανίζονται στο χαρακτηριστικό μαρκάρισμα πάνω στο κόλο. Όπου η έγκριση σχεδιασμού και η έγκριση φόρτωσης συνδυάζονται, οι ισχύοντες κωδικοί τύπου δεν χρειάζεται να επαναλαμβάνονται. Για παράδειγμα:

A/132/B(M)F-85: Ένας σχεδιασμός κόλου Τύπου Β(Μ) εγκεκριμένης για σχάσιμο υλικό, που απαιτεί πολυμερή έγκριση, για την οποία η αρμόδια αρχή της Αυστρίας έχει καταχωρήσει τον αριθμό σχεδιασμού 132 ( που πρέπει να μαρκάρεται πάνω τόσο στο κόλο όσο και στο πιστοποιητικό έγκρισης του σχεδιασμού του κόλου).

A/132/B(M)F-85T: Η έγκριση φόρτωσης που εκδίδεται για ένα κόλο που φέρει το χαρακτηριστικό σήμα που αναλύεται παραπάνω (που πρέπει να μαρκάρεται πάνω στο πιστοποιητικό μόνο).

A/137/X-85: Μία ειδική έγκριση ρύθμισης που εκδίδεται από την αρμόδια αρχή της Αυστρίας, για την οποία ο αριθμός 137 έχει καταχωρηθεί (που πρέπει να μαρκάρεται πάνω στο πιστοποιητικό μόνο),

A/139/IF-85: Ο σχεδιασμός ενός βιομηχανικού κόλου για σχάσιμο υλικό εγκεκριμένος από την αρμόδια αρχή της Αυστρίας, για τον οποίο ο αριθμός σχεδιασμού κόλου 139 έχει καταχωρηθεί (που πρέπει να μαρκάρεται πάνω τόσο στο κόλο όσο και στο πιστοποιητικό έγκρισης σχεδιασμού του κόλου).

- (b) Όπου πολυμερής έγκριση πραγματοποιείται με επικύρωση, μόνον το χαρακτηριστικό σήμα που εκδίδεται από τη χώρα προέλευσης του σχεδιασμού ή της φόρτωσης θα πρέπει να χρησιμοποιείται. Όπου πολυμερής έγκριση πραγματοποιείται με έκδοση πιστοποιητικών από διαδοχικές χώρες, κάθε πιστοποιητικό θα πρέπει να φέρει το κατάλληλο σήμα και το κόλο του οποίου ο σχεδιασμός είχε έτσι εγκριθεί θα πρέπει να φέρει όλα τα κατάλληλα χαρακτηριστικά σήματα. Για παράδειγμα:

A/132/B(M)F-85  
CH/28/B(M)F-85

θα ήταν το χαρακτηριστικό σήμα ενός κόλου που είχε αρχικά εγκριθεί από την Αυστρία και είχε επακολούθως εγκριθεί, με ξεχωριστό πιστοποιητικό, από την Ελβετία. Πρόσθετα χαρακτηριστικά σήματα θα εμφανίζονταν μ' έναν παρόμοιο τρόπο πάνω στο κόλο.

<sup>12/</sup> Αυτό το σύμβολο δείχνει ότι ο σχεδιασμός κόλου ικανοποιεί τις διατάξεις των Ρυθμίσεων για την Ασφαλή Μεταφορά Ραδιενεργών Υλικών, Σειρά Ασφάλειας Αριθμ. 6, Έκδοση 1985.

<sup>13/</sup> ANSI N 14.1 - 1982 δημοσιευμένη το 1982 και διαθέσιμη από το Αμερικανικό Εθνικό Ινστιτούτο Προτύπων, 10430 Broadway, New York, NY 10018.

## Προσθήκη Α.7

- 3760** (συνεχ.) (c) Η αναθεώρηση ενός πιστοποιητικού θα πρέπει να υποδεικνύεται με μία παρενθετική έκφραση μετά από το χαρακτηριστικό σήμα πάνω στο πιστοποιητικό. Για παράδειγμα, A/132/B(M)F-85 (Αναθ.2) θα δήλωνε την αναθεώρηση 2 του αυστριακού πιστοποιητικού έγκρισης του σχεδιασμού του κόλου, ή A/132/B(M)F-85 (Αναθ.0) θα δήλωνε την αρχική έκδοση του αυστριακού πιστοποιητικού έγκρισης του σχεδιασμού του κόλου. Για αρχικές εκδόσεις, η παρενθετική καταχώρηση είναι προαιρετική και άλλες λέξεις τέτοιες όπως 'Αρχική έκδοση' μπορούν επίσης να χρησιμοποιούνται στη θέση των 'Αναθ.0'. Αριθμοί αναθεώρησης Πιστοποιητικού μπορούν μόνον να εκδίδονται από τη χώρα που εκδίδει το αρχικό πιστοποιητικό έγκρισης.
- (d) Πρόσθετα σύμβολα (όπως μπορεί να επιβάλλονται από εθνικές απαιτήσεις) μπορούν να προστίθενται σε παρένθεση στο τέλος του χαρακτηριστικού σήματος, για παράδειγμα, A/132/B(M)F-85 (SP503).
- (e) Δεν είναι απαραίτητο να τροποποιείται το χαρακτηριστικό σήμα πάνω στη συσκευασία κάθε φορά που γίνεται μία αναθεώρηση στο πιστοποιητικό σχεδιασμού. Τέτοιο επαναμαρκάρισμα θα πρέπει να γίνεται μόνο σε εκείνες τις περιπτώσεις όπου η αναθεώρηση στο πιστοποιητικό σχεδιασμού του κόλου συνεπάγεται αλλαγή στους γραμματικούς κωδικούς τύπου για τον σχεδιασμό του κόλου μετά την δεύτερη κάθετο.

**Περιεχόμενο των πιστοποιητικών έγκρισης**  
(βλέπε εισαγωγική σημείωση σ' αυτό το μέρος)

**3761** Πιστοποιητικά έγκρισης ειδικής μορφής ραδιενεργού υλικού

παράγραφος 726

παράγραφος 727

**3763** Πιστοποιητικά έγκρισης φόρτωσης

παράγραφος 728

**3764** Πιστοποιητικά έγκρισης σχεδιασμού του κόλου

παράγραφος 729

**Ισχύς των πιστοποιητικών**

**3765** Πολυμερής έγκριση μπορεί να γίνει με ισχύ του αρχικού πιστοποιητικού που εκδίδεται από την αρμόδια αρχή της χώρας προέλευσης του σχεδιασμού ή της φόρτωσης.

Τέτοια ισχύς μπορεί να λάβει τη μορφή μίας επικύρωσης πάνω στο αρχικό πιστοποιητικό ή της έκδοσης μίας ξεχωριστής επικύρωσης, παραρτήματος, συμπληρώματος κ.λπ., από την αρμόδια αρχή της χώρας μέσω της οποίας ή στην οποία γίνεται η φόρτωση.

## Προσθήκη Α.7

## Γενική διάταξη για το πρόγραμμα εξασφάλισης της ποιότητας

**3766** Προγράμματα εξασφάλισης της ποιότητας θα πρέπει να καθιερώνονται για το σχεδιασμό, την κατασκευή, τον έλεγχο, την τεκμηρίωση, τη χρήση, τη συντήρηση και την επιθεώρηση όλων των κόλων και για τις λειτουργίες μεταφοράς και υπό μεταφορά αποθήκευσης για την εξασφάλιση συμφωνίας με τις σχετικές διατάξεις αυτής της Προσθήκης. Όπου έγκριση της αρμόδιας αρχής για το σχεδιασμό ή τη φόρτωση απαιτείται, τέτοια έγκριση θα πρέπει να λαμβάνει υπόψη και να εξαρτάται από την επάρκεια του προγράμματος εξασφάλισης της ποιότητας. Πιστοποίηση ότι οι προδιαγραφές σχεδιασμού έχουν πλήρως εφαρμοστεί θα πρέπει να είναι διαθέσιμη στην αρμόδια αρχή. Ο κατασκευαστής, ο αποστολέας, ή ο χρήστης οποιουδήποτε σχεδιασμού κόλου θα πρέπει να είναι προετοιμασμένος να προσφέρει διευκολύνσεις για την επιθεώρηση της συσκευασίας από την αρμόδια αρχή κατά τη διάρκεια της κατασκευής και της χρήσης και να επιδεικνύει σε οποιαδήποτε σχετική αρμόδια αρχή ότι:

- (a) Οι μέθοδοι τα υλικά κατασκευής που χρησιμοποιούνται για την κατασκευή της συσκευασίας είναι σε συμφωνία με τις εγκεκριμένες προδιαγραφές σχεδιασμού και
- (b) Όλες οι συσκευασίες που είναι κατασκευασμένες σύμφωνα μ' έναν εγκεκριμένο σχεδιασμό επιθεωρούνται περιοδικά και, όπως απαιτείται, επισκευάζονται και συντηρούνται σε καλή κατάσταση έτσι ώστε να συνεχίζουν να είναι σύμφωνες με όλες τις σχετικές διατάξεις και προδιαγραφές, ακόμα και μετά από επανειλημμένη χρήση.

3767-  
3769

## Προσθήκη Α.7

## ΜΕΡΟΣ V

## ΡΑΔΙΕΝΕΡΓΑ ΥΛΙΚΑ ΠΟΥ ΕΧΟΥΝ ΑΛΛΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΙΔΙΟΤΗΤΕΣ

- 3770 (1) Τα ραδιενεργά υλικά που έχουν άλλες επικίνδυνες ιδιότητες θα πρέπει να είναι συσκευασμένα:
- (a) σε συμφωνία με τις διατάξεις για την Κλάση 7 και
  - (b) εκτός εάν μεταφέρονται ως ένα κόλο Τύπου Α ή Τύπου Β, επίσης σε συμφωνία με τις διατάξεις της κατάλληλης κλάσης.
- (2) Τα πυροφορικά ραδιενεργά υλικά θα πρέπει να είναι συσκευασμένα σε κόλα Τύπου Α ή Τύπου Β και θα πρέπει επίσης να είναι κατάλληλα αδρανοποιημένα.
- (3) Για ραδιενεργά υλικά σε εξαιρούμενα κόλα που έχουν άλλες επικίνδυνες ιδιότητες, βλέπε περιθωριακό 2002 (12) και (13).
- (4) Οι συσκευασίες για εξαφθοριούχο ουράνιο θα πρέπει να σχεδιάζονται, κατασκευάζονται και χρησιμοποιούνται σε συμφωνία με τις διατάξεις του περιθωριακού 3771.

## Διατάξεις για τη συσκευασία και τη μεταφορά του εξαφθοριούχου ουρανίου

- 3771 (1) Οι συσκευασίες για εξαφθοριούχο ουράνιο θα πρέπει να είναι σχεδιασμένα ως δοχεία πίεσης και κατασκευασμένα από κατάλληλο κοινό χάλυβα ή άλλο κατάλληλο κράμα χάλυβα.
- (2) (a) Οι συσκευασίες και ο εξοπλισμός εξυπηρέτησής τους θα πρέπει να είναι σχεδιασμένες για θερμοκρασίες εργασίας τουλάχιστον - 40 °C έως 121 °C και για πίεση εργασίας 1.4 MPa (14 bar).
- (b) Οι συσκευασίες και ο εξοπλισμός εξυπηρέτησης και δόμησής τους θα πρέπει να είναι έτσι σχεδιασμένες ώστε να αποφεύγεται οποιαδήποτε διαρροή ή μόνιμη παραμόρφωση όταν υπόκεινται για πέντε λεπτά σε υδραυλική πίεση ελέγχου 2.8 MPa (28 bar).
- (c) Οι συσκευασίες και ο δομικός εξοπλισμός τους (εάν αυτός είναι μόνιμα προσαρμοσμένος στη συσκευασία) θα πρέπει να είναι έτσι σχεδιασμένες ώστε να αντέχουν μία εξωτερική πίεση πιεζομέτρου 150 kPa (1.5 bar) χωρίς μόνιμη παραμόρφωση.
- (d) Οι συσκευασίες και ο εξοπλισμός εξυπηρέτησής τους θα πρέπει να είναι έτσι σχεδιασμένες ώστε να παραμένουν στεγανές έτσι ώστε να τηρείται το όριο που προκαθορίζεται στην παράγραφο (4) (f).
- (e) Βαλβίδες εκτόνωσης της πίεσης δεν επιτρέπονται και ο αριθμός ανοιγμάτων θα πρέπει να είναι όσο το δυνατόν λιγότερες.
- (f) Συσκευασίες με χωρητικότητα μεγαλύτερη από 450 λίτρα και ο εξοπλισμός εξυπηρέτησης και δόμησής τους (εάν αυτός είναι μόνιμα προσαρμοσμένος στη συσκευασία) θα πρέπει να είναι έτσι σχεδιασμένες ώστε να παραμένουν στεγανές όταν υπόκεινται στον έλεγχο πτώσης που προκαθορίζεται στο περιθωριακό 3742.
- (3) Μετά την κατασκευή, το εσωτερικό των μερών που φέρουν την πίεση θα πρέπει να είναι διεξοδικά καθαρισμένο από γράσο, λάδι, επικαθίσεις, σκουριά και άλλες ξένες ύλες με μία κατάλληλη διαδικασία.

## Προσθήκη Α.7

- 3771 (4) (α) Κάθε κατασκευασμένη συσκευασία και ο εξοπλισμός εξυπηρέτησης και δόμησής της θα πρέπει, είτε από κοινού είτε ξεχωριστά, να υποβάλλεται σε μία επιθεώρηση αρχικά πριν τεθεί σε υπηρεσία και περιοδικά μετέπειτα. Αυτές οι επιθεωρήσεις θα πρέπει να πραγματοποιούνται και να πιστοποιούνται σε συμφωνία με την αρμόδια αρχή.
- (β) Η αρχική επιθεώρηση θα πρέπει να συνίσταται από έναν έλεγχο των χαρακτηριστικών του σχεδιασμού, τον έλεγχο αντοχής, τον έλεγχο στεγανότητας, το έλεγχο χωρητικότητας νερού και έναν έλεγχο κανονποιητικής λειτουργίας του εξοπλισμού εξυπηρέτησης.
- (γ) Οι περιοδικές επιθεωρήσεις θα πρέπει να συνίστανται από μία οπτική επιθεώρηση, τον έλεγχο αντοχής, τον έλεγχο στεγανότητας και έναν έλεγχο κανονποιητικής λειτουργίας του εξοπλισμού εξυπηρέτησης. Το διάστημα για τις περιοδικές επιθεωρήσεις θα πρέπει να είναι όχι μεγαλύτερο από πέντε χρόνια. Συσκευασίες που δεν έχουν επιθεωρηθεί μέσα σε αυτή την περίοδο των πέντε χρόνων θα πρέπει να εξετάζονται πριν τη μεταφορά σε συμφωνία με ένα πρόγραμμα εγκεκριμένο από την αρμόδια αρχή. Δεν θα πρέπει να ξαναγεμίζονται πριν την συμπλήρωση του πλήρους προγράμματος για τις περιοδικές επιθεωρήσεις.
- (δ) Ο έλεγχος των χαρακτηριστικών του σχεδιασμού θα πρέπει να παρουσιάζει συμφωνία με τις προδιαγραφές των τύπων σχεδιασμού και το πρόγραμμα κατασκευής.
- (ε) Ο έλεγχος αντοχής πριν τεθεί σε λειτουργία για πρώτη φορά θα πρέπει να διεξάγεται με υδραυλικό έλεγχο με εσωτερική πίεση 2.8 MPa (28 bar). Για τις περιοδικές επιθεωρήσεις, οποιαδήποτε άλλη ισοδύναμη μη-επιβλαβής διαδικασία εξέτασης αναγνωρισμένη από την αρμόδια αρχή μπορεί να εφαρμόζεται.
- (ς) Ο έλεγχος στεγανότητας θα πρέπει να πραγματοποιείται σε συμφωνία με μία διαδικασία που είναι ικανή να δείχνει τις διαρροές στο σύστημα συγκράτησης με ευαισθησία 0.1 Pa.l/s ( $10^{-6}$  bar.l/s).
- (ζ) Η χωρητικότητα νερού των συσκευασιών θα πρέπει να καθορίζεται με ακρίβεια  $\pm 0.25$  % σε μία θερμοκρασία αναφοράς 15 °C. Ο όγκος θα πρέπει να αναφέρεται πάνω στον πίνακα που περιγράφεται στην παράγραφο (6).

(5) Με την εξαίρεση των συσκευασιών για λιγότερο από 10 kg εξαφθορισόχο ουράνιο, η αρμόδια αρχή της χώρας προέλευσης θα πρέπει, για κάθε τύπο σχεδιασμού κόλου εξαφθορισόχου ουρανίου, να επιβεβαιώνει ότι συμφωνεί με τις διατάξεις αυτού του περιθωριακού και να εκδίδει μία έγκριση. Αυτή η έγκριση μπορεί να είναι μέρος της έγκρισης για ένα κόλο Τύπου Β και/ή για ένα κόλο με σχάσιμο περιεχόμενο σε συμφωνία με το Μέρος IV αυτής της Προσθήκης.

(6) Μία πλάκα κατασκευασμένη από μη-διαβρωτικό μέταλλο θα πρέπει να είναι με διάρκεια προσαρμοσμένη σε κάθε συσκευασία σε μία άμεσα προσπελάσιμη θέση. Η μέθοδος προσαρμογής της πλάκας δεν πρέπει να μειώνει την αντοχή της συσκευασίας. Τα παρακάτω στοιχεία, τουλάχιστον, θα πρέπει να είναι μαρκαρασιμένα πάνω στον πίνακα με σφραγίδα ή με οποιαδήποτε άλλη ισοδύναμη μέθοδο:

- αριθμός έγκρισης,
- σειριακός αριθμός του κατασκευαστή,
- μέγιστη πίεση εργασίας (πίεση πιεζομέτρου) 1.4 MPa (14 bar),
- πίεση ελέγχου (πίεση πιεζομέτρου) 2.8 MPa (28 bar),

## Προσθήκη Α.7

3771  
(συνεχ.)

- περιεχόμενο: εξαφθοριούχο ουράνιο,
- χωρητικότητα σε λίτρα,
- μέγιστο επιτρεπτό βάρος πλήρωσης εξαφθοριούχου ουρανίου,
- απόβαρο,
- ημερομηνία (μήνας, χρόνος) του αρχικού ελέγχου και του πιο πρόσφατου περιοδικού ελέγχου,
- σφραγίδα του εμπειρογνώμονα που διεξήγαγε τον έλεγχο.

- (7) (a) Το εξαφθοριούχο ουράνιο πρέπει να είναι σε στερεή μορφή όταν μεταφέρεται.
- (b) Ο βαθμός πλήρωσης θα πρέπει να είναι μόνον τέτοια ώστε η χωρητικότητα να μην είναι περισσότερο από 95 % γεμισμένη στους 121 °C.
- (c) Ο καθαρισμός των συσκευασιών θα πρέπει να πραγματοποιείται μόνον με μία κατάλληλη διαδικασία.
- (d) Η εκτέλεση των επισκευών επιτρέπεται μόνον σε συμφωνία με τα προγράμματα σχεδιασμού και κατασκευής που τίθενται γραπτά. Τα προγράμματα επισκευής απαιτούν την προηγούμενη έγκριση της αρμόδιας αρχής.
- (e) Οι ακαθάριστες κενές συσκευασίες θα πρέπει να είναι το ίδιο σφικτά κλεισμένες, κατά τη διάρκεια της μεταφοράς και της ενδιάμεσης αποθήκευσης, όπως όταν είναι γεμάτες.
- (f) Για τη συντήρηση, ένα πρόγραμμα εγκεκριμένο από την αρμόδια αρχή θα πρέπει να ενεργείται.

(8) Συσκευασίες κατασκευασμένες σε συμφωνία με το Πρότυπο ANSI N/14.1 - 1982<sup>19</sup> των Ηνωμένων Πολιτειών, ή ισοδύναμες, μπορούν να χρησιμοποιούνται, με τη συγκατάθεση της συγκεκριμένης αρμόδιας αρχής, εάν οι έλεγχοι που προκαθορίζονται σε αυτά τα πρότυπα έχουν διεξαχθεί από τον εμπειρογνώμονα που ονομάζεται σ' αυτά και συνεχίζουν να πραγματοποιούνται και να πιστοποιούνται σε συμφωνία με την αρμόδια αρχή σύμφωνα με την παράγραφο (4) (c).

3772-  
3799

<sup>19</sup> ANSI N 14.1 - 1982 δημοσιευμένη το 1982 και διαθέσιμη από το Αμερικανικό Εθνικό Ινστιτούτο Προτύπων, 10430 Broadway, New York, NY 10018.

**ΠΡΟΣΘΗΚΗ Α.8**

3800-  
3899

Επιφύλασσομένο

## ΠΡΟΣΘΗΚΗ Α.9

## 1. Διατάξεις σχετικές με ετικέτες κινδύνου.

**ΣΗΜΕΙΩΣΗ:** Για συσκευασίες, βλέπε επίσης περιθωριακό 2007.

- 3900 (1) Οι ετικέτες αριθμ. 1, 1.4, 1.5, 1.6, 01, 2, 3, 4.1, 4.2, 4.3, 5.1, 5.2, 05, 6.1, 6.2, 7A, 7B, 7C, 8 και 9 θα πρέπει να είναι σε σχήμα ρόμβου και να έχουν διαστάσεις 100 x 100 mm. Έχουν μία μαύρη γραμμή 5 mm μέσα από την άκρη που διατρέχει παράλληλα μ' αυτήν. Εάν το μέγεθος της συσκευασίας έτσι απαιτεί, οι διαστάσεις των ετικετών μπορούν να μειώνονται, υπό την προϋπόθεση ότι παραμένουν καθαρά ορατές [βλέπε επίσης περιθωριακό 2224 (6)]. Οι ετικέτες αριθμ. 7D και άλλες ετικέτες που πρέπει να τοποθετούνται σε οχήματα, σε δεξαμενές χωρητικότητας μεγαλύτερης από 3 m<sup>3</sup> ή σε μεγάλα εμπορευματοκιβώτια θα πρέπει να έχουν διαστάσεις όχι μικρότερες από 250 x 250 mm.
- (2) Οι ετικέτες αριθμ. 10, 11 και 12 θα πρέπει να είναι ορθογώνιες, πρότυπου σχήματος A5 (148 x 210 mm). Εάν το μέγεθος της συσκευασίας έτσι απαιτεί, οι διαστάσεις των ετικετών μπορούν να μειώνονται, υπό την προϋπόθεση ότι παραμένουν καθαρά ορατές.
- (3) Μία περιγραφή, με αριθμούς ή γράμματα, που αφορούν στη φύση του κινδύνου μπορεί να τοποθετείται πάνω στο χαμηλότερο μέρος των ετικετών.
- (4) Η διατύπωση στις ετικέτες κινδύνου θα πρέπει να είναι καθαρά ευανάγνωστη και ανεξίτηλη.
- 3901 (1) Οι ετικέτες κινδύνου πρέπει να τοποθετούνται στις συσκευασίες και στις σταθερές δεξαμενές μ' έναν κατάλληλο τρόπο και να είναι καθαρά ορατές. Μόνον όπου η κατάσταση του εξωτερικού μίας συσκευασίας δεν το επιτρέπει αυτό οι ετικέτες θα πρέπει να κολλούνται πάνω σε κάρτες ή πινακίδες που είναι με ασφάλεια προσαρμοσμένες στη συσκευασία. Ανεξίτηλα μαρκαρίσματα κινδύνου που αντιστοιχούν ακριβώς στα οριζόμενα υποδείγματα μπορούν να χρησιμοποιούνται αντί για ετικέτες.
- (2) Είναι καθήκον του αποστολέα να τοποθετήσει τις ετικέτες.
- (3) Επιπλέον των ετικετών κινδύνου που ορίζονται σ' αυτήν την Οδηγία, ετικέτες κινδύνου σύμφωνα με τις απαιτήσεις άλλων τρόπων μεταφοράς μπορούν να τοποθετούνται στις συσκευασίες, τα εμπορευματοκιβώτια, τα εμπορευματοκιβώτια-δεξαμενές και τις συστοιχίες των δοχείων που περιέχουν επικίνδυνα εμπορεύματα που μεταφέρονται για μέρος μίας διαδρομής οδικώς και που πρέπει να είναι εσημασμένα σε συμφωνία με τις διατάξεις εκείνων των απαιτήσεων.

## 2. Επεξήγηση των συμβόλων

- 3902 Οι ετικέτες κινδύνου που ορίζονται για υελες και ειση των Κλάσεων 1 έως 9 (βλέπε αντίτυπα στο τέλος) έχουν τις παρακάτω σημασίες:

Αριθμ. 1	(μαύρη σε πορτοκαλί φόντο: έκρηξη βόμβας στο επάνω μισό, κατάλληλος αριθμός υποδιαίρεσης και γράμμα ομάδας συμβατότητας στο κάτω μισό, μικρός αριθμός 1 στην κάτω γωνία):	υπόκειται σε έκρηξη, υποδιαίρεσεις 1.1, 1.2 και 1.3,
Αριθμ. 1.4	(μαύρο σε πορτοκαλί φόντο: αριθμός υποδιαίρεσης '1.4' που γεμίζει το μεγαλύτερο μέρος του επάνω μισού, κατάλληλο γράμμα ομάδας συμβατότητας στο κάτω μισό, μικρός αριθμός 1 στην κάτω γωνία):	υπόκειται σε έκρηξη, υποδιαίρεση 1.4,
Αριθμ. 1.5	(μαύρο σε πορτοκαλί φόντο: αριθμός	υπόκειται σε έκρηξη, υποδιαίρεση 1.5,

## Προσθήκη Α.9

3902  
(συνεχ.)

	υποδιαίρεσης '1.5' που γεμίζει το μεγαλύτερο τμήμα του επάνω μισού, γράμμα ομάδας συμβατότητας 'D' στο κάτω μισό, μικρός αριθμός 1 στην κάτω γωνία):	
Αριθμ. 1.6	(μαύρο σε πορτοκαλί φόντο: αριθμός υποδιαίρεσης '1.6' που γεμίζει το μεγαλύτερο τμήμα του επάνω μισού, γράμμα ομάδας συμβατότητας 'N' στο κάτω μισό, μικρός αριθμός '1' στην κάτω γωνία),	υπόκειται σε έκρηξη, υποδιαίρεση 1.6,
Αριθμ. 01	(μαύρο σε πορτοκαλί φόντο, έκρηξη βόμβας στο επάνω μισό):	υπόκειται σε έκρηξη,
Αριθμ. 2	(κύλινδρος αερίου, μαύρος ή λευκός, σε πράσινο φόντο, μικρός αριθμός "2" στην κάτω γωνία):	μη-εύφλεκτο μη-τοξικό αέριο,
Αριθμ. 3	(μαύρη ή λευκή φλόγα σε κόκκινο φόντο):	κίνδυνος φωτιάς (εύφλεκτο υγρό),
Αριθμ. 4.1	(μαύρη φλόγα σε φόντο από ισαπέχουσες εναλλασσόμενες κόκκινες και λευκές κάθετες ραβδώσεις):	κίνδυνος φωτιάς (εύφλεκτο στερεό),
Αριθμ. 4.2	(μαύρη φλόγα σε λευκό φόντο, το κάτω τρίγωνο της ετικέτας κόκκινο):	ύλη που υπόκειται σε αυτόματη ανάφλεξη,
Αριθμ. 4.3	(μαύρη ή λευκή φλόγα σε μπλε φόντο):	κίνδυνος έκλυσης εύφλεκτων αερίων σε περίπτωση επαφής με το νερό,
Αριθμ. 5.1	(φλόγα πάνω από έναν κύκλο, μαύρη σε κίτρινο φόντο, μικρός αριθμός "5.1" στην κάτω γωνία):	οξειδωτική ύλη
Αριθμ. 5.2	(φλόγα πάνω από έναν κύκλο, μαύρη σε κίτρινο φόντο, μικρός αριθμός "5.2" στην κάτω γωνία):	οργανικό υπεροξειδίο, κίνδυνος φωτιάς,
Αριθμ. 05	(φλόγα πάνω από έναν κύκλο, μαύρη σε κίτρινο φόντο):	κίνδυνος ενίσχυσης της φωτιάς,
Αριθμ. 6.1	(νεκροκεφαλή σε διασταυρούμενα οστά, μαύρη σε λευκό φόντο):	τοξική ύλη: να διατηρείται ξεχωριστά από τρόφιμα και άλλα είδη για κατανάλωση σε οχήματα και σημεία φόρτωσης, εκφόρτωσης ή μεταφόρτωσης,
Αριθμ. 6.2	(σύμβολο με τρεις ημισέληνους τοποθετημένες σ' έναν κύκλο):	μολυσματικό: να διατηρείται ξεχωριστά σε οχήματα και σε σημεία φόρτωσης, εκφόρτωσης ή μεταφόρτωσης, από τρόφιμα, άλλα είδη κατανάλωσης και ζωοτροφές,

## Προσθήκη Α.9

3902  
(συνεχ.)

- Αριθμ. 7Α (τυποποιημένο τριφύλλι, επιγραφή ΡΑΔΙΕΝΕΡΓΟ ακολουθούμενη από μία κάθετη ράβδωση στο κάτω μισό, με το παρακάτω κείμενο:
- Περιεχόμενο .....  
Δραστηκότητα .....  
μικρός αριθμός 7 στην κάτω γωνία, μαύρο σύμβολο και επιγραφές σε λευκό φόντο, κόκκινη κάθετη ράβδωση):
- Αριθμ. 7Β (όπως παραπάνω, αλλά με δύο κόκκινες κάθετες ραβδώσεις στο κάτω μισό και το παρακάτω κείμενο:
- Περιεχόμενο .....  
Δραστηκότητα .....  
Δείκτης μεταφοράς.....
- (στο ορθογώνιο μαύρο πλαίσιο). Μικρός αριθμός 7 στην κάτω γωνία, μαύρο σύμβολο και επιγραφές. Φόντο στο επάνω μισό: κίτρινο. Φόντο στο κάτω μισό: λευκό. Κόκκινες κάθετες ραβδώσεις):
- Αριθμ. 7C (όπως παραπάνω, αλλά με τρεις κόκκινες κάθετες ραβδώσεις στο κάτω μισό):
- Αριθμ. 7D (τυποποιημένο τριφύλλι, επιγραφή ΡΑΔΙΕΝΕΡΓΟ και αριθμός 7. Μαύρο σύμβολο και επιγραφές. Φόντο στο επάνω μισό: κίτρινο, φόντο στο κάτω μισό: λευκό.  
Η χρήση της λέξης "ΡΑΔΙΕΝΕΡΓΟ" στο κάτω μισό είναι προαιρετική ώστε να επιτρέπει την εναλλακτική χρήση αυτής της ετικέτας για την ένδειξη του κατάλληλου χαρακτηριστικού αριθμού της ύλης για το φορτίο):
- Αριθμ. 8 (υγρό που στάζει από έναν δοκιμαστικό σωλήνα σε μία πλάκα και από έναν άλλο δοκιμαστικό σωλήνα σε ένα χέρι. Μαύρο σε λευκό φόντο. Το κάτω τρίγωνο της ετικέτας μαύρο με λευκό περιθώριο):
- ραδιενεργό υλικό σε συσκευασίες της Κατηγορίας I - ΛΕΥΚΗ. Στην περίπτωση φθοράς στις συσκευασίες, κίνδυνος για την υγεία από κατάποση ή εισπνοή, ή επαφή με το χυμένο περιεχόμενο,
- ραδιενεργό υλικό σε συσκευασίες της Κατηγορίας II - ΚΙΤΡΙΝΗ. Οι συσκευασίες να διατηρούνται μακριά από συσκευασίες που φέρουν την επιγραφή "FOTO" (βλέπε περιθωριακό 2711). Στην περίπτωση φθοράς στις συσκευασίες, κίνδυνος για την υγεία από κατάποση ή εισπνοή, ή επαφή με το χυμένο περιεχόμενο και κίνδυνος εξωτερικής ακτινοβολίας σε μία απόσταση,
- ραδιενεργό υλικό σε συσκευασίες της Κατηγορίας III - ΚΙΤΡΙΝΗ. Οι συσκευασίες να διατηρούνται μακριά από συσκευασίες που φέρουν την επιγραφή "FOTO" (βλέπε περιθωριακό 2711). Στην περίπτωση φθοράς στις συσκευασίες, κίνδυνος για την υγεία από κατάποση ή εισπνοή, ή επαφή με το χυμένο περιεχόμενο και κίνδυνος εξωτερικής ακτινοβολίας σε μία απόσταση,
- ραδιενεργό υλικό που παρουσιάζει τους κινδύνους που περιγράφονται στα 7Α, 7Β ή 7C,
- διαβρωτική ύλη,

## Προσθήκη Α.9

3902  
(συνεχ.)

Αριθμ. 9	(λευκό φόντο με 7 μαύρες κάθετες ραβδώσεις στο επάνω μισό και μικρός αριθμός 9, υπογραμμισμένος, στην κάτω γωνία):	διάφορες ύλες και είδη που, κατά τη διάρκεια της μεταφοράς, παρουσιάζουν κινδύνους άλλους από εκείνους που καλύπτονται από τις άλλες κλάσεις,
Αριθμ. 10	(μαύρη ανοιχτή ομπρέλα και έξι μαύρες σταγόνες νερού, σε λευκό ή κατάλληλο για τη δημιουργία αντίθεσης φόντο):	να διατηρείται ξηρό,
Αριθμ. 11	(δύο μαύρα βέλη σε λευκό ή κατάλληλο για τη δημιουργία αντίθεσης φόντο):	αυτή η πλευρά προς τα επάνω: η ετικέτα πρέπει να τοποθετείται, με τα βέλη να δείχνουν προς τα επάνω,
Αριθμ. 12	(μαύρο ποτήρι του κρασιού σε λευκό ή κατάλληλο για τη δημιουργία αντίθεσης φόντο):	εύθραστο, ή να διακινείται με προσοχή.

## 3. Μεταβατικές διατάξεις

3903 Οι ετικέτες κινδύνου που μέχρι τις 31 Δεκεμβρίου 1987 συμφωνούσαν με τα υποδείγματα Αριθμ. 7Α, 7Β, 7C, 10, 11 και 12 μπορούν να χρησιμοποιούνται μέχρι την εξάντληση των αποθεμάτων.

## ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΕΞΟΠΛΙΣΜΟ ΜΕΤΑΦΟΡΑΣ ΚΑΙ ΕΡΓΑΣΙΕΣ ΜΕΤΑΦΟΡΑΣ

## Σχέδιο του Παραρτήματος

10 000 (1) Το παρόν Παράρτημα περιλαμβάνει:

- (a) Γενικές διατάξεις που έχουν εφαρμογή στη μεταφορά επικινδύνων ουσιών όλων των Κλάσεων (Μέρος I).
- (b) Ειδικές διατάξεις που έχουν εφαρμογή στην μεταφορά επικινδύνων ουσιών των Κλάσεων 1 μέχρι 9 (Μέρος II).
- (c) Προσθήκες όπως τα παρακάτω:
  - Προσθήκη Β.1a που αφορά σταθερές δεξαμενές (οχήματα, δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων,
  - Προσθήκη Β.1b που αφορά εμπορευματοκιβώτια-δεξαμενές,
  - Προσθήκη Β.1c που αφορά σταθερές δεξαμενές και αποσυναρμολογούμενες δεξαμενές κατασκευασμένες από ενισχυμένο πλαστικό,
  - Προσθήκη Β.1d που αφορά τις προϋποθέσεις για τα υλικά και την κατασκευή συγκολλημένων σταθερών δεξαμενών, συγκολλημένων αποσυναρμολογούμενων δεξαμενών και περιβλημάτων συγκολλημένων εμπορευματοκιβωτίων-δεξαμενών που προορίζονται για τη μεταφορά υγροποιημένων αερίων βαθιάς καταψύξεως της Κλάσης 2 ή για τα οποία απαιτείται η πίεση δοκιμής να μην είναι μικρότερη από 1 Μρα (10 bar),
  - Προσθήκη Β.2 που αφορά τις ενιαίες διατάξεις για την κατασκευή οχημάτων προοριζόμενα για την μεταφορά επικινδύνων εμπορευμάτων συμπεριλαμβανομένων των διατάξεων για τους εγκεκριμένους τύπους τους, όπου αυτό χρειάζεται,
  - Προσθήκη Β.3 που περιέχει τύπο πιστοποιητικού για έγκριση οχημάτων,
  - Προσθήκη Β.5 που περιέχει τον κατάλογο ουσιών που καλύπτονται από το περιθωριακό 10500 (2),
  - Προσθήκη Β.6 που περιέχει υπόδειγμα πιστοποιητικού εκπαίδευσεως οδηγού.

(2) Οι γενικές διατάξεις του Μέρους I και οι ειδικές διατάξεις του Μέρους II χωρίζονται σε Τμήματα με τις ακόλουθες επικεφαλίδες:

- Γενικά: Το παρόν τμήμα περιγράφει το πλαίσιο του παρόντος Παραρτήματος και περιλαμβάνει τις διατάξεις που αφορούν επιτρεπόμενες εξαιρέσεις και ορισμούς.
- Τμήμα 1: Τρόπος μεταφοράς εμπορευμάτων (αυτό το τμήμα περιέχει τις διατάξεις που αφορούν μέθοδο αποστολής, περιορισμούς αποστολής, πλήρη φορτία και τη δυνατότητα μεταφοράς εμπορευμάτων χύμα, μέσα σε εμπορευματοκιβώτια ή σε δεξαμενές).
- Τμήμα 2: Ειδικές προϋποθέσεις προς εκπλήρωση με τα μέσα μεταφοράς και εξοπλισμός αυτών
- Τμήμα 3: Γενικές διατάξεις εξυπηρέτησεως

1912

Προσθήκη Α.9

3902  
(συνεχ.)

Τμήμα 4: Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό (αυτό το τμήμα περιέχει επίσης τις απαγορεύσεις επί μικτής φορτώσεως)

Τμήμα 5: Ειδικές διατάξεις που αφορούν τη λειτουργία των οχημάτων

Τμήμα 6: Μεταβατικές διατάξεις, μειώσεις και διατάξεις αποκλειστικές για ορισμένες χώρες.

**Εφαρμοσιμότητα άλλων διατάξεων, εθνικών ή διεθνών.**

**10 001 (1)** Αν το όχημα που εκτελεί εργασία μεταφοράς με την επιφύλαξη των διατάξεων αυτής της Οδηγίας αποστέλλεται πάνω σε τμήμα του ταξιδιού κατά τρόπο διαφορετικό από την οδική έλξη, οποιοσδήποτε εθνικές ή διεθνείς διατάξεις που διέπουν την μεταφορά επικίνδυνων εμπορευμάτων σ' εκείνο το τμήμα με τον τρόπο μεταφοράς που χρησιμοποιείται για την αποστολή του οδικού οχήματος, θα έχουν εφαρμογή σ' εκείνο το τμήμα του ταξιδιού.

(2) Στις περιπτώσεις όπου κάποια μεταφορά που υπόκειται στις διατάξεις αυτής της Οδηγίας υπόκειται επίσης στο σύνολο ή σε μέρος του ταξιδιού στις διατάξεις μίας διεθνούς σύμβασης, η οποία καθορίζει την μεταφορά επικίνδυνων εμπορευμάτων με κάποιο τρόπο μεταφοράς εκτός της οδικής μεταφοράς δυνάμει διατάξεων που εκτείνουν την εφαρμοσιμότητα της σύμβασης αυτής σε ορισμένες υπηρεσίες μηχανοκίνητων οχημάτων, τότε οι διατάξεις αυτής της διεθνούς σύμβασης θα εφαρμόζονται στο εν λόγω ταξίδι συγχρόνως με εκείνες αυτής της Οδηγίας οι οποίες δεν είναι ασύμβατες με εκείνες, οι υπόλοιπες διατάξεις αυτής της Οδηγίας δεν θα εφαρμόζονται κατά την διάρκεια του εν λόγω ταξιδιού.

**Εφαρμοσιμότητα των διατάξεων του Μέρους I του Παραρτήματος.**

**10 002** Όταν διατάξεις του Μέρους II ή των Προσθηκών του παρόντος Παραρτήματος συγκρούονται με διατάξεις του Μέρους I, εκείνες οι διατάξεις του Μέρους I δεν θα έχουν εφαρμογή.

Παρά ταύτα,

(a) οι διατάξεις των περιθωριακών 10 010 και 10 013 θα έχουν προτεραιότητα πάνω σ' εκείνες του Μέρους II,

(b) οι διατάξεις του περιθωριακού 10 403 θα λαμβάνουν προτεραιότητα επί των απαγορεύσεων για μικτή φόρτωση που προβλέπεται στο Τμήμα 4 του Μέρους II.

10 003-  
10 009

**ΜΕΡΟΣ Ι****ΓΕΝΙΚΕΣ ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΕΧΟΥΝ ΕΦΑΡΜΟΓΗ  
ΣΤΗ ΜΕΤΑΦΟΡΑ ΕΠΙΚΙΝΔΥΝΩΝ ΥΛΩΝ ΟΛΩΝ ΤΩΝ ΚΛΑΣΕΩΝ**

(Βλέπε, όμως, το περιθωριακό 10 002)

**Γενικά****Πλαίσιο του παρόντος Παραρτήματος**

- 10 010** Το Παράρτημα Α εξαιρεί από τις διατάξεις του παρόντος Παραρτήματος, τη μεταφορά που γίνεται σύμφωνα με τους όρους (συσκευασίας, όγκου κ.λπ.) που αναφέρονται στα περιθωριακά 2201a, 2301a, 2401a, 2471a, 2501a, 2551a, 2601a, 2801a και 2901a.
- 10 011** Πίνακας που καθορίζει τις περιορισμένες ποσότητες επικίνδυνων υλών σε κόλα που μπορεί να μεταφερθούν σε μία μεταφορική μονάδα χωρίς εφαρμογή των διατάξεων του παρόντος Παραρτήματος που έχουν σχέση με:
- ειδικές απαιτήσεις που πρέπει να ικανοποιούνται από τα μέσα μεταφοράς και τον εξοπλισμό τους (όλα τα Τμήματα 2 των Μερών Ι και ΙΙ), υποκείμενες, εντούτοις, στις διατάξεις των περιθωριακών 10 240 (1) (a) και 21 212,
  - τα πληρώματα οχήματος (περιθωριακά XX 311 των Μερών Ι και ΙΙ),
  - την ειδική εκπαίδευση για οδηγούς (περιθωριακό 10315),
  - την μεταφορά επιβατών (περιθωριακό 10325),
  - γραπτές οδηγίες (περιθωριακά XX 385 των Μερών Ι και ΙΙ),
  - τους χώρους φόρτωσης και εκφόρτωσης (περιθωριακά XX 407 του Μέρους ΙΙ) και
  - ειδικές διατάξεις σχετικά με τη λειτουργία των οχημάτων (όλα τα Τμήματα 5 των Μερών Ι και ΙΙ).

10 Ψ11  
(συνεχ.)

## Γενικές Διατάξεις

Κλάσεις	ΥΛΕΣ  Πολλαπλασιαστές για τον υπολογισμό των συνολικών ποσοτήτων που εξαιρούνται για φορτία που περιλαμβάνει πολλές ύλες που η κάθε μία περιορίζεται από διαφορετικά όρια όγκου (βλέπε παρακάτω σημείωση 1)	Ανώτατη συνολική ποσότητα ανά μεταφορική μονάδα (μικτό βάρος)

	11° (c) και 12° (c)							X	

**ΣΗΜΕΙΩΣΗ 1:** Οι ανώτατες ποσότητες που εμφανίζονται στον παραπάνω πίνακα αντιπροσωπεύουν βαθμό κινδύνου ο οποίος μπορεί, από μια πολύ απλοποιημένη άποψη, να θεωρηθεί σαν ισότιμος για κάθε μία από τις αναγραφόμενες ύλες. Ο κίνδυνος αυτός δεν θα ξεπερνιέται ακόμη και όταν ένα φορτίο που δεν θίγεται από οποιαδήποτε απαγόρευση επί μικτής φορτώσεως περιλαμβάνει περισσότερες από μία επικίνδυνες ύλες.

Όπου το ίδιο όριο εξαίρεσεως ισχύει για τις ύλες για τις οποίες πρόκειται, τα αντίστοιχα βάρη τους προσθέτονται και το σύνολο δεν πρέπει να υπερβεί εκείνο το όριο. Όπου εντούτοις, ισχύουν για τις ύλες διαφορετικά όρια εξαίρεσεως, οι ανώτατες ποσότητες που επιτρέπονται για κάθε μία θα υπολογίζονται όπως παρακάτω:

<sup>1/</sup> Εξαιρείται το βάρος της συσκευής κατάψυξης εάν υπάρχει τέτοια.

## Γενικές Διατάξεις

- 10 011** (συνεχ.) (a) Το ολικό πραγματικό βάρος κάθε ύλης που αναφέρεται σε οποιαδήποτε στήλη του πίνακα θα πολλαπλασιάζεται με το συντελεστή που αναφέρεται στην κεφαλή της στήλης.
- (b) Τα προϊόντα που επιτυγχάνονται κατ' αυτό τον τρόπο θα προστίθενται μαζί και το σύνολο τους δεν θα υπερβαίνει το 1,000.

Μέχρι αυτό τον αριθμό, η διαφορά διαιρούμενη με το συντελεστή που αντιστοιχεί προς κάποια άλλη ύλη δίνει το όριο εξαέρσεως που δεν έχει ακόμη καλυφθεί.

## Παράδειγμα αυτών των υπολογισμών

Κλ.	Υλη	Ανώτατη ποσότητα						
		5 kg	20 kg	50 kg	100 kg	333 kg	500 kg	1000 kg
2	2° (a)							100
3	33° (c)						50	
4.1	4° (c)			2				
6.1	16° (b)			3				
6.1	16° (c)				25			
Σύνολο μεταφερομένων ποσοτήτων				5	25		50	100
Πολλαπλασιαστής		200	50	20	10	3	2	1
Προϊόν (πολ/στής x ποσότητα)				100	250		100	100
Σύνολο προϊόντων		$100 + 250 + 100 + 100 = 550$						

Αφού το σύνολο των προϊόντων είναι λιγότερο από 1,000, η παραπάνω περίπτωση αφήνει διαθέσιμα μέσα στο όριο εξαέρσεως  $1,000 - 550 = 450$  που μπορεί να χρησιμοποιηθεί για να συμπληρωθεί το φορτίο, παραδείγματος χάρη, κολώνδρους αερίου της Κλάσης 2, 11° (a) (όριο 333 kg) έως την αξία  $450 : 3 = 150$  kg.

**ΣΗΜΕΙΩΣΗ 2:** Για την εφαρμογή αυτού του περιθωριακού και του πίνακά του, τα βάρη των υγρών ή αερίων που περιέχονται στις συνηθισμένες σταθερές δεξαμενές ή μέσα μεταφοράς για την προώθησή τους ή για την λειτουργία του εξειδικευμένου εξοπλισμού (ψυκτικές συσκευές για παράδειγμα) ή για την εξασφάλιση της ασφάλειάς τους, δεν θα λαμβάνονται υπόψη.

## Γενικές Διατάξεις

10 011 Αυτοί οι πολλαπλασιασμοί ή διαιρέσεις μπορεί να αποφευχθούν με τη χρησιμοποίηση των πινάκων βάρους που υπάρχουν παρακάτω.

Ανάτομο βάρος κάθε μιας από δύο διαφορετικές ύλες που αναφέρονται στις στήλες Α μέχρι Γ του παραπάνω πίνακα που μπορεί να φορτωθούν μαζί σε μεταφορική μονάδα χωρίς να υπερβούν τα όρια εξαρέσεως (σε kg):

Αν, λαμβάνοντας υπόψη τον όγκο της πρώτης προς φόρτωση ύλης (όπως φαίνεται σε μία από τις στήλες πίνακα ταχείας αναφοράς), δεν επιτευχθεί η ανώτατη ποσότητα για τη δεύτερη ύλη (στην άλλη στήλη του ίδιου πίνακα) ο όγκος που απομένει διαθέσιμος μπορεί να χρησιμοποιηθεί για τρίτη ύλη. Για να εξακριβωθεί ο επιτρεπόμενος όγκος εκείνης της ύλης, πρέπει να γίνει αναφορά στον πίνακα ταχείας αναφοράς που έχει επικεφαλίδα από τα γράμματα στήλης που αντιστοιχούν στη δεύτερη και τρίτη ύλη. Αν και η ανώτατη ποσότητα για την τρίτη ύλη δεν εξαντληθεί, μπορεί να ακολουθηθεί η ίδια διαδικασία σχετικά με τη φόρτωση μιας ή περισσότερων άλλων υλών.

Στην αριστερή στήλη κάθε πίνακα, μια ενδιάμεση υψηλότερη αξία για την πραγματικά φορτωθείσα ποσότητα (π.χ. στον πίνακα Β και D, 9 μεταξύ 8 και 10) μπορεί να στρογγυλευτεί στη χαμηλότερη εμφανιζόμενη αξία (σ' αυτή την περίπτωση 8). Στη δεξιά στήλη, από το άλλο μέρος, μια ενδιάμεση αξία για μια πραγματικά φορτωθείσα ποσότητα (π.χ. στον ίδιο πίνακα, 55 αντί για 60) μπορεί να στρογγυλευτεί στην υψηλότερη εμφανιζόμενη αξία (σ' αυτή την περίπτωση 60).

## Γενικές Διατάξεις

**10 012** (1) Στην περίπτωση εξαιρέσεων που προβλέπονται στο περιθωριακό 10 011, το έγγραφο μεταφοράς που προβλέπεται από το περιθωριακό 2002 (3) θα φέρει την παρακάτω εγγραφή μετά από τα στοιχεία που καθορίζονται στο κεφάλαιο Β των ειδικών προϋποθέσεων για κάθε Κλάση του Παραρτήματος Α:

" Φορτίο μη υπερβαίνουν τα όρια εξαιρέσεως που προβλέπονται στο περιθωριακό 10 011"

(2) Όταν αποστολές από περισσότερους του ενός αποστολείς μεταφέρονται στην ίδια μονάδα μεταφοράς, τα έγγραφα μεταφοράς που συνοδεύουν αυτές τις αποστολές δεν υποχρεούνται να φέρουν την εγγραφή που ορίζεται στην παράγραφο (1).

**10 013** Παρεκκλίσεις από τις διατάξεις του παρόντος Παραρτήματος μπορεί να γίνουν σε περίπτωση επείγουσας μεταφοράς για τη σωτηρία ανθρώπινων ζωών.

## Ορισμοί

**10 014** (1) Για την εφαρμογή του παρόντος Παραρτήματος:

- Ο όρος "αμόδια αρχή" σημαίνει την αρχή που έχει υποδειχθεί σαν τέτοια σε κάθε χώρα και σε κάθε συγκεκριμένη περίπτωση από την Κυβέρνηση.
- Ο όρος "εύθραστο κόλο" σημαίνει κόλο που περιέχει εύθραστο δοχείο (δηλ. δοχείο από γυαλί, πορσελάνη, πήλινο ή από παρόμοια υλικά) που δεν περιέχεται σε συσκευασία με πλήρεις πλευρές που το προστατεύουν αποτελεσματικά κατά της κρούσεως [(βλέπε επίσης και Παράρτημα Α, περιθωριακό 2001(7))].
- Ο όρος "αέριο" σημαίνει αέριο ή ατμός.
- Ο όρος "επικίνδυνες ύλες", όταν χρησιμοποιείται μόνος σημαίνει τις ύλες και τα είδη που ορίζονται ότι είναι ύλες και είδη αυτής της Οδηγίας.
- Ο όρος "RID" σημαίνει διατάξεις που αφορούν διεθνή μεταφορά επικίνδυνων εμπορευμάτων με σιδηρόδρομο που αποτελούν το Παράρτημα Ι της COTIF - Συνθήκη που αφορά τις σιδηροδρομικές μεταφορές με σιδηρόδρομο, Παράρτημα Β - Ενιαίοι κανόνες που αφορούν το σύμβολο για διεθνή μεταφορά εμπορευμάτων με τον σιδηρόδρομο (CIM).
- Ο όρος "μεταφορά χύμα" σημαίνει τη μεταφορά στερεάς ύλης χωρίς συσκευασία.
- Ο όρος "εμπορευματοκιβώτιο" (container) σημαίνει αντικείμενο εξοπλισμού μεταφοράς (ανυσούμενο όχημα, αποσυναρμολογούμενη δεξαμενή ή άλλες παρόμοιες κατασκευές):
  - μόνιμου χαρακτήρα και κατά συνέπεια αρκετά στερεό για να είναι κατάλληλος για επανειλημμένη χρήση,
  - ειδικά σχεδιασμένος για να διευκολύνει τη μεταφορά εμπορευμάτων, με ένα ή περισσότερα μέσα μεταφοράς, χωρίς θραύση του φορτίου,
  - εξοπλισμένου με συσκευές που επιτρέπουν τον έγκαιρο χειρισμό του, ειδικότερα όταν μεταφορτώνεται από ένα μέσον μεταφοράς σε άλλο,
  - σχεδιασμένος κατά τέτοιο τρόπο ώστε να είναι εύκολο το γέμισμα και το άδειασμα, και να έχει εσωτερικό όγκο όχι λιγότερο από 1 m<sup>3</sup>.

## Γενικές Διατάξεις

10 014  
(συνεχ.)

- Ο όρος "εμπορευματοκιβώτιο" δεν καλύπτει συμβατικές συσκευασίες, ή IBC, ή οχήματα, ή εμπορευματοκιβώτια-δεξαμενές. Μόνο για την Κλάση 7, ο όρος "εμπορευματοκιβώτιο" ορίζεται στο περιθωριακό 2700 (2).
- Ο όρος "μεγάλο εμπορευματοκιβώτιο" σημαίνει εμπορευματοκιβώτιο που έχει εσωτερικό όγκο πάνω από 3 m<sup>3</sup>.
  - Ο όρος "μικρό εμπορευματοκιβώτιο" σημαίνει εμπορευματοκιβώτιο που έχει εσωτερικό όγκο όχι λιγότερο από 1 m<sup>3</sup> και όχι περισσότερο από 3 m<sup>3</sup>.
  - Ο όρος "εμπορευματοκιβώτιο-δεξαμενή" σημαίνει είδος εξοπλισμού μεταφοράς που ταιριάζει με τον ορισμό του όρου "εμπορευματοκιβώτιο" που δίνεται παραπάνω και κατασκευασμένο για να περιέχει υγρές, αερίωδεις, σε σκόνη ή σε κόκκους ύλες, αλλά που έχει χωρητικότητα πάνω από 0.45 m<sup>3</sup>.
  - Ο όρος "συστοιχία δοχείων" ή "συστοιχία δεξαμενών" σημαίνει συγκρότημα που περιλαμβάνει αριθμό δοχείων όπως αυτά ορίζονται στο περιθωριακό 2212 (1)(b), ή δεξαμενών όπως αυτές ορίζονται στο περιθωριακό 2212 (1)(c), τα οποία αλληλοσυνδέονται με πολλαπλό αγωγό και είναι μόνιμα τοποθετημένα πάνω σε πλαίσιο.
  - Ο όρος "αποσυναρμολογούμενη δεξαμενή" σημαίνει δεξαμενή άλλη, εκτός από σταθερή δεξαμενή, εμπορευματοκιβώτιο-δεξαμενή ή συστοιχία δοχείων, που έχει χωρητικότητα πάνω από 1000 λίτρα, δεν είναι σχεδιασμένη για τη μεταφορά εμπορευμάτων χωρίς θραύση φορτίου, και συνήθως χειρισμός της μπορεί να γίνει μόνο όταν είναι άδεια.
  - Ο όρος "σταθερή δεξαμενή" σημαίνει δεξαμενή που είναι δομικά προσαρτημένη σε όχημα (που τότε γίνεται όχημα δεξαμενή) ή αποτελεί αναπόσπαστο μέρος του πλαισίου αυτού του οχήματος.
  - Ο όρος "δεξαμενή" όταν χρησιμοποιείται χωριστά, σημαίνει εμπορευματοκιβώτιο-δεξαμενή ή δεξαμενή χωρητικότητας που ξεπερνά το 1 m<sup>3</sup> που μπορεί να είναι σταθερή δεξαμενή, αποσυναρμολογούμενη δεξαμενή ή συστοιχία δοχείων. (Βλέπε, εντούτοις, περιορισμό στην έννοια της λέξεως "δεξαμενή" στις διατάξεις των Προσθηκών Β.1, περιθωριακό 200 000 (2)).
  - Ο όρος "μονάδα μεταφοράς" σημαίνει αυτοκίνητο όχημα χωρίς προσαρτημένο συρόμενο όχημα, ή συρμό αποτελούμενο από αυτοκίνητο όχημα και προσαρτημένο συρόμενο όχημα.
  - Ο όρος "κλειστό όχημα" σημαίνει όχημα που έχει αμάξωμα που μπορεί να κλείνει.
  - Ο όρος "ανοικτό όχημα" σημαίνει όχημα του οποίου η πλατφόρμα δεν έχει υπερκατασκευή ή έχει απλώς πλευρικά και οπίσθια σανδύματα.
  - Ο όρος "όχημα με κάλυμμα" σημαίνει ανοικτό όχημα εφοδιασμένο με κάλυμμα για την προστασία του φορτίου.
  - Ο όρος "όχημα δεξαμενή" σημαίνει όχημα κατασκευασμένο για τη μεταφορά υγρών, αερίων ή υλών σε σκόνη ή σε κόκκους που περιλαμβάνουν μία ή περισσότερες σταθερές δεξαμενές.
  - Ο όρος "όχημα συστοιχία" σημαίνει όχημα με συστοιχία δοχείων ή με συστοιχία δεξαμενών το οποίο καλύπτεται από τον όρο "όχημα δεξαμενή"
  - Ο όρος "όχημα βάσης" σημαίνει κάθε ημιτελές αυτοκίνητο όχημα ή το συρόμενο όχημά του που αντιστοιχεί σε εγκεκριμένο τύπο σύμφωνα με την Προσθήκη Β.2.

## Γενικές Διατάξεις

**10 014 (2)** Για την εφαρμογή του παρόντος Παραρτήματος, οι δεξαμενές [βλέπε ορισμό στο (συνεχ.) παραπάνω (1)] δεν είναι τοποθετημένες πάνω στην ίδια βάση όπως τα δοχεία, του όρου "δοχεία" χρησιμοποιούμενου με περιορισμένη έννοια. Οι διατάξεις που αφορούν δοχεία έχουν εφαρμογή σε σταθερές δεξαμενές, συστοιχίες δοχείων, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές μόνο αν αυτό καθορίζεται ρητά.

(3) Ο όρος "πλήρες φορτίο" σημαίνει οποιοδήποτε φορτίο που προέρχεται από ένα αποστολέα, για τον οποίο η χρήση ενός οχήματος ή μεγάλου εμπορευματοκιβωτίου κρατείται αποκλειστικά και όλες οι εργασίες φορτώσεως και εκφορτώσεως γίνονται σύμφωνα με τις οδηγίες του αποστολέα ή του παραλήπτη (βλέπε περιθωριακό 10 108).

(4) Τα "Απόβλητα" είναι ύλες, διαλύματα, μείγματα ή είδη για τα οποία δεν προβλέπεται απ' ευθείας χρήση αλλά μεταφέρονται για επανεπεξεργασία, απόθεση, καταστροφή δι' αποτεφρώσεως ή άλλες μεθόδους διάθεσης.

**10 015 (1)** Εκτός αν ρητώς αναφέρεται διαφορετικά, το σημείο "%" στο παρόν Παράρτημα αντιπροσωπεύει:

(a) Στην περίπτωση αναμείξεως στερεών ή υγρών, επίσης δε και στην περίπτωση διαλυμάτων και στερεών υγραμένων από υγρό: ποσοστό κατά βάρος βασιζόμενο στο συνολικό βάρος του μείγματος, το διάλυμα ή το βρεγμένο υγρό.

(b) Στην περίπτωση αναμείξεως συμπυκνωμένων αερίων: ποσοστό κατ' όγκο βασιζόμενο στο συνολικό όγκο του μείγματος αερίων. Στη περίπτωση αναμείξεως υγροποιημένων αερίων και αερίων διαλυμένων υπό πίεση: ποσοστό κατά βάρος βασιζόμενο στο συνολικό βάρος του μείγματος.

(2) Όταν στο παρόν Παράρτημα αναφέρεται το βάρος κόλου, εννοείται το μικτό βάρος εκτός αν αναφέρεται διαφορετικά. Το βάρος των εμπορευματοκιβωτίων ή δεξαμενών που χρησιμοποιούνται για τη μεταφορά εμπορευμάτων δεν περιλαμβάνεται στο μικτό βάρος.

(3) Οι πιέσεις όλων των ειδών που σχετίζονται με τις δεξαμενές (όπως η πίεση δοκιμής, πίεση εργασίας, πίεση ανοίγματος βαλβίδας ασφαλείας) δείχνονται πάντα σε πίεση μετρητή (πίεση πέρα από την ατμοσφαιρική πίεση) όμως η πίεση εξαερώσεως των υλών εκφράζεται πάνω σε απόλυτη πίεση.

(4) Όπου το παρόν Παράρτημα ορίζει βαθμό πληρώσεως για δεξαμενές, ο βαθμός πληρώσεως δίνεται πάντα για θερμοκρασία των υλών στους 15° C εκτός αν ορίζεται κάποια άλλη θερμοκρασία.

10 016-  
10 099

### ΤΜΗΜΑ 1. Τρόπος μεταφοράς εμπορευμάτων

10 100-  
10 104

#### Μέθοδος αποστολής, περιορισμοί μεταφοράς

**10 105** Η μεταφορά ορισμένων επικινδύνων εμπορευμάτων υπόκειται στις εντεταλμένες χρήσεις ενός συγκεκριμένου τύπου μεταφοράς ή εξοπλισμού. Αυτοί οι ειδικοί όροι καθορίζονται στο παρόν Παράρτημα, Μέρος II, περιθωριακά XX 105.

10 106-  
10 107

## Γενικές Διατάξεις

## Πλήρες φορτίο

10 108 Όπου έχουν εφαρμογή οι διατάξεις περί μεταφοράς σαν "πλήρες φορτίο", οι αρμόδιες αρχές μπορεί να ζητήσουν, όπως το όχημα ή μεγάλο εμπορευματοκιβώτιο που χρησιμοποιείται γι' αυτή τη μεταφορά να φορτωθεί μόνο σε ένα σημείο και να εκφορτωθεί μόνο σε ένα σημείο.

10 109-  
10 110

## Μεταφορά χύμα

10 111 (1) Οι στερεές επικίνδυνες ύλες δεν μπορεί να μεταφέρονται χύμα εκτός αν αυτός ο τρόπος μεταφοράς επιτρέπεται ρητά γι' αυτές τις ύλες από τις διατάξεις του Μέρους II του παρόντος Παραρτήματος, και τότε μόνο κάτω από τις συνθήκες που καθορίζονται από εκείνες τις διατάξεις. Παρ' όλα αυτά, η κενή συσκευασία, χωρίς να έχει καθαριστεί, μπορεί να μεταφέρεται χύμα αν αυτός ο τρόπος μεταφοράς δεν απαγορεύεται ρητά από τις απαιτήσεις του Παραρτήματος Α. Μέρος II.

(2) Για μεταφορά χύμα σε εμπορευματοκιβώτια, βλέπε περιθωριακό 10 118 (2).

**ΣΗΜΕΙΩΣΗ:** Βλέπε περιθωριακό 10 500 για το μαρκάρισμα και την επισήμανση οχημάτων μεταφοράς χύμα

10 112-  
10 117

## Μεταφορά σε εμπορευματοκιβώτια

**ΣΗΜΕΙΩΣΗ:** Οι διατάξεις που αφορούν μεταφορά σε εμπορευματοκιβώτια-δεξαμενές καθορίζονται στα περιθωριακά που τιτλοφορούνται "Μεταφορά σε δεξαμενές".

10 118 (1) Η μεταφορά κόλων σε εμπορευματοκιβώτια επιτρέπεται.

(2) Ύλες δεν μπορεί να μεταφέρονται χύμα σε εμπορευματοκιβώτια εκτός αν η μεταφορά τους χύμα επιτρέπεται ρητά (βλέπε περιθωριακό 10 111), τα μικρά εμπορευματοκιβώτια θα είναι του κλειστού τύπου και θα έχουν πλήρη τοιχώματα.

(3) Τα μεγάλα εμπορευματοκιβώτια θα ανταποκρίνονται στις απαιτήσεις που αφορούν το αμάξωμα του οχήματος που καθορίζεται στο παρόν Παράρτημα για το φορτίο για το οποίο πρόκειται, το αμάξωμα του οχήματος τότε δεν χρειάζεται να ανταποκρίνεται σ' αυτές τις διατάξεις.

(4) Με την επιφύλαξη των διατάξεων της τελευταίας φράσεως στο παραπάνω (3), το γεγονός ότι επικίνδυνες ύλες περιέχονται σε ένα ή περισσότερα εμπορευματοκιβώτια δεν θα θίγει τους όρους που πρέπει, καλύπτει το όχημα εξ αιτίας της φύσεως και των ποσοτήτων των μεταφερόμενων επικίνδυνων υλών.

**ΣΗΜΕΙΩΣΗ:** Βλέπε περιθωριακό 10 500 για το μαρκάρισμα και την επισήμανση εμπορευματοκιβωτίων.

10 119-  
10 120

## Γενικές Διατάξεις

## Μεταφορά σε δεξαμενές

10 121 (1) Οι επικίνδυνες ύλες μπορεί να μεταφέρονται σε δεξαμενές μόνο αν αυτός ο τρόπος μεταφοράς επιτρέπεται ρητά γι' αυτές τις ύλες από τις διατάξεις περί χρησιμοποίησης σταθερών δεξαμενών, αποσυναρμολογούμενων δεξαμενών και συστοιχιών δοχείων που ορίζονται σε κάθε Τμήμα 1 της Προσθήκης Β.1α, Μέρος ΙΙ και εκείνες πάνω στη χρήση των εμπορευματοκιβωτίων-δεξαμενών που ορίζονται σε κάθε Τμήμα 1 της Προσθήκης Β.1β, Μέρος ΙΙ.

(2) Δεξαμενές ενισχυμένου πλαστικού μπορεί να χρησιμοποιούνται μόνο αν η χρήση τους επιτρέπεται ρητά στην Προσθήκη Β.1c, περιθωριακό 213 010 (Χρήση). Η θερμοκρασία της μεταφερόμενης ύλης δεν θα υπερβαίνει τους 50° C κατά το χρόνο της πλήρωσας.

**ΣΗΜΕΙΩΣΗ:** Βλέπε περιθωριακό 10 500 για το μαρκάρισμα και την επισήμανση των οχημάτων με σταθερές ή αποσυναρμολογούμενες δεξαμενές.

10 122-  
10 199

## ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από το μέσο μεταφοράς και τον εξοπλισμό του

10 200-  
10 203

## Τύποι οχήματος

10 204 (1) Μεταφορική μονάδα φορτωμένη με επικίνδυνες ύλες σε καμιά περίπτωση δεν μπορεί να περιλαμβάνει περισσότερα από ένα συρόμενο ή επικαθήμενο όχημα.

(2) Ειδικές διατάξεις που αφορούν τους τύπους οχήματος που θα χρησιμοποιηθεί για τη μεταφορά ορισμένων επικινδύνων υλών θα βρεθούν, όπου χρειάζεται, στο Μέρος ΙΙ του παρόντος Παραρτήματος (βλέπε επίσης τα περιθωριακά που αναφέρονται σε μεταφορά σε εμπορευματοκιβώτια, μεταφορά στερεών υλών χύμα, μεταφορά σε δεξαμενές, και δεξαμενές).

(3) Κόλα που περιλαμβάνουν συσκευασίες από υλικά που είναι ευαίσθητα στην υγρασία θα φορτώνονται σε οχήματα με κάλυμμα.

10 205-  
10 219

Οχήματα χρησιμοποιούμενα για την μεταφορά επικινδύνων εμπορευμάτων σε σταθερές ή αποσυναρμολογούμενες δεξαμενές, συστοιχίες δοχείων ή εμπορευματοκιβώτια-δεξαμενές με χωρητικότητα μεγαλύτερη από 3000 λίτρα

**ΣΗΜΕΙΩΣΕΙΣ:** (α) Οι διατάξεις που αφορούν το σχέδιο, επιθεώρηση, πλήρωση και χρήση των σταθερών δεξαμενών, αποσυναρμολογούμενων δεξαμενών και συστοιχιών δοχείων, και οι διάφορες διατάξεις που αφορούν οχήματα - δεξαμενές και τη χρήση αυτών, θα βρίσκονται στη Προσθήκη Β.1α και όσον αφορά το σχέδιο των σταθερών δεξαμενών, αποσυναρμολογούμενων δεξαμενών και συστοιχιών δοχείων που προορίζονται για τη μεταφορά υγροποιημένων αερίων βαθιάς καταπόξεως της Κλάσης 2 ή που απαιτούν δοκιμή πίεσης όχι μικρότερης του 1 ΜΡα(10 bar) στην Προσθήκη Β.1d (για την έγκριση οχημάτων-δεξαμενών βλέπε περιθωριακό 10 282).

## Γενικές Διατάξεις

10 219

(συνεχ.)

(b) Οι διατάξεις που αφορούν την κατασκευή, τα είδη του εξοπλισμού, έγκριση τύπου, δοκιμές, μαρκάρισμα, κ.λπ. των εμπορευματοκιβωτίων-δεξαμενών υπάρχουν στην Προσθήκη Β.1b και όσον αφορά την κατασκευή των εμπορευματοκιβωτίων-δεξαμενών που προορίζονται για τη μεταφορά υγροποιημένων αερίων βαθιάς καταψύξεως της Κλάσης 2 ή που απαιτούν δοκιμή πίεσης όχι μικρότερης του 1 ΜΡα(10 bar), στην Προσθήκη Β.1d.

(c) Οι διατάξεις που αφορούν την κατασκευή σταθερών δεξαμενών και αποσυναρμολογούμενων δεξαμενών από ενισχυμένο πλαστικό υπάρχουν στην Προσθήκη Β.1c.

(d) Οι κοινές διατάξεις των Προσθηκών Β.1 υπάρχουν στο περιθωριακό 200 000.

(e) Για τα δοχεία, βλέπε Παράρτημα Α.

10 220

(1) Οπίσθια προστασία των οχημάτων: Προφυλακτήρας αρκετά ανθεκτικός στην πρόσκρουση από πίσω θα τοποθετείται στο πλήρες πλάτος της δεξαμενής στο πίσω μέρος του οχήματος. Θα υπάρχει διάκενο 100 mm τουλάχιστο μεταξύ του πίσω τοιχώματος της δεξαμενής και του πίσω μέρους του προφυλακτήρα (διάκενο που μετράται από το πιο πάνω σημείο της δεξαμενής ή από προεξέχοντα εξαρτήματα που βρίσκονται σε επαφή με τη μεταφερόμενη ύλη). Οχήματα με δεξαμενή με τέντα για την μεταφορά υλών σε σκόνη ή σε κόκκους με πίσω εκφόρτωση δεν χρειάζονται προφυλακτήρα εάν τα πίσω εξαρτήματα της δεξαμενής είναι εφοδιασμένα με μέσα προστασίας που προφυλάσσουν την δεξαμενή με τον ίδιο τρόπο όπως ένας προφυλακτήρας.

**ΣΗΜΕΙΩΣΗ 1:** Αυτή η διάταξη δεν εφαρμόζεται σε οχήματα που χρησιμοποιούνται για την μεταφορά επικίνδυνων εμπορευμάτων σε εμπορευματοκιβώτια-δεξαμενές.

**ΣΗΜΕΙΩΣΗ 2:** Για την προστασία των δεξαμενών από ζημία προερχόμενη από πλευρική πρόσκρουση ή ανατροπή, βλέπε το περιθωριακό 211 127 (4) και (5).

(2) Οχήματα που μεταφέρουν υγρά που έχουν σημείο αναφλέξεως 61° C ή παρακάτω ή οι εύφλεκτες ύλες της Κλάσης 2 όπως ορίζονται στο περιθωριακό 2200 (3) θα ανταποκρίνονται επί πλέον στις απαιτήσεις των περιθωριακών 220 532, 220 533 και 220 534 της Προσθήκης Β.2.

## Πέδηση

10 221

(1) Αυτοκίνητα οχήματα (ελκυστήρες και ενιαία οχήματα) με μέγιστο βάρος που υπερβαίνει τους 16 τόνους, και συρόμενα οχήματα (δηλ. πλήρη συρόμενα οχήματα, επικαθήμενα και συρόμενα κεντρικού άξονα) με μέγιστο βάρος που υπερβαίνει τους 10 τόνους<sup>2/</sup>, που αποτελούν τους παρακάτω τύπους μεταφορικών μονάδων:

- δεξαμενές οχήματα,
- οχήματα που μεταφέρουν αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων,
- οχήματα που μεταφέρουν εμπορευματοκιβώτια-δεξαμενές με χωρητικότητα μεγαλύτερη από 3 000 λίτρα, και
- μεταφορικές μονάδες τύπου III [βλέπε περιθωριακό 11 204 (3)],

<sup>2/</sup> Για τα επικαθήμενα και συρόμενα οχήματα κεντρικού άξονα, το μέγιστο βάρος αναφέρεται στο βάρος που διαβιβάζεται στο έδαφος από τον άξονα ή τους άξονες του επικαθήμενου ή του συρόμενου οχήματος κεντρικού άξονα, όταν αυτό το συρόμενο είναι ενωμένο με το έλκον όχημα και μεταφέρει το μέγιστο του φορτίο.

## Γενικές Διατάξεις

**10 221** που γράφτηκαν για πρώτη φορά μετά την 30 Ιουνίου 1993, θα προσαρμόζονται με ένα σύστημα (συνεχ.) πέδησης με προστασία από κλειδώμα (anti-lock), η απόδοση του οποίου θα ικανοποιεί τις διατάξεις των περιθωριακών 220 520 και 220 521 της Προσθήκης Β.2.

(2) Κάθε μεταφορική μονάδα ενός τύπου που ορίζεται στην παραπάνω παράγραφο (1), η οποία περιλαμβάνει αυτοκίνητο όχημα και/ή συρόμενο ενός τύπου που ορίζεται παραπάνω στο (1) θα προσαρμόζεται με ένα σύστημα πέδησης αντοχής που θα ικανοποιεί τις απαιτήσεις των περιθωριακών 220 522 και 220 535 της Προσθήκης Β.2.

Όταν η μεταφορική μονάδα περιλαμβάνει ένα αυτοκίνητο όχημα και ένα συρόμενο όχημα, η απαίτηση εφαρμόζεται όταν το αυτοκίνητο όχημα έχει εγγραφεί μετά τις 30 Ιουνίου 1993.

(3) Κάθε μεταφορική μονάδα ενός τύπου που ορίζεται στην παραπάνω παράγραφο (1) που βρίσκεται σε λειτουργία μετά την 31 Δεκεμβρίου 1999 θα πρέπει να είναι εφοδιασμένη με τα εξαρτήματα που αναφέρονται στις παραγράφους (1) και (2).

**10 222-  
10 239**

## Συσκευές καταπολέμησης πυρκαϊάς

**10 240** (1) Κάθε μεταφορική μονάδα που μεταφέρει επικίνδυνα εμπορεύματα θα είναι εξοπλισμένη με:

(a) Τουλάχιστο ένα φορητό πυροσβεστήρα με ελάχιστη χωρητικότητα 2 kg στεγνής σκόνης (ή αντίστοιχη τάξη για κατάλληλα πυροσβεστικά), κατάλληλο για την καταπολέμηση πυρκαϊάς στον κινητήρα ή σε οποιοδήποτε άλλο τμήμα της μεταφορικής μονάδας, τέτοιο ώστε, αν χρησιμοποιηθεί για την καταπολέμηση πυρκαϊάς στο φορτίο, δεν επιδεινώνει τη φωτιά και αν είναι δυνατόν, την ελέγχει. Εντούτοις, αν το όχημα είναι εφοδιασμένο με μόνιμο πυροσβεστήρα, αυτόματο ή εύκολα τιθέμενο σε λειτουργία για την καταπολέμηση πυρκαϊάς στον κινητήρα, ο φορητός πυροσβεστήρας δεν χρειάζεται να είναι κατάλληλος για την καταπολέμηση φωτιάς στον κινητήρα.

(b) Πέραν από τον εξοπλισμό που περιγράφεται στο παραπάνω (a), τουλάχιστον ένας φορητός πυροσβεστήρας με ελάχιστη χωρητικότητα 6 kg στεγνής σκόνης (ή αντίστοιχη τάξη για κατάλληλα πυροσβεστικά), κατάλληλος για την καταπολέμηση φωτιάς στα ελαστικά/φρένα ή στο φορτίο, και τέτοιος ώστε, αν χρησιμοποιηθεί για καταπολέμηση φωτιάς στον κινητήρα ή σε οποιοδήποτε άλλο τμήμα της μεταφορικής μονάδας, να μην επιδεινώνει τη φωτιά. Αυτοκίνητα οχήματα με μέγιστο επιτρεπόμενο βάρος φορτωμένα μικρότερο από 3.5 τόνους θα είναι εφοδιασμένα με ένα φορητό πυροσβεστήρα ελάχιστης χωρητικότητας 2 kg σκόνη.

(2) Ο κατασβεστικός παράγων που περιέχεται στους πυροσβεστήρες με τους οποίους είναι εφοδιασμένη μια μεταφορική μονάδα θα είναι τέτοιοι ώστε να μην εξαπολύουν τοξικά αέρια στο κουβούκλιο του οδηγού ή υπό την επίδραση της θερμότητας της φωτιάς.

(3) Οι φορητοί πυροσβεστήρες που υπόκεινται στις διατάξεις της παραπάνω παραγράφου (1) θα είναι κλεισμένοι με σφραγίδα που θα επιβεβαιώνει ότι δεν έχουν χρησιμοποιηθεί. Επί πλέον, θα φέρουν ένα σήμα συμμόρφωσης με τις προδιαγραφές που αναγνωρίζονται από την αρμόδια υπηρεσία καθώς και μία εγγραφή που θα υποδεικνύει την προσεχή ημερομηνία ελέγχου..

## Γενικές Διατάξεις

**10 240** (4) Όπου μια μεταφορική μονάδα περιλαμβάνει συρόμενο όχημα και το φορτωμένο συρόμενο (συνεχ.) όχημα είναι ασύνδετο και έχει αφεθεί στη δημόσια εθνική οδό, σε κάποια απόσταση από το έλκον όχημα, το συρόμενο όχημα θα είναι εξοπλισμένο με τουλάχιστον ένα πυροσβεστήρα σύμφωνα με τις διατάξεις του εδαφίου (1) (b) του παρόντος περιθωριακού.

**10 241-  
10 250**

## Ηλεκτρικός εξοπλισμός

**10 251** Οι προϋποθέσεις που αφορούν τον ηλεκτρικό εξοπλισμό που ορίζεται στο περιθωριακό 220 511 της Προσθήκης Β.2 θα έχουν εφαρμογή σε κάθε μεταφορική μονάδα που μεταφέρει επικίνδυνες ύλες για τις οποίες απαιτείται μία έγκριση σύμφωνα με τα περιθωριακά 10 282 και 10 283. Οι προϋποθέσεις στα περιθωριακά 220 512 έως 220 516 της Προσθήκης Β.2 θα εφαρμόζονται μόνο στα παρακάτω οχήματα:

- (a) Οχήματα που φέρουν δεξαμενές (σταθερές ή αποσυναρμολογούμενες) ή συστοιχίες δοχείων που μεταφέρουν είτε υγρά που έχουν σημείο αναφλέξεως 61° C ή παρακάτω, ή τα εύφλεκτα αέρια της Κλάσης 2 που αναγράφονται στο περιθωριακό 2200 (3). Οχήματα που φέρουν δεξαμενές (σταθερές ή αποσυναρμολογούμενες) που μεταφέρουν καύσιμο ντίζελ, γκαζόιλ ή ελαφρύ πετρέλαιο θέρμανσης, με τον αριθμό αναγνώρισης 1202, εγγεγραμμένο πριν τον Ιούλιο του 1995 και τα οποία δεν συμφωνούν με αυτό το περιθωριακό, μπορούν εντούτοις να χρησιμοποιούνται.
- (b) Οχήματα προοριζόμενα για τη μεταφορά εκρηκτικών και που πρέπει να ανταποκρίνονται στις προϋποθέσεις του περιθωριακού 11 204 (3) για μεταφορικές μονάδες του τύπου III.

**10 252-  
10 259**

## Διάφορος εξοπλισμός

**10 260** Κάθε μεταφορική μονάδα που μεταφέρει επικίνδυνα εμπορεύματα θα είναι εφοδιασμένη με:

- (a) κιβώτιο εργαλείων για επείγουσες επισκευές του οχήματος,
- (b) για κάθε όχημα, τουλάχιστο ένα τάκο κατάλληλου μεγέθους προς το βάρος του οχήματος και τη διάμετρο των τροχών,
- (c) δύο κίτρινα φάτα. Αυτά τα φάτα θα είναι ανεξάρτητα από τον ηλεκτρικό εξοπλισμό του οχήματος και θα είναι έτσι σχεδιασμένα ώστε η χρήση τους να μη μπορεί να προκαλέσει ανάφλεξη των μεταφερόμενων εμπορευμάτων. Αυτά τα φάτα θα είναι σταθερά ή αναβροσβήνοντα.
- (d) ο απαραίτητος εξοπλισμός για την λήψη των άμεσων μέτρων ασφαλείας που αναφέρονται στις οδηγίες ασφαλείας που ορίζονται στο περιθωριακό 10 385.

**10 261** (1) Αυτοκίνητα οχήματα (ελκυστήρες και ενιαία οχήματα) με μέγιστο βάρος που ξεπερνά τους 12 τόνους, εγγεγραμμένα για πρώτη φορά μετά την 1 Ιουλίου 1995, θα είναι εφοδιασμένα με έναν μηχανισμό περιορισμού της ταχύτητας σύμφωνα με το περιθωριακό 220 540 της Προσθήκης Β.2.

## Γενικές Διατάξεις

**10 261** (2) Οι προϋποθέσεις της παραπάνω παραγράφου (1) εφαρμόζονται επίσης σε οχήματα με τα ίδια χαρακτηριστικά που έχουν εγγραφεί ανάμεσα στην 1 Ιανουαρίου 1988 και την 1 Ιουλίου 1995, όπως από την 1 Ιουλίου 1996.

**10 262-  
10 280**

## Έγκριση οχημάτων

**10 281** Μετά από αίτηση του κατασκευαστή ή του κανονικά εξουσιοδοτημένου αντιπροσώπου, οχήματα βάσης νέων αυτοκινήτων οχημάτων και τα συρόμενα οχήματά τους τα οποία υπόκεινται σε έγκριση σύμφωνα με τα περιθωριακά 10 282 και 10 283, μπορούν να εγκριθούν από μία αρμόδια υπηρεσία σύμφωνα με την Προσθήκη Β.2. Αυτή η έγκριση του τύπου θα γίνει αποδεκτή ως διασφαλίζουσα τη συμφωνία του οχήματος βάσης όταν αποκτηθεί η έγκριση ολόκληρου του οχήματος, αρκεί καμία τροποποίηση του οχήματος βάσης να μην μεταβάλλει την ισχύ της έγκρισης.

**10 282** (1) Οχήματα - δεξαμενές, οχήματα που φέρουν αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων και, όπου χρειάζεται σύμφωνα με τις διατάξεις του Μέρους II του παρόντος Παραρτήματος, άλλα οχήματα θα υπόκεινται σε τεχνική επιθεώρηση στη χώρα εγγραφής τους για να εξασφαλιστεί ότι είναι σύμφωνα με τις διατάξεις του παρόντος Παραρτήματος, περιλαμβανόμενων εκείνων των προσηκόντων του και τις γενικές διατάξεις ασφαλείας (που αφορούν τα φρένα, τον φωτισμό κ.λπ.) που ισχύουν στη χώρα εγγραφής τους. Αν αυτά τα οχήματα είναι συρόμενα ή επικαθήμενα συνδεμένα πίσω από ελκυστήρα, ο ελκυστήρας θα υπόκειται σε τεχνική επιθεώρηση για τους ίδιους σκοπούς.

(2) Πιστοποιητικό εγκρίσεως θα εκδίδεται από την αρμόδια αρχή της χώρας εγγραφής για κάθε όχημα του οποίου η επιθεώρηση δίνει ικανοποιητικά αποτελέσματα. Θα είναι συντεταγμένο στη γλώσσα ή σε μία από τις γλώσσες της χώρας που το εκδίδει, επίσης δε αν αυτή η γλώσσα δεν είναι η Αγγλική, Γαλλική ή Γερμανική, στην Αγγλική, Γαλλική ή Γερμανική, εκτός αν συμφωνίες που έχουν συναφθεί μεταξύ των ενδιαφερομένων χωρών στο χώρο της μεταφοράς προβλέπουν διαφορετικά. Θα είναι όπως το υπόδειγμα που δίνεται στην Προσθήκη Β.3.

(3) Ειδικό πιστοποιητικό εγκρίσεως που εκδίδεται από τις αρμόδιες αρχές ενός Κράτους Μέλους για όχημα εγγεγραμμένο στην περιοχή εκείνου του Κράτους Μέλους θα γίνεται δεκτό, εφόσον η ισχύς του συνεχίζεται, από τις αρμόδιες αρχές των άλλων Κρατών Μελών.

(4) Η ισχύς του ειδικού πιστοποιητικού εγκρίσεως θα λήγει όχι αργότερα από ένα έτος μετά την ημερομηνία του τεχνικού ελέγχου του οχήματος που προηγείται της εκδόσεως του πιστοποιητικού. Εντούτοις, στην περίπτωση δεξαμενών που υπόκεινται σε υποχρεωτική περιοδική επιθεώρηση αυτή η διάταξη δεν θα σημαίνει ότι οι δοκιμές στεγανότητας, οι δοκιμές υδραυλικής πίεσεως ή οι εσωτερικές επιθεωρήσεις των δεξαμενών πρέπει να γίνονται σε χρονικά διαστήματα βραχύτερα εκείνων που ορίζονται στις Προσθήκες Β.1α και Β.1c.

**10 283** Οι μεταφορικές μονάδες που προορίζονται για τη μεταφορά εμπορευματοκιβωτίων-δεξαμενών που υπερβαίνουν τη χωρητικότητα των 3 000 λίτρων θα υπόκεινται σε ετήσιο τεχνικό έλεγχο στη χώρα εγγραφής τους για να εξασφαλιστεί ότι ανταποκρίνονται στις γενικές διατάξεις ασφαλείας που αφορούν φρένα, φωτισμό κ.λπ. που ισχύουν στη χώρα τους. Πιστοποιητικό εγκρίσεως θα εκδίδεται από την αρμόδια αρχή της χώρας εγγραφής για κάθε στοιχείο της μεταφορικής μονάδας της οποίας η επιθεώρηση δίνει ικανοποιητικά αποτελέσματα. Η ημερομηνία της τελευταίας επιθεωρήσεως πρέπει να καθορίζεται. Το υπόδειγμα που υπάρχει στην Προσθήκη Β.3 μπορεί να χρησιμοποιείται γι' αυτό το πιστοποιητικό.

**10 284-  
10 299**

## Γενικές Διατάξεις

## ΤΜΗΜΑ 3. Γενικές απαιτήσεις εξυπηρέτησως

10 300-  
10 310

## Πληρώματα οχήματος

10 311 Όπου οι σχετικές διατάξεις του Μέρους II του παρόντος Παραρτήματος απαιτούν την παρουσία στο όχημα βοηθού, ο βοηθός πρέπει να είναι σε θέση να αναλάβει το όχημα από τον οδηγό.

10 312-  
10 314

## Ειδική εκπαίδευση οδηγών

10 315 (1) Οι οδηγοί οχημάτων - δεξαμενών ή μεταφορικών μονάδων που φέρουν δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές με ολική χωρητικότητα μεγαλύτερη των 3 000 λίτρων και/ή επιτρεπόμενο μέγιστο βάρος που υπερβαίνει 3.5 τόνους και, όπου αυτό απαιτείται από τις διατάξεις του Μέρους II του παρόντος Παραρτήματος, οι οδηγοί άλλων οχημάτων θα κρατούν πιστοποιητικό εκδιδόμενο από την αρμόδια αρχή ή από οργανισμό αναγνωρισμένο από εκείνη την αρχή που θα αναφέρει ότι έχουν συμμετάσχει σε εκπαιδευτικό κύκλο και έχουν περάσει τις εξετάσεις πάνω στις συγκεκριμένες απαιτήσεις που πρέπει να ανταποκρίνονται κατά τη διάρκεια μεταφοράς επικίνδυνων εμπορευμάτων.

(2) Από την 1 Ιανουαρίου 1995, οι οδηγοί οχημάτων άλλων από εκείνα που σημειώνονται υπό την παράγραφο (1) με επιτρεπόμενο μέγιστο βάρος που υπερβαίνει τους 3.5 τόνους, των κατηγοριών C και E που αναφέρονται στο Παράρτημα 6 της Συνθήκης για την Οδική Κυκλοφορία (1968), πρέπει να φέρουν πιστοποιητικό όπως περιγράφεται στην παράγραφο (1).

(3) Με κατάλληλες ανανεώσεις πάνω σ' αυτό το πιστοποιητικό του που θα γίνονται κάθε πέντε χρόνια από την αρμόδια αρχή ή από τον οργανισμό που είναι αναγνωρισμένος από εκείνη την αρχή ο οδηγός του οχήματος πρέπει να είναι σε θέση να δείξει ότι μέσα στο έτος πριν την ημερομηνία λήξης του πιστοποιητικού του έχει συμπληρώσει έναν κύκλο ανανέωσης της εκπαίδευσης και έχει περάσει με επιτυχία την εγκεκριμένη από αυτή την αρχή δοκιμασία.

(4) Η εκπαίδευση θα γίνεται σε κύκλους εκπαίδευσως εγκεκριμένους από την αρμόδια αρχή. Οι κύριοι στόχοι της είναι να ενημερώσει τους οδηγούς για τους κινδύνους που παρουσιάζονται στη μεταφορά επικίνδυνων εμπορευμάτων και να τους δώσει βασικές πληροφορίες απαραίτητες για την ελαχιστοποίηση του ενδεχόμενου ατυχήματος και, αν γίνει, να μπορέσουν να λάβουν μέτρα που μπορεί να αποδειχθούν αναγκαία για την δική τους ασφάλεια και εκείνη του περιβάλλοντος και για τον περιορισμό των συνεπειών του συμβάντος. Η εκπαίδευση αυτή, η οποία πρέπει να περιλαμβάνει ατομικές πρακτικές ασκήσεις, θα πρέπει να καλύπτει ως βασική εκπαίδευση για όλες τις κατηγορίες οδηγών:

- (a) Τις γενικές προϋποθέσεις που καλύπτουν τη μεταφορά επικίνδυνων εμπορευμάτων.
- (b) Τους κύριους τύπους κινδύνων.
- (c) Πληροφορίες σχετικά με την περιβαλλοντική προστασία στον έλεγχο της μεταφοράς αποβλήτων.

## Γενικές Διατάξεις

10 315  
(συνεχ.)

- (d) Προληπτικά και μέτρα ασφαλείας κατάλληλα για τους διάφορους τύπους κινδύνου.
- (e) Τι να κάνουν μετά από ατύχημα (πρώτες βοήθειες, οδική ασφάλεια, βασικές γνώσεις για τη χρήση προστατευτικού εξοπλισμού, κ.λπ.).
- (f) Επισήμανση και μαρκάρισμα για να δείχνεται κίνδυνος.
- (g) Τι πρέπει να κάνει και τι πρέπει να μην κάνει ο οδηγός κατά τη διάρκεια μεταφοράς επικινδύνων εμπορευμάτων.
- (h) Το σκοπό και τη μέθοδο λειτουργίας του τεχνικού εξοπλισμού πάνω σε οχήματα.
- (i) Απαγορεύσεις σχετικές με μικτά φορτία στο ίδιο όχημα ή εμπορευματοκιβώτιο.
- (j) Προφυλάξεις που πρέπει να λαμβάνονται κατά την φόρτωση και εκφόρτωση επικινδύνων φορτίων.
- (k) Γενικές πληροφορίες που αφορούν την αστική ευθύνη.
- (l) Πληροφορίες σχετικά με τις συνδυασμένες μεταφορές.

Για τους οδηγούς οχημάτων που μεταφέρουν εμπορεύματα σε κόλα, οι γνώσεις που απαιτούνται για την απόκτηση πιστοποιητικού εκπαίδευσης θα πρέπει επίσης να καλύπτουν:

- (m) Τον χειρισμό και την στοibaσία των κόλων.

Για τους οδηγούς οχημάτων που μεταφέρουν εμπορεύματα σε δεξαμενές, οι γνώσεις που απαιτούνται για την απόκτηση πιστοποιητικού εκπαίδευσης θα πρέπει επίσης να καλύπτουν:

- (n) Τη συμπεριφορά οχημάτων που φέρουν δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές πάνω στο δρόμο, περιλαμβανομένων των κινήσεων του φορτίου.

(5) Όλα τα πιστοποιητικά εκπαίδευσης που είναι σύμφωνα με τις απαιτήσεις του παρόντος περιθωριακού και εκδίδονται σύμφωνα με το υπόδειγμα που υπάρχει στην Προσθήκη Β.6 από τις αρμόδιες αρχές του Κράτους Μέλους ή από οργανισμό αναγνωρισμένο από αυτές τις αρχές, θα γίνονται δεκτά κατά τη διάρκεια της περιόδου ισχύος τους από τις αρμόδιες αρχές άλλων Κρατών Μελών.

(6) Το πιστοποιητικό θα συντάσσεται στην γλώσσα ή σε μία από τις γλώσσες του κράτους της αρμόδιας αρχής η οποία εξέδωσε το πιστοποιητικό ή αναγνώρισε τον οργανισμό έκδοσης και, αν αυτή η γλώσσα δεν είναι η Αγγλική, Γαλλική ή Γερμανική, στην Αγγλική, Γαλλική ή Γερμανική, εκτός αν προβλέπεται διαφορετικά από συμφωνίες που έχουν συναφθεί μεταξύ των ενδιαφερομένων χωρών στο χώρο της μεταφοράς

(7) Πιστοποιητικά που εκδόθηκαν σύμφωνα με το υπόδειγμα που καθορίστηκε στις ισχύουσες διατάξεις αυτής της Οδηγίας έως την 31 Δεκεμβρίου 1989 μπορούν να χρησιμοποιούνται έως την ημερομηνία λήξης τους. Εντούτοις, για την μεταφορά εμπορευμάτων της Κλάσης 1 θα χρησιμοποιούνται μόνο εάν ισχύουν για τις Κλάσεις 1a, 1b και 1c, και για την μεταφορά εμπορευμάτων της Κλάσης 9 θα χρησιμοποιούνται μόνο εάν ισχύουν για τις Κλάσεις 3, 6.1 και 8.

## Γενικές Διατάξεις

**10 315** (8) Πιστοποιητικά που εκδόθηκαν σύμφωνα με το μοντέλο που καθορίστηκε στις ισχύουσες (συνεχ.) διατάξεις αυτής της Οδηγίας έως την 28 Ιανουαρίου 1992 μπορούν να χρησιμοποιούνται για την μεταφορά επικίνδυνων εμπορευμάτων σε δεξαμενές ή για εμπορεύματα της Κλάσης 1 αντίστοιχα έως την ημερομηνία λήξης τους.

**10 316-  
10 320**

## Επίβλεψη οχημάτων

**10 321** Τα οχήματα που μεταφέρουν επικίνδυνα εμπορεύματα σε ποσότητες που αναγράφονται στα σχετικά περιθωριακά του Μέρους II θα τελούν υπό επίβλεψη ή εναλλακτικά μπορεί να σταθμεύουν, χωρίς επίβλεψη, σε απομονωμένη θέση στα ανοικτά σε ασφαλή αποθήκη ή σε ασφαλή κτίρια εργοστασίου. Αν δεν υπάρχουν τέτοιες διευκολύνσεις, το όχημα, αφού διασφαλιστεί κατάλληλα, μπορεί να σταθμεύσει σε μεμονωμένη θέση που ανταποκρίνεται στις απαιτήσεις των παραγράφων (i), (ii) ή (iii) παρακάτω. Οι διευκολύνσεις σταθμεύσεως που επιτρέπονται στην παράγραφο (ii) θα χρησιμοποιούνται μόνο αν αυτές που περιγράφονται στην παράγραφο (i) δεν υπάρχουν και αυτές που περιγράφονται στην παράγραφο (iii) μπορούν να χρησιμοποιούνται μόνο αν δεν υπάρχουν οι διευκολύνσεις που περιγράφονται στις παραγράφους (i) και (ii).

- (i) Χώρος σταθμεύσεως οχημάτων εποπτευόμενος από φύλακα, ο οποίος έχει ειδοποιηθεί για τη φύση του φορτίου και για το μέρος που βρίσκεται ο οδηγός.
- (ii) Δημόσιος ή ιδιωτικός χώρος σταθμεύσεως όπου η μεταφορική μονάδα δεν είναι πιθανό να υποστεί βλάβη από άλλα οχήματα ή
- (iii) Κατάλληλος ανοικτός χώρος χωρισμένος από τη δημόσια εθνική οδό και από κατοικίες, όπου το κοινό συνήθως δεν διέρχεται ή συγκεντρώνεται.

**10 322-  
10 324**

## Μεταφορά επιβατών

**10 325** Εκτός από τα μέλη του πληρώματος οχήματος, δεν θα μεταφέρονται επιβάτες σε μεταφορικές μονάδες που μεταφέρουν επικίνδυνες ύλες.

**10 326-  
10 339**

## Χρήση πυροσβεστικών συσκευών

**10 340** Το πλήρωμα του οχήματος πρέπει να γνωρίζει πως θα χρησιμοποιήσει τις πυροσβεστικές συσκευές.

**10 341-  
10 352**

## Φορητές φωτιστικές συσκευές

**10 353** (1) Στο όχημα δεν μπορεί να εισέρχονται πρόσωπα τα οποία φέρουν φωτιστικές συσκευές που περιλαμβάνουν φλόγα. Επί πλέον, η φωτιστική συσκευή που χρησιμοποιείται δεν θα εμφανίζει μεταλλική επιφάνεια που ενδεχομένως μπορεί να δημιουργήσει σπινθήρα.

## Γενικές Διατάξεις

- 10 353 (2) Στα κλειστά οχήματα που μεταφέρουν υγρά με σημείο ανάφλεξης 61° C ή κάτω, ή (συνεχ.) εύφλεκτες ύλες ή είδη της Κλάσης 2, όπως αναγράφονται στο περιθωριακό 2200 (3), δεν θα μπορούν να εισέρχονται πρόσωπα τα οποία φέρουν φωτιστικές συσκευές εκτός από τις φορητές λάμπες που είναι έτσι σχεδιασμένες και κατασκευασμένες που δεν μπορούν να αναφλέξουν εύφλεκτους ατμούς ή αέρια τα οποία μπορεί να εισχωρήσουν στο εσωτερικό του οχήματος.

10 354-  
10 377

## Κενές δεξαμενές

- 10 378 (1) Για μόνιμες δεξαμενές (οχήματα δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων, βλέπε το περιθωριακό 211 177.
- (2) Για εμπορευματοκιβώτια-δεξαμενές, βλέπε το περιθωριακό 212 177.

10 379-  
10 380

## Έγγραφα που πρέπει να υπάρχουν στη μεταφορική μονάδα

- 10 381 (1) Εκτός από τα έγγραφα που απαιτούνται σύμφωνα με άλλες διατάξεις, πρέπει να υπάρχουν στη μεταφορική μονάδα τα παρακάτω έγγραφα:
- (a) Τα έγγραφα μεταφοράς που προβλέπονται στο Παράρτημα Α, περιθωριακό 2002 (3), (4) και (9), καλύπτουν όλες τις μεταφερόμενες επικίνδυνες ύλες και
  - (b) ένα αντίγραφο του κύριου κειμένου της ειδικής συμφωνίας (-ιών) που συνάφθηκε σύμφωνα με τα περιθωριακά 2010 και 10 602 εάν η μεταφορά εκτελείται με βάση τέτοια συμφωνία (-ίες)
- (2) Όπου οι διατάξεις του παρόντος Παραρτήματος απαιτούν τα παρακάτω έγγραφα, αυτά τα έγγραφα θα πρέπει να βρίσκονται στη μεταφορική μονάδα:
- (a) Το ειδικό πιστοποιητικό εγκρίσεως που αναφέρεται στο περιθωριακό 10 282 ή 10 283 για κάθε μεταφορική μονάδα ή στοιχείο αυτής.
  - (b) Το πιστοποιητικό εκπαίδευσής του οδηγού που προβλέπεται στο περιθωριακό 10 315 και απεικονίζεται στην Προσθήκη Β.6.
  - (c) Τις οδηγίες που προβλέπονται στο περιθωριακό 10 385, που αναφέρεται σε όλες τις μεταφερόμενες επικίνδυνες ύλες.
  - (d) Την άδεια που επιτρέπει την μεταφορά.

10 382-  
10 384

## Γραπτές οδηγίες

- 10 385 (1) Σαν προληπτικό μέτρο κατά οποιοδήποτε ατυχήματος ή περιπτώσεις ανάγκης που μπορεί να συμβεί ή να προκύψει στη διάρκεια της μεταφοράς, στον οδηγό θα δίδονται γραπτές οδηγίες που θα καθορίζουν συνοπτικά:
- (a) Τη φύση του κινδύνου που ενυπάρχει στις μεταφερόμενες επικίνδυνες ύλες και τα μέτρα ασφαλείας που πρέπει να παρθούν για την αποφυγή του.

## Γενικές Διατάξεις

- 10 385**  
(συνεχ.)
- (b) Την ενέργεια που πρέπει να γίνει και τη θεραπεία που πρέπει να εφαρμοστεί σε περίπτωση που πρόσωπα έλθουν σε επαφή με τα μεταφερόμενα εμπορεύματα ή με οποιεσδήποτε ύλες που μπορεί να διαφύγουν από αυτά.
- (c) Τα μέτρα που πρέπει να παρθούν σε περίπτωση πυρκαϊάς και, ειδικά, οι πυροσβεστικές συσκευές ή εξοπλισμός που δεν πρέπει να χρησιμοποιηθούν.
- (d) Τα μέτρα που πρέπει να ληφθούν σε περίπτωση σπασίματος ή φθοράς των συσκευασιών ή των μεταφερόμενων επικίνδυνων υλών, ειδικά όπου αυτές οι επικίνδυνες ύλες έχουν χυθεί πάνω στο οδόστρωμα.
- (e) Στην περίπτωση οχημάτων - δεξαμενών ή μεταφορικών μονάδων με δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές χωρητικότητας πάνω από 3 000 λίτρα, και/ή ένα επιτρεπόμενο μέγιστο βάρος που υπερβαίνει τους 3.5 τόνους που μεταφέρουν ύλες που αναφέρονται στην Προσθήκη Β.5, το όνομα της ύλης/υλών, η Κλάση, ο αριθμός και το γράμμα του είδους/ειδών και οι αριθμοί αναγνώρισεως της ύλης και του κινδύνου σύμφωνα με την Προσθήκη Β.5.
- (f) Τα μέτρα που πρέπει να ληφθούν για την πρόληψη ή ελαχιστοποίηση των ζημιών στην περίπτωση που χυθούν ύλες που θεωρούνται ότι μολύνουν το υδρόβιο περιβάλλον επί πλέον των κινδύνων που αναφέρονται από τις ετικέτες κινδύνου.
- (2) Οι οδηγίες αυτές θα ετοιμάζονται για κάθε επικίνδυνη ύλη ή Κλάση επικίνδυνων υλών από τον βιομήχανο ή τον αποστολέα σε γλώσσα της χώρας προελεύσεως. Όπου αυτή η γλώσσα δεν είναι ίδια με εκείνες των χωρών διελεύσεως ή προορισμού, οι οδηγίες θα συντάσσονται επίσης στη γλώσσα εκείνων των χωρών. Μια σειρά από αυτές τις οδηγίες θα φυλάσσεται στο κουβούκλιο του οδηγού.
- (3) Οι οδηγίες αυτές θα δίδονται στον μεταφορέα το αργότερο όταν δίδεται η εντολή μεταφοράς, για να μπορέσει να λάβει όλα τα αναγκαία μέτρα για να εξασφαλίσει ότι οι ενδιαφερόμενοι υπάλληλοι γνωρίζουν αυτές τις οδηγίες και μπορούν να τις διεκπεραιώσουν σωστά.

**10 386-**  
**10 399**

**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

**10 400**

**Περιορισμός των μεταφερόμενων ποσοτήτων**

- 10 401** Το γεγονός ότι επικίνδυνες ύλες περιέχονται σε ένα ή περισσότερα εμπορευματοκιβώτια δεν θα επηρεάζει τους περιορισμούς βάρους που καθορίζονται στο παρόν Παράρτημα σχετικά με τη μεταφορά σε ένα όχημα ή σε μία μεταφορική μονάδα.

**10 402**

**Απαγόρευση μκτικής φορτώσεως σε ένα όχημα**

- 10 403** Εκτός αν το αντίθετο προβλέπεται ρητά από τις διατάξεις των Τμημάτων 4 του Μέρους II του παρόντος Παραρτήματος, οι απαγορεύσεις μκτικής φορτώσεως σε ένα όχημα δεν θα έχουν εφαρμογή σε φορτία εμπορευμάτων συσκευασμένων μαζί με τον τρόπο που επιτρέπεται από τις διατάξεις μκτικής συσκευασίας που περιέχονται στο Παράρτημα Α. Η συμμόρφωση προς τις απαγορεύσεις περί μκτικής φορτώσεως θα βασίζεται πάνω στις ετικέτες κινδύνου της Προσθήκης Α.9 που θα τοποθετούνται πάνω στα κόλα σύμφωνα με τις απαιτήσεις που αναφέρονται για τις διάφορες Κλάσεις στο Παράρτημα Α.

## Γενικές Διατάξεις

**10 403** ΣΗΜΕΙΩΣΗ: Όπως προβλέπεται στο περιθωριακό 2002 (4), θα συντάσσονται χωριστά έγγραφα (συνεχ.) μεταφοράς για φορτία που δεν μπορούν να φορτωθούν μαζί στο ίδιο όχημα.

**Απαγόρευση μικτής φορτώσεως σε ένα εμπορευματοκιβώτιο**

**10 404** Οι απαγορεύσεις μικτής φορτώσεως σε ένα όχημα θα τηρούνται επίσης σε κάθε εμπορευματοκιβώτιο.

**Απαγόρευση μικτής φορτώσεως με εμπορεύματα περιεχόμενα σε εμπορευματοκιβώτιο**

**10 405** Προς το σκοπό εφαρμογής των απαγορεύσεων μικτής φορτώσεως σε ένα όχημα, δεν θα λαμβάνονται υπόψη ύλες που περιέχονται σε κλειστά εμπορευματοκιβώτια με πλήρεις πλευρές.

**10 406-**

**10 412**

**Καθαρισμός πριν από τη φόρτωση**

**10 413** Όλες οι διατάξεις στο παρόν Παράρτημα που σχετίζονται με τον καθαρισμό οχημάτων πριν από τη φόρτωση θα έχουν επίσης εφαρμογή και για τον καθαρισμό των εμπορευματοκιβωτίων.

**Χειρισμός και στοιβασία**

**10 414** (1) Τα διάφορα στοιχεία φορτίου που περιλαμβάνει επικίνδυνες ύλες θα στοιβάζονται κατάλληλα στο όχημα και θα στερεώνονται με κατάλληλα μέσα για να αποφευχθεί η μετακίνησή τους κατά οποιονδήποτε τρόπο σε σχέση προς άλλα και προς τα τοιχώματα του οχήματος. Το φορτίο μπορεί να προστατεύεται, για παράδειγμα, με την χρήση υμάντων πρόσδεσης στα πλευρικά τοιχώματα, σφήνες και ρυθμιζόμενους βραχίονες στήριξης, αερόσακκους και μηχανισμούς κλειδώματος έναντι στην ολίσθηση. Το φορτίο είναι επίσης ικανοποιητικά προφυλασσόμενο με την έννοια της πρώτης πρότασης εάν κάθε στρώση του συνολικού χώρου φόρτωσης είναι πλήρως συμπληρωμένη με κόλα.

(2) Όλες οι διατάξεις του παρόντος Παραρτήματος που έχουν σχέση με τη φόρτωση και εκφόρτωση οχημάτων και με τη στοιβασία και χειρισμό υλών θα έχουν επίσης εφαρμογή για τη φόρτωση, στοιβασία και εκφόρτωση των εμπορευματοκιβωτίων επί και από τα οχήματα.

(3) Τα κόλα που φέρουν ετικέτες σύμφωνα με το μοντέλο Αριθμ. 12 θα προστατεύονται έναντι ζημιάς που μπορεί να προκληθεί από άλλα κόλα.

(4) Ο οδηγός ή ο βοηθός οδηγός δεν μπορούν να ανοίξουν κόλο που περιέχει επικίνδυνες ύλες.

**Καθαρισμός μετά την εκφόρτωση**

**10 415** (1) Αν, όταν ένα όχημα που είναι φορτωμένο με συσκευασμένα επικίνδυνα εμπορεύματα ξεφορτώνεται, μερικά από τα περιεχόμενα διαπιστωθεί ότι έχουν διαφύγει, το όχημα θα καθαρίζεται το ταχύτερο δυνατό και πάντως πριν από την επόμενη φόρτωση.

(2) Οχήματα τα οποία έχουν φορτωθεί με επικίνδυνες ύλες χύμα θα πλένονται καλά πριν από τη νέα φόρτωση εκτός αν το νέο φορτίο αποτελείται από την ίδια επικίνδυνη ύλη με το προηγούμενο φορτίο.

(3) Όλες οι διατάξεις του παρόντος Παραρτήματος που έχουν σχέση με τον καθαρισμό ή την απολύμανση οχημάτων θα έχουν επίσης εφαρμογή στον καθαρισμό και την απολύμανση των εμπορευματοκιβωτίων.

## Γενικές Διατάξεις

## Απαγόρευση καπνίσματος

- 10 416 Το κάπνισμα θα απαγορεύεται στη διάρκεια εργασιών χειρισμού, κοντά στα οχήματα και μέσα στα οχήματα

## Προληπτικά μέτρα κατά ηλεκτροστατικών φορτίσεων

- 10 417 Σε περίπτωση υλών με σημείο ανάφλεξης  $61^{\circ}$  C ή κάτω, θα δημιουργηθεί καλή ηλεκτρική επαφή (ένωση) μεταξύ του αμαξώματος του οχήματος και του εδάφους πριν οι δεξαμενές γεμίσουν ή αδειάσουν. Επί πλέον, ο ρυθμός πλήρωσεως θα είναι περιορισμένος.

10 418

## Φόρτωση και εκφόρτωση επικίνδυνων υλών σε εμπορευματοκιβώτια

- 10 419 Οι διατάξεις του παρόντος Παραρτήματος που έχουν σχέση με τη φόρτωση και εκφόρτωση οχημάτων και τη στοιβασία και χειρισμό επικίνδυνων υλών θα έχουν επίσης εφαρμογή στη φόρτωση και εκφόρτωση επικίνδυνων υλών σε εμπορευματοκιβώτια.

10 420-

10 430

## Λειτουργία του κινητήρα στη διάρκεια φορτώσεως ή εκφορτώσεως.

- 10 431 Εκτός όπου ο κινητήρας πρέπει να χρησιμοποιηθεί για την κίνηση των αντλιών ή άλλων συσκευών για φόρτωση ή για εκφόρτωση του οχήματος, η δε νομοθεσία της χώρας στην οποία λειτουργεί το όχημα επιτρέπει αυτή τη χρήση, ο κινητήρας θα είναι κλειστός στη διάρκεια των εργασιών φορτώσεως και εκφορτώσεως.

10 432-

10 499

## ΤΜΗΜΑ 5.Ειδικές διατάξεις που αφορούν τη λειτουργία των οχημάτων (-δεξαμενών), συστοιχιών δοχείων και εμπορευματοκιβωτίων (-δεξαμενών).

## Μαρκάρισμα

- 10 500 (1) Οι μεταφορικές μονάδες που μεταφέρουν επικίνδυνες ύλες θα προβάλλουν δύο ορθογώνιες αντανακλαστικές πινακίδες χρώματος πορτοκαλί με βάση 40 cm και ύψος όχι μικρότερο από 30 cm σε κάθετο επίπεδο. Οι πινακίδες θα έχουν μαύρο περίγραμμα πλάτους όχι μεγαλύτερου των 15 mm πλάτος. Θα τοποθετούνται μία μπροστά και μία πίσω της μεταφορικής μονάδας, και οι δύο κατακόρυφες προς τον διαμήκη άξονα της μεταφορικής μονάδας. Θα είναι καθαρά ορατές. Εάν το μέγεθος και η κατασκευή του οχήματος είναι τέτοιες ώστε η διαθέσιμη επιφάνεια να μην είναι ικανοποιητική για την τοποθέτηση αυτών των πορτοκαλί πινακίδων, οι διαστάσεις τους μπορούν να μειωθούν σε 300 mm για τη βάση, 120 mm και 10 mm για το ύψος για το μαύρο περίγραμμα.

**ΣΗΜΕΙΩΣΗ:** Το χρώμα των πορτοκαλί πινακίδων σε συνθήκες κανονικής χρήσεως πρέπει να έχουν συντεταγμένες χρωματικότητας που να βρίσκονται μέσα στο χώρο του διαγράμματος χρωματικότητας που σχηματίζεται με την ένωση των παρακάτω συντεταγμένων:

Συντεταγμένες χρωματικότητας σημείων στις γωνίες του χώρου πάνω στο διάγραμμα χρωματικότητας				
X	0.52	0.52	0.578	0.618
Y	0.38	0.40	0.422	0.38

## Γενικές Διατάξεις

**10 500** Συντελεστής φωτεινότητας αντανάκλαστικού χρώματος:  $\beta > 0.12$ .

(συνεχ.)

Κέντρο αναφοράς E, καθιερωμένο φωτιστικό C, κανονική πρόσπτωση  $45^\circ$ , θεώμενο σε  $0^\circ$ .

Συντελεστής φωτεινής εντάσεως αντανάκλασης σε γωνία φωτισμού  $5^\circ$ , θεώμενη στους  $0.2^\circ$ : όχι λιγότερο από 20 κηρία κατά λουξ ανά  $m^2$ .

(2) Οχήματα - δεξαμενές ή μεταφορικές μονάδες με μία ή περισσότερες δεξαμενές που μεταφέρουν επικίνδυνα εμπορεύματα που αναφέρονται στην Προσθήκη B.5 θα προβάλλουν, επί πλέον, στα πλευρά κάθε δεξαμενής ή διαμερίσματος δεξαμενής, καθαρά ορατές και παράλληλες προς το διαμήκη άξονα του οχήματος, πορτοκαλί πινακίδες ίδιες με αυτές που περιγράφονται στην παράγραφο (1). Αυτές οι πορτοκαλί πινακίδες θα φέρουν τους αριθμούς αναγνώρισεως που προβλέπονται στην Προσθήκη B.5 για κάθε μία από τις μεταφερόμενες στη δεξαμενή ύλες ή σε διαμέρισμα της δεξαμενής.

(3) Μεταφορικές μονάδες και εμπορευματοκιβώτια που μεταφέρουν επικίνδυνες στερεές ύλες χύμα που καλύπτονται από την Προσθήκη B.5 θα προβάλλουν, επί πλέον, στα πλευρά κάθε μεταφορικής μονάδας ή εμπορευματοκιβωτίου, καθαρά ορατές και παράλληλες προς το διαμήκη άξονα του οχήματος, πορτοκαλί πινακίδες ίδιες με αυτές που περιγράφονται στην παράγραφο (1). Αυτές οι πορτοκαλί πινακίδες θα φέρουν τους αριθμούς αναγνώρισεως που προβλέπονται για κάθε ύλη που μεταφέρεται χύμα στην μεταφορική μονάδα ή στο εμπορευματοκιβώτιο.

(4) Για εμπορευματοκιβώτια που μεταφέρουν επικίνδυνες στερεές ύλες χύμα και για εμπορευματοκιβώτια-δεξαμενές, οι πινακίδες που προβλέπονται στις παραγράφους (2) και (3) μπορεί να αντικατασταθούν από αυτοκόλλητο φύλλο, από μογιά ή από οποιοδήποτε ισότιμο τρόπο, με τον όρο ότι το υλικό που χρησιμοποιείται γι' αυτό το σκοπό είναι ανθεκτικό στις καιρικές συνθήκες και εξασφαλίζει ανθεκτική επισήμανση. Στην περίπτωση αυτή, δεν θα έχουν εφαρμογή οι διατάξεις της τελευταίας φράσεως της παραγράφου (6), που αφορούν αντίσταση στη φωτιά.

(5) Για μεταφορικές μονάδες που μεταφέρουν μόνο μία από τις ύλες που αναφέρονται στην Προσθήκη B.5, οι πορτοκαλί πινακίδες που προβλέπονται στις παραγράφους (2) και (3) δε θα είναι αναγκαίες με τον όρο ότι αυτές που προβάλλονται μπροστά και πίσω σύμφωνα με την παράγραφο (1) φέρουν τους αριθμούς αναγνώρισεως που προβλέπονται στην Προσθήκη B.5..

(6) Οι αριθμοί αναγνώρισεως θα αποτελούνται από μαύρους αριθμούς (ψηφία) ύψους 100 mm και πάχους γραφής 15 mm. Ο αριθμός αναγνώρισεως κινδύνου θα είναι γραμμένος στο επάνω μέρος της πινακίδας και ο αριθμός αναγνώρισεως της ύλης στο κάτω μέρος. Θα χωρίζονται με οριζόντια μαύρη γραμμή, με πάχος γραφής 15 mm εκτεινόμενη από πλευρά σε πλευρά της πινακίδας σε μέσο ύψος (βλέπε Προσθήκη B.5). Οι αριθμοί αναγνώρισεως θα είναι ανεξίτηλοι και θα παραμένουν ευανάγνωστοι μετά από 15 λεπτά περιτύλιξη από τη φωτιά.

(7) Οι παραπάνω προϋποθέσεις έχουν επίσης εφαρμογή για κενές δεξαμενές, σταθερές ή αποσυναρμολογούμενες, εμπορευματοκιβώτια-δεξαμενές και συστοιχίες δοχείων, μη καθαρισμένων και μη απαερωμένων και κενά οχήματα μεταφοράς χύμα και κενά εμπορευματοκιβώτια μεταφοράς χύμα, μη καθαρισμένων.

(8) Οι πορτοκαλί πινακίδες που δεν αναφέρονται στα μεταφερόμενα επικίνδυνα εμπορεύματα, ή στα επ'αυτών υπολείμματα, θα αφαιρούνται ή θα καλύπτονται. Εάν οι πινακίδες είναι καλυμμένες, το κάλυμμα θα είναι συνολικό και θα παραμείνει αποτελεσματικό μετά από 15 λεπτά περιτύλιξη από τη φωτιά.

## Γενικές Διατάξεις

10 500  
(συνεχ.) **Επισήμανση**

(9) Αν οι επικίνδυνες ύλες που μεταφέρονται μέσα σε εμπορευματοκιβώτια είναι τέτοιες ώστε, σύμφωνα με το Παράρτημα Α, πρέπει να τοποθετηθούν μία ή περισσότερες ετικέτες κινδύνου στο κόλο που τις περιέχει, ίδια ετικέτα ή ετικέτες θα τοποθετούνται στο έξω μέρος του εμπορευματοκιβωτίου που περιέχει αυτές τις ύλες σε κόλα ή χύμα. Εντούτοις, οι ετικέτες Αριθμ. 10, 11 και 12 δεν χρειάζεται να τοποθετηθούν.

(10) Εμπορευματοκιβώτια μεταφοράς χύμα, εμπορευματοκιβώτια-δεξαμενές και συστοιχίες δοχείων θα φέρουν και στις δύο πλευρές τις πινακίδες που προβλέπονται στα περιθωριακά ΧΧ 500 κάθε Κλάσης. Αν αυτές οι πινακίδες δεν είναι ορατές από το εξωτερικό του οχήματος, οι ίδιες πινακίδες θα τοποθετούνται και στις δύο πλευρές του οχήματος και στα πίσω τοιχώματα.

(11) Οχήματα μεταφοράς χύμα και οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές θα φέρουν και στις δύο πλευρές και στα πίσω τοιχώματα τις ετικέτες που προβλέπονται στο περιθωριακό ΧΧ 500 κάθε Κλάσης.

(12) Οι απαιτήσεις του περιθωριακού 10 500 (10) και (11) εφαρμόζονται επίσης σε κενές δεξαμενές, σταθερές ή αποσυναρμολογούμενες, εμπορευματοκιβώτια-δεξαμενές και συστοιχίες δοχείων, μη καθαρισμένων και μη απαερωμένων και κενά οχήματα μεταφοράς χύμα και κενά εμπορευματοκιβώτια μεταφοράς χύμα, μη καθαρισμένων.

(13) Οι ετικέτες που δεν αναφέρονται στα μεταφερόμενα επικίνδυνα εμπορεύματα, ή στα επ'αυτών υπολείμματα, θα αφαιρούνται ή θα καλύπτονται.

10 501-  
10 502**Στάθμευση γενικά**

10 503 Καμία μεταφορική μονάδα που μεταφέρει επικίνδυνες ύλες δεν μπορεί να σταθμεύσει χωρίς να χρησιμοποιηθούν τα φρένα σταθμεύσεως.

## 10 504

**Στάθμευση τη νύχτα ή με κακή ορατότητα**

10 505 (1) Αν ένα όχημα είναι σταθμευμένο τη νύχτα ή με κακή ορατότητα και τα φώτα του δεν είναι αναμμένα, θα τοποθετηθούν στο δρόμο τα κίτρινα φώτα που αναφέρονται στο περιθωριακό 10 260 (c).

- το ένα περίπου 10 m μπροστά από το όχημα και

- το άλλο περίπου 10 m πίσω από το όχημα.

(2) Οι διατάξεις του παρόντος περιθωριακού δεν θα έχουν εφαρμογή στην επικράτεια του Ηνωμένου Βασιλείου.

## 10 506

**Στάθμευση οχήματος που αποτελεί ειδικό κίνδυνο**

10 507 Χωρίς βλάβη των μέτρων που προβλέπονται στο παραπάνω περιθωριακό 10 505, αν η φύση των επικίνδυνων υλών που μεταφέρει το σταθμευμένο όχημα αποτελεί πηγή ειδικού κινδύνου προς τους χρήστες της οδού (π.χ. στην περίπτωση υλών επικίνδυνων για τους πεζούς, τα ζώα ή τα οχήματα εκχυνόμενες πάνω στο δρόμο) το δε πλήρωμα του οχήματος δεν είναι σε θέση να εξουδετερώσει τον κίνδυνο γρήγορα, ο οδηγός θα ειδοποιεί τις

## Γενικές Διατάξεις

**10 507** πλησιέστερες αρμόδιες αρχές ή θα ενεργεί για να ειδοποιηθούν αμέσως. Επίσης, όπου  
(συνεχ.) χρειάζεται, θα λαμβάνει τα μέτρα που προβλέπονται στις οδηγίες που δίδονται στο περιθωριακό 10 385.

**10 508-  
10 598**

## Άλλες διατάξεις

**10 599** Όσον αφορά τις διατάξεις που δεν περιλαμβάνονται σ' αυτό το Μέρος ή στο Μέρος II του παρόντος Παραρτήματος που αφορούν τη λειτουργία οχημάτων που μεταφέρουν επικίνδυνα εμπορεύματα, τα σχετικά μέτρα που έχουν υιοθετηθεί στον τομέα αυτό από κάθε Κράτος Μέλος βάσει της εσωτερικής νομοθεσίας του και αφορά εσωτερικές μεταφορές, θα έχουν εφαρμογή στη διεθνή μεταφορά που χρησιμοποιεί την επικράτεια αυτού.

## ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, παρεκκλίσεις και διατάξεις ιδιόμορφες για ορισμένες χώρες

**10 600-  
10 601**

## Ταχεία διαδικασία για να επιτραπούν παρεκκλίσεις προς το σκοπό δοκιμών

**10 602** Προς το σκοπό διεξαγωγής των αναγκαίων δοκιμών για να τροποποιηθούν οι διατάξεις του παρόντος Παραρτήματος για να προσαρμοστούν με τις τεχνολογικές και βιομηχανικές εξελίξεις, οι αρμόδιες αρχές των Κρατών Μελών μπορούν να συμφωνήσουν απ' ευθείας μεταξύ τους να επιτρέψουν μερικές μεταφορικές εργασίες στις επικράτειές τους με προσωρινή παρέκκλιση από τις διατάξεις του παρόντος Παραρτήματος. Η περίοδος ισχύος της προσωρινής παρέκκλισης δεν μπορεί να υπερβαίνει τα πέντε έτη από την ημερομηνία της θέσεως της σε ισχύ. Η προσωρινή παρέκκλιση θα λήγει αυτόματα την ημερομηνία θέσεως σε ισχύ της αντίστοιχης τροποποίησης στο παρόν παράρτημα.

**10 603-  
10 999**

## ΜΕΡΟΣ ΙΙ

**ΕΙΔΙΚΕΣ ΔΙΑΤΑΞΕΙΣ ΜΕ ΕΦΑΡΜΟΓΗ ΣΤΗ ΜΕΤΑΦΟΡΑ ΕΠΙΚΙΝΔΥΝΩΝ  
ΥΛΩΝ ΤΩΝ ΚΛΑΣΕΩΝ 1 ΕΩΣ 9 ΟΙ ΟΠΟΙΕΣ ΣΥΜΠΛΗΡΩΝΟΥΝ Ή  
ΤΡΟΠΟΠΟΙΟΥΝ ΤΙΣ ΑΠΑΙΤΗΣΕΙΣ ΤΟΥ ΜΕΡΟΥΣ Ι**

**ΚΛΑΣΗ 1. ΕΚΡΗΚΤΙΚΕΣ ΥΛΕΣ ΚΑΙ ΑΝΤΙΚΕΙΜΕΝΑ**

**Γενικά**

(Εχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους Ι)

11 000-  
11 099

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**

11 100-  
11 107

**Πλήρη φορτία**

11 108 (1) Υλεις και αντικείμενα της Συμβατικής Ομάδας L μπορούν να μεταφέρονται μόνο ως πλήρες φορτίο.

(2) Όταν ύλες και αντικείμενα των υποδιαιρέσεων 1.1, 1.2 ή 1.5 μεταφέρονται σε μεγάλα εμπορευματοκιβώτια, τέτοια εμπορεύματα μπορούν να μεταφέρονται μόνο ως πλήρες φορτίο.

11 109-  
11 117

**Μεταφορά σε εμπορευματοκιβώτια**

11 118 Εφόσον μικρά εμπορευματοκιβώτια καλύπτουν τις απαιτήσεις που προβλέπονται σχετικά με το αμάξωμα του οχήματος για την εκάστοτε εργασία μεταφοράς, τότε δεν θα είναι αναγκαίο να καλύπτει αυτές τις απαιτήσεις το αμάξωμα του οχήματος.

11 119-  
11 199

## Κλάση 1

**ΤΜΗΜΑ 2: Ειδικές απαιτήσεις προς εκπλήρωση από τα μέσα μεταφοράς και τα οχήματα και τον εξοπλισμό τους**11 200-  
11 203**Τύποι οχημάτων**

**11 204** Για την εφαρμογή του παρόντος Παραρτήματος, οι μεταφορικές μονάδες που έχουν άδεια μεταφοράς υλών και αντικειμένων της Κλάσης I κατατάσσονται όπως παρακάτω:

(1) **Μεταφορικές μονάδες "Τύπου I":**

Αυτά τα οχήματα μπορούν να είναι είτε κλειστά είτε επενδεδυμένα. Τα φύλλα των επενδεδυμένων οχημάτων πρέπει να είναι από αδιάβροχο υλικό που να μην αναφλέγεται εύκολα. Πρέπει να είναι τεντωμένα ούτως ώστε να καλύπτουν το όχημα από όλες τις πλευρές, με επικάλυψη όχι μικρότερη από 20 εκ. προς τα κάτω επί των τοιχωμάτων του οχήματος και να διατηρούνται στη θέση τους με μηχανισμό που κλειδώνεται.

(2) **Μεταφορικές μονάδες "Τύπου II":** Μονάδες των οποίων οι κινητήρες χρησιμοποιούν υγρό καύσιμο με σημείο αναφλέξεως 55 °C ή μεγαλύτερο.

(a) Γενικά

Αυτά τα οχήματα μπορούν να είναι είτε κλειστά είτε επενδεδυμένα. Το αμάξωμα πρέπει να είναι στερεά κατασκευασμένο με τέτοιο τρόπο ώστε να προστατεύει επαρκώς τα μεταφερόμενα εμπορεύματα. Η επιφάνεια φορτώσεως, συμπεριλαμβανομένου του εμπροσθίου τοιχώματος, θα είναι συνεχής. Εάν το όχημα είναι επενδεδυμένο, θα τηρούνται οι διατάξεις οι σχετικές με την επένδυση στις μεταφορικές μονάδες "Τύπου I".

Εάν η μεταφορική μονάδα περιλαμβάνει συρόμενο όχημα, το συρόμενο όχημα πρέπει να έχει συσκευή σύνδεσης που αποσπάται γρήγορα και είναι στερεή· η μεταφορική μονάδα πρέπει επίσης να είναι εξοπλισμένη με αποτελεσματικό μηχανισμό πέδησης που επενεργεί σε όλους τους τροχούς, ενεργοποιείται από το σύστημα ελέγχου πέδησης του έλκοντος οχήματος και αυτομάτως σταματά το συρόμενο όχημα σε περίπτωση θραύσεως της συνδέσεως.

(b) Κινητήρας και σύστημα εξαγωγής καυσαερίων

Ο κινητήρας και το σύστημα εξαγωγής καυσαερίων πρέπει να ικανοποιούν τις απαιτήσεις των περιθωριακών 220 533 και 220 534 του Παραρτήματος Β.2.

(c) Δεξαμενή καυσίμων

Η δεξαμενή καυσίμων πρέπει να ικανοποιεί τις απαιτήσεις του περιθωριακού 220 532 του Παραρτήματος Β.2.

(d) Κουβούκλιο οδηγού

Το υλικό που χρησιμοποιείται στην κατασκευή του κουβουκλίου του οδηγού πρέπει να ικανοποιεί τις απαιτήσεις του περιθωριακού 220 531(1) του Παραρτήματος Β.2.

Οι βοηθητικές θερμαντικές εγκαταστάσεις πρέπει να ικανοποιούν τις απαιτήσεις του περιθωριακού 220 536 του Παραρτήματος Β.2.

## Κλάση 1

11 204 (3) Μεταφορικές μονάδες "Τύπου III":  
(συνεχ.)

που έχουν όλα τα χαρακτηριστικά των κλειστών οχημάτων "Τύπου II" με αμαξώματα τα οποία πληρούν τις ακόλουθες διατάξεις:

- (a) Το αμάξωμα είναι κλειστό και έχει συνεχή επιφάνεια. Είναι στερεά κατασκευασμένο από υλικά που δεν είναι εύκολα αναφλέξιμα, κατά τρόπο ώστε να προστατεύει επαρκώς τα μεταφερόμενα εμπορεύματα. Τα χρησιμοποιούμενα υλικά για επίστρωση δεν θα μπορούν να προκαλέσουν σπινθήρες. Οι μονωτικές και αντιθερμαντικές ιδιότητες του αμαξώματος είναι σε όλα τα σημεία κατ'ελάχιστον ισοδύναμες με εκείνες ενός χωρίσματος αποτελούμενου από εξωτερικό μεταλλικό τοίχωμα επενδεδυμένο με στρώμα άφλεκτου ξύλου πάχους 10 χιλ.
- (b) Όλες οι πόρτες μπορούν να κλειδώνονται. Θα τοποθετούνται και κατασκευάζονται κατά τέτοιο τρόπο ώστε να αλληλοεπικαλύπτονται οι αρμοί.

## Ειδικές απαιτήσεις για τη χρήση οχημάτων ορισμένων τύπων

11 205 (1) Συρόμενα οχήματα, εξαιρουμένων των επικαθμένων οχημάτων, φορτωμένα με ύλες και αντικείμενα της Κλάσης 1, τα οποία τηρούν τις προδιαγραφές που απαιτούνται για μεταφορικές μονάδες των Τύπων II και III, μπορούν να έλκονται από μηχανοκίνητα οχήματα που δεν τηρούν αυτές τις προδιαγραφές.

(2) Για μεταφορά σε εμπορευματοκιβώτια έχουν εφαρμογή οι διατάξεις των περιθωριακών 10 118(3) και 11 118. Για ύλες σε ελεύθερα υπάμενη σκόνη των 2°, 4°, 8°, 26° και 29°, και για πυροτεχνήματα των 9°, 21° και 30°, το δάπεδο του εμπορευματοκιβωτίου πρέπει να έχει μη μεταλλική επιφάνεια ή επικάλυψη.

11 206-  
11 209

## Υλικά που θα χρησιμοποιηθούν για την κατασκευή των αμαξωμάτων οχημάτων

- 11 210 Για την κατασκευή του αμαξώματος, δεν θα χρησιμοποιούνται υλικά που είναι ενδεχόμενο να σχηματίσουν επικίνδυνα μείγματα με τα μεταφερόμενα εκρηκτικά [βλέπε και περιθωριακό 11 204 (3)].
- 11 211 Για μεταφορά σε εμπορευματοκιβώτια έχουν εφαρμογή οι διατάξεις των περιθωριακών 10 118(3) και 11 118. Για ελεύθερα υπάμενες ύλες σε σκόνη των 2°, 4°, 8°, 26° και 29°, και για πυροτεχνήματα των 9°, 21° και 30°, το δάπεδο του εμπορευματοκιβωτίου πρέπει να έχει μη μεταλλική επιφάνεια ή επικάλυψη.

11 212-  
11 250

## Ηλεκτρολογικός εξοπλισμός

- 11 251 (1) Η καθορισμένη τάση του ηλεκτρικού συστήματος φωτισμού δεν θα υπερβαίνει τα 24V.
- (2) Οι μεταφορικές μονάδες των Τύπων II και III πρέπει να ικανοποιούν τις παρακάτω απαιτήσεις:
- (a) Οι συσσωρευτές πρέπει να φυλάσσονται επαρκώς και να προστατεύονται από ζημιά λόγω σύγκρουσης και οι ακροδέκτες τους πρέπει να προστατεύονται με ηλεκτρομονωτικό κάλυμμα.
  - (b) Η εγκατάσταση εσωτερικού φωτισμού στο διαμέρισμα μεταφοράς φορτίου πρέπει να προστατεύεται από τη σκόνη (κατ'ελάχιστον IP54 ή ισοδύναμη) ή, στην περίπτωση της Συμβατικής Ομάδας J, να είναι άφλεκτη Ex d (κατ'ελάχιστον IP65 ή ισοδύναμη). Ο διακόπτης θα τοποθετείται εξωτερικά.

## Κλάση 1

11 252-  
11 281**Έγκριση οχημάτων**

11 282 Οι απαιτήσεις του περιθωριακού 10 282 έχουν εφαρμογή σε μεταφορικές μονάδες Τύπου III.

11 283-  
11 299**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**11 300-  
11 310**Πληρώματα οχημάτων**

11 311 (1) Σε κάθε μεταφορική μονάδα θα υπάρχει βοηθός οδηγού. Αν οι εθνικές διατάξεις το προβλέπουν, η αρμόδια αρχή Κράτους Μέλους μπορεί να ζητήσει να υπάρχει στο όχημα εξουσιοδοτημένος κρατικός υπάλληλος με έξοδα του μεταφορέα.

(2) Η πρώτη πρόταση του (1) δεν εφαρμόζεται σε φάλαγγες περισσότερων των δύο οχημάτων εάν οι οδηγοί του πρώτου και του τελευταίου οχήματος της φάλαγγας συνοδεύονται από οδηγό.

(3) Η παρουσία βοηθού οδηγού δεν απαιτείται στην περίπτωση αντικειμένων του 43°, με χαρακτηριστικό αριθμό 0336, μεταφερόμενα σε μεταφορική μονάδα Τύπου I.

11 312-  
11 314**Ειδική εκπαίδευση οδηγών**

11 315 Οι διατάξεις (1), (3), (4)(a) έως (m) και (5) του περιθωριακού 10 315 εφαρμόζονται σε οδηγούς οχημάτων που μεταφέρουν ύλες ή αντικείμενα της Κλάσης I σε ποσότητες που υπερβαίνουν τα όρια που ορίζονται στο περιθωριακό 10 011.

11 316-  
11 320**Επιθεώρηση οχημάτων**

11 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή μόνο σε οχήματα που μεταφέρουν ύλες και αντικείμενα της Κλάσης I με συνολικό βάρος εκρηκτικής ύλης άνω των 50 κιλών. Επί πλέον, αυτά τα εμπορεύματα θα επιβλέπονται πάντοτε ώστε να αποφευχθεί οποιαδήποτε κακόβουλη ενέργεια και να κινητοποιηθεί ο οδηγός και οι αρμόδιες αρχές σε περίπτωση απωλείας ή πυρκαϊάς. Εξαιρούνται κενές συσκευασίες του 51°.

11 322-  
11 353**Απαγόρευση φωτιάς και γυμνής φλόγας**

11 354 Απαγορεύεται η χρήση φωτιάς ή γυμνής φλόγας επί οχημάτων που μεταφέρουν ύλες και αντικείμενα της Κλάσης I, στην πλησίον τους περιοχή και κατά την φόρτωση και εκφόρτωση αυτών των υλών και αντικειμένων.

## Κλάση 1

11 355-  
11 399**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

11 400

**Περιορισμός των μεταφερομένων ποσοτήτων**

- 11 401 Το συνολικό καθαρό βάρος σε κιλά εκρηκτικής ύλης (ή, στην περίπτωση εκρηκτικών αντικειμένων, το συνολικό καθαρό βάρος εκρηκτικής ύλης που περιέχεται στο σύνολο των αντικειμένων) το οποίο μπορεί να μεταφέρεται σε μία μεταφορική μονάδα περιορίζεται κατά τα αναφερόμενα στον παρακάτω πίνακα (βλέπε και περιθωριακό 11 403 όσον αφορά την απαγόρευση μικτής φορτώσεως):

**Μέγιστο επιτρεπόμενο καθαρό βάρος εμπορευμάτων Κλάσης 1 σε κιλά ανά μεταφορική μονάδα**

Υποδιαίρεση	1.1	1.2	1.3	1.4		1.5 και 1.6	
Είδος	1°-12°	13°-25°	26°-34°	35°-45°	46°, 47°	48°, 49°, 50°	51°
Μεταφορική Μονάδα							
Τύπος I	50	50	50	300*	Απεριόριστο	50	Απεριόριστο
Τύπος II	1 000	3 000	5 000	15 000	Απεριόριστο	5 000	Απεριόριστο
Τύπος III	15 000	15 000	15 000	15 000	Απεριόριστο	15 000	Απεριόριστο

\*/ Χαρακτηριστικός αριθμός 0336: 3 000 κιλά (4 000 κιλά για μεταφορική μονάδα με συρόμενο όχημα).

- 11 402 Εάν ύλες και αντικείμενα διαφορετικών υποδιαίρεσεων της Κλάσης 1 μεταφέρονται σε μία μεταφορική μονάδα σύμφωνα με τις απαγορεύσεις μικτής φορτώσεως που περιλαμβάνονται στο 11 403, το φορτίο στο σύνολό του θα θεωρείται ως εάν ανήκε στην πλέον επικίνδυνη υποδιαίρεση (με τη σειρά 1.1, 1.5, 1.2, 1.3, 1.6, 1.4).

Εάν ύλες 48° μεταφέρονται σε μία μεταφορική μονάδα μαζί με ύλες και αντικείμενα της υποδιαίρεσης 1.2, το σύνολο του φορτίου θα θεωρείται ως εάν ανήκε στην υποδιαίρεση 1.1.

**Απαγορεύσεις μικτής φορτώσεως**

- 11 403 (1) Κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5 ή 1.6 τα οποία όμως έχουν ορισθεί σε διαφορετικές συμβατικές ομάδες δεν θα φορτώνονται μαζί σε ένα όχημα, εκτός εάν η μικτή φόρτωση των αντιστοίχων συμβατικών ομάδων επιτρέπεται βάσει του παρακάτω πίνακα:

## Κλάση 1

11 403  
(συνεχ.)

Συμβατική ομάδα	B	C	D	E	F	G	H	J	L	N	S
B	X										X
C		X	X	X		X				2/, 3/	X
D		X	X	X		X				2/, 3/	X
E		X	X	X		X				2/, 3/	X
F					X						X
G		X	X	X		X					X
H							X				X
J								X			X
L									1/		
N		2/, 3/	2/, 3/	2/, 3/						2/	X
S	X	X	X	X	X	X	X	X		X	X

X = επιτρέπεται η μικτή φόρτωση

(2) Κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4 ή 1.5 δεν θα φορτώνονται σε ένα όχημα μαζί με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 2, 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.1A, 7A, 7B, 7C, 8 ή 9.

11 404

## Απαγόρευση μικτής φόρτωσης με εμπορεύματα σε εμπορευματοκιβώτια

11 405 (1) Οι απαγορεύσεις μικτής φόρτωσης εμπορευμάτων που αναφέρονται στο περιθωριακό 11 403 έχουν εφαρμογή μέσα σε κάθε εμπορευματοκιβώτιο.

(2) Οι διατάξεις του περιθωριακού 11 403 έχουν εφαρμογή μεταξύ των επικίνδυνων εμπορευμάτων που περιέχονται σε εμπορευματοκιβώτια και των άλλων επικίνδυνων εμπορευμάτων που είναι φορτωμένα στο ίδιο όχημα, είτε τα τελευταία περιέχονται ή όχι σε ένα ή περισσότερα άλλα εμπορευματοκιβώτια.

<sup>1/</sup> Κόλα που περιέχουν ύλες και αντικείμενα της Συμβατικής Ομάδας 1 επιτρέπεται να φορτωθούν μαζί σε ένα όχημα με κόλα που περιέχουν τον ίδιο τύπο υλών και αντικειμένων αυτής της συμβατικής ομάδας.

<sup>2/</sup> Διαφορετικοί τύποι αντικειμένων 1.6N μπορούν να μεταφέρονται μαζί ως αντικείμενα 1.6N μόνο εάν έχει αποδειχθεί διά δοκιμής ή αναλογίας ότι δεν υπάρχει πρόσθετος κίνδυνος συμπαθητικής έκρηξης μεταξύ των αντικειμένων. Διαφορετικά πρέπει να θεωρηθούν ως ανήκοντα στην κατηγορία κινδύνου 1.1.

<sup>3/</sup> Εάν αντικείμενα της συμβατικής ομάδας N μεταφέρονται μαζί με ύλες ή αντικείμενα των συμβατικών ομάδων C, D ή E, τα αντικείμενα της συμβατικής ομάδας N πρέπει να θεωρούνται ως έχοντα τα χαρακτηριστικά της συμβατικής ομάδας D.

## Κλάση 1

11 406

**Τόποι φορτώσεως και εκφόρτώσεως**

11 407 (1) Οι παρακάτω εργασίες απαγορεύονται:

- (a) Φόρτωση ή εκφόρτωση υλών και αντικειμένων της Κλάσης 1, σε δημόσιο χώρο εντός κατοικημένης περιοχής χωρίς ειδική έγκριση από τις αρμόδιες αρχές.
- (b) Φόρτωση ή εκφόρτωση υλών ή αντικειμένων αυτών των Κλάσεων σε δημόσιο χώρο εκτός από κατοικημένη περιοχή χωρίς προηγούμενη ειδοποίηση των αρμόδιων αρχών, εκτός αν αυτές οι εργασίες είναι επείγοντως αναγκαίες για λόγους ασφαλείας.

(2) Αν για οποιονδήποτε λόγο, οι εργασίες χειρισμού πρέπει να γίνουν σε δημόσιο χώρο, τότε ύλες και αντικείμενα διαφόρων ειδών θα χωρίζονται σύμφωνα με τις ετικέτες.

11 408-

11 409

**Προφυλάξεις σε σχέση με αντικείμενα καταναλώσεως**

- 11 410 (1) Κόλα που φέρουν ετικέτες σύμφωνες με το υπόδειγμα Αριθμ. 6.1 θα διαχωρίζονται από τρόφιμα, άλλα αντικείμενα καταναλώσεως και ζωοτροφές εντός των οχημάτων και στους χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.
- (2) Κενές συσκευασίες, ακαθάριστες, που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα διαχωρίζονται από τρόφιμα, άλλα αντικείμενα καταναλώσεως και ζωοτροφές εντός των οχημάτων και στους χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

11 411-

11 412

**Καθαρισμός πριν από τη φόρτωση**

11 413 Πριν να φορτωθούν ύλες και αντικείμενα της Κλάσης 1, η επιφάνεια φόρτωσης του οχήματος πρέπει να καθαρίζεται επιμελώς.

11 414-

11 499

**ΤΜΗΜΑ 5. Ειδικές διατάξεις λειτουργίας οχημάτων και εμπορευματοκιβωτίων****Μαρκάρισμα και επισήμανση****Μαρκάρισμα**

11 500 (1) Επί πλέον των διατάξεων του περιθωριακού 10 500, μεταφορικές μονάδες που μεταφέρουν κόλα ή αντικείμενα που φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5 ή 1.6 θα φέρουν παρόμοια ετικέτα σε αμφοτέρες τις πλευρές και στο πίσω μέρος. Οι συμβατικές ομάδες δεν θα αναφέρονται στις ετικέτες αν η μεταφορική μονάδα μεταφέρει ύλες και αντικείμενα που ανήκουν σε διαφορετικές συμβατικές ομάδες.

## Κλάση 1

**11 500** (2) Μεταφορική μονάδα που μεταφέρει ύλες ή αντικείμενα διαφορετικών υποδιαίρεσεων (συνεχ.) θα φέρει μόνο ετικέτες σύμφωνα με το υπόδειγμα της πλέον επικίνδυνης υποδιαίρεσης, με τη σειρά:

1.1 (πλέον επικίνδυνη), 1.5, 1.2, 1.3, 1.6, 1.4 (λιγότερο επικίνδυνη). Εάν ύλες 48° μεταφέρονται με ύλες ή αντικείμενα της υποδιαίρεσης 1.2, η μεταφορική μονάδα θα έχει ετικέτα της υποδιαίρεσης 1.1.

(3) Μεταφορικές μονάδες που φέρουν ύλες ή αντικείμενα των παρακάτω ειδών και χαρακτηριστικών αριθμών θα φέρουν επιπλέον ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1:

4° αριθμοί 0076 και 0143  
21° αριθμός 0018  
26° αριθμός 0077  
30° αριθμός 0019  
43° αριθμός 0301

(4) Μεταφορικές μονάδες που φέρουν αντικείμενα των παρακάτω ειδών και χαρακτηριστικών αριθμών θα φέρουν επιπλέον ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 8:

21° αριθμοί 0015 και 0018  
30° αριθμοί 0016 και 0019  
43° αριθμοί 0301 και 0303

(5) Οι διατάξεις (1) έως (4) δεν θα έχουν εφαρμογή σε μεταφορικές μονάδες που μεταφέρουν εμπορευματοκιβώτια, εφόσον τα εμπορευματοκιβώτια έχουν ετικέτες σύμφωνα με τις απαιτήσεις του περιθωριακού 10 500 (9).

**11 501-  
11 508**

**Στάσεις για την εκτέλεση απαιτούμενων εργασιών**

**11 509.** Όταν οχήματα που μεταφέρουν ύλες ή αντικείμενα της Κλάσης 1 υποχρεούνται να σταματήσουν για εργασίες φόρτωσης ή εκφόρτωσης σε δημόσιο χώρο, θα διατηρείται απόσταση τουλάχιστον 50 μ. μεταξύ των σταθμευμένων οχημάτων.

**11 510-  
11 519**

**Φάλαγγες**

**11 520** (1) Όταν οχήματα που μεταφέρουν ύλες ή αντικείμενα της Κλάσης 1 ταξιδεύουν σε φάλαγγα, θα διατηρείται μεταξύ κάθε μεταφορικής μονάδας και της επόμενης απόσταση όχι μικρότερη από 50 μ.

(2) Η αρμόδια αρχή μπορεί να καταρτίσει κανόνες για τη σειρά ή τη σύνθεση των φαλάγγων.

**11 521-  
11 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**11 600-  
20 999**

**ΚΛΑΣΗ 2. ΑΕΡΙΑ: ΠΙΕΣΜΕΝΑ, ΥΓΡΟΠΟΙΗΜΕΝΑ Ή ΔΙΑΛΥΜΕΝΑ ΥΠΟ ΠΙΕΣΗ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

21 000-  
21 099**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**21 100-  
21 117**Μεταφορά σε εμπορευματοκιβώτια**

21 118 Η μεταφορά σε μικρά εμπορευματοκιβώτια κώλων που περιέχουν αέρια του 7° (a) και 8° (a) απαγορεύεται.

21 119-  
21 199**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**21 200-  
21 211**Αερισμός**

21 212 Εάν κώλα που περιέχουν αέρια του 1° μέχρι 6° και 9° (e) μεταφέρονται σε κλειστό όχημα, το όχημα θα είναι εφοδιασμένο με επαρκή εξαερισμό.

21 213-  
21 259**Ειδικός εξοπλισμός**

21 260 Όταν μεταφέρονται πιεσμένα αέρια ή υγροποιημένα αέρια βλαβερά για τα αναπνευστικά όργανα ή που εγκυμονούν κίνδυνο δηλητηρίασεως και χαρακτηρίζονται με το γράμμα "t" στον πίνακα των υλών, το πλήρωμα του οχήματος πρέπει να εφοδιάζεται με ασφυξιογόνες προσωπίδες (αναπνευστήρες) τύπου κατάλληλου για τα μεταφερόμενα αέρια.

21 261-  
21 299**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησεως**21 300-  
21 320

## Κλάση 2

## Επίβλεψη των οχημάτων

21 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή για τα επικίνδυνα εμπορεύματα που αναφέρονται παρακάτω σε ποσότητες που υπερβαίνουν αυτές που καθορίζονται:

Τριφθοριούχο βόριο και φθόριο του 1° (at)· οι ύλες του 3° (at), του 3° (bt) πλην αιθυλοχλωριδίου και του 3° (ct)· υδροχλωρίου του 5° (at)· και τα υγροποιημένα αέρια βαθιάς καταψύξεως του 7° (a) και 8° (a): 1 000 κιλά·

Οι ύλες του 3° (b)· αιθυλοχλωρίδιο του 3° (bt)· βινυλοχλωρίδιο του 3° (c)· οι ύλες του 4° (b)· και τα υγροποιημένα αέρια βαθιάς καταψύξεως του 7° (b) και 8° (b): 10 000 κιλά.

21 322-  
21 399

**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

21 400-  
21 402

**Απαγόρευση μικτής φορτώσεως σε ένα όχημα**

21 403 Κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 2, 3 ή 6.1 δεν θα φορτώνονται στο ίδιο όχημα μαζί με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

21 404-  
21 406

**Τόποι φορτώσεως και εκφορτώσεως**

21 407 (1) Οι παρακάτω εργασίες απαγορεύονται:

- (a) Φόρτωση ή εκφόρτωση των παρακάτω υλών σε δημόσιο χώρο εντός κατοικημένης περιοχής χωρίς ειδική άδεια από τις αρμόδιες αρχές: υδροβρώμιο, χλώριο, διοξείδιο του αζώτου, διοξείδιο του θείου ή φωσγένιο [3° (at)]· υδρόθειο [3° (bt)]· και υδροχλωρίου [5° (at)]·
- (b) Φόρτωση ή εκφόρτωση των παραπάνω υπό (a) αναφερομένων υλών σε δημόσιο χώρο πλην κατοικημένης περιοχής χωρίς προηγούμενη ειδοποίηση των αρμοδίων αρχών, εκτός αν οι προαναφερόμενες εργασίες δικαιολογούνται για σοβαρούς λόγους ασφαλείας.

Η άδεια και η ειδοποίηση που προβλέπονται παραπάνω στα (a) και (b) αντιστοίχως δεν θα απαιτούνται αν οι ύλες περιέχονται σε κυλίνδρους, δοχεία, 'συνδεσμολογίες κυλίνδρων' ή δοχεία σύμφωνα με το περιθωριακό 2207 με χωρητικότητα που δεν υπερβαίνει τα 1 000 λίτρα κατά τα περιγραφόμενα στο περιθωριακό 2212 (1) (a), (b), (d) ή (e).

(2) Αν για οποιοδήποτε λόγο οι εργασίες χειρισμού πρέπει να γίνουν σε δημόσιο χώρο, τότε:

Υλεις και αντικείμενα διαφορετικών ειδών θα διαχωρίζονται σύμφωνα με τις ετικέτες και

Κόλα εφοδιασμένα με μέσα χειρισμού θα διατηρούνται επίπεδα κατά τον χειρισμό.

## Κλάση 2

21 408-  
21 413

## Χειρισμός και στοιβασία

- 21 414 (1) Τα κόλα δεν πρέπει να ρίπτονται ή να υποβάλλονται σε πρόσκρουση.
- (2) Τα δοχεία θα στοιβάζονται εντός του οχήματος κατά τέτοιο τρόπο ώστε αφ'ενός να μη μπορούν να ανατραπούν ή να πέσουν και αφ'ετέρου να καλύπτονται οι παρακάτω προϋποθέσεις:

(a) Οι κύλινδροι που αναφέρονται στο περιθωριακό 2212 (1)(a) θα τοποθετούνται παράλληλα ή σε ορθή γωνία προς τον κατά μήκος άξονα του οχήματος· εντούτοις, αυτοί που βρίσκονται πλησίον του εμπρόσθιου εγκάρσιου τοιχώματος θα τοποθετούνται σε ορθή γωνία προς τον προαναφερόμενο άξονα.

Οι κοντοί κύλινδροι μεγάλης διαμέτρου (περίπου 30 εκ. και πάνω) μπορεί να στοιβάζονται κατά μήκος με τη συσκευή προστασίας της βαλβίδας στραμμένη προς το μέσον του οχήματος.

Κύλινδροι που είναι αρκετά σταθεροί ή μεταφέρονται σε κατάλληλες συσκευές που εμποδίζουν αποτελεσματικά την ανατροπή μπορεί να τοποθετούνται όρθιοι.

Κύλινδροι που τοποθετούνται οριζόντια θα σφηνώνονται, θα προσδένονται ή θα ασφαλιζονται κατάλληλα και σταθερά ώστε να μη μπορούν να μετατοπισθούν.

(b) Δοχεία που περιέχουν αέρια του 7° (a) ή 8° (a) θα τοποθετούνται πάντοτε στη θέση για την οποία έχουν σχεδιαστεί και θα προστατεύονται έναντι οποιουδήποτε ενδεχόμενου να υποστούν βλάβες από άλλα κόλα.

21 415-  
21 499

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων-δεξαμενών  
συστοιχίων δοχείων και εμπορευματοκιβωτίων-δεξαμενών**

## Μαρκάρισμα και επισήμανση οχημάτων

Μαρκάρισμα

- 21 500 (1) Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές, εμπορευματοκιβώτια-δεξαμενές και συστοιχίες δοχείων που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες της Κλάσης 2 πλην των αναγραφόμενων στον Πίνακα 2 του παρόντος περιθωριακού πρέπει να φέρουν την ετικέτα ή τις ετικέτες που αναφέρονται στον Πίνακα 1 παρακάτω:

Πίνακας 1

Υλες και αντικείμενα	Υπόδειγμα ετικέτας Αριθμ.
Καταχωρημένες υπό (a)	2
Καταχωρημένες υπό (at)	6.1
Καταχωρημένες υπό (b)	3
Καταχωρημένες υπό (bt)	6.1 + 3
Καταχωρημένες υπό (c)	3
Καταχωρημένες υπό (ct)	6.1 + 3

## Κλάση 2

**21 500** (2) Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές, εμπορευματοκιβώτια-δεξαμενές, ή συστοιχίες δοχείων, που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες που αναγράφονται στον Πίνακα 2 παρακάτω θα φέρουν την ετικέτα ή τις ετικέτες που αναφέρονται.

Πίνακας 2

Αριθμός είδους	Υλες	Αριθμός υποδείγματος ετικέτας
1° (a)	Οξυγόνο	2 + 05
2° (a)	Μείγματα με άνω του 25% οξυγόνο κατ'όγκο	2 + 05
3° (at)	Χλώριο, υδροβρώμιο, φωσγένιο	6.1 + 8
3° (at)	Διοξείδιο του αζώτου	6.1 + 05
5° (a)	Πρωτοξείδιο του αζώτου	2 + 05
5° (at)	Υδροχλώριο	6.1 + 8
7° (a)	Οξείδιο του υδρογόνου, οξυγόνο	2 + 05
8° (a)	Μείγματα με άνω του 32 % νιτρώδες οξύ κατά βάρος, αέρας, μείγματα με άνω του 20 % οξυγόνο κατά βάρος	2 + 05

21 501-  
21 508

## Στάσεις περιορισμένης διάρκειας για ανάγκες σέρβις

**21 509** Κατά τη μεταφορά επικίνδυνων υλών της Κλάσης 2 πλην εκείνων του 1° (a) και (at), 2° (a), 7° (a), 8° (a), και 10°, οι στάσεις για ανάγκες σέρβις δεν θα γίνονται, όσο είναι δυνατό, πλησίον κατοικημένων περιοχών ή θερέτρων. Η στάση κοντά σε ένα τέτοιο τόπο δεν θα μπορεί να παρατείνεται παρά μόνο με τη σύμφωνη γνώμη των αρμόδιων αρχών.

21 510-  
21 599

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

31 200-  
31 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**

31 300-  
31 320

**Επίβλεψη των οχημάτων**

31 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή για τα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω, για ποσότητες που υπερβαίνουν τις αναφερόμενες:

Υγες του 1° μέχρι 5° (a) και (b), 7° (b), 21° μέχρι 26° και ελαφρώς τοξικές ύλες του 41° μέχρι 57°: 10 000 κιλά.

Υγες του 6° και 11° μέχρι 19°, 27°, 28°, και τοξικές ή πολύ τοξικές ύλες του 41° μέχρι 57°: 5 000 κιλά.

31 322-  
31 399

**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

31 400-  
31 402

**Απαγόρευση μικτής φορτώσεως σε ένα όχημα**

31 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3 δεν θα φορτώνονται στο ίδιο όχημα μαζί με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

31 404-  
31 409

## Κλάση 3

**Προφυλάξεις σε σχέση με αντικείμενα καταναλώσεως**

- 31 410** (1) Κόλα που φέρουν ετικέτες σύμφωνες με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα καταναλώσεως και ζωοτροφές εντός των οχημάτων και στους χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.
- (2) Κενές συσκευασίες, ακαθάρσιτες, που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα καταναλώσεως και ζωοτροφές εντός των οχημάτων και στους χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

**31 411-  
31 414**

**Καθαρισμός μετά την εκφόρτωση**

- 31 415** Εάν οποιοσδήποτε ύλες του 6° και 11° έως 19°, 27°, 28°, 32° και οι τοξικές ή πολύ τοξικές ύλες του 41° έως 57° έχουν διαρρεύσει και διασκορπιστεί μέσα σε ένα όχημα, αυτό δεν μπορεί να επαναχρησιμοποιηθεί μέχρι να καθαρισθεί επιμελώς και, εάν είναι αναγκαίο, να απολυμανθεί. Οποιαδήποτε άλλα εμπορεύματα και αντικείμενα που μεταφέρονται στο ίδιο όχημα θα εξετάζονται για ενδεχόμενη μόλυνση.

**31 416-  
31 499**

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων-δεξαμενών και εμπορευματοκιβωτίων-δεξαμενών****Μαρκάρισμα και επισήμανση****Μαρκάρισμα**

- 31 500** Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάρσιστα) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 3.

Όσες περιέχουν ή περιείχαν στο παρελθόν τις ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2312 (3) έως (5) θα φέρουν επίσης ετικέτες σύμφωνα με το εν λόγω περιθωριακό.

**31 501-  
31 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**31 600-  
40 999**

## ΚΛΑΣΗ 4.1. ΕΥΦΛΕΚΤΑ ΣΤΕΡΕΑ

## Γενικά

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

41 000-  
41 099

## ΤΜΗΜΑ 1. Τρόπος μεταφοράς

41 100-  
41 104

## Μέθοδος αποστολής και περιορισμοί διαμεταφοράς

- 41 105 (1) Ύλες του 5° και 15° μπορεί να μεταφέρονται μόνο σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές.
- (2) Ύλες του 26° πρέπει να προστατεύεται από άμεσο ηλιακό φως και θερμότητα κατά τη μεταφορά.
- (3) Ύλες του 41° μέχρι 50° θα φορτώνονται έτσι ώστε να μην υπερβαίνονται οι θερμοκρασίες ελέγχου που αναφέρονται στο περιθωριακό 2400 (20), που ισχύουν για ύλες που αναγράφονται στο περιθωριακό 2401 και για μη αναγραφόμενες ύλες στους εγκεκριμένους όρους μεταφοράς [βλέπε περιθωριακό 2400 (16)].
- (4) Η διατήρηση της προβλεπόμενης θερμοκρασίας είναι απαραίτητη για την ασφαλή μεταφορά πολλών αυτοαναφλεγόμενων υλών. Γενικά, πρέπει να υπάρχουν:
- επιμελής επιθεώρηση της μεταφορικής μονάδας πριν από τη φόρτωση·
  - οδηγίες στον μεταφορέα για την λειτουργία του συστήματος ψύξεως, συμπεριλαμβανομένου ενός καταλόγου των προμηθευτών ψυκτικού που βρίσκονται κατά μήκος της διαδρομής·
  - διαδικασίες που θα ακολουθούνται σε περίπτωση απώλειας του ελέγχου·
  - τακτική παρακολούθηση των θερμοκρασιών λειτουργίας· και
  - πρόβλεψη εφεδρικού συστήματος ψύξεως ή ανταλλακτικών.
- (5) Οποιοσδήποτε συσκευές ελέγχου και μέτρησης θερμοκρασίας στο σύστημα ψύξεως θα είναι εύκολα προσπελάσιμες και όλες οι ηλεκτρικές συνδέσεις θα προφυλάσσονται από τις καιρικές συνθήκες. Η θερμοκρασία του αέρα στον χώρο εντός της μεταφορικής μονάδας θα μετράται από δύο ανεξάρτητα θερμομέτρα και το αποτέλεσμα της μέτρησης θα καταγράφεται έτσι ώστε οι αλλαγές θερμοκρασίας να εντοπίζονται αμέσως. Η θερμοκρασία θα ελέγχεται κάθε τέσσερις έως έξι ώρες και θα καταγράφεται. Όταν μεταφέρονται ύλες με θερμοκρασία ελέγχου κάτω των +25° C, η μεταφορική μονάδα θα είναι εξοπλισμένη με ορατούς και ηχητικούς συναγερμούς, ηλεκτροδοτούμενους ανεξάρτητα από το σύστημα ψύξεως, ρυθμισμένους να λειτουργούν στην θερμοκρασία ελέγχου ή κάτω απ'αυτήν.
- (6) Εάν η θερμοκρασία ελέγχου υπερβαίνεται κατά τη μεταφορά, θα ενεργοποιείται διαδικασία επιφυλακής που θα περιλαμβάνει τις απαραίτητες επισκευές του εξοπλισμού ψύξεως ή αύξηση της ικανότητας ψύξεως (π.χ. με προσθήκη υγρού ή στερεού ψυκτικού υλικού). Θα γίνονται επίσης συχνοί έλεγχοι της θερμοκρασίας και προετοιμασίες για την εφαρμογή των διαδικασιών έκτακτης ανάγκης. Εάν η θερμοκρασία φθάσει το όριο συναγερμού (βλέπε επίσης περιθωριακά 2400 (20) και 2401), θα τεθούν σε λειτουργία οι διαδικασίες έκτακτης ανάγκης.

## Κλάση 4.1

**41 105 (7)** Η καταλληλότητα ενός συγκεκριμένου μέσου ελέγχου της θερμοκρασίας εξαρτάται (συνεχ.) από αρκετούς παράγοντες. Μεταξύ αυτών που πρέπει να ληφθούν υπόψη συγκαταλέγονται:

- η (οι) θερμοκρασία (-ίες) ελέγχου της ύλης (των υλών) που πρόκειται να μεταφερθεί (-ούν).
- η διαφορά μεταξύ της θερμοκρασίας ελέγχου και των αναμενόμενων συνθηκών θερμοκρασίας περιβάλλοντος.
- η αποτελεσματικότητα της θερμομόνωσης.
- η διάρκεια μεταφοράς και
- το επιτρεπτό περιθώριο ασφαλείας για καθυστερήσεις.

**(8)** Κατάλληλες μέθοδοι για να ελεγχθεί η θερμοκρασία ελέγχου είναι, κατ'αύξουσα σειρά ως προς την ικανότητά τους:

- (a) θερμομόνωση· εφόσον η αρχική θερμοκρασία της (των) αυτοαναφλεγόμενης (-ων) ύλης (υλών) είναι αρκούντως κατώτερη της θερμοκρασίας ελέγχου.
- (b) θερμομόνωση και ψυκτικό σύστημα· εφόσον:
  - μεταφέρεται επαρκής ποσότητα μη εύφλεκτου ψυκτικού υλικού (π.χ. υγρό άζωτο ή στερεό διοξείδιο του άνθρακα), επιτρέποντας ένα λογικό περιθώριο καθυστερήσεων, ή εξασφαλίζεται η δυνατότητα αναπλήρωσης.
  - δεν χρησιμοποιείται υγρό οξυγόνο ή αέρας ως ψυκτικό υλικό.
  - η επίδραση της ψύξεως είναι ομοιόμορφη ακόμη και όταν έχει καταναλωθεί το μεγαλύτερο μέρος του ψυκτικού υλικού και
  - η ανάγκη αερισμού της μεταφορικής μονάδας πριν την είσοδο επισημαίνεται με σαφή προειδοποίηση πάνω στην θύρα ή τις θύρες.
- (c) θερμομόνωση και απλή μηχανική ψύξη· εφόσον ηλεκτρικά εξαρτήματα με αντοχή στη φλόγα χρησιμοποιούνται εντός του διαμερίσματος του ψυκτικού υλικού για την πρόληψη ανάφλεξης των εύφλεκτων ατμών από τις αυτοαναφλεγόμενες ύλες.
- (d) θερμομόνωση και συνδυασμός μηχανικής ψύξης και συστήματος με χρήση ψυκτικού υλικού· εφόσον:
  - τα δύο συστήματα είναι ανεξάρτητα μεταξύ τους και
  - ικανοποιούνται οι απαιτήσεις (b) και (c).
- (e) θερμομόνωση και διπλό σύστημα μηχανικής ψύξης, εφόσον:
  - πέραν της ενσωματωμένης μονάδας ηλεκτροδότησης, τα δύο συστήματα είναι ανεξάρτητα μεταξύ τους.
  - κάθε σύστημα είναι από μόνο του ικανό για τη διατήρηση επαρκούς ελέγχου της θερμοκρασίας και

## Κλάση 4.1

41 105  
(συνεχ.)

ηλεκτρικά εξαρτήματα που αντέχουν στη φλόγα χρησιμοποιούνται εντός του διαμερισματος του ψυκτικού υλικού για την πρόληψη ανάφλεξης των εύφλεκτων ατμών από τις αυτοαναφλεγόμενες ύλες.

(9) Για ύλες του 41° και 42°, θα χρησιμοποιείται μία από τις ακόλουθες μεθόδους ελέγχου θερμοκρασίας που περιγράφονται στο (8):

- η μέθοδος (c) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος κατά τη μεταφορά δεν υπερβαίνει τη θερμοκρασία ελέγχου κατά περισσότερο από 10 °C· ή
- η μέθοδος (d) ή (e).

Για ύλες του 43° έως 50°, θα χρησιμοποιείται μία από τις ακόλουθες μεθόδους:

- η μέθοδος (a) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος κατά τη μεταφορά είναι τουλάχιστον 10 °C χαμηλότερη της θερμοκρασίας ελέγχου·
- η μέθοδος (b) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος κατά τη μεταφορά δεν υπερβαίνει τη θερμοκρασία ελέγχου κατά περισσότερο από 30 °C· ή
- η μέθοδος (c), (d) ή (e).

41 106-  
41 110**Μεταφορά χύμα**

41 111 (1) Ύλες αναγραφόμενες ονομαστικά υπό το 6° (c) με την εξαίρεση της ναφθαλίνης, των 11° (c), 12° (c), 13° (c) και 14° (c) και των στερεών αποβλήτων που αναγράφονται υπό το (c) των προαναφερομένων ειδών μπορεί να μεταφέρονται χύμα σε κλειστά ή επενδεδυμένα οχήματα.

Η ναφθαλίνη του 6° (c) μπορεί να μεταφέρεται χύμα σε κλειστά οχήματα με μεταλλικό αμάξωμα ή σε οχήματα καλυμμένα με μη αναφλέξιμη επένδυση τα οποία έχουν μεταλλικό αμάξωμα ή δάπεδο και τοιχώματα που προστατεύονται από το φορτίο.

(2) Απόβλητα του 4° (c) μπορεί να μεταφέρονται χύμα σε ανοικτά επενδεδυμένα οχήματα με επαρκή αερισμό. Πρέπει να λαμβάνονται τα κατάλληλα μέτρα ώστε να μην είναι δυνατή η διαφυγή οποιουδήποτε από τα περιεχόμενα, ιδιαίτερα των συστατικών σε υγρή μορφή.

41 112-  
41 117**Μεταφορά σε εμπορευματοκιβώτια**

41 118 Μικρά εμπορευματοκιβώτια που χρησιμοποιούνται για τη μεταφορά χύμα των υλών που αναφέρονται στο περιθωριακό 41 111 πρέπει να ικανοποιούν τις απαιτήσεις των οχημάτων αυτού του περιθωριακού.

41 119-  
41 199

**ΤΜΗΜΑ 2.** Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους.

41 200-  
41 203

## Κλάση 4.1

## Τύποι οχημάτων

- 41 204 Υλεις του 31° μέχρι 40° θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα. Σε περιπτώσεις όπου, κατά τις διατάξεις του 41 105, οι ύλες απαιτείται να μεταφέρονται σε μονωμένα, ψυχόμενα ή μηχανικώς ψυχόμενα οχήματα, τα οχήματα αυτά θα ικανοποιούν τις διατάξεις του 41 248. Υλεις του 41° μέχρι 50° που περιέχονται σε προστατευτικές συσκευασίες πλήρεις ψυκτικού υλικού θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα. Εάν τα χρησιμοποιούμενα οχήματα είναι κλειστά πρέπει να αερίζονται επαρκώς. Τα επενδεδυμένα οχήματα πρέπει να είναι εξοπλισμένα με χωρίσματα στα πλάγια και στο πίσω μέρος. Η επένδυση αυτών των οχημάτων θα αποτελείται από αδιάβροχο και μη αναφλέξιμο υλικό.

41 205-  
41 247

## Μονωμένα, ψυχόμενα και μηχανικώς ψυχόμενα οχήματα

- 41 248 Τα μονωμένα, ψυχόμενα και μηχανικώς ψυχόμενα οχήματα που χρησιμοποιούνται σύμφωνα με τις διατάξεις του 41 105 πρέπει να ικανοποιούν τους ακόλουθους όρους:

- (a) το όχημα πρέπει να είναι τέτοιου είδους και με τέτοιο τρόπο εξοπλισμένο όσον αφορά τη μόνωση και τις μεθόδους ψύξεως (βλέπε περιθωριακό 41 105) ώστε να μην υπερβαίνεται η μέγιστη θερμοκρασία που προβλέπεται στο 41 105. Ο συνολικός συντελεστής θερμικής αγωγιμότητας δεν θα είναι μεγαλύτερος από  $0.4 \text{ W/m}^2 \text{ K}$ .
- (b) το όχημα πρέπει να είναι εξοπλισμένο κατά τέτοιο τρόπο ώστε οι ατμοί των μεταφερομένων υλών ή του ψυκτικού υλικού να μην μπορούν να διεισδύσουν στο κουβούκλιο του οδηγού.
- (c) θα υπάρχει κατάλληλη συσκευή που θα επιτρέπει ανά πάσα στιγμή την ανάγνωση από το κουβούκλιο της θερμοκρασίας που επικρατεί στο χώρο φορτώσεως.
- (d) ο χώρος φορτώσεως θα έχει εξαεριστήρες ή βαλβίδες αερισμού εάν υπάρχει οποιοσδήποτε κίνδυνος να αναπτυχθεί υπερβολική πίεση στο εσωτερικό του. Θα λαμβάνεται μέριμνα, όπου αυτό είναι απαραίτητο, ώστε η ψύξη να μην δυσχεραίνεται από τους εξαεριστήρες ή τις βαλβίδες αερισμού.
- (e) το ψυκτικό μέσο δεν πρέπει να είναι εύφλεκτο και
- (f) η ψυκτική συσκευή του μηχανικώς ψυχόμενου οχήματος θα είναι ικανή να λειτουργεί ανεξάρτητα από τον κινητήρα του οχήματος.

41 249-  
41 299

## ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησεως

41 300-  
41 320

## Κλάση 4.1

## Επίβλεψη των οχημάτων

**41 321** Οι διατάξεις του 10 321 θα έχουν εφαρμογή στα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω σε ποσότητες που υπερβαίνουν τις καθοριζόμενες:

- ύλες του 21° έως 25°:	1 000 κιλά
- ύλες του 26°:	100 κιλά
- ύλες του 31°, 32°, 43° και 44°:	1 000 κιλά
- ύλες του 33°, 34°, 45° και 46°:	2 000 κιλά
- ύλες του 35°, 36°, 47° και 48°:	5 000 κιλά
- ύλες του 41° και 42°:	500 κιλά

Επιπλέον, οχήματα που μεταφέρουν περισσότερα από 500 κιλά υλών του 41° και 42° θα υπόκεινται ανά πάσα στιγμή σε επίβλεψη για την πρόληψη κάθε κακόβουλης ενέργειας και για την κινητοποίηση του οδηγού και των αρμόδιων αρχών στην περίπτωση απώλειας ή πυρκαγιάς.

**41 322-  
41 399**

**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

**41 400**

**Περιορισμός της μεταφερόμενης ποσότητας**

**41 401 (1)** Μια μεταφορική μονάδα δεν θα μεταφέρει περισσότερα από:

- 5 000 κιλά υλών του 31° και 32° εάν ο χώρος φόρτωσης αερίζεται από το άνω μέρος και η μεταφορική μονάδα είναι μονωμένη με αντιθερμαντικό υλικό [βλέπε περιθωριακό 11 204 (3) (a)] ή 1 000 κιλά υλών του 31° και 32° εάν η μεταφορική μονάδα δεν ικανοποιεί αυτές τις απαιτήσεις·
- 10 000 κιλά υλών του 33° και 34°·
- 20 000 κιλά υλών του 35°, 36°, 37°, 38°, 39° και 40°·
- 1 000 κιλά υλών του 41° και 42° ή 5 000 κιλά εάν είναι μονωμένη με αντιθερμαντικό υλικό·
- 5 000 κιλά υλών του 43° και 44° ή 10 000 κιλά εάν είναι μονωμένη με αντιθερμαντικό υλικό· και
- 20 000 κιλά υλών του 45°, 46°, 47°, 48°, 49° και 50°·

(2) Όποτε μεταφέρονται μαζί ύλες αυτής της Κλάσης σε μία μεταφορική μονάδα, τα όρια που αναφέρονται στο (1) δεν θα υπερβαίνονται και τα συνολικά περιεχόμενα δεν θα υπερβαίνουν τα 20 000 κιλά.

## Κλάση 4.1

- 41 402** Οι διατάξεις των περιθωριακών 10 500 και 41 204 δεν θα έχουν εφαρμογή στη μεταφορά υλών που αναφέρονται ή εξυπακούονται στα 31° έως 34° και 41° έως 44°, εφόσον η ύλη είναι συσκευασμένη σύμφωνα με τη μέθοδο συσκευασίας OP1A, OP1B, OP2A ή OP2B, όπως απαιτείται, και η ποσότητα ανά μεταφορική μονάδα περιορίζεται σε 10 κιλά.

**Απαγόρευση μικτής φορτώσεως σε ένα όχημα**

- 41 403** (1) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.1 δεν θα φορτώνονται μαζί σε ένα όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.
- (2) Κόλα που φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 4.1 και 01 δεν θα φορτώνονται μαζί σε ένα όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6, 2, 3, 4.2, 4.3, 5.1, 5.2, 6.1, 7A, 7B, 7C, 8 ή 9.

**41 404-  
41 409**

**Προφυλάξεις σχετικές με τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές**

- 41 410** (1) Κόλα που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.
- (2) Κενές ακαθάριστες συσκευασίες που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

**41 411-  
41 413**

**Χειρισμός και στοιβασία**

- 41 414** (1) Κόλα που περιέχουν ύλες του 26° θα αποθηκεύονται μόνο σε δροσερούς, καλά αερισμένους χώρους μακριά από πηγές θερμότητας.
- (2) Κόλα που περιέχουν ύλες του 41° έως 50° δεν θα τοποθετούνται στο επάνω μέρος άλλων εμπορευμάτων· επιπλέον, θα στοιβάζονται έτσι ώστε να είναι εύκολα προσπελάσιμες.
- (3) Για κόλα που περιέχουν ύλες του 41° έως 50°, η καθορισμένη θερμοκρασία ελέγχου θα διατηρείται σε όλη τη διάρκεια της μεταφορικής εργασίας, συμπεριλαμβανομένης της φόρτωσης και εκφόρτωσης, καθώς και τυχόν ενδιάμεσες στάσεις [βλέπε περιθωριακό 41 105(2)].
- (4) Τα κόλα θα φορτώνονται με τέτοιο τρόπο ώστε να κυκλοφορεί ελεύθερα ο αέρας μέσα στο χώρο φόρτωσης εξασφαλίζοντας ομοιόμορφη θερμοκρασία στο φορτίο. Εάν τα περιεχόμενα ενός οχήματος ή μεγάλου εμπορευματοκιβωτίου υπερβαίνουν τα 5 000 κιλά εύφλεκτων στερεών, το φορτίο θα διαίρεται σε στοιβές όχι βαρύτερες των 5 000 κιλών χωριζόμενες από κενό διάστημα τουλάχιστον 0.05 μ.

**41 415-  
41 499**

1958

Κλάση 4.1

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων-δεξαμενών και εμπορευματοκιβωτίων-δεξαμενών**

**Μαρκάρισμα και επισήμανση**

**Μαρκάρισμα**

**41 500** Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικίνδυνων στερεών υλών, τα οποία περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 4.1.

Όσα περιέχουν ή περιείχαν στο παρελθόν τις ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2412 (3) θα φέρουν επίσης ετικέτες σύμφωνα με το εν λόγω περιθωριακό.

**41 501-  
41 508**

**Στάσεις περιορισμένης διάρκειας για ανάγκες σέρβις**

**41 509** Κατά τη μεταφορά υλών του 31°, 32°, 41° και 42°, οι στάσεις για ανάγκες σέρβις δεν θα γίνονται, όσο είναι δυνατό, πλησίον κατοικημένων ή πολυσύχναστων περιοχών. Η παρατεταμένη στάση κοντά σε τέτοιους τόπους μπορεί να επιτραπεί μόνο με τη σύμφωνη γνώμη των αρμόδιων αρχών. Ο ίδιος κανόνας θα έχει εφαρμογή εάν η μεταφορική μονάδα είναι φορτωμένη με περισσότερα από 2 000 κιλιά υλών του 33°, 34°, 43° και 44°.

**41 510-  
41 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**41 600-  
41 999**

**ΚΛΑΣΗ 4.2. ΥΛΕΣ ΠΟΥ ΥΠΟΚΕΙΝΤΑΙ ΣΕ ΑΥΤΟΓΕΝΗ ΑΝΑΦΑΞΗ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

42 000-  
42 099

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**

42 100-  
42 104

**Μέθοδος αποστολής και περιορισμοί διαμεταφοράς**

42 105 Φωσφόρος του 22° μπορεί να μεταφέρεται μόνο σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές.

42 106-  
42 110

**Μεταφορά χύμα**

42 111 Ύλες του 1° (c), 2° (c), 3°, ρινίσματα, ξύσματα, και θραύσματα σιδηρούχων μετάλλων του 12° (c), αναλωμένο οξειδίο του σιδήρου και αναλωμένος σπόγγος σιδήρου του 16° (c) και στερεά απόβλητα που συμπεριλαμβάνονται στο (c) των προαναφερομένων ειδών, μπορεί να μεταφέρονται χύμα.

Εντούτοις, αυτές οι ύλες πρέπει να μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα με μεταλλικό αμάξωμα.

42 112-  
42 117

**Μεταφορά σε εμπορευματοκιβώτια**

42 118 Μικρά εμπορευματοκιβώτια που χρησιμοποιούνται για τη μεταφορά χύμα των υλών που αναφέρονται στο περιθωριακό 42 111 θα ικανοποιούν τις απαιτήσεις για τα οχήματα στο εν λόγω περιθωριακό.

42 119-  
42 199

**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

42 200-  
42 203

**Τύποι οχημάτων**

42 204 Κόλα που περιέχουν ύλες της Κλάσης 4.2 θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα.

42 205-  
42 299

## Κλάση 4.2

## ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως

42 300-  
42 320

## Επίβλεψη των οχημάτων

42 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή για τα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω όταν η ποσότητά τους υπερβαίνει την καθοριζόμενη:

Υλεις που συμπεριλαμβάνονται στο (α) των διαφόρων ειδών και ύλης του 22°: 10 000 κιλά.

42 322-  
42 377

## Κενές δεξαμενές

42 378 Για δεξαμενές που περιείχαν στο παρελθόν φωσφόρο του 11° (α) και 22°, βλέπε και τα περιθωριακά 211 470 (2) και 212 470 (2).

42 379-  
42 399

## ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό

42 400-  
42 402

## Απαγόρευση μικτής φορτώσεως σε ένα όχημα

42 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2 δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

42 404-  
42 409

## Προφυλάξεις σχετικές με τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές

42 410 (1) —Κόλα που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

(2) Κενές ακαθάριστες συσκευασίες που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

Κλάση 4.3

**ΤΜΗΜΑ 5.** Ειδικές διατάξεις σχετικές με τη λειτουργία οχημάτων (-δεξαμενών) και εμπορευματοκιβωτίων (-δεξαμενών)

**Μαρκάρισμα και επισήμανση**

*Επισήμανση*

**43 500** Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικίνδυνων στερεών υλών, τα οποία περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 4.3.

Όσα περιέχουν ή περιείχαν στο παρελθόν ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2482 (3) έως (7) θα φέρουν επίσης ετικέτες σύμφωνα με το εν λόγω περιθωριακό.

43 501-

43 599

**ΤΜΗΜΑ 6.** Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

43 600-

50 999

## ΚΛΑΣΗ 5.1. ΟΞΕΙΔΩΤΙΚΕΣ ΥΛΕΣ

## Γενικά

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του μέρους I)

51 000-  
51 099

## ΤΜΗΜΑ 1. Τρόπος μεταφοράς

51 100-  
51 104

## Μέθοδος αποστολής και περιορισμοί φορτώσεως

51 105 Νιτρικό αμμώνιο του 20° μπορεί να μεταφέρεται μόνο σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές.

51 106-  
51 110

## Μεταφορά χύμα

51 111 (1) Υλεις του 11° έως 13°, 16°, 18°, 19°, 21°, 22° (c) και στερεά απόβλητα, που συμπεριλαμβάνονται στα προαναφερόμενα είδη, μπορεί να μεταφέρονται χύμα ως πλήρες φορτίο.

(2) Υλεις του 11° έως 13°, 16°, 18°, 19°, 21°, 22° (c) και στερεά απόβλητα που συμπεριλαμβάνονται στα προαναφερόμενα είδη πρέπει να μεταφέρονται σε κλειστά οχήματα ή επενδεδυμένα οχήματα καλυμμένα με αδιάβροχη μη αναφλέξιμη επένδυση. Τα οχήματα θα είναι κατασκευασμένα με τέτοιο τρόπο ώστε, είτε η ύλη να μην μπορεί να έλθει σε επαφή με ξύλο ή άλλο αναφλέξιμο υλικό, ή ολόκληρη η επιφάνεια του δαπέδου και των τοιχωμάτων - εάν είναι εύφλεκτη - να έχει αδιάβροχη και άφλεκτη επικάλυψη ή να έχει υποστεί επεξεργασία με ύλες που καθιστούν το ξύλο δύσκολα αναφλέξιμο.

51 112-  
51 117

## Μεταφορά σε εμπορευματοκιβώτια

51 118 (1) Εξαιρουμένων των εύθραυστων κόλων που εννοούνται στο περιθωριακό 10'014(1) και των κόλων που περιέχουν υπεροξειδίο του υδρογόνου ή διαλύματα του υπεροξειδίου του υδρογόνου του 1° ή τετρανιτρομεθάνιο του 2°, κόλα που περιέχουν ύλες που αναφέρονται σε αυτήν την Κλάση μπορεί να μεταφέρονται σε μικρά εμπορευματοκιβώτια.

(2) Εμπορευματοκιβώτια που προορίζονται για τη μεταφορά χύμα υλών του 11° έως 13°, 16°, 18° και 19° πρέπει να είναι κατασκευασμένα από μέταλλο, να είναι στεγανά, να είναι καλυμμένα με καπάκι ή με αδιάβροχη επένδυση που αντιστέκεται στην ανάφλεξη, και να είναι έτσι κατασκευασμένο ώστε οι ύλες στα εμπορευματοκιβώτια να μη μπορούν να έλθουν σε επαφή με ξύλο ή οποιοδήποτε άλλο αναφλέξιμο υλικό.

## Κλάση 5.1

- 51 118 (3) Εμπορευματοκιβώτια που προορίζονται για τη μεταφορά χύμα υλών του 21° και 22°  
(συνεχ.) (c) πρέπει να είναι καλυμμένα με καπάκι ή αδιάβροχη επένδυση που αντιστέκεται στην ανάφλεξη και να είναι κατασκευασμένα κατά τρόπο ώστε, είτε η ύλη μέσα στα εμπορευματοκιβώτια να μη μπορεί να έλθει σε επαφή με ξύλο ή άλλο αναφλέξιμο υλικό, ή ολόκληρη η επιφάνεια του δαπέδου και των τοιχωμάτων - αν είναι κατασκευασμένα από ξύλο - να έχει επικαλυφθεί με αδιάβροχη επιφάνεια που αντιστέκεται στην ανάφλεξη ή να έχει επιχριστεί με πυριτικό νάτριο ή παρόμοια ύλη.

51 119-  
51 199

**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

51 200-  
51 203

**Τύποι οχημάτων**

- 51 204 Εύφλεκτα IBC που περιέχουν ύλες του 11° έως 13° και 16° (b) θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα. Η επένδυση θα είναι κατασκευασμένη από αδιάβροχο και μη αναφλέξιμο υλικό. Θα λαμβάνονται μέτρα για να εξασφαλισθεί ότι, εάν συμβεί διαρροή, οι ύλες που περιέχονται στο όχημα δεν μπορούν να έλθουν σε επαφή με το ξύλο ή οποιοδήποτε άλλο υλικό.

51 205-  
51 219

**Οχήματα που χρησιμοποιούνται για τη μεταφορά επικίνδυνων εμπορευμάτων σε σταθερές ή αποσυναρμολογούμενες δεξαμενές, ή εμπορευματοκιβώτια-δεξαμενές με χωρητικότητα μεγαλύτερη από 3.0 λίτρα**

- 51 220 Για τη μεταφορά υγρών του 1° (a):

(1) Θα έχουν εφαρμογή οι διατάξεις των περιθωριακών 220 531(2), 220 532 και 220 533 του Παραρτήματος Β.2.

(2) Δεν θα χρησιμοποιείται ξύλο - εκτός αν καλύπτεται με μέταλλο ή κατάλληλο συνθετικό υλικό - για την κατασκευή οποιουδήποτε τμήματος του οχήματος που βρίσκεται στο οπίσθιο τοίχωμα προστασίας που πρόβλεπεται στο περιθωριακό 220 531 (2).

(3) Τα οχήματα θα μεταφέρουν δεξαμενή τοποθετημένη κατά το δυνατόν με ασφαλή τρόπο, και με χωρητικότητα περί τα 30 λίτρα ύδατος. Στο νερό θα προστίθεται αντιψυκτικό παρασκεύασμα που δεν προσβάλλει το δέρμα ή τις μεμβράνες του βλεννογόνου και δεν έρχεται σε χημική αντίδραση με το φορτίο.

51 221-  
51 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**

51 300-  
51 320

## Κλάση 5.1

## Επίβλεψη των οχημάτων

- 51 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή στα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω όταν η ποσότητά τους υπερβαίνει την αναφερόμενη:

Υλεις του 5° και ύλεις που συμπεριλαμβάνονται στο (α) όλων των άλλων ειδών: 10 000 κιλά.

51 322-  
51 399

## ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό

51 400-  
51 402

## Απαγόρευση μικτής φορτώσεως σε ένα όχημα

- 51 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 5.1 δεν θα φορτώνονται στο ίδιο όχημα μαζί με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

51 404-  
51 409

## Προφυλάξεις σχετικές με τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές

- 51 410 (1) Κόλα που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

(2) Κενές ακαθάριστες συσκευασίες που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης και μεταφόρτωσης.

51 411-  
51 413

## Χειρισμός και στοιβασία

- 51 414 Απαγορεύεται η χρήση εύφλεκτων υλικών για τη στοιβασία των κόλων στα οχήματα.

51 415-  
51 499

## ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (-δεξαμενών) και εμπορευματοκιβωτίων (-δεξαμενών)

## Μαρκάρισμα και επισήμανση

## Επισήμανση

- 51 500 Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικίνδυνων στερεών υλών, τα οποία περιέχουν ή περιείχαν στο παρελθόν (κενά, ακάθαρτα) ύλεις αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 5.1.

1968

**Κλάση 5.1**

**51 500** Όσα περιέχουν ή περιείχαν στο παρελθόν τις ύλες αυτής της Κλάσης που αναγράφονται  
(συνεχ.) στο περιθωριακό 2512(3) θα φέρουν επίσης πινακίδες σύμφωνα με το εν λόγω περιθωριακό.

**51 501-  
51 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις, και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**51 600-  
51 999**

## ΚΛΑΣΗ 5.2. ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ

## Γενικά

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

52 000-  
52 099

## ΤΜΗΜΑ 1. Τρόπος μεταφοράς

52 100-  
52 104

## Μέθοδος αποστολής και περιορισμοί φορτώσεως

52 105 (1) Ύλες του 11° έως 20° θα φορτώνονται κατά τρόπο ώστε οι θερμοκρασίες ελέγχου που αναφέρονται στο περιθωριακό 2550 (16) έως (19), οι οποίες ισχύουν για ύλες που αναγράφονται στο περιθωριακό 2551 και για μη αναγραφόμενες ύλες στους εγκεκριμένους όρους μεταφοράς [βλέπε περιθωριακό 2550 (8)], να μην υπερβαίνουν ποτέ.

(2) Η διατήρηση της προβλεπόμενης θερμοκρασίας είναι απαραίτητη για την ασφαλή μεταφορά πολλών οργανικών υπεροξειδίων. Γενικά, θα πρέπει να υπάρχει:

- επιμελής επιθεώρηση της μεταφορικής μονάδας πριν από τη φόρτωση·
- οδηγίες στον μεταφορέα για την λειτουργία του συστήματος ψύξεως, συμπεριλαμβανομένου ενός καταλόγου των προμηθευτών ψυκτικού που βρίσκονται κατά μήκος της διαδρομής·
- διαδικασίες που θα ακολουθούνται σε περίπτωση απώλειας του ελέγχου·
- τακτική παρακολούθηση των θερμοκρασιών λειτουργίας και
- πρόβλεψη εφεδρικού συστήματος ψύξεως ή ανταλλακτικών.

(3) Οποιοσδήποτε συσκευές ελέγχου και μέτρησης θερμοκρασίας στο σύστημα ψύξεως θα είναι εύκολα προσπελάσιμες και όλες οι ηλεκτρικές συνδέσεις θα προφυλάσσονται από τις καιρικές συνθήκες. Η θερμοκρασία του αέρα στον χώρο εντός της μεταφορικής μονάδας θα μετράται από δύο ανεξάρτητους sensors και το αποτέλεσμα της μέτρησης θα καταγράφεται έτσι ώστε οι αλλαγές θερμοκρασίας να εντοπίζονται αμέσως. Η θερμοκρασία θα ελέγχεται κάθε τέσσερις έως έξι ώρες και θα καταγράφεται. Όταν μεταφέρονται ύλες με θερμοκρασία ελέγχου κάτω των +25° C, η μεταφορική μονάδα θα είναι εξοπλισμένη με ορατούς και ηχητικούς συναγερμούς, ηλεκτροδοτούμενους ανεξάρτητα από το σύστημα ψύξεως και ρυθμισμένους να λειτουργούν στην θερμοκρασία ελέγχου ή κάτω απ'αυτήν.

(4) Εάν η θερμοκρασία ελέγχου υπερβαίνεται κατά τη μεταφορά, θα ενεργοποιείται διαδικασία επιφανειακής που θα περιλαμβάνει τις απαραίτητες επισκευές του εξοπλισμού ψύξεως ή αύξηση της ικανότητας ψύξεως (π.χ. με προσθήκη υγρού ή στερεού ψυκτικού υλικού). Θα γίνονται επίσης συχνοί έλεγχοι της θερμοκρασίας και προετοιμασίες για την εφαρμογή των διαδικασιών έκτακτης ανάγκης. Εάν η θερμοκρασία φθάσει το όριο συναγερμού [βλέπε επίσης περιθωριακά 2550 (17) και 2551], θα τεθούν σε λειτουργία οι διαδικασίες έκτακτης ανάγκης.

(5) Η καταλληλότητα ενός συγκεκριμένου μέσου ελέγχου της θερμοκρασίας εξαρτάται από αρκετούς παράγοντες. Μεταξύ αυτών που πρέπει να ληφθούν υπόψη συγκαταλέγονται:

- η (οι) θερμοκρασία (-ίες) ελέγχου της ύλης (των υλών) που πρόκειται να μεταφερθεί (-ούν)·

## Κλάση 5.2

- 52 105**  
(συνεχ.)
- η διαφορά μεταξύ της θερμοκρασίας ελέγχου και της αναμενόμενης θερμοκρασίας περιβάλλοντος·
  - η αποτελεσματικότητα της θερμομόνωσης·
  - η διάρκεια μεταφοράς και
  - το επιτρεπτό περιθώριο ασφαλείας για καθ'οδόν καθυστερήσεις.

(6) Κατάλληλες μέθοδοι για να αποφευχθεί η υπέρβαση της θερμοκρασίας ελέγχου καταγράφονται παρακάτω, κατ'αύξουσα σειρά ως προς την ικανότητά τους:

- (a) θερμομόνωση· εφόσον η αρχική θερμοκρασία της (των) οργανικής (-ών) ύλης (υλών) είναι αρκούντως κατώτερη της θερμοκρασίας ελέγχου·
- (b) θερμομόνωση και ψυκτικό σύστημα· εφόσον:
  - μεταφέρεται επαρκής ποσότητα μη εύφλεκτου ψυκτικού υλικού (π.χ. υγρό άζωτο ή στερεό διοξείδιο του άνθρακα), επιτρέποντας ένα λογικό περιθώριο καθυστερήσεων, ή εξασφαλίζεται η δυνατότητα αναπλήρωσης·
  - δεν χρησιμοποιείται υγρό οξυγόνο ή αέρας ως ψυκτικό υλικό·
  - η επίδραση της ψύξεως είναι ομοιόμορφη ακόμη και όταν έχει καταναλωθεί το μεγαλύτερο μέρος του ψυκτικού υλικού· και
  - η ανάγκη αερισμού της μεταφορικής μονάδας πριν την είσοδο επισημαίνεται με σαφή προειδοποίηση πάνω στην θύρα ή τις θύρες·
- (c) θερμομόνωση και απλή μηχανική ψύξη· εφόσον ηλεκτρικά fittings με αντοχή στη φλόγα χρησιμοποιούνται εντός του διαμερίσματος του ψυκτικού υλικού για την πρόληψη ανάφλεξης των εύφλεκτων ατμών από τα οργανικά υπεροξειδία.
- (d) θερμομόνωση και συνδυασμός μηχανικής ψύξης και συστήματος με χρήση ψυκτικού υλικού· εφόσον:
  - τα δύο συστήματα είναι ανεξάρτητα μεταξύ τους· και
  - ικανοποιούνται οι απαιτήσεις (b) και (c)·
- (e) θερμομόνωση και διπλό σύστημα μηχανικής ψύξης, εφόσον:
  - πέραν της ενσωματωμένης μονάδας ηλεκτροδότησης, τα δύο συστήματα είναι ανεξάρτητα μεταξύ τους·
  - κάθε σύστημα είναι από μόνο του ικανό για τη διατήρηση επαρκούς ελέγχου της θερμοκρασίας και
  - ηλεκτρικά fittings που αντέχουν στη φλόγα χρησιμοποιούνται εντός του διαμερίσματος του ψυκτικού υλικού για την πρόληψη ανάφλεξης των εύφλεκτων ατμών από τα οργανικά υπεροξειδία.

## Κλάση 5.2.

**52 105** (7) Για ύλες του 11° και 12°, θα χρησιμοποιείται μία από τις ακόλουθες μεθόδους ελέγχου (συνεχ.) θερμοκρασίας που περιγράφονται στο (6):

- η μέθοδος (c) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος κατά τη μεταφορά δεν υπερβαίνει τη θερμοκρασία ελέγχου κατά περισσότερο από 10 °C· αλλιώς
- η μέθοδος (d) ή (e).

Για ύλες του 13° έως 20°, θα χρησιμοποιείται μία από τις ακόλουθες μεθόδους:

- η μέθοδος (a) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος κατά τη μεταφορά είναι τουλάχιστον 10 °C κάτω από τη θερμοκρασία ελέγχου·
- η μέθοδος (b) όταν η μέγιστη αναμενόμενη θερμοκρασία περιβάλλοντος που αναμένεται κατά τη μεταφορά δεν υπερβαίνει τη θερμοκρασία ελέγχου κατά περισσότερο από 30 °C· αλλιώς
- η μέθοδος (c), (d) ή (e).

**52 106-  
52 117**

#### Μεταφορά σε εμπορευματοκιβώτια

**52 118** Εύθραυστα κόλα κατά την έννοια του περιθωριακού 10 014 (1), καθώς και κόλα που περιέχουν ύλες του 1° ή 2°, δεν θα μεταφέρονται σε μικρά εμπορευματοκιβώτια.

**52 119-  
52 199**

#### ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους

**52 200-  
52 203**

#### Τύποι οχημάτων

**52 204** Ύλες του 1° έως 10° θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα. Όπου, σύμφωνα με τις διατάξεις του περιθωριακού 52 105, οι ύλες χρειάζεται να μεταφέρονται σε μονωμένα, ψυχόμενα ή μηχανικώς ψυχόμενα οχήματα, εκείνα τα οχήματα θα ανταποκρίνονται στις απαιτήσεις του 52 248. Ύλες του 11° έως 20° που περιέχονται σε προστατευτικές συσκευασίες γεμάτες με ψυκτικό υλικό θα μεταφέρονται σε κλειστά ή επενδεδυμένα οχήματα. Εάν τα οχήματα που χρησιμοποιούνται είναι κλειστά θα αερίζονται επαρκώς. Τα επενδυμένα οχήματα θα είναι εξοπλισμένα με πλευρικά φύλλα και οπίσθιο φύλλο. Τα φύλλα αυτών των οχημάτων θα είναι από αδιάβροχο μη αναφλέξιμο υλικό.

**52 205-  
52 247**

#### Μονωμένα, ψυχόμενα και μηχανικώς ψυχόμενα οχήματα

**52 248** Τα μονωμένα, ψυχόμενα και μηχανικώς ψυχόμενα οχήματα που χρησιμοποιούνται σύμφωνα με τις διατάξεις του 52 105 θα ικανοποιούν τις παρακάτω προϋποθέσεις:

1972

Κλάση 5.2

52 248  
(συνεχ.)

- (a) το όχημα πρέπει να είναι τέτοιου είδους και με τέτοιο τρόπο εξοπλισμένο όσον αφορά τη μόνωση και τα μέσα ψύξεως (βλέπε περιθωριακό 52 105) ώστε να μην υπερβαίνεται η μέγιστη θερμοκρασία που προβλέπεται στο 52 105. Ο συνολικός συντελεστής θερμικής αγωγιμότητας δεν θα υπερβαίνει τα  $0.4 \text{ W/m}^2 \text{ K}$ .
- (b) το όχημα θα είναι έτσι εξοπλισμένο ώστε οι ατμοί από τις μεταφερόμενες ύλες ή το ψυκτικό υλικό να μην μπορούν να διεισδύσουν στο κουβούκλιο του οδηγού.
- (c) θα υπάρχει κατάλληλη συσκευή που θα καθιστά δυνατό τον καθορισμό της θερμοκρασίας που υπάρχει στο χώρο φορτώσεως ανά πάσα στιγμή από το κουβούκλιο.
- (d) Ο χώρος φορτώσεως θα είναι εφοδιασμένος με εξαεριστήρες ή βαλβίδες εξαερισμού αν υπάρχει οποιοσδήποτε κίνδυνος επικίνδυνης αυξημένης πίεσεως εντός αυτού. Θα λαμβάνεται μέριμνα, όπου χρειάζεται, για να εξασφαλιστεί ότι δεν εμποδίζεται η ψύξη εξ αιτίας των εξαεριστήρων ή των βαλβίδων εξαερισμού.
- (e) Το ψυκτικό υλικό δεν θα είναι εύφλεκτο
- (f) Η συσκευή ψύξεως μηχανικά ψυχόμενου οχήματος θα είναι σε θέση να λειτουργήσει ανεξάρτητα από τον κινητήρα που χρησιμοποιείται για την κίνηση του οχήματος.

52 249-  
52 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησεως**

52 300-  
52 320

**Επίβλεψη των οχημάτων**

52 321 Οι διατάξεις του 10.321 θα έχουν εφαρμογή για τα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω σε ποσότητες που υπερβαίνουν τις αναφερόμενες:

- ύλες του 1°, 2°, 13° και 14°: 1 000 κιλά
- ύλες του 3°, 4°, 15° και 16°: 2 000 κιλά
- ύλες του 5°, 6°, 17° και 18°: 5 000 κιλά
- ύλες του 11° και 12°: 500 κιλά

Επί πλέον, οχήματα που μεταφέρουν περισσότερα από 500 κιλά υλών του 11° και 12° θα υπόκεινται πάντοτε σε επίβλεψη για να προληφθεί οποιαδήποτε κακόβουλη ενέργεια και για να ειδοποιηθεί ο οδηγός και οι αρμόδιες αρχές σε περίπτωση απώλειας ή φωτιάς.

52 322-  
52 399

## Κλάση 5.2

**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**

52 400

**Περιορισμός των μεταφερόμενων ποσοτήτων**

52 401 (1) Μια μεταφορική μονάδα δεν θα μεταφέρει περισσότερα από:

- 5 000 κιλά υλών του 1° και 2° εάν ο χώρος φόρτωσής της εξαερίζεται στο άνω μέρος και η μεταφορική μονάδα είναι μονωμένη με υλικό ανθεκτικό στη θερμότητα [βλέπε περιθωριακό 11 204 (3)(a)], ή 1 000 κιλά υλών του 1° και 2° εάν η μεταφορική μονάδα δεν ικανοποιεί αυτές τις απαιτήσεις;
- 10 000 κιλά υλών του 3° και 4°;
- 20 000 κιλά υλών του 5°, 6°, 7°, 8°, 9° και 10°;
- 1 000 κιλά υλών του 11° και 12°, ή 5 000 κιλά εάν είναι μονωμένη με υλικό ανθεκτικό στη θερμότητα;
- 5 000 κιλά υλών του 13° και 14°, ή 10 000 κιλά εάν είναι μονωμένη με υλικό ανθεκτικό στη θερμότητα; και
- 20 000 κιλά υλών του 15°, 16°, 17°, 18°, 19° και 20°.

(2) Όταν ύλες αυτής της Κλάσης φορτώνονται μαζί στην ίδια μεταφορική μονάδα, τα όρια που αναφέρονται στην παράγραφο (1) δεν θα υπερβαίνονται, και το συνολικό βάρος των περιεχομένων δεν θα υπερβαίνει τα 20 000 κιλά.

52 402 Οι διατάξεις των περιθωριακών 10 500 και 52 204 δεν θα έχουν εφαρμογή για τη μεταφορά υλών που αναφέρονται ή εξυπακούονται στα 1° έως 4° και 11° έως 14° εφόσον η ύλη είναι συσκευασμένη σύμφωνα με τη μέθοδο συσκευασίας OP1A, OP1B, OP2A ή OP2B, όπως απαιτείται, και η ποσότητα ανά μεταφορική μονάδα περιορίζεται στα 10 κιλά.

**Απαγόρευση μικτής φορτώσεως σε ένα όχημα**

52 403 (1) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 5.2 δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

(2) Κόλα που φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 5.2 και 01 δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6, 2, 3, 4.1, 4.2, 4.3, 5.1, 6.1, 7A, 7B, 7C, 8 ή 9.

52 404-  
52 412**Καθαρισμός πριν τη φόρτωση**

52 413 Οχήματα προοριζόμενα για τη μεταφορά κόλων που περιέχουν ύλες της Κλάσης 5.2 θα καθαρίζονται προσεκτικά.

## Κλάση 5.2

**Χειρισμός και στοιβασία**

- 52 414 (1) Η χρήση εύκολα αναφλέξιμων υλικών για τη στοιβασία κόλων στο όχημα απαγορεύεται.
- (2) Κόλα που περιέχουν ύλες του 11° έως 20° θα στοιβάζονται έτσι ώστε να είναι εύκολα προσπελάσιμες.
- (3) Σε κόλα που περιέχουν ύλες του 11° έως 20°, η θερμοκρασία ελέγχου θα διατηρείται καθ'όλη τη μεταφορική εργασία, συμπεριλαμβανομένης της φόρτωσης και της εκφόρτωσης, καθώς και οποιαδήποτε ενδιάμεσων στάσεων [βλέπε περιθωριακό 52 105 (1)].
- (4) Τα κόλα θα φορτώνονται έτσι ώστε η ελεύθερη κυκλοφορία του αέρα εντός του χώρου φόρτωσης να εξασφαλίζει την ομοιόμορφη θερμοκρασία του φορτίου. Εάν τα περιεχόμενα ενός οχήματος ή μεγάλου εμπορευματοκιβωτίου υπερβαίνουν τα 5 000 κιλά οργανικού υπεροξειδίου, το φορτίο θα μοιράζεται σε στοιβές βάρους όχι άνω των 5 000 κιλών που θα διαχωρίζονται από κενά διαστήματα τουλάχιστον 0.05 μ.

52 415-  
52 499

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (-δεξαμενών) και εμπορευματοκιβωτίων (-δεξαμενών)**

**Μαρκάρισμα και επισήμανση****Επισήμανση**

- 52 500 Οχήματά με σταθερές ή αποσυναρμολογούμενες δεξαμενές που περιέχουν ή περιείχαν στο παρελθόν (κενές, ακαθάριστες) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 5.2.

Όσα περιέχουν ή περιείχαν στο παρελθόν τις ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2559 (3) έως (4) θα φέρουν επίσης ετικέτες σύμφωνα με το εν λόγω περιθωριακό.

52 501-  
52 508

**Στάσεις περιορισμένης διάρκειας για ανάγκες σέρβις**

- 52 509 Κατά τη μεταφορά υλών του 1°, 2°, 11° και 12° οι στάσεις για ανάγκες σέρβις δεν θα γίνονται, όσο αυτό είναι δυνατό, κοντά σε κατοικημένες ή αστικές περιοχές. Η στάση πλησίον τέτοιας περιοχής δεν μπορεί να παραταθεί παρά μόνο με την σύμφωνη γνώμη των αρμόδιων αρχών. Ο ίδιος κανόνας θα έχει εφαρμογή εάν μία μεταφορική μονάδα είναι φορτωμένη με περισσότερα από 2,000 κιλά υλών του 3°, 4°, 13° και 14°.

52 510-  
52 599

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις, και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

52 600-  
60 999

**ΚΛΑΣΗ 6.1. ΤΟΞΙΚΕΣ ΥΛΕΣ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

61 000-  
61 099

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**

61 100-  
61 110

**Μεταφορά χύμα**

- 61 111 (1) Υλεις του 60° (c) και στερεά του 3243 που περιέχουν τοξικό υγρό του 65° (b) μπορούν να μεταφέρονται χύμα ως πλήρες φορτίο.
- (2) Υλεις του 60° (c) και στερεά του 3243 που περιέχουν τοξικό υγρό του 65° (b) θα μεταφέρονται σε επενδεδυμένα, ανοικτά όχημα. Οχήματα που περιέχουν στερεά του 3243 περιέχοντα τοξικό υγρό του 65° (b) χύμα θα είναι στεγανά ή στεγανοποιημένα, για παράδειγμα με κατάλληλη και επαρκούς πάχους εσωτερική επίστρωση.
- (3) Στερεά απόβλητα που περιέχουν ύλες του 60° (c) μπορούν να μεταφέρονται υπό τους ίδιους όρους με τις ύλες αυτές. Άλλα στερεά απόβλητα που συμπεριλαμβάνονται στο (c) των διαφόρων ειδών μπορούν να μεταφέρονται χύμα μόνο υπό τους όρους του περιωριακού 61 118.

61 112-  
61 117

**Μεταφορά σε εμπορευματοκιβώτια**

- 61 118 Εμπορευματοκιβώτια που προορίζονται για τη μεταφορά χύμα των στερεών αποβλήτων που συμπεριλαμβάνονται στο (c) των διαφόρων ειδών και των στερεών του 3243 που περιέχουν τοξικό υγρό του 65° (b) θα έχουν πλήρη τοιχώματα και θα είναι επενδεδυμένα ή καλυμμένα.

Εμπορευματοκιβώτια που περιέχουν στερεά του 3243 περιέχοντα τοξικό υγρό του 65° (b) χύμα θα είναι στεγανά ή στεγανοποιημένα, για παράδειγμα με κατάλληλη και επαρκούς πάχους εσωτερική επίστρωση.

61 119-  
61 199

**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

61 200-  
61 259

**Ειδικός εξοπλισμός**

- 61 260 Οποτεδήποτε μεταφέρονται αντικροτικά μείγματα καυσίμου του 31° (a) ή δοχεία που τα περιείχαν, στον οδηγό θα δίδεται, ταυτόχρονα με την επίδοση του εγγράφου μεταφοράς, φορητό κιβώτιο εξοπλισμού με χειρολαβή το οποίο θα περιέχει:

## Κλάση 6.1

- 61 260 - τρία αντίγραφα των γραπτών οδηγιών καθορίζοντα τις ενέργειες που πρέπει να  
(συνεχ.) γίνουν στην περίπτωση ατυχήματος ή συμβάντος στη διάρκεια της μεταφοράς (βλέπε περιθωριακό 61 385).
- δύο ζεύγη γάντια και δύο ζεύγη μπότες κατασκευασμένα από ελαστικό ή κάποιο κατάλληλο πλαστικό υλικό.
  - δύο αναπνευστήρες με φυσίγιο ενεργού άνθρακα ικανότητας 500 κυβ.εκ.
  - μία φιάλη (κατασκευασμένη, για παράδειγμα, από βακελίτη) περιέχουσα 2 κιλά υπερμαγγανικού καλίου και φέρουσα την ένδειξη "διαλύσατε σε νερό πριν από τη χρήση".
  - έξι πινακίδες ινόπλακας με την ένδειξη "ΚΙΝΔΥΝΟΣ - χυμένο πτητικό δηλητήριο. Μη πλησιάζετε χωρίς αναπνευστήρα", στη γλώσσα ή γλώσσες κάθε χώρας στο έδαφος των οποίων λαμβάνει χώρα η μεταφορά.
  - αυτό το κιβώτιο εξοπλισμού θα φυλάσσεται στο κουβούκλιο του οδηγού σε μέρος όπου μπορεί να βρεθεί εύκολα από την ομάδα απολύμανσης.

61 261-  
61 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**

61 300-  
61 301

**Ενέργειες που πρέπει να γίνου σε περίπτωση ατυχήματος**

61 302 (Βλέπε περιθωριακό 61 385)

**Προφυλάξεις σε σχέση με αντικείμενα κατανάλωσης**

61 303 (Βλέπε περιθωριακό 61 410)

61 304-  
61 320

**Επίβλεψη των οχημάτων**

61 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή για τα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω σε ποσότητες που υπερβαίνουν τις καθοριζόμενες:

- ύλες του 1° έως 5° και ύλες που συμπεριλαμβάνονται στο (α) όλων των ειδών: 1 000 κιλά
- ύλες που συμπεριλαμβάνονται στο (β) όλων των ειδών: 5 000 κιλά.

61 322-  
61 384

**Γραπτές οδηγίες**

61 385 Όποτε μεταφέρονται αντικροτικά μείγματα καυσίμου του 31° (α) ή δοχεία που περιείχαν αυτά, το κείμενο των γραπτών οδηγιών θα καθορίζει, μεταξύ άλλων, τα ακόλουθα:

## Κλάση 6.1

61 385 (A) Προφυλάξεις προς τήρηση  
(συνεχ.)

Η μεταφερόμενη ύλη είναι εξαιρετικά τοξική. Σε περίπτωση διαρροής από ένα από τα δοχεία πρέπει να παρθούν οι παρακάτω προφυλάξεις:

## 1. Αποφεύγετε:

- (a) την επαφή με το δέρμα.
- (b) την εισπνοή ατμών.
- (c) την εισαγωγή του υγρού στο στόμα.

## 2. Όταν γίνεται χειρισμός βαρελιών που έχουν ανοίξει ή υποστεί βλάβη ή διαβραχεί με υγρό, είναι υποχρεωτικό να χρησιμοποιούνται τα ακόλουθα:

- (a) αναπνευστήρες.
- (b) γάντια από ελαστικό ή κάποιο κατάλληλο πλαστικό.
- (c) μπότες από ελαστικό ή κάποιο κατάλληλο πλαστικό.

Σε περίπτωση σοβαρού ατυχήματος που έχει ως συνέπεια τον αποκλεισμό δημόσιας οδού, είναι απαραίτητο να ειδοποιηθούν για τον κίνδυνο που υπάρχει τα πρόσωπα που έρχονται για να ελευθερώσουν το χώρο.

## (B) Ενέργειες που πρέπει να γίνουν

Θα γίνουν όλες οι πρακτικώς δυνατές ενέργειες, περιλαμβανομένης της χρήσεως των επιγραφών που αναφέρονται στο περιθωριακό 61 260, για να κρατηθούν τα πρόσωπα σε απόσταση όχι μικρότερη των 15 μέτρων από την τοποθεσία του ατυχήματος: οι επιγραφές που περιέχονται στο κιβώτιο εξοπλισμού θα τοποθετηθούν περίξ της περιφράξεως και οι περιέργοι θα κρατούνται μακριά.

Οι αναπνευστήρες, τα γάντια και οι μπότες θα επιτρέπουν σε ένα πρόσωπο να πλησιάσει το φορτίο και να εξακριβώσει την κατάστασή του.

Εάν κάποιο από τα βαρέλια ανοίξει, πρέπει να γίνουν τα παρακάτω:

- (a) πρέπει να γίνει άμεση προμήθεια πρόσθετων αναπνευστήρων, γαντιών και μοτιών για τον εξοπλισμό των εργατών.
- (b) τα άθικτα βαρέλια πρέπει να παραμεριστούν.
- (c) το χυμένο υγρό πάνω στο όχημα ή στο έδαφος πρέπει να εξουδετερωθεί ξεπλένοντας με άφθονο υδατικό διάλυμα υπερμαγγανικού καλίου (εξουδετερωτικός παράγον, μια φιάλη από τον οποίο φυλάσσεται στο κιβώτιο εξοπλισμού): το διάλυμα ετοιμάζεται εύκολα ανακατεύοντας 0.5 κιλό υπερμαγγανικό κάλιο με 15 λίτρα νερό σε κουβά: το ξέπλυμα πρέπει να γίνει πολλές φορές διότι χρειάζονται 2 κιλά από το υπερμαγγανικό κάλιο για να εξουδετερωθεί πλήρως 1 κιλό από τη μεταφερόμενη ύλη.

Όπου είναι πρακτικά δυνατό, ο καλύτερος τρόπος για να απολυμανθεί η περιοχή είναι να περιλουστεί το χυμένο υγρό με βενζίνη και να αναφλεγεί.

## Κλάση 6.1

61 385 (C) Σημαντική προειδοποίηση  
(συνεχ.)

Σε περίπτωση ατυχήματος, μια από τις πρώτες ενέργειες που πρέπει να γίνουν είναι να ειδοποιηθεί τηλεγραφικώς ή τηλεφωνικώς ..... (γράψτε εδώ τις διευθύνσεις και τους αριθμούς τηλεφώνου των ιδρυμάτων που πρέπει να ειδοποιηθούν σε κάθε μία από τις χώρες στην επικράτεια των οποίων θα λάβει χώρα η μεταφορά).

Όχημα το οποίο έχει μολυνθεί με την ύλη που μεταφέρει δεν θα τίθεται πάλι σε υπηρεσία μέχρις ότου απολυμανθεί με την επίβλεψη αρμόδιου προσώπου. Οποιαδήποτε ξύλινα μέρη του οχήματος τα οποία έχουν προσβληθεί από την ύλη που μεταφέρεται θα αφαιρούνται και θα καίγονται.

61 386-  
61 399

## ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό

61 400-  
61 402

## Απαγόρευση μικτής φορτώσεως σε ένα όχημα

61 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1 δεν θα μεταφέρονται μαζί σε ένα όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

61 404-  
61 406

## Τόποι φορτώσεως και εκφορτώσεως

61 407 (1) Οι παρακάτω εργασίες απαγορεύονται:

- (a) φόρτωση ή εκφόρτωση υλών του 1° έως 5° και οποιαδήποτε ύλη ταξινομημένη υπό το (a) άλλων ειδών σε δημόσιο χώρο εντός κατοικημένης περιοχής χωρίς ειδική άδεια από τις αρμόδιες αρχές
- (b) φόρτωση ή εκφόρτωση των προαναφερομένων υλών σε δημόσιο χώρο εκτός κατοικημένης περιοχής χωρίς προηγούμενη ειδοποίηση των αρμοδίων αρχών, εκτός εάν οι προαναφερόμενες εργασίες δικαιολογούνται για σοβαρούς λόγους ασφάλειας.

(2) Εάν, για οποιοδήποτε λόγο, οι εργασίες χειρισμού πρέπει να γίνουν σε δημόσιο χώρο, οι ύλες και τα αντικείμενα διαφόρων ειδών θα διαχωρίζονται σύμφωνα με τις ετικέτες.

61 408-  
61 409

## Προφυλάξεις σε σχέση με αντικείμενα κατανάλωσης

61 410 Ύλες της Κλάσης 6.1 θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές στα οχήματα και σε χώρους φόρτωσης, εκφόρτωσης ή μεταφόρτωσης.

61 411-  
61 414

## Κλάση 6.1

## Καθορισμός μετά την εκφόρτωση

61 415 (1) Όχημα που έχει μολυνθεί με ύλες του 31°(a) ή με μείγμα αυτών δεν θα τίθεται πάλι σε υπηρεσία μέχρις ότου απολυμανθεί υπό την επίβλεψη αρμόδιου προσώπου. Οποιαδήποτε ξύλινα μέρη του οχήματος που έχουν προσβληθεί από ύλες του 31°(a) θα αφαιρούνται και θα καίγονται.

(2) Εάν ύλες αυτής της Κλάσης έχουν διαρρεύσει και χυθεί μέσα σε όχημα, αυτό δεν μπορεί να επαναχρησιμοποιηθεί έως ότου καθαρισθεί επιμελώς και, αν χρειασθεί, απολυμανθεί. Όλα τα άλλα εμπορεύματα και αντικείμενα που μεταφέρονται μέσα στο ίδιο όχημα θα εξετάζονται για ενδεχόμενη μόλυνση.

61 416-  
61 499

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (οχημάτων-δεξαμενών) και εμπορευματοκιβωτίων (εμπορευματοκιβωτίων-δεξαμενών)**

**Μαρκάρισμα και επισήμανση**

*Επισήμανση*

61 500 (1) Όποτε μεταφέρονται ύλες του 31° (a), το όχημα θα έχει σε κάθε πλευρά επιγραφή που θα προειδοποιεί ότι, αν διαφύγει οποιοδήποτε υγρό, πρέπει να λαμβάνονται οι μέγιστες προφυλάξεις και ότι το όχημα δεν πρέπει να προσεγγίζεται χωρίς αναπνευστήρα, γάντια και μπότες από ελαστικό ή κάποιο κατάλληλο πλαστικό υλικό.

*Μαρκάρισμα*

(2) Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικινδύνων στερεών υλών, που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1.

Όσα περιέχουν ή περιείχαν (κενά, ακαθάριστα) τις ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2612 (3) έως (10) θα φέρουν επίσης πινακίδες σύμφωνα με το εν λόγω περιθωριακό.

61 501-  
61 508

**Στάσεις περιορισμένης διάρκειας για ανάγκες σέρβις**

61 509 Στάσεις για ανάγκες σέρβις δεν θα γίνονται όσο είναι δυνατό σε κατοικημένες ή αστικές περιοχές. Στάση κοντά σε τέτοια τοποθεσία δεν μπορεί να παραταθεί παρά μόνο με τη σύμφωνη γνώμη των αρμόδιων αρχών

61 510-  
61 514

**Αντιηλιακή προστασία**

61 515 Κατά την περίοδο από τον Απρίλιο έως και τον Οκτώβριο, όταν όχημα που μεταφέρει υδροκυανικό οξύ του 1° είναι ακίνητο, τα κόλα πρέπει, αν το απαιτεί η νομοθεσία της χώρας στην οποία έχει σταματήσει το όχημα, να προστατεύονται αποτελεσματικά από τη δράση του ηλίου π.χ. με φύλλα τοποθετούμενα σε ύψος όχι λιγότερο των 20 εκ. πάνω από το φορτίο.

1980

Κλάση 6.1

61 516-  
61 599

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις, και διατάξεις ειδικές για ορισμένες χώρες**  
(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

61 600-  
61 999

**ΚΛΑΣΗ 6.2. ΜΟΛΥΣΜΑΤΙΚΕΣ ΥΛΕΣ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

62 000-  
62 099

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**

62 100-  
62 104

62 105 Κόλα που περιέχουν ύλες αυτής της Κλάσης θα μεταφέρονται σε κλειστά ή καλυμμένα οχήματα.

62 106-  
62 117

**Μεταφορά σε εμπορευματοκιβώτια**

62 118 (1) Κόλα που περιέχουν ύλες αυτής της Κλάσης μπορούν να μεταφέρονται σε μικρά εμπορευματοκιβώτια.

(2) Οι απαγορεύσεις μικτής φορτώσεως του περιθωριακού 62 403 θα έχουν επίσης εφαρμογή και για τα περιεχόμενα μικρών εμπορευματοκιβωτίων.

62 119-  
62 199

**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

62 200-  
62 239

**Πυροσβεστικές συσκευές**

62 240 Οι διατάξεις του περιθωριακού 10 240 (1) (b), (3) και (4), δεν θα έχουν εφαρμογή.

62 241-  
62 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησεως**

62 300-  
62 301

**Απαιτούμενες ενέργειες σε περίπτωση ατυχήματος**

62 302 (Βλέπε περιθωριακό 62 385)

**Προφυλάξεις σχετικές με αντικείμενα κατανάλωσης**

62 303 (Βλέπε περιθωριακό 62 410)

## Κλάση 6.2

62 304-  
62 320**Επίβλεψη των οχημάτων**

62 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή σε όλες τις ύλες του 1<sup>ο</sup>, οποιαδήποτε βάρους. Θα έχουν επίσης εφαρμογή σε ύλες του 2<sup>ο</sup> των οποίων η ποσότητα υπερβαίνει το βάρος των 100 κιλών. Παρόλα αυτά, οι διατάξεις του περιθωριακού 10 321 δεν είναι αναγκαίο να εφαρμόζονται όπου το φορτωμένο διαμέρισμα είναι κλειδωμένο και τα μεταφερόμενα κόλα προστατεύονται διαφορετικά έναντι οποιασδήποτε παράνομης εκφόρτωσης.

62 322-  
62 352

62 353 Οι διατάξεις του περιθωριακού 10 353 δεν θα έχουν εφαρμογή.

62 354-  
62 384**Γραπτές οδηγίες**

62 385 (1) Οι γραπτές οδηγίες θα περιλαμβάνουν επίσης:

- (a) την διάταξη ότι, στις περιπτώσεις που προβλέπονται στο περιθωριακό 10 385 (1) (d), θα ενημερώνονται οι τοπικές υγειονομικές ή κτηνιατρικές αρχές·
- (b) πληροφορίες σχετικά με το πώς οι ύλες θα απορροφούνται και θα περιορίζονται, και πώς οι κίνδυνοι των υλών της Κλάσης 6.2 θα εκμηδενίζονται επί τόπου, π.χ. κατάλληλα απολυμαντικά·
- (c) πληροφορίες για κατάλληλο προστατευτικό εξοπλισμό του οδηγού.

62 386-  
62 399**ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό**62 400-  
62 402**Απαγόρευση μικτής φορτώσεως σε ένα όχημα**

- 62 403 (1) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.2 δεν θα φορτώνονται μαζί στο ίδιο όχημα με τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές.
- (2) Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.2 δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

62 404-  
62 409

## Κλάση 6.2

**Προφύλαξη σχετική με αντικείμενα κατανάλωσης**

**62 410** Ύλες της Κλάσης 6.2 δεν θα φορτώνονται μαζί στο ίδιο όχημα με τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές [βλέπε 62 403(1)]. Θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές σε χώρους φόρτωσης, εκφόρτωσης ή μεταφόρτωσης.

**62 411**

**62 412** Ύλες του είδους 4° θα μεταφέρονται σε δεξαμενές ή σε ειδικά εξοπλισμένα οχήματα κατά τρόπο ώστε να αποφεύγονται οι κίνδυνοι για ανθρώπους, ζώα και το περιβάλλον, π.χ. με φόρτωση σε σακκούλες ή με αεροστεγείς συνδέσεις.

**62 413**

**Χειρισμός και αποθήκευση**

**62 414** (1) Κόλα που περιέχουν ύλες αυτής της Κλάσης θα στοιβάζονται έτσι ώστε να είναι εύκολα προσπελάσιμες.

(2) Όποτε κόλα αυτής της Κλάσης πρέπει να μεταφερθούν σε θερμοκρασία περιβάλλοντος όχι μεγαλύτερη των 15 °C ή να καταψυχθούν, η θερμοκρασία θα διατηρείται σταθερή κατά την εκφόρτωση ή την αποθήκευση.

(3) Κόλα αυτής της Κλάσης θα αποθηκεύονται μόνο σε δροσερό μέρος μακριά από πηγές θερμότητας.

**Καθαρισμός μετά την εκφόρτωση**

**62 415** Εάν ύλες αυτής της Κλάσης έχουν διαρρεύσει και χυθεί μέσα σε όχημα, αυτό δεν μπορεί να επαναχρησιμοποιηθεί έως ότου έχει επιμελώς καθαρισθεί και, εάν είναι ανάγκη, απολυμανθεί. Όλα τα εμπορεύματα και τα αντικείμενα που μεταφέρονται μέσα σε τέτοιο όχημα θα ελέγχονται για ενδεχόμενη μόλυνση. Τα ξύλινα μέρη του οχήματος που έχουν έρθει σε επαφή με τις ύλες των ειδών 1° και 2° θα απομακρύνονται και θα καίγονται.

**62 416-**

**62 499**

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (οχημάτων-δεξαμενών) και εμπορευματοκιβωτίων (εμπορευματοκιβωτίων-δεξαμενών)**

**Μαρκάρισμα και επισήμανση****Μαρκάρισμα**

**62 500** Οχήματα με σταθερές δεξαμενές ή αποσυναρμολογούμενες δεξαμενές, ειδικά εξοπλισμένα οχήματα και εμπορευματοκιβώτια-δεξαμενές που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες του 4°, θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.2.

**62 501-**

**62 508**

**Στάσεις περιορισμένης διάρκειας για ανάγκες σέρβις**

**62 509** Οι στάσεις οχημάτων που μεταφέρουν ύλες του 1° και 2° για ανάγκες σέρβις δεν θα γίνονται, κατά το δυνατόν, σε κατοικημένες ή αστικές περιοχές. Η στάση κοντά σε τέτοιο μέρος δεν θα μπορεί να παραταθεί παρά μόνο με τη σύμφωνη γνώμη των αρμοδίων αρχών.

**62 510-**

**62 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

1984

Κλάση 6.2

62 600-  
70 999

**ΚΛΑΣΗ 7. ΡΑΔΙΟΕΝΕΡΓΑ ΥΛΙΚΑ****Γενικά****Μεταφορά**

**71 000** Για λεπτομέρειες βλέπε το σχετικό πρόγραμμα στο περιθωριακό 2704.

**71 001-  
71 099**

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς****Διατάξεις**

**71 100** Για λεπτομέρειες βλέπε το σχετικό πρόγραμμα στο περιθωριακό 2704.

**71 101-  
71 199**

**ΤΜΗΜΑ 2. Ειδικές διατάξεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους****Διατάξεις**

**71 200** Για λεπτομέρειες βλέπε το σχετικό πρόγραμμα στο περιθωριακό 2704.

**71 201-  
71 299**

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησης****Διατάξεις**

**71 300** Για λεπτομέρειες βλέπε το σχετικό πρόγραμμα στο περιθωριακό 2704.

**71 301-  
71 320**

**Επίβλεψη των οχημάτων**

**71 321** Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή σε όλα τα υλικά, για οποιαδήποτε ποσότητα. Επιπλέον, αυτά τα εμπορεύματα θα υπόκεινται πάντοτε σε επίβλεψη προς αποφυγή κακόβουλης ενέργειας και για να κινητοποιηθεί ο οδηγός και οι αρμόδιες αρχές σε περίπτωση απώλειας ή πυρκαγιάς. Εντούτοις, οι διατάξεις του περιθωριακού 10 321 δεν χρειάζεται να εφαρμοσθούν όπου:

- (a) Το φορτωμένο διαμέρισμα είναι κλειδωμένο και τα μεταφερόμενα κόλλα προστατεύονται αλλιώς έναντι παράνομης εκφόρτωσης και
- (b) Ο βαθμός της δόσεως δεν υπερβαίνει τα 5 mSv/h (0.5 mrem/h) σε κάθε προσπελάσιμο σημείο επί της εξωτερικής επιφάνειας του οχήματος.

## Κλάση 7

71 321 Επί πλέον, τα εμπορεύματα αυτά θα υπόκεινται πάντοτε σε επίβλεψη για να προληφθεί (συνεχ.) οποιαδήποτε κακόβουλη ενέργεια και για να κινητοποιηθεί ο οδηγός και οι αρμόδιες αρχές σε περίπτωση απόλειας ή πυρκαγιάς.

71 322-  
71 324

## Μεταφορά επιβατών

71 325 Οι διατάξεις του περιθωριακού 10 325 δεν θα έχουν εφαρμογή σε μεταφορικές μονάδες που μεταφέρουν μόνο ραδιενεργά υλικά των προγραμμάτων 1 έως 4.

71 326-  
71 352

## Φορητή συσκευή φωτισμού

71 353 Οι διατάξεις του περιθωριακού 10 353 δεν θα έχουν εφαρμογή εφόσον δεν υπάρχει δευτερογενής κίνδυνος.

71 354-  
71 384

## Γραπτές οδηγίες

71 385 Οι διατάξεις του περιθωριακού 10 385 δεν θα έχουν εφαρμογή σε μεταφορικές μονάδες που μεταφέρουν μόνο ραδιενεργά υλικά των προγραμμάτων 1 έως 4.

71 386-  
71 399

## ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, μεταφόρτωση και χειρισμό

## Διατάξεις

71 400 Για λεπτομέρειες βλέπε το σχετικό πρόγραμμα στο περιθωριακό 2704.

71 401-  
71 402

## Απαγόρευση μικτής φορτώσεως σε ένα όχημα

71 403 Κόλα που φέρουν ετικέτα σύμφωνα με τα μοντέλα Αριθμ. 7Α, 7Β ή 7C δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα μοντέλα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

71 404-  
71 414

## Καθαρισμός μετά την εκφόρτωση

71 415 Για τις απαιτήσεις απολύμανσης, βλέπε περιθωριακό 3712

71 416-  
71 499

## Κλάση 7

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (-δεξαμενών) και εμπορευματοκιβωτίων (-δεξαμενών)****Μαρκάρισμα και επισήμανση****Μαρκάρισμα**

**71 500** (1) Επιπλέον των προϋποθέσεων του περιθωριακού 10 500, κάθε όχημα που μεταφέρει ραδιενεργά υλικά θα φέρει στο εξωτερικό μέρος κάθε πλευρικού τοιχώματος και του οπισθίου τοιχώματος ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 7D.

Εντούτοις, αυτές οι προϋποθέσεις δεν θα έχουν εφαρμογή σε οχήματα που μεταφέρουν μόνο τα ραδιενεργά υλικά που αναφέρονται στα προγράμματα 1 έως 4 του περιθωριακού 2704.

Επιπλέον των διατάξεων του περιθωριακού 10 500 (1) που αφορούν την ελάττωση του μεγέθους της πινακίδας πορτοκαλί χρώματος, η ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 7D μπορεί επίσης να μειωθεί σε 100 χιλ. σε κάθε πλευρά.

(2) Οι ετικέτες που προβλέπονται στο περιθωριακό 10 500 (9) θα επικολλούνται και στις τέσσερις πλευρές του εμπορευματοκιβωτίου.

(3) Οι ετικέτες και οι πινακίδες πορτοκαλί χρώματος κατά τα προβλεπόμενα στην Κλάση 7 θα επικολλούνται και στις τέσσερις πλευρές του εμπορευματοκιβωτίου-δεξαμενής. Εάν αυτές οι ετικέτες ή πινακίδες δεν είναι ορατές από το εξωτερικό του οχήματος, οι ίδιες ετικέτες και πινακίδες θα επικολλούνται στα πλάγια και το πίσω μέρος του οχήματος.

**71 501-  
71 506**

**Στάθμευση οχήματος που αποτελεί ειδικό κίνδυνο**

**71 507** Επιπλέον του περιθωριακού 10 507, βλέπε Προσθήκη Α.7 περιθωριακό 3712. Αυτές οι προϋποθέσεις, εντούτοις, δεν θα έχουν εφαρμογή σε οχήματα που μεταφέρουν μόνο ραδιενεργό υλικό των προγραμμάτων 1 έως 4 του περιθωριακού 2704.

**71 508-  
71 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**71 600-  
80 999**

**ΚΛΑΣΗ 8. ΔΙΑΒΡΩΤΙΚΕΣ ΥΛΕΣ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

81 000-  
81 099

**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**

81 100-  
81 110

**Μεταφορά χύμα**

**81 111** Θεικός φωσφόρος του 1° (b), ύλες του 13° (b) και στερεά 3244 με διαβρωτικό υγρό του 65° (b) μπορούν να μεταφέρονται χύμα ως πλήρες φορτίο. Το σώμα του οχήματος θα είναι εξοπλισμένο με κατάλληλη και επαρκούς πάχους εσωτερική επίστρωση. Εάν το όχημα είναι επενδεδυμένο, η επένδυση θα τοποθετείται κατά τέτοιον τρόπο ώστε να μην μπορεί να ακουμπήσει το φορτίο. Οχήματα που περιέχουν ύλες του 65° (b) (χαρακτηριστικός αριθμός 3244) θα είναι στεγανά ή στεγανοποιημένα, για παράδειγμα με κατάλληλη και επαρκούς πάχους εσωτερική επίστρωση.

(2) Στερεά απόβλητα που περιέχουν ύλες του 13° μπορεί να μεταφέρονται υπό τους ίδιους όρους με αυτές καθ'εαυτές τις ύλες. Άλλα στερεά απόβλητα ταξινομημένα στο (c) των διαφόρων ειδών μπορούν να μεταφέρονται χύμα υπό τους όρους του περιθωριακού 81 118.

81 112-  
81 117

**Μεταφορά σε εμπορευματοκιβώτια**

**81 118** Εμπορευματοκιβώτια που προορίζονται για τη μεταφορά χύμα θεικού φωσφόρου του 1° (b), ύλες του 13° (b), στερεά του 3244 που περιέχουν διαβρωτικό υγρό του 65° (b) ή στερεά απόβλητα ταξινομημένα στο (c) των διαφόρων ειδών θα έχουν πλήρη τοιχώματα και κατάλληλη επίστρωση και θα είναι επενδεδυμένα ή καλυμμένα.

Εμπορευματοκιβώτια που περιέχουν στερεά του 3244 που περιέχουν διαβρωτικό υγρό του 65° (b) χύμα θα είναι στεγανά ή στεγανοποιημένα, για παράδειγμα με κατάλληλη και επαρκούς πάχους εσωτερική επίστρωση.

81 119-  
81 199

**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I).

81 200-  
81 299

**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**

81 300-  
81 320

## Κλάση 8

## Επίβλεψη των οχημάτων

81 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή στις ύλες που αναγράφονται παρακάτω σε ποσότητες που υπερβαίνουν τις καθορισμένες:

Ύλες ταξινομημένες στο (α) όλων των ειδών: 10 000 κιλά

Βρώμιο του 14°: 1 000 κιλά

81 322-  
81 399

## ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό

81 400-  
81 402

## Απαγόρευση μικτής φορτώσεως σε ένα όχημα

81 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8 δεν θα φορτώνονται στο ίδιο όχημα μαζί με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

81 404-  
81 409

## Προφυλάξεις σχετικά με αντικείμενα κατανάλωσης

81 410 Κόλα που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης ή μεταφόρτωσης.

81 411-  
81 412

## Καθαρισμός πριν από τη φόρτωση

81 413 Οχήματα προοριζόμενα να μεταφέρουν κόλα που περιέχουν ύλες του 2° (α) 2., 3° (α), 4°, 73° ή 74° θα καθαρίζονται προσεκτικά και ιδίως θα είναι απαλλαγμένα από κάθε αναφλέξιμο απόβλητο (άχυρο, χόρτο, χαρτί, κ.λπ.).

81 414

## Καθαρισμός μετά από την εκφόρτωση

81 415 Εάν ύλες από κόλα που φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 6.1 έχουν διαρρεύσει και χυθεί μέσα σε όχημα, αυτό δεν μπορεί να επαναχρησιμοποιηθεί έως ότου έχει επιμελώς καθαρισθεί και, αν είναι ανάγκη, απολυμανθεί. Όλα τα άλλα εμπορεύματα και αντικείμενα που μεταφέρονται στο ίδιο όχημα θα εξετάζονται για ενδεχόμενη μόλυνση.

81 416-  
81 499

1990

Κλάση 8

**ΤΜΗΜΑ 5.** Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (οχημάτων-δεξαμενών) και εμπορευματοκιβωτίων (εμπορευματοκιβωτίων-δεξαμενών)

**Μαρκάρισμα και επισήμανση**

*Μαρκάρισμα*

**81 500** Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικινδύνων στερεών υλών, που περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) ύλες αυτής της Κλάσης θα φέρουν ετικέτες σύμφωνα με το υπόδειγμα Αριθμ. 8.

Όσα περιέχουν ή περιείχαν στο παρελθόν (κενά, ακαθάριστα) τις ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2812 (3) έως (10) θα φέρουν επίσης πινακίδες σύμφωνα με το εν λόγω περιθωριακό.

**81 501-  
81 599**

**ΤΜΗΜΑ 6.** Μεταβατικές διατάξεις, ανακλήσεις και διατάξεις ειδικές για ορισμένες χώρες

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**81 600-  
90 999**

**ΚΛΑΣΗ 9. ΔΙΑΦΟΡΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΥΛΕΣ ΚΑΙ ΑΝΤΙΚΕΙΜΕΝΑ****Γενικά**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

91 000-  
91 099**ΤΜΗΜΑ 1. Τρόπος μεταφοράς**91 100-  
91 104**Μέθοδος αποστολής και περιορισμοί στη μεταφορά**

91 105 Κόλα που περιέχουν ύλες αυτής της Κλάσης θα μεταφέρονται σε κλειστά ή καλυμμένα οχήματα.

91 106-  
91 110**Μεταφορά χύμα**

91 111 Ύλες του 4° (c) και 12° (c) μπορούν να μεταφέρονται χύμα σε ανοικτά και επενδεδυμένα οχήματα με επαρκή εξαερισμό.

91 112-  
91 117**Μεταφορά σε εμπορευματοκιβώτια**

91 118 Ύλες του 4° (c) και 12° (c) μπορούν επίσης να συσκευάζονται χωρίς εσωτερική συσκευασία σε μικρά εμπορευματοκιβώτια του κλειστού τύπου με πλήρη τοιχώματα.

91 119-  
91 199**ΤΜΗΜΑ 2. Ειδικές προϋποθέσεις προς εκπλήρωση από τα μέσα μεταφοράς και τον εξοπλισμό τους**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I).

91 200-  
91 299**ΤΜΗΜΑ 3. Γενικές διατάξεις εξυπηρέτησως**91 300-  
91 320

## Κλάση 9

## Επίβλεψη των οχημάτων

91 321 Οι διατάξεις του περιθωριακού 10 321 θα έχουν εφαρμογή στα επικίνδυνα εμπορεύματα που αναγράφονται παρακάτω για ποσότητες που υπερβαίνουν τις καθοριζόμενες:

- ύλες ταξινομημένες στο (b) όλων των ειδών: 5 000 κιλά
- ύλες ταξινομημένες στο 13°(b): 1 000 κιλά

91 322-  
91 384

91 385 (1) Για τη μεταφορά υλών του 2° (b) ή εξοπλισμού του 3°, το κείμενο των γραπτών οδηγιών πρέπει να επισημαίνει ότι μπορεί να σχηματισθούν εξαιρετικά τοξικές διοξίνες σε περίπτωση πυρκαγιάς.

(2) Για ύλες του 11° και 12°, οι γραπτές οδηγίες πρέπει επίσης να περιλαμβάνουν τα μέτρα προς λήψη για την αποφυγή ή ελαχιστοποίηση της βλάβης στην περίπτωση διαρροής των υλών που θεωρούνται ρυπαντές του υδάτινου περιβάλλοντος.

(3) Για ύλες του 13°, οι γραπτές οδηγίες θα περιλαμβάνουν επίσης:

- (a) τη διάταξη ότι, σε περίπτωση βλάβης σε ή διαρροής από κύλο που περιέχει ύλες του 13°, θα ενημερώνονται οι τοπικές υγειονομικές ή κτηνιατρικές αρχές;
- (b) πληροφορίες για τον τρόπο απορρόφησης και περιορισμού των υλών και για το πώς οι κίνδυνοι από τις ύλες του 13° θα εξαλειφθούν επί τόπου, π.χ. κατάλληλα απολυμαντικά;
- (c) πληροφορίες για τον κατάλληλο προστατευτικό εξοπλισμό του οδηγού.

91 386-  
91 399

#### ΤΜΗΜΑ 4. Ειδικές διατάξεις που αφορούν τη φόρτωση, εκφόρτωση και χειρισμό

91 400-  
91 402

#### Απαγόρευση μικτής φορτώσεως σε ένα όχημα

91 403 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9 δεν θα φορτώνονται μαζί στο ίδιο όχημα με κόλα που φέρουν ετικέτα σύμφωνα με τα υποδείγματα Αριθμ. 1, 1.4, 1.5, 1.6 ή 01.

91 404-  
91 406

#### Τόποι φορτώσεως και εκφορτώσεως

91 407 (1) Απαγορεύονται οι ακόλουθες εργασίες:

- (a) η φόρτωση ή εκφόρτωση υλών ταξινομημένων στο (b) των διαφόρων ειδών σε δημόσιο χώρο εντός κατοικημένης περιοχής χωρίς ειδική άδεια από τις αρμόδιες αρχές;

## Κλάση 9

91 407 (b) η φόρτωση ή εκφόρτωση υλών ταξινομημένων στο (b) των διαφόρων ειδών (συνεχ.) σε δημόσιο χώρο πλην κατοικημένης περιοχής χωρίς προηγούμενη ειδοποίηση των αρμοδίων αρχών, εκτός εάν αυτές οι εργασίες είναι επείγοντως αναγκαίες για λόγους ασφαλείας.

(2) Εάν για οποιοδήποτε λόγο πρέπει να διεξαχθούν εργασίες χειρισμού σε δημόσιο χώρο, τότε ύλες και αντικείμενα διαφορετικών ειδών θα διαχωρίζονται ανάλογα με τις ετικέτες.

91 408-

91 409

## Προφυλάξεις σχετικές με αντικείμενα κατανάλωσης

91 410 Κόλα που φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9 θα κρατούνται χωριστά από τρόφιμα, άλλα αντικείμενα κατανάλωσης και ζωοτροφές σε οχήματα και σε χώρους φόρτωσης, εκφόρτωσης ή μεταφόρτωσης.

91 411-

91 413

## Χειρισμός και στοιβασία

91 414 (1) Κόλα που περιέχουν ύλες του 13° θα στοιβάζονται έτσι ώστε να είναι εύκολα προσπελάσιμα.

(2) Όταν κόλα που περιέχουν ύλες του 13° πρέπει να μεταφερθούν ψυχόμενα, θα εξασφαλίζεται η λειτουργία της αλυσίδας ψύξεως κατά την εκφόρτωση ή κατά την αποθήκευση.

(3) Κόλα που περιέχουν ύλες του 13° θα αποθηκεύονται μόνο σε δροσερά μέρη μακριά από πηγές θερμότητας.

## Καθαρισμός μετά από την εκφόρτωση

91 415 (1) Εάν ύλες και αντικείμενα της Κλάσης 9, 1° έως 12° έχουν χυθεί ή διαρρεύσει μέσα σε όχημα, αυτό δεν μπορεί να επαναχρησιμοποιηθεί έως ότου έχει επιμελώς καθαρισθεί και, αν είναι ανάγκη, απολυμανθεί. Όλα τα άλλα εμπορεύματα που μεταφέρονται στο ίδιο όχημα θα εξετάζονται για ενδεχόμενη μόλυνση.

(2) Εάν ύλη του 13° έχει διαφύγει και μολύνει όχημα, το όχημα μπορεί να επαναχρησιμοποιηθεί μόνο αφού έχει επιμελώς καθαρισθεί και, αν είναι ανάγκη, απολυμανθεί. Όλα τα εμπορεύματα και αντικείμενα που μεταφέρονται σε τέτοιο όχημα θα ελέγχονται για ενδεχόμενη μόλυνση. Τα ξύλινα μέρη του οχήματος που έχουν έλθει σε επαφή με τις ύλες του 13° θα απομακρύνονται και θα καίγονται.

91 416-

91 499

## Κλάση 9

**ΤΜΗΜΑ 5. Ειδικές διατάξεις που αφορούν τη λειτουργία οχημάτων (-δεξαμενών) και εμπορευματοκιβωτίων (-δεξαμενών)**

**Μαρκάρισμα και επισήμανση****Επισήμανση**

- 91 500** (1) Μικρά εμπορευματοκιβώτια που περιέχουν διασταλτά πολυμερή του 4° (c) θα φέρουν την εξής επισήμανση: "Διατηρήστε μακριά από κάθε πηγή ανάφλεξης". Η επισήμανση αυτή θα αναγράφεται στην επίσημη γλώσσα της χώρας αναχώρησης, και επίσης, εάν η γλώσσα αυτή δεν είναι η Αγγλική, Γαλλική ή Γερμανική, στην Αγγλική, Γαλλική ή Γερμανική, εκτός εάν προβλέπεται διαφορετικά από τυχόν συμφωνίες που έχουν συναφθεί από τις χώρες που αφορά η μεταφορική εργασία.

**Μαρκάρισμα**

- (2) Οχήματα με σταθερές ή αποσυναρμολογούμενες δεξαμενές και εμπορευματοκιβώτια-δεξαμενές, καθώς και οχήματα και εμπορευματοκιβώτια για τη μεταφορά χύμα επικίνδυνων στερεών υλών που περιέχουν ή περιείχαν στο παρελθόν (δεξαμενές, εμπορευματοκιβώτια για μεταφορά χύμα και οχήματα για μεταφορά χύμα, κενά, ακαθάριστα) ύλες αυτής της Κλάσης, εξαιρουμένων των υλών του 4° (c), θα φέρουν πινακίδες σύμφωνα με το υπόδειγμα Αριθμ. 9.

Όσα περιέχουν ή περιείχαν στο παρελθόν ύλες αυτής της Κλάσης που αναγράφονται στο περιθωριακό 2912 (4) έως (6) θα φέρουν επίσης ετικέτες σύμφωνα με το εν λόγω περιθωριακό.

**91 501-  
91 599**

**ΤΜΗΜΑ 6. Μεταβατικές διατάξεις, ανακλήσεις, και διατάξεις ειδικές για ορισμένες χώρες**

(Έχουν εφαρμογή μόνο οι γενικές διατάξεις του Μέρους I)

**91 600-  
199 999**

1995

**ΜΕΡΟΣ ΙΙΙ**

**ΠΡΟΣΘΗΚΕΣ ΣΤΟ ΠΑΡΑΡΤΗΜΑ Β**

**ΠΡΟΣΘΗΚΕΣ Β.1: Διατάξεις που αφορούν τις δεξαμενές**

**ΚΟΙΝΕΣ ΔΙΑΤΑΞΕΙΣ ΤΩΝ ΠΡΟΣΘΗΚΩΝ Β.1**

**200 000 (1)** Η περιοχή εφαρμογής των διαφόρων Προσθηκών Β.1 έχει ως ακολούθως:

- (a) Η Προσθήκη Β.1a έχει εφαρμογή σε δεξαμενές εκτός από εμπορευματοκιβώτια-δεξαμενές
- (b) Η Προσθήκη Β.1b έχει εφαρμογή σε εμπορευματοκιβώτια-δεξαμενές
- (c) Η Προσθήκη Β.1c έχει εφαρμογή σε δεξαμενές, εκτός από συστοιχίες δοχείων και εμπορευματοκιβώτια-δεξαμενές, κατασκευασμένες από ενισχυμένο πλαστικό
- (d) Η Προσθήκη Β.1d αφορά τα υλικά και την κατασκευή σταθερών συγκολλημένων δεξαμενών, αποσυναρμολογούμενων συγκολλημένων δεξαμενών, και συγκολλημένων περιβλημάτων των εμπορευματοκιβωτίων-δεξαμενών, που προορίζονται για τη μεταφορά υγροποιημένων αερίων βαθιάς καταψύξεως της Κλάσης 2, ή για τα οποία απαιτείται πίεση δοκιμής όχι μικρότερη του 1 MPa (10 bar).

**ΣΗΜΕΙΩΣΗ:** Για δοχεία, βλέπε τις σχετικές απαιτήσεις του Παραρτήματος Α (Κόλα).

(2) Κατά παρέκκλιση του ορισμού που δίνεται στο περιθωριακό 10 014, ο όρος "δεξαμενή" όταν χρησιμοποιείται μόνος στην Προσθήκη Β.1a και την Προσθήκη Β.1c δεν καλύπτει τα εμπορευματοκιβώτια-δεξαμενές. Εντούτοις, ορισμένες από τις απαιτήσεις της Προσθήκης Β.1a μπορεί να καταστούν εφαρμόσιμες στα εμπορευματοκιβώτια-δεξαμενές από τις διατάξεις του Παραρτήματος Β και της Προσθήκης Β.1b.

(3) Υπενθυμίζεται ότι το περιθωριακό 10 121 (1) απαγορεύει τη μεταφορά επικινδύνων υλών σε δεξαμενές εκτός των περιπτώσεων όπου αυτή η μεταφορά επιτρέπεται ρητώς σύμφωνα με κάθε Τμήμα 1 του Μέρους ΙΙ στις Προσθήκες Β.1a ή Β.1b και Τμήμα 1 της Προσθήκης Β.1c.

200 001-  
210 999

**ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΣΤΑΘΕΡΕΣ ΔΕΞΑΜΕΝΕΣ (ΟΧΗΜΑΤΑ-ΔΕΞΑΜΕΝΕΣ)  
ΑΠΟΣΥΝΑΡΜΟΛΟΓΟΥΜΕΝΕΣ ΔΕΞΑΜΕΝΕΣ ΚΑΙ ΣΥΣΤΟΙΧΙΕΣ ΔΟΧΕΙΩΝ**

**ΣΗΜΕΙΩΣΗ:** Το Μέρος I καθορίζει τις απαιτήσεις που έχουν εφαρμογή σε σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων που προορίζονται για τη μεταφορά υλών οποιασδήποτε κλάσης. Το Μέρος II περιλαμβάνει ειδικές απαιτήσεις που συμπληρώνουν ή τροποποιούν τις απαιτήσεις του Μέρους I.

**ΜΕΡΟΣ I. ΑΠΑΙΤΗΣΕΙΣ ΜΕ ΕΦΑΡΜΟΓΗ ΣΕ ΟΛΕΣ ΤΙΣ ΚΛΑΣΕΙΣ**

211 000-  
211 099

**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί**

**ΣΗΜΕΙΩΣΗ:** Σύμφωνα με τις διατάξεις του περιθωριακού 10 121 (1), η μεταφορά επικινδύνων υλών σε σταθερές ή αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων επιτρέπεται μόνο όπου επιτρέπεται ρητά αυτός ο τρόπος μεταφοράς για αυτές τις ύλες σε κάθε Τμήμα I του Μέρους II της παρούσης Προσθήκης.

**211 100** Αυτές οι απαιτήσεις θα έχουν εφαρμογή σε σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων που χρησιμοποιούνται για τη μεταφορά υγρών, αερίων, κοινωδών ή κοκκωδών υλών.

**211 101** (1) Επί πλέον του κυρίως οχήματος, ή των κινητών μονάδων που χρησιμοποιούνται αντ'αυτού, το όχημα-δεξαμενή περιλαμβάνει ένα ή περισσότερα περιβλήματα, τα είδη εξοπλισμού τους και τα εξαρτήματα για την πρόσδεσή τους στο όχημα ή τις κινητές μονάδες.

(2) Όταν είναι προσδεμένη στο φέρον όχημα, η αποσυναρμολογούμενη δεξαμενή ή η συστοιχία δοχείων θα ανταποκρίνεται στις απαιτήσεις που προβλέπονται για τα οχήματα-δεξαμενές.

**211 102** Στις ακόλουθες απαιτήσεις:

(1) (a) "περιβλήμα" σημαίνει την κυρίως δεξαμενή (συμπεριλαμβανομένων των στομιών και των πωμάτων τους)

(b) "εξοπλισμός λειτουργίας του περιβλήματος" σημαίνει τις συσκευές πλήρωσεως, εκκενώσεως, εξαερισμού, ασφαλείας, θερμάνσεως και θερμομονώσεως και τα όργανα μετρήσεως

(c) "κατασκευαστικός εξοπλισμός" σημαίνει τα εσωτερικά ή εξωτερικά ενισχυτικά, συνδετικά, προστατευτικά ή σταθεροποιητικά μέλη στο εξωτερικό του περιβλήματος.

(2) (a) "πίεση υπολογισμού" σημαίνει μια θεωρητική τιμή της πίεσης κατ'ελάχιστον ίση με την πίεση δοκιμής η οποία, αναλόγως του βαθμού επικινδυνότητας που χαρακτηρίζει την μεταφερόμενη ύλη, μπορεί να υπερβαίνει την πίεση εργασίας σε μεγαλύτερο ή μικρότερο βαθμό. Χρησιμοποιείται αποκλειστικά για τον καθορισμό του πάχους των τοιχωμάτων του περιβλήματος, ανεξάρτητα από οποιαδήποτε εξωτερική ή εσωτερική συσκευή ενίσχυσης

(b) "πίεση δοκιμής" σημαίνει την μέγιστη πίεση που αναπτύσσεται στο περίβλημα κατά τη δοκιμή πίεσης

(c) "πίεση πλήρωσεως" σημαίνει τη μέγιστη πραγματική πίεση που δημιουργείται στο περίβλημα όταν αυτό πληρούται υπό πίεση.

## Προσθήκη Β.1α

- 211 102** (d) "πίεση εκκένωσης" σημαίνει τη μέγιστη πραγματική πίεση που δημιουργείται στο (συνεχ.) περίβλημα όταν αυτό εκκενώνεται υπό πίεση
- (e) "μέγιστη πίεση εργασίας (πίεση μετρητή)" σημαίνει την υψηλότερη από τις ακόλουθες τρεις τιμές της πίεσης:
- (i) την υψηλότερη πραγματική πίεση που επιτρέπεται στο περίβλημα κατά την πλήρωση ("μέγιστη επιτρεπόμενη πίεση πλήρωσεως")
  - (ii) την υψηλότερη πραγματική πίεση που επιτρέπεται στο περίβλημα κατά την εκκένωση ("μέγιστη επιτρεπόμενη πίεση εκκενώσεως") και
  - (iii) την πραγματική πίεση μετρητή στην οποία υποβάλλεται το περίβλημα από τα περιεχόμενά του (συμπεριλαμβανομένων τυχόν εξωγενών αερίων που μπορεί να περιέχει) στην μέγιστη θερμοκρασία εργασίας.

Εκτός εάν οι ειδικές απαιτήσεις για κάθε κλάση προβλέπουν διαφορετικά, η αριθμητική τιμή αυτής της πίεσεως εργασίας (πίεσεως μετρητή) δεν θα είναι χαμηλότερη της πίεσεως των ατμών (απολύτου πίεσεως) της πληρωτικής ύλης στους 50 °C.

Για περιβλήματα εξοπλισμένα με βαλβίδες ασφαλείας (με ή χωρίς εκρηγνύσιμο δίσκο), η μέγιστη πίεση εργασίας (πίεση μετρητή) θα είναι εντούτοις ίση με την προβλεπόμενη πίεση ανοίγματος τέτοιων βαλβίδων ασφαλείας.

- (3) "Δοκιμή στεγανότητας" σημαίνει τη δοκιμή που συνίσταται στην υποβολή του περιβλήματος σε πραγματική εσωτερική πίεση ίση με τη μέγιστη πίεση εργασίας, αλλά όχι μικρότερη από 20 kPa (0.2 bar) (πίεση μετρητή), μέσω διαδικασίας εγκεκριμένης από την αρμόδια αρχή.

Για περιβλήματα εξοπλισμένα με συστήματα εξαερισμού και συσκευή ασφαλείας για να εμποδισθεί η διαρροή των περιεχομένων εάν το περίβλημα ανατραπεί, η πίεση για τη δοκιμή στεγανότητας θα είναι ίση με τη στατική πίεση της πληρωτικής ύλης.

**211 103-**  
**211 119**

## ΤΜΗΜΑ 2. Κατασκευή

**211 120** Τα περιβλήματα θα σχεδιάζονται και θα κατασκευάζονται σύμφωνα με τις διατάξεις τεχνικού κώδικα που αναγνωρίζεται από την αρμόδια αρχή, θα ικανοποιούνται όμως οι ακόλουθες ελάχιστες απαιτήσεις:

- (1) Τα κελύφη θα κατασκευάζονται από κατάλληλα μεταλλικά υλικά τα οποία, εκτός εάν προβλέπονται άλλα εύρη θερμοκρασιών στις διάφορες κλάσεις, θα αντέχουν στην ψαθυρή θραύση και στην ρηγμάτωση λόγω διαβρωτικής καταπόνησης μεταξύ -20 °C και +50 °C.
- (2) Για συγκολλημένα περιβλήματα, θα χρησιμοποιούνται μόνο υλικά τέλειας συγκολλησιμότητας και με εγγυημένη επαρκή κρουστική αντοχή σε θερμοκρασία περιβάλλοντος -20 °, ειδικά στις ραφές συγκόλλησης και τις γειτονικές τους ζώνες.
- (3) Οι συγκολλήσεις θα είναι επιδέξια κατασκευασμένες και θα προσφέρουν πλήρη ασφάλεια. Για την εκτέλεση και τον έλεγχο των σημείων συγκόλλησης, βλέπε επίσης το περιθωριακό 211 127 (8). Περιβλήματα των οποίων τα ελάχιστα πάχη τοιχωμάτων έχουν καθορισθεί σύμφωνα με το 211 127 (2) έως (6) θα ελέγχονται με τις μεθόδους που περιγράφονται στον ορισμό του συντελεστή συγκόλλησης 0.8.

## Προσθήκη Β.1α

- 211 120** (4) Τα υλικά των περιβλημάτων ή οι προστατευτικές επενδύσεις τους που έρχονται (συνεχ.) σε επαφή με το περιεχόμενο δεν θα περιέχουν ύλες που μπορεί να αντιδράσουν επικίνδυνα με το περιεχόμενο, να σχηματίζουν επικίνδυνες ενώσεις, ή να αδυνατίζουν ουσιαστικά το υλικό.
- (5) Η προστατευτική επένδυση θα είναι σχεδιασμένη κατά τέτοιο τρόπο ώστε η στεγανότητά της να παραμένει αμετάβλητη σε όποια παραμόρφωση μπορεί να συμβεί σε κανονικές συνθήκες μεταφοράς [211 127 (1)].
- (6) Αν η επαφή μεταξύ της μεταφερόμενης ύλης και του υλικού που χρησιμοποιήθηκε για την κατασκευή του περιβλήματος συνεπάγεται προοδευτική μείωση του πάχους των τοιχωμάτων, το πάχος θα αυξάνεται κατά την κατασκευή καταλλήλως. Το πρόσθετο αυτό πάχος ως ανοχή για τη διάβρωση δεν θα λαμβάνεται υπόψη κατά τον υπολογισμό του πάχους των τοιχωμάτων του.
- 211 121** (1) Τα περιβλήματα, τα προσαρτήματα αυτών και ο λειτουργικός και κατασκευαστικός εξοπλισμός τους θα σχεδιάζονται ώστε να αντέχουν χωρίς απώλεια περιεχομένου (εκτός από ποσότητες του αερίου που διαφεύγουν από τυχόν ειδικούς εξαεριστήρες):
- τις στατικές και δυναμικές εντάσεις σε κανονικές συνθήκες μεταφοράς
  - τις προβλεπόμενες ελάχιστες εντάσεις όπως ορίζονται στα περιθωριακά 211 125 και 211 127.
- (2) Στην περίπτωση οχημάτων στα οποία το περίβλημα αποτελεί αυτοστηριζόμενο μέλος σε εντατική καταπόνηση, το περίβλημα θα σχεδιάζεται ώστε να αντέχει τις εντάσεις που επιβάλλονται από αυτό το λόγο επί πλέον των εντάσεων που προέρχονται από άλλες πηγές.
- 211 122** Η πίεση στην οποία βασίζεται το πάχος τοιχωμάτων του περιβλήματος δεν θα είναι μικρότερη από την πίεση υπολογισμού, αλλά οι εντάσεις που αναφέρονται στο περιθωριακό 211 121 θα λαμβάνονται επίσης.
- 211 123** Εκτός αν υπάρχει διαφορετική ειδική πρόβλεψη στις διάφορες κλάσεις, οι παρακάτω λεπτομέρειες θα λαμβάνονται υπόψη στο σχεδιασμό των περιβλημάτων:
- (1) Περιβλήματα βαρυτικής εκκενώσεως προοριζόμενα για τη μεταφορά υλών που έχουν πίεση ατμών μη υπερβαίνουσα τα 100 kPa (1.1 bar) (απόλυτη πίεση) στους 50 °C θα είναι σχεδιασμένα για πίεση υπολογισμού διπλάσια από τη στατική πίεση της ύλης που πρόκειται να μεταφερθεί αλλά όχι μικρότερη από τη στατική πίεση του νερού.
- (2) Περιβλήματα πληρούμενα υπό πίεση ή εκκενούμενα υπό πίεση, προοριζόμενα για τη μεταφορά υλών που έχουν πίεση ατμών μη υπερβαίνουσα τα 110 kPa (1.1 bar) (απόλυτη πίεση) στους 50 °C θα σχεδιάζονται για πίεση υπολογισμού ίση με 1.3 φορές την πίεση πλήρωσης ή εκκένωσης.
- (3) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που έχουν πίεση ατμών μεγαλύτερη των 110 kPa (1.1 bar) αλλά όχι μεγαλύτερη από 175 kPa (1.75 bar) (απόλυτη πίεση) στους 50 °C θα σχεδιάζονται, οποιοδήποτε και αν είναι το σύστημα πλήρωσεως ή εκφορτώσεώς τους, για πίεση υπολογισμού όχι μικρότερη από 150 kPa (1.5 bar) πίεση μετρητή ή 1.3 φορές την πίεση πλήρωσης ή εκκένωσης, όποια είναι μεγαλύτερη.
- (4) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που έχουν πίεση ατμών μεγαλύτερη από 175 kPa (1.75 bar) (απόλυτη πίεση) στους 50 °C θα σχεδιάζονται, οποιοδήποτε και αν είναι το σύστημα πλήρωσεως ή εκκενώσεως τους, για πίεση υπολογισμού ίση με 1.3 φορές την πίεση πλήρωσεως ή εκκενώσεως αλλά όχι μικρότερη από 400 kPa (4 bar) πίεση μετρητή.
- 211 124** Δεξαμενές προοριζόμενες να περιέχουν ορισμένες επικίνδυνες ύλες θα έχουν ειδική προστασία. Αυτή μπορεί να πάρει τη μορφή πρόσθετου πάχους του περιβλήματος (αυτό το πρόσθετο πάχος θα καθορίζεται βάσει των κινδύνων που ενυπάρχουν στην εν λόγω ύλη: βλέπε τις σχετικές κλάσεις) ή προστατευτικής συσκευής.

## Προσθήκη Β.1α

**211 125** Στην πίεση δοκιμής, η ένταση  $\sigma$  (σίγμα) στο πιο έντονα καταπονούμενο σημείο του περιβλήματος δεν θα υπερβαίνει τα όρια, εξαρτώμενα από τα υλικά, που περιγράφονται παρακάτω. Θα υπολογίζεται ανοχή για οποιαδήποτε εξασθένηση οφειλόμενη στις συγκολλήσεις. Επί πλέον, στην επιλογή του υλικού και τον προσδιορισμό του πάχους του τοιχώματος, πρέπει να λαμβάνονται υπόψη η ανώτατη και κατώτατη θερμοκρασία πληρώσεως και εργασίας.

(1) Για όλα τα μέταλλα και κράματα, η ένταση  $\sigma$  στην πίεση δοκιμής θα είναι χαμηλότερη από την μικρότερη από τις τιμές των παρακάτω τύπων:

$$\sigma \leq 0.75 Re \text{ ή } \sigma \leq 0.5 Rm$$

όπου

Re = φαινόμενη τάση διαρροής, ή 0.2%  
ή, στην περίπτωση ωστενιτικών χάλυβων, 1%  
Rm = ελάχιστη τάση εφελκυσμού.

Ο λόγος του Re/Rm δεν επιτρέπεται να υπερβαίνει το 0.85 για χάλυβες που χρησιμοποιούνται στην κατασκευή συγκολλούμενων δεξαμενών.

Οι τιμές των Re και Rm που θα χρησιμοποιηθούν θα είναι καθορισμένες ελάχιστες τιμές σύμφωνα με τις προδιαγραφές των υλικών. Εάν δεν υπάρχει προδιαγραφή υλικού για κάποιο μέταλλο ή κράμα, οι χρησιμοποιούμενες τιμές των Re και Rm θα εγκρίνονται από την αρμόδια αρχή ή από φορέα που θα υποδείξει η αρχή αυτή.

Όταν χρησιμοποιούνται ωστενιτικοί χάλυβες, οι καθορισμένες ελάχιστες τιμές σύμφωνα με τις προδιαγραφές υλικών μπορεί να υπερβαίνουν έως και 15% εάν οι ανώτερες αυτές τιμές κατακυρώνονται στο πιστοποιητικό επιθεώρησης.

Οι τιμές που καθορίζονται στο πιστοποιητικό θα λαμβάνονται ως βάση για τον καθορισμό του εκάστοτε λόγου Re/Rm.

(2) Όταν η μέγιστη θερμοκρασία εργασίας δεν υπερβαίνει τους 50 °C, μπορεί να χρησιμοποιούνται οι τιμές των Re και Rm στους 20 °C. Όταν η θερμοκρασία εργασίας υπερβαίνει τους 50 °C, θα χρησιμοποιούνται οι τιμές σε αυτή τη μέγιστη θερμοκρασία (θερμοκρασία υπολογισμού).

(3) Για τον χάλυβα, η επιμήκυνση κατά τη θραύση σε ποσοστό % δεν θα είναι μικρότερη από

—10 000—

καθορισμένη εφελκυστική αντοχή σε  $N/mm^2$

αλλά σε κάθε περίπτωση θα είναι όχι μικρότερη από 16% για λεπτόκοκκους χάλυβες και όχι μικρότερη από 20% για τους λουτούς χάλυβες. Για κράματα αλουμινίου η επιμήκυνση κατά τη θραύση δεν θα είναι μικρότερη από 12% <sup>1/</sup>.

<sup>1/</sup> Στην περίπτωση μετάλλων σε φύλλο ο άξονας του ολκίμου δοκιμαστικού τεμαχίου θα είναι σε ορθή γωνία με την κατεύθυνση κυλίσεως. Η μόνιμη επιμήκυνση θραύσεως ( $l = 5d$ ) θα μετράται σε δοκιμαστικό τεμάχιο με κυκλική διατομή όπου το μέτρο μήκους  $l$  ισούται με πέντε επί την διάμετρο  $d$  εάν χρησιμοποιούνται δοκιμαστικά τεμάχια ορθογωνικής διατομής, το μέτρο μήκους θα υπολογίζεται από τον τύπο

$$l = 5,65 \sqrt{F_o}$$

Error! Main Document Only. όπου  $F_o$  είναι το εμβαδόν της αρχικής διατομής του δοκιμαστικού τεμαχίου.

## Προσθήκη Β.1α

**211 126** Περιβλήματα προοριζόμενα για τη μεταφορά υγρών που έχουν σημείο αναφλέξεως 61 °C ή χαμηλότερο ή για τη μεταφορά εύφλεκτων αερίων, θα συνδέονται με το σασί μέσω τουλάχιστον μιας καλής ηλεκτρικής σύνδεσης. Θα αποφεύγεται οποιαδήποτε μεταλλική επαφή ικανή να προκαλέσει ηλεκτροχημική διάβρωση. Τα περιβλήματα θα έχουν τουλάχιστον ένα εξάρτημα γειώσεως που θα επισημαίνεται σαφώς με το σύμβολο  $\ominus$ , ικανό να συνδεθεί ηλεκτρικά.

**211 127** Τα περιβλήματα και τα μέσα πρόσδεσης αυτών θα αντέχουν τις εντάσεις που καθορίζονται στο (1) παρακάτω, και τα πάχη των τοιχωμάτων των περιβλημάτων θα είναι τουλάχιστον όσο ορίζεται σύμφωνα με τα (2) έως (6).

(1) Τα περιβλήματα και τα μέσα πρόσδεσής τους θα είναι ικανά να απορροφούν, υπό το μέγιστο επιτρεπόμενο φορτίο, τις δυνάμεις που ασκούνται από:

- προς την κατεύθυνση πορείας: το διπλάσιο του συνολικού βάρους
- σε ορθή γωνία με την κατεύθυνση πορείας: το συνολικό βάρος
- κατακόρυφα προς τα άνω: το ολικό βάρος
- κατακόρυφα προς τα κάτω: το διπλάσιο του ολικού βάρους.

Υπό τις εντάσεις που ορίζονται παραπάνω, η ένταση στο εντονότερα καταπονούμενο σημείο του περιβλήματος και των μέσων πρόσδεσής του δεν θα υπερβαίνει την τιμή  $\sigma$  που ορίζεται στο περιθωριακό 211 125.

(2) Το πάχος του κυλινδρικού τοιχώματος του περιβλήματος και των άκρων και των πλακών καλύμματος θα είναι τουλάχιστον ίσο προς εκείνο που λαμβάνεται με τους ακόλουθους τύπους:

$$e = \frac{P_{MPa} \times D}{2 \times \sigma \times \lambda} \text{ mm} \qquad e = \frac{P_{bar} \times D}{2 \times \sigma \times \lambda} \text{ mm}$$

όπου  $P_{MPa}$  = πίεση υπολογισμού σε MPa

$P_{bar}$  = πίεση υπολογισμού σε bar

$D$  = εσωτερική διάμετρος του περιβλήματος σε mm

$\sigma$  = επιτρεπόμενη τάση, όπως ορίζεται στο περιθωριακό 211 125 (1), (a) και (b), και (2), σε  $N/mm^2$  και

$\lambda$  = συντελεστής, που δεν υπερβαίνει το 1, που λαμβάνει υπόψη τυχόν εξασθένηση λόγω των συγκολλήσεων.

Το πάχος δεν θα είναι σε καμία περίπτωση μικρότερο από το οριζόμενο στα (3) έως (5) παρακάτω.

## Προσθήκη Β.1α

**211 127 (3)** Τα τοιχώματα, τα άκρα και οι πλάκες καλυμμάτων των περιβλημάτων κυκλικής διατομής με (συνεχ.) διάμετρο όχι μεγαλύτερη των 1.80 m<sup>2/</sup>, εκτός από τα αναφερόμενα στο (5), δεν θα είναι κάτω από 5 mm σε πάχος εάν είναι από μαλακό χάλυβα<sup>3/</sup>, ή από ισοδύναμο πάχος εάν είναι από άλλο μέταλλο. Όπου η διάμετρος είναι μεγαλύτερη από 1.80 m<sup>2/</sup>, το πάχος αυτό θα αυξάνεται σε 6 mm πλην των περιπτώσεων περιβλημάτων προοριζόμενων για τη μεταφορά κονιωδών ή κοκκωδών υλών, εάν το περίβλημα είναι από μαλακό χάλυβα<sup>3/</sup>, ή σε ισοδύναμο πάχος εάν το περίβλημα είναι από άλλο μέταλλο. "Ισοδύναμο πάχος" σημαίνει το πάχος που λαμβάνεται από τον ακόλουθο τύπο:

$$e_1 = \frac{21.4 \times e_0}{\sqrt[3]{R m_1 \times A_1}} \quad 4/$$

(4) Όπου προβλέπεται η προστασία του περιβλήματος έναντι βλάβης από πλευρική πρόσκρουση ή ανατροπή, η αρμόδια αρχή μπορεί να επιτρέψει να μειωθούν τα προαναφερόμενα ελάχιστα πάχη αναλόγως της προβλεπόμενης προστασίας· εντούτοις, τα εν λόγω πάχη δεν θα είναι μικρότερα από 3 mm στην περίπτωση μαλακού χάλυβα<sup>3/</sup>, ή από ισοδύναμο πάχος στην περίπτωση άλλων υλικών, για περιβλήματα όχι μεγαλύτερα από 1.80 m σε διάμετρο<sup>2/</sup>. Για περιβλήματα με διάμετρο που υπερβαίνει τα 1.80 m<sup>2/</sup> το προαναφερόμενο ελάχιστο πάχος θα αυξάνεται σε 4 mm στην περίπτωση μαλακού χάλυβα<sup>3/</sup> και σε ισοδύναμο πάχος στην περίπτωση άλλου μετάλλου. "Ισοδύναμο πάχος" σημαίνει το πάχος που λαμβάνεται από τον ακόλουθο τύπο:

$$e_1 = \frac{21.4 \times e_0}{\sqrt[3]{R m_1 \times A_1}} \quad 4/$$

(5) Για δεξαμενές κατασκευασμένες μετά την 1η Ιανουαρίου 1990, υπάρχει προστασία έναντι βλάβης κατά τα αναφερόμενα στο (4) όταν λαμβάνονται τα ακόλουθα μέτρα ή ισοδύναμα μέτρα:

- (a) Για περιβλήματα προοριζόμενα για τη μεταφορά κονιωδών ή κοκκωδών υλών, η προστασία έναντι βλάβης θα ικανοποιεί την αρμόδια αρχή.

<sup>2/</sup> Για περιβλήματα μη κυκλικής διατομής, παραδείγματος χάριν κβωτοειδή ή ελλειψοειδή περιβλήματα, οι σχετικές διαμέτροι θα ανταποκρίνονται στις υπολογιζόμενες βάσει κυκλικών διατομών του ιδίου εμβαδού. - Για τέτοια σχήματα διατομών η ακτίνα κυρτότητας του τοιχώματος του περιβλήματος δεν θα υπερβαίνει τα 2 000 mm στα πλάγια ή τα 3 000 mm στο άνω και κάτω μέρος.

<sup>3/</sup> "Μαλακός χάλυβας" σημαίνει τον χάλυβα με ελάχιστη αντοχή θραύσεως μεταξύ 360 και 410 N/mm<sup>2</sup>.

<sup>4/</sup> Ο τύπος αυτός εξάγεται από τον γενικό τύπο:

$$e_1 = e_0 \sqrt[3]{\frac{R m_0 \times A_0}{R m_1 \times A_1}}$$

Error! Main Document Only. όπου

$$R m_0 = 360$$

$$A_0 = 27 \text{ για τον μαλακό χάλυβα αναφοράς.}$$

$$R m_1 = \text{ελάχιστη εφελκυστική αντοχή του επιλεγμένου μετάλλου, σε N/mm}^2 \text{ και}$$

$$A_1 = \text{ελάχιστη επιμήκυνση του επιλεγμένου μετάλλου κατά την εφελκυστική θραύση, σε ποσοστό \%}$$

## Προσθήκη Β.1α

211 127  
(συνεχ.)

(b) Για περιβλήματα προοριζόμενα για τη μεταφορά άλλων υλών, υπάρχει προστασία έναντι βλάβης όταν:

- για περιβλήματα με κυκλική ή ελλειψοειδή διατομή που έχουν μέγιστη ακτίνα καμπυλότητας 2 m, το περίβλημα είναι εξοπλισμένο με ενισχυτικά μέλη που συμπεριλαμβάνουν χωρίσματα, πλάκες διογκώσεως ή εξωτερικούς ή εσωτερικούς δακτυλίους, τοποθετημένους έτσι ώστε να ικανοποιείται τουλάχιστον ένας από τους ακόλουθους όρους:

Απόσταση μεταξύ δύο συνεχόμενων ενισχυτικών στοιχείων  $\leq 1.75$  m.

Όγκος περιεχόμενος μεταξύ δύο χωρισμάτων ή πλακών διογκώσεως  $\leq 7500$  l.

Η κατακόρυφη διατομή του δακτυλίου, μαζί με το αντίστοιχο μέσο σύνδεσης, θα έχει ροπή αντιστάσεως τουλάχιστον  $10 \text{ cm}^3$ .

Οι εξωτερικοί δακτύλιοι δεν θα έχουν προεξέχοντα άκρα με ακτίνα μικρότερη των 2.5 mm.

Τα χωρίσματα και οι πλάκες διογκώσεως θα είναι σύμφωνα με τις απαιτήσεις του (7).

Το πάχος των χωρισμάτων και πλακών διογκώσεως δεν θα είναι σε καμία περίπτωση μικρότερο από εκείνο του περιβλήματος.

- Για περιβλήματα κατασκευασμένα με διπλά τοιχώματα, με το ενδιάμεσο διάστημα εκκενωμένο από τον αέρα, το ολικό πάχος του εξωτερικού μεταλλικού τοιχώματος και του τοιχώματος του περιβλήματος αντιστοιχεί στο πάχος τοιχώματος που προβλέπεται στο (3), και το πάχος τοιχώματος του περιβλήματος αυτού καθ'εαυτού δεν είναι μικρότερο από το ελάχιστο πάχος που προβλέπεται στο (4).
- Για περιβλήματα κατασκευασμένα με διπλά τοιχώματα που έχουν ενδιάμεση στρώση από στερεά υλικά πάχους τουλάχιστον 50 mm, το εξωτερικό τοίχωμα έχει πάχος τουλάχιστον 0.5 mm μαλακού χάλυβα <sup>5/</sup> ή τουλάχιστον 2 mm πλαστικού υλικού ενισχυμένου με ίνες υάλου. Στερεός αφρός (με ικανότητα απορρόφησης προσκρούσεων παρόμοια, παραδείγματος χάριν, με αυτή του αφρού πολουρεθάνης) μπορεί να χρησιμοποιηθεί ως ενδιάμεση στρώση στερεού υλικού.
- Περιβλήματα με σχήματα εκτός από αυτά του 1., ιδίως κητοειδείς δεξαμενές, είναι εξοπλισμένα, γύρω από το καθ' ύψος μέσον τους και για ποσοστό τουλάχιστον 30% του ύψους τους με πρόσθετη προστασία σχεδιασμένη με τέτοιο τρόπο ώστε να προσφέρει ειδική επανατακτικότητα τουλάχιστον ίση με εκείνη περιβλήματος κατασκευασμένου με μαλακό χάλυβα πάχους 5 mm (για διάμετρο περιβλήματος που δεν υπερβαίνει τα 1.80 m) ή 6 mm (για διάμετρο περιβλήματος που υπερβαίνει τα 1.80 m). Η πρόσθετη προστασία θα ασκείται διαρκώς στο εξωτερικό του περιβλήματος. Αυτή η απαίτηση θα θεωρείται ότι έχει ικανοποιηθεί χωρίς περαιτέρω απόδειξη της ειδικής επανατακτικότητας όταν η πρόσθετη προστασία περιλαμβάνει τη συγκόλληση πλάκας του ίδιου υλικού με το περίβλημα στην προς ενίσχυση περιοχή, ούτως ώστε το ελάχιστο πάχος τοιχώματος να είναι σύμφωνο με το (3).

Η προστασία αυτή εξαρτάται από τις πιθανές εντάσεις που ασκούνται σε περιβλήματα μαλακού χάλυβα στην περίπτωση ατυχήματος, όπου τα άκρα και τα τοιχώματα έχουν πάχος τουλάχιστον 5 mm για διάμετρο που δεν υπερβαίνει τα 1.80 m ή τουλάχιστον 6 mm για διάμετρο που υπερβαίνει τα 1.80 m. Εάν χρησιμοποιείται άλλο μέταλλο, το ισοδύναμο πάχος θα λαμβάνεται σύμφωνα με τον τύπο του (3).

## Προσθήκη Β.1α

**211 127** Για αποσυναρμολογούμενες δεξαμενές δεν απαιτείται αυτή η προστασία όταν προστατεύονται (συνεχ.) σε όλες τις πλευρές από τα ανατρεπόμενα πλευρικά τοιχώματα των φερόντων οχημάτων.

(6) Το πάχος των περιβλημάτων δεξαμενών που έχουν σχεδιασθεί σύμφωνα με το περιθωριακό 211 123 (1) τα οποία είναι είτε χωρητικότητας όχι μεγαλύτερης από 5 000 λίτρα είτε χωρίζονται σε στεγανά διαμερίσματα μοναδιαίας χωρητικότητας όχι μεγαλύτερης από 5 000 λίτρα μπορεί να προσαρμόζεται σε επίπεδο το οποίο, εκτός εάν προβλέπεται διαφορετικά στις διάφορες κλάσεις, εντούτοις δεν θα είναι μικρότερο από την κατάλληλη τιμή από αυτές που εμφανίζονται στον ακόλουθο πίνακα:

Μέγιστη ακτίνα καμπυλότητας του περιβλήματος (m)	Χωρητικότητα του περιβλήματος ή του διαμερίσματος αυτού (m <sup>3</sup> )	Ελάχιστο πάχος (mm)
		Μαλακός χάλυβας
≤ 2	≤ 5.0	3
2 - 3	≤ 3.5	3
	> 3.5 αλλά ≤ 5.0	4

Όπου χρησιμοποιείται μέταλλο εκτός από μαλακό χάλυβα, το πάχος θα καθορίζεται από τον τύπο ισοδυναμίας που δίνεται στο (3). Το πάχος των χωρισμάτων και των πλακών διόγκωσης δεν θα είναι σε καμιά περίπτωση μικρότερο από εκείνο του περιβλήματος.

(7) Οι πλάκες διόγκωσης και τα χωρίσματα θα είναι κοίλα, με βάθος κοιλώματος όχι μικρότερο από 10 cm, ή θα είναι πτυχωμένα, ανάγλυφα ή με άλλο τρόπο ενισχυμένα ώστε να δίνουν ισοδύναμη αντοχή. Η επιφάνεια της πλάκας διόγκωσης θα είναι τουλάχιστον 70% του εμβαδού της διατομής της δεξαμενής στην οποία είναι προσαρτημένη η πλάκα διόγκωσης.

(8) Η ικανότητα του κατασκευαστή για τη διενέργεια εργασιών συγκολλήσεως θα είναι αναγνωρισμένη από την αρμόδια αρχή. Η συγκόλληση θα γίνεται από ειδικευμένους συγκολλητές που χρησιμοποιούν διαδικασία συγκολλήσεως της οποίας η αποτελεσματικότητα (περιλαμβανομένων τυχόν απαιτούμενων θερμαντικών διεργασιών) έχει επιδειχθεί με δοκιμή. Θα διεξάγονται μη καταστρεπτικές δοκιμές με ραδιογραφία ή με υπερήχους, οι οποίες πρέπει να επιβεβαιώσουν ότι η ποιότητα της συγκολλήσεως είναι η ενδεικνυόμενη για τις καταπονήσεις.

Για τον καθορισμό του πάχους του περιβλήματος σύμφωνα με το (2), πρέπει να υιοθετηθούν για τις συγκολλήσεις οι παρακάτω τιμές του συντελεστή λάμδα (λ):

- 0.8: όπου οι λωρίδες συγκολλήσεως επιβλέπονται όσο είναι δυνατόν οπτικά και από τις δύο πλευρές και υποβάλλονται σε μη καταστρεπτικό σημειακό έλεγχο με ειδική προσοχή στις ενώσεις
- 0.9: όπου όλες οι κατά μήκος λωρίδες σε όλο το μήκος τους, όλες οι ενώσεις, 25% των κυκλικών λωρίδων, και οι συγκολλήσεις για τη συναρμολόγηση ειδών εξοπλισμού μεγάλης διαμέτρου υποβάλλονται σε μη καταστρεπτικούς ελέγχους. Οι λωρίδες θα ελέγχονται οπτικά και από τις δύο πλευρές όσο αυτό είναι δυνατό
- 1.0: όπου όλες οι λωρίδες θα υποβάλλονται σε μη καταστρεπτικούς ελέγχους και ελέγχονται όσο αυτό είναι δυνατόν οπτικά και από τις δύο πλευρές. Θα αφαιρείται ένα τεμάχιο δοκιμής συγκολλήσεως.

Όπου η αρμόδια αρχή έχει αμφιβολίες σχετικά με την ποιότητα των λωρίδων συγκολλήσεως, μπορεί να απαιτήσει πρόσθετους ελέγχους.

(9) Θα λαμβάνονται μέτρα για την προστασία των περιβλημάτων κατά του κινδύνου παραμορφώσεως ως αποτέλεσμα αρνητικής εσωτερικής πίεσεως.

## Προσθήκη Β.1α

**211 127** Εκτός εάν προβλέπεται διαφορετικά στις ειδικές διατάξεις για τις επιμέρους κλάσεις, αυτά τα (συνεχ.) περιβλήματα μπορεί να έχουν βαλβίδες για την αποφυγή μη αποδεκτής αρνητικής εσωτερικής πίεσης, χωρίς τη μεσολάβηση εκρηγνυόμενου δίσκου.

(10) Η θερμική μόνωση θα είναι σχεδιασμένη κατά τέτοιο τρόπο ώστε να μη εμποδίζει την πρόσβαση ή τη λειτουργία πλήρωσης και κενώσεως των αντίστοιχων συσκευών και βαλβίδων ασφαλείας.

**Ευστάθεια**

**211 128** Το συνολικό πλάτος της φέρουσας επιφάνειας στο ύψος του εδάφους (η απόσταση μεταξύ των εξωτερικών σημείων επαφής με το έδαφος του δεξιού τροχού και του αριστερού τροχού του ίδιου άξονα) θα είναι τουλάχιστο ίσο με το 90% του ύψους του κέντρου βάρους του φορτωμένου οχήματος-δεξαμενής. Σε αρθρωτό όχημα, το βάρος πάνω στους άξονες της μεταφέρουσας το φορτίο μονάδας του φορτωμένου επικαθήμενου οχήματος δεν θα υπερβαίνει το 60% του ονομαστικού συνολικού φορτωμένου βάρους ολόκληρου του αρθρωτού οχήματος.

**Προστασία των εξαρτημάτων του άνω μέρους**

**211 129** Τα εξαρτήματα και προσαρτήματα που τοποθετούνται στο άνω μέρος του περιβλήματος θα προστατεύονται έναντι βλάβης προκαλούμενης από ανατροπή. Η προστασία αυτή μπορεί να πάρει τη μορφή ενισχυτικών δακτυλίων, προστατευτικών κουβουκλίων ή εγκαρσίων ή επιμηκών μελών σχήματος τέτοιου ώστε να παρέχεται αποτελεσματική προστασία.

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**211 130** Τα είδη εξοπλισμού θα είναι τακτοποιημένα κατά τρόπο ώστε να προστατεύονται κατά του κινδύνου ξεβιδώματος ή της βλάβης στη διάρκεια της μεταφοράς ή του χειρισμού. Θα έχουν κατάλληλο βαθμό ασφαλείας συγκρίσιμο με εκείνο των ίδιων των περιβλημάτων και ειδικότερα:

- θα είναι συμβατά με τις μεταφερόμενες ύλες και
- θα ικανοποιούν τις απαιτήσεις του περιθωριακού 211 121.

Όσο το δυνατό περισσότερα λειτουργούντα μέρη θα εξυπηρετούνται από το μικρότερο δυνατό αριθμό ανοιγμάτων στο τοίχωμα του περιβλήματος.

Η στεγανότητα των ειδών του εξοπλισμού θα εξασφαλίζεται ακόμη και στην περίπτωση ανατροπής των οχημάτων-δεξαμενών, των αποσυναρμολογούμενων δεξαμενών και των συστοιχιών δοχείων. Τα παρεμβύσματα (φλάντζες) θα είναι κατασκευασμένα από υλικό συμβατό με την μεταφερόμενη ύλη και θα αντικαθίστανται μόλις μειωθεί η αποτελεσματικότητά τους, παραδείγματος χάριν λόγω γηράσκων. Τα παρεμβύσματα (φλάντζες) που εξασφαλίζουν τη στεγανότητα των εξαρτημάτων τα οποία χρειάζονται χειρισμό κατά την κανονική χρήση των οχημάτων-δεξαμενών, αποσυναρμολογούμενων δεξαμενών και συστοιχιών δοχείων, θα σχεδιάζονται και θα τοποθετούνται κατά τέτοιο τρόπο ώστε να μην τους προκαλεί βλάβη ο χειρισμός των εξαρτημάτων στα οποία είναι ενσωματωμένα.

**211 131** Κάθε περίβλημα που εκκενώνεται από τον πυθμένα και, στην περίπτωση περιβλημάτων με διαμερίσματα που εκκενώνονται από τον πυθμένα, κάθε διαμέρισμα, θα είναι εξοπλισμένο με δύο ανεξάρτητες μεταξύ τους δικλείδες, η πρώτη ως εσωτερική βαλβίδα κλεισίματος <sup>6/</sup> στερεωμένη απευθείας στο περίβλημα και η δεύτερη ως βαλβίδα υπερχείλισης ή άλλη ισοδύναμη συσκευή,

<sup>6/</sup> Εντούτοις, στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά ορισμένων κρυσταλλοποιήσιμων ή εξαιρετικά ιξώδων υλών, βαθιά κατεψυγμένων υγροποιημένων αερίων και περιβλημάτων με επίχρισμα από εβονίτη ή θερμοπλαστικό, η εσωτερική βαλβίδα κλεισίματος μπορεί να αντικαθίσταται με εξωτερική δικλείδα με πρόσθετη προστασία.

## Προσθήκη Β.1α

**211 131** τοποθετημένες σε σειρά, από μία σε κάθε άκρο του στομίου του σωλήνα εκκένωσης. Η (συνεχ.) εκκένωση από τον πυθμένα σε περιβλήματα προοριζόμενα για τη μεταφορά κονιαδών ή κοκκωδών υλών μπορεί να πραγματοποιείται με εξωτερική σωλήνωση με βαλβίδα κλεισίματος εάν αυτή είναι κατασκευασμένη από σφυρήλατο μεταλλικό υλικό. Επιπλέον, τα ανοίγματα των περιβλημάτων θα μπορούν να κλείνονται με βιδωτά βύσματα, κενά παρεμβύσματα (φλάντζες) ή άλλα μέσα ίσης αποτελεσματικότητας. Η εσωτερική βαλβίδα κλεισίματος θα μπορεί να ενεργοποιείται από πάνω ή από κάτω. Εάν είναι δυνατό, η ρύθμιση - ανοικτή ή κλειστή - της εσωτερικής βαλβίδας κλεισίματος θα μπορεί να επαληθευθεί από το έδαφος και στις δύο περιπτώσεις. Ο χειρισμός της εσωτερικής βαλβίδας κλεισίματος θα είναι έτσι σχεδιασμένος ώστε να εμποδίζει οποιοδήποτε ακούσιο άνοιγμα λόγω πρόσκρουσης ή αναπάντεχης ενέργειας. Η εσωτερική δικλείδα πρέπει να εξακολουθεί να λειτουργεί στην περίπτωση βλάβης του εξωτερικού συστήματος χειρισμού.

Η θέση και/ή η κατεύθυνση κλεισίματος των βαλβίδων υπερχείλισης πρέπει να είναι εμφανής.

Για την αποφυγή οποιασδήποτε απώλειας των περιεχομένων σε περίπτωση βλάβης στα εξωτερικά εξαρτήματα πλήρωσης και εκκένωσης (σωλήνες, πλευρικές συσκευές κλεισίματος), η εσωτερική βαλβίδα κλεισίματος και η έδρασή της θα προστατεύονται έναντι του κινδύνου να ξεβιδωθούν λόγω εξωτερικών καταπονήσεων ή θα σχεδιάζονται έτσι ώστε να τις αντέχουν. Οι συσκευές πλήρωσης και εκκένωσης (περιλαμβανομένων των παρεμβυσμάτων ή βιδωτών βυσμάτων) και προστατευτικών παμάτων (εάν υπάρχουν) θα μπορούν να ασφαλιζονται έναντι αιφνιδίου ανοίγματος.

Το περιβλήμα ή κάθε ένα από τα διαμερίσματά του θα έχουν άνοιγμα αρκετά μεγάλο ώστε να μπορεί να γίνει επιθεώρηση.

**211 132** Περιβλήματα προοριζόμενα για τη μεταφορά υλών για τις οποίες όλα τα ανοίγματα πρέπει να βρίσκονται πάνω από την στάθμη του υγρού μπορεί να είναι εξοπλισμένα, στο κάτω μέρος του αμαξώματος, με άνοιγμα καθαρισμού (fist-hole). Το άνοιγμα αυτό πρέπει να μπορεί να σφραγίζεται με παρέμβυσμα (φλάντζα) κλεισμένο έτσι ώστε να είναι στεγανό και ο σχεδιασμός του πρέπει να είναι εγκεκριμένος από την αρμόδια αρχή ή από φορέα που θα έχει ορίσει η αρχή αυτή.

**211 133** Περιβλήματα προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών μεγαλύτερη από 110 kPa (1.1 bar) (απόλυτη) στους 50 °C θα έχουν σύστημα εξαερισμού και συσκευή ασφαλείας για να αποφεύγεται η εκροή των περιεχομένων σε περίπτωση που το περιβλήμα ανατραπεί διαφορετικά πρέπει να συμφωνούν με τις απαιτήσεις του περιθωριακού 211 134 ή 211 135.

**211 134** Περιβλήματα προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών μεγαλύτερη από 110 kPa (1.1 bar) αλλά που δεν υπερβαίνει τα 175 kPa (1.75 bar) (απόλυτη) στους 50 °C θα έχουν βαλβίδα ασφαλείας ρυθμισμένη σε πίεση όχι μικρότερη από 150 kPa (1.5 bar) (πίεση μετρητή) και η οποία πρέπει να είναι εντελώς ανοικτή σε πίεση που δεν υπερβαίνει την πίεση δοκιμής διαφορετικά πρέπει να συμφωνούν με τις απαιτήσεις του περιθωριακού 211 135.

**211 135** Περιβλήματα προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών μεγαλύτερη από 175 kPa (1.75 bar) αλλά που δεν υπερβαίνει τα 300 kPa (3 bar) (απόλυτη) στους 50 °C θα έχουν βαλβίδα ασφαλείας ρυθμισμένη σε πίεση όχι μικρότερη από 300 kPa (3 bar) πίεση μετρητή και η οποία πρέπει να είναι εντελώς ανοικτή σε πίεση που δεν υπερβαίνει την πίεση δοκιμής διαφορετικά πρέπει να είναι ερμητικά κλειστά<sup>2/</sup>.

**211 136** Κινητά μέρη όπως καλύμματα, κλείστρα κ.λπ., τα οποία μπορεί να έλθουν σε επαφή τριβής ή κρούσης με περιβλήματα αλουμινίου προοριζόμενα για τη μεταφορά εύφλεκτων υγρών με σημείο ανάφλεξης

<sup>2/</sup> "Ερμητικά κλειστά περιβλήματα" σημαίνει αυτά των οποίων τα ανοίγματα είναι ερμητικά κλειστά και τα οποία δεν είναι εξοπλισμένα με βαλβίδες ασφαλείας, θραυστούς δίσκους ή άλλες παρόμοιες συσκευές ασφαλείας. Περιβλήματα με βαλβίδες ασφαλείας μπροστά από τις οποίες υπάρχει ασφαλιστικός δίσκος θα θεωρούνται ερμητικά κλειστά.

## Προσθήκη Β.1α

μικρότερο ή ίσο των 61 °C ή για την μεταφορά εύφλεκτων αερίων δεν επιτρέπεται να είναι κατασκευασμένα από απροστάτευτο οξειδούμενο χάλυβα.

211 137-  
211 139

## ΤΜΗΜΑ 4. Έγκριση τύπου

**211 140** Η αρμόδια αρχή ή φορέας ορισμένος από την αρχή αυτή θα εκδίδει για κάθε νέο τύπο δεξαμενής πιστοποιητικό που θα βεβαιώνει ότι η πρότυπη δεξαμενή, περιλαμβανομένων των μέσων πρόσδεσης του περιβλήματος τα οποία έχει επιθεωρήσει, είναι κατάλληλη για τον σκοπό για τον οποίο προορίζεται και ικανοποιεί τις κατασκευαστικές απαιτήσεις του Τμήματος 2, τις απαιτήσεις εξοπλισμού του Τμήματος 3 και τους ειδικούς όρους για κάθε κλάση μεταφερομένων υλών.

Τα αποτελέσματα των δοκιμών, οι ύλες και/ή οι ομάδες υλών για τη μεταφορά των οποίων η δεξαμενή έχει εγκριθεί και ο αριθμός έγκρισης τύπου θα καταχωρούνται σε έκθεση δοκιμής. Οι ύλες μιας ομάδας υλών θα είναι παρομοίου είδους και εξίσου συμβατές με τα χαρακτηριστικά του περιβλήματος. Οι ύλες ή ομάδες υλών που επιτρέπονται θα καθορίζονται στην έκθεση δοκιμής, με τα χημικά τους ονόματα ή την αντίστοιχη συνεκδοχική επικεφαλίδα στον κατάλογο υλών, και την κλάση τους και τον αριθμό είδους.

Η έγκριση αυτή θα έχει ισχύ για δεξαμενές κατασκευασμένες σύμφωνα με το πρότυπο αυτό χωρίς τροποποίηση.

211 141-  
211 149

## ΤΜΗΜΑ 5. Δοκιμές

**211 150** Τα περιβλήματα και ο εξοπλισμός τους θα υποβάλλονται είτε από κοινού ή χωριστά σε αρχική επιθεώρηση πριν τεθούν σε λειτουργία. Η επιθεώρηση αυτή θα περιλαμβάνει έλεγχο συμφωνίας προς το εγκεκριμένο πρότυπο, έλεγχο των χαρακτηριστικών σχεδιασμού <sup>8/</sup>, εξωτερική και εσωτερική εξέταση, δοκιμή υδραυλικής πίεσης <sup>9/</sup> και έλεγχο ικανοποιητικής λειτουργίας του εξοπλισμού.

Η δοκιμή υδραυλικής πίεσης θα διεξάγεται στο περίβλημα στο σύνολό του στην πίεση που αναφέρεται στο Μέρος II αυτής της Προσθήκης, και χωριστά σε κάθε διαμέρισμα σε περιβλήματα με διαμερίσματα σε πίεση όχι μικρότερη από 1.3 φορές τη μέγιστη πίεση εργασίας. Η δοκιμή στεγανότητας θα διεξάγεται χωριστά σε κάθε διαμέρισμα σε περιβλήματα με διαμερίσματα.

Η δοκιμή υδραυλικής πίεσης θα διεξάγεται πριν την εγκατάσταση του θερμομονωτικού εξοπλισμού που είναι εκάστοτε αναγκαίος. Εάν τα περιβλήματα και ο εξοπλισμός τους δοκιμάζονται χωριστά, θα υποβάλλονται από κοινού σε δοκιμή στεγανότητας μετά τη συναρμολόγηση.

<sup>8/</sup> Ο έλεγχος των χαρακτηριστικών σχεδιασμού θα περιλαμβάνει επίσης, για περιβλήματα που απαιτούν πίεση δοκιμής 1 MPa (10 bar) ή μεγαλύτερη, τη λήψη δοκιμών συγκόλλησης (δειγμάτων εργασίας) σύμφωνα με τις δοκιμές που προβλέπονται στην Προσθήκη Β.1d.

<sup>9/</sup> Σε ειδικές περιπτώσεις και με τη σύμφωνη γνώμη του εγκεκριμένου από την αρμόδια αρχή ειδικού, η δοκιμή υδραυλικής πίεσης μπορεί να αντικαθίσταται από δοκιμή πίεσης χρησιμοποιώντας άλλο υγρό ή αέριο, όπου μια τέτοια λειτουργία δεν συνεπάγεται κίνδυνο.

## Προσθήκη Β.1α

**211 151** Τα περιβλήματα και ο εξοπλισμός τους θα υποβάλλονται σε περιοδικές επιθεωρήσεις σε τακτά διαστήματα. Οι περιοδικές επιθεωρήσεις θα περιλαμβάνουν: εξωτερική και εσωτερική εξέταση και, ως γενικό κανόνα, δοκιμή υδραυλικής πίεσης <sup>9/</sup>. Η επένδυση για θερμική ή άλλη μόνωση θα αφαιρείται μόνο στην έκταση που απαιτείται για αξιόπιστη εκτίμηση των χαρακτηριστικών του περιβλήματος.

Η δοκιμή υδραυλικής πίεσης θα διεξάγεται στο περίβλημα στο σύνολό του στην πίεση που αναφέρεται στο Μέρος II αυτής της Προσθήκης, και χωριστά σε κάθε διαμέρισμα σε περιβλήματα με διαμερίσματα, σε πίεση όχι μικρότερη από 1.3 φορές την μέγιστη πίεση εργασίας.

Στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά κοκκωδών ή κονιοδών υλών, και με την σύμφωνη γνώμη του εγκεκριμένου από την αρμόδια αρχή ειδικού, οι περιοδικές δοκιμές υδραυλικής πίεσης μπορεί να παραλείπονται και να αντικαθίστανται από δοκιμές στεγανότητας σύμφωνα με το περιθωριακό 211 102 (3).

Τα μέγιστα διαστήματα μεταξύ επιθεωρήσεων θα είναι έξι έτη.

Οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων κενές, ακαθάριστες, μπορεί να μεταφέρονται μετά την εκπονή της περιόδου διεξαγωγής της δοκιμής.

**211 152** Επιπλέον, θα διεξάγεται δοκιμή στεγανότητας του περιβλήματος με τον εξοπλισμό του και έλεγχος της ικανοποιητικής λειτουργίας όλων των μερών του εξοπλισμού τουλάχιστον κάθε τρία έτη. Η δοκιμή στεγανότητας θα διεξάγεται χωριστά σε κάθε διαμέρισμα σε περιβλήματα με διαμερίσματα.

**211 153** Όταν η ασφάλεια του περιβλήματος ή του εξοπλισμού του μπορεί να έχει μειωθεί λόγω επισκευών, μετατροπών ή ατυχήματος, θα διεξάγεται έλεγχος κατ'εξάιρεση.

**211 154** Οι δοκιμές, οι επιθεωρήσεις και οι έλεγχοι σύμφωνα με το περιθωριακό 211 150 έως 211 153 θα διενεργούνται από τον εγκεκριμένο από την αρμόδια αρχή ειδικό. Θα εκδίδονται πιστοποιητικά που θα δείχνουν τα αποτελέσματα των εργασιών αυτών. Τα πιστοποιητικά αυτά θα αναφέρονται στον κατάλογο των υλών των οποίων επιτρέπεται η μεταφορά σε αυτό το περίβλημα σύμφωνα με το 211 140.

211 155-  
211 159

#### ΤΜΗΜΑ 6. Επισήμανση

**211 160** Κάθε περίβλημα θα είναι εξοπλισμένο με αντιοξειδωτική μεταλλική πλάκα μόνιμα προσδεδεμένη στο περίβλημα σε μέρος εύκολα προσπελάσιμο για επιθεώρηση. Τουλάχιστον τα ακόλουθα στοιχεία θα επισημαίνονται στην πλάκα αυτή με σφραγίδα ή με οποιαδήποτε άλλη παρόμοια μέθοδο. Τα στοιχεία αυτά μπορεί να χαραχθούν απευθείας πάνω στα τοιχώματα του ίδιου του περιβλήματος, εάν τα τοιχώματα είναι ενισχυμένα έτσι ώστε να μη μειώνεται η αντοχή του περιβλήματος:

- αριθμός έγκρισης
- επωνυμία ή σήμα του κατασκευαστή
- αύξων αριθμός του κατασκευαστή
- έτος κατασκευής

## Προσθήκη Β.1α

- 211 160** (συνεχ.)
- πίεση δοκιμής <sup>10/</sup> (πίεση μετρητή)
  - χωρητικότητα <sup>10/</sup> - στην περίπτωση περιβλημάτων με πολλαπλά στοιχεία, η χωρητικότητα του καθενός
  - θερμοκρασία σχεδιασμού <sup>10/</sup> (μόνο εάν είναι άνω των +50 °C ή κάτω των -20 °C)
  - ημερομηνία (μήνας και έτος) της αρχικής δοκιμής της πιο πρόσφατης περιοδικής δοκιμής σύμφωνα με τα περιθωριακά 211 150 και 211 151
  - σφραγίδα του ειδικού που διενήργησε τις δοκιμές
  - πίεση δοκιμής στο περιβλήμα συνολικά και πίεση δοκιμής κατά διαμέρισμα σε ΜΡα ή βαρ (πίεση μετρητή) όπου η πίεση κατά διαμέρισμα είναι μικρότερη από την πίεση στο περιβλήμα και
  - υλικό του περιβλήματος και, όπου χρειάζεται, η προστατευτική επιστροφή.

Επιπλέον, η μέγιστη επιτρεπόμενη πίεση εργασίας θα αναγράφεται σε περιβλήματα πληρούμενα ή εκκενούμενα υπό πίεση.

**211 161** Τα ακόλουθα στοιχεία θα αναγράφονται στο ίδιο το όχημα-δεξαμενή ή σε πινακίδα. Τα στοιχεία αυτά δεν θα απαιτούνται στην περίπτωση οχήματος που μεταφέρει αποσυναρμολογούμενες δεξαμενές:

- όνομα του ιδιοκτήτη ή χειριστή
- απόβαρο και
- μέγιστο επιτρεπόμενο βάρος.

**211 162-  
211 169**

#### ΤΜΗΜΑ 7. Λειτουργία

- 211 170** Το πάχος των τοιχωμάτων του περιβλήματος, σε όλη τη διάρκεια της χρήσης του, δεν θα γίνεται μικρότερο από την ελάχιστη τιμή που προβλέπεται στο περιθωριακό 211 127 (2).
- 211 171** Τα περιβλήματα δεν θα φορτώνονται με επικίνδυνες ύλες εκτός από εκείνες για τη μεταφορά των οποίων έχουν εγκριθεί και οι οποίες, ερχόμενες σε επαφή με τα υλικά του περιβλήματος, τα παρεμβύσματα (φλάντζες), τον εξοπλισμό και τις προστατευτικές επιστρώσεις, δεν υπάρχει περίπτωση να αντιδράσουν επικίνδυνα μαζί τους, να σχηματίσουν επικίνδυνα προϊόντα ή να εξασθενήσουν αισθητά το υλικό. Δεν θα μεταφέρονται τρόφιμα σε αυτά τα περιβλήματα εκτός εάν έχουν ληφθεί τα αναγκαία μέτρα για να αποτραπεί οποιοσδήποτε κίνδυνος για τη δημόσια υγεία.
- 211 172** (1) Οι ακόλουθοι βαθμοί πλήρωσης δεν θα υπερβαίνονται σε περιβλήματα προοριζόμενα για τη μεταφορά υγρών σε θερμοκρασίες περιβάλλοντος:

<sup>10/</sup>

Οι μονάδες μετρήσεως πρέπει να εμφανίζονται μετά τις αριθμητικές τιμές.

## Προσθήκη Β.1α

211 172  
(συνεχ.)

- (a) για εύφλεκτες ύλες χωρίς πρόσθετους κινδύνους (π.χ. τοξικότητα ή οξείδωση), σε περιβλήματα με σύστημα εξαερισμού ή με βαλβίδες ασφαλείας (ακόμη και όπου έχει τοποθετηθεί μπροστά εκρηγνυόμενος δίσκος):

$$\text{βαθμός πλήρωσης} = \frac{100}{1 + \alpha (50 - t_F)} \% \text{χωρητικότητας}$$

- (b) για τοξικές ή οξειδωτικές ύλες (είτε εύφλεκτες είτε όχι) σε περιβλήματα με σύστημα εξαερισμού ή με βαλβίδες ασφαλείας (ακόμη και όπου έχει τοποθετηθεί μπροστά εκρηγνυόμενος δίσκος):

$$\text{βαθμός πλήρωσης} = \frac{98}{1 + \alpha (50 - t_F)} \% \text{χωρητικότητας}$$

- (c) για εύφλεκτες ύλες και για ελαφρά τοξικές ή ελαφρά διαβρωτικές ύλες, (είτε εύφλεκτες είτε όχι) σε ερμητικά κλειστά<sup>11/</sup> περιβλήματα χωρίς συσκευή ασφαλείας:

$$\text{βαθμός πλήρωσης} = \frac{97}{1 + \alpha (50 - t_F)} \% \text{χωρητικότητας}$$

- (d) για εξαιρετικά τοξικές, τοξικές, εξαιρετικά οξειδωτικές ή οξειδωτικές ύλες (είτε εύφλεκτες είτε όχι) σε ερμητικά κλειστά<sup>11/</sup> περιβλήματα χωρίς συσκευή ασφαλείας:

$$\text{βαθμός πλήρωσης} = \frac{95}{1 + \alpha (50 - t_F)} \% \text{χωρητικότητας}$$

- (2) Σε αυτούς τους τύπους, αντιπροσωπεύει τον μέσο συντελεστή κυβικής διαστολής του υγρού μεταξύ 15 °C και 50 °C, δηλ. για μέγιστη διακύμανση θερμοκρασίας 35 °C.

$$\text{Το } \alpha \text{ υπολογίζεται από τον τύπο: } \alpha = \frac{d_{15} - d_{50}}{35 \times d_{50}}$$

όπου  $d_{15}$  και  $d_{50}$  είναι οι σχετικές πυκνότητες του υγρού στους 15 °C και 50 °C αντίστοιχα και  $t_F$  είναι η μέση θερμοκρασία του υγρού κατά την πλήρωση.

- (3) Οι παραπάνω διατάξεις του (1) δεν θα έχουν εφαρμογή σε περιβλήματα των οποίων τα περιεχόμενα διατηρούνται, με θερμαντική συσκευή, σε θερμοκρασία άνω των 50 °C κατά τη μεταφορά. Σε αυτήν την περίπτωση, ο βαθμός πλήρωσης στην αρχή θα είναι τέτοιος, και η θερμοκρασία θα είναι έτσι ρυθμισμένη, ώστε το περιβλήμα να μην είναι πλήρες κατά ποσοστό μεγαλύτερο από 95% της χωρητικότητάς του σε οποιαδήποτε στιγμή κατά τη μεταφορά, και να μην υπερβαίνεται η θερμοκρασία πλήρωσης.

- (4) Όπου φορτώνονται ύλες υψηλής θερμοκρασίας, η θερμοκρασία της εξωτερικής επιφάνειας του περιβλήματος ή της θερμομόνωσης δεν θα υπερβαίνει τους 70 °C κατά την μεταφορά.

<sup>11/</sup> Βλέπε υποσημείωση<sup>2/</sup>

## Προσθήκη Β.1α

**211 173** Όπου περιβλήματα προοριζόμενα για τη μεταφορά υγρών<sup>12/</sup> δεν χωρίζονται με χωρίσματα ή πλάκες διόγκωσης σε τμήματα χωρητικότητας κάτω των 7 500 λίτρων, θα πληρούνται σε ποσοστό όχι μικρότερο του 80% της χωρητικότητάς τους εκτός εάν έχουν χαρακτηριστεί ως κενά.

**211 174** Κατά τη φόρτωση και την εκφόρτωση των δεξαμενών, θα λαμβάνονται κατάλληλα μέτρα για να αποτρέπεται η έκλυση επικινδύνων ποσοτήτων αερίων και ατμών.

Τα περιβλήματα θα κλείνονται κατά τρόπο ώστε τα περιεχόμενα να μην μπορούν να διαφύγουν ανεξέλεγκτα. Τα ανοίγματα περιβλημάτων με εκκένωση από των πυθμένα θα κλείνονται με βιδωτά βύσματα, κενά παρεμβύσματα (φλάντζες) ή άλλες εξίσου αποτελεσματικές συσκευές. Η στεγανότητα των κλειστών του περιβλήματος, ιδίως στο άνω μέρος του σίφωνα, θα επαληθεύεται από τον αποστολέα μετά την πλήρωση του περιβλήματος.

**211 175** Όπου υπάρχουν τοποθετημένα σε σειρά αρκετά συστήματα κλεισίματος, θα κλείνεται πρώτο το πλησιέστερο στη μεταφερόμενη ύλη.

**211 176** Δεν θα παραμένουν κολλημένα επικίνδυνα κατάλοιπα της μεταφερόμενης ύλης στο εξωτερικό των περιβλημάτων κατά τη μεταφορά, είτε αυτά είναι φορτωμένα είτε κενά.

**211 177** Για να γίνουν δεκτά για μεταφορά, τα κενά και ακαθάριστα περιβλήματα, πρέπει να κλείνονται με τον ίδιο τρόπο και να είναι στεγανά στον ίδιο βαθμό ως εάν ήταν γεμάτα.

**211 178** Οι σωληνώσεις συνδέσεως μεταξύ ανεξάρτητων πλην διασυνδεδεμένων περιβλημάτων μιας μεταφορικής μονάδας θα είναι κενές κατά τη μεταφορά.

Εύκαμπτες σωληνώσεις πλήρωσης και εκκένωσης που δεν είναι μόνιμα συνδεδεμένες με το περιβλήμα θα είναι κενές κατά τη μεταφορά.

**211 179**

### ΤΜΗΜΑ 8. Μεταβατικά μέτρα

**211 180** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων κατασκευασμένες πριν την 1η Οκτωβρίου 1978 και μη ανταποκρινόμενες στις απαιτήσεις αυτής της Προσθήκης μπορούν, εάν έχουν κατασκευαστεί σύμφωνα με τις απαιτήσεις αυτής της Οδηγίας, να χρησιμοποιούνται μέχρι την 30ή Σεπτεμβρίου 1984. Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων προοριζόμενες για τη μεταφορά αερίων της Κλάσης 2 μπορούν εντούτοις να χρησιμοποιούνται μέχρι την 30ή Σεπτεμβρίου 1990 εάν τηρείται η απαίτηση περιοδικού ελέγχου.

**211 181** Στην εκπονή αυτής της περιόδου οι προαναφερόμενες μονάδες μπορούν να διατηρηθούν σε λειτουργία εάν ο εξοπλισμός του περιβλήματος ικανοποιεί τις παρούσες απαιτήσεις. Το πάχος του τοιχώματος του περιβλήματος, εκτός από την περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά αερίων της Κλάσης 2, 7° και 8°, θα είναι το ενδεικνυόμενο για πίεση υπολογισμού όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή) στην περίπτωση μαλακού χάλυβα και όχι μικρότερη από 200 kPa (2 bar) (πίεση μετρητή) στην περίπτωση αλουμινίου και κραμάτων αλουμινίου. Για διατομές δεξαμενών πλην των κυκλικών, η διάμετρος υπολογισμού θα είναι εκείνη κύκλου με εμβαδόν ίσο με αυτό της πραγματικής διατομής της δεξαμενής.

<sup>12/</sup> Σύμφωνα με την παρούσα διάταξη, ύλες των οποίων το κινηματικό ιξώδες στους 20 °C είναι κάτω των 2 680 mm<sup>2</sup>/s θα θεωρούνται υγρά.

## Προσθήκη Β.1α

- 211 182** Οι περιοδικές δοκιμές για σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων που διατηρούνται σε λειτουργία βάσει αυτών των μεταβατικών διατάξεων θα διενεργούνται σύμφωνα με τις διατάξεις του Τμήματος 5 και με τις σχετικές ειδικές διατάξεις για τις διάφορες Κλάσεις. Εκτός εάν οι προηγούμενες διατάξεις προέβλεπαν υψηλότερη πίεση δοκιμής, η τιμή πίεσης δοκιμής των 200 kPa (2 bar) (πίεση μετρητή) θα επαρκεί για περιβλήματα από αλουμίνιο και περιβλήματα από κράματα αλουμινίου.
- 211 183** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων που ικανοποιούν αυτές τις μεταβατικές διατάξεις μπορούν να χρησιμοποιούνται μέχρι την 30ή Σεπτεμβρίου 1993 για τη μεταφορά επικίνδυνων εμπορευμάτων για τα οποία έχουν εγκριθεί. Η μεταβατική αυτή περίοδος δεν θα έχει εφαρμογή σε σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων προοριζόμενων για τη μεταφορά υλών της Κλάσης 2, ή σε σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων των οποίων τα πάχη τοιχωμάτων και είδη εξοπλισμού ικανοποιούν τις απαιτήσεις αυτής της Προσθήκης.
- 211 184** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων κατασκευασμένες πριν την 1η Μαΐου 1985 σύμφωνα με τις απαιτήσεις αυτής της Οδηγίας σε ισχύ μεταξύ 1ης Οκτωβρίου 1978 και 30ής Απριλίου 1985 αλλά μη ανταποκρινόμενες στις διατάξεις εφαρμόσιμες από 1η Μαΐου 1985 μπορούν να συνεχίσουν να χρησιμοποιούνται μετά από αυτή την ημερομηνία.
- 211 185** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων, κατασκευασμένες μεταξύ της 1ης Μαΐου 1985 και της έναρξης ισχύος των διατάξεων εφαρμόσιμων από 1ης Ιανουαρίου 1988 που δεν ανταποκρίνονται σε εκείνες τις διατάξεις αλλά κατασκευάστηκαν βάσει των απαιτήσεων αυτής της Οδηγίας που ήταν σε ισχύ μέχρι εκείνη την ημερομηνία, μπορούν να εξακολουθούν να χρησιμοποιούνται.
- 211 186** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων, κατασκευασμένες πριν την έναρξη ισχύος των διατάξεων εφαρμόσιμων από 1ης Ιανουαρίου 1993 που δεν ανταποκρίνονται σε εκείνες τις διατάξεις αλλά κατασκευάστηκαν σύμφωνα με τις απαιτήσεις αυτής της Οδηγίας που ήταν σε ισχύ μέχρι εκείνη την ημερομηνία μπορούν να εξακολουθούν να χρησιμοποιούνται.
- 211 187** Σταθερές δεξαμενές (οχήματα-δεξαμενές), αποσυναρμολογούμενες δεξαμενές και συστοιχίες δοχείων κατασκευασμένες πριν την 1η Ιανουαρίου 1990 θα ανταποκρίνονται, εάν χρησιμοποιηθούν μετά την 31η Δεκεμβρίου 2004, στις διατάξεις του περιθωριακού 211 127 (5), εφαρμόσιμες από την 1η Ιανουαρίου 1990, που αφορούν πάχη τοιχωμάτων και προστασία έναντι βλάβης.

~~211-188-~~

211 199

## Προσθήκη Β.1α

**ΜΕΡΟΣ ΙΙ. ΕΙΔΙΚΕΣ ΑΠΑΙΤΗΣΕΙΣ ΠΟΥ ΣΥΜΠΛΗΡΩΝΟΥΝ Ή ΤΡΟΠΟΠΟΙΟΥΝ ΤΙΣ ΑΠΑΙΤΗΣΕΙΣ ΤΟΥ ΜΕΡΟΥΣ Ι**

**ΚΛΑΣΗ 2. ΑΕΡΙΑ: ΣΥΜΠΙΕΣΜΕΝΑ, ΥΓΡΟΠΟΙΗΜΕΝΑ, Ή ΔΙΑΛΥΜΕΝΑ ΥΠΟ ΠΙΕΣΗ**

211 200-  
211 209

**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί**

**Χρήση**

**211 210** Αέρια του περιθωριακού 2201 εκτός από εκείνα που αναγράφονται παρακάτω μπορεί να μεταφέρονται σε σταθερές δεξαμενές, σε αποσυναρμολογούμενες δεξαμενές, ή σε συστοιχίες δοχείων:

Φθόριο, τριφθοριούχο άζωτο και τετραφθοριούχο πυρίτιο του 1° (at) οξείδιο του αζώτου του 1° (ct) μείγματα υδρογόνου με όχι περισσότερο του 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ'όγκο ή με όχι περισσότερο από 15% αρσίνη κατ'όγκο μείγματα αζώτου ή ευγενών αερίων (περιέχοντα όχι περισσότερο από 10% ξένο κατ'όγκο) με όχι περισσότερο από 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ'όγκο ή όχι περισσότερο από 15% αρσίνη κατ'όγκο του 2° (bt) μείγματα υδρογόνου με όχι περισσότερο από 10% διβοράνιο κατ'όγκο μείγματα αζώτου ή ευγενή αέρια (περιέχοντα όχι περισσότερο από 10% ξένο κατ'όγκο) με όχι περισσότερο από 10% διβοράνιο κατ'όγκο του 2° (ct), οκταφθοροβουτ-2-ένιο (R1318) και οκταφθοροπροπάνιο του 3° (a) τριχλωριούχο βόριο, τριφθοριούχο χλώριο, εξαφθοροακετόνη, νιτρωδυλοχλωρίδιο, σουλφουρυλοφθορίδιο και εξαφθοριούχο βολφράμιο του 3° (at) 2,2-διμεθυλοπροπάνιο και μεθυλοσιλάνιο του 3° (b) αρσίνη, καρβονυλοσουλφίδιο, διχλωροσιλάνιο, διμεθυλοσιλάνιο, υδροσελήνιο και τριμεθυλοσιλάνιο του 3° (bt) προπαδιένιο, αδρανές, του 3° (c), κυανογόνο, χλωριούχο κυανογόνο, αιθυλενοξείδιο και υδροϊώδιο, ανυδρίτη του 3° (ct) μείγματα μεθυλοσιανιάν του 4° (bt) προπαδιένιο με 1% έως 4% μεθυλακετυλένιο, σταθεροποιημένο, του 4° (c) αιθυλενοξείδιο περιέχον όχι περισσότερο από 50% κατά βάρος μυρμηκικό μεθυλεστερά του 4° (ct) σιλάνιο του 5° (b) ύλες του 5° (bt) και (ct) διαλυμένο ακετυλένιο του 9° (c) αέρια του 12° και 13°.

211 211-  
211 219

**ΤΜΗΜΑ 2. Κατασκευή**

**211 220** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 1° έως 6° και 9° θα κατασκευάζονται από χάλυβα. Στην περίπτωση μη συγκολλημένων περιβλημάτων κατά παρέκκλιση από το περιθωριακό 211 125 (3), μπορεί να γίνει δεκτή ελάχιστη επιμήκυνση θραύσεως 14% καθώς και τάση σ (σίγμα) μικρότερη ή ίση των παρακάτω ορίων αναλόγως του υλικού.

- (a) Όταν ο λόγος  $Re/Rm$  των ελάχιστων εγγυημένων χαρακτηριστικών μετά από θερμική κατεργασία είναι μεγαλύτερος του 0.66 χωρίς να υπερβαίνει το 0.85:

$$\sigma \leq 0.75 Re.$$

- (b) Όταν ο λόγος  $Re/Rm$  των ελάχιστων εγγυημένων χαρακτηριστικών μετά από θερμική κατεργασία είναι μεγαλύτερος του 0.85:

$$\sigma \leq 0.5 Rm.$$

## Προσθήκη Β.1α

- 211 221** Οι απαιτήσεις της Προσθήκης Β.1d θα έχουν εφαρμογή στα υλικά και την κατασκευή συγκολλημένων περιβλημάτων.
- 211 222** Περιβλήματα προοριζόμενα για τη μεταφορά χλωρίου ή φωσγενίου του 3° (at) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] τουλάχιστον 2.2 MPa (22 bar) (πίεση μετρητή).
- 211 223-  
211 229**

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

- 211 230** Οι σωληνώσεις εκκένωσης των περιβλημάτων θα μπορούν να κλείνονται με κενά παρεμβύσματα (φλάντζες) ή άλλη εξίσου αξιόπιστη συσκευή.
- 211 231** Περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων μπορεί να έχουν, επιπλέον των ανοιγμάτων που προβλέπονται στο περιθωριακό 211 131, ανοίγματα για την τοποθέτηση μετρητών, περιλαμβανομένων μετρητών πίεσης, και θερμομέτρων και με ανοίγματα αποστραγγίσεως, όπως απαιτείται για τη λειτουργία και την ασφάλειά τους.
- 211 232** Οι συσκευές ασφαλείας θα πληρούν τις ακόλουθες απαιτήσεις:

(1) Τα ανοίγματα πλήρωσης και εκκένωσης περιβλημάτων προοριζόμενων για τη μεταφορά υγροποιημένων εύφλεκτων και/ή τοξικών αερίων θα είναι εξοπλισμένα με εσωτερική συσκευή ασφαλείας στιγμιαίου κλεισίματος η οποία κλείνει αυτομάτως σε περίπτωση ακούσιας κίνησης του περιβλήματος ή φωτιάς. Θα είναι επίσης δυνατή η λειτουργία της συσκευής κλεισίματος με τηλεχειρισμό.

(2) Όλα τα ανοίγματα, εκτός από εκείνα που υποδέχονται βαλβίδες ασφαλείας και από ανοίγματα αποστράγγισης, περιβλημάτων προοριζόμενων για τη μεταφορά υγροποιημένων εύφλεκτων και/ή τοξικών αερίων θα είναι εξοπλισμένα, εάν η ονομαστική διάμετρος τους είναι μεγαλύτερη από 1.5 mm, με εσωτερική συσκευή κλεισίματος.

(3) Κατά παρέκκλιση από τις διατάξεις του (1) και (2), περιβλήματα προοριζόμενα για τη μεταφορά εύφλεκτων και/ή τοξικών υγροποιημένων αερίων βαθιάς καταψύξεως μπορεί να είναι εξοπλισμένα με εξωτερικές συσκευές αντί για εσωτερικές συσκευές εάν οι εξωτερικές συσκευές παρέχουν προστασία έναντι εξωτερικής βλάβης τουλάχιστον ισοδύναμη με αυτή που παρέχεται από το τοίχωμα του περιβλήματος.

(4) Εάν τα περιβλήματα είναι εξοπλισμένα με μετρητές, αυτοί δεν θα είναι κατασκευασμένοι από διαφανές υλικό σε απευθείας επαφή με τη μεταφερόμενη ύλη. Εάν υπάρχουν θερμομέτρα, δεν θα εξέχουν άμεσα στο αέριο ή το υγρό μέσα από το τοίχωμα του περιβλήματος.

(5) Περιβλήματα προοριζόμενα για τη μεταφορά χλωρίου ή διοξειδίου του θείου ή φωσγενίου του 3° (at) ή μεθυλομερκαπτάνη ή υδρόθειο του 3° (bt) δεν θα έχουν ανοίγματα κάτω από τη στάθμη της επιφάνειας του υγρού. Επιπλέον, δεν θα επιτρέπονται ανοίγματα καθαρισμού κατά τα αναφερόμενα στο περιθωριακό 211 132.

(6) Ανοίγματα πλήρωσης και εκκένωσης τοποθετημένα στο άνω μέρος των περιβλημάτων θα είναι εξοπλισμένα, επιπλέον των προβλεπόμενων στο (1), με δεύτερη, εξωτερική, συσκευή κλεισίματος. Αυτή η συσκευή θα είναι ικανή να κλειστεί με κενό παρέμβυσμα (φλάντζα) ή άλλη εξίσου αξιόπιστη συσκευή.

- 211 233** Οι βαλβίδες ασφαλείας θα ικανοποιούν τις ακόλουθες απαιτήσεις:

(1) Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 1° έως 6° και 9° μπορεί να είναι εφοδιασμένα με όχι περισσότερες από δύο βαλβίδες ασφαλείας των οποίων η συνολική καθαρή επιφάνεια διατομής της διόδου από το σημείο ή τα σημεία έδρασης δεν θα είναι μικρότερη από 20 cm<sup>2</sup> ανά 30 m<sup>3</sup> (ή μέρος αυτού) χωρητικότητας του δοχείου.

## Προσθήκη Β.1α

**211 233** Αυτές οι βαλβίδες θα μπορούν να ανοίγουν αυτομάτως σε πίεση μεταξύ 0.9 και 1.0 φορές την (συνεχ.) πίεση δοκιμής του περιβλήματος στο οποίο είναι τοποθετημένες. Θα είναι τέτοιου τύπου ώστε να ανθίστανται σε δυναμικές καταπονήσεις, περιλαμβανομένης της διόγκωσης υγρού. Η χρήση βαλβίδων με νεκρό βάρος ή αντίβαρο απαγορεύεται.

Περιβλήματα προοριζόμενα για την μεταφορά αερίων του 1° έως 9° βλαβερών για τα αναπνευστικά όργανα ή συνεπαγόμενα κίνδυνο δηλητηρίασεως <sup>13/</sup> δεν θα φέρουν βαλβίδες ασφαλείας εκτός εάν υπάρχει εκρηγνύομενος δίσκος μπροστά από τις βαλβίδες ασφαλείας. Στην τελευταία αυτή περίπτωση η διευθέτηση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα πρέπει να είναι ικανοποιητική για την αρμόδια αρχή.

Όπου οχήματα-δεξαμενές προορίζονται για μεταφορά διά θαλάσσης, οι διατάξεις του παρόντος δεν θα απαγορεύουν την τοποθέτηση βαλβίδων ασφαλείας σύμφωνα με τους κανονισμούς που διέκουν αυτό το μέσο μεταφοράς <sup>14/</sup>.

(2) Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° και 8° θα είναι εξοπλισμένα με δύο ανεξάρτητες βαλβίδες ασφαλείας, κάθε μία σχεδιασμένη έτσι ώστε να επιτρέπει τη διαφυγή από το περίβλημα των αερίων που σχηματίζονται με εξάτμιση κατά την κανονική λειτουργία κατά τρόπο ώστε η πίεση να μην υπερβαίνει σε καμία στιγμή την πίεση εργασίας που αναφέρεται στο περίβλημα κατά περισσότερο από 10%. Μία από τις δύο βαλβίδες ασφαλείας μπορεί να αντικαθίσταται από εκρηγνύομενο δίσκο που θα είναι τέτοιος ώστε να σπάει στην πίεση δοκιμής. Σε περίπτωση απώλειας του κενού σε περίβλημα διπλού τοιχώματος, ή καταστροφής του 20% της μονώσεως σε περίβλημα μονού τοιχώματος, η βαλβίδα ασφαλείας και ο εκρηγνύομενος δίσκος θα επιτρέπει εκροή τόσο ώστε η πίεση στο περίβλημα να μην μπορεί να υπερβεί την πίεση δοκιμής.

(3) Οι βαλβίδες ασφαλείας περιβλημάτων προοριζόμενων για τη μεταφορά αερίων του 7° και 8° θα μπορούν να ανοίγουν στην πίεση εργασίας που αναγράφεται στο περίβλημα. Θα είναι έτσι σχεδιασμένες ώστε να λειτουργούν αλάνθαστα ακόμη και στην ελάχιστη θερμοκρασία εργασίας τους. Η αξιοπιστία της λειτουργίας τους στη θερμοκρασία αυτή θα εξακριβώνεται και θα ελέγχεται είτε ελέγχοντας κάθε βαλβίδα είτε ελέγχοντας δειγματοληπτικά μία βαλβίδα για κάθε τύπο σχεδιασμού.

## Θερμομόνωση

**211 234** (1) Εάν περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων του 3° και 4° είναι εξοπλισμένα με θερμική μόνωση, αυτή η μόνωση θα αποτελείται:

- είτε από αλεξήλιο που να καλύπτει όχι λιγότερο από το άνω εν τρίτο αλλά όχι περισσότερο από το άνω ήμισυ της επιφάνειας του περιβλήματος και να χωρίζεται από το περίβλημα με κενό αέρα τουλάχιστον 4 cm<sup>3</sup> ή
- από πλήρη επένδυση, επαρκούς πάχους, από μονωτικά υλικά.

(2) Περιβλήματα προοριζόμενα για την μεταφορά αερίων του 7° και 8° θα είναι θερμομονωμένα. Η θερμομόνωση θα εξασφαλίζεται με συνεχή επένδυση. Εάν ο χώρος μεταξύ του περιβλήματος και της επένδυσης είναι κενός από αέρα (μόνωση κενού) η προστατευτική επένδυση θα είναι έτσι σχεδιασμένη ώστε να αντέχει χωρίς παραμόρφωση σε εξωτερική πίεση τουλάχιστον 100 kPa (1 bar) (πίεση μετρητή). Κατά παρέκκλιση από το περιθωριακό 211 102 (2),

<sup>13/</sup> Αέρια χαρακτηριζόμενα με το γράμμα "α" στον κατάλογο υλών θεωρούνται αέρια επιβλαβή για τα αναπνευστικά όργανα ή ενέχοντα κίνδυνο δηλητηρίασης.

<sup>14/</sup> Οι απαιτήσεις αυτές περιέχονται στην Παράγραφο 13 της Γενικής Εισαγωγής στον Κώδικα της Διεθνούς Ναυτιλιακής Οργάνωσης για τα Επικίνδυνα Εμπορεύματα (IMDG) που εκδίδεται από την Διεθνή Ναυτιλιακή Οργάνωση στο Λονδίνο.

## Προσθήκη Β.1α

**211 234** εξωτερικές και εσωτερικές ενισχυτικές συσκευές μπορεί να λαμβάνονται υπόψη στους υπολογισμούς. Εάν η επένδυση είναι κλεισμένη έτσι ώστε να είναι αεροστεγής, θα υπάρχει συσκευή για να αποτρέπει την ανάπτυξη επικίνδυνης πίεσης στο μονωτικό στρώμα σε περίπτωση ανεπαρκούς αεροστεγανότητας του περιβλήματος ή των ειδών εξοπλισμού του. Η συσκευή θα αποτρέπει την διείσδυση υγρασίας μέσα στην θερμομονωτική επένδυση.

(3) Περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων με σημείο βρασμού κάτω των  $-182\text{ }^{\circ}\text{C}$  σε ατμοσφαιρική πίεση δεν θα περιλαμβάνουν αναφλέξιμα υλικά είτε στη θερμομόνωση ή στο μέσο πρόσδεσης στο πλαίσιο.

Το μέσο πρόσδεσης περιβλημάτων προοριζόμενων για τη μεταφορά αργού, αζώτου, ηλίου ή νέον του  $7^{\circ}$  (a) ή υδρογόνου του  $7^{\circ}$  (b) μπορεί, με τη συναίνεση της αρμόδιας αρχής, να περιέχει πλαστικές ύλες ανάμεσα στο περίβλημα και την επένδυση.

**211 235** (1) Τα ακόλουθα θεωρούνται στοιχεία οχήματος συστοιχίας:

- Δοχεία κατά τα οριζόμενα στο περιθωριακό 2212 (1)(b) ή
- Δεξαμενές κατά τα οριζόμενα στο περιθωριακό 2212 (1)(c).

Οι διατάξεις αυτής της Προσθήκης δεν έχουν εφαρμογή σε πλαίσια κυλίνδρων σύμφωνα με το περιθωριακό 2212 (1)(d).

(2) Οι ακόλουθοι όροι θα πληρούνται για τα οχήματα συστοιχίας:

- (a) Εάν ένα από τα στοιχεία οχήματος συστοιχίας είναι εξοπλισμένο με βαλβίδα ασφαλείας και υπάρχουν συσκευές κλεισίματος μεταξύ των στοιχείων, κάθε στοιχείο θα είναι έτσι εξοπλισμένο.
- (b) Οι συσκευές πλήρωσης και εκκένωσης μπορεί να είναι τοποθετημένες σε πολλαπλή.
- (c) Κάθε στοιχείο οχήματος συστοιχίας προοριζόμενου για την μεταφορά συμπιεσμένων αερίων του  $1^{\circ}$  και  $2^{\circ}$  τα οποία είναι επιβλαβή για τα αναπνευστικά όργανα ή συνεπάγονται κίνδυνο δηλητηρίασεως<sup>15/</sup> θα είναι σε θέση να απομονώνεται με βαλβίδα.
- (d) Τα στοιχεία οχήματος συστοιχίας προοριζόμενου για την μεταφορά υγροποιημένων αερίων του  $3^{\circ}$  έως  $6^{\circ}$  θα είναι σχεδιασμένα έτσι ώστε να μπορούν να πληρωθούν χωριστά και να μπορούν να διατηρηθούν απομονωμένα με βαλβίδα που θα επιδέχεται σφράγιση.

(3) Οι ακόλουθες απαιτήσεις θα έχουν εφαρμογή σε αποσυναρμολογούμενες δεξαμενές:

- (a) δεν θα είναι διασυνδεδεμένες με πολλαπλή και
- (b) εάν οι αποσυναρμολογούμενες δεξαμενές μπορούν να κυλίνουν, οι βαλβίδες θα είναι εξοπλισμένες με προστατευτικά κώματα.

**211 236** Κατά παρέκκλιση από τις διατάξεις του περιθωριακού 211 131, περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων βαθιάς κατάψυξης δεν χρειάζεται να έχουν άνοιγμα για επιθεώρηση.

**211 237-  
211 239**

<sup>15/</sup> Αέρια χαρακτηριζόμενα με το γράμμα "t" στον κατάλογο υλών θεωρούνται αέρια επιβλαβή για τα αναπνευστικά όργανα ή ενέχοντα κίνδυνο δηλητηρίασης.

## Προσθήκη Β.1α

**ΤΜΗΜΑ 4. Έγκριση τύπου**

211 240-

211 249 (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 5. Δοκιμές**

**211 250** Τα υλικά κάθε συγκολλημένου περιβλήματος θα δοκιμάζονται με την μέθοδο που περιγράφεται στην Προσθήκη Β.1d.

**211 251** Τα επίπεδα της πίεσης δοκιμής θα είναι ως ακολούθως:

- (1) Για περιβλήματα προοριζόμενα για την μεταφορά αερίων του 1<sup>ο</sup> και 2<sup>ο</sup>: τα επίπεδα που αναφέρονται στο περιθωριακό 2219 (1) και (3).
- (2) Για περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 3<sup>ο</sup> και 4<sup>ο</sup>:
  - (a) εάν τα περιβλήματα δεν είναι μεγαλύτερα από 1.5 m σε διάμετρο, τα επίπεδα που αναφέρονται στο περιθωριακό 2220 (2)
  - (b) εάν τα περιβλήματα είναι μεγαλύτερα από 1.5 m σε διάμετρο, τα επίπεδα <sup>16/</sup> που αναφέρονται παρακάτω:

<sup>16/</sup>

1. Οι προβλεπόμενες τιμές της πίεσης δοκιμής είναι:

- a) εάν το περιβλημα είναι εξοπλισμένο με θερμομόνωση, τουλάχιστον ίση με την πίεση ατμών, μειωμένη κατά 0.1 MPa (1 bar), του υγρού στους 60 °C, και όχι μικρότερη από 1 MPa (10 bar)
- b) εάν το περιβλημα δεν είναι εξοπλισμένο με θερμομόνωση, τουλάχιστον ίση με την πίεση ατμών, ελαττωμένη κατά 0.1 MPa (1 bar), του υγρού στους 65 °C, και όχι μικρότερη από 1 MPa (10 bar).

2. Δεδομένης της υψηλής τοξικότητας του φωσγενίου του 3C (a), η ελάχιστη πίεση δοκιμής για αυτό το αέριο είναι σταθερή στα 1.5 MPa (15 bar) εάν το περιβλημα είναι εξοπλισμένο με θερμομόνωση και στα 1.7 MPa (17 bar) εάν δεν είναι εξοπλισμένο.

3. Οι μέγιστες τιμές σε kg/l που προβλέπονται για το βαθμό πλήρωσης υπολογίζονται ως εξής: μέγιστη μάζα περιεχομένων ανά λίτρο χωρητικότητας = 0.95 x πυκνότητα της υγρής φάσης στους 50 °C.

μείγμα αερίων (R 503)	6° (a)	3.1 4.2 10.0	0.11 0.21 0.76
διοξείδιο του άνθρακα περιέχον όχι περισσότερο από 35% αιθυλενοξείδιο κατά βάρος	6° (c)	19.0 22.5	0.73 0.78
αιθυλενοξείδιο περιέχον περισσότερο από 10% αλλά όχι περισσότερο από 50% διοξείδιο του άνθρακα κατά βάρος	6° (ct)	19.0 25.0	0.66 0.75

Όπου χρησιμοποιούνται περιβλήματα επενδεδυμένα με θερμομόνωση τα οποία έχουν υποβληθεί σε πίεση δοκιμής χαμηλότερη της αναγραφόμενης στον πίνακα, το μέγιστο βάρος των περιεχομένων ανά λίτρο χωρητικότητας θα είναι τέτοιο ώστε η πίεση που αναπτύσσεται στο περιβλήμα από την εν λόγω ύλη στους 55 °C δεν υπερβαίνει την πίεση δοκιμής που αναγράφεται με σφραγίδα στο περιβλήμα. Σε αυτήν την περίπτωση το μέγιστο επιτρεπόμενο φορτίο θα καθορίζεται από τον ειδικό που θα έχει εγκρίνει η αρμόδια αρχή.

## Προσθήκη Β.1α

- 211 251** (συνεχ.) (4) Για περιβλήματα προοριζόμενα για τη μεταφορά αμμωνίας διαλυμένης υπό πίεση του 9° (at):

Περιγραφή ύλης	Αριθ. είδους	Ελάχιστη πίεση δοκιμής MPa	Μέγιστο βάρος περιεχομένων ανά λίτρο χωρητικότητας kg
αμμωνία διαλυμένη υπό πίεση στο νερό			
- με άνω του 35% αλλά όχι περισσότερο από 40% αμμωνία κατά βάρος	9° (at)	1.0	0.80
- με άνω του 40% αλλά όχι περισσότερο από 50% αμμωνία κατά βάρος	9° (at)	1.0	0.77

(5) Για περιβλήματα προοριζόμενα για την μεταφορά αερίων του 7° και 8°: όχι λιγότερο από 1.3 φορές τη μέγιστη επιτρεπόμενη πίεση εργασίας, κατά τα αναγραφόμενα στο περιβλήμα, αλλά όχι λιγότερο από 300 kPa (3 bar) (πίεση μετρητή) για περιβλήματα με μόνωση κενού η πίεση δοκιμής δεν θα είναι μικρότερη από 1.3 φορές την μέγιστη επιτρεπόμενη πίεση εργασίας προσωαυξημένη κατά 100 kPa (1 bar).

- 211 252** Η πρώτη δοκιμή υδραυλικής πίεσης θα διενεργείται πριν την τοποθέτηση της θερμομόνωσης.
- 211 253** Η χωρητικότητα κάθε περιβλήματος προοριζόμενου για τη μεταφορά αερίων του 3° έως 6° και 9° θα καθορίζεται, υπό την επίβλεψη ειδικού, εγκεκριμένου από την αρμόδια αρχή, με ζύγιση ή ογκομετρική μέτρηση της ποσότητας ύδατος που πληρώνει το περιβλήμα το τυχόν σφάλμα στη μέτρηση της χωρητικότητας του περιβλήματος θα είναι μικρότερο από 1%. Δεν επιτρέπεται ο καθορισμός με υπολογισμό βασισμένο στις διαστάσεις του περιβλήματος. Το μέγιστο επιτρεπόμενο βάρος πλήρωσης σύμφωνα με τα περιθωριακά 2220 (4) και 211 251 (3) θα καθορίζεται από εγκεκριμένο ειδικό.
- 211 254** Ο έλεγχος των συγκολλήσεων θα διενεργείται σύμφωνα με τις σχετικές με τον συντελεστή λάμδα 1.0 απαιτήσεις του περιθωριακού 211 127 (8).
- 211 255** Κατά παρέκκλιση από τις απαιτήσεις του περιθωριακού 211 151, οι περιοδικές δοκιμές θα γίνονται:
- (1) κάθε τρία έτη στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά τριφθοριούχου βορίου του 1° (at), αερίου πόλης του 2° (bt), υδροβρώμιου, χλώριου, διοξειδίου του αζώτου, διοξειδίου του θείου ή φωσγένιου του 3° (at), υδρόθειου του 3° (bt), ή υδροχλωρίου του 5° (at)
- (2) μετά από λειτουργία έξι ετών και εφεξής κάθε δώδεκα έτη στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά αερίων του 7° ή 8°. Έλεγχος στεγανότητας θα διενεργείται από εγκεκριμένο ειδικό έξι έτη μετά από κάθε περιοδική δοκιμή.
- 211 256** Στην περίπτωση περιβλημάτων με μόνωση κενού, η δοκιμή υδραυλικής πίεσης και ο έλεγχος της εσωτερικής κατάστασης μπορεί να αντικατασταθεί, με τη συναίνεση του εγκεκριμένου ειδικού, από έλεγχο στεγανότητας και μέτρηση του κενού.

## Προσθήκη Β.1α

- 211 257** Εάν έχουν γίνει ανοίγματα, κατά τις περιοδικές επιθεωρήσεις, σε περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° ή 8°, η μέθοδος με την οποία κλείνονται ερμητικά πριν τα περιβλήματα επανατεθούν σε λειτουργία θα εγκρίνεται από τον εγκεκριμένο ειδικό και θα εξασφαλίζουν την ακεραιότητα του περιβλήματος.
- 211 258** Δοκιμές στεγανότητας περιβλημάτων προοριζόμενων για τη μεταφορά αερίων του 1° έως 6° και 9° θα διενεργούνται σε πίεση όχι μικρότερη από 400 kPa (4 bar) και όχι μεγαλύτερη από 800 kPa (8 bar) (πίεση μετρητή).

211 259

## ΤΜΗΜΑ 6. Επισήμανση

**211 260** Τα ακόλουθα πρόσθετα στοιχεία θα επισημαίνονται με σφραγίδα ή με άλλη παρόμοια μέθοδο στην πινακίδα που προβλέπεται στο περιθωριακό 211 160, ή απευθείας στα τοιχώματα του ίδιου του περιβλήματος εάν τα τοιχώματα είναι ενισχυμένα κατά τρόπο ώστε να μην μειώνεται η αντοχή του περιβλήματος:

(1) Σε περιβλήματα προοριζόμενα για τη μεταφορά μόνο μίας ύλης:

- η πλήρης ονομασία του αερίου <sup>17/</sup>.

Η ένδειξη αυτή θα συμπληρώνεται στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά συμπιεσμένων αερίων του 1° και 2° με ένδειξη της μέγιστης επιτρεπόμενης για το περίβλημα πίεσης πλήρωσης στους 15 °C, και στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά υγροποιημένων αερίων του 3° έως 8° ή αμμωνίας διαλυμένης υπό πίεση του 9° (at) με ένδειξη του μέγιστου επιτρεπόμενου βάρους φορτώσεως σε kg και της θερμοκρασίας πλήρωσης εάν αυτή είναι κάτω των -20 °C

(2) Σε περιβλήματα πολλαπλών χρήσεων :

- οι πλήρεις ονομασίες <sup>17/</sup> των αερίων για τη μεταφορά των οποίων είναι εγκεκριμένο το περίβλημα.

Τα στοιχεία αυτά θα συμπληρώνονται με ένδειξη του μέγιστου επιτρεπόμενου βάρους φορτώσεως σε kg για κάθε αέριο

(3) Σε περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° ή 8°:

- η πίεση εργασίας και

(4) Σε περιβλήματα εξοπλισμένα με θερμομόνωση:

- η ένδειξη "θερμομονωμένα" ή "θερμομονωμένα με κενό".

**211 261** Το πλαίσιο οχήματος συστοιχίας θα φέρει πλησίον του σημείου πλήρωσης πινακίδα που θα αναγράφει:

- την πίεση δοκιμής των στοιχείων <sup>18/</sup>.

<sup>17/</sup> Οι περιγραφές που είναι υπογραμμισμένες στο περιθωριακό 2201 θα χρησιμοποιούνται ως η πλήρης ονομασία του αερίου για τα μείγματα A, A0 και C του 4□ (b) του περιθωριακού 2201. Τα εθμικά ονόματα του εμπορίου που αναφέρονται στην Σημείωση στο 4□ (b) του περιθωριακού 2201 μπορεί να χρησιμοποιούνται μόνον ως συμπλήρωμα.

<sup>18/</sup> Οι μονάδες μέτρησης πρέπει να εμφανίζονται μετά τις αριθμητικές τιμές.

## Προσθήκη Β.1α

- τη μέγιστη επιτρεπόμενη πίεση πλήρωσης <sup>18/</sup> στους 15 °C για στοιχεία προοριζόμενα για συμπιεσμένα αέρια
- τον αριθμό στοιχείων
- την ολική χωρητικότητα <sup>18/</sup> των στοιχείων
- την πλήρη ονομασία του αερίου <sup>19/</sup>.

και, στην περίπτωση υγροποιημένων αερίων:

- το μέγιστο επιτρεπόμενο φορτίο <sup>18/</sup> ανά στοιχείο.

**211 262** Επιπλέον των στοιχείων που προβλέπονται στο περιθωριακό 211 161, τα ακόλουθα θα αναγράφονται είτε στο ίδιο το περίβλημα είτε σε πινακίδα:

- (a) - είτε: "ελάχιστη επιτρεπόμενη θερμοκρασία πλήρωσης: -20 °C",  
- ή: "ελάχιστη επιτρεπόμενη θερμοκρασία πλήρωσης: ....."
- (b) όπου το περίβλημα προορίζεται για τη μεταφορά μόνο μίας ύλης:
  - η πλήρης ονομασία του αερίου <sup>19/</sup>.
  - για υγροποιημένα αέρια του 3° έως 8° και για αμμωνία διαλυμένη υπό πίεση σε νερό του 9° (at), το μέγιστο επιτρεπόμενο βάρος φόρτωσης σε kg
- (c) όπου το περίβλημα είναι περίβλημα πολλαπλών χρήσεων:
  - οι πλήρεις ονομασίες <sup>19/</sup> όλων των αερίων για τη μεταφορά των οποίων προορίζεται το περίβλημα, με ένδειξη του μέγιστου επιτρεπόμενου βάρους φόρτωσης σε kg για κάθε ένα από αυτά
- (d) όπου το περίβλημα είναι εξοπλισμένο με θερμομόνωση:

η ένδειξη "θερμομονωμένο" ή "θερμομονωμένο με κενό", σε μία επίσημη γλώσσα της χώρας προέλευσης και επίσης, εάν η γλώσσα αυτή δεν είναι η αγγλική, γαλλική ή γερμανική, σε μία από αυτές τις γλώσσες, εκτός εάν προβλέπεται διαφορετικά από συμφωνίες που έχουν συναφθεί μεταξύ των χωρών που αφορά τη μεταφορά.

**211 263** Τα στοιχεία αυτά δεν θα απαιτούνται στην περίπτωση οχήματος που μεταφέρει αποσυναρμολογούμενες δεξαμενές.

**211 264-**

**211 269**

<sup>19/</sup> Βλέπε υποσημείωση <sup>12/</sup>.

## Προσθήκη Β.1α

## ΤΜΗΜΑ 7. Λειτουργία

**211 270** Περιβλήμα που διατίθεται σε διαφορετικούς χρόνους για τη μεταφορά διαφορετικών υγροποιημένων αερίων του 3° έως 8° (περιβλήμα πολλαπλών χρήσεων) δεν μπορεί να μεταφέρει ύλες εκτός από εκείνες που αναγράφονται σε μία, και μόνο μία, από τις ακόλουθες ομάδες:

Ομάδα 1: αλογονωμένοι υδρογονάνθρακες του 3° (a) και 4° (a)

Ομάδα 2: υδρογονάνθρακες του 3° (b) και 4° (b)· βουταδιένια του 3° (c) και μείγματα του 1,3-βουταδιενίου και υδρογονάνθρακες, του 4° (c)

Ομάδα 3: αμμωνία του 3° (at)· διμεθυλαιθέρας του 3° (b)· διμεθυλαμίνη, αιθυλαμίνη, αιθυλαμίνη, μεθυλαμίνη και τριμεθυλαμίνη του 3° (bt) και βινυλοχλωρίδιο του 3° (c)

Ομάδα 4: μεθυλοβρωμίδιο του 3° (at)· αιθυλοχλωρίδιο και μεθυλοχλωρίδιο του 3° (bt)

Ομάδα 5: μείγματα αιθυλενοξειδίου με διοξείδιο του άνθρακα και αιθυλενοξειδίου με άζωτο του 4°(ct)

Ομάδα 6: άζωτο, διοξείδιο του άνθρακα, ευγενή αέρια, πρωτοξειδιο του αζώτου  $N_2O$ , και οξυγόνο του 7° (a)· αέρας, μείγματα αζώτου με ευγενή αέρια, και μείγματα οξυγόνου με άζωτο, επίσης όταν περιέχουν ευγενή αέρια, του 8° (a)

Ομάδα 7: αιθάνιο, αιθυλένιο, και μεθάνιο του 7° (b) και μείγματα μεθανίου με αιθάνιο, επίσης όταν περιέχουν προπάνιο ή βουτάνιο, του 8° (b).

**211 271** Περιβλήματα που έχουν πληρωθεί με ύλη της ομάδας 1 ή ομάδας 2 θα κενώνονται από υγροποιημένο αέριο πριν φορτωθούν με άλλη ύλη της ίδιας ομάδας. Περιβλήματα που έχουν πληρωθεί με ύλη των ομάδων 3 έως 7 θα κενώνονται εντελώς από υγροποιημένο αέριο και κατόπιν θα διοχετεύεται αέρας πριν τη φόρτωση με άλλη ύλη της ίδιας ομάδας.

**211 272** Η πολλαπλή χρήση περιβλημάτων για τη μεταφορά υγροποιημένων αερίων της ίδιας ομάδας θα επιτρέπεται εάν τηρούνται όλες οι προβλεπόμενες απαιτήσεις για τα αέρια προς μεταφορά σε ένα και το αυτό περιβλήμα. Αυτή η πολλαπλή χρήση θα υπόκειται σε έγκριση από εγκεκριμένο ειδικό.

**211 273** Η πολλαπλή χρήση περιβλημάτων για την μεταφορά αερίων διαφορετικών ομάδων θα επιτρέπεται εάν δοθεί άδεια από τον εγκεκριμένο ειδικό.

Όταν περιβλήματα αναδιατίθενται σε αέρια διαφορετικής ομάδας, τα περιβλήματα θα κενώνονται εντελώς από υγροποιημένα αέρια, κατόπιν θα διοχετεύεται αέρας και, τέλος, θα απαερώνονται. Η απαέρωση των περιβλημάτων θα ελέγχεται και θα πιστοποιείται από τον εγκεκριμένο ειδικό.

**211 274** Όταν φορτωμένες δεξαμενές ή κενές πλην ακαθάριστες δεξαμενές παραδίδονται για μεταφορά, μόνο τα στοιχεία που αναφέρονται στο περιθωριακό 211 262 εφαρμόσιμα στο φορτωνόμενο ή μόλις εκφορτωθέν αέριο θα είναι ορατά· όλα τα στοιχεία που αφορούν άλλα αέρια θα είναι καλυμμένα.

**211 275** Όλα τα στοιχεία οχήματος συστοιχίας θα περιέχουν μόνο ένα και το αυτό αέριο. Στην περίπτωση οχήματος συστοιχίας προοριζόμενου για τη μεταφορά υγροποιημένων αερίων του 3° έως 6°, τα στοιχεία θα πληρούνται χωριστά και θα κρατούνται απομονωμένα με σφραγισμένη βαλβίδα.

## Προσθήκη Β.1α

**211 276** Η μέγιστη πίεση πλήρωσης για συμπιεσμένα αέρια του 1° και 2° εκτός από τριφθοριούχο βόριο δεν θα υπερβαίνουν τις τιμές που προβλέπονται στο περιθωριακό 2219 (2).

Για τριφθοριούχο βόριο του 1° (at) το μέγιστο βάρος πλήρωσης ανά λίτρο χωρητικότητας δεν θα υπερβαίνει τα 0.86 kg.

Το μέγιστο βάρος πλήρωσης ανά λίτρο χωρητικότητας σύμφωνα με τα περιθωριακά 2220, (2), (3) και (4), και 211 251, (2), (3) και (4), θα τηρείται απόλυτα.

**211 277** Ο βαθμός πλήρωσης περιβλημάτων προοριζόμενων για τη μεταφορά αερίων του 7° (b) και 8° (b) θα παραμένει κάτω από το επίπεδο στο οποίο, εάν τα περιεχόμενα έχουν θερμανθεί στη θερμοκρασία στην οποία η πίεση ατμών ισούται με την πίεση ανοίγματος της βαλβίδας ασφαλείας, ο όγκος του υγρού θα έφθανε το 95% της χωρητικότητας του περιβλήματος σε αυτή τη θερμοκρασία. Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° (a) και 8° (a) μπορεί να πληρούνται στο 98% της θερμοκρασίας φόρτωσης και της πίεσης φόρτωσης.

**211 278** Σε περιβλήματα προοριζόμενα για τη μεταφορά πρωτοξειδίου του αζώτου και οξυγόνου του 7° (a), αέρα ή μειγμάτων περιεχόντων οξυγόνο του 8° (a), δεν θα χρησιμοποιούνται ύλες περιέχουσες γράσο ή λάδι για να εξασφαλίζεται η στεγανότητα των αρμών ή για τη συντήρηση των κλεισμάτων.

**211 279** Η απαίτηση στο περιθωριακό 211 175 δεν θα έχει εφαρμογή σε αέρια του 7° και 8°.

**211 280-**

**211 299**

## Προσθήκη Β.1α

## ΚΛΑΣΗ 3. ΕΥΦΛΕΚΤΑ ΥΓΡΑ

211 300-  
211 309

## ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί

## Χρήση

211 310 Οι ακόλουθες ύλες του περιθωριακού 2301 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές:

- (a) προπυλενιμίνη, αδρανής του 2<sup>ο</sup>
- (b) ύλες ταξινομημένες υπό το (a) του 11°, 14° έως 22°, 26° και 27°, 41° έως 57°
- (c) ύλες ταξινομημένες υπό το (b) του 11°, 14° έως 27°, 41° έως 57°, και ύλες του 32° και 33°
- (d) ύλες του 1° έως 5°, 31°, 34° και 61° (c), εξαιρουμένου του νιτρικού ισοπροπυλεστέρα, n-νιτρικού προπυλεστέρα και νιτρομεθανίου του 3<sup>ο</sup> (b).

211 311-  
211 319

## ΤΜΗΜΑ 2. Κατασκευή

211 320 Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς προπυλενιμίνης του 12° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1.5 MPa (15 bar) (πίεση μετρητή).

211 321 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1.0 MPa (10 bar) (πίεση μετρητή).

211 322 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

211 323 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

211 324-  
211 329

## Προσθήκη Β.1α

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

- 211 330** Όλα τα ανοίγματα των περιβλημάτων που προορίζονται για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (α) και (β) θα είναι επάνω από τη στάθμη της επιφανείας του υγρού. Δεν θα διέρχονται σωλήνες ή συνδέσεις σωληνώσεων μέσα από τα τοιχώματα του περιβλήματος κάτω από την στάθμη της επιφανείας του υγρού. Τα περιβλήματα θα μπορούν να κλειστούν ερμητικά <sup>20/</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πάματα που κλειδώνουν.
- 211 331** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (ε) και (δ) μπορεί να είναι επίσης του τύπου εκκενώσεως από τον πυθμένα. Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (ε), εκτός από εκείνες του 33°, θα μπορούν να κλειστούν ερμητικά <sup>20/</sup>.
- 211 332** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (α) και (β) ή (ε), εκτός από εκείνες του 33°, είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διεύθεση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοιος ώστε να ικανοποιεί την αρμόδια αρχή. Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (δ) είναι εξοπλισμένα με βαλβίδες ασφαλείας ή σύστημα εξαερισμού, εκείνα θα πληρούν τις απαιτήσεις των περιθωριακών 211 133 έως 211 135.

Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών του 33° είναι εξοπλισμένα με βαλβίδες ασφαλείας, αυτές θα πληρούν τις απαιτήσεις των περιθωριακών 211 134 και 211 135.

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (δ) οι οποίες έχουν σημείο ανάφλεξης που δεν υπερβαίνει τους 61 °C και εξοπλισμένα με σύστημα εξαερισμού που δεν μπορεί να κλειστεί θα έχουν φλογοπαγίδα στο σύστημα εξαερισμού.

211 333-

211 339

**ΤΜΗΜΑ 4. Έγκριση τύπου**

211 340-

211 349 (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 5. Δοκιμές**

- 211 350** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (α), (β) ή (ε) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar).
- 211 351** Περιβλήματα προοριζόμενα για την μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (δ) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 211 123.

211 352-

211 359

<sup>20/</sup> Βλέπε υποσημείωση <sup>2/</sup>.

## Προσθήκη Β.1α

**ΤΜΗΜΑ 6. Επισήμανση**

- 211 360-  
211 369 (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 7. Λειτουργία**

- 211 370 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 310 (a), (b) και (c) πλην εκείνων του 33° θα είναι ερμητικά κλειστά<sup>21/</sup> κατά τη μεταφορά. Τα κλεισίματα των περιβλημάτων που προορίζονται για τη μεταφορά των υλών που αναφέρονται στο 211 310 (a) και (b) θα προστατεύονται με πόμα που κλειδώνει.
- 211 371 Οχήματα-δεξαμενές και αποσυναρμολογούμενες δεξαμενές εγκεκριμένες για τη μεταφορά υλών του 11°, 12°, 14° έως 20°, 27°, 32° και 41° έως 57° δεν θα χρησιμοποιούνται για τη μεταφορά τροφίμων, αντικειμένων κατανάλωσης ή ζωοτροφών.
- 211 372 Δεν θα χρησιμοποιείται περίβλημα από κράμα αλουμινίου για τη μεταφορά ακεταλδεΐδης του 1° (a) εκτός εάν το περίβλημα χρησιμοποιείται αποκλειστικά για τέτοιου είδους μεταφορά και η ακεταλδεΐδη είναι απαλλαγμένη από οξύ.
- 211 373 Η βενζίνη που αναφέρεται στη Σημείωση στο 3° (b) του περιθωριακού 2301 μπορεί να μεταφέρεται επίσης σε δεξαμενές που σχεδιάζονται σύμφωνα με το περιθωριακό 211 123 (1) και έχουν εξοπλισμό σύμφωνα με το περιθωριακό 211 133.

- 211 374-  
211 379

**ΤΜΗΜΑ 8. Μεταβατικά μέτρα**

- 211 380 Σταθερές δεξαμενές (οχήματα-δεξαμενές) και αποσυναρμολογούμενες δεξαμενές προοριζόμενες για τη μεταφορά υλών του 32° και 33° του περιθωριακού 2301, κατασκευασμένες σύμφωνα με τις απαιτήσεις αυτής της Προσθήκης που είχαν εφαρμογή πριν την 1η Ιανουαρίου 1995, αλλά που, εντούτοις, δεν συμφωνούν με τις απαιτήσεις που έχουν εφαρμογή από 1ης Ιανουαρίου 1995, μπορεί να εξακολουθούν να χρησιμοποιούνται έως την 31η Δεκεμβρίου 2000.

- 211 381-  
211 399

<sup>21/</sup> Βλέπε υποσημείωση 7/.

**ΚΛΑΣΗ 4.1. ΕΥΦΛΕΚΤΑ ΣΤΕΡΕΑ**

**ΚΛΑΣΗ 4.2. ΥΛΕΣ ΥΠΟΚΕΙΜΕΝΕΣ ΣΕ ΑΥΤΟΓΕΝΗ ΑΝΑΦΛΕΞΗ**

**ΚΛΑΣΗ 4.3. ΥΛΕΣ ΟΙ ΟΠΟΙΕΣ, ΕΡΧΟΜΕΝΕΣ ΣΕ ΕΠΑΦΗ ΜΕ ΤΟ ΝΕΡΟ, ΕΚΠΕΜΠΟΥΝ ΕΥΦΛΕΚΤΑ ΑΕΡΙΑ**

211 400-  
211 409

**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί**

**Χρήση**

**211 410** Οι ακόλουθες ύλες των περιθωριακών 2401, 2431 και 2471 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές:

- (a) οι ύλες που έχουν καταχωρηθεί υπό το γράμμα (a) των 6°, 17°, 19° και 31° έως 33° του περιθωριακού 2431
- (b) οι ύλες των 11° (a) και 22° του περιθωριακού 2431
- (c) οι ύλες που έχουν καταχωρηθεί υπό το γράμμα (a) των 1°, 2°, 3°, 21°, 23° και 25° του περιθωριακού 2471
- (d) οι ύλες του 11° (a) του περιθωριακού 2471
- (e) οι ύλες που έχουν καταχωρηθεί υπό το γράμμα (b) ή (c) των 6°, 8°, 10°, 17°, 19° και 21° του περιθωριακού 2431 και των 3°, 21°, 23° και 25° του περιθωριακού 2471
- (f) οι ύλες των 5° και 15° του περιθωριακού 2401
- (g) κωνώδεις και κοκκώδεις ύλες καταχωρημένες υπό το γράμμα (b) ή (c) των:
  - 1°, 6°, 7°, 8°, 11°, 12°, 13°, 14°, 16° και 17° του περιθωριακού 2401,
  - 1°, 5°, 7°, 9°, 12°, 13°, 14°, 15°, 16°, 18° και 20° του περιθωριακού 2431,
  - 11°, 12°, 13°, 14°, 15°, 16°, 17°, 19°, 20°, 22° και 24° του περιθωριακού 2471.

**ΣΗΜΕΙΩΣΗ:** Για την μεταφορά χύμα υλών των:

4° (c), 6° (c), 11° (c), 12° (c), 13° (c) και 14° (c) και στερεών αποβλήτων ταξινομημένων υπό το (c) αυτών των ειδών του περιθωριακού 2401,

1° (c), 2° (c), 3° (c), 12° (c) και 16° (c) και στερεών αποβλήτων ταξινομημένων υπό το (c) αυτών των ειδών του περιθωριακού 2431,

11° (c), 12° (c), 13° (b) και (c), 14° (c), 15° (c), 17° (b) και 20° (c) του περιθωριακού 2471,

βλέπε περιθωριακά 41 111, 42 111 και 43 111.

## Προσθήκη Β.1α

211 411-  
211 419

**ΤΜΗΜΑ 2. Κατασκευή**

**211 420** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (a) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 2.1 MPa (21 bar) (πίεση μετρητή).

Οι απαιτήσεις της Προσθήκης Β.1d έχουν εφαρμογή στα υλικά και την κατασκευή αυτών των περιβλημάτων.

**211 421** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (b), (c) και (d) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1 MPa (10 bar) (πίεση μετρητή).

**211 422** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (e) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

**211 423** Περιβλήματα προοριζόμενα για τη μεταφορά των στερεών που αναφέρονται στο περιθωριακό 211 410 (f) και (g) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους Ι της παρούσης Προσθήκης.

**211 424** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2431, 1° (b) θα συνδέονται με όλα τα μέρη του οχήματος με ισοδυναμικές συνδέσεις και θα είναι σε θέση να γειωθούν ηλεκτρικά.

211 425-  
211 429

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**211 430** Όλα τα ανοίγματα των περιβλημάτων που προορίζονται για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (a), (b), (c) και (e) θα είναι επάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διαπερνούν τα τοιχώματα του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα μπορούν να κλείνονται ερμητικά <sup>22/</sup> και το κλείσιμο θα μπορεί να προστατεύεται με πάματα που κλειδώνουν. Δεν θα επιτρέπονται ανοίγματα καθαρισμού κατά τα αναφερόμενα στο περιθωριακό 211 132.

**211 431** Με την εξαίρεση περιβλημάτων προοριζόμενων για τη μεταφορά καυσίου και ρουβιδίου του περιθωριακού 2471, 11° (a), περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 410 (d), (f) και (g) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα. Τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά καυσίου και ρουβιδίου του περιθωριακού 2471, 11° (a) θα είναι εξοπλισμένα με πάματα που κλείνουν ερμητικά <sup>22/</sup> και κλειδώνουν.

**211 432** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (b) θα ικανοποιούν επιπλέον τις ακόλουθες απαιτήσεις:

<sup>22/</sup> Βλέπε υποσημείωση <sup>2/</sup>

## Προσθήκη Β.1α

- 211 432** (συνεχ.) (1) Η συσκευή θέρμανσης δεν θα διεισδύει στο σώμα του περιβλήματος, αλλά θα είναι εξωτερική ως προς αυτό. Εντούτοις, σωλήνωση που χρησιμοποιείται για την εξαγωγή του φωσφόρου μπορεί να είναι εξοπλισμένη με θερμαντικό χιτώνιο. Η συσκευή που θερμαίνει το χιτώνιο θα είναι ρυθμισμένη έτσι ώστε να μην επιτρέπει στη θερμοκρασία του φωσφόρου να υπερβεί την θερμοκρασία πλήρωσης του περιβλήματος. Οι λουπές σωληνώσεις θα εισέρχονται στο περίβλημα στο άνω μέρος αυτού· τα ανοίγματα θα είναι τοποθετημένα επάνω από την ανώτερη επιτρεπόμενη στάθμη του φωσφόρου και θα μπορούν να περικλείονται εντελώς με πώματα που κλειδώνουν. Επιπλέον, τα ανοίγματα καθαρισμού που αναφέρονται στο περιθωριακό 211 132 δεν θα επιτρέπονται.
- (2) Το περίβλημα θα είναι εξοπλισμένο με σύστημα μετρητών για να εξακριβώνεται η στάθμη του φωσφόρου και, εάν χρησιμοποιείται νερό ως μέσο προστασίας, με σταθερό σημείο μετρήσεως που θα δείχνει την ανώτατη επιτρεπόμενη στάθμη νερού.
- 211 433** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (a), (c) και (e) είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.
- 211 434** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (f) θα είναι εξοπλισμένα με θερμομόνωση κατασκευασμένη από υλικά που δεν αναφλέγονται εύκολα.
- 211 435** Εάν περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 410 (d) είναι εξοπλισμένα με θερμομόνωση, η μόνωση αυτή θα είναι κατασκευασμένη από υλικά που δεν αναφλέγονται εύκολα.
- 211 436** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (f) μπορεί να είναι εξοπλισμένα με βαλβίδες που ανοίγουν αυτομάτως προς τα μέσα ή προς τα έξω συνεπεία διαφοράς των πιέσεων από 20 kPa έως 30 kPa (0.2 bar και 0.3 bar).

**211 437-  
211 439**

**ΤΜΗΜΑ 4. Έγκριση τύπου**

**211 440-  
211 449** (Δεν υπάρχουν ειδικές απαιτήσεις.)

**ΤΜΗΜΑ 5. Δοκιμές**

- 211 450** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (a) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 1 MPa (10 bar). Τα υλικά καθενός από αυτά τα περιβλήματα θα δοκιμάζονται με τη μέθοδο που περιγράφεται στην Προσθήκη Β.1d.
- 211 451** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (b) έως (e) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 400 kPa (4 bar).

Κατά παρέκκλιση από τις απαιτήσεις του περιθωριακού 211 151, περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 410 (d) θα υποβάλλονται σε περιοδικές επιθεωρήσεις τουλάχιστον κάθε οκτώ έτη, οι οποίες θα περιλαμβάνουν έλεγχο πάχους χρησιμοποιώντας τα κατάλληλα όργανα. Για τέτοια περιβλήματα, η δοκιμή και ο έλεγχος στεγανότητας, για τα οποία γίνεται πρόβλεψη στο περιθωριακό 211 152, θα διενεργούνται τουλάχιστον κάθε τέσσερα έτη.

## Προσθήκη Β.1α

**211 452** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (f) και (g) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση υπολογισμού κατά τα οριζόμενα στο περιθωριακό 211 123.

**211 453-  
211 459**

**ΤΜΗΜΑ 6. Επισήμανση**

**211 460** Περιβλήματα προοριζόμενα για την μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 410 (a) θα φέρουν, επιπλέον των στοιχείων που προβλέπονται στο περιθωριακό 211 161, τις εξής λέξεις: "Μην ανοίγετε κατά τη μεταφορά. Υπόκειται σε αυτογενή ανάφλεξη."

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο 211 410 (c) έως (e) θα φέρουν επιπλέον των στοιχείων που προβλέπονται στο περιθωριακό 211 161, τις εξής λέξεις:

"Μην ανοίγετε κατά την μεταφορά. Αναδίδει εύφλεκτα αέρια κατά την επαφή με το νερό."

Τα στοιχεία αυτά θα αναγράφονται σε επίσημη γλώσσα της χώρας εγκρίσεως, και επίσης, εάν η γλώσσα αυτή δεν είναι η αγγλική, γαλλική ή γερμανική, σε μία από αυτές τις γλώσσες, εκτός εάν προβλέπεται διαφορετικά σε τυχόν συμφωνίες που έχουν συναφθεί μεταξύ των χωρών που αφορά η μεταφορά.

**211 461** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2471, 1° (a) θα φέρουν επίσης, στην πινακίδα που προβλέπεται στο περιθωριακό 211 160, τα ονόματα των εγκεκριμένων υλών και το μέγιστο επιτρεπόμενο φορτίο του περιβλήματος σε kg.

**211 462-  
211 469**

**ΤΜΗΜΑ 7. Λειτουργία**

**211 470** (1) Υλεις των 11° και 22° του περιθωριακού 2431 θα καλύπτονται, εάν χρησιμοποιείται νερό ως μέσο προστασίας, με νερό ύψους όχι μικρότερο από 12 cm κατά την πλήρωση<sup>1</sup> ο βαθμός πλήρωσης σε θερμοκρασία 60 °C δεν θα υπερβαίνει το 98%. Εάν χρησιμοποιείται άζωτο ως προστατευτικό μέσο, ο βαθμός πλήρωσης σε θερμοκρασία 60 °C δεν θα υπερβαίνει το 96%. Το υπολειπόμενο κενό θα πληροῦται με άζωτο κατά τρόπο ώστε, ακόμη και μετά την ψύξη, η πίεση να μην πέφτει ποτέ κάτω από την ατμοσφαιρική πίεση. Το περιβλημα θα είναι ερμητικά κλειστό<sup>23/</sup> ώστε να μην συμβαίνει διαρροή αερίου.

(2) Ακαθάριστα κενά περιβλήματα που περιείχαν ύλεις των 11° και 22° του περιθωριακού 2431, όταν παραδίδονται για μεταφορά, θα πρέπει:

- είτε να είναι γεμάτα με άζωτο ή
- να είναι γεμάτα με νερό σε ποσοστό όχι μικρότερο από 96% και όχι μεγαλύτερο από 98% της χωρητικότητάς τους μεταξύ 1ης Οκτωβρίου και 31ης Μαρτίου, το νερό αυτό θα περιέχει επαρκή ποσότητα αντιψυκτικού μέσου ώστε να καταστεί αδύνατο να παγώσει το νερό κατά τη μεταφορά το αντιψυκτικό μέσο θα είναι απαλλαγμένο από διαβρωτική δράση και δεν θα υπόκειται σε χημική αντίδραση με το φωσφόρο.

<sup>23/</sup>

Βλέπε υποσημείωση Z'

## Προσθήκη Β.1α

**211 471** Περιβλήματα που περιέχουν ύλες των 31° έως 33° του περιθωριακού 2431 και ύλες των 2° (a), 3° (a) και 3° (b) του περιθωριακού 2471 θα πληρούνται σε ποσοστό όχι μεγαλύτερο από 90% της χωρητικότητάς τους· χώρος σε ποσοστό 5% θα παραμένει κενός για λόγους ασφάλειας όταν το υγρό έχει μέση θερμοκρασία 50 °C. Κατά τη μεταφορά, οι ύλες θα είναι κάτω από στρώμα αδρανούς αερίου, του οποίου η πίεση μετρητή δεν θα είναι μικρότερη από 50 kPa (0.5 bar). Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>23/</sup> και τα προστατευτικά πάματα σύμφωνα με το περιθωριακό 211 430 θα είναι κλειδωμένα. Ακαθάριστα κενά περιβλήματα, όταν παραδίδονται για μεταφορά, θα είναι γεμάτα με αδρανές αέριο σε πίεση μετρητή τουλάχιστον 50 kPa (0.5 bar).

**211 472** Για αιθυλοδιχλωροσιλάνιο, μεθυλοδιχλωροσιλάνιο και τριχλωροσιλάνιο του περιθωριακού 2471, 1°, ο βαθμός πλήρωσης δεν θα υπερβαίνει τα 0.93 ή 0.95 ή 1.14 kg ανά λίτρο χωρητικότητας αντίστοιχα, εάν η πλήρωση υπολογίζεται κατά βάρος. Εάν η πλήρωση υπολογίζεται κατ'όγκο, και για χλωροσιλάνια που δεν αναφέρονται ονομαστικά (ε.α.ο.) του περιθωριακού 2471, 1°, ο βαθμός πλήρωσης δεν θα υπερβαίνει το 85%. Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>24/</sup> και τα προστατευτικά πάματα σύμφωνα με το περιθωριακό 211 430 θα είναι κλειδωμένα.

**211 473** Περιβλήματα που περιέχουν ύλες του περιθωριακού 2401, 5° και 15°, δεν θα πληρούνται σε ποσοστό μεγαλύτερο από 98% της χωρητικότητάς τους.

**211 474** Για τη μεταφορά καυσίου και ρουβιδίου του περιθωριακού 2471, 11° (a), η ύλη θα καλύπτεται με αδρανές αέριο και τα πάματα σύμφωνα με το περιθωριακό 211 431 θα είναι κλειδωμένα. Περιβλήματα που περιέχουν άλλες ύλες του περιθωριακού 2471, 11° (a), δεν θα είναι παραδίδονται για μεταφορά μέχρις ότου η ύλη έχει εντελώς στερεοποιηθεί και καλυφθεί με αδρανές αέριο.

Ακαθάριστα κενά περιβλήματα τα οποία περιείχαν ύλες του περιθωριακού 2471, 11° (a) θα πληρούνται με αδρανές αέριο. Τα περιβλήματα θα είναι ερμητικά κλειστά.

**211 475** Όποτε φορτώνονται ύλες του περιθωριακού 2431, 1° (b), η θερμοκρασία των εμπορευμάτων που φορτώνονται δεν θα υπερβαίνει τους 60 °C.

**211 476-**

**211 499**

**211 510** Οι ακόλουθες ύλες του περιθωριακού 2501 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές:

- (a) ύλες του 5°
- (b) ύλες καταχωρημένες υπό το γράμμα (a) ή (b) των 1° έως 4°, 11°, 13°, 16°, 17°, 22° και 23°, μεταφερόμενες σε υγρή κατάσταση
- (c) υγρό νιτρικό αμμώνιο του 20°
- (d) ύλες καταχωρημένες υπό το γράμμα (c) των 1°, 16°, 18°, 22° και 23°, μεταφερόμενες σε υγρή κατάσταση
- (e) ύλες σε κωνιάδη ή κοκκώδη μορφή καταχωρημένες υπό το γράμμα (b) ή (c) των 11°, 13° έως 19°, 21° έως 27°, 29° έως 31°.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα υλών των 11° έως 13°, 16°, 18°, 19°, 21° και 22° (c), και στερεών αποβλήτων ταξινομημένων στα προαναφερόμενα είδη του περιθωριακού 2501, βλέπε περιθωριακό 51 111.

**211 511** Υλες των 9° (b), 10° (b), 19° (b) ή 20° (b) του περιθωριακού 2551 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές το αργότερο από 1ης Ιανουαρίου 1995 υπό τους όρους που θέτει η αρμόδια αρχή της χώρας προέλευσης εάν, βάσει δοκιμών (βλέπε περιθωριακό 211 541), η αρμόδια αρχή πεισθεί ότι μια τέτοια μεταφορική εργασία μπορεί να διεξαχθεί με ασφάλεια.

211 512-  
211 519**ΤΜΗΜΑ 2. Κατασκευή**

**211 520** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 510 (a) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] τουλάχιστον 1 MPa (10 bar) (πίεση μετρητή).

**211 521** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 510 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή). Περιβλήματα, και τα είδη εξοπλισμού αυτών, προοριζόμενα για τη μεταφορά υλών του 1° θα είναι κατασκευασμένα από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5% ή από κατάλληλο χάλυβα ο οποίος δεν θα είναι σε θέση να προκαλέσει την αποσύνθεση του υπεροξειδίου του υδρογόνου. Όπου τα περιβλήματα είναι κατασκευασμένα από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5%, το πάχος του τοιχώματος δεν χρειάζεται να είναι μεγαλύτερο από 15 mm, ακόμη και όπου ο υπολογισμός σύμφωνα με το περιθωριακό 211 127 (2) δίνει υψηλότερη τιμή.

**211 522** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 510 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή). Τα περιβλήματα θα είναι κατασκευασμένα από ωστενιτικό χάλυβα.

## Προσθήκη Β.1α

**211 523** Περιβλήματα προοριζόμενα για τη μεταφορά των υγρών που αναφέρονται στο περιθωριακό 211 510 (d) και τις κονιώδεις ή κοκκώδεις ύλες που αναφέρονται στο περιθωριακό 211 510 (e) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους Ι της παρούσης Προσθήκης.

**211 524** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα σχεδιάζονται για πίεση υπολογισμού τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή).

**211 525-**

**211 529**

### ΤΜΗΜΑ 3. Είδη εξοπλισμού

**211 530** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 1° (a), 3° (a) και 5° του περιθωριακού 2501 θα έχουν τα ανοίγματά τους επάνω από την στάθμη της επιφάνειας του υγρού. Επιπλέον, τα ανοίγματα καθαρισμού (fist holes) που αναφέρονται στο περιθωριακό 211 132 δεν θα επιτρέπονται.

Για διαλύματα περιέχοντα περισσότερο από 60% αλλά όχι περισσότερο από 70% υπεροξειδίου του υδρογόνου, θα επιτρέπονται ανοίγματα κάτω από την στάθμη της επιφάνειας του υγρού. Στην περίπτωση αυτή το σύστημα εκκένωσης του περιβλήματος θα είναι εξοπλισμένο με δύο ανεξάρτητες μεταξύ τους συσκευές κλεισίματος συναρμολογημένες σε σειρά, η πρώτη με τη μορφή εσωτερικής βαλβίδας κλεισίματος ταχείας λειτουργίας, εγκεκριμένου τύπου, και η δεύτερη με τη μορφή βαλβίδας εκροής, μία σε κάθε άκρο του σωλήνα εκκένωσης. Ένα κενό παρέμβυσμα (φλάντζα), ή άλλη συσκευή που παρέχει τον ίδιο βαθμό ασφαλείας, θα είναι επίσης τοποθετημένο στην έξοδο κάθε εξωτερικής βαλβίδας εκροής. Η εσωτερική βαλβίδα κλεισίματος θα είναι τέτοια ώστε, εάν η σωλήνωση ξεβιδωθεί, η βαλβίδα κλεισίματος να παραμένει ακέραια μαζί με το περίβλημα και σε κλειστή θέση. Οι συνδέσεις με τα εξωτερικά στόμια των σωλήνων των περιβλημάτων θα κατασκευάζονται από υλικά που δεν είναι σε θέση να προκαλέσουν αποσύνθεση του υπεροξειδίου του υδρογόνου.

**211 531**

**211 532** Περιβλήματα προοριζόμενα για τη μεταφορά υπεροξειδίου του υδρογόνου ή υδατικών διαλυμάτων του υπεροξειδίου του υδρογόνου του 1°, ή τη μεταφορά υγρού νιτρικού αμμωνίου του 20° του περιθωριακού 2501 θα είναι εξοπλισμένα στο άνω μέρος τους με συσκευή κλεισίματος που θα εμποδίζει την ανάπτυξη υπερβολικής πίεσης στο εσωτερικό του περιβλήματος, την οποιαδήποτε διαρροή υγρού, και την οποιαδήποτε εισδοχή ξένης ουσίας μέσα στο περίβλημα. Οι συσκευές κλεισίματος σε περιβλήματα προοριζόμενα για το υγρό νιτρικό αμμώνιο του περιθωριακού 2501, 20°, θα είναι σχεδιασμένες έτσι ώστε να αποκλείουν απόφραξη των συσκευών από στερεοποιημένο νιτρικό αμμώνιο κατά τη μεταφορά.

**211 533** Όπου περιβλήματα προοριζόμενα για τη μεταφορά υγρού νιτρικού αμμωνίου του περιθωριακού 2501, 20°, επενδύονται με θερμομονωτικό υλικό, το υλικό θα είναι ανόργανης φύσεως και εντελώς απαλλαγμένο από εύφλεκτες ουσίες.

**211 534** Περιβλήματα προοριζόμενα για την μεταφορά υλών αναφερόμενων στο περιθωριακό 211 511 θα είναι εξοπλισμένα με θερμομόνωση σύμφωνα με τις απαιτήσεις του περιθωριακού 211 234 (1). Εάν η θερμοκρασία [SADT] του οργανικού υπεροξειδίου στο περίβλημα είναι 55 °C ή μικρότερη, ή το περίβλημα είναι κατασκευασμένο από αλουμίνιο, το περίβλημα θα είναι πλήρως μονωμένο. Το αλεξήλιο και οποιοδήποτε μέρος του περιβλήματος δεν καλύπτεται από αυτό, ή η εξωτερική επένδυση πλήρους μονωτικής κάλυψης, θα είναι χρωματισμένα λευκά ή φινιρισμένα με στιλπνό μέταλλο. Το χρώμα θα καθαρίζεται πριν από κάθε διαδρομή και θα ανανεώνεται στην περίπτωση κτηρινίσματος ή φθοράς. Η θερμομόνωση θα είναι απαλλαγμένη από εύφλεκτες ουσίες.

**211 535** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα είναι εξοπλισμένα με αισθητήρες θερμοκρασίας.

## Προσθήκη Β.1α

**211 536** (1) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα είναι εξοπλισμένα με βαλβίδες ασφαλείας και συσκευές εκτόνωσης υπό πίεση. Συσκευές εκτόνωσης στο κενό μπορεί επίσης να χρησιμοποιούνται. Συσκευές εκτόνωσης υπό πίεση θα λειτουργούν σε πιέσεις καθοριζόμενες σύμφωνα τόσο με τις ιδιότητες του οργανικού υπεροξειδίου όσο και με τα κατασκευαστικά χαρακτηριστικά της δεξαμενής. Δεν θα επιτρέπεται να υπάρχουν εύηχτα στοιχεία στο σώμα του περιβλήματος.

(2) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα είναι εξοπλισμένα με βαλβίδες ασφαλείας με ελατήριο για την αποτροπή ανάπτυξης σημαντικής πίεσης μέσα στο περιβλήμα στα προϊόντα αποσύνθεσης και τους ατμούς που εκλύονται σε θερμοκρασία 50 °C. Η χωρητικότητα και η πίεση στην αρχή της εκκένωσης της βαλβίδας ή των βαλβίδων ασφαλείας θα βασίζεται στα αποτελέσματα των δοκιμών που αναφέρονται στο περιθωριακό 211 541. Η πίεση στην αρχή της εκκένωσης εντούτοις δεν θα είναι σε καμία περίπτωση τόσο ώστε να μπορούσε να διαφύγει υγρό από τη βαλβίδα ή τις βαλβίδες εάν το περιβλήμα αναποδογύριζε.

(3) Οι συσκευές εκτόνωσης υπό πίεση σε περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 μπορεί να είναι τύπου ελατηρίου ή τύπου εκρηγνυόμενου δίσκου, σχεδιασμένες έτσι ώστε να εξαερώνουν όλα τα προϊόντα αποσύνθεσης και τους ατμούς που αναπτύσσονται σε χρονική περίοδο όχι μικρότερη από μία ώρα περικύκλωσης από φωτιά (φορτίο θερμότητας 110 kW/m<sup>2</sup>) ή αυτο-επιταχυνόμενη αποσύνθεση. Η πίεση στην αρχή της εκκένωσης της συσκευής (των συσκευών) εκτόνωσης υπό πίεση θα είναι υψηλότερη από την αναφερόμενη στο (2) και θα βασίζεται στα αποτελέσματα των δοκιμών που αναφέρονται στο περιθωριακό 211 541. Οι διαστάσεις των συσκευών εκτόνωσης πίεσης θα είναι τέτοιες ώστε η μέγιστη πίεση στο περιβλήμα να μην υπερβαίνει ποτέ την πίεση δοκιμής του περιβλήματος.

(4) Για περιβλήματα με μόνωση που αποτελείται από πλήρη επένδυση προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511, η χωρητικότητα και η ρύθμιση της συσκευής (των συσκευών) εκτόνωσης υπό πίεση θα καθορίζεται υποθέτοντας απώλεια μόνωσης από ποσοστό 1% του εμβαδού της επιφανείας.

(5) Συσκευές εκτόνωσης σε κενό και βαλβίδες ασφαλείας με ελατήριο σε περιβλήματα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα είναι εφοδιασμένες με ανασχετήρες φλόγας εκτός εάν οι προς μεταφορά ύλες και τα προϊόντα αποσύνθεσής τους είναι μη αναφλέξιμα. Θα δίνεται η δέουσα προσοχή στην ελάττωση της ικανότητας εκτόνωσης που προκαλείται από τον ανασχετήρα φλόγας.

**211 537-  
211 539**

#### ΤΜΗΜΑ 4. Έγκριση τύπου

**211 540-**

**211 541** Για την έγκριση του τύπου περιβλημάτων προοριζόμενων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511, θα διενεργούνται δοκιμές:

- για να αποδείξουν τη συμβατότητα όλων των υλικών που σε κανονικές περιστάσεις έρχονται σε επαφή με την ύλη κατά τη μεταφορά
- για να παράσχουν δεδομένα για να διευκολύνουν τον σχεδιασμό των συσκευών εκτόνωσης υπό πίεση και τις βαλβίδες ασφαλείας λαμβάνοντας υπόψη τα χαρακτηριστικά σχεδιασμού της δεξαμενής και
- για να εξακριβώσουν τυχόν ειδικές απαιτήσεις απαραίτητες για την ασφαλή μεταφορά της ύλης.

Τα αποτελέσματα των δοκιμών θα περιλαμβάνονται στην έκθεση για την έγκριση τύπου της δεξαμενής.

## Προσθήκη Β.1α

211 542-  
211 549

**ΤΜΗΜΑ 5. Δοκιμές**

**211 550** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 510 (a), (b) και (c) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή). Περιβλήματα από καθαρό αλουμίνιο προ-οριζόμενα για τη μεταφορά υλών του περιθωριακού 2501, 1°, μπορεί να υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μόνον 250 kPa (2.5 bar) (πίεση μετρητή).

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 510 (d) και (e) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού αυτών κατά τα οριζόμενα στο περιθωριακό 211 123.

**211 551** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού αυτών κατά τα οριζόμενα στο περιθωριακό 211 524.

211 552-  
211 559

**ΤΜΗΜΑ 6. Επισήμανση**

**211 560** Για περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511, τα ακόλουθα πρόσθετα στοιχεία θα επισημαίνονται με σφραγίδα ή με οποιαδήποτε άλλη παρόμοια μέθοδο στην πινακίδα που προβλέπεται στο περιθωριακό 211 161 ή απευθείας στα τοιχώματα του ίδιου του περιβλήματος, εάν τα τοιχώματα είναι ενισχυμένα έτσι ώστε να μη μειώνεται η αντοχή του περιβλήματος:

- η χημική ονομασία με την εγκεκριμένη συγκέντρωση της εν λόγω ύλης.

211 561-  
211 569

**ΤΜΗΜΑ 7. Λειτουργία**

**211 570** Το εσωτερικό του περιβλήματος και όλων των μερών που είναι δυνατόν να έλθουν σε επαφή με τις ύλες που αναφέρονται στα περιθωριακά 211 510 και 211 511 θα διατηρούνται καθαρά. Για αντλίες, βαλβίδες ή άλλες συσκευές, δεν θα χρησιμοποιείται λιπαντικό ικανό να συνδυαστεί επικίνδυνα με τη μεταφερόμενη ύλη.

**211 571** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° (a), 2° (a) και 3° (a) του περιθωριακού 2501 θα είναι πληρωμένα σε ποσοστό όχι μεγαλύτερο από 95% της χωρητικότητάς τους σε θερμοκρασία αναφοράς 15 °C. Περιβλήματα προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2501, 20°, θα είναι γεμάτα σε ποσοστό όχι μεγαλύτερο από 97% της χωρητικότητάς τους, και η μέγιστη θερμοκρασία μετά την πλήρωση δεν θα υπερβαίνει τους 140 °C. Περιβλήματα εγκεκριμένα για τη μεταφορά υγρού νιτρικού αμμωνίου δεν θα χρησιμοποιούνται για τη μεταφορά άλλων υλών χωρίς προηγουμένως να καθαρισθούν προσεκτικά από τυχόν υπολείμματα.

**211 572** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα πληρούνται όπως ορίζεται στην έκθεση της δοκιμής για την έγκριση τύπου της δεξαμενής αλλά δεν θα πληρούνται σε ποσοστό μεγαλύτερο από 90% της χωρητικότητάς τους. Τα περιβλήματα θα είναι απαλλαγμένα από προσμείξεις κατά την πλήρωση.

**211 573** Ο λειτουργικός εξοπλισμός όπως οι βαλβίδες και οι εξωτερικές σωληνώσεις περιβλημάτων προοριζόμενων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 511 θα κενώνεται μετά την πλήρωση ή εκκένωση της δεξαμενής.

211 574-  
211 599

## Προσθήκη Β.1α

**ΚΛΑΣΗ 6.1: ΤΟΞΙΚΕΣ ΥΛΕΣ****ΚΛΑΣΗ 6.2: ΜΟΛΥΣΜΑΤΙΚΕΣ ΥΛΕΣ**211 600-  
211 609**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί****Χρήση**

**211 610** (1) Οι ακόλουθες ύλες του περιθωριακού 2601 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές:

- (a) οι ονομαστικά καταχωρημένες ύλες στα 2° έως 4°
- (b) ύλες ταξινομημένες υπό το (a) των 6° έως 13° - με την εξαίρεση του χλωρομυρμηκικού ισοπροπυλεστέρα των 10° - , 15° έως 17°, 20°, 22°, 23°, 25° έως 28°, 31° έως 36°, 41°, 44°, 51°, 52°, 55°, 61°, 65° έως 68°, 71° έως 87° και 90°, μεταφερόμενες στην υγρή κατάσταση
- (c) ύλες ταξινομημένες υπό το (b) ή (c) των 11°, 12°, 14° έως 28°, 32° έως 36°, 41°, 44°, 51° έως 55°, 57° έως 62°, 64° έως 68°, 71° έως 87° και 90°, μεταφερόμενες σε υγρή κατάσταση
- (d) ύλες σε κονιώδη ή κοκκώδη μορφή ταξινομημένες υπό το (b) ή (c) των 12°, 14°, 17°, 19°, 21°, 23°, 25° έως 27°, 32° έως 35°, 41°, 44°, 51° έως 55°, 57° έως 68°, 71° έως 87° και 90°.

**ΣΗΜΕΙΩΣΗ:** Για την μεταφορά χύμα υλών του 60° (c), στερεών περιεχόντων τοξικά υγρά του 65° (b) (χαρακτηριστικός αριθμός 3243) και στερεών αποβλήτων ταξινομημένων υπό το (c) των διαφόρων ειδών, βλέπε περιθωριακό 61 111.

(2) Υλες του περιθωριακού 2651, 3° και 4°, μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές.

211 611-  
211 619**ΤΜΗΜΑ 2. Κατασκευή**

**211 620** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 610 (1) (a) ονομαστικά καταχωρημένα υπό τα 2° έως 4° του περιθωριακού 2601 θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1.5 MPa (15 bar) (πίεση μετρητή).

**211 621** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610 (1) (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1.0 MPa (10 bar) (πίεση μετρητή).

**211 622** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610(1)(c) και 211 610(2) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

## Προσθήκη Β.1α

- 211 622** Περιβλήματα προοριζόμενα για τη μεταφορά γλωρο-οξικού οξέος του 24° (b) του περιθωριακού (συνεχ.) 2601 θα είναι εφοδιασμένα με προστατευτική επίστρωση ισοδύναμη με σμάλτο εάν το υλικό του περιβλήματος προσβληθεί από γλωρο-οξικό οξύ.
- 211 623** Περιβλήματα προοριζόμενα για τη μεταφορά των κονιωδών ή κοκκωδών υλών που αναφέρονται στο περιθωριακό 211 610(1)(d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.
- 211 624-**  
**211 629**

## ΤΜΗΜΑ 3. Είδη εξοπλισμού

- 211 630** Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610(1)(a) και (b) θα είναι επάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διέρχονται από τα τοιχώματα του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα μπορούν να κλειστούν ερμητικά <sup>24/</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πάματα που κλειδώνουν. Τα ανοίγματα καθαρισμού που προβλέπονται στο περιθωριακό 211 132 δεν θα επιτρέπονται εντούτοις σε περιβλήματα προοριζόμενα για τη μεταφορά διαλυμάτων υδροκυανικού οξέος του 2°.
- 211 631** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610(1)(c) και (d) και (2) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα. Τα περιβλήματα θα μπορούν να κλείνονται ερμητικά <sup>24/</sup>.
- 211 632** Εάν τα περιβλήματα είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διεύθυνση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

## Προστασία του εξοπλισμού

- 211 633** (1) Εξαρτήματα και προσαρτήματα συναρμολογημένα στο άνω μέρος του περιβλήματος

Τέτοια εξαρτήματα και προσαρτήματα:

- είτε θα εισάγονται σε ειδικό μετατοπισμένο κλειστό χώρο, είτε
- θα εξοπλίζονται με εσωτερική βαλβίδα ασφαλείας, είτε
- θα καλύπτονται με πάμα, ή με εγκάρσια και/ή διαμήκη μέλη, ή με άλλες εξίσου αποτελεσματικές συσκευές, με ανάγλυφο τέτοιο ώστε σε περίπτωση ανατροπής τα εξαρτήματα και προσαρτήματα να μην καταστρέφονται.

- (2) Εξαρτήματα και προσαρτήματα συναρμολογημένα στο κάτω μέρος του περιβλήματος

Στόμια σωληνώσεων, εγκάρσιες συσκευές κλεισίματος, και όλες οι συσκευές εκκένωσης θα είναι μετατοπισμένα κατά τουλάχιστον 200 mm από την ακραία εξωτερική ακμή του περιβλήματος ή θα προστατεύονται με μπάρα έχουσα συντελεστή αδρανείας όχι μικρότερο από 20 cm<sup>3</sup> εγκάρσια στη διεύθυνση κίνησης το ύψος τους από το έδαφος δεν θα είναι μικρότερο από 300 mm όταν το περίβλημα είναι πλήρες.

<sup>24/</sup> Βλέπε υποσημείωση Z/.

## Προσθήκη Β.1α

**211 633** (3) Εξαρτήματα και προσαρτήματα συναρμολογημένα στην οπίσθια όψη του περιβλήματος (συνεχ.)

Όλα τα εξαρτήματα και προσαρτήματα που είναι συναρμολογημένα στην οπίσθια όψη θα προστατεύονται από τον προφυλακτήρα που προβλέπεται στο περιθωριακό 10 220. Το ύψος τους πάνω από το έδαφος θα είναι τέτοιο ώστε να τα προστατεύει επαρκώς ο προφυλακτήρας.

**211 634-**  
**211 639**

**ΤΜΗΜΑ 4. Έγκριση τύπου**

**211 640-**  
**211 649** (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 5. Δοκιμές**

**211 650** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610(1)(a), (b) και (c) και (2) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar).

Για περιβλήματα προοριζόμενα για τη μεταφορά υλών του 31° (a) του περιθωριακού 2601, οι περιοδικές δοκιμές θα διενεργούνται σε διαλείμματα όχι μεγαλύτερα από τα τρία έτη και θα περιλαμβάνουν τη δοκιμή υδραυλικής πίεσης.

**211 651** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610(1)(d) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 211 123.

**211 652-**  
**211 659**

**ΤΜΗΜΑ 6. Επισήμανση**

**211 660-**  
**211 669** (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 7. Λειτουργία**

**211 670** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 3° του περιθωριακού 2601 δεν θα είναι πληρωμένα κατά περισσότερο από 1 kg ανά λίτρο χωρητικότητας.

**211 671** Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>25/</sup> κατά τη μεταφορά. Τα κλεισίματα των περιβλημάτων που προορίζονται για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 211 610(1)(a) και (b) θα προστατεύονται με κλειδωμένα πώματα.

**211 672** Οχήματα-δεξαμενές και αποσυναρμολογούμενες δεξαμενές εγκεκριμένες για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 610 δεν θα χρησιμοποιούνται για τη μεταφορά τροφίμων, ειδών κατανάλωσης ή ζωοτροφών.

**211 673-**  
**211 699**

<sup>25/</sup> Βλέπε υποσημείωση 2/.

## ΚΛΑΣΗ 7. ΡΑΔΙΕΝΕΡΓΕΣ ΥΛΕΣ

211 700-  
211 709**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί****Χρήση**

**211 710** Υλικά των περιθωριακών 2704, Πίνακες 1, 5, 6, 9, 10 και 11, πλην εξαφθοριούχου ουρανίου, μπορούν να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές. Έχουν εφαρμογή οι διατάξεις του αντίστοιχου πίνακα στο περιθωριακό 2704.

**ΣΗΜΕΙΩΣΗ:** Μπορεί να υπάρχουν πρόσθετες απαιτήσεις για δεξαμενές σχεδιασμένες ως συσκευασίες Τύπου Α ή Τύπου Β.

211 711-  
211 719**ΤΜΗΜΑ 2. Κατασκευή**

**211 720** Βλέπε περιθωριακό 3736.

211 721-  
211 729**ΤΜΗΜΑ 3. Είδη Εξοπλισμού**

**211 730** Τα ανοίγματα των περιβλημάτων για τη μεταφορά υγρών ραδιενεργών υλικών<sup>26/</sup> θα είναι πάνω από τη στάθμη του υγρού. Τα τοιχώματα του περιβλήματος δεν θα έχουν σωληνώσεις ή συνδέσεις σωληνώσεων κάτω από τη στάθμη του υγρού.

211 731-  
211 739**ΤΜΗΜΑ 4. Έγκριση τύπου**

**211 740** Δεξαμενές που έχουν εγκριθεί για τη μεταφορά ραδιενεργού υλικού δεν θα εγκρίνονται για τη μεταφορά άλλων υλών.

211 741-  
211 749**ΤΜΗΜΑ 5. Δοκιμές**

**211 750** Τα περιβλήματα θα υποβάλλονται αρχικά και περιοδικά σε δοκιμή υδραυλικής πίεσης σε πίεση τουλάχιστον 265 kPa (2.65 bar). Παρά τις διατάξεις του περιθωριακού 211 151, η περιοδική εσωτερική επιθεώρηση μπορεί να αντικατασταθεί με πρόγραμμα εγκεκριμένο από την αρμόδια αρχή.

<sup>26/</sup>Βλέπε υποσημείωση<sup>27/</sup>.

## Προσθήκη Β.1α

211 751-  
211 759

**ΤΜΗΜΑ 6. Επισήμανση**

- 211 760 Επιπλέον, το σύμβολο του τριφυλλιού, όπως περιγράφεται στο περιθωριακό 2705(5), θα επιστημαίνεται με σφραγίδα ή με οποιαδήποτε άλλη ισοδύναμη μέθοδο στην πινακίδα που περιγράφεται στο περιθωριακό 211 160. Η επισήμανση με το τριφύλλι μπορεί να εφαρμόζεται απευθείας στα τοιχώματα του ίδιου του περιβλήματος, εάν τα τοιχώματα είναι ενισχυμένα ούτως ώστε να μη μειώνεται η αντοχή του περιβλήματος.

211 761-  
211 769

**ΤΜΗΜΑ 7. Λειτουργία**

- 211 770 Ο βαθμός πλήρωσης, σύμφωνα με το περιθωριακό 211 172, στη θερμοκρασία αναφοράς των 15 °C δεν θα υπερβαίνει το 93% της χωρητικότητας του περιβλήματος.
- 211 771 Δεξαμενές στις οποίες έχει μεταφερθεί ραδιενεργό υλικό δεν θα χρησιμοποιούνται για τη μεταφορά άλλων υλών.

211 772-  
211 799

## Προσθήκη Β.1α

## ΚΛΑΣΗ 8. ΔΙΑΒΡΩΤΙΚΕΣ ΥΛΕΣ

211 800-  
211 809

## ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμεμών) ορισμοί

## Χρήση

211 810 Οι ακόλουθες ύλες του περιθωριακού 2801 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμεμές:

- (a) ύλες ονομαστικά καταχωρημένες στα 6° και 14°
- (b) ύλες ταξινομημένες υπό το (a) των 1°, 2°, 3°, 7°, 8°, 12°, 17°, 32°, 33°, 39°, 40°, 46°, 47°, 52° έως 56°, 64° έως 68° και 70°, 72° έως 76°, μεταφερόμενες στην υγρή κατάσταση
- (c) οξυβρωμίδιο του φωσφόρου του 15° και ύλες ταξινομημένες υπό το (b) ή (c) των 1° έως 5°, 7°, 8°, 10°, 12°, 17°, 31° έως 40°, 42° έως 47°, 51° έως 56°, 61° έως 76°, μεταφερόμενες στην υγρή κατάσταση
- (d) κονιώδεις ή κοκκώδεις ύλες ταξινομημένες υπό το (b) ή (c) των 9°, 11°, 13°, 16°, 31°, 34°, 35°, 39°, 41°, 45°, 46°, 52°, 55°, 62°, 65°, 67°, 69°, 71°, 73° και 75°.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα θεικού μολύβδου του 1° (b), υλών του 13° (b), στερεών που περιέχουν διαβρωτικό υγρό του 65° (b) με χαρακτηριστικό αριθμό 3244, και στερεών αποβλήτων ταξινομημένων υπό το (c) των διαφόρων ειδών, βλέπε περιθωριακό 81 111.

211 811-  
211 819

## ΤΜΗΜΑ 2. Κατασκευή

211 820 Περιβλήματα προοριζόμενα για τη μεταφορά υλών ονομαστικά καταχωρημένων στα 6° και 14° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 2.1 MPa (21 bar) (πίεση μετρητή). Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 14° θα είναι εφοδιασμένα με επιστροφή μολύβδου με πάχος όχι μικρότερο από 5 mm ή ισοδύναμη επιστροφή. Η απαίτηση της Προσθήκης Β.1d θα έχει εφαρμογή στα υλικά και την κατασκευή συγκολλημένων περιβλημάτων προοριζόμενων για τη μεταφορά υλών του 6°.

211 821 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 810 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 1.0 MPa (10 bar) (πίεση μετρητή).

Όπου είναι αναγκαία η χρήση αλουμινίου για περιβλήματα προοριζόμενα για τη μεταφορά του νιτρικού οξέος του 2° (a), αυτά τα περιβλήματα θα είναι κατασκευασμένα από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5%, οπότε, κατά παρέκκλιση από τις ανωτέρω διατάξεις, το πάχος του τοιχώματος δεν χρειάζεται να υπερβαίνει τα 15 mm.

## Προσθήκη Β.1α

**211 822** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 810 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

Παρά τις ανωτέρω διατάξεις, το πάχος του τοιχώματος δεν χρειάζεται να είναι μεγαλύτερο από 15 mm όταν τα περιβλήματα είναι κατασκευασμένα από καθαρό αλουμίνιο.

**211 823** Περιβλήματα προοριζόμενα για τη μεταφορά κονιωδών ή κοκκωδών υλών που αναφέρονται στο περιθωριακό 211 810 (d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

211 824-  
211 829

### ΤΜΗΜΑ 3. Είδη εξοπλισμού

**211 830** Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά υλών των 6°, 7° και 14° θα είναι πάνω από τη στάθμη της επιφάνειας του υγρού. Δεν θα διέρχονται σωληνώσεις ή συνδέσεις σωληνώσεων από τα τοιχώματα του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα μπορούν να κλείνουν ερμητικά<sup>27</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πώματα που κλειδώνουν. Επιπλέον, τα ανοίγματα καθαρισμού που αναφέρονται στο περιθωριακό 211 132 δεν θα επιτρέπονται.

**211 831** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 810 (b), (c) και (d) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα.

**211 832** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 810 (b) είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνύομου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

**211 833** Περιβλήματα προοριζόμενα για την μεταφορά τριοξειδίου του θείου του 1° (a) θα είναι θερμομονωμένα και εξοπλισμένα με συσκευή θερμάνσεως στο εξωτερικό τους.

**211 834** Περιβλήματα και ο λειτουργικός εξοπλισμός τους προοριζόμενα για μεταφορά διαλυμάτων υποχλωριωδών αλάτων του 61° θα σχεδιάζονται έτσι ώστε να εμποδίζεται η εισδοχή ξένων ουσιών, η διαρροή υγρού ή τυχόν ανάπτυξη επικίνδυνης υπερβολικής πίεσης μέσα στο περίβλημα.

211 835-  
211 839

### ΤΜΗΜΑ 4. Έγκριση τύπου

211 840-

211 849 (Δεν υπάρχουν ειδικές απαιτήσεις)

### ΤΜΗΜΑ 5. Δοκιμές

**211 850** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 6° θα υποβάλλονται στην αρχική και τις περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 1.0 MPa (10 bar) και εκείνα που προορίζονται για τη μεταφορά υλών του 7° θα υποβάλλονται σε αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar).

<sup>27</sup>

Βλέπε υποσημείωση 27.

## Προσθήκη Β.1α

**211 850** Τα υλικά κάθε συγκολλημένου περιβλήματος προοριζόμενου για τη μεταφορά υλών του 6° θα (συνεχ.) δοκιμάζεται με τη μέθοδο που περιγράφεται στην Προσθήκη Β.1δ.

**211 851** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 14° ή των υλών που αναφέρονται στο περιθωριακό 211 810 (b) και (c) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar). Η δοκιμή υδραυλικής πίεσης για περιβλήματα προοριζόμενα για τη μεταφορά τριοξειδίου του θείου του 1° (a) θα επαναλαμβάνονται κάθε τρία έτη.

Περιβλήματα κατασκευασμένα από καθαρό αλουμίνιο και προοριζόμενα για τη μεταφορά νιτρικού οξέος του 2° (a) χρειάζεται να υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή μόνον 250 kPa (2.5 bar).

Η κατάσταση της επίστρωσης σε περιβλήματα προοριζόμενα για τη μεταφορά υλών του 14° θα επιθεωρείται κάθε έτος από ειδικό εγκεκριμένο από την αρμόδια αρχή, ο οποίος θα επιθεωρεί το εσωτερικό του περιβλήματος.

**211 852** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 211 810 (d) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 211 123.

**211 853-  
211 859**

**ΤΜΗΜΑ 6. Επισήμανση**

**211 860** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 6° και 14° θα φέρουν, επιπλέον των στοιχείων που αναφέρονται στο περιθωριακό 211 160, την ημερομηνία (μήνας, έτος) της πιο πρόσφατης επιθεώρησης της εσωτερικής κατάστασης του περιβλήματος.

**211 861** Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς τριοξειδίου του θείου του 1° (a) και υλών των 6° και 14° θα φέρουν επιπλέον, στην πινακίδα που αναφέρεται στο περιθωριακό 211 160, το μέγιστο επιτρεπόμενο βάρος φορτώσεως σε kg του περιβλήματος.

**211 862-  
211 869**

**ΤΜΗΜΑ 7. Λειτουργία**

**211 870** Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς τριοξειδίου του θείου του 1° (a) δεν θα πληρούνται σε ποσοστό μεγαλύτερο από 88% της χωρητικότητάς τους εκείνα που προορίζονται για τη μεταφορά υλών του 14° θα πληρούνται σε ποσοστό όχι μικρότερο από 88% και όχι μεγαλύτερο από 92% της χωρητικότητάς τους ή 2.86 kg ανά λίτρο χωρητικότητας.

Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 6° δεν θα πληρούνται σε ποσότητα μεγαλύτερη από 0.84 kg ανά λίτρο χωρητικότητας.

**211 871** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 6°, 7° και 14° θα είναι ερμητικά κλειστά <sup>28/</sup> [βλέπε περιθωριακό 211 127(2)] κατά τη μεταφορά και τα κλεισίματα θα προστατεύονται με πάματα που κλειδώνουν.

**211 872-  
211 899**

## Προσθήκη Β.1α

**ΚΛΑΣΗ 9. ΔΙΑΦΟΡΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΥΛΕΣ ΚΑΙ ΑΝΤΙΚΕΙΜΕΝΑ**211 900-  
211 909**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση δεξαμενών) ορισμοί****Χρήση**

**211 910** Υλεις των 1°, 2° και 4°, 11° και 12° του περιθωριακού 2901 μπορεί να μεταφέρονται σε σταθερές ή αποσυναρμολογούμενες δεξαμενές.

**ΣΗΜΕΙΩΣΗ:** Για την μεταφορά χύμα υλών των 4° και 12° του περιθωριακού 2901, βλέπε περιθωριακό 91 111.

211 911-  
211 919**ΤΜΗΜΑ 2. Κατασκευή**

**211 920** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1°, 4°, 11° και 12° θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

**211 921** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 2° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 211 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

211 922-  
211 929**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**211 930** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° και 2° θα μπορούν να κλείνουν ερμητικά <sup>29/</sup>. Περιβλήματα προοριζόμενα για την μεταφορά υλών του 4° (c) θα είναι εξοπλισμένα με βαλβίδα ασφαλείας.

**211 931** Εάν περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° και 2° είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τις βαλβίδες. Η διεύθυνση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

211 932-  
211 939**ΤΜΗΜΑ 4. Έγκριση τύπου**

**211 940-  
211 949** (Δεν υπάρχουν ειδικές απαιτήσεις)

<sup>29/</sup> Βλέπε υποσημείωση 2/.

## Προσθήκη Β.1α

**ΤΜΗΜΑ 5. Δοκιμές**

- 211 950** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 2<sup>ο</sup> θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση 400 kPa (4 bar) (πίεση μετρητή).
- 211 951** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1<sup>ο</sup>, 4<sup>ο</sup>, 11<sup>ο</sup> και 12<sup>ο</sup> θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού που χρησιμοποιείται στο σχεδιασμό τους κατά τα οριζόμενα στο περιθωριακό 211 123.
- 211 952-  
211 959**

**ΤΜΗΜΑ 6. Επισήμανση**

- 211 960-  
211 969** (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 7. Λειτουργία**

- 211 970** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1<sup>ο</sup> και 2<sup>ο</sup> θα είναι ερμητικά κλειστά <sup>30/</sup> κατά τη μεταφορά.
- 211 971** Οχήματα-δεξαμενές και αποσυναρμολογούμενες δεξαμενές εγκεκριμένες για τη μεταφορά υλών των 1<sup>ο</sup> και 2<sup>ο</sup> δεν θα χρησιμοποιούνται για τη μεταφορά τροφίμων, αντικειμένων κατανάλωσης ή ζωοτροφών.
- 211 972-  
211 999**

## Προσθήκη Β.1b

**ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΕΜΠΟΡΕΥΜΑΤΟΚΙΒΩΤΙΑ-ΔΕΞΑΜΕΝΕΣ**

**ΣΗΜΕΙΩΣΗ:** Το Μέρος I παρουσιάζει τις απαιτήσεις με εφαρμογή σε εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υλών όλων των κλάσεων. Το Μέρος II περιέχει ειδικές απαιτήσεις που συμπληρώνουν ή τροποποιούν τις απαιτήσεις του Μέρους I.

**ΜΕΡΟΣ I: Απαιτήσεις με εφαρμογή σε όλες τις κλάσεις**

212 000-  
212 099

**ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση εμπορευματοκιβωτίων-δεξαμενών) ορισμοί**

**ΣΗΜΕΙΩΣΗ 1:** Σύμφωνα με τις διατάξεις του περιθωριακού 10 121 (1), η μεταφορά επικίνδυνων υλών σε εμπορευματοκιβώτια-δεξαμενές επιτρέπεται μόνο όπου υπάρχει ρητή έγκριση για τέτοιες ύλες σε κάθε ένα από τα Τμήματα 1 του Μέρους II της παρούσης Προσθήκης.

**ΣΗΜΕΙΩΣΗ 2:** Για τους σκοπούς αυτής της Οδηγίας, δεξαμενές σε ειδικά αμαξώματα (swap bodies) θεωρούνται ως εμπορευματοκιβώτια-δεξαμενές.

- 212 100** Οι παρούσες απαιτήσεις θα έχουν εφαρμογή σε εμπορευματοκιβώτια-δεξαμενές χωρητικότητας όχι μεγαλύτερης από  $0.45 \text{ m}^3$  τα οποία χρησιμοποιούνται για τη μεταφορά υγρών, αερίων, κονιοδών ή κοκκωδών υλών, και στα εξαρτήματα και προσαρτήματα αυτών.
- 212 101** Το εμπορευματοκιβώτιο-δεξαμενή συμπεριλαμβάνει περίβλημα και είδη εξοπλισμού, περιλαμβανομένου του εξοπλισμού για τη διευκόλυνση της κίνησης του εμπορευματοκιβωτίου-δεξαμενής χωρίς σημαντική μεταβολή του προσανατολισμού.
- 212 102** Στις ακόλουθες απαιτήσεις:
- (1) (a) "περίβλημα" σημαίνει την κυρίως δεξαμενή (περιλαμβανομένων των ανοιγμάτων και των αντίστοιχων κλεισιμάτων)
  - (b) "λειτουργικός εξοπλισμός" του περιβλήματος σημαίνει την πλήρωση και κένωση, τον εξαερισμό, τις συσκευές ασφαλείας, θέρμανσης και θερμομόνωσης και τα όργανα μέτρησης και
  - (c) "κατασκευαστικός εξοπλισμός" σημαίνει τα μέλη εσωτερικής ή εξωτερικής ενίσχυσης, πρόσδεσης, προστατευτικά ή σταθεροποιητικά του περιβλήματος.
  - (2) (a) "πίεση υπολογισμού" σημαίνει θεωρητική πίεση τουλάχιστον ίση προς την πίεση δοκιμής η οποία, αναλόγως του βαθμού επικινδυνότητας που επιδεικνύει η μεταφερόμενη ύλη, μπορεί να υπερβαίνει σε μεγαλύτερο ή μικρότερο βαθμό την πίεση εργασίας. Χρησιμοποιείται αποκλειστικά για τον προσδιορισμό του πάχους των τοιχωμάτων του περιβλήματος, ανεξάρτητα από τυχόν εξωτερική ή εσωτερική ενισχυτική συσκευή
  - (b) "πίεση δοκιμής" σημαίνει την μέγιστη πραγματική πίεση που αναπτύσσεται στο περίβλημα κατά την δοκιμή πίεσης
  - (c) "πίεση πλήρωσης" σημαίνει την μέγιστη πίεση που πραγματικά αναπτύσσεται στο περίβλημα όταν αυτό πληρούται υπό πίεση
  - (d) "πίεση εκκένωσης" σημαίνει την μέγιστη πίεση που πραγματικά αναπτύσσεται στο περίβλημα όταν αυτό εκκενώνεται υπό πίεση

## Προσθήκη Β.1b

212 102  
(συνεχ.)

(e) "μέγιστη πίεση εργασίας (πίεση μετρητή)" σημαίνει την υψηλότερη από τις ακόλουθες τρεις τιμές πίεσης:

- (i) την υψηλότερη πραγματική πίεση που επιτρέπεται να αναπτυχθεί στο περίβλημα κατά την πλήρωση ("μέγιστη επιτρεπόμενη πίεση πλήρωσης")
- (ii) την υψηλότερη πραγματική πίεση που επιτρέπεται να αναπτυχθεί στο περίβλημα κατά την εκκένωση ("μέγιστη επιτρεπόμενη πίεση εκκένωσης") και
- (iii) την πραγματική πίεση μετρητή στην οποία υποβάλλεται το περίβλημα από τα περιεχόμενά του (περιλαμβανομένων τυχόν εξωγενών αερίων που μπορεί να περιέχει) στη μέγιστη θερμοκρασία εργασίας.

Εκτός εάν οι ειδικές απαιτήσεις για κάθε κλάση προβλέπουν διαφορετικά, η αριθμητική τιμή αυτής της πίεσης εργασίας (πίεση μετρητή) δεν θα είναι μικρότερη από την πίεση ατμών (απόλυτη πίεση) της ύλης πλήρωσης στους 50 °C.

Για περιβλήματα εξοπλισμένα με βαλβίδες ασφαλείας (με ή χωρίς εκρηγνύσιμο δίσκο), η μέγιστη πίεση εργασίας (πίεση μετρητή) θα είναι εντούτοις ίση προς την προβλεπόμενη πίεση εργασίας τέτοιων βαλβίδων ασφαλείας.

(3) "Δοκιμή στεγανότητας" σημαίνει τη δοκιμή η οποία αποτελείται από την υποβολή του περιβλήματος σε πραγματική εσωτερική πίεση ίση προς τη μέγιστη πίεση εργασίας, αλλά όχι μικρότερη από 20 kPa (0.2 bar) (πίεση μετρητή), χρησιμοποιώντας μέθοδο εγκεκριμένη από την αρμόδια αρχή.

Για περιβλήματα εξοπλισμένα με συστήματα εξαερισμού και συσκευή ασφαλείας για την αποτροπή της διαρροής των περιεχομένων εάν το περίβλημα αναποδογυριστεί, η πίεση για τη δοκιμή στεγανότητας θα είναι ίση προς τη στατική πίεση της ύλης πλήρωσης.

212 103-  
212 119

## ΤΜΗΜΑ 2. Κατασκευή

212 120 Τα περιβλήματα θα σχεδιάζονται και θα κατασκευάζονται σύμφωνα με τις διατάξεις τεχνικού κώδικα αναγνωρισμένου από την αρμόδια αρχή, θα ικανοποιούνται όμως οι ακόλουθες ελάχιστες απαιτήσεις:

(1) Τα περιβλήματα θα κατασκευάζονται από κατάλληλα μεταλλικά υλικά τα οποία, εκτός εάν προβλέπονται διαφορετικά εύρη θερμοκρασίας στις διάφορες κλάσεις, θα είναι ανθεκτικά στην ψαθιρή θραύση και στην ρηγιμάτωση διάβρωσης λόγω καταπόνησης μεταξύ των -20 °C και +50 °C.

(2) Για συγκολλημένα περιβλήματα θα χρησιμοποιούνται μόνο υλικά άψογης συγκολλησιμότητας των οποίων η επαρκής κρουστική αντοχή σε θερμοκρασία περιβάλλοντος -20 °C μπορεί να είναι εγγυημένη, ιδίως στις ραφές συγκόλλησης και τις γειτονικές τους ζώνες.

(3) Οι συγκολλήσεις θα γίνονται επιδέξια και θα προσφέρουν την πληρέστερη δυνατή ασφάλεια. Για την εκτέλεση και τον έλεγχο των σημείων συγκόλλησης, βλέπε επίσης το περιθωριακό 212 127 (6). Περιβλήματα των οποίων τα ελάχιστα πάχη τοιχωμάτων έχουν καθορισθεί σύμφωνα με το περιθωριακό 212 127 (3) και (4) θα ελέγχονται με τις μεθόδους που περιγράφονται στον ορισμό του συντελεστή συγκόλλησης 0.8.

## Προσθήκη Β.1b

**212 120** (4) Τα υλικά περιβλημάτων ή των προστατευτικών επιστρώσεών τους τα οποία έρχονται σε επαφή με τα περιεχόμενα δεν θα περιέχουν ύλες που είναι δυνατόν να αντιδράσουν επικίνδυνα με τα περιεχόμενα, να σχηματίσουν επικίνδυνες ενώσεις, ή να εξασθενήσουν σημαντικά το υλικό.

(5) Η προστατευτική επίστρωση θα σχεδιάζεται έτσι ώστε η στεγανότητα αυτής να παραμένει ακέραια, οποιαδήποτε και αν είναι η πιθανή παραμόρφωση σε κανονικές συνθήκες μεταφοράς[περιθωριακό 212 127 (1)].

(6) Εάν η επαφή μεταξύ της μεταφερόμενης ύλης και του υλικού που χρησιμοποιείται για την κατασκευή του περιβλήματος συνεπάγεται προοδευτική μείωση του πάχους των τοιχωμάτων, το πάχος αυτό θα αυξάνεται κατά την κατασκευή σε κατάλληλο βαθμό. Αυτό το πρόσθετο πάχος για την αναπλήρωση της διάβρωσης δεν θα λαμβάνεται υπόψη στον υπολογισμό του πάχους των τοιχωμάτων του περιβλήματος.

**212 121** Τα περιβλήματα, τα προσαρτήματά τους και ο λειτουργικός και κατασκευαστικός εξοπλισμός τους θα σχεδιάζονται έτσι ώστε να αντέχουν χωρίς απώλεια περιεχομένου (εκτός από την διαφυγή ποσοτήτων αερίου διαμέσου τυχόν εξαεριστήρων):

- στατικές και δυναμικές καταπονήσεις σε κανονικές συνθήκες μεταφοράς

- τις προβλεπόμενες ελάχιστες καταπονήσεις κατά τα οριζόμενα στα περιθωριακά 212 125 και 212 127.

**212 122** Η πίεση επί της οποίας βασίζεται το πάχος τοιχώματος του περιβλήματος δεν θα είναι μικρότερη από την πίεση υπολογισμού, αλλά θα λαμβάνονται επίσης υπόψη οι καταπονήσεις που αναφέρονται στο περιθωριακό 212 121.

**212 123** Εκτός εάν υπάρχει ειδική διαφορετική πρόβλεψη στις διάφορες κλάσεις, θα λαμβάνονται υπόψη τα ακόλουθα στοιχεία στο σχεδιασμό των περιβλημάτων:

(1) Περιβλήματα εκκένωσης διά της βαρύτητας προοριζόμενα για τη μεταφορά υλών με πίεση ατμών που δεν υπερβαίνει τα 110 kPa (1.1 bar) (απόλυτη πίεση) στους 50 °C θα σχεδιάζονται για πίεση υπολογισμού διπλάσια της στατικής πίεσης της προς μεταφορά ύλης αλλά όχι μικρότερη από το διπλάσιο της στατικής πίεσης του νερού.

(2) Περιβλήματα πλήρωσης με πίεση ή εκκένωσης με πίεση προοριζόμενα για τη μεταφορά υλών με πίεση ατμών που δεν υπερβαίνει τα 110 kPa (1.1 bar) (απόλυτη πίεση) στους 50 °C θα σχεδιάζονται για πίεση υπολογισμού ίση προς 1.3 φορές την πίεση πλήρωσης ή εκκένωσης.

(3) Περιβλήματα προοριζόμενα για τη μεταφορά υλών με πίεση ατμών μεγαλύτερη από 110 kPa (1.1 bar) αλλά όχι μεγαλύτερη από 175 kPa (1.75 bar) (απόλυτη πίεση) στους 50 °C, οποιοδήποτε και αν είναι το σύστημα πλήρωσης ή εκκένωσης αυτών, θα σχεδιάζονται για πίεση υπολογισμού όχι μικρότερη από 150 kPa (1.5 bar) (πίεση μετρητή) ή 1.3 φορές την πίεση πλήρωσης ή εκκένωσης, τη μεγαλύτερη από τις δύο.

(4) Περιβλήματα προοριζόμενα για τη μεταφορά υλών με πίεση ατμών μεγαλύτερη από 175 kPa (1.75 bar) (απόλυτη πίεση) στους 50 °C, οποιοδήποτε και αν είναι το σύστημα πλήρωσης ή εκκένωσης αυτών, θα σχεδιάζονται για πίεση υπολογισμού ίση προς 1.3 φορές την πίεση πλήρωσης ή εκκένωσης αλλά όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

**212 124** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για να περιέχουν ορισμένες επικίνδυνες ύλες θα είναι εφοδιασμένα με πρόσθετη προστασία, που μπορεί να παίρνει τη μορφή πρόσθετου πάχους του περιβλήματος (αυτό το πρόσθετο πάχος θα καθορίζεται αναλόγως των κινδύνων που ενυπάρχουν στις αντίστοιχες ύλες: βλέπε τις σχετικές κλάσεις) ή προστατευτικής συσκευής.

## Προσθήκη B.1b

**212 125** Στην πίεση δοκιμής, η τάση  $\sigma$  (σίγμα) στο δυσμενέστερα καταπονούμενο σημείο του περιβλήματος δεν θα υπερβαίνει τα κατά υλικό οριζόμενα όρια που προβλέπονται παρακάτω. Θα αφήνεται περιθώριο για τυχόν εξασθένηση λόγω των συγκολλήσεων. Επιπλέον, στην επιλογή του υλικού και τον καθορισμό του πάχους τοιχώματος, οι μέγιστες και ελάχιστες θερμοκρασίες πλήρωσης και εργασίας πρέπει να λαμβάνονται υπόψη.

(1) Για όλα τα μέταλλα και κράματα, η τάση  $\sigma$  στην πίεση δοκιμής θα είναι χαμηλότερη από την μικρότερη από τις τιμές που δίνουν οι ακόλουθοι τύποι:

$$\sigma \leq 0.75 Re \text{ ή } \sigma \leq 0.5 Rm$$

όπου

$$\begin{aligned} Re &= \text{φαινόμενη τάση διαρροής, ή 0.2\%} \\ &\text{ή, στην περίπτωση ωστενιτικών χαλύβων, 1\%} \\ Rm &= \text{ελάχιστη εφελκυστική αντοχή.} \end{aligned}$$

Λόγοι του  $Re/Rm$  που υπερβαίνουν το 0.85 δεν επιτρέπονται για χάλυβες που χρησιμοποιούνται στην κατασκευή συγκολλημένων δεξαμεμών.

Για τις τιμές των  $Re$  και  $Rm$  προς χρήση θα καθορίζονται ελάχιστες τιμές αναλόγως των προδιαγραφών των υλικών. Εάν δεν υπάρχει προδιαγραφή υλικού για το εν λόγω μέταλλο ή κράμα, οι τιμές των  $Re$  και  $Rm$  που χρησιμοποιούνται θα εγκρίνονται από την αρμόδια αρχή ή από φορέα ορισμένο από εκείνη την αρχή.

Όταν χρησιμοποιούνται ωστενιτικοί χάλυβες, οι καθορισμένες ελάχιστες τιμές σύμφωνα με τις προδιαγραφές του υλικού μπορεί να υπερβαίνονται κατά 15% το πολύ, εάν αυτές οι ανώτερες τιμές βεβαιώνονται στο πιστοποιητικό επιθεώρησης.

Οι τιμές που καθορίζονται στο πιστοποιητικό θα λαμβάνονται ως βάση για τον καθορισμό του λόγου  $Re/Rm$  σε κάθε περίπτωση.

(2) Όποτε η μέγιστη θερμοκρασία εργασίας του περιβλήματος δεν υπερβαίνει τους 50 °C, μπορεί να χρησιμοποιούνται οι τιμές των  $Re$  και  $Rm$  στους 20°C όταν η θερμοκρασία εργασίας υπερβαίνει τους 50 °C, θα χρησιμοποιούνται οι τιμές της μέγιστης θερμοκρασίας εργασίας (θερμοκρασίας υπολογισμού).

(3) Για τον χάλυβα, η επιμήκυνση κατά τη θραύση, σε ποσοστό επί τοις εκατό, δεν θα είναι μικρότερη από

$$10\,000 \cdot$$

$$\frac{\text{καθορισμένη εφελκυστική αντοχή σε N/mm}^2}{\text{}}^2$$

αλλά σε κάθε περίπτωση για λεπτόκοκκους χάλυβες δεν θα είναι μικρότερη από 16% και για άλλους χάλυβες δεν θα είναι μικρότερη από 20%. Για κράματα αλουμινίου η επιμήκυνση κατά τη θραύση δεν θα είναι μικρότερη από 12% <sup>1/</sup>.

<sup>1/</sup> Στην περίπτωση μετάλλου σε φύλλο, ο άξονάς του εφελκυστικού δοκιμίου θα είναι σε ορθή γωνία προς την κατεύθυνση κυλίσεως. Η μόνιμη επιμήκυνση κατά τη θραύση θα μετράται σε δοκίμια κυκλικής διατομής στα οποία το μήκος δοκιμίου  $l$  ισούται προς πέντε φορές τη διάμετρο  $d$  ( $l = 5d$ ) εάν χρησιμοποιούνται δοκίμια ορθογωνικής διατομής, το μήκος θα υπολογίζεται από τον τύπο

$$l = 5,65 \sqrt{F_0 \text{ Error! Main Document Only.}}$$

## Προσθήκη Β.1b

**212 126** Όλα τα μέρη ενός εμπορευματοκιβωτίου-δεξαμενής που προορίζεται για τη μεταφορά υγρών με σημείο ανάφλεξης όχι μεγαλύτερο από 61 °C, ή για τη μεταφορά εύφλεκτων αερίων, θα είναι ικανά να γειωθούν ηλεκτρικά. Θα αποφεύγεται η επαφή με οποιοδήποτε μέταλλο που θα μπορούσε να υποβοηθήσει ηλεκτροχημική οξειδωση.

**212 127** Τα εμπορευματοκιβώτια-δεξαμενές θα μπορούν να αντέχουν τις καταπονήσεις που ορίζονται στο (1) και το πάχος τοιχώματος των περιβλημάτων θα είναι τουλάχιστον αυτό που προβλέπεται στα (2) έως (5) παρακάτω.

(1) Τα εμπορευματοκιβώτια-δεξαμενές και οι προσδέσεις τους θα μπορούν, υπό τη μέγιστη επιτρεπόμενη φόρτιση να απορροφούν τάσεις ίσες προς εκείνες που ασκούνται από:

- κατά τη διεύθυνση κίνησης: το διπλάσιο του συνολικού βάρους
- οριζοντίως σε ορθή γωνία προς την διεύθυνση κίνησης: το συνολικό βάρος (όπου η διεύθυνση κίνησης δεν καθορίζεται σαφώς, το διπλάσιο του συνολικού βάρους σε κάθε κατεύθυνση)
- κατακόρυφα προς τα άνω: το συνολικό βάρος και
- κατακόρυφα προς τα κάτω: το διπλάσιο του συνολικού βάρους.

Για κάθε μία δύναμη οι συντελεστές ασφαλείας προς τήρηση θα είναι οι παρακάτω:

- για μέταλλα με σαφώς ορισμένο σημείο διαρροής: συντελεστής ασφαλείας 1.5 σε σχέση με την εγγυημένη φαινόμενη τάση διαρροής ή,
- για μέταλλα χωρίς σαφώς ορισμένο σημείο διαρροής: συντελεστής ασφαλείας 1.5 σε σχέση με την εγγυημένη τάση δοκιμής 0.2%, και στην περίπτωση ωστενιτικών χαλύβων η μέγιστη επιμήκυνση 1%.

(2) Το πάχος του κυλινδρικού τοιχώματος του περιβλήματος και των άκρων και πλακών κάλυψης δεν θα είναι μικρότερο από την τιμή που καθορίζεται από τους ακόλουθους τύπους:

$$e = \frac{P_{MPa} \times D}{2 \times \sigma \times \lambda} \quad (\text{σε mm})$$

$$e = \frac{P_{bar} \times D}{2 \times \sigma \times \lambda} \quad (\text{σε mm})$$

όπου:

$P_{MPa}$  = πίεση υπολογισμού σε MPa

$P_{bar}$  = πίεση υπολογισμού σε bar

$D$  = εσωτερική διάμετρος περιβλήματος σε mm

$\sigma$  = επιτρεπόμενη τάση, κατά τα οριζόμενα στο περιθωριακό 212 125(1) και (2), σε  $N/mm^2$

$\lambda$  = συντελεστής που δεν υπερβαίνει το 1, με ανοχή για τυχόν εξασθένηση λόγω συγκολλήσεων.

Το πάχος σε καμία περίπτωση δεν θα είναι μικρότερο από την τιμή που προβλέπεται στα (3) και (4) παρακάτω.

## Προσθήκη Β.1b

212 127 (3) Τα τοιχώματα, τα άκρα και οι πλάκες κάλυψης περιβλημάτων με διάμετρο όχι μεγαλύτερη (συνεχ.) από  $1.80 \text{ m}^{2/}$  δεν θα είναι μικρότερα από 5 mm σε πάχος εάν είναι από μαλακό χάλυβα <sup>3/</sup> (σύμφωνα με τις διατάξεις του περιθωριακού 212 125) ή ισοδύναμου πάχους εάν είναι από άλλο μέταλλο. Όπου η διάμετρος είναι μεγαλύτερη από  $1.80 \text{ m}^{2/}$ , το πάχος αυτό θα αυξάνεται σε 6 mm εκτός από την περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά κονιαδών ή κοκκωδών υλών, εάν το περίβλημα είναι από μαλακό χάλυβα <sup>3/</sup> (σύμφωνα με τις διατάξεις του περιθωριακού 212 125) ή σε ισοδύναμο πάχος εάν η δεξαμενή είναι από άλλο μέταλλο.

Όποιο μέταλλο και αν χρησιμοποιείται, το πάχος του τοιχώματος του περιβλήματος δεν θα είναι σε καμία περίπτωση μικρότερο από 3 mm.

"Ισοδύναμο πάχος" σημαίνει το πάχος που υπολογίζεται με τον ακόλουθο τύπο:

$$e_1 = \frac{21.4 x e_0}{\sqrt[3]{R m_1 x A_1}}^{4/}$$

(4) Όπου παρέχεται προστασία του περιβλήματος έναντι βλάβης, η αρμόδια αρχή μπορεί να επιτρέψει την μείωση των προαναφερομένων ελάχιστων παχών αναλογικά προς την προσφερόμενη προστασία: εντούτοις, τα πάχη αυτά δεν θα είναι μικρότερα από 3 mm στην περίπτωση του μαλακού χάλυβα, <sup>3/</sup> ή από ισοδύναμο πάχος στην περίπτωση άλλων υλικών, για περιβλήματα όχι μεγαλύτερα από 1.80 m σε διάμετρο <sup>2/</sup>. Για περιβλήματα διαμέτρου που υπερβαίνει τα 1.80 m <sup>2/</sup> αυτό το ελάχιστο πάχος θα αυξάνεται σε 4 mm στην περίπτωση μαλακού χάλυβα <sup>3/</sup> και σε ισοδύναμο πάχος στην περίπτωση άλλων μετάλλων.

"Ισοδύναμο πάχος" σημαίνει το πάχος που λαμβάνεται από τον ακόλουθο τύπο:

$$e_1 = \frac{21.4 x e_0}{\sqrt[3]{R m_1 x A_1}}^{4/}$$

(5) Η προστασία που αναφέρεται στο (4) μπορεί να περιλαμβάνει συνολική εξωτερική κατασκευαστική προστασία όπως στην κατασκευή "σάντουιτς", όπου η επένδυση στερεώνεται στο περίβλημα, ή κατασκευή στην οποία το περίβλημα υποστηρίζεται από πλήρη σκελετό που περιλαμβάνει διαμήκη και εγκάρσια δομικά μέλη, ή κατασκευή διπλού τοιχώματος.

<sup>2/</sup> Για περιβλήματα μη κυκλικής διατομής, παραδείγματος χάριν κηρωσιδής ή ελλειψοειδής περιβλήματα, οι αναγραφόμενες διαμέτροι θα αντιστοιχούν σε εκείνες που υπολογίζονται με βάση κυκλική διατομή του ίδιου εμβαδού. Για τέτοια σχήματα διατομής η ακτίνα κυρτότητας του τοιχώματος του περιβλήματος δεν θα υπερβαίνει τα 2 000 mm στα πλάγια ή 3 000 mm στο άνω και κάτω μέρος.

<sup>3/</sup> "Μαλακός χάλυβας" σημαίνει χάλυβα με ελάχιστη αντοχή θραύσεως μεταξύ  $360 \text{ N/mm}^2$  και  $440 \text{ N/mm}^2$ .

<sup>4/</sup> Ο τύπος αυτός προκύπτει από τον γενικό τύπο:

$$e_1 = e_0 \sqrt[3]{\frac{R m_0 x A_0}{R m_1 x A_1}}$$

στον οποίο:

$R m_0$  = 360,

$A_0$  = 27 για τον μαλακό χάλυβα αναφοράς

$R m_1$  = ελάχιστη εφελκυστική αντοχή του επιλεγμένου μετάλλου, σε  $\text{N/mm}^2$  και

$A_1$  = ελάχιστη επιμήκυνση του επιλεγμένου μετάλλου κατά τη θραύση λόγω εφελκυστικής καταπόνησης, σε ποσοστό τοις εκατό.

## Προσθήκη Β.1b

**212 127 (συνεχ.)** Όπου τα περιβλήματα είναι κατασκευασμένα με διπλά τοιχώματα, με τον ενδιάμεσο χώρο κενωμένο από αέρα, το συνολικό πάχος του εξωτερικού μεταλλικού τοιχώματος και του τοιχώματος του περιβλήματος θα αντιστοιχούν στο ελάχιστο πάχος τοιχώματος που προβλέπεται στο (3), και το πάχος τοιχώματος του ίδιου του περιβλήματος δεν θα είναι μικρότερο από το ελάχιστο πάχος που προβλέπεται στο (4).

Όπου τα περιβλήματα είναι κατασκευασμένα με διπλά τοιχώματα με ενδιάμεση στρώση στερεών υλικών πάχους τουλάχιστον 50 mm, το εξωτερικό τοίχωμα θα έχει πάχος όχι μικρότερο από 0.5 mm εάν είναι κατασκευασμένο από μαλακό χάλυβα <sup>5/</sup> ή τουλάχιστον 2 mm εάν είναι κατασκευασμένο από πλαστικό υλικό ενισχυμένο με ίνες γυαλιού. Στερεός αφρός με ικανότητα απορρόφησης κρούσης παρόμοια, παραδείγματος χάριν, με αυτή του αφρού πολουρεθάνης, μπορεί να χρησιμοποιείται ως η ενδιάμεση στρώση στερεού υλικού.

(6) Η έγκριση του κατασκευαστή για τη διενέργεια εργασιών συγκόλλησης θα αναγνωρίζεται από την αρμόδια αρχή. Η συγκόλληση θα γίνεται από ειδικευμένους συγκολλητές με διαδικασία της οποίας η αποτελεσματικότητα (περιλαμβομένων τυχόν απαιτούμενων θερμικών διεργασιών) θα έχει αποδειχθεί με δοκιμή. Μη καταστρεπτικές δοκιμές θα διενεργούνται με ραδιογράφημα ή με υπερήχους και θα πρέπει να επιβεβαιώνουν ότι η ποιότητα της συγκόλλησης είναι κατάλληλη έναντι των καταπονήσεων.

Στον καθορισμό του πάχους των τοιχωμάτων του περιβλήματος σύμφωνα με το (2), πρέπει να υιοθετούνται οι ακόλουθες τιμές του συντελεστή λ (λάμδα) για τις συγκολλήσεις:

- 0.8: όπου τα κορδόνια συγκόλλησης επιθεωρούνται όσο αυτό είναι δυνατό και στις δύο όψεις και υποβάλλονται σε μη καταστρεπτικό σημειακό έλεγχο με ειδική φροντίδα στις συνδέσεις
- 0.9: όπου όλα τα επιμήκη κορδόνια συγκόλλησης σε όλο το μήκος τους, όλες οι συνδέσεις, 25% των κυκλικών σημείων, και οι συγκολλήσεις για τη συναρμολόγηση ειδών εξοπλισμού μεγάλης διαμέτρου υποβάλλονται σε μη καταστρεπτικούς ελέγχους. Τα κορδόνια συγκόλλησης θα ελέγχονται οπτικά και στις δύο όψεις στο βαθμό που αυτό είναι δυνατό
- 1.0: όπου όλα τα κορδόνια υποβάλλονται σε μη καταστρεπτικούς ελέγχους και επιθεωρούνται οπτικά κατά το δυνατόν και στις δύο πλευρές. Θα λαμβάνεται δοκίμιο συγκόλλησης.

Όπου η αρμόδια αρχή έχει αμφιβολίες σχετικά με την ποιότητα των κορδονιών συγκόλλησης, μπορεί να απαιτήσει πρόσθετους ελέγχους.

(7) Θα λαμβάνονται μέτρα για την προστασία των περιβλημάτων έναντι του κινδύνου παραμόρφωσης ως αποτέλεσμα αρνητικής εσωτερικής πίεσης.

Εκτός εάν προβλέπεται διαφορετικά στις ειδικές διατάξεις για τις επιμέρους κλάσεις, αυτά τα περιβλήματα μπορεί να έχουν βαλβίδες για την αποφυγή της μη αποδεκτής αρνητικής εσωτερικής πίεσης, χωρίς τη μεσολάβηση εκρηγνυόμενων δίσκων.

(8) Η θερμομόνωση θα σχεδιάζεται έτσι ώστε να μην παρεμποδίζει την πρόσβαση στις συσκευές πλήρωσης και εκκένωσης και τις βαλβίδες ασφαλείας, ούτε τη λειτουργία τους.

212 128-  
212 129

<sup>5/</sup> Βλέπε υποσημείωση <sup>3/</sup>.

## Προσθήκη Β.1b

## ΤΜΗΜΑ 3. Είδη εξοπλισμού

**212 130** Τα είδη εξοπλισμού θα είναι διαρρυθμισμένα έτσι ώστε να είναι προστατευμένα έναντι του κινδύνου να ξεβιδωθούν ή να πάθουν βλάβη κατά τη μεταφορά ή τον χειρισμό. Θα επιδεικνύουν κατάλληλο βαθμό ασφαλείας συγκρίσιμο με αυτόν των ίδιων των περιβλημάτων και ιδίως:

- θα είναι συμβατές με τις μεταφερόμενες ύλες
- θα ικανοποιούν τις απαιτήσεις του περιθωριακού 212 121.

Η στεγανότητα του λειτουργικού εξοπλισμού θα εξασφαλίζεται ακόμη και σε περίπτωση αναποδογύρισματος του εμπορευματοκιβωτίου-δεξαμενής. Τα παρεμβύσματα (φλάντζες) θα κατασκευάζονται από υλικό συμβατό με την μεταφερόμενη ύλη και θα αντικαθίστανται μόλις μειωθεί η αποτελεσματικότητά τους, παραδείγματος χάριν λόγω γήρανσης. Τα παρεμβύσματα (φλάντζες) που εξασφαλίζουν τη στεγανότητα των εξαρτημάτων τα οποία χρειάζονται χειρισμό κατά την κανονική χρήση των εμπορευματοκιβωτίων-δεξαμενών, θα σχεδιάζονται και θα τοποθετούνται κατά τέτοιο τρόπο ώστε να μην τους προκαλεί βλάβη ο χειρισμός των εξαρτημάτων στα οποία είναι ενσωματωμένα.

**212 131** Κάθε εμπορευματοκιβώτιο-δεξαμενή που εκκενώνεται από τον πυθμένα και στην περίπτωση εμπορευματοκιβωτίου-δεξαμενής με διαμερίσματα που εκκενώνονται από τον πυθμένα, κάθε διαμέρισμα, θα είναι εξοπλισμένο με δύο ανεξάρτητες μεταξύ τους δικλείδες, η πρώτη ως εσωτερική βαλβίδα κλεισίματος<sup>6/</sup> στερεωμένη απευθείας στο περίβλημα και η δεύτερη ως βαλβίδα υπερχειλίστης ή άλλη ισοδύναμη συσκευή<sup>7/</sup>, τοποθετημένες σε σειρά, από μία σε κάθε άκρο του στομίου του σωλήνα εκκένωσης. Η εκκένωση από τον πυθμένα σε περιβλήματα προοριζόμενα για τη μεταφορά κοινωδών ή κοκκωδών υλών μπορεί να πραγματοποιείται με εξωτερική σωλήνωση με βαλβίδα κλεισίματος εάν είναι κατασκευασμένη από σφυρήλατο μεταλλικό υλικό. Επιπλέον, τα ανοίγματα θα είναι σε θέση να κλειστούν με βιδωτά πώματα, κενά παρεμβύσματα (φλάντζες) ή άλλες εξίσου αποτελεσματικές συσκευές.

Η εσωτερική βαλβίδα κλεισίματος θα μπορεί να ρυθμίζεται από τα άνω ή από τα κάτω. Η ρύθμισή της - ανοικτή ή κλειστή - θα μπορεί κατά το δυνατόν σε κάθε περίπτωση να επαληθεύεται από το έδαφος. Εσωτερικές συσκευές ελέγχου με δικλείδα θα σχεδιάζονται έτσι ώστε να αποτρέπεται μη ηθελημένο άνοιγμα λόγω κρούσης ή ακούσιας ενέργειας.

Η εσωτερική συσκευή κλεισίματος θα συνεχίσει να λειτουργεί σε περίπτωση βλάβης της εξωτερικής συσκευής ελέγχου.

Για την αποφυγή οποιασδήποτε απώλειας των περιεχομένων σε περίπτωση βλάβης των εξωτερικών εξαρτημάτων εκκένωσης (σωλήνες, εγκάρσιες συσκευές κλεισίματος), η εσωτερική δικλείδα και η έδρασή της θα προστατεύονται έναντι του κινδύνου να ξεβιδωθούν λόγω εξωτερικών καταπονήσεων ή θα σχεδιάζονται έτσι ώστε να τις αντέχουν. Οι συσκευές πλήρωσης και εκκένωσης (περιλαμβανομένων των παρεμβυσμάτων ή βιδωτών πωμάτων) και τα προστατευτικά πώματα (εάν υπάρχουν) θα μπορούν να ασφαλισθούν έναντι οποιουδήποτε μη ηθελημένου ανοίγματος.

Η θέση και/ή η φορά κλεισίματος των βαλβίδων θα είναι προφανείς.

Το περίβλημα ή καθένα από τα διαμερίσματά του θα είναι εφοδιασμένο με άνοιγμα επαρκούς μεγέθους ώστε να επιτρέπουν την επιθεώρηση.

<sup>6/</sup> Εντούτοις, στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά ορισμένων υλών κρυσταλλοποιούμενων ή με υψηλό ιξώδες, υγροποιημένων αερίων βαθιάς καταψύξεως και περιβλημάτων εξοπλισμένων με επίχρισμα από εβονίτη ή θερμοπλαστικό, η εσωτερική δικλείδα μπορεί να αντικαθίσταται από εξωτερική δικλείδα με πρόσθετη προστασία.

<sup>7/</sup> Στην περίπτωση εμπορευματοκιβωτίων-δεξαμενών με χωρητικότητα μικρότερη από 1 m<sup>3</sup>, η βαλβίδα υπερχειλίστης ή άλλη ισοδύναμη συσκευή θα αντικαθίσταται από ένα κενό παρέμβυσμα (φλάντζα)

## Προσθήκη Β.1b

- 212 132** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υλών για τα οποία όλα τα ανοίγματα είναι πάνω από τη στάθμη της επιφάνειας του υγρού μπορεί να είναι εξοπλισμένα, στο κάτω μέρος του αμαξώματος, με άνοιγμα καθαρισμού (fist-hole). Το άνοιγμα αυτό θα μπορεί να σφραγισθεί με παρέμβυσμα (φλάντζα) κλεισμένο έτσι ώστε να είναι στεγανή, ο σχεδιασμός της οποίας θα εγκρίνεται από την αρμόδια αρχή ή από φορέα ορισμένο από την αρχή αυτή.
- 212 133** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών όχι μεγαλύτερη από 110 kPa (1.1 bar) (απόλυτη πίεση) στους 50 °C θα έχουν σύστημα εξαερισμού και συσκευή ασφαλείας για να αποτρέπεται η διαφυγή των περιεχομένων από το περίβλημα εάν το εμπορευματοκιβώτιο-δεξαμενή ανατραπεί ή θα συμφωνούν με τις απαιτήσεις του περιθωριακού 212 134 ή 212 135 παρακάτω.
- 212 134** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών μεγαλύτερη από 110 kPa (1.1 bar) και όχι μεγαλύτερη από 175 kPa (1.75 bar) (απόλυτη πίεση) στους 50 °C θα έχουν βαλβίδα ασφαλείας ρυθμισμένη σε πίεση όχι μικρότερη από 150 kPa (1.5 bar) (πίεση μετρητή) και τέτοια ώστε να είναι εντελώς ανοικτή σε πίεση που δεν υπερβαίνει την πίεση δοκιμής ή θα συμφωνούν με τις απαιτήσεις του περιθωριακού 212 135.
- 212 135** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υγρών με πίεση ατμών μεγαλύτερη από 175 kPa (1.75 bar) και όχι μεγαλύτερη από 300 kPa (3 bar) (απόλυτη πίεση) στους 50 °C θα είναι εξοπλισμένα με βαλβίδα ασφαλείας ρυθμισμένη σε πίεση όχι μικρότερη από 300 kPa (3 bar) (πίεση μετρητή) και τέτοια ώστε να είναι εντελώς ανοικτή σε πίεση που δεν υπερβαίνει την πίεση δοκιμής ή θα είναι ερμητικά κλειστά <sup>8/</sup>.
- 212 136** Κινητά μέρη όπως καλύμματα, κλεισίματα, κ.λπ., τα οποία είναι δυνατό να έλθουν σε τριβική ή κρουστική επαφή με περιβλήματα αλουμινίου προοριζόμενα για τη μεταφορά εύφλεκτων υγρών με σημείο ανάφλεξης όχι μεγαλύτερο από 61 °C ή για τη μεταφορά εύφλεκτων αερίων δεν μπορεί να κατασκευάζονται από απροστάτευτο οξειδούμενο χάλυβα.

**212 137-  
212 139**

**ΤΜΗΜΑ 4. Έγκριση τύπου**

- 212 140** Η αρμόδια αρχή ή φορέας ορισμένος από την αρχή αυτή θα εκδίδει σχετικά με κάθε νέο τύπο εμπορευματοκιβωτίου-δεξαμενής πιστοποιητικό που να βεβαιώνει ότι το πρότυπο εμπορευματοκιβώτιο-δεξαμενή, περιλαμβομένων των προσδέσεων, το οποίο έχει επιθεωρήσει είναι κατάλληλο για τον σκοπό για τον οποίο προορίζεται και ικανοποιεί τις κατασκευαστικές απαιτήσεις του Τμήματος 2, τις απαιτήσεις εξοπλισμού του Τμήματος 3 και τους ειδικούς όρους για τις κλάσεις των μεταφερομένων υλών. Εάν τα εμπορευματοκιβώτια-δεξαμενές κατασκευάζονται σε σειρά χωρίς τροποποίηση, η έγκριση αυτή θα έχει ισχύ για ολόκληρη τη σειρά. Τα αποτελέσματα των δοκιμών, οι ύλες και/ή οι ομάδες υλών για τη μεταφορά των οποίων εγκρίνεται το εμπορευματοκιβώτιο-δεξαμενή και ο αριθμός έγκρισης τύπου του προτύπου θα αναφέρονται σε έκθεση δοκιμής. Οι ύλες μιας ομάδας υλών θα είναι παρόμοιου είδους και εξίσου συμβατές με τα χαρακτηριστικά του περιβλήματος. Οι επιτρεπόμενες ύλες ή ομάδες υλών θα αναφέρονται στην έκθεση δοκιμής, με τα χημικά τους ονόματα ή την αντίστοιχη συνολική επικεφαλίδα στον κατάλογο υλών, και με την Κλάση και τον αριθμό είδους. Ο αριθμός έγκρισης θα αποτελείται από το διακριτικό σήμα <sup>9/</sup> του Κράτους στην επικράτεια του οποίου δόθηκε η έγκριση, και τον αριθμό εγγραφής.

<sup>8/</sup> "Ερμητικά κλεισμένα περιβλήματα" σημαίνει τα περιβλήματα τα ανοίγματα των οποίων κλείνονται ερμητικά και τα οποία δεν είναι εξοπλισμένα με βαλβίδες ασφαλείας, ασφαλιστικούς δίσκους ή άλλες παρόμοιες συσκευές ασφαλείας. Περιβλήματα που έχουν βαλβίδες ασφαλείας των οποίων προηγείται ασφαλιστικός δίσκος θα θεωρούνται ότι είναι ερμητικά κλεισμένα.

<sup>9/</sup> Διακριτικό σήμα προς χρήση στη διεθνή οδική κυκλοφορία προβλεπόμενο από την Σύμβαση για την Οδική Κυκλοφορία (Βιέννη, 1968).

## Προσθήκη Β.1b

212 141-  
212 149

## ΤΜΗΜΑ 5. Δοκιμές

**212 150** Τα περιβλήματα και ο εξοπλισμός τους υποβάλλονται είτε από κοινού ή χωριστά σε αρχική επιθεώρηση πριν να τεθούν σε λειτουργία. Η επιθεώρηση αυτή θα περιλαμβάνει:

- έλεγχο της συμφωνίας προς το εγκεκριμένο πρότυπο<sup>10/</sup>
- έλεγχο των χαρακτηριστικών σχεδιασμού<sup>10/</sup>
- εξέταση των εσωτερικών και εξωτερικών συνθηκών
- δοκιμή υδραυλικής πίεσης<sup>11/</sup> στην πίεση δοκιμής που αναγράφεται στην πινακίδα στοιχείων και
- έλεγχο της ικανοποιητικής λειτουργίας του εξοπλισμού.

Η δοκιμή υδραυλικής πίεσης θα διενεργείται πριν την εγκατάσταση της θερμομόνωσης που τυχόν είναι αναγκαία. Εάν τα περιβλήματα και ο εξοπλισμός τους δοκιμάζονται χωριστά, θα υποβάλλονται από κοινού σε δοκιμή στεγανότητας σύμφωνα με το περιθωριακό 212 102 (3).

**212 151** Τα περιβλήματα και ο εξοπλισμός τους θα υποβάλλονται σε περιοδικές επιθεωρήσεις σε σταθερά διαστήματα. Οι περιοδικές επιθεωρήσεις θα περιλαμβάνουν εξωτερική και εσωτερική εξέταση και, ως γενικό κανόνα, δοκιμή υδραυλικής πίεσης<sup>11/</sup>. Η επένδυση για θερμική ή άλλη μόνωση θα απομακρύνεται μόνο στο βαθμό που απαιτείται για την αξιόπιστη αποτίμηση των χαρακτηριστικών του περιβλήματος.

Στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά κονιωδών ή κοκκωδών υλών, και με τη σύμφωνη γνώμη του εγκεκριμένου από την αρμόδια αρχή ειδικού, οι περιοδικές δοκιμές υδραυλικής πίεσης μπορεί να παραλείπονται και να αντικαθίστανται από δοκιμές στεγανότητας σύμφωνα με το περιθωριακό 212 102 (3).

Τα μέγιστα διαστήματα μεταξύ επιθεωρήσεων θα είναι πέντε έτη.

Εμπορευματοκιβώτια-δεξαμενές, κενά, ακαθάριστα, μπορούν επίσης να μεταφέρονται μετά την λήξη αυτής της περιόδου για τη διενέργεια της δοκιμής.

**212 152** Επιπλέον, θα διενεργούνται δοκιμή στεγανότητας του περιβλήματος με τον εξοπλισμό του σύμφωνα με το περιθωριακό 212 102 (3) και έλεγχος της ικανοποιητικής λειτουργίας ολοκλήρου του εξοπλισμού τουλάχιστον κάθε δύομισι χρόνια.

**212 153** Όποτε η ασφάλεια του περιβλήματος ή του εξοπλισμού του μπορεί να έχει μειωθεί συνεπεία επισκευών, μετατροπών ή ατυχήματος, θα διενεργείται έκτακτος έλεγχος.

<sup>10/</sup> Ο έλεγχος των χαρακτηριστικών σχεδιασμού θα περιλαμβάνει επίσης, για περιβλήματα που απαιτούν πίεση δοκιμής 1 MPa (10 bar) ή μεγαλύτερη, τη λήψη δοκιμών συγκόλλησης (δειγμάτων εργασίας) σύμφωνα με τις δοκιμές στην Προσθήκη Β.1d.

<sup>11/</sup> Σε ειδικές περιπτώσεις και με τη σύμφωνη γνώμη του εγκεκριμένου από την αρμόδια αρχή ειδικού, η δοκιμή υδραυλικής πίεσης μπορεί να αντικατασταθεί από δοκιμή πίεσης χρησιμοποιώντας άλλο υγρό ή αέριο, όπου τέτοια εργασία δεν συνεπάγεται τυχόν κίνδυνο.

## Προσθήκη Β.1b

**212 154** Οι δοκιμές, επιθεωρήσεις και έλεγχοι σύμφωνα με τα περιθωριακά 212 150 έως 212 153 θα διενεργούνται από τον εγκεκριμένο από την αρμόδια αρχή ειδικό. Θα εκδίδονται πιστοποιητικά που θα εμφανίζουν τα αποτελέσματα των εργασιών αυτών. Αυτά τα πιστοποιητικά θα αναφέρονται στον κατάλογο υλών των οποίων επιτρέπεται η μεταφορά σε αυτό το περιβλήμα σύμφωνα με το 212 140.

**212 155-  
212 159**

**ΤΜΗΜΑ 6. Επισήμανση**

**212 160** Κάθε εμπορευματοκιβώτιο-δεξαμενή θα είναι εξοπλισμένο με πινακίδα από μέταλλο ανθεκτικό στην οξείδωση μόνιμα προσδεδεμένο στο περιβλήμα σε μέρος εύκολα προσπελάσιμο για επιθεώρηση. Τα ακόλουθα στοιχεία, τουλάχιστον, θα σημειώνονται στην πινακίδα με σφράγιση ή άλλη παρόμοια μέθοδο. Τα στοιχεία αυτά μπορεί να χαρασσονται απευθείας στα τοιχώματα του ίδιου του περιβλήματος εάν τα τοιχώματα είναι ενισχυμένα έτσι ώστε να μη μειώνεται η αντοχή του περιβλήματος:

- αριθμός έγκρισης
- επωνυμία ή σήμα του κατασκευαστή
- αύξων αριθμός του κατασκευαστή
- έτος κατασκευής
- πίεση δοκιμής <sup>12/</sup> (πίεση μετρητή)
- χωρητικότητα <sup>12/</sup> - στην περίπτωση εμπορευματοκιβωτίου-δεξαμενής πολλαπλών στοιχείων: χωρητικότητα του κάθε στοιχείου
- θερμοκρασία σχεδιασμού <sup>12/</sup> (μόνο εάν είναι άνω των 50 °C ή κάτω των -20 °C)
- ημερομηνία (μήνας και έτος) της αρχικής δοκιμής και της πιο πρόσφατης περιοδικής δοκιμής σύμφωνα με τα περιθωριακά 212 150 και 212 151 και
- σφραγίδα του ειδικού που διενεργεί τις δοκιμές.
- υλικό του περιβλήματος και, όπου υπάρχει, της προστατευτικής επίστρωσης.

Επιπλέον θα αναγράφεται η μέγιστη πίεση εργασίας σε περιβλήματα που πληρούνται ή εκκενώνονται με πίεση.

**212 161** Τα ακόλουθα στοιχεία θα αναγράφονται είτε στο ίδιο το εμπορευματοκιβώτιο-δεξαμενή είτε σε πινακίδα:

- επωνυμίες του ιδιοκτήτη και του χειριστή
- χωρητικότητα του περιβλήματος <sup>12/</sup>
- απόβαρο <sup>12/</sup>
- το μέγιστο επιτρεπόμενο μικτό βάρος <sup>12/</sup> και
- η ονομασία της μεταφερόμενης ύλης <sup>13/</sup>.

<sup>12/</sup> Οι μονάδες μέτρησης πρέπει να αναφέρονται μετά τις αριθμητικές τιμές.

<sup>13/</sup> Συνεκδοχική περιγραφή που καλύπτει ομάδα υλών παρόμοιας φύσης και εξίσου συμβατών με τα χαρακτηριστικά του περιβλήματος μπορεί να δίνεται αντί της ονομασίας.

2060

**Προσθήκη Β.1b**

Επιπλέον, τα εμπορευματοκιβώτια-δεξαμενές θα φέρουν τις προβλεπόμενες ετικέτες αναγγελίας κινδύνου.

## Προσθήκη Β.1b

212 162-  
212 169

## ΤΜΗΜΑ 7. Λειτουργία

- 212 170** Κατά τη μεταφορά, τα εμπορευματοκιβώτια-δεξαμενές θα στερεώνονται στο φέρον όχημα κατά τρόπο ώστε να προστατεύονται επαρκώς από τα εξαρτήματα του φέροντος οχήματος ή του ίδιου του εμπορευματοκιβωτίου-δεξαμενής έναντι πλευρικής και κατά μήκος κρούσης και έναντι ανατροπής <sup>14/</sup>. Εάν τα περιβλήματα, περιλαμβανομένου του λειτουργικού εξοπλισμού, κατασκευάζονται έτσι ώστε να αντέχουν την κρούση ή την ανατροπή δεν χρειάζεται να προστατεύονται με αυτόν τον τρόπο. Το πάχος των τοιχωμάτων του περιβλήματος, σε όλη την περίοδο χρήσης του, δεν θα υπολείπεται της ελάχιστης τιμής που απαιτείται από το περιθωριακό 212 127 (2).
- 212 171** Τα περιβλήματα δεν θα φορτώνονται με επικίνδυνες ύλες εκτός από εκείνες για τη μεταφορά των οποίων έχουν εγκριθεί και οι οποίες, ερχόμενες σε επαφή με τα υλικά του περιβλήματος, τα παρεμβύσματα (φλάντζες), τον εξοπλισμό και τις προστατευτικές επιστρώσεις, δεν είναι δυνατόν να αντιδράσουν επικίνδυνα με αυτά, να σχηματίσουν επικίνδυνα προϊόντα ή να εξασθενήσουν αισθητά το υλικό. Δεν θα μεταφέρονται τρόφιμα σε αυτά τα περιβλήματα εκτός εάν έχουν ληφθεί τα αναγκαία μέτρα για να αποτραπεί οποιαδήποτε βλάβη στη δημόσια υγεία.
- 212 172** (1) Οι ακόλουθοι βαθμοί πλήρωσης δεν θα υπερβαίνουν σε εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υγρών σε θερμοκρασίες περιβάλλοντος:

- (a) για εύφλεκτες ύλες χωρίς πρόσθετους κινδύνους (π.χ. τοξικότητα ή οξείδωση), σε εμπορευματοκιβώτια-δεξαμενές με σύστημα εξαερισμού ή με βαλβίδες ασφαλείας (ακόμη και όπου προηγείται εκρηγνύομενος δίσκος):

$$\text{βαθμός πλήρωσης} = \frac{100}{1 + \alpha (50 - t_F)} \% \text{ χωρητικότητας}$$

- (b) για τοξικές ή διαβρωτικές ύλες (εύφλεκτες ή μη) σε εμπορευματοκιβώτια-δεξαμενές με σύστημα εξαερισμού ή με βαλβίδες ασφαλείας (ακόμη και όπου προηγείται εκρηγνύομενος δίσκος):

$$\text{βαθμός πλήρωσης} = \frac{98}{1 + \alpha (50 - t_F)} \% \text{ χωρητικότητας}$$

<sup>14/</sup>

## Παραδείγματα προστασίας περιβλημάτων:

1. προστασία έναντι πλευρικής πρόσκρουσης μπορεί, παραδείγματος χάριν, να αποτελείται από επιμήκεις ράβδους (μπάρες) που προστατεύουν το περίβλημα και στις δύο πλευρές στο επίπεδο της μέσης γραμμής.
2. Προστασία έναντι ανατροπής μπορεί, παραδείγματος χάριν, να αποτελείται από ενισχυτικούς δακτυλίους ή ράβδους (μπάρες) στερεωμένες εγκάρσια σε σχέση με το πλαίσιο.
3. Προστασία έναντι πρόσκρουσης από όπισθεν μπορεί παραδείγματος χάριν να αποτελείται από προφυλακτήρα ή πλαίσιο.

## Προσθήκη Β.1b

- 212 172 (c) για εύφλεκτες ύλες και για ελαφρά τοξικές ή ελαφρά διαβρωτικές ύλες (εύφλεκτες ή (συνεχ.) μη) σε ερμητικά κλειστά περιβλήματα <sup>15/</sup> χωρίς συσκευή ασφαλείας:

$$\text{βαθμός πλήρωσης} = \frac{97}{1 + a(50 - t_F)} \% \text{ χωρητικότητας}$$

- (d) για εξαιρετικά τοξικές, τοξικές, εξαιρετικά διαβρωτικές ή διαβρωτικές ύλες εύφλεκτες ή μη) σε ερμητικά κλειστά περιβλήματα <sup>15/</sup> χωρίς συσκευή ασφαλείας:

$$\text{βαθμός πλήρωσης} = \frac{95}{1 + a(50 - t_F)} \% \text{ χωρητικότητας}$$

- (2) Στους τύπους αυτούς, είναι ο μέσος συντελεστής κυβικής διαστολής του υγρού μεταξύ 15 °C και 50 °C, δηλ. για μέγιστη διακύμανση θερμοκρασίας 35 °C.

$$\text{Το } a \text{ υπολογίζεται από τον τύπο: } a = \frac{d_{15} - d_{50}}{35 \times d_{50}}$$

όπου  $d_{15}$  και  $d_{50}$  είναι οι σχετικές πυκνότητες του υγρού στους 15 °C και 50 °C αντίστοιχα.  $t_F$  είναι η μέση θερμοκρασία του υγρού κατά την πλήρωση.

(3) Οι διατάξεις του (1) δεν θα έχουν εφαρμογή σε περιβλήματα τα περιεχόμενα των οποίων, διαμέσου θερμαντικής συσκευής, διατηρούνται σε θερμοκρασία άνω των 50 °C κατά τη μεταφορά. Στην περίπτωση αυτή ο βαθμός πλήρωσης στην αρχή θα είναι τέτοιος, και η θερμοκρασία έτσι ρυθμισμένη, ώστε το περιβλημα να μην είναι γεμάτο σε ποσοστό μεγαλύτερο από 95% της χωρητικότητάς του και η θερμοκρασία πλήρωσης να μην υπερβαίνεται, σε καμία στιγμή κατά τη μεταφορά.

(4) Όπου φορτώνονται θερμές ύλες, η θερμοκρασία της εξωτερικής επιφάνειας του περιβλήματος ή της θερμομόνωσης δεν θα υπερβαίνει τους 70 °C κατά τη μεταφορά.

- 212 173 Εάν τα περιβλήματα εμπορευματοκιβωτίων-δεξαμενών προοριζόμενων για τη μεταφορά υγρών <sup>16/</sup> δεν διαιρούνται με χωρίσματα ή πλάκες διογκώσεως σε τμήματα χωρητικότητας όχι μεγαλύτερης από 7 500 λίτρα, θα πληρούνται σε ποσοστό όχι μικρότερο από 80% της χωρητικότητάς τους εκτός εάν είναι χαρακτηρισμένα ως κενά.

- 212 174 Κατά την φόρτωση και εκφόρτωση δεξαμενών, θα λαμβάνονται κατάλληλα μέτρα για να αποτρέπουν την έκλυση επικίνδυνων ποσοτήτων αερίων και ατμών.

Τα εμπορευματοκιβώτια-δεξαμενές θα είναι κλειστά έτσι ώστε τα περιεχόμενα να μην μπορούν να διασκορπιστούν ανεξέλεγκτα. Τα ανοίγματα σε περιβλήματα εκκένωσης από τον πυθμένα θα κλείνονται με βιδωτά βύσματα, κενά παρεμβύσματα (φλάντζες) ή άλλες εξίσου αποτελεσματικές συσκευές. Η στεγανότητα των κλεισμάτων στα περιβλήματα, ιδίως στο άνω μέρος του σίφωνα, θα ελέγχεται από τον αποστολέα μετά την πλήρωση του περιβλήματος.

<sup>15/</sup> Βλέπε υποσημείωση <sup>8/</sup>

<sup>16/</sup> Υλεις των οποίων το κινηματικό ιξώδες στους 20 °C είναι μικρότερο από 2 680 mPa·s θα θεωρούνται ως υγρά για τους σκοπούς αυτής της διάταξης.

## Προσθήκη Β.1b

- 212 175 Όπου πολλαπλά συστήματα κλεισίματος είναι τοποθετημένα σε σειρά, το πλησιέστερο στην μεταφερόμενη ύλη θα κλείνεται πρώτο.
- 212 176 Δεν θα επικάθονται επικίνδυνα κατάλοιπα της ύλης πλήρωσης στο εξωτερικό ενός εμπορευματοκιβωτίου-δεξαμενής κατά τη μεταφορά, είτε αυτό είναι φορτωμένο είτε κενό.
- 212 177 Για να γίνουν δεκτά για μεταφορά, τα κενά εμπορευματοκιβώτια-δεξαμενές, ακαθάριστα, θα κλείνονται με τον ίδιο τρόπο και θα είναι στεγανά στον ίδιο βαθμό σαν να ήταν γεμάτα.
- 212 178-  
212 179

**ΤΜΗΜΑ 8. Μεταβατικά μέτρα**

- 212 180 Εμπορευματοκιβώτια-δεξαμενές κατασκευασμένα πριν την έναρξη ισχύος των διατάξεων με δυνατότητα εφαρμογής από 1ης Ιανουαρίου 1988 τα οποία δεν είναι σύμφωνα με εκείνες τις διατάξεις αλλά κατασκευάστηκαν σύμφωνα με τις απαιτήσεις αυτής της Οδηγίας σε ισχύ πριν από εκείνη την ημερομηνία μπορούν να χρησιμοποιούνται ακόμη.
- 212 181 Εμπορευματοκιβώτια-δεξαμενές κατασκευασμένα πριν την έναρξη ισχύος των διατάξεων με δυνατότητα εφαρμογής από 1ης Ιανουαρίου 1993 τα οποία δεν είναι σύμφωνα με εκείνες τις διατάξεις αλλά κατασκευάστηκαν σύμφωνα με τις απαιτήσεις αυτής της Οδηγίας σε ισχύ μέχρι εκείνη την ημερομηνία μπορούν να χρησιμοποιούνται ακόμη.
- 212 182-  
212 189

**ΤΜΗΜΑ 9. Χρήση εμπορευματοκιβωτίων-δεξαμενών εγκεκριμένων για θαλάσσια μεταφορά**

- 212 190 Εμπορευματοκιβώτια-δεξαμενές τα οποία δεν ικανοποιούν πλήρως τις απαιτήσεις της παρούσης προσθήκης αλλά τα οποία έχουν εγκριθεί σύμφωνα με τις απαιτήσεις που αφορούν θαλάσσια μεταφορά θα γίνονται δεκτά για μεταφορά <sup>17/</sup>.

Επιπλέον των ήδη προβλεπόμενων στοιχείων, το έγγραφο μεταφοράς θα φέρει τις εξής λέξεις: "Μεταφορά σύμφωνα με περιθωριακό 212 190".

Μόνο ύλες εγκεκριμένες από το περιθωριακό 10 121 (1) μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές.

- 212 191-  
212 199

<sup>17/</sup> Αυτές οι απαιτήσεις περιέχονται στην Παράγραφο 13 της Γενικής Εισαγωγής του Κώδικα της Διεθνούς Ναυτιλιακής Οργάνωσης για τα Επικίνδυνα Εμπορεύματα (IMDG) που δημοσιεύεται από την Διεθνή Ναυτιλιακή Οργάνωση, Λονδίνο.

## Προσθήκη Β.1b

**ΜΕΡΟΣ ΙΙ: Ειδικές απαιτήσεις που συμπληρώνουν ή τροποποιούν τις απαιτήσεις του Μέρους Ι**

**ΚΛΑΣΗ 2. ΑΕΡΙΑ ΣΥΜΠΙΕΣΜΕΝΑ, ΥΓΡΟΠΟΙΗΜΕΝΑ Ή ΔΙΑΛΥΜΕΝΑ ΥΠΟ ΠΙΕΣΗ**

212 200-

212 209

**ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση εμπορευματοκιβωτίων-δεξαμενών), ορισμοί**

**Χρήση**

**212 210** Αέρια του περιθωριακού 2201, εκτός των αναγραφόμενων παρακάτω μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

Φθόριο, τριφθοριούχο αζώτο και τετραφθοριούχο πυρίτιο του 1° (at) οξείδιο του αζώτου του 1° (ct) μείγματα υδρογόνου με όχι περισσότερο του 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ'όγκο ή με όχι περισσότερο από 15% αρσίνη κατ'όγκο μείγματα αζώτου ή ευγενών αερίων (περιέχοντα όχι περισσότερο από 10% ξένο κατ'όγκο) με όχι περισσότερο από 10% υδροσελήνιο ή φωσφίνη ή γερμάνιο κατ'όγκο ή όχι περισσότερο από 15% αρσίνη κατ'όγκο του 2° (bt) μείγματα υδρογόνου με όχι περισσότερο από 10% διβοράνιο κατ'όγκο μείγματα αζώτου ή ευγενή αέρια (περιέχοντα όχι περισσότερο από 10% διβοράνιο κατ'όγκο) με όχι περισσότερο από 10% διβοράνιο κατ'όγκο του 2° (ct), οκταφθοροβουτ-2-ένιο (R1318) και οκταφθοροπροπάνιο του 3° (a) τριχλωριούχο βόριο, τριφθοριούχο χλώριο, εξαφθοροακετόνη, νιτρωδυλοχλωρίδιο, σουλφουρυλοφθορίδιο και εξαφθοριούχο βολφράμιο του 3° (at) 2,2-διμεθυλοπροπάνιο και μεθυλοσιλάνιο του 3° (b) αρσίνη, καρβονυλοσουλφίδιο, διχλωροσιλάνιο, διμεθυλοσιλάνιο, υδροσελήνιο και τριμεθυλοσιλάνιο του 3° (bt) προπαδιένιο, αδρανές, του 3° (c), κυανογόνο, χλωριούχο κυανογόνο, αιθυλενοξείδιο και υδροϊώδιο, ανυδρίτη του 3° (ct) μείγματα μεθυλοσιανίων του 4° (bt) προπαδιένιο με 1% έως 4% μεθυλακετυλένιο, σταθεροποιημένο, του 4° (c) αιθυλενοξείδιο περιέχον όχι περισσότερο από 50% κατά βάρος μυρμηκικό μεθυλεστέρα του 4° (ct) σιλάνιο του 5° (b) ύλης του 5° (bt) και (ct) διαλυμένο ακετυλένιο του 9° (c) αέρια του 12° και 13°.

212 211-

212 219

**ΤΜΗΜΑ 2. Κατασκευή**

**212 220** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 1° έως 6° και 9° θα κατασκευάζονται από χάλυβα.

Στην περίπτωση μη συγκολλημένων περιβλημάτων κατά παρέκκλιση από το περιθωριακό 212 125 (3), μπορεί να γίνει δεκτή ελάχιστη επιμήκυνση θραύσεως 14% καθώς και τάση  $\sigma$  (σίγμα) μικρότερη ή ίση των παρακάτω ορίων αναλόγως του υλικού.

(a) Όταν ο λόγος  $Re/Rm$  των ελάχιστων εγγυημένων χαρακτηριστικών μετά από θερμική κατεργασία είναι μεγαλύτερος του 0.66 χωρίς να υπερβαίνει το 0.85:

$$\sigma \leq 0.75 Re$$

(b) Όταν ο λόγος  $Re/Rm$  των ελάχιστων εγγυημένων χαρακτηριστικών μετά από θερμική κατεργασία είναι μεγαλύτερος του 0.85:  $\sigma \leq 0.5 Rm$ .

**212 221** Οι απαιτήσεις της Προσθήκης Β.1d θα έχουν εφαρμογή στα υλικά και την κατασκευή συγκολλημένων περιβλημάτων.

**212 222** Περιβλήματα προοριζόμενα για τη μεταφορά χλωρίου ή φωσγενίου του 3° (at) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] τουλάχιστον 2.2 MPa (22 bar) (πίεση μετρητή).

## Προσθήκη Β.1b

212 223-  
212 229

## ΤΜΗΜΑ 3. Είδη εξοπλισμού

**212 230** Οι σωληνώσεις εκκένωσης των περιβλημάτων θα μπορούν να κλείνονται με κενά παρεμβύσματα (φλάντζες) ή άλλη εξίσου αξιόπιστη συσκευή.

**212 231** Περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων μπορεί να έχουν, επιπλέον των ανοιγμάτων που προβλέπονται στα περιθωριακά 212 131 και 212 132, ανοίγματα για την τοποθέτηση μετρητών, θερμομέτρων, μανομέτρων και με ανοίγματα αποστραγγίσεως, όπως απαιτείται για την ασφαλή λειτουργία τους.

**212 232** Οι συσκευές ασφαλείας θα πληρούν τις ακόλουθες απαιτήσεις:

(1) Τα ανοίγματα πλήρωσης και εκκένωσης περιβλημάτων με χωρητικότητα που υπερβαίνει το  $1 \text{ m}^3$  προοριζόμενων για τη μεταφορά υγροποιημένων εύφλεκτων και/ή τοξικών αερίων θα είναι εξοπλισμένα με εσωτερική συσκευή ασφαλείας στιγμιαίου κλεισίματος, η οποία κλείνει αυτομάτως σε περίπτωση ακούσιας κίνησης του περιβλήματος ή φωτιάς. Θα είναι επίσης δυνατή η λειτουργία της συσκευής κλεισίματος με τηλεχειρισμό.

(2) Όλα τα ανοίγματα, εκτός από εκείνα που υποδέχονται βαλβίδες ασφαλείας και από ανοίγματα αποστράγγισης, περιβλημάτων προοριζόμενων για τη μεταφορά υγροποιημένων εύφλεκτων και/ή τοξικών αερίων θα είναι εξοπλισμένα, εάν η ονομαστική διάμετρος τους είναι μεγαλύτερη από 1.5 mm, με εσωτερική συσκευή κλεισίματος.

(3) Κατά παρέκκλιση από τις διατάξεις του (1) και (2), περιβλήματα προοριζόμενα για τη μεταφορά εύφλεκτων και/ή τοξικών υγροποιημένων αερίων βαθιάς καταψύξεως μπορεί να είναι εξοπλισμένα με εξωτερικές συσκευές αντί για εσωτερικές συσκευές εάν οι εξωτερικές συσκευές παρέχουν προστασία έναντι εξωτερικής βλάβης τουλάχιστον ισοδύναμη με αυτή που παρέχεται από το τοίχωμα του περιβλήματος.

(4) Εάν τα περιβλήματα είναι εξοπλισμένα με μετρητές, αυτοί δεν θα είναι κατασκευασμένοι από διαφανές υλικό σε απευθείας επαφή με τη μεταφερόμενη ύλη. Εάν υπάρχουν θερμομέτρα, δεν θα εξέχουν άμεσα στο αέριο ή το υγρό μέσα από το τοίχωμα του περιβλήματος.

(5) Περιβλήματα προοριζόμενα για τη μεταφορά χλωρίου, διοξειδίου του θείου και φωσγενίου του  $3^\circ$  (at), μεθυλομερκαπτάνη και υδρόθειο του  $3^\circ$  (bt) δεν θα έχουν ανοίγματα κάτω από τη στάθμη της επιφάνειας του υγρού. Επιπλέον, δεν θα επιτρέπονται ανοίγματα καθαρισμού κατά τα αναφερόμενα στο περιθωριακό 212 132.

(6) Ανοίγματα πλήρωσης και εκκένωσης τοποθετημένα στο άνω μέρος των περιβλημάτων θα είναι εξοπλισμένα, επιπλέον των προβλεπόμενων στο (1), με δεύτερη, εξωτερική, συσκευή κλεισίματος. Αυτή η συσκευή θα είναι ικανή να κλειστεί με κενό παρέμβυσμα (φλάντζα) ή άλλη εξίσου αξιόπιστη συσκευή.

**212 233** Οι βαλβίδες ασφαλείας θα ικανοποιούν τους όρους που προβλέπονται στα (1), (2) και (3) παρακάτω:

(1) Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του  $1^\circ$  έως  $6^\circ$  και  $9^\circ$  μπορεί να είναι εφοδιασμένα με όχι περισσότερες από δύο βαλβίδες ασφαλείας των οποίων η συνολική καθαρή επιφάνεια διατομής της διόδου από το σημείο ή τα σημεία έδρασης δεν θα είναι μικρότερη από  $20 \text{ cm}^2$  ανά  $30 \text{ m}^3$  (ή μέρος αυτού) χωρητικότητας του δοχείου. Αυτές οι βαλβίδες θα μπορούν να ανοίγουν αυτομάτως με πίεση 0.9 έως 1.0 φορές την πίεση δοκιμής του περιβλήματος στο οποίο είναι τοποθετημένες. Θα είναι τέτοιου τύπου ώστε να ανθίστανται σε δυναμικές καταπονήσεις, περιλαμβανομένης της διάγκωσης υγρού. Η χρήση βαλβίδων με νεκρό βάρος ή αντίβαρο απαγορεύεται.

## Προσθήκη Β.1b

**212 233** Περιβλήματα προοριζόμενα για τη μεταφορά αερίων των 1° έως 9° επιβλαβών για τα (συνεχ.) αναπνευστικά όργανα ή ενέχοντα κίνδυνο δηλητηρίασης <sup>18/</sup> δεν θα έχουν βαλβίδες ασφαλείας εκτός εάν υπάρχει εκρηγνυόμενος δίσκος μπροστά από τις βαλβίδες ασφαλείας. Στην τελευταία αυτή περίπτωση η διευθέτηση του εκρηγνυόμενου δίσκου και της βαλβίδας ασφαλείας θα πρέπει να είναι ικανοποιητική για την αρμόδια αρχή.

Όπου εμπορευματοκιβώτια-δεξαμενές προορίζονται για μεταφορά διά θαλάσσης, οι διατάξεις του παρόντος δεν θα απαγορεύουν την τοποθέτηση βαλβίδων ασφαλείας σύμφωνα με τους κανονισμούς που διέπουν αυτό το μέσο μεταφοράς <sup>19/</sup>.

(2) Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° και 8° θα είναι εξοπλισμένα με δύο ανεξάρτητες βαλβίδες ασφαλείας: κάθε βαλβίδα θα είναι σχεδιασμένη έτσι ώστε να επιτρέπει την διαφυγή από το περίβλημα των αερίων που σχηματίζονται με εξάτμιση κατά την κανονική λειτουργία κατά τρόπο ώστε η πίεση να μην υπερβαίνει σε καμία στιγμή την πίεση εργασίας που αναφέρεται στο περίβλημα κατά περισσότερο από 10%. Μία από τις δύο βαλβίδες ασφαλείας μπορεί να αντικαθίσταται από εκρηγνυόμενο δίσκο που θα είναι τέτοιος ώστε να σπάει στην πίεση δοκιμής.

Σε περίπτωση απώλειας του κενού σε περίβλημα διπλού τοιχώματος, ή καταστροφής του 20% της μονώσεως σε περίβλημα μονού τοιχώματος, η βαλβίδα ασφαλείας και ο εκρηγνυόμενος δίσκος θα επιτρέπει εκροή τόσο ώστε η πίεση στο περίβλημα να μην μπορεί να υπερβεί την πίεση δοκιμής.

(3) Οι βαλβίδες ασφαλείας περιβλημάτων προοριζόμενων για τη μεταφορά αερίων του 7° και 8° θα μπορούν να ανοίγουν στην πίεση εργασίας που αναγράφεται στο περίβλημα. Θα είναι έτσι σχεδιασμένες ώστε να λειτουργούν αλάνθαστα ακόμη και στην ελάχιστη θερμοκρασία εργασίας. Η αξιοπιστία της λειτουργίας τους στη θερμοκρασία αυτή θα εξακριβώνεται και θα ελέγχεται είτε ελέγχοντας κάθε βαλβίδα είτε ελέγχοντας δειγματοληπτικά μία βαλβίδα για κάθε τύπο σχεδιασμού.

**Θερμομόνωση**

**212 234** (1) Εάν περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων του 3° και 4° είναι εξοπλισμένα με θερμική μόνωση, αυτή η μόνωση θα αποτελείται:

- είτε από αλεξήλιο που να καλύπτει όχι λιγότερο από το άνω εν τρίτο αλλά όχι περισσότερο από το άνω ήμισυ της επιφάνειας του περιβλήματος και να χωρίζεται από το περίβλημα με κενό αέρα τουλάχιστον 4 cm<sup>3</sup> ή
- από πλήρη επένδυση, επαρκούς πάχους, από μονωτικά υλικά.

(2) Περιβλήματα προοριζόμενα για την μεταφορά αερίων του 7° και 8° θα είναι θερμομονωμένα. Η θερμομόνωση θα εξασφαλίζεται με συνεχή επένδυση. Εάν ο χώρος μεταξύ του περιβλήματος και της επένδυσης είναι κενός από αέρα (μόνωση κενού) η προστατευτική επένδυση θα είναι έτσι σχεδιασμένη ώστε να αντέχει χωρίς παραμόρφωση εξωτερική πίεση τουλάχιστον 100 kPa (1 bar) (πίεση μετρητή). Παρά το περιθωριακό 212 102 (2)(a), εξωτερικές και εσωτερικές ενισχυτικές συσκευές μπορεί να λαμβάνονται υπόψη στους υπολογισμούς. Εάν η επένδυση είναι κλεισμένη έτσι ώστε να είναι αεροστεγής, θα υπάρχει συσκευή για να αποτρέπει την ανάπτυξη επικίνδυνης πίεσης στο μονωτικό στρώμα σε περίπτωση ανεπαρκούς αεροστεγανότητας του περιβλήματος ή των ειδών εξοπλισμού του. Η συσκευή θα αποτρέπει την διείσδυση υγρασίας μέσα στην θερμομονωτική επένδυση.

<sup>18/</sup> Αέρια που χαρακτηρίζονται από το γράμμα "F" στον κατάλογο υλών κρίνονται ως αέρια επιβλαβή για τα αναπνευστικά όργανα ή ενέχοντα κίνδυνο δηλητηρίασεως.

<sup>19/</sup> Βλέπε υποσημείωση 17/.

## Προσθήκη Β.1b

**212 234** (3) Περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων με σημείο βρασμού (συνεχ.) κάτω των  $-182\text{ }^{\circ}\text{C}$  σε ατμοσφαιρική πίεση δεν θα περιλαμβάνουν αναφλέξιμο υλικό είτε στη θερμομόνωση ή στις προσδέσεις.

Το μέσο πρόσδεσης περιβλημάτων προοριζόμενων για τη μεταφορά αργού, αζώτου, ηλίου και νέον του  $7^{\circ}$  (a) και υδρογόνου του  $7^{\circ}$  (b) μπορεί, με τη συναίνεση της αρμόδιας αρχής, να περιέχει πλαστικές ύλες ανάμεσα στο περίβλημα και την επένδυση.

**212 235** (1) Τα ακόλουθα θεωρούνται ότι είναι στοιχεία εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων:

- δοχεία κατά τα οριζόμενα στο περιθωριακό 2212 (1)(b) ή
- δεξαμενές κατά τα οριζόμενα στο περιθωριακό 2212 (1)(c).

Οι διατάξεις της παρούσης Προσθήκης δεν έχουν εφαρμογή σε πλαίσια κυλίνδρων σύμφωνα με το περιθωριακό 2212 (1)(d).

(2) Για εμπορευματοκιβώτια-δεξαμενές πολλαπλών στοιχείων, θα τηρούνται οι ακόλουθοι όροι:

- (a) Εάν ένα από τα στοιχεία εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων είναι εξοπλισμένο με βαλβίδα ασφαλείας και υπάρχουν συσκευές κλεισίματος μεταξύ των στοιχείων, κάθε στοιχείο θα είναι έτσι εξοπλισμένο.
- (b) Οι συσκευές πλήρωσης και εκκένωσης μπορεί να είναι τοποθετημένες σε πολλαπλή.
- (c) Κάθε στοιχείο εμπορευματοκιβωτίου-δεξαμενής πολλαπλών στοιχείων προοριζόμενου για τη μεταφορά συμπιεσμένων αερίων των  $1^{\circ}$  και  $2^{\circ}$  επιβλαβών για τα αναπνευστικά όργανα ή ενεχόντων κίνδυνο δηλητηρίασεως<sup>20/</sup> θα μπορεί να απομονωθεί με βαλβίδα.
- (d) Τα στοιχεία εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων προοριζόμενου για τη μεταφορά υγροποιημένων αερίων των  $3^{\circ}$  έως  $6^{\circ}$  θα σχεδιάζονται έτσι ώστε να μπορούν να πληρωθούν χωριστά και να διατηρούνται απομονωμένα με βαλβίδα που μπορεί να σφραγισθεί.

**212 236** Κατά παρέκκλιση από τις διατάξεις του περιθωριακού 212 131 περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων βαθιάς κατάψυξης δεν χρειάζεται να έχουν άνοιγμα επιθεώρησης.

**212 237-  
212 239**

#### ΤΜΗΜΑ 4. Έγκριση τύπου

**212 240-  
212 249** (Δεν υπάρχουν ειδικές απαιτήσεις)

#### ΤΜΗΜΑ 5. Δοκιμές

**212 250** Τα υλικά κάθε συγκολλημένου περιβλήματος θα δοκιμάζονται σύμφωνα με τη μέθοδο που περιγράφεται στην Προσθήκη Β.1d.

## Προσθήκη Β.1b

212 251 Οι τιμές της πίεσης δοκιμής θα είναι οι ακόλουθες:

- (1) Για περιβλήματα προοριζόμενα για τη μεταφορά αερίων των 1° και 2°: οι τιμές που αναγράφονται στο περιθωριακό 2219 (1) και (3).
- (2) Για περιβλήματα προοριζόμενα για τη μεταφορά αερίων των 3° και 4°:
- (a) εάν τα περιβλήματα δεν είναι μεγαλύτερα από 1.5 m σε διάμετρο, οι τιμές που αναγράφονται στο περιθωριακό 2220 (2)
- (b) εάν τα περιβλήματα είναι μεγαλύτερα από 1.5 m σε διάμετρο οι τιμές <sup>21</sup> που αναγράφονται παρακάτω:

Περιγραφή ύλης	Αριθμός είδους	Ελάχιστη πίεση δοκιμής για περιβλήματα		Μέγιστο βάρος των περιεχομένων ανά λίτρο χωρητικότητας kg
		με θερμομόνωση MPa	χωρίς θερμομόνωση MPa	
βρωμοχλωροδιφθορομεθάνιο (R 12 B1)	3°(a)	1.0	1.0	1.61
χλωροδιφθορομεθάνιο (R 22)	3°(a)	2.4	2.6	1.03
χλωροπενταφθορομεθάνιο (R 115)	3°(a)	2.0	2.3	1.08
1-χλωρο-1,2,2,2-τετραφθοροαιθάνιο (R 124)	3°(a)	1.0	1.1	1.2
1-χλωρο-2,2,2-τριφθοροαιθάνιο (R 133a)	3°(a)	1.0	1.0	1.18
διχλωροδιφθορομεθάνιο (R 12)	3°(a)	1.5	1.6	1.15
διχλωροφθορομεθάνιο (R 21)	3°(a)	1.0	1.0	1.23
1,2-διχλωρο-1,1,2,2-τετραφθοροαιθάνιο (R 114)	3°(a)	1.0	1.0	1.30
οκταφθοροκυκλοβουτάνιο (RC 318)	3°(a)	1.0	1.0	1.34
1,1,1,2-τετραφθοροαιθάνιο (R 134a)	3°(a)	1.6	1.8	1.04
αμμωνία	3°(at)	2.6	2.9	0.53

<sup>21</sup> (i) Οι προβλεπόμενες πιέσεις δοκιμής είναι:

(a) εάν το περίβλημα είναι εξοπλισμένο με θερμομόνωση, τουλάχιστον ίση με την πίεση ατμών, ελαττωμένη κατά 100 kPa (1 bar), του υγρού στους 60 °C, και όχι μικρότερη από 1 MPa (10 bar)

(b) εάν το περίβλημα δεν είναι εξοπλισμένο με θερμομόνωση, τουλάχιστον ίση με την πίεση ατμών, ελαττωμένη κατά 100 kPa (1 bar), του υγρού στους 65 °C, και όχι μικρότερη από 1 MPa (10 bar)

(ii) λόγω της υψηλής τοξικότητας του φωσγενίου του 3° (at), η ελάχιστη πίεση δοκιμής για αυτό το αέριο θα είναι 1.5 MPa (15 bar) εάν το περίβλημα είναι εξοπλισμένο με θερμομόνωση και 1.7 MPa (17 bar) εάν δεν είναι εξοπλισμένο

(iii) οι μέγιστες τιμές σε kg/litre που προβλέπονται για το βαθμό πλήρωσης υπολογίζονται ως εξής: μέγιστη μάζα περιεχομένων ανά λίτρο χωρητικότητας = 0.95 x πυκνότητα της υγρής φάσης στους 50 °C.

αιθυλένιο	5°(b)	12.0 22.5	0.25 0.36
1,1-διφθοροαιθυλένιο	5°(c)	12.0 22.5	0.66 0.78
βιτυλοφθορίδιο	5°(c)	12.0 22.5	0.58 0.65
μείγμα αερίων R 503	6°(a)	3.1 4.2 10.0	0.11 0.21 0.76
διοξείδιο του άνθρακα περιέχον όχι περισσότερο από 35% αιθυλενοξείδιο κατά βάρος	6°(c)	19.0 22.5	0.73 0.78
αιθυλενοξείδιο περιέχον περισσότερο από 10% αλλά όχι περισσότερο από 50% διοξείδιο του άνθρακα κατά βάρος	6°(ct)	19.0 25.0	0.66 0.75

Όπου χρησιμοποιούνται περιβλήματα επενδεδυμένα με θερμομόνωση τα οποία έχουν υποβληθεί σε πίεση δοκιμής χαμηλότερη από την αναγραφόμενη στους πίνακες, το μέγιστο βάρος των περιεχομένων ανά λίτρο χωρητικότητας θα είναι τόση ώστε η πίεση που αναπτύσσεται στο περιβλημα από την εν λόγω ύλη στους 55 °C να μην υπερβαίνει την πίεση δοκιμής που αναγράφεται με σφραγίδα στο περιβλημα. Σε μια τέτοια περίπτωση το μέγιστο επιτρεπόμενο φορτίο θα ορίζεται από τον εγκεκριμένο από την αρμόδια αρχή ειδικό.

## Προσθήκη Β.1b

**212 251 (4)** Για περιβλήματα προοριζόμενα για τη μεταφορά αμμωνίας που διαλύεται υπό πίεση του (συνεχ.) 9° (at), οι τιμές που αναφέρονται παρακάτω:

Περιγραφή ύλης	Αριθ. είδους	Ελάχιστη πίεση δοκιμής MPa	Μέγιστο βάρος περιεχομένων ανά λίτρο χωρητικότητας kg
αμμωνία που διαλύεται υπό πίεση στο νερό			
- με περισσότερο από 35% αλλά όχι περισσότερο από 40% αμμωνία κατά βάρος	9°(at)	1.0	0.80
- με περισσότερο από 40% αλλά όχι περισσότερο από 50% αμμωνία κατά βάρος	9°(at)	1.0	0.77

(5) Για περιβλήματα προοριζόμενα για τη μεταφορά αερίων των 7° και 8°: όχι λιγότερο από 1.3 φορές την μέγιστη επιτρεπόμενη πίεση εργασίας που αναγράφεται στο περίβλημα, αλλά όχι λιγότερο από 300 kPa (3 bar) (πίεση μετρητή) για περιβλήματα με μόνωση κενού η πίεση δοκιμής δεν θα είναι μικρότερη από 1.3 φορές την μέγιστη επιτρεπόμενη πίεση εργασίας προσαυξημένη κατά 100 kPa (1 bar).

- 212 252** Η πρώτη δοκιμή υδραυλικής πίεσης θα διενεργείται πριν την τοποθέτηση της θερμομόνωσης.
- 212 253** Η χωρητικότητα κάθε περιβλήματος προοριζόμενου για τη μεταφορά αερίων των 3° έως 6° και 9° θα προσδιορίζεται, υπό την επίβλεψη ειδικού εγκεκριμένου από την αρμόδια αρχή, με ζύγιση ή ογκομετρική μέτρηση της ποσότητας νερού που πληρώνει το περίβλημα τυχόν σφάλμα στη μέτρηση της χωρητικότητας του περιβλήματος θα είναι μικρότερο από 1%. Δεν επιτρέπεται ο προσδιορισμός με υπολογισμό βάσει των διαστάσεων του περιβλήματος. Τα μέγιστα επιτρεπόμενα βάρη πλήρωσης σύμφωνα με τα περιθωριακά 2220 (4) και 212 251 (3) θα ορίζονται από εγκεκριμένο ειδικό.
- 212 254** Ο έλεγχος των συγκολλήσεων θα διενεργείται σύμφωνα με τις απαιτήσεις του περιθωριακού 212 127 (6) σχετικά με τον συντελεστή λάμδα 1.0.
- 212 255** Παρά τις απαιτήσεις του Τμήματος 5 του Μέρους I της παρούσης Προσθήκης, οι περιοδικές δοκιμές θα γίνονται:
- (1) Κάθε δύομισι χρόνια στην περίπτωση εμπορευματοκιβωτίων-δεξαμενών προοριζόμενων για τη μεταφορά τριφθοριούχου βορίου του 1° (at), αερίου πόλης του 2° (bt), χλωρίου, υδροβρωμίου, διοξειδίου του αζώτου, φωσγενίου ή διοξειδίου του θείου του 3° (at), υδρόθειου του 3° (bt), ή υδροχλωρίου του 5° (at)
  - (2) Μετά από λειτουργία οκτώ ετών και εφεξής κάθε 12 έτη στην περίπτωση εμπορευματοκιβωτίων-δεξαμενών προοριζόμενων για τη μεταφορά αερίων των 7° και 8°. Έλεγχος στεγανότητας μπορεί να διενεργείται, μετά από αίτημα της αρμόδιας αρχής, μεταξύ δύο οποιονδήποτε διαδοχικών δοκιμών.
- 212 256** Στην περίπτωση περιβλημάτων με μόνωση κενού η δοκιμή υδραυλικής πίεσης και ο έλεγχος της εσωτερικής κατάστασης μπορεί, με τη σύμφωνη γνώμη του εγκεκριμένου ειδικού, να αντικατασταθεί με δοκιμή στεγανότητας και μέτρηση του κενού.

## Προσθήκη Β.1b

**212 257** Εάν έχουν γίνει ανοίγματα, με την ευκαιρία περιοδικών επιθεωρήσεων, σε περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° ή 8°, η μέθοδος με την οποία κλείνονται ερμητικά πριν την επαναχρησιμοποίηση των περιβλημάτων θα εγκρίνεται από τον εγκεκριμένο ειδικό και θα εξασφαλίζει την ακεραιότητα του περιβλήματος.

**212 258** Η δοκιμή στεγανότητας περιβλημάτων προοριζόμενων για τη μεταφορά αερίων των 1° έως 6° και 9° θα διενεργείται σε πίεση όχι μικρότερη από 400 kPa (4 bar) και όχι μεγαλύτερη από 800 kPa (8 bar) (πίεση μετρητή).

**212 259**

**ΤΜΗΜΑ 6. Επισήμανση**

**212 260** Τα ακόλουθα πρόσθετα στοιχεία θα επισημαίνονται με σφράγιση ή με άλλη παρόμοια μέθοδο στην πινακίδα που περιγράφεται στο περιθωριακό 212 160, ή απευθείας στα τοιχώματα του ίδιου του περιβλήματος εάν τα τοιχώματα είναι ενισχυμένα έτσι ώστε να μη μειώνεται η αντοχή του περιβλήματος:

(1) Σε περιβλήματα προοριζόμενα για τη μεταφορά μόνο μίας ύλης:

- η πλήρης ονομασία του αερίου <sup>22/</sup>.

Η ένδειξη αυτή θα συμπληρώνεται, στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά συμπιεσμένων αερίων των 1° και 2° με ένδειξη της μέγιστης πίεσης πλήρωσης στους 15°C που επιτρέπεται για το περίβλημα και, στην περίπτωση περιβλημάτων προοριζόμενων για τη μεταφορά υγροποιημένων αερίων των 3° έως 8° ή αμμωνίας που διαλύεται υπό πίεση του 9° (at), με ένδειξη του μέγιστου επιτρεπόμενου βάρους φόρτωσης σε kg και της θερμοκρασίας πλήρωσης εάν είναι κάτω των -20°C

(2) Σε εμπορευματοκιβώτια-δεξαμενές πολλαπλών χρήσεων:

- οι πλήρεις ονομασίες <sup>22/</sup> των αερίων για τη μεταφορά των οποίων εγκρίνεται το περίβλημα.

Τα στοιχεία αυτά θα συμπληρώνονται με ένδειξη του μέγιστου επιτρεπόμενου βάρους φόρτωσης σε kg για κάθε αέριο:

(3) Σε περιβλήματα προοριζόμενα για τη μεταφορά αερίων των 7° και 8°:

- η πίεση εργασίας και

(4) Σε περιβλήματα εξοπλισμένα με θερμομόνωση:

- η ένδειξη "Θερμικά μονωμένα" ή "Θερμικά μονωμένα με κενό".

**212 261** Το πλαίσιο εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων θα φέρει πλησίον του σημείου πλήρωσης πινακίδα που θα αναγράφει:

- την πίεση δοκιμής των στοιχείων <sup>23/</sup>.

<sup>22/</sup> Οι περιγραφές που υπογραμμίζονται στο περιθωριακό 2201 θα χρησιμοποιούνται ως πλήρεις ονομασίες του αερίου για μείγματα A, A0 και C του 4□ (b) του περιθωριακού 2201. Οι εθιμικές ονομασίες του εμπορίου που αναφέρονται στη Σημείωση για το 4□ (b) του περιθωριακού 2201 μπορεί να χρησιμοποιούνται μόνο ως συμπλήρωμα.

<sup>23/</sup> Οι μονάδες μέτρησης πρέπει να αναφέρονται μετά από τις αριθμητικές τιμές.

## Προσθήκη Β.1b

- 212 261** (συνεχ.) - τη μέγιστη επιτρεπόμενη πίεση πλήρωσης<sup>23/</sup> στους 15 °C που επιτρέπεται για στοιχεία προοριζόμενα για συμπιεσμένα αέρια
- τον αριθμό των στοιχείων
  - την ολική χωρητικότητα<sup>23/</sup> των στοιχείων
  - την πλήρη ονομασία του αερίου<sup>22/</sup>.

και, επιπλέον, στην περίπτωση υγροποιημένων αερίων:

- το μέγιστο επιτρεπόμενο βάρος φόρτωσης<sup>23/</sup> ανά στοιχείο.

**212 262** Επιπλέον των στοιχείων που αναγράφονται στο περιθωριακό 212 161, τα ακόλουθα θα αναγράφονται είτε στο ίδιο το εμπορευματοκιβώτιο-δεξαμενή είτε σε πινακίδα:

- (a) - είτε: "ελάχιστη επιτρεπόμενη θερμοκρασία πλήρωσης: - 20 °C", είτε
- "ελάχιστη επιτρεπόμενη θερμοκρασία πλήρωσης: ....."
- (b) όπου το περίβλημα προορίζεται για τη μεταφορά μίας ύλης μόνον:
- η πλήρης ονομασία του αερίου<sup>22/</sup>.
  - για υγροποιημένα αέρια των 3° έως 8° και για αμμωνία που διαλύεται υπό πίεση στο νερό του 9° (at), το μέγιστο επιτρεπόμενο βάρος φόρτωσης σε kg
- (c) όπου το περίβλημα είναι περίβλημα πολλαπλών χρήσεων:
- οι πλήρεις ονομασίες<sup>22/</sup> όλων των αερίων για τη μεταφορά των οποίων διατίθεται το περίβλημα, με ένδειξη του μέγιστου επιτρεπόμενου βάρους φόρτωσης σε kg για κάθε ένα από αυτά
- (d) όπου το περίβλημα είναι εξοπλισμένο με θερμομόνωση:
- η επιγραφή "θερμικά μονωμένο" ή "θερμικά μονωμένο με κενό", σε επίσημη γλώσσα της χώρας εγγραφής, και επίσης, εάν αυτή η γλώσσα δεν είναι η αγγλική, γαλλική ή γερμανική, σε μία από αυτές τις γλώσσες, εκτός εάν προβλέπεται διαφορετικά σε τυχόν συμφωνίες που έχουν συναφθεί μεταξύ των χωρών που αφορά η μεταφορά.

**212 263-**  
**212 269**

<sup>22/</sup> Οι περιγραφές που υπογραμμίζονται στο περιθωριακό 2201 θα χρησιμοποιούνται ως πλήρης ονομασία του αερίου για μείγματα A, A0 και C of 4□ (b) του περιθωριακού 2201. Τα εθνικά ονόματα του εμπορίου που αναφέρονται στη Σημείωση για το 4□ (b) του περιθωριακού 2201 μπορεί να χρησιμοποιούνται μόνον ως συμπλήρωμα.

<sup>23/</sup> Οι μονάδες μέτρησης πρέπει να αναφέρονται μετά τις αριθμητικές τιμές.

## Προσθήκη Β.1b

## ΤΜΗΜΑ 7. Λειτουργία

**212 270** Περιβλήμα που διατίθεται σε διαφορετικούς χρόνους στη μεταφορά διαφορετικών υγροποιημένων αερίων των 3° έως 8° (περιβλήματα πολλαπλών χρήσεων) δεν επιτρέπεται να μεταφέρει ύλες εκτός από τις καταχωρημένες σε μία, και μόνο μία, από τις ακόλουθες ομάδες:

**Ομάδα 1:** αλογονωμένοι υδρογονάνθρακες του 3° (a) και 4° (a)

**Ομάδα 2:** υδρογονάνθρακες του 3° (b) και 4° (b), βουταδιένια του 3° (c) και μείγματα 1,3-βουταδιενίου και υδρογονανθράκων του 4° (c)

**Ομάδα 3:** αμμωνία του 3° (at) διμεθυλαιθέρας του 3° (b) διμεθυλαμίνη, αιθυλαμίνη, μεθυλαμίνη και τριμεθυλαμίνη του 3° (bt) και βινυλοχλωρίδιο του 3° (c)

**Ομάδα 4:** μεθυλοβρωμίδιο του 3° (at) αιθυλοχλωρίδιο και μεθυλοχλωρίδιο του 3° (bt)

**Ομάδα 5:** μείγματα οξειδίου του αιθυλενίου με διοξείδιο του άνθρακα και οξειδίου του αιθυλενίου με άζωτο του 4° (ct)

**Ομάδα 6:** άζωτο, διοξείδιο του άνθρακα, ευγενή αέρια, πρωτοξείδιο του αζώτου N<sub>2</sub>O, και οξυγόνο του 7° (a) αέρας, μείγματα αζώτου με ευγενή αέρια και μείγματα οξυγόνου με άζωτο, επίσης όταν περιέχουν ευγενή αέρια του 8° (a)

**Ομάδα 7:** αιθάνιο, αιθυλένιο, και μεθάνιο του 7° (b) και μείγματα μεθανίου με αιθάνιο, επίσης όταν περιέχουν προπάνιο ή βουτάνιο του 8° (b).

**212 271** Περιβλήματα που έχουν πληρωθεί με ύλη της ομάδας 1 ή της ομάδας 2 θα κενώνονται από υγροποιημένο αέριο πριν φορτωθούν με άλλη ύλη που ανήκει στην ίδια ομάδα. Περιβλήματα που έχουν πληρωθεί με ύλη των ομάδων 3 έως 7 θα κενώνονται εντελώς από υγροποιημένο αέριο και θα διοχετεύεται αέρας πριν να φορτωθούν με άλλη ύλη της ίδιας ομάδας.

**212 272** Η πολλαπλή χρήση περιβλημάτων για τη μεταφορά υγροποιημένων αερίων της ίδιας ομάδας θα επιτρέπεται εάν τηρούνται όλες οι απαιτήσεις που προβλέπονται για τα αέρια που πρόκειται να μεταφερθούν σε ένα και το αυτό περιβλήμα. Αυτή η πολλαπλή χρήση θα υπόκειται σε έγκριση από εγκεκριμένο ειδικό.

**212 273** Η πολλαπλή χρήση περιβλημάτων για τη μεταφορά αερίων διαφορετικών ομάδων θα επιτρέπεται εάν δοθεί άδεια από τους εγκεκριμένους ειδικούς.

Όποτε περιβλήματα επαναδιατίθενται σε αέρια διαφορετικής ομάδας, τα περιβλήματα θα κενώνονται εντελώς από υγροποιημένα αέρια, κατόπιν θα διοχετεύεται αέρας και, τέλος, θα απαερώνονται. Η απαέρωση των περιβλημάτων θα επαληθεύεται και θα πιστοποιείται από τον εγκεκριμένο ειδικό.

**212 274** Όποτε φορτωμένες δεξαμενές ή κενές αλλά ακαθάρτιστες δεξαμενές παραδίδονται για μεταφορά, θα είναι ορατά μόνο τα στοιχεία που αναφέρονται στο περιθωριακό 212 262 με εφαρμογή στο αέριο που φορτώθηκε ή μόλις εικενώθηκε όλα τα στοιχεία που αφορούν άλλα αέρια θα είναι καλυμμένα.

## Προσθήκη Β.1b

**212 275** Όλα τα στοιχεία εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων θα περιέχουν μόνο ένα και το αυτό αέριο. Στην περίπτωση εμπορευματοκιβωτίων-δεξαμενών πολλαπλών στοιχείων προοριζόμενου για τη μεταφορά υγροποιημένων αερίων των 3° έως 6°, τα στοιχεία θα πληρούνται χωριστά και θα κρατούνται απομονωμένα με σφραγισμένη βαλβίδα.

**212 276** Η μέγιστη πίεση πλήρωσης για συμπιεσμένα αέρια των 1° και 2° εκτός από τριφθοριούχο βόριο του 1° (af) δεν θα υπερβαίνει τις τιμές που προβλέπονται στο περιθωριακό 2219 (2).

Για τριφθοριούχο βόριο του 1° (af) το μέγιστο βάρος πλήρωσης ανά λίτρο χωρητικότητας δεν θα υπερβαίνει τα 0,86 kg. Το μέγιστο βάρος πλήρωσης ανά λίτρο χωρητικότητας θα είναι σύμφωνα με τα περιθωριακά 2220 (2), (3) και (4) και 212 251 (2), (3) και (4).

**212 277** Ο βαθμός πλήρωσης των περιβλημάτων που προορίζονται για τη μεταφορά αερίων των 7° (b) και 8° (b) θα παραμένει κάτω από το επίπεδο για το οποίο, εάν η θερμοκρασία των περιεχομένων ανέβαινε στο επίπεδο στο οποίο η πίεση ατμών θα ισούτο με την πίεση ανοίγματος της βαλβίδας ασφαλείας, ο όγκος του υγρού θα έφθανε στο 95% της χωρητικότητας του περιβλήματος σε αυτήν τη θερμοκρασία. Περιβλήματα προοριζόμενα για τη μεταφορά αερίων του 7° (a) και 8° (a) μπορεί να πληρούνται κατά 98% στη θερμοκρασία φορτώσεως και την πίεση φορτώσεως.

**212 278** Σε περιβλήματα για τη μεταφορά πρωτοξειδίου του αζώτου και οξυγόνου του 7°-(a), αέρα ή μειγμάτων που περιέχουν οξυγόνο του 8° (a), ύλες που περιέχουν γράσο ή λάδι δεν θα χρησιμοποιούνται για να εξασφαλιστεί η στεγανότητα των αρμών ή για τη συντήρηση των κλεισιμάτων.

**212 279** Οι απαιτήσεις στο περιθωριακό 212 175 δεν θα έχουν εφαρμογή σε αέρια των 7° και 8°.

**212 280-**  
**212 299**

## Προσθήκη Β.1b

## ΚΛΑΣΗ 3. ΕΥΦΛΕΚΤΑ ΥΓΡΑ

212 300-  
212 309

## ΤΜΗΜΑ 1. Γενικά πλαίσιο (χρήση των εμπορευματοκιβωτίων-δεξαμενών) ορισμοί

## Χρήση

212 310 Οι ακόλουθες ύλες του περιθωριακού 2301 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

- (a) προπυλενιμίνη, αδρανής, του 12°
- (b) ύλες ταξινομημένες υπό το (a) των 11°, 14° έως 22°, 26° και 27°, 41° έως 57°
- (c) ύλες ταξινομημένες υπό το (b) των 11°, 14° έως 27°, 41° έως 57°, και ύλες των 32° και 33°
- (d) ύλες των 1° έως 5°, 31°, 34° και 61° (c), με την εξαίρεση νιτρικού ισοπροπυλεστερά, n-νιτρικού προπυλεστερά και νιτρομεθανίου του 3° (b).

212 311-  
212 319

## ΤΜΗΜΑ 2. Κατασκευή

212 320 Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς προπυλενιμίνης του 12° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 1.5 MPa (15 bar) (πίεση μετρητή).

212 321 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 100 kPa (10 bar) (πίεση μετρητή).

212 322 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

212 323 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους Ι της παρούσης Προσθήκης.

212 324-  
212 329

## ΤΜΗΜΑ 3. Είδη εξοπλισμού

212 330 Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (a) και (b) θα είναι πάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διέρχονται διαμέσου των τοιχωμάτων του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα μπορούν να κλείνουν ερμητικά<sup>24/</sup> και τα κλεισίματα θα είναι ικανά να προστατευθούν με πάματα που κλειδώνουν.<sup>24/</sup> Βλέπε υποσημείωση<sup>8/</sup>.

## Προσθήκη Β.1b

**212 331** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (c) και (d) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα. Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (c), εκτός από εκείνες του 33°, θα μπορούν να κλείνονται ερμητικά<sup>24/</sup>.

**212 332** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (a), (b) ή (c), εκτός από εκείνες του 33°, είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνυόμενος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνυόμενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή. Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (d) είναι εξοπλισμένα με βαλβίδες ασφαλείας ή σύστημα εξαερισμού, αυτά θα ικανοποιούν τις απαιτήσεις των περιθωριακών 212 133 έως 212 135.

Εάν περιβλήματα προοριζόμενα για τη μεταφορά υλών του 33° είναι εξοπλισμένα με βαλβίδες ασφαλείας, αυτές θα ικανοποιούν τις απαιτήσεις των περιθωριακών 212 134 και 212 135.

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (d) με σημείο ανάφλεξης που δεν υπερβαίνει τους 61 °C και εξοπλισμένα με σύστημα εξαερισμού που δεν μπορεί να κλείσει θα έχουν φλογοπαγίδα στο σύστημα εξαερισμού.

212 333-  
212 339

#### ΤΜΗΜΑ 4. Έγκριση τύπου

212 340-

212 349 (Δεν υπάρχουν ειδικές απαιτήσεις)

#### ΤΜΗΜΑ 5. Δοκιμές

**212 350** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (a), (b) ή (c) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar).

**212 351** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (d) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 212 123.

212 352-

212 359

#### ΤΜΗΜΑ 6. Επισήμανση

212 360-

212 369 (Δεν υπάρχουν ειδικές απαιτήσεις)

#### ΤΜΗΜΑ 7. Λειτουργία

**212 370** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (a), (b) ή (c), εκτός από εκείνες του 33°, θα είναι ερμητικά κλειστά<sup>24/</sup> κατά τη μεταφορά. Τα κλεισίματα περιβλημάτων προοριζόμενων για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 310 (a) και (b) θα προστατεύονται με κλειδωμένο πόμα.

<sup>24/</sup> Βλέπε υποσημείωση<sup>B/</sup>.

## Προσθήκη Β.1b

- 212 371** Εμπορευματοκιβώτια-δεξαμενές εγκεκριμένα για τη μεταφορά υλών των 11°, 12°, 14° έως 20°, 27°, 32° και 41° έως 57° δεν θα χρησιμοποιούνται για τη μεταφορά τροφίμων, αντικειμένων κατανάλωσης ή ζωοτροφών.
- 212 372** Δεν θα χρησιμοποιείται περίβλημα από κράμα αλουμινίου για τη μεταφορά ακεταλδεϋδης του 1° (a) εκτός εάν το περίβλημα προορίζεται αποκλειστικά για αυτή τη μεταφορά και η ακεταλδεϋδη είναι απαλλαγμένη από οξύ.
- 212 373** Η βενζίνη που αναφέρεται στη Σημείωση στο 3° (b) του περιθωριακού 2301 μπορεί επίσης να μεταφέρεται σε δεξαμενές σχεδιασμένες σύμφωνα με το περιθωριακό 212 123 (1) και εξοπλισμένες σύμφωνα με το περιθωριακό 212 133.
- 212 374-**  
**212 379**
- 212 380** Εμπορευματοκιβώτια-δεξαμενές προοριζόμενα για τη μεταφορά υλών των 32° και 33° του περιθωριακού 2301, κατασκευασμένα σύμφωνα με τις απαιτήσεις της παρούσης Προσθήκης με δυνατότητα εφαρμογής προ της 1ης Ιανουαρίου 1995, τα οποία, εντούτοις, δεν είναι σύμφωνα με τις απαιτήσεις με δυνατότητα εφαρμογής από 1ης Ιανουαρίου 1995, μπορεί να εξακολουθούν να χρησιμοποιούνται έως την 31η Δεκεμβρίου 1999.

## Προσθήκη Β.1b

- ΚΛΑΣΗ 4.1. ΕΥΦΛΕΚΤΑ ΣΤΕΡΕΑ**
- ΚΛΑΣΗ 4.2. ΥΛΕΣ ΠΟΥ ΥΠΟΚΕΙΝΤΑΙ ΣΕ ΑΥΤΟΓΕΝΗ ΑΝΑΦΛΕΞΗ**
- ΚΛΑΣΗ 4.3. ΥΛΕΣ ΟΙ ΟΠΟΙΕΣ, ΕΡΧΟΜΕΝΕΣ ΣΕ ΕΠΑΦΗ ΜΕ ΤΟ ΝΕΡΟ, ΕΚΠΕΜΠΟΥΝ ΕΥΦΛΕΚΤΑ ΑΕΡΙΑ**

212 400-  
212 409

**ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση εμπορευματοκιβωτίων-δεξαμενών) ορισμοί**

**Χρήση**

**212 410** Οι ακόλουθες ύλες των περιθωριακών 2401, 2431 και 2471 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

- (a) οι ύλες που έχουν καταχωρηθεί στο γράμμα (a) των 6°, 17°, 19° και 31° έως 33° του περιθωριακού 2431
- (b) οι ύλες των 11° (a) και 22° του περιθωριακού 2431
- (c) οι ύλες που έχουν καταχωρηθεί στο γράμμα (a) των 1°, 2°, 3°, 21°, 23° και 25° του περιθωριακού 2471
- (d) οι ύλες του 11° (a) του περιθωριακού 2471
- (e) οι ύλες που έχουν καταχωρηθεί στο γράμμα (b) ή (c) των:  
6°, 8°, 10°, 17°, 19° και 21° του περιθωριακού 2431, και  
3°, 21°, 23° και 25° του περιθωριακού 2471
- (f) οι ύλες των 5° και 15° του περιθωριακού 2401
- (g) κονιώδεις και κοκκώδεις ύλες που έχουν καταχωρηθεί στο γράμμα (b) ή (c) των:  
1°, 6°, 7°, 8°, 11°, 12°, 13°, 14°, 16° και 17° του περιθωριακού 2401,  
1°, 5°, 7°, 9°, 12°, 13°, 14°, 15°, 16°, 18° και 20° του περιθωριακού 2431,  
11°, 12°, 13°, 14°, 15°, 16°, 17°, 19°, 20°, 22° και 24° του περιθωριακού 2471.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα υλών των

4° (c), 6° (c), 11° (c), 12° (c), 13° (c) και 14° (c) και στερεών αποβλήτων ταξινομημένων στο (c) αυτών των ειδών του περιθωριακού 2401,

1° (c), 2° (c), 3° (c), 12° (c) και 16° (c), και στερεών αποβλήτων ταξινομημένων στο (c) αυτών των ειδών του περιθωριακού 2431,

11° (c), 12° (c), 13° (b) και (c), 14° (c), 15° (c), 17° (b) και 20° (c) του περιθωριακού 2471,

βλέπε τα περιθωριακά 41 111, 42 111 και 43 111.

## Προσθήκη Β.1b

212 411 -  
212 419

**ΤΜΗΜΑ 2. Κατασκευή**

**212 420** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (a) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 2.1 MPa (21 bar) (πίεση μετρητή).

Οι απαιτήσεις της Προσθήκης Β.1d έχουν εφαρμογή στα υλικά και την κατασκευή αυτών των περιβλημάτων.

**212 421** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (b), (c) και (d) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 1 MPa (10 bar) (πίεση μετρητή).

**212 422** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (e) θα σχεδιάζονται για πίεση υπολογισμού (βλέπε περιθωριακό 212 127 (2)) όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

**212 423** Περιβλήματα προοριζόμενα για τη μεταφορά των στερεών που αναφέρονται στο περιθωριακό 212 410 (f) και (g) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

**212 424** Όλα τα μέρη των εμπορευματοκιβωτίων-δεξαμενών που προορίζονται για τη μεταφορά υλών του περιθωριακού 2431, 1<sup>ο</sup>(b) θα είναι δυνατόν να γεωθούν ηλεκτρικά.

212 425-  
212 429

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**212 430** Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (a), (b), (c) και (e) θα είναι πάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διαπερνούν τα τοιχώματα του περιβλήματος κάτω από την στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα είναι δυνατό να κλείνονται ερμητικά <sup>2d/</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πάματα που κλειδώνουν. Τα ανοίγματα καθαρισμού που αναφέρονται στο περιθωριακό 212 132 δεν θα επιτρέπονται.

**212 431** Εξαιρουμένων περιβλημάτων προοριζόμενων για τη μεταφορά καυσίου και ρουβιδίου του περιθωριακού 2471, 11<sup>ο</sup> (a), περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 410 (d), (f) και (g) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα. Τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά καυσίου και ρουβιδίου του περιθωριακού 2471, 11<sup>ο</sup> (a) θα είναι εξοπλισμένα με πάματα που κλείνουν ερμητικά <sup>2d/</sup> και κλειδώνουν.

**212 432** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (b) θα ικανοποιούν επιπλέον τις ακόλουθες απαιτήσεις:

(1) Η συσκευή θερμάνσεως δεν θα εισχωρεί στο σώμα του περιβλήματος, αλλά θα είναι εξωτερική ως προς αυτό. Εντούτοις, ο σωλήνας που χρησιμοποιείται για την εξαγωγή του φωσφόρου μπορεί να είναι εξοπλισμένος με θερμαντικό χιτώνιο. Η συσκευή θερμάνσεως του χιτωνίου θα είναι ρυθμισμένη έτσι ώστε να εμποδίζει την θερμοκρασία του φωσφόρου να υπερβεί την θερμοκρασία πλήρωσης του περιβλήματος. Άλλες σωληνώσεις θα εισέρχονται στο περίβλημα από το άνω μέρος

<sup>2d/</sup> Βλέπε υποσημείωση <sup>8/</sup>

## Προσθήκη Β.1b

**212 432** τα ανοίγματα θα είναι τοποθετημένα πάνω από την ανώτατη επιτρεπόμενη στάθμη του (συνεχ.) φωσφόρου και θα μπορούν να περικλείονται εξ ολοκλήρου με πώματα που κλειδώνουν. Επιπλέον, τα ανοίγματα καθαρισμού που αναφέρονται στο περιθωριακό 212 132 δεν θα επιτρέπονται.

(2) Το περιβλήμα θα είναι εξοπλισμένο με σύστημα μέτρησης για την εξακρίβωση της στάθμης του φωσφόρου και, εάν χρησιμοποιείται νερό ως προστατευτικό μέσο, με σταθερό σημείο μέτρησης που θα δείχνει την ανώτατη επιτρεπόμενη στάθμη του νερού.

**212 433** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (a), (c) και (e) είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνύομενου δίσκου και των βαλβίδων ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

**212 434** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (f) θα είναι εξοπλισμένα με θερμομόνωση κατασκευασμένη από υλικά που δεν είναι εύκολα αναφλέξιμα.

**212 435** Εάν περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 410 (d) είναι εξοπλισμένα με θερμομόνωση, αυτή η μόνωση θα κατασκευάζεται από υλικά που δεν είναι εύκολα αναφλέξιμα.

**212 436** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (f) μπορεί να είναι εξοπλισμένα με βαλβίδες που ανοίγουν αυτομάτως προς τα μέσα ή προς τα έξω υπό την επίδραση διαφοράς πίεσης μεταξύ 20 kPa και 30 kPa (0.2 bar και 0.3 bar).

**212 437-**

**212 439**

#### ΤΜΗΜΑ 4. Έγκριση τύπου

**212 440-**

**212 449** (Δεν υπάρχουν ειδικές απαιτήσεις)

#### ΤΜΗΜΑ 5. Δοκιμές

**212 450** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (a) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 1 MPa (10 bar). Τα υλικά κάθε ενός από αυτά τα περιβλήματα θα δοκιμάζονται διά της μεθόδου που περιγράφεται στην Προσθήκη Β.1d.

**212 451** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (b) έως (e) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 400 kPa (4 bar).

Κατά παρέκκλιση από τις απαιτήσεις του περιθωριακού 212 151, περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 410 (d) θα υποβάλλονται σε περιοδικές επιθεωρήσεις τουλάχιστον κάθε οκτώ έτη οι οποίες θα περιλαμβάνουν έλεγχο πάχους χρησιμοποιώντας τα κατάλληλα όργανα. Για τέτοια περιβλήματα, η δοκιμή και ο έλεγχος στεγανότητας, για τα οποία γίνεται πρόβλεψη στο περιθωριακό 212 152, θα διενεργείται τουλάχιστον κάθε τέσσερα έτη.

**212 452** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (f) και (g) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 212 123.

## Προσθήκη Β.1b

212 453-

212 459

**ΤΜΗΜΑ 6. Επισήμανση**

**212 460** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (a) θα φέρουν επιπλέον των στοιχείων που προβλέπονται στο περιθωριακό 212 161, τις εξής λέξεις: "Μην ανοίγετε κατά τη μεταφορά. Υπόκειται σε αυτογενή ανάφλεξη".

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 410 (c) έως (e) θα φέρουν επιπλέον των στοιχείων που προβλέπονται στο περιθωριακό 212 161, τις εξής λέξεις: "Μην ανοίγετε κατά τη μεταφορά. Αναδίδει εύφλεκτα αέρια σε επαφή με το νερό".

Αυτά τα στοιχεία θα είναι σε επίσημη γλώσσα της χώρας εγκρίσεως, και επίσης, εάν η γλώσσα αυτή δεν είναι η αγγλική, γαλλική ή γερμανική, σε μία από αυτές τις γλώσσες, εκτός εάν προβλέπεται διαφορετικά σε τυχόν συμφωνίες που έχουν συναφθεί μεταξύ των χωρών που αφορά τη μεταφορά.

**212 461** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2471, 1° (a) θα φέρουν επίσης, στην πινακίδα που προβλέπεται στο περιθωριακό 212 160, τις ονομασίες των εγκεκριμένων υλών και το μέγιστο επιτρεπόμενο φορτίο του περιβλήματος σε kg.

212 462-

212 469

**ΤΜΗΜΑ 7. Λειτουργία**

**212 470** (1) Υλεις των 11° και 22° του περιθωριακού 2431 θα είναι καλυμμένες, εάν χρησιμοποιείται νερό ως προστατευτικό μέσο, με νερό σε ύψος όχι μικρότερο από 12 cm κατά την πλήρωση· ο βαθμός πλήρωσης σε θερμοκρασία 60 °C δεν θα υπερβαίνει το 98%. Εάν χρησιμοποιείται άζωτο ως προστατευτικό μέσο, ο βαθμός πλήρωσης σε θερμοκρασία 60 °C δεν θα υπερβαίνει το 96%. Ο εναπομένον χώρος θα πληρούται με άζωτο κατά τρόπο ώστε, ακόμα και μετά την ψύξη, η πίεση να μην πέφτει ποτέ κάτω από την ατμοσφαιρική πίεση. Το περιβλήμα θα είναι ερμητικά κλειστό<sup>24/</sup> έτσι ώστε να μη συμβεί διαρροή αερίου.

(2) Ακαθάριστα κενά περιβλήματα τα οποία περιείχαν ύλες των 11° και 22° του περιθωριακού 2431, όταν παραδίδονται για μεταφορά:

- είτε θα είναι γεμάτα με άζωτο· είτε
- θα είναι γεμάτα με νερό σε ποσοστό όχι μικρότερο από 96% και όχι μεγαλύτερο από 98% της χωρητικότητάς τους μεταξύ 1ης Οκτωβρίου και 31ης Μαρτίου, το νερό αυτό θα περιέχει επαρκή ποσότητα αντιψυκτικού μέσου ώστε να καταστήσει αδύνατη την πήξη του νερού κατά τη μεταφορά· το αντιψυκτικό μέσο θα είναι απαλλαγμένο από διαβρωτική δράση και δεν θα υπόκειται σε αντίδραση με τον φωσφόρο.

## Προσθήκη Β.1b

- 212 471** Περιβλήματα περιέχοντα ύλες των 31° έως 33° του περιθωριακού 2431 και ύλες των 2° (a), 3° (a) και 3° (b) του περιθωριακού 2471 θα πληρούνται σε ποσοστό όχι μεγαλύτερο από 90% της χωρητικότητάς τους· κενό διάστημα του 5% θα παραμένει κενό για ασφάλεια όποτε το υγρό είναι σε μέση θερμοκρασία 50 °C. Κατά τη μεταφορά, οι ύλες θα είναι κάτω από στρώμα αδρανούς αερίου, η πίεση μετρητή του οποίου δεν θα είναι μικρότερη από 50 kPa (0.5 bar). Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>24/</sup> και τα προστατευτικά πώματα σύμφωνα με το 212 430 θα είναι κλειδωμένα. Ακαθάριστα κενά περιβλήματα όταν παραδίδονται για μεταφορά θα είναι γεμάτα με αδρανές αέριο σε πίεση μετρητή τουλάχιστον 50 kPa (0.5 bar).
- 212 472** Για αιθυλοδιχλωροσιλάνιο, μεθυλοδιχλωροσιλάνιο και τριχλωροσιλάνιο του περιθωριακού 2471, 1°, ο βαθμός πλήρωσης δεν θα υπερβαίνει το 0.93 ή 0.95 ή 1.14 kg ανά λίτρο χωρητικότητας αντίστοιχα, εάν η πλήρωση υπολογίζεται κατά βάρος. Εάν η πλήρωση υπολογίζεται κατ'όγκο, και για χλωροσιλάνια που δεν αναφέρονται ονομαστικά (ε.α.ο.) του περιθωριακού 2471, 1°, ο βαθμός πλήρωσης δεν θα υπερβαίνει το 85%. Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>24/</sup> και τα προστατευτικά πώματα σύμφωνα με το περιθωριακό 212 430 θα είναι κλειδωμένα.
- 212 473** Περιβλήματα που περιέχουν ύλες του περιθωριακού 2401, 5° και 15°, δεν θα πληρούνται σε ποσοστό μεγαλύτερο από 98% της χωρητικότητάς τους.
- 212 474** Για τη μεταφορά καισίου και ρουβιδίου του περιθωριακού 2471 11° (a) , οι ύλες θα καλύπτονται με αδρανές αέριο και τα πώματα σύμφωνα με το περιθωριακό 212 431 θα είναι κλειδωμένα. Περιβλήματα που περιέχουν άλλες ύλες του περιθωριακού 2471, 11° (a) δεν θα παραδίδονται για μεταφορά μέχρις ότου η ύλη στερεοποιηθεί εντελώς και καλυφθεί με αδρανές αέριο.
- Ακαθάριστα κενά περιβλήματα τα οποία περιείχαν ύλες του περιθωριακού 2471, 11°(a) θα πληρούνται με αδρανές αέριο. Τα περιβλήματα θα είναι ερμητικά κλειστά <sup>24/</sup>.
- 212 475** Όποτε φορτώνονται ύλες του περιθωριακού 2431, 1° (b), η θερμοκρασία των μεταφερομένων εμπορευμάτων δεν θα υπερβαίνει τους 60 °C.

212 476-  
212 499

---

<sup>24/</sup> Βλέπε footnote 8/.

## Προσθήκη Β.1b

**ΚΛΑΣΗ 5.1. ΟΞΕΙΑΩΤΙΚΕΣ ΥΛΕΣ**

**ΚΛΑΣΗ 5.2. ΟΡΓΑΝΙΚΑ ΥΠΕΡΟΞΕΙΔΙΑ**

212 500-  
212 509

**ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση εμπορευματοκιβωτίων-δεξαμενών) ορισμοί**

**Χρήση**

**212 510** Οι ακόλουθες ύλες του περιθωριακού 2501 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

- (a) ύλες του 5°
- (b) ύλες που έχουν καταχωρηθεί στο γράμμα (a) ή (b) των 1° έως 4°, 11°, 13°, 16°, 17°, 22° και 23°, μεταφερόμενες στην υγρή κατάσταση
- (c) υγρό νιτρικό αμμώνιο του 20°
- (d) ύλες που έχουν καταχωρηθεί στο γράμμα (c) των 1°, 16°, 18°, 22° και 23°, μεταφερόμενες στην υγρή κατάσταση
- (e) ύλες σε κονιώδη ή κοκκώδη μορφή που έχουν καταχωρηθεί στο γράμμα (b) ή (c) των 11°, 13° έως 19°, 21° έως 27°, 29° έως 31°.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα υλών των 11° έως 13°, 16°, 18°, 19°, 21° και 22° (c), και στερεών αποβλήτων ταξινομημένων στα προαναφερόμενα είδη του περιθωριακού 2501, βλέπε περιθωριακό 51 111.

**212 511** Υλές των 9° (b), 10° (b), 19° (b) ή 20° (b) του περιθωριακού 2551 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές το αργότερο από 1ης Ιανουαρίου 1995 υπό τους όρους που θέτει η αρμόδια αρχή της χώρας προέλευσης εάν, βάσει δοκιμών (βλέπε περιθωριακό 212 541), η αρμόδια αρχή ικανοποιείται ότι αυτή η μεταφορά μπορεί να διενεργηθεί με ασφάλεια.

212 512-  
212 519

**ΤΜΗΜΑ 2. Κατασκευή**

**212 520** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 510 (a) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] τουλάχιστον 1 MPa (10 bar) (πίεση μετρητή).

**212 521** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 510 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127(2)] τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή). Περιβλήματα, και τα είδη εξοπλισμού τους, προοριζόμενα για τη μεταφορά υλών του 1° θα κατασκευάζονται από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5% ή από κατάλληλο χάλυβα που δεν είναι δυνατό να προκαλέσει την αποσύνθεση του υπεροξειδίου του υδρογόνου. Όπου τα περιβλήματα είναι κατασκευασμένα από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5%, το πάχος των τοιχωμάτων δεν χρειάζεται να είναι μεγαλύτερο από 15 mm, ακόμη και όπου ο υπολογισμός σύμφωνα με το περιθωριακό 212 127 (2) δίνει υψηλότερη τιμή.

**212 522** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 510 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή). Τα περιβλήματα θα κατασκευάζονται από ωστενιτικούς χάλυβες.

## Προσθήκη Β.1b

- 212 523** Περιβλήματα προοριζόμενα για τη μεταφορά των υγρών που αναφέρονται στο περιθωριακό 212 510 (d) και των κοινοδών ή κοκκωδών υλών που αναφέρονται στο περιθωριακό 212 510 (e) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους Ι της παρούσης Προσθήκης.
- 212 524** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα σχεδιάζονται για πίεση υπολογισμού τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή).
- 212 525-  
212 529**

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

- 212 530** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° (a), 3° (a) και 5° του περιθωριακού 2501 θα έχουν τα ανοίγματά τους επάνω από τη στάθμη επιφάνειας του υγρού. Επιπλέον, τα ανοίγματα καθαρισμού (fist holes) που αναφέρονται στο περιθωριακό 212 132 δεν θα επιτρέπονται.

Για διαλύματα περιέχοντα ποσοστό μεγαλύτερο από 60% αλλά όχι μεγαλύτερο από 70% υπεροξειδίου του υδρογόνου, θα επιτρέπονται ανοίγματα κάτω από τη στάθμη της επιφάνειας του υγρού. Σε αυτήν την περίπτωση το σύστημα εκκένωσης του περιβλήματος θα είναι εξοπλισμένο με δύο ανεξάρτητες μεταξύ τους συσκευές κλεισίματος συναρμολογημένες σε σειρά, η πρώτη με τη μορφή εσωτερικής δικλείδας ταχείας λειτουργίας, συγκεκριμένου τύπου, και η δεύτερη με τη μορφή βαλβίδας εκροής, μία σε κάθε άκρο του σωλήνα εκκένωσης. Κενό παρέμβυσμα (φλάντζα), ή άλλη συσκευή που παρέχει το ίδιο μέτρο ασφαλείας, θα τοποθετείται επίσης στο στόμιο κάθε εξωτερικής βαλβίδας εκροής. Η εσωτερική δικλείδα θα είναι τέτοια ώστε, εάν η σωλήνωση ξεβιδωθεί, η δικλείδα θα παραμείνει ενωμένη με το περίβλημα και στην κλειστή θέση. Οι συνδέσεις με τα εξωτερικά στόμια σωληνώσεων των περιβλημάτων θα κατασκευάζονται από υλικά που δεν μπορούν να προκαλέσουν αποσύνθεση του υπεροξειδίου του υδρογόνου.

**212 531**

- 212 532** Περιβλήματα προοριζόμενα για τη μεταφορά υπεροξειδίου του υδρογόνου ή υδατικών διαλυμάτων υπεροξειδίου του υδρογόνου του 1°, ή υγρού νιτρικού αμμωνίου του 20° του περιθωριακού 2501 θα είναι εξοπλισμένα στο άνω μέρος τους με συσκευή κλεισίματος που θα αποτρέπει την ανάπτυξη υπερβολικής πίεσης στο εσωτερικό του περιβλήματος, τυχόν διαρροή υγρού, και τυχόν εισδοχή ξένης ουσίας στο περίβλημα. Οι συσκευές κλεισίματος περιβλημάτων προοριζόμενων για τη μεταφορά υγρού νιτρικού αμμωνίου του περιθωριακού 2501, 20°, θα είναι σχεδιασμένες έτσι ώστε να αποκλείουν απόφραξη των συσκευών από στερεοποιημένο νιτρικό αμμώνιο κατά τη μεταφορά.

- 212 533** Όπου περιβλήματα προοριζόμενα για τη μεταφορά υγρού νιτρικού αμμωνίου του περιθωριακού 2501, 20°, είναι επενδεδυμένα με θερμομονωτικό υλικό, το υλικό θα είναι ανόργανο και εντελώς απαλλαγμένο από αναφλέξιμες ουσίες.

- 212534** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα είναι εξοπλισμένα με θερμομόνωση τηρώντας τις απαιτήσεις του περιθωριακού 212 234 (1). Εάν η SADT του οργανικού υπεροξειδίου στο περίβλημα είναι 55 °C ή μικρότερη, ή το περίβλημα είναι κατασκευασμένο με αλουμίνιο, το περίβλημα θα είναι πλήρως μονωμένο. Το αλεξήλιο και οποιοδήποτε μέρος του περιβλήματος που δεν καλύπτεται από αυτό, ή η εξωτερική επένδυση πλήρους μονωτικής κάλυψης, θα είναι βαμμένα λευκά ή φινιρισμένα με στυλνόν μέταλλο. Το χρώμα θα καθαρίζεται πριν από κάθε διαδρομή και θα ανανεώνεται σε περίπτωση κτηρινίσματος ή φθοράς. Η θερμομόνωση θα είναι απαλλαγμένη από αναφλέξιμες ουσίες.

- 212 535** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα είναι εξοπλισμένα με αισθητήρες θερμοκρασίας.

- 212 536** (1) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα είναι εξοπλισμένα με βαλβίδες ασφαλείας και συσκευές εκτόνωσης με πίεση.

## Προσθήκη Β.1b

**212 536** Συσκευές εκτόνωσης σε κενό μπορούν επίσης να χρησιμοποιούνται. Συσκευές εκτόνωσης με (συνεχ.) πίεση θα λειτουργούν σε πιέσεις καθοριζόμενες σύμφωνα τόσο με τις ιδιότητες του οργανικού υπεροξειδίου όσο και τα κατασκευαστικά χαρακτηριστικά της δεξαμενής. Δεν θα επιτρέπονται εύηχτα στοιχεία στο σώμα του περιβλήματος.

(2) Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα είναι εξοπλισμένα με βαλβίδες ασφαλείας με ελατήριο για να αποτραπεί η ανάπτυξη σημαντικής πίεσης μέσα στο περίβλημα από τα προϊόντα αποσύνθεσης και τους ατμούς που εκλύονται σε θερμοκρασία 50 °C. Η χωρητικότητα και η πίεση στην αρχή της εκκένωσης της βαλβίδας (των βαλβίδων) ασφαλείας θα βασίζεται στα αποτελέσματα των δοκιμών που καθορίζονται στο περιθωριακό 212 541. Η πίεση στην αρχή της εκκένωσης δεν θα είναι εντούτοις σε καμία περίπτωση τέτοια ώστε να ήταν δυνατή η διαφυγή υγρού από τη βαλβίδα (τις βαλβίδες) εάν το περίβλημα ανατρεπόταν.

(3) Οι συσκευές εκτόνωσης με πίεση περιβλημάτων προοριζόμενων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 μπορεί να είναι του τύπου ελατηρίου ή του τύπου εκρηγνύομενου δίσκου, σχεδιασμένες να εξαερώνουν όλα τα προϊόντα αποσύνθεσης και τους ατμούς που αναπτύσσονται σε περίοδο περικύκλωσης από φωτιά όχι μικρότερη από μία ώρα (φορτίο θερμότητας 110 kW/m<sup>2</sup>) ή αυτο-επιταχυνόμενης αποσύνθεσης. Η πίεση στην αρχή της εκκένωσης της συσκευής (των συσκευών) εκτόνωσης με πίεση θα είναι υψηλότερη από την αναφερόμενη στο (2) και θα βασίζεται στα αποτελέσματα των δοκιμών που αναφέρονται στο περιθωριακό 212 541. Οι διαστάσεις των συσκευών εκτόνωσης με πίεση θα είναι τέτοιες ώστε η μέγιστη πίεση στο περίβλημα να μην υπερβαίνει ποτέ την πίεση δοκιμής του περιβλήματος.

(4) Για περιβλήματα με μόνωση αποτελούμενη από πλήρη επένδυση προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511, η χωρητικότητα και η ρύθμιση των συσκευών εκτόνωσης με πίεση θα καθορίζεται υποθέτοντας απώλεια μόνωσης από ποσοστό 1% του εμβαδού της επιφάνειας.

(5) Συσκευές εκτόνωσης στο κενό και βαλβίδες ασφαλείας με ελατήριο περιβλημάτων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα είναι εφοδιασμένες με ανασχετήρες φλόγας εκτός εάν οι προς μεταφορά ύλες και τα προϊόντα αποσύνθεσής τους είναι μη αναφλέξιμα. Θα δίνεται η δέουσα προσοχή στην ελάττωση της ικανότητας εκτόνωσης που προκαλεί ο ανασχετήρας φλόγας.

**212 537-  
212 539**

#### ΤΜΗΜΑ 4. Έγκριση τύπου

**212 540** Εμπορευματοκιβώτια-δεξαμενές εγκεκριμένα για τη μεταφορά υγρού νιτρικού αμμωνίου του περιθωριακού 2501, 20°, δεν θα εγκρίνονται για τη μεταφορά άλλων υλών.

**212 541** Για την έγκριση τύπου περιβλημάτων προοριζόμενων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511, θα διενεργούνται δοκιμές:

- για να αποδειχθεί η συμβατότητα όλων των υλικών που κανονικά έρχονται σε επαφή με την ύλη κατά τη μεταφορά
- για να παρασχεθούν στοιχεία για τη διευκόλυνση του σχεδιασμού των συσκευών εκτόνωσης με πίεση και των βαλβίδων ασφαλείας λαμβάνοντας υπόψη τα χαρακτηριστικά σχεδιασμού των εμπορευματοκιβωτίων-δεξαμενών και
- για να εξακριβωθούν τυχόν ειδικές απαιτήσεις αναγκαίες για την ασφαλή μεταφορά της ύλης.

Τα αποτελέσματα των δοκιμών θα περιλαμβάνονται στην έκθεση για την έγκριση τύπου του περιβλήματος.

## Προσθήκη Β.1b

212 542-  
212 549

**ΤΜΗΜΑ 5. Δοκιμές**

**212 550** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 510 (a), (b) και (c) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή). Περιβλήματα από καθαρό αλουμίνιο προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2501, 1<sup>ο</sup>, μπορεί να υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μόνον 250 kPa (2.5 bar) (πίεση μετρητή).

Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 510 (d) και (e) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 212 123.

**212 551** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού τους σύμφωνα με το περιθωριακό 212 524.

212 552-  
212 559

**ΤΜΗΜΑ 6. Επισήμανση**

**212 560** Τα ακόλουθα πρόσθετα στοιχεία θα επισημαίνονται με σφράγιση ή με άλλη παρόμοια μέθοδο στην πινακίδα που προβλέπεται στο περιθωριακό 212 161 ή απευθείας στα τοιχώματα του ίδιου του περιβλήματος, εάν τα τοιχώματα είναι έτσι ενισχυμένα ώστε να μη μειώνεται η αντοχή του περιβλήματος:

- η χημική ονομασία με την εγκεκριμένη συγκέντρωση της σχετικής ύλης.

212 561-  
212 569

**ΤΜΗΜΑ 7. Λειτουργία**

**212 570** Το εσωτερικό του περιβλήματος και όλα τα μέρη που είναι δυνατό να έλθουν σε επαφή με τις ύλες που αναφέρονται στα περιθωριακά 212 510 και 212 511 θα διατηρούνται καθαρά. Λιπαντικό που μπορεί να συνδυαστεί επικίνδυνα με τη μεταφερόμενη ύλη δεν θα χρησιμοποιείται για αντλίες, βαλβίδες ή άλλες συσκευές.

**212 571** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1<sup>ο</sup> (a), 2<sup>ο</sup> (a) και 3<sup>ο</sup> (a) περιθωριακού 2501 θα πληρούνται σε ποσοστό όχι μεγαλύτερο από 95% της χωρητικότητάς τους σε θερμοκρασία αναφοράς 15 °C. Περιβλήματα προοριζόμενα για τη μεταφορά υλών του περιθωριακού 2501, 20<sup>ο</sup>, θα πληρούνται σε ποσοστό όχι μεγαλύτερο από 97% της χωρητικότητάς τους, και η μέγιστη θερμοκρασία μετά την πλήρωση δεν θα υπερβαίνει τους 140 °C. Περιβλήματα εγκεκριμένα για τη μεταφορά υγρού νιτρικού αμμωνίου δεν θα χρησιμοποιούνται για τη μεταφορά άλλων υλών.

**212 572** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα πληρούνται όπως καθορίζεται στην έκθεση δοκιμής για την έγκριση τύπου της δεξαμενής αλλά θα είναι γεμάτα σε ποσοστό όχι μεγαλύτερο από 90% της χωρητικότητάς τους. Τα περιβλήματα θα είναι απαλλαγμένα από προσμειξείς κατά την πλήρωση.

**212 573** Ο λειτουργικός εξοπλισμός όπως οι βαλβίδες και εξωτερικές σωληνώσεις περιβλημάτων προοριζόμενων για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 511 θα κενώνεται μετά την πλήρωση ή εκκένωση της δεξαμενής.

212 574-  
212 599

**ΚΛΑΣΗ 6.1. ΤΟΞΙΚΕΣ ΥΛΕΣ****ΚΛΑΣΗ 6.2. ΜΟΛΥΣΜΑΤΙΚΕΣ ΥΛΕΣ**212 600-  
212 609**ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση των εμπορευματοκιβωτίων-δεξαμενών) ορισμοί****Χρήση**

**212 610** Οι ακόλουθες ύλες του περιθωριακού 2601 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

- (a) οι ονομαστικά καταχωρημένες ύλες στα 2° έως 4°
- (b) ύλες ταξινομημένες στο (a) των 6° έως 13° με την εξαίρεση του χλωρομυρμηκικού ισοπροπυλεστέρα των 10°, 15° έως 17°, 20°, 22°, 23°, 25° έως 28°, 31° έως 36°, 41°, 44°, 51°, 52°, 55°, 61°, 65° έως 68°, 71° έως 87° και 90°, μεταφερόμενες στην υγρή κατάσταση
- (c) ύλες ταξινομημένες στο (b) ή (c) των 11°, 12°, 14° έως 28°, 31° έως 36°, 41°, 44°, 51° έως 55°, 57° έως 62°, 64° έως 68°, 71° έως 87° και 90°, μεταφερόμενες στην υγρή κατάσταση
- (d) ύλες σε κοκκώδη ή κονιώδη μορφή ταξινομημένες στο (b) ή (c) των 12°, 14°, 17°, 19°, 21°, 23°, 25° έως 27°, 32° έως 35°, 41°, 44°, 51° έως 55°, 57° έως 68°, 71° έως 87° και 90°.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα υλών του 60° (c), στερεών που περιέχουν τοξικά υγρά του 65° (b) (χαρακτηριστικός αριθμός 3243) και στερεών αποβλήτων ταξινομημένων στο (c) των διαφόρων ειδών, βλέπε το περιθωριακό 61 111.

(2) Υλες του περιθωριακού 2651, 3° και 4° μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές.

212 611-  
212 619**ΤΜΗΜΑ 2. Κατασκευή**

**212 620** Περιβλήματα προοριζόμενα για τη μεταφορά υλών που αναφέρονται στο περιθωριακό 212 610 (1) (a) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 1.5 MPa (15 bar) (πίεση μετρητή).

**212 621** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 610 (1) (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 1.0 MPa (10 bar) (πίεση μετρητή).

**212 622** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στα περιθωριακά 212 610 (1) (c) και 212 610 (2) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή). Περιβλήματα προοριζόμενα για τη μεταφορά χλωροοξικού οξέος του 24°(b) του περιθωριακού 2601 θα είναι εφοδιασμένα με σμάλτο ή ισοδύναμη προστατευτική επιστρώση εάν το υλικό του περιβλήματος προσβάλλεται από το χλωροοξικό οξύ.

## Προσθήκη Β.1b

**212 623** Περιβλήματα προοριζόμενα για τη μεταφορά των κονιωδών ή κοκκωδών υλών που αναφέρονται στο περιθωριακό 212 610 (1) (d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους Ι της παρούσης Προσθήκης.

**212 624-**  
**212 629**

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**212 630** Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 610 (1) (a) και (b) θα είναι πάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διαπερνούν τα τοιχώματα του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Τα περιβλήματα θα μπορούν να κλείνονται ερμητικά<sup>24/</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πόματα που κλειδώνουν. Τα ανοίγματα καθαρισμού (fist holes) που προβλέπονται στο περιθωριακό 212 132 δεν θα επιτρέπονται εντούτοις για περιβλήματα προοριζόμενα για την μεταφορά διαλυμάτων υδροκυανικού οξέος του 2°.

**212 631** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 610 (1) (c) και (d) και (2) μπορεί επίσης να είναι του τύπου εκκένωσης από τον πυθμένα. Τα περιβλήματα θα μπορούν να κλείνονται ερμητικά<sup>24/</sup>.

**212 632** Εάν περιβλήματα είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνύομενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

**212 633-**

## ΚΛΑΣΗ 8. ΔΙΑΒΡΩΤΙΚΕΣ ΥΛΕΣ

212 800-  
212 809

## ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση των εμπορευματοκιβωτίων-δεξαμενών) ορισμοί

## Χρήση

212 810 Οι ακόλουθες ύλες του περιθωριακού 2801 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές:

- (a) ύλες ονομαστικά καταχωρημένες στα 6° και 14°
- (b) ύλες ταξινομημένες στο (a) των 1°, 2°, 3°, 7°, 8°, 12°, 17°, 32°, 33°, 39°, 40°, 46°, 47°, 52° έως 56°, 64° έως 68°, 70°, 72° έως 76°, μεταφερόμενες στην υγρή κατάσταση
- (c) ύλες του 15° ή ταξινομημένες στο (b) ή (c) των 1° έως 5°, 7°, 8° 10°, 12°, 17°, 31° έως 40°, 42° έως 47°, 51° έως 56°, 61° έως 76°, μεταφερόμενες στην υγρή κατάσταση
- (d) ύλες σε κονιώδη ή κοκκώδη μορφή ταξινομημένες στο (b) ή (c) των 9°, 11°, 13°, 16°, 31°, 34°, 35°, 39°, 41°, 45°, 46°, 52°, 55°, 62°, 65°, 68°, 69°, 71°, 73° και 75°.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά χύμα θειικού μολύβδου του 1° (b), υλών του 13° (b), και στερεών αποβλήτων και στερεών που περιέχουν διαβρωτικό υγρό του 65° (b) με χαρακτηριστικό αριθμό 3244 ταξινομημένες στο (c) των διαφόρων ειδών, βλέπε το περιθωριακό 81 111.

212 811-  
212 819

## ΤΜΗΜΑ 2. Κατασκευή

212 820 Περιβλήματα προοριζόμενα για τη μεταφορά υλών ονομαστικά καταχωρημένων στα 6° και 14° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 2.1 MPa (21 bar) (πίεση μετρητή). Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 14° θα είναι εφοδιασμένα με επίστρωση μολύβδου όχι μικρότερη από 5 mm σε πάχος, ή με ισοδύναμη επίστρωση. Η απαίτηση της Προσθήκης Β.1d θα έχει εφαρμογή στα υλικά και την κατασκευή συγκολλημένων περιβλημάτων, προοριζόμενων για τη μεταφορά υλών του 6°.

212 821 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 810 (b) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 1.0 MPa (10 bar) (πίεση μετρητή).

Όπου η χρήση αλουμινίου είναι αναγκαία για περιβλήματα προοριζόμενα για τη μεταφορά νιτρικού οξέος του 2° (a), τέτοια περιβλήματα θα κατασκευάζονται από αλουμίνιο καθαρότητας όχι μικρότερης από 99.5% ακόμη και όπου η πίεση υπολογισμού κατά το περιθωριακό 212 127 (2) δίνει υψηλότερη τιμή, το πάχος του τοιχώματος δεν χρειάζεται να υπερβαίνει τα 15 mm.

212 822 Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 810 (c) θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

Εάν τα περιβλήματα είναι κατασκευασμένα από καθαρό αλουμίνιο, το πάχος του τοιχώματος δεν χρειάζεται να είναι μεγαλύτερο από 15 mm ακόμη και όπου η πίεση υπολογισμού κατά το περιθωριακό 212 127(2) δίνει υψηλότερη τιμή.

## Προσθήκη Β.1b

**212 823** Περιβλήματα προοριζόμενα για τη μεταφορά των κοιωδών ή κοκκωδών υλών που αναφέρονται στο περιθωριακό 212 810 (d) θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

**212 824-  
212 829**

**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

**212 830** Όλα τα ανοίγματα περιβλημάτων προοριζόμενων για τη μεταφορά υλών των 6°, 7° και 14° θα είναι επάνω από τη στάθμη της επιφάνειας του υγρού. Σωληνώσεις ή συνδέσεις σωληνώσεων δεν θα διαπερνούν τα τοιχώματα του περιβλήματος κάτω από τη στάθμη της επιφάνειας του υγρού. Επιπλέον, τα ανοίγματα καθαρισμού (fist holes) που αναφέρονται στο περιθωριακό 212 132 δεν θα επιτρέπονται. Τα εμπορευματοκιβώτια-δεξαμενές θα μπορούν να κλείνονται ερμητικά<sup>26/</sup> και τα κλεισίματα θα μπορούν να προστατεύονται με πάμα που κλειδώνει.

**212 831** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 810 (b), (c) και (d) μπορεί να είναι επίσης του τύπου εκκένωσης από τον πυθμένα.

**212 832** Εάν περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 810 (b) είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνύομενος δίσκος μπροστά από τη βαλβίδα. Η διευθέτηση του εκρηγνύομενου δίσκου και τη βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

**212 833** Περιβλήματα προοριζόμενα για τη μεταφορά τριοξειδίου του θείου του 1° (a) θα είναι θερμομονωμένα και εξοπλισμένα με συσκευή θέρμανσης στο εξωτερικό μέρος.

**212 834** Περιβλήματα και ο λειτουργικός εξοπλισμός αυτών προοριζόμενα για μεταφορά διαλυμάτων υποχλωριωδών αλάτων του 61° θα σχεδιάζονται έτσι ώστε να αποτρέπουν την εισδοχή ξένης ουσίας, τη διαρροή υγρού ή τυχόν ανάπτυξη επικίνδυνης υπερβολικής πίεσης μέσα στο περιβλήμα.

**212 835-  
212 839**

**ΤΜΗΜΑ 4. Έγκριση τύπου**

**212 840-  
212 849** (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 5. Δοκιμές**

**212 850** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 6° θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή τουλάχιστον 1.0 MPa (10 bar) και εκείνα που προορίζονται για τη μεταφορά υλών του 7° θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar).

Τα υλικά κάθε συγκολλημένου περιβλήματος προοριζόμενου για τη μεταφορά υλών του 6° θα δοκιμάζονται με τη μέθοδο που περιγράφεται στην Προσθήκη Β.1d.

## Προσθήκη Β.1b

**212 851** Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 14° ή των υλών που αναφέρονται στο περιθωριακό 212 810 (b) και (c) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή όχι μικρότερη από 400 kPa (4 bar). Η δοκιμή υδραυλικής πίεσης για περιβλήματα προοριζόμενα για τη μεταφορά τριοξειδίου του θείου του 1° (a) θα επαναλαμβάνεται κάθε δύομισι χρόνια.

Περιβλήματα κατασκευασμένα από καθαρό αλουμίνιο και προοριζόμενα για τη μεταφορά νιτρικού οξέος του 2° (a) χρειάζεται να υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση μετρητή μόνον 250 kPa (2.5 bar).

Η κατάσταση της επίστρωσης περιβλημάτων προοριζόμενων για τη μεταφορά υλών του 14° θα επιθεωρείται κάθε έτος από ειδικό εγκεκριμένο από την αρμόδια αρχή, ο οποίος θα επιθεωρεί το εσωτερικό του περιβλήματος.

**212 852** Περιβλήματα προοριζόμενα για τη μεταφορά των υλών που αναφέρονται στο περιθωριακό 212 810 (d) θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές στην πίεση υπολογισμού τους κατά τα οριζόμενα στο περιθωριακό 212 123.

**212 853-  
212 859**

**ΤΜΗΜΑ 6. Επισήμανση**

**212 860** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 6° και 14°, θα φέρουν, επιπλέον των στοιχείων που αναφέρονται στο περιθωριακό 212 160, την ημερομηνία (μήνας, έτος) της πιο πρόσφατης επιθεώρησης της εσωτερικής κατάστασης.

**212 861** Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς τριοξειδίου του θείου του 1° (a) και ύλες των 6° και 14° θα αναγράφουν επιπλέον, στην πινακίδα που αναφέρεται στο περιθωριακό 212 160, το μέγιστο επιτρεπόμενο βάρος φόρτωσης σε kg του περιβλήματος.

**212 862-  
212 869**

**ΤΜΗΜΑ 7. Λειτουργία**

**212 870** Περιβλήματα προοριζόμενα για τη μεταφορά αδρανούς τριοξειδίου του θείου του 1° (a) δεν θα πληρούνται σε ποσοστό μεγαλύτερο από 88% της χωρητικότητάς τους εκείνα που προορίζονται για τη μεταφορά υλών του 14° θα πληρούνται σε ποσοστό όχι μικρότερο από 88% και όχι μεγαλύτερο από 92% της χωρητικότητάς τους ή σε 2.86 kg ανά λίτρο χωρητικότητας.

Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 6° δεν θα πληρούνται κατά περισσότερο από 0.84 kg ανά λίτρο χωρητικότητας.

**212 871** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 6°, 7° και 14° θα είναι ερμητικά κλειστά<sup>26/</sup> [βλέπε περιθωριακό 212 127 (2)] κατά τη μεταφορά και τα κλεισίματα θα προστατεύονται με πόματα που κλειδώνουν.

**212 872-  
212 899**

<sup>26/</sup> Βλέπε υποσημείωση<sup>8/</sup>.

## Προσθήκη Β.1b

**ΚΛΑΣΗ 9. ΔΙΑΦΟΡΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΥΛΕΣ ΚΑΙ ΑΝΤΙΚΕΙΜΕΝΑ**212 900-  
212 909**ΤΜΗΜΑ 1. Γενικά, πλαίσιο (χρήση των εμπορευματοκιβωτίων-δεξαμενών) ορισμοί****Χρήση**

212 910 Υλεις των 1°, 2°, 4°, 11° και 12° του περιθωριακού 2901 μπορεί να μεταφέρονται σε εμπορευματοκιβώτια-δεξαμενές.

*ΣΗΜΕΙΩΣΗ:* Για τη μεταφορά χύμα υλών των 4° και 12° του περιθωριακού 2901, βλέπε περιθωριακό 91 111.

212 911-  
212 919**ΤΜΗΜΑ 2. Κατασκευή**

212 920 Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1°, 4°, 11° και 12° θα σχεδιάζονται σύμφωνα με τις απαιτήσεις του Μέρους I της παρούσης Προσθήκης.

212 921 Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 2° θα σχεδιάζονται για πίεση υπολογισμού [βλέπε περιθωριακό 212 127 (2)] όχι μικρότερη από 400 kPa (4 bar) (πίεση μετρητή).

212 922-  
212 929**ΤΜΗΜΑ 3. Είδη εξοπλισμού**

212 930 Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° και 2° θα μπορούν να κλείνονται ερμητικά <sup>26/</sup>. Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 4° (c) θα είναι εξοπλισμένα με βαλβίδα ασφαλείας.

212 931 Εάν περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° και 2° είναι εξοπλισμένα με βαλβίδες ασφαλείας, θα τοποθετείται εκρηγνυόμενος δίσκος μπροστά από τις βαλβίδες. Η διεύθετη του εκρηγνυόμενου δίσκου και της βαλβίδας ασφαλείας θα είναι τέτοια ώστε να ικανοποιεί την αρμόδια αρχή.

212 932-  
212 939**ΤΜΗΜΑ 4. Έγκριση τύπου**

212 940-  
212 949 (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 5. Δοκιμές**

212 950 Περιβλήματα προοριζόμενα για τη μεταφορά υλών του 2° θα υποβάλλονται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης σε πίεση τουλάχιστον 400 kPa (4 bar) (πίεση μετρητή).

<sup>26/</sup> Βλέπε υποσημείωση <sup>8/</sup>.

## Προσθήκη Β.1b

**212 951** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1°, 4°, 11° και 12° θα υπόκεινται στις αρχικές και περιοδικές δοκιμές υδραυλικής πίεσης στην πίεση υπολογισμού που χρησιμοποιείται στο σχεδιασμό τους κατά τα οριζόμενα στο περιθωριακό 212 123.

**212 952-**  
**212 959**

**ΤΜΗΜΑ 6. Επισήμανση**

**212 960-**  
**212 969** (Δεν υπάρχουν ειδικές απαιτήσεις)

**ΤΜΗΜΑ 7. Λειτουργία**

**212 970** Περιβλήματα προοριζόμενα για τη μεταφορά υλών των 1° και 2° θα είναι ερμητικά κλειστά <sup>26/</sup> κατά τη μεταφορά.

**212 971** Εμπορευματοκιβώτια-δεξαμενές εγκεκριμένα για τη μεταφορά υλών των 1° και 2° δεν θα χρησιμοποιούνται για τη μεταφορά τροφίμων, αντικειμένων κατανάλωσης ή ζωοτροφών.

**212 972-**  
**212 999**

---

<sup>26/</sup>

## Προσθήκη Β.1c

**ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΣΤΑΘΕΡΕΣ ΔΕΞΑΜΕΝΕΣ ΚΑΙ  
ΑΠΟΣΥΝΑΡΜΟΛΟΓΟΥΜΕΝΕΣ ΔΕΞΑΜΕΝΕΣ ΚΑΤΑΣΚΕΥΑΣΜΕΝΕΣ ΑΠΟ  
ΕΝΙΣΧΥΜΕΝΑ ΠΛΑΣΤΙΚΑ**

**ΣΗΜΕΙΩΣΗ 1:** *Η παρούσα Προσθήκη έχει εφαρμογή σε σταθερές δεξαμενές και αποσυναρμολογούμενες δεξαμενές δεν έχει εφαρμογή σε συστοιχίες δοχείων, σε εμπορευματοκιβώτια-δεξαμενές, ή σε δοχεία.*

**ΣΗΜΕΙΩΣΗ 2:** *Για δοχεία, βλέπε τις απαιτήσεις που τα αφορούν στο Παράρτημα Α (κόλα).*

213 000-  
213 009

**ΤΜΗΜΑ 1.** Γενικές διατάξεις που αφορούν τη χρήση και κατασκευή σταθερών και αποσυναρμολογούμενων δεξαμενών

**ΣΗΜΕΙΩΣΗ:** *Σύμφωνα με τις διατάξεις του περιθωριακού 10 121 (2) η μεταφορά επικίνδυνων υλών σε σταθερές ή αποσυναρμολογούμενες δεξαμενές κατασκευασμένες από ενισχυμένα πλαστικά σύμφωνα με τις απαιτήσεις της παρούσης Προσθήκης επιτρέπεται μόνο όπου η χρήση τέτοιων δεξαμενών για εκείνες τις ύλες εγκρίνεται ρητά υπό το περιθωριακό 213 010.*

**Χρήση**

**213 010** Οι ακόλουθες ύλες μπορεί να μεταφέρονται σε δεξαμενές από ενισχυμένο πλαστικό σύμφωνα με τις διατάξεις της παρούσης Προσθήκης:

- (a) αργό πετρέλαιο και άλλα ακατέργαστα έλαια πτητικά προϊόντα από την απόσταξη του αργού πετρελαίου και των λουπών ακατέργαστων ελαίων του 3° (b) της Κλάσης 3'
- (b) ημιβεράα προϊόντα από την απόσταξη πετρελαίου και άλλων ακατέργαστων ελαίων του 31° (c) της Κλάσης 3'
- (c) πετρέλαια θερμάνσεως και πετρέλαια ντίζελ του 31° (c) της Κλάσης 3'
- (d) υδατικά διαλύματα υπεροξειδίου του υδρογόνου του 1° (b) και (c) και διαλύματα του 11° (b) της Κλάσης 5.1'
- (e) ύλες των 1° (b) και (c), 2° (b), 5°, 8° (b) και (c), 17° (c), 42°, 43° (c) και 61° της Κλάσης 8.

213 011-  
213 099

**Κατασκευή**

**213 100** Οι δεξαμενές θα συμφωνούν με τις ακόλουθες απαιτήσεις της Προσθήκης Β.1a:

(1) Γενικές διατάξεις με εφαρμογή σε δεξαμενές που χρησιμοποιούνται για μεταφορά υλών όλων των κλάσεων:

Περιθωριακά 211 120 (4), (5) και (6) 211 121 211 122 211 124 211 126 211 127 (7)

211 128 211 130 211 132 211 140 211 150 έως 211 154 211 160 και 211 161 211 171 211 172 (1) και (2) 211 173 έως 211 178.

## Προσθήκη Β.1c

**213 100** (2) Διατάξεις με εφαρμογή σε δεξαμενές που χρησιμοποιούνται για μεταφορά υλών της Κλάσης 3: Περιβλήματα εξοπλισμένα με συσκευή εξαερισμού που δεν μπορεί να κλειστεί και προοριζόμενα για τη μεταφορά εύφλεκτων υγρών με σημείο ανάφλεξης που δεν υπερβαίνει τους 55 °C θα έχουν φλογοπαγίδα στη συσκευή εξαερισμού.

Η δοκιμή στεγανότητας και η εσωτερική επιθεώρηση θα γίνονται κάθε τρία έτη.

(3) Ειδικές διατάξεις με εφαρμογή σε δεξαμενές χρησιμοποιούμενες για τη μεταφορά υλών της Κλάσης 5.1: περιθωριακό 211 532.

(4) Διατάξεις με εφαρμογή σε δεξαμενές χρησιμοποιούμενες για μεταφορά υλών της Κλάσης 8: περιθωριακό 211 834.

**213 101** Τα τοιχώματα της δεξαμενής δεν πρέπει να παρουσιάζουν ελαττώματα του υλικού που να προκαλούν ελάττωση της ασφάλειας.

**213 102** Τα τοιχώματα της δεξαμενής πρέπει να έχουν αντοχή διάρκειας στις μηχανικές, θερμικές και χημικές καταπονήσεις στις οποίες υποβάλλονται.

#### Ανοίγματα δεξαμενών

**213 103** (1) Όπου η δεξαμενή έχει ένα ή περισσότερα ανοίγματα εκκένωσης κάτω από τη στάθμη του υγρού, τυχόν σωλήνας ή βαλβίδα εφαρμοσμένη σε άνοιγμα ή ανοίγματα αυτού του είδους θα προστατεύονται είτε τοποθετούμενα σε εσοχή στο περίβλημα της δεξαμενής είτε με οποιοδήποτε άλλο μέσο εγκεκριμένο από την αρμόδια αρχή και παρέχον ισοδύναμη προστασία.

(2) Η χρήση βιδωτών βυσμάτων απαγορεύεται αυστηρά. Οι βαλβίδες θα ανήκουν σε υπόδειγμα εγκεκριμένο από την αρμόδια αρχή.

(3) Τα ανοίγματα πλήρωσης θα κλείνονται με ερμητική συσκευή. Εάν η συσκευή προεξέχει προς το έξω μέρος του περιβλήματος της δεξαμενής θα προστατεύεται με πάμα ικανό να αντέχει στρεπτικές καταπονήσεις λόγω τυχαίας ανατροπής της δεξαμενής.

~~213 104-~~  
213 119

#### ΤΜΗΜΑ 2. Υλικά που χρησιμοποιούνται για τα τοιχώματα της δεξαμενής

**213 120** Τα τοιχώματα των δεξαμενών μπορεί να κατασκευάζονται από τα ακόλουθα υλικά:

(1) Συνθετική ρητίνη

- μη-κορεσμένες ρητίνες πολυεστέρα
- εποξειδικές ρητίνες
- άλλες ρητίνες με παρόμοια χαρακτηριστικά, εφόσον καταδεικνύεται η ασφάλεια του τοιχώματος.

## Προσθήκη Β.1c

**213 120** (2) Ενισχύσεις με ίνες  
(συνεχ.)

Ίνες γυαλιού (γυαλί τύπων Ε και C) <sup>1/</sup> με κατάλληλο επίχρισμα, παραδείγματος χάριν με βάση σιλανίου ή παρόμοια προϊόντα. Οι ίνες γυαλιού μπορεί να χρησιμοποιούνται στη μορφή κομμένων ή μη ινών περιλαμβανομένων προεντεταμένων συνεχών ινών ή νημάτων, ψαθών, ψαθών επιφάνειας ή υφάσματος.

## (3) Πρόσθετα

- (a) Πρόσθετα απαραίτητα για τη μεταχείριση ρητινών, παραδείγματος χάριν, καταλύτες, επιταχυντές, μονομερή, σκληρυντικά, θιξοτροπικές ύλες, σύμφωνα με οδηγίες του κατασκευαστή της ρητίνης.
- (b) Διαλυτικά, φυσικές χρωστικές ύλες, τεχνητές χρωστικές ύλες και άλλα προϊόντα που βοηθούν να επιτευχθούν οι απαιτούμενες ιδιότητες, παραδείγματος χάριν, την αύξηση της αντιστάσεως στη φωτιά, εφόσον δεν προκαλούν μείωση στην ασφάλεια χρήσεως των τοιχωμάτων της δεξαμενής.

~~213 121-~~  
~~213 129~~

**ΤΜΗΜΑ 3. Δομή των τοιχωμάτων της δεξαμενής**

**213 130** Η εξωτερική επιφανειακή στρώση των τοιχωμάτων της δεξαμενής πρέπει να αντέχει σε ατμοσφαιρικά φαινόμενα και επίσης σε σύντομη επαφή με την προς μεταφορά ύλη.

**213 131** Τα τοιχώματα της δεξαμενής και των σφραγισμένων αρμών πρέπει να ικανοποιούν τις απαιτήσεις μηχανικής αντίστασης που αναφέρονται στο Τμήμα 4.

**213 132** Η εσωτερική επιφανειακή στρώση των τοιχωμάτων πρέπει να αντέχει στις διαρκείς επιδράσεις της προς μεταφορά ύλης. Η στρώση αυτή πρέπει να κατασκευάζεται από ενισχυμένη ρητίνη με ελάχιστο πάχος 1 mm. Οι ίνες που χρησιμοποιούνται δεν πρέπει να ελαττώνουν την χημική αντίσταση της στρώσης. Το εσωτερικό μέρος της στρώσης πρέπει να είναι πλούσιο σε ρητίνες και να έχει ελάχιστο πάχος 0.2 mm.

Οι απαιτήσεις που αναλύονται στα περιθωριακά 213 140 (6) και 213 142 (2) του Τμήματος 4 πρέπει να ικανοποιούνται.

**213 133** Τα τελειωμένα τοιχώματα πρέπει να ικανοποιούν τις απαιτήσεις που αναλύονται στο περιθωριακό 213 140 (3) του Τμήματος 4.

**213 134** Το ελάχιστο πάχος του τοιχώματος θα είναι

- 3.5 mm εάν η χωρητικότητα της δεξαμενής δεν υπερβαίνει τα 3 m<sup>3</sup>
- 5.0 mm εάν η χωρητικότητα της δεξαμενής είναι μεγαλύτερη από 3 m<sup>3</sup>.

~~213 135-~~  
~~213 139~~

<sup>1/</sup> Το γυαλί των τύπων Ε και C ορίζεται στον Πίνακα 1.

## Προσθήκη Β.1c

**ΤΜΗΜΑ 4. Μέθοδοι δοκιμής και απαιτούμενες ποιότητες****Δοκιμές και ποιότητες που απαιτούνται για υλικά για την πρότυπη δεξαμενή****213 140 (1) Λήψη δειγμάτων**

Τα δείγματα που απαιτούνται για τη δοκιμή πρέπει όπου είναι δυνατό να λαμβάνονται από τα τοιχώματα της δεξαμενής. Για το σκοπό αυτό μπορεί να χρησιμοποιούνται κομμάτια που προέρχονται από την κατασκευή ανοιγμάτων, κ.λπ.

**(2) Ποσοστό ίνας γυαλιού**

Η δοκιμή πρέπει να διεξάγεται σύμφωνα με τις μεθόδους που προβλέπονται στην Υπόδειξη ISO R1172 1970.

Το περιεχόμενο γυαλιού με ίνες του δείγματος πρέπει να είναι μεγαλύτερο από 25% και μικρότερο από 75% κατά βάρος.

**(3) Βαθμός πολυμερισμού****(a) Τοίχωμα σε ρητίνες πολυεστέρα**

Το κατάλοιπο περιεχόμενο στυρενίου μπορεί να μην είναι άνω του 2%, υπολογισμένο επί της ολικής ποσότητας ρητινών. Η δοκιμή θα διεξάγεται σύμφωνα με κατάλληλη μέθοδο <sup>2/</sup>.

**(b) Τοίχωμα σε εποξειδικές ρητίνες**

Το εικχόλισμα ακετόνης μπορεί να μην είναι περισσότερο από 2% υπολογισμένο επί της ολικής ποσότητας ρητινών. Η δοκιμή θα διεξάγεται σύμφωνα με κατάλληλη μέθοδο <sup>3/</sup>.

**(4) Καμπτική και εφελκυστική αντοχή**

Οι μηχανικές ιδιότητες πρέπει να καθορίζονται:

- για το περίβλημα, στην αξονική και την περιφερειακή διεύθυνση.
- για τα άκρα και τα τοιχώματα των διαμερισμάτων, σε κάθε διεύθυνση.

Εάν οι κύριες διευθύνσεις του οπλισμού δεν συμπίπτουν με την αξονική και περιφερειακή διεύθυνση (παραδείγματος χάριν στην περίπτωση διαξονικής περιέλιξης), η αντοχή πρέπει να καθορίζεται στις κύριες κατευθύνσεις του οπλισμού και να υπολογίζεται για την αξονική και την περιφερειακή διεύθυνση εφαρμόζοντας τον ακόλουθο τύπο:

<sup>2/</sup> Η μέθοδος που προβλέπεται στην προδιαγραφή DIN 16945 του Ιουνίου 1969, παράγραφος 6.4.3. θεωρείται κατάλληλη.

<sup>3/</sup> Η μέθοδος που προβλέπεται στην προδιαγραφή DIN 16945 του Ιουνίου 1969, παράγραφος 6.4.2. θεωρείται κατάλληλη.

## Προσθήκη Β.1c

213 140 Εφελκυστική  
(συνεχ.)

$$\sigma_{T,c} = 2 \sigma_{T,H} \sin^2 \alpha$$

T = εφελκυστική

$$\sigma_{T,a} = 2 \sigma_{T,H} \cos^2 \alpha$$

c = περιφερειακή

a = αξονική

## Καμπτική

$$\sigma_{F,c} = 2 \sigma_{F,H} \sin^2 \alpha$$

H = ελικοειδής

F = καμπτική

$$\sigma_{F,a} = 2 \sigma_{F,H} \cos^2 \alpha$$

= προτιμησιακή γωνία περιέλιξης

Η αντοχή πρέπει να δοκιμάζεται σύμφωνα με τις μεθόδους που προβλέπονται στο έγγραφο ISO/TC61/WG2/TG "Δοκιμές σε πλαστικά ενισχυμένα με γυαλί" No. 4 του Φεβρουαρίου 1971.

Η καμπτική αντοχή πρέπει να δοκιμάζεται σύμφωνα με τις μεθόδους που προβλέπονται στην Υπόδειξη ISO/TC61 No. 1540 του Απριλίου 1970.

## Απαιτήσεις

Οι νέες δεξαμενές πρέπει να έχουν τους ακόλουθους συντελεστές ασφαλείας έναντι θραύσεως:

συντελεστής ασφαλείας για στατική φόρτιση: 7.5

συντελεστής ασφαλείας για δυναμική φόρτιση: 5.5

Οι τιμές επιτάχυνσης που πρέπει να εφαρμόζονται στον υπολογισμό του δυναμικού φορτίου είναι οι ακόλουθες:

2 g στην κατεύθυνση κίνησης

1 g σε ορθή γωνία προς την κατεύθυνση κίνησης

1 g κατακόρυφα προς τα άνω και

2 g κατακόρυφα προς τα κάτω.

Καθώς τα χαρακτηριστικά φύλλου ενισχυμένου πλαστικού μπορεί να ποικίλλουν αναλόγως της κατασκευής του, δεν προβλέπονται ελάχιστες τιμές για την καμπτική και εφελκυστική αντοχή για φορτία:

A =  $e \sigma_T$  όπου  $\sigma_T$  είναι η εφελκυστική αντοχή κατά τη θραύση

B =  $e^2 \sigma_F$  όπου  $\sigma_F$  είναι η καμπτική αντοχή κατά τη θραύση

όπου e είναι το πάχος του τοιχώματος.

Οι ελάχιστες τιμές για τις δυνάμεις A και B είναι:

Για κάμψη:

$$\text{χωρητικότητα δεξαμενής} \leq 3 \text{ m}^3$$

- περιφερειακή διεύθυνση B = 600 daN

- αξονική διεύθυνση B = 300 daN

## Προσθήκη Β.1c

213 140  
(συνεχ.)

χωρητικότητα δεξαμενής	>	3 m <sup>3</sup>		
- περιφερειακή διεύθυνση			B	= 600 daN
- αξονική διεύθυνση			B	= 600 daN

Για εφελκυσμό:

- περιφερειακή διεύθυνση			A	= 100 daN/mm
- αξονική διεύθυνση			A	= 70 daN/mm

Το μέτρο ελαστικότητας E για την κάμψη μετράται στους -40 °C και στους +60 °C. Οι δύο τιμές δεν μπορεί να διαφέρουν κατά περισσότερο από 30% από την τιμή που λαμβάνεται στους 20 °C. Η συμπεριφορά του υλικού του τοιχώματος κατά εφελκυστική δοκιμή που διαρκεί περισσότερες από 1 000 ώρες.

Η τάση δοκιμής είναι:  $\frac{\sigma_T}{7,5}$

Κατά τη δοκιμή ο συντελεστής  $K = \frac{\epsilon_{1000}}{\epsilon_0}$  εν μπορεί να είναι μεγαλύτερος από 1.6.

$\epsilon_0$  = επιμήκυνση του φορτωμένου δείγματος στην αρχή της δοκιμής

$\epsilon_{1000}$  = επιμήκυνση του φορτωμένου δείγματος στο τέλος της δοκιμής

(5) *Κρουστική συμπεριφορά*(a) *Φύση της δοκιμής*

Η κρουστική συμπεριφορά καθορίζεται σε δείγμα φύλλου που αντιστοιχεί στο δομικό υλικό που χρησιμοποιείται για την κατασκευή της δεξαμενής. Η δοκιμή διενεργείται με ρίψη μάζας χάλυβα 5 kg επάνω στην επιφάνεια του φύλλου που αντιστοιχεί στην εξωτερική επιφάνεια της δεξαμενής.

(b) *Μηχανισμός*

Ο μηχανισμός αποτελείται από μάζα χάλυβα 5 kg, συσκευή καθοδήγησης για αυτή τη μάζα και φέρουσα βάση του δείγματος. Γενικό διάγραμμα του μηχανισμού δίνεται στο σχήμα 1. Η μάζα έχει τη μορφή χαλύβδινου κυλίνδρου εφοδιασμένου με δύο διαύλους καθοδήγησης, με το κάτω άκρο να έχει σφαιρικό σχήμα, διαμέτρου 90 mm. Η συσκευή καθοδήγησης τοποθετείται κατακόρυφα στο τοίχωμα.

Ο φορέας του δείγματος αποτελείται από δύο γωνιακές ράβδους διατομής 100 x 100 x 25 mm και μήκους 300 mm, συγκολλημένες σε μεταλλικό στήριγμα 400 x 400 mm. Το διάκενο μεταξύ των δύο ράβδων είναι 175 mm. Ο φορέας του δείγματος, στερεωμένος στο έδαφος, είναι εφοδιασμένος με κοιλότητα βάθους 50 mm για να επιτρέπει την κάμψη του δείγματος.

## Προσθήκη Β.1c

213 140  
(συνεχ.)

## (c) Προετοιμασία των δειγμάτων

Από το δείγμα λαμβάνονται τρία δείγματα, κάθε ένα διαστάσεων 200 x 200 mm x το πάχος του δείγματος.

## (d) Μέθοδος λειτουργίας

Το δείγμα τοποθετείται συμμετρικά στον φορέα του δείγματος εάν είναι δυνατό ακουμπά στο στήριγμα ακολουθώντας δύο βασικές ευθείες γραμμές της επιφάνειας, κατά τρόπο ώστε η μάζα να χτυπά το κέντρο της όψης του δείγματος που αντιστοιχεί στην εξωτερική επιφάνεια της δεξαμενής.

Η μάζα αφήνεται να πέσει από καθορισμένο ύψος, μεριμνώντας ώστε να εξασφαλισθεί ότι δεν θα αναπηδήσει για να χτυπήσει το δείγμα για δεύτερη φορά.

Η δοκιμή πρέπει να διεξάγεται σε θερμοκρασία περιβάλλοντος.

Το ύψος στο οποίο ανυψώνεται η μάζα στην συσκευή καθοδήγησης σημειώνεται.

Τα άλλα δύο δείγματα δοκιμάζονται κατά τον ίδιο τρόπο.

## (e) Απαίτηση

Το ύψος ρίψεως για μάζα 5 kg θα είναι 1 μέτρο· το δείγμα δεν πρέπει να επιτρέπει τη διαρροή ποσότητας μεγαλύτερης από 1 λίτρο ανά 24 ώρες όταν υποβάλλεται σε στήλη νερού ύψους 1 m.

## (6) Αντοχή σε χημικούς παράγοντες

Επίπεδες πλάκες δοκιμής από ενισχυμένο πλαστικό, παρασκευασμένες στο εργαστήριο, υποβάλλονται σε προσβολή από την επικίνδυνη ύλη σε θερμοκρασία 50 °C για 30 ημέρες σύμφωνα με την ακόλουθη διαδικασία:

## (a) Περιγραφή του μηχανισμού δοκιμής (παρουσιάζεται στο σχήμα 2)

Ο μηχανισμός δοκιμής συμπεριλαμβάνει γυάλινο κύλινδρο, διαμέτρου 140 x 150 mm, ύψους 150 mm με δύο ακροφύσια τοποθετημένα στις 135° το ένα εξοπλισμένο με αρμό NS 29 για να υποδεχθεί ενδιάμεσο σωλήνα για συμπυκνωτή αναρροής (1), το άλλο ακροφύσιο εξοπλισμένο με αρμό NS 14.5 για να υποδεχθεί θερμομόμετρο (2), ενδιάμεσο σωλήνα για συμπυκνωτή αναρροής και συμπυκνωτή αναρροής που δεν εμφανίζονται στο διάγραμμα. Το γυάλινο μέρος του μηχανισμού θα είναι μέσα σε γυαλί ανθεκτικό σε αλλαγές θερμοκρασίας.

Τα δείγματα που λαμβάνονται από τις πλάκες δοκιμής αποτελούν τη βάση και την κορυφή του γυάλινου κυλίνδρου. Σφραγίζονται στα πλάγια του κυλίνδρου με κολάρο PTFE. Ο κύλινδρος με τα δύο δείγματα σφηνώνεται μεταξύ δύο πλακών πίεσης από ανοξείδωτο χάλυβα με έξι κοιλίες που σφίγγουν με περικόχλια πεταλούδες. Ροδέλα από αμιάντο πρέπει να τοποθετείται μεταξύ των πλακών πίεσης και των δειγμάτων. Αυτές οι ροδέλες δεν παρουσιάζονται στο σχήμα 2. Η θέρμανση επιτυγχάνεται από έξω μέσω αυτομάτως ελεγχόμενου σωληνωτού θερμαντήρα. Η θερμοκρασία μετράται στον θάλαμο που περιέχει το υγρό.

## Προσθήκη Β.1c

213 140  
(συνεχ.)(b) *Λειτουργία του μηχανισμού δοκιμής*

Ο μηχανισμός δοκιμής επιτρέπει να δοκιμάζονται μόνο επίπεδες πλάκες ομοιόμορφου πάχους. Οι πλάκες δοκιμής πρέπει, εάν είναι δυνατό, να έχουν πάχος 4 mm. Σε περίπτωση που οι πλάκες καλυφθούν με επίχρισμα κολλοειδούς, πρέπει να δοκιμάζονται σε κατάσταση πρακτικής χρήσης. Έξι εξαγωνικά δείγματα, με μήκος της κάθε πλευράς 100 mm, κόβονται από την πλάκα δοκιμής.

Για κάθε δοκιμή, παρασκευάζονται τρία δείγματα ανά μηχανισμό. Ένα από τα δείγματα αυτά χρησιμοποιείται ως αναφορά και τα άλλα δύο χρησιμοποιούνται για έλεγχο στην υγρή ζώνη και την ζώνη ατμών της συσκευής αντίστοιχα.

(c) *Διαδικασία δοκιμής*

Τα προς δοκιμή δείγματα τοποθετούνται στο μηχανισμό με την επιφάνεια που μπορεί να επιχρισθεί με κολλοειδές στραμμένη προς τα μέσα. 1 200 ml υγρού δοκιμής χύνεται μέσα στον γυάλινο κύλινδρο. Ο μηχανισμός κατόπιν θερμαίνεται στην θερμοκρασία δοκιμής. Η θερμοκρασία διατηρείται σταθερή κατά τη δοκιμή. Μετά τη δοκιμή ο μηχανισμός ψύχεται στην θερμοκρασία περιβάλλοντος και το υγρό της δοκιμής απομακρύνεται. Τα δοκιμασμένα δείγματα πλένονται αμέσως με απεσταγμένο νερό. Υγρά που δεν είναι διαλυτά στο νερό απομακρύνονται με διαλύτη που δεν προσβάλλει τα δείγματα. Δεν μπορεί να γίνει μηχανικός καθαρισμός των πλακών εξαιτίας του κινδύνου βλάβης της επιφάνειας των δειγμάτων.

(d) *Αξιολόγηση*

Γίνεται οπτικός έλεγχος:

- εάν ο οπτικός έλεγχος αποκαλύψει υπερβολική προσβολή (ραγμές, φυσαλίδες, πόρους, αποφλοΐωση, διαστολή, ή τραχύτητα), η δοκιμή θεωρείται οριστικά αρνητική
- εάν ο οπτικός έλεγχος δεν αποκαλύψει ανωμαλίες, γίνονται καμπτικές δοκιμές με τις μεθόδους που ορίζονται στο περιθωριακό 213 140 (4) στα δύο δείγματα που υποβλήθηκαν σε χημική προσβολή και στο δείγμα αναφοράς. Στην περίπτωση αυτή η καμπτική αντοχή δεν θα είναι μεγαλύτερη από την τιμή, μειωμένη κατά 20%, που επιβεβαιώνεται για την πλάκα δοκιμής που δεν υποβλήθηκε σε καμία καταπόνηση.

**Δοκιμή και ποιότητα που απαιτείται για την πρότυπη μονάδα**

**213 141** Η πρότυπη δεξαμενή θα υποβάλλεται σε δοκιμή υδραυλικής πίεσης που διενεργείται από ειδικό εγκεκριμένο από τις αρμόδιες αρχές ενός Κράτους Μέλους.

Εάν η πρότυπη δεξαμενή χωρίζεται σε διαμερίσματα είτε με διαφράγματα ή με διαχωριστικές πλάκες, η δοκιμή θα διενεργείται σε μονάδα κατασκευασμένη για αυτό το σκοπό με τα ίδια εξωτερικά άκρα όπως ολόκληρη η δεξαμενή και η οποία αντιπροσωπεύει το μέρος της δεξαμενής που υποβάλλεται, υπό κανονικές συνθήκες χρήσης, στις μεγαλύτερες καταπονήσεις.

Αυτή η δοκιμή δεν πρέπει να διενεργείται εάν ήδη έχει γίνει επιτυχής δοκιμή σε άλλη πρότυπη μονάδα του ίδιου τμήματος ή τμήματος μεγαλύτερων διαστάσεων, γεωμετρικά όμοιας με αυτή της εν λόγω πρότυπης μονάδας, ακόμη και εάν εκείνη η μονάδα έχει διαφορετική εσωτερική επιφανειακή στρώση.

Η δοκιμή αυτή πρέπει να καταδεικνύει ότι η πρότυπη μονάδα έχει, υπό κανονικές συνθήκες χρήσης, συντελεστή όχι μικρότερο από 7.5 σε ότι αφορά την θραύση.

## Προσθήκη B.1c

**213 141** Πρέπει να αποδεικνύεται, π.χ. δι'υπολογισμού, ότι οι συντελεστές ασφαλείας έναντι θραύσης (συνεχ.) που δίνονται στο περιθωριακό 213 140 (4) τηρούνται για κάθε τμήμα της δεξαμενής.

Η θραύση επέρχεται όταν υγρό της δοκιμής διαφεύγει από την δεξαμενή με τη μορφή πιδάκων. Συνεπώς, πριν από αυτή τη θραύση, η παρουσία σχισμών και οι μέσω αυτών των σχισμών απώλειες υγρού υπό μορφή σταγονιδίων επιτρέπεται.

Η πρότυπη μονάδα θα υποβάλλεται σε υδραυλική πίεση.

$$H = 7.5 \times d \times h$$

όπου H είναι το ύψος της στήλης νερού

h είναι το ύψος της δεξαμενής

d είναι η πυκνότητα της προς μεταφοράν ύλης.

Εάν επέλθει θραύση με ύψος στήλης ύδατος  $H_1$  μικρότερο του H, πρέπει να εξακολουθεί να είναι

$$H_1 \geq 7.5 \times d \times (h - h_1)$$

όπου  $h_1$  είναι το ύψος του υψηλότερου σημείου όπου εμφανίζεται ο πρώτος πίδακας υγρού.

Σε περίπτωση που η παροχή υγρού στο σημείο  $h_1$  είναι πολύ μεγάλη, είναι απαραίτητο να γίνει προσωρινή επισκευή και προσωρινή τοπική ενίσχυση για να επιτρέψει τη συνέχιση της δοκιμής έως το ύψος H.

#### Έλεγχος ομοιομορφίας σε δεξαμενές που παράγονται σε σειρά

**213 142** (1) Η επιθεώρηση της ομοιομορφίας σε δεξαμενές που παράγονται σε σειρά θα διενεργείται διεξάγοντας μία ή περισσότερες από τις δοκιμές που αναφέρονται στο περιθωριακό 213 140. Εντούτοις, η μέτρηση του βαθμού πολυμερισμού αντικαθίσταται με μέτρηση σκληρότητας Barcol.

(2) Σκληρότητα Barcol

Η δοκιμή πρέπει να διενεργείται σύμφωνα με κατάλληλες διαδικασίες <sup>4/</sup>. Η σκληρότητα Barcol που μετράται στην εσωτερική επιφάνεια της τελειωμένης δεξαμενής δεν θα είναι μικρότερη από το 75% της τιμής που λαμβάνεται στο εργαστήριο σε καθαρή σκληρωμένη ρητίνη.

(3) Το ποσοστό ινών γυαλιού πρέπει να είναι εντός των ορίων που προβλέπονται στο περιθωριακό 213 140 (2) και, επιπλέον, δεν πρέπει να παρεκκλίνει κατά περισσότερο από 10% της τιμής για την πρότυπη δεξαμενή.

Δοκιμές και ποιότητες που απαιτούνται για όλες τις δεξαμενές πριν τεθούν σε λειτουργία

**213 143** Δοκιμή στεγανότητας

Η δοκιμή στεγανότητας θα διενεργείται σύμφωνα με τις διατάξεις των περιθωριακών 211 150, 211 151 και 211 152 και η σφραγίδα του ειδικού θα τοποθετείται στη δεξαμενή.

<sup>4/</sup> Οι διαδικασίες που προβλέπονται στην προδιαγραφή ASTM-D 2583-67 θεωρούνται κατάλληλες.

## Προσθήκη Β.1c

213 144-  
213 149**ΤΜΗΜΑ 5. Ειδικές διατάξεις για δεξαμενές που χρησιμοποιούνται για τη μεταφορά υλών με σημείο ανάφλεξης 55 °C ή χαμηλότερο**

**213 150** Η δεξαμενή πρέπει να κατασκευάζεται έτσι ώστε να εξασφαλίζεται η εξάλειψη του στατικού ηλεκτρισμού από τα διάφορα συστατικά μέρη, έτσι ώστε να αποφεύγεται η συσσώρευση επικίνδυνων ηλεκτρικών φορτίων.

**213 151** Όλα τα μεταλλικά μέρη της δεξαμενής και της μεταφορικής μονάδας και επίσης οι στρώσεις των τοιχωμάτων που είναι αγωγοί του ηλεκτρισμού πρέπει να είναι διασυνδεδεμένα.

**213 152** Η αντίσταση ανάμεσα σε κάθε αγωγίμο μέρος και τη βάση δεν πρέπει να υπερβαίνει τα  $10^6$  ohm.

**Εξάλειψη των κινδύνων λόγω φορτίσεων που δημιουργούνται από την τριβή**

**213 153** Η επιφανειακή αντίσταση και η αντίσταση εκκένωσης στη γη ολόκληρης της επιφάνειας της δεξαμενής θα συμφωνούν με τις απαιτήσεις του περιθωριακού 213 154.

**213 154** Η επιφανειακή αντίσταση και η αντίσταση εκκένωσης στη γη μετρημένες σύμφωνα με το περιθωριακό 213 155 πρέπει να ικανοποιούν τις ακόλουθες απαιτήσεις.

(1) Τοιχώματα που δεν είναι εξοπλισμένα με ηλεκτρικά αγωγίμα στοιχεία:

(a) Επιφάνειες επί των οποίων είναι δυνατό το βάδισμα:

η αντίσταση εκκένωσης στη γη δεν θα είναι μεγαλύτερη από  $10^8$  ohm.

(b) Άλλες επιφάνειες:

η επιφανειακή αντίσταση δεν θα είναι μεγαλύτερη από  $10^9$  ohm.

(2) Τοιχώματα εξοπλισμένα με ηλεκτρικά αγωγίμα στοιχεία:

(a) Επιφάνειες επί των οποίων είναι δυνατό το βάδισμα:

η αντίσταση εκκένωσης στη γη δεν θα είναι μεγαλύτερη από  $10^8$  ohm.

(b) Άλλες επιφάνειες:

η αγωγιμότητα θα θεωρείται επαρκής εάν το μέγιστο πάχος μη αγωγίμων στρώσεων σε αγωγίμα στοιχεία, παραδείγματος χάριν, αγωγίμα φύλλα, μεταλλικό πλέγμα ή άλλο κατάλληλο υλικό, που συνδέονται με τη σύνδεση γείωσης, δεν υπερβαίνει τα 2 mm, και τα οποία, στην περίπτωση μεταλλικού πλέγματος, το εμβαδόν της επιφάνειας του πλέγματος δεν υπερβαίνει τα  $64 \text{ cm}^2$ .

(3) Οποιαδήποτε μέτρηση της επιφανειακής αντίστασης ή αντίστασης εκκένωσης στη γη πρέπει να διενεργείται στην ίδια τη δεξαμενή θα αντικαθίσταται σε διαστήματα όχι μεγαλύτερα από ένα έτος για να εξασφαλίζεται ότι δεν υπερβαίνονται οι καθορισμένες αντιστάσεις.

## Προσθήκη Β.1c

## Μέθοδοι δοκιμής

**213 155** (1) Επιφανειακή αντίσταση ( $R_{100}$ ) - (αντίσταση μόνωσης) σε ohm, ηλεκτρόδια αγωγιμής μογογιάς σύμφωνα με το σχήμα 3 της Υπόδειξης IEC 167 του 1964, μετρημένη στην πρότυπη ατμόσφαιρα 23/50 σύμφωνα με την Υπόδειξη ISO R291, παράγραφος 3.1, του 1963.

(2) Η αντίσταση εκκένωσης στη γη σε ohm είναι ο λόγος μεταξύ της συνεχούς τάσεως που μετράται ανάμεσα σε ηλεκτρόδιο που περιγράφεται παρακάτω σε επαφή με την επιφάνεια της δεξαμενής του οχήματος και στη γειωμένη βάση του οχήματος, και του συνολικού ρεύματος.

Η ρύθμιση των δειγμάτων είναι η ίδια όπως στο 1. Το ηλεκτρόδιο είναι δίσκος με εμβαδόν επιφάνειας  $20 \text{ cm}^2$  και διάμετρο 50 mm. Η στενή επαφή του με την επιφάνεια της δεξαμενής πρέπει να εξασφαλίζεται, παραδείγματος χάριν, χρησιμοποιώντας νωπό χαρτί ή νωπό σπόγγο ή άλλη κατάλληλη ύλη. Η γειωμένη βάση του οχήματος χρησιμοποιείται ως το άλλο ηλεκτρόδιο. Θα εφαρμόζεται συνεχής τάση εντός του εύρους 100 volt-500 volt. Η μέτρηση θα διενεργείται αφού η τάση δοκιμής έχει εφαρμοσθεί επί ένα λεπτό. Το ηλεκτρόδιο μπορεί να τοποθετείται σε οποιοδήποτε σημείο της εσωτερικής ή της εξωτερικής επιφάνειας της δεξαμενής.

Εάν η μέτρηση είναι αδύνατη στη δεξαμενή, μπορεί να διενεργηθεί επίσης, υπό τις ίδιες συνθήκες, στο εργαστήριο, σε δείγμα του υλικού.

## Εξάλειψη των κινδύνων λόγω φορτίσεων που δημιουργούνται κατά την πλήρωση

**213 156** Γειωμένα μεταλλικά μέρη θα υπάρχουν και θα είναι διευθετημένα έτσι ώστε σε οποιοδήποτε στάδιο της διαδικασίας πλήρωσης ή κένωσης να υπάρχει επιφάνεια όχι μικρότερη από 0.04 τετρ. μέτρα γειωμένου μετάλλου σε επαφή με το προϊόν ανά κυβικό μέτρο του προϊόντος που περιέχεται στη δεξαμενή τη στιγμή εκείνη, και να μην είναι κανένα μέρος του προϊόντος σε απόσταση μεγαλύτερη από 2.0 μέτρα από το πλησιέστερο γειωμένο μεταλλικό μέρος. Τέτοια μεταλλικά μέρη μπορεί να έχουν τη μορφή:

- (a) Βαλβίδας με μεταλλικό πόδα, στομίου σωλήνα, ή πλάκας εφόσον η ολική επιφάνεια του μετάλλου που έρχεται σε επαφή με το υγρό δεν είναι μικρότερη από την οριζόμενη, ή
- (b) Μεταλλική σχάρα με πάχος συρμάτων όχι μικρότερο από 1 mm σε διάμετρο και επιφάνεια οπής όχι μεγαλύτερη από 4 τετρ. εκατοστά, εφόσον η ολική επιφάνεια της σχάρας που έρχεται σε επαφή με το υγρό δεν είναι μικρότερη από την οριζόμενη.

**213 157** Το περιθωριακό 213 156 δεν θα έχει εφαρμογή σε δεξαμενές από ενισχυμένα πλαστικά εξοπλισμένες με οποιοδήποτε άλλο σύστημα για την εξάλειψη του κινδύνου από φορτίσεις που παράγονται κατά την πλήρωση, εφόσον έχει καταδειχθεί με πρακτική συγκριτική δοκιμή σύμφωνα με το περιθωριακό 213 158 ότι ο χρόνος υφέσεως της παραγόμενης φόρτισης μέσα στη δεξαμενή κατά την πλήρωση είναι ισοδύναμος προς αυτόν που επιτυγχάνεται για μεταλλική δεξαμενή συγκρίσιμων διαστάσεων.

## Συγκριτική δοκιμή

**213 158** (1) Η συγκριτική δοκιμή του χρόνου υφέσεως του ηλεκτροστατικού φορτίου σύμφωνα με τους όρους δοκιμής που περιγράφονται στο (2) θα διενεργείται σε πρότυπη δεξαμενή από ενισχυμένο πλαστικό και δεξαμενή από χάλυβα κατά τον ακόλουθο τρόπο (βλέπε σχήμα 3).

## Προσθήκη Β.1c

213 158  
(συνεχ.)

- (a) Η δεξαμενή από ενισχυμένο πλαστικό θα συναρμολογείται με τον ίδιο τρόπο σαν να ερησιμοποιείται, παραδείγματος χάριν, σε στήριγμα από χάλυβα που απομμεείται το πλαίσιο οχήματος, και θα πληρούται σε ποσοστό όχι μικρότερο από το 75% της χωρητικότητας με καύσιμο κίνησης ντίζελ, ποσοστό του οποίου διοχετεύεται μέσω κατάλληλου μικροφίλτρου κατά τρόπο ώστε η πυκνότητα φορτίου της τελικής ροής να είναι περίπου  $100 \mu\text{C}/\text{m}^3$ .
- (b) Η αντοχή πεδίου στον χώρο ατμών της δεξαμενής θα μετράται με κατάλληλο μετρητή πεδίου συνεχούς ανάγνωσης τοποθετημένο με κατακόρυφο τον άξονα και σε απόσταση τουλάχιστον 20 cm από τον κατακόρυφο σωλήνα πλήρωσεως.
- (c) Παρόμοια δοκιμή θα διενεργείται σε δεξαμενή από χάλυβα της οποίας το πλάτος, μήκος, πάχος και ο όγκος αποκλίνουν το πολύ κατά 15% εκείνων της δεξαμενής από ενισχυμένο πλαστικό, ή σε δεξαμενή από ενισχυμένο πλαστικό παρομοίων διαστάσεων, επχρισμένη εσωτερικά με φύλλο μετάλλου συνδεδεμένο με τη γη.

(2) Θα ικανοποιούνται οι ακόλουθοι όροι δοκιμής:

- (a) η δοκιμή θα διενεργείται σε καλυμμένη περιοχή σε συνθήκες σχετικής υγρασίας μικρότερης από 80%.
- (b) Το καύσιμο κίνησης ντίζελ που χρησιμοποιείται στη δοκιμή θα έχει αγωγιμότητα αδρανείας στη θερμοκρασία μέτρησης μεταξύ 3 και 5 pS/m. Αυτή θα μετράται σε στοιχείο στο οποίο

$$\frac{VT}{d^2} \text{ είναι μικρότερο ή ίσο του } 2.5 \times 10^6$$

όπου  $V$  = η εφαρμοζόμενη τάση  
 $d$  = το διάκενο μεταξύ των ηλεκτροδίων σε μέτρα  
 $T$  = η διάρκεια μέτρησης σε δευτερόλεπτα

Η αγωγιμότητα αδρανείας που μετράται σε δείγματα του προϊόντος που έχουν ληφθεί από τη δεξαμενή δοκιμής μετά την πλήρωση δεν θα διαφέρει σε διαδοχικές δοκιμές σε δεξαμενές από πλαστικό και μέταλλο κατά περισσότερο από 0.5 pS/m

- (c) Η πλήρωση θα γίνεται σε σταθερό ρυθμό μέσα στο εύρος μεταξύ 1 και 2  $\text{m}^3/\text{min}$  και θα είναι η ίδια για τη δεξαμενή από ενισχυμένο πλαστικό και για τη δεξαμενή από χάλυβα. Στο τέλος της πλήρωσης, η ροή πρέπει να σταματήσει σε χρόνο μικρότερο από το χρόνο υφέσεως για το φορτίο στη δεξαμενή από χάλυβα.
- (d) Η πυκνότητα φορτίου θα μετράται με κατάλληλο μετρητή πεδίου διαρκούς ανάγνωσης (παραδείγματος χάριν, τύπου μύλου) βυθισμένου στο προϊόν και τοποθετημένου όσο το δυνατόν πιο κοντά στο σωλήνα πλήρωσης.
- (e) Οι σωλήνες παροχής και ο σωλήνας κατακόρυφης πλήρωσης θα έχουν εσωτερική διάμετρο 10 cm και θα τερματίζουν σε στόμιο σωλήνα πλήρωσης τύπου "T".
- (f) Κατάλληλο μικροφίλτρο <sup>5/</sup>, με ρυθμιζόμενη παράπλευρη που επιτρέπει τη ρύθμιση της αναλογίας ροής που διέρχεται μέσα από αυτό, θα τοποθετείται σε απόσταση όχι μεγαλύτερη από 5 m από το στόμιο του σωλήνα πλήρωσης.

5/

Το Rellumit 5 έχει βρεθεί ότι είναι κατάλληλο.

2112

Προσθήκη Β.1c

213 158 (g) Η στάθμη του υγρού δεν θα φθάνει στον πυθμένα του σωλήνα πλήρωσης ή του  
(συνεχ.) μετρητή πεδίου.

Σύγκριση χρόνων υφέσεως

(3) Η αρχική τιμή της αντοχής πεδίου θα είναι αυτή που καταγράφεται στο ενωρίτερο χρονικό σημείο μετά τη διακοπή της ροής του καυσίμου όποτε έχει διαπιστωθεί ήπια φθίνουσα καμπύλη. Ο χρόνος υφέσεως και στις δύο δοκιμές θα εκφράζεται ως ο χρόνος που χρειάζεται για την αντοχή πεδίου να φθίνει από την αρχική τιμή στο 37% της αρχικής τιμής.

(4) Ο χρόνος υφέσεως της δεξαμενής από ενισχυμένο πλαστικό δεν θα υπερβαίνει αυτόν της δεξαμενής από χάλυβα.

213 159-  
213 999

**ΑΠΑΙΤΗΣΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΤΑ ΥΛΙΚΑ ΚΑΙ ΤΗΝ ΚΑΤΑΣΚΕΥΗ ΣΤΑΘΕΡΩΝ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΔΕΞΑΜΕΝΩΝ, ΑΠΟΣΥΝΑΡΜΟΛΟΓΟΥΜΕΝΩΝ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΔΕΞΑΜΕΝΩΝ, ΚΑΙ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΠΕΡΙΒΑΗΜΑΤΩΝ ΕΜΠΟΡΕΥΜΑΤΟΚΙΒΩΤΙΩΝ-ΔΕΞΑΜΕΝΩΝ ΓΙΑ ΤΑ ΟΠΟΙΑ ΑΠΑΙΤΕΙΤΑΙ ΠΙΕΣΗ ΔΟΚΙΜΗΣ ΟΧΙ ΜΙΚΡΟΤΕΡΗ ΑΠΟ 1 MPa (10 BAR), ΚΑΙ ΣΤΑΘΕΡΩΝ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΔΕΞΑΜΕΝΩΝ, ΑΠΟΣΥΝΑΡΜΟΛΟΓΟΥΜΕΝΩΝ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΔΕΞΑΜΕΝΩΝ ΚΑΙ ΣΥΓΚΟΛΛΗΜΕΝΩΝ ΠΕΡΙΒΑΗΜΑΤΩΝ ΕΜΠΟΡΕΥΜΑΤΟΚΙΒΩΤΙΩΝ-ΔΕΞΑΜΕΝΩΝ ΠΡΟΟΡΙΖΟΜΕΝΩΝ ΓΙΑ ΤΗ ΜΕΤΑΦΟΡΑ ΥΓΡΟΠΟΙΗΜΕΝΩΝ ΑΕΡΙΩΝ ΒΑΘΙΑΣ ΚΑΤΑΨΥΞΕΩΣ ΤΗΣ ΚΛΑΣΗΣ 2**

214 000-  
214 249

**1. Υλικά και περιβλήματα**

**214 250** (1) Περιβλήματα προοριζόμενα για τη μεταφορά υλών της Κλάσης 2, 1° έως 6° και 9°, Κλάσης 4.2, 6° (a), 17° (a), 19° (a) και 31° (a) έως 33° (a) ή Κλάσης 8, 6°, θα κατασκευάζονται από χάλυβα.

(2) Για περιβλήματα κατασκευασμένα από λεπτόκοκκους χάλυβες για τη μεταφορά:

- αμμωνίας του περιθωριακού 2201, 3° (at) και 9° (at),
- άλλες ύλες της Κλάσης 2 των οποίων οι ονομασίες στο περιθωριακό 2201 ακολουθούνται από την λέξη "(διαβρωτικό)", και
- ύλες του περιθωριακού 2801, 6°

ο χάλυβας θα έχει εγγυημένη αντοχή διαρροής όχι μεγαλύτερη από 460 N/mm<sup>2</sup> και μέγιστη τελική εφελκυστική αντοχή 725 N/mm<sup>2</sup>. Αυτά τα περιβλήματα θα υφίστανται θερμική κατεργασία για την εκτόνωση των θερμικών τάσεων.

(3) Περιβλήματα προοριζόμενα για τη μεταφορά υγροποιημένων αερίων βαθιάς καταψύξεως της Κλάσης 2 θα κατασκευάζονται από χάλυβα, αλουμίνιο, κράμα αλουμινίου, χαλκό ή κράμα χαλκού, π.χ., μπρούντζο. Εντούτοις, περιβλήματα κατασκευασμένα από χαλκό ή κράμα χαλκού θα επιτρέπονται μόνο για αέρια που δεν περιέχουν ακετυλένιο· το αιθυλένιο, εντούτοις, δεν μπορεί να περιέχει περισσότερο από 0.005% ακετυλένιο.

(4) Μόνο υλικά ενδεικνύμενα για τις κατώτατες και ανώτατες θερμοκρασίες εργασίας των περιβλημάτων και των εξαρτημάτων και προσαρτημάτων τους μπορεί να χρησιμοποιούνται.

**214 251** Τα ακόλουθα υλικά θα επιτρέπονται για την κατασκευή περιβλημάτων:

(a) χάλυβες μη υποκείμενοι σε ψαθυρή θραύση στην ελάχιστη θερμοκρασία εργασίας (βλέπε περιθωριακό 214 265), μπορεί να χρησιμοποιούνται οι ακόλουθοι:

1. μαλακοί χάλυβες (εκτός από αέρια του περιθωριακού 2201, 7° και 8°)
2. λεπτόκοκκοι αμιγείς χάλυβες, με κατώτερη θερμοκρασία -60 °C
3. χάλυβες νικελίου (με περιεκτικότητα σε νικέλιο 0.5 έως 9%), με κατώτερη θερμοκρασία -196 °C, αναλόγως της περιεκτικότητας σε νικέλιο
4. ωστενιτικοί χάλυβες χρωμίου-νικελίου, με κατώτερη θερμοκρασία -270°C

## Προσθήκη B.1d

- 214 251** (b) αλουμίνιο καθαρότητας όχι μικρότερης από 99.5%, ή κράματα αλουμινίου (βλέπε (συνεχ.) περιθωριακό 214 266)
- (c) αποξειδωμένος χαλκός καθαρότητας όχι μικρότερης από 99.9%, ή κράματα χαλκού με περιεκτικότητα σε χαλκό άνω του 56% (βλέπε περιθωριακό 214 267).
- 214 252** (1) Περιβλήματα κατασκευασμένα από χάλυβα, αλουμίνιο ή κράματα αλουμινίου θα είναι είτε χωρίς ραφή είτε συγκολλημένα.
- (2) Περιβλήματα κατασκευασμένα από ωστενιτικό χάλυβα, χαλκό ή κράματα χαλκού μπορεί να είναι σκληρής συγκόλλησης.
- 214 253** Τα εξαρτήματα και προσαρτήματα μπορεί να είναι είτε βιδωμένα στα περιβλήματα είτε να είναι ασφαλισμένα σε αυτά ως ακολούθως:
- (a) περιβλήματα κατασκευασμένα από χάλυβα, αλουμίνιο ή κράμα αλουμινίου: με συγκόλληση
- (b) περιβλήματα κατασκευασμένα από ωστενιτικό χάλυβα, χαλκό ή κράμα χαλκού: με συγκόλληση ή σκληρή συγκόλληση.
- 214 254** Η κατασκευή περιβλημάτων και η πρόδεδεσή τους στο όχημα, στο πλαίσιο υποστηρίξεως ή στο πλαίσιο του εμπορευματοκιβωτίου θα είναι τέτοια ώστε να αποκλείει με βεβαιότητα τυχόν μείωση στη θερμοκρασία των φερόντων στοιχείων τέτοια που θα ήταν πιθανό να τα καταστήσει ψαθυρά. Τα ίδια τα μέσα πρόσδεσης περιβλημάτων θα είναι σχεδιασμένα έτσι ώστε ακόμη και όταν το περίβλημα είναι στην χαμηλότερη θερμοκρασία εργασίας του να εξακολουθούν να έχουν τις αναγκαίες μηχανικές ιδιότητες.

**214 255-  
214 264**

## 2. Απαιτήσεις δοκιμής

(a) *Περιβλήματα από χάλυβα*

- 214 265** Τα υλικά που χρησιμοποιούνται για την κατασκευή περιβλημάτων και κορδονιών συγκόλλησης θα ικανοποιούν, στην κατώτερη θερμοκρασία εργασίας τους, αλλά τουλάχιστον στους -20 °C, τουλάχιστον τις ακόλουθες απαιτήσεις ως προς την κρουστική αντοχή.

Οι δοκιμές θα διενεργούνται με δοκίμια με εγκοπή σχήματος V.

Η ελάχιστη κρουστική αντοχή (βλέπε περιθωριακά 214 275 έως 214 277) για δοκίμια με τον επιμήκη άξονά τους σε ορθή γωνία προς την κατεύθυνση κυλίσεως και εγκοπή σχήματος V (σύμφωνα με το ISO R 148) κάθετη στην επιφάνεια της πλάκας, θα είναι 34 J/cm<sup>2</sup> για τον μαλακό χάλυβα (ο οποίος, λόγω των υπάρχουσών προδιαγραφών ISO, μπορεί να δοκιμάζεται με δοκίμια που έχουν τον επιμήκη άξονα στην κατεύθυνση κύλισης) τον χάλυβα φερριτικού κράματος με Ni < 5%, τον χάλυβα φερριτικού κράματος 5% ≤ Ni ≤ 9% ή τον ωστενιτικό χάλυβα Cr - Ni.

Στην περίπτωση ωστενιτικών χαλύβων, μόνο το κορδόνι συγκόλλησης είναι ανάγκη να υποβάλλεται σε δοκιμή κρουστικής αντοχής.

Για θερμοκρασίες εργασίας κάτω των -196 °C η δοκιμή κρουστικής αντοχής δεν διενεργείται στην κατώτατη θερμοκρασία εργασίας, αλλά στους -196 °C.

(b) *Περιβλήματα κατασκευασμένα από αλουμίνιο ή κράμα αλουμινίου*

---

2119

Προσθήκη Β.1d

## Προσθήκη Β.1d

214 266 Οι ραφές των περιβλημάτων θα ικανοποιούν τις απαιτήσεις που ορίζονται από την αρμόδια αρχή.

(c) *Περιβλήματα κατασκευασμένα από χαλκό ή κράμα χαλκού*

214 267 Δεν είναι ανάγκη να διενεργούνται δοκιμές για να καθορισθεί εάν η κρουστική αντοχή είναι επαρκής.

214 268-

214 274

### 3. Μέθοδοι δοκιμής

(a) *Δοκιμές κρουστικής αντοχής*

214 275 Για φύλλα πάχους μικρότερου από 10 mm αλλά όχι μικρότερου από 5 mm, δοκίμια διατομής 10 mm x e mm, όπου το "e" συμβολίζει το πάχος του φύλλου, θα χρησιμοποιούνται. Η μηχανική ρύθμιση στα 7.5 mm ή τα 5 mm επιτρέπεται εάν είναι αναγκαία. Θα απαιτείται η ελάχιστη τιμή των 34 J/cm<sup>2</sup> σε κάθε περίπτωση.

**ΣΗΜΕΙΩΣΗ:** Καμία δοκιμή κρουστικής αντοχής δεν θα διενεργείται σε φύλλα πάχους μικρότερου από 5 mm, ή στις ραφές συγκόλλησής τους.

214 276 (1) Με σκοπό να δοκιμασθούν φύλλα, η κρουστική αντοχή θα καθορίζεται σε τρία δοκίμια. Τα δοκίμια θα λαμβάνονται σε ορθή γωνία προς την διεύθυνση κυλίσεως· εντούτοις, για μαλακό χάλυβα μπορεί να λαμβάνονται στην διεύθυνση κυλίσεως.

(2) Για να δοκιμάζονται οι ραφές συγκόλλησης τα δοκίμια θα λαμβάνονται ως ακολούθως:

όταν  $e \leq 10$  mm:

τρία δοκίμια με την εγκοπή στο κέντρο της συγκόλλησης

τρία δοκίμια με την εγκοπή στο κέντρο της ζώνης προσβολής από θερμότητα (η εγκοπή V να διασχίζει το όριο της περιοχής τήξεως στο κέντρο του δείγματος)

Κέντρο της συγκόλλησης

Ζώνη προσβεβλημένη από τη θερμότητα

## Προσθήκη Β.1d

214 276 όταν  $10 \text{ mm} < e \leq 20 \text{ mm}$ :  
(συνεχ.)

τρία δοκίμια από το κέντρο της συγκόλλησης

τρία δοκίμια από τη ζώνη προσβολής από τη θερμότητα (η εγκοπή V να διασχίζει το όριο της περιοχής τήξεως στο κέντρο του δείγματος)

Κέντρο της συγκόλλησης

Ζώνη προσβεβλημένη από τη θερμότητα

όταν  $e > 20 \text{ mm}$ :

δύο ομάδες των τριών δοκιμίων, η μία στην άνω όψη, η άλλη στην κάτω όψη σε κάθε ένα από τα σημεία που αναφέρονται παρακάτω (η εγκοπή V να διασχίζει το όριο της περιοχής τήξεως στο κέντρο του δείγματος για τα δοκίμια που έχουν ληφθεί από την ζώνη που προσβάλλεται από θερμότητα)

Κέντρο της συγκόλλησης

Ζώνη προσβεβλημένη από τη θερμότητα

## Προσθήκη Β.1d

**214 277** (1) Για τα φύλλα, ο μέσος όρος των τριών δοκιμών θα ικανοποιεί την ελάχιστη τιμή των  $34 \text{ J/cm}^2$  που αναφέρεται στο περιθωριακό 214 265· το πολύ μία από τις επιμέρους τιμές μπορεί να είναι κάτω από την ελάχιστη τιμή και τότε όχι κάτω των  $24 \text{ J/cm}^2$ .

(2) Για τις συγκολλήσεις, η μέση τιμή που λαμβάνεται από τα τρία δοκίμια που έχουν ληφθεί στο κέντρο της συγκόλλησης δεν θα είναι κάτω από την ελάχιστη τιμή των  $34 \text{ J/cm}^2$ · το πολύ μία από τις επιμέρους τιμές μπορεί να είναι κάτω από την ελάχιστη τιμή και τότε όχι κάτω των  $24 \text{ J/cm}^2$ .

(3) Για την προσβαλλόμενη από τη θερμότητα ζώνη (η εγκοπή V να διασχίζει το όριο της περιοχής τήξεως στο κέντρο του δείγματος) οι τιμές που λαμβάνονται από ένα το πολύ από τα τρία δοκίμια μπορεί να είναι μικρότερες από την ελάχιστη τιμή των  $34 \text{ J/cm}^2$ , όχι όμως κάτω των  $24 \text{ J/cm}^2$ .

**214 278** Εάν οι απαιτήσεις που προβλέπονται στο περιθωριακό 214 277 δεν ικανοποιούνται, μπορεί να γίνει μόνο μία νέα δοκιμή εάν:

(a) η μέση τιμή των πρώτων τριών δοκιμών είναι κάτω από την ελάχιστη τιμή των  $34 \text{ J/cm}^2$ , ή

(b) περισσότερες από μία από τις επιμέρους τιμές είναι μικρότερες από την ελάχιστη τιμή των  $34 \text{ J/cm}^2$  αλλά όχι κάτω των  $24 \text{ J/cm}^2$ .

**214 279** Σε επαναλαμβανόμενη κρουστική δοκιμή σε φύλλα ή συγκολλήσεις, καμία από τις επιμέρους τιμές δεν μπορεί να είναι κάτω των  $34 \text{ J/cm}^2$ . Η μέση τιμή όλων των αποτελεσμάτων της αρχικής δοκιμής και της νέας δοκιμής πρέπει να είναι ίση προς ή μεγαλύτερη από την ελάχιστη των  $34 \text{ J/cm}^2$ .

Σε επαναλαμβανόμενη δοκιμή κρουστικής αντοχής στην προσβεβλημένη από τη θερμότητα ζώνη, καμία από τις επιμέρους τιμές δεν μπορεί να είναι κάτω των  $34 \text{ J/cm}^2$ .

## ΠΡΟΣΘΗΚΗ Β.2

**ΕΝΙΑΙΕΣ ΔΙΑΤΑΞΕΙΣ ΠΟΥ ΑΦΟΡΟΥΝ ΤΗΝ ΚΑΤΑΣΚΕΥΗ ΟΧΗΜΑΤΩΝ ΠΟΥ  
ΠΡΟΟΡΙΖΟΝΤΑΙ ΓΙΑ ΤΗ ΜΕΤΑΦΟΡΑ ΕΠΙΚΙΝΔΥΝΩΝ ΕΜΠΟΡΕΥΜΑΤΩΝ  
ΠΕΡΙΛΑΜΒΑΝΟΜΕΝΩΝ ΔΙΑΤΑΞΕΩΝ ΓΙΑ ΤΗΝ ΕΓΚΡΙΣΗ ΤΟΥ ΤΥΠΟΥ ΤΟΥΣ ΟΠΟΥ ΑΥΤΗ  
ΑΠΑΙΤΕΙΤΑΙ**

220 000-  
220 099

**ΤΜΗΜΑ 1. Πλαίσιο**

- 220 100 (1) Οι διατάξεις της παρούσης Προσθήκης έχουν εφαρμογή στην κατασκευή βασικών οχημάτων, κινητήριων οχημάτων και των συρομένων οχημάτων τους που προορίζονται για τη μεταφορά επικίνδυνων εμπορευμάτων, τα οποία υπόκεινται σε έγκριση κατά τα περιθωριακά 10 282, 11 282, 10 283, και σε μεταφορικές μονάδες "τύπου II" σύμφωνα με το περιθωριακό 11 204(2), και στην έγκριση του τύπου τους.
- (2) Για την έγκριση τύπου ενός τύπου οχήματος σύμφωνα με το περιθωριακό 10 281, όλα τα Τμήματα της παρούσας Προσθήκης θα έχουν εφαρμογή.
- (3) Στην περίπτωση απλών οχημάτων τα οποία δεν έχουν υποβληθεί στην διαδικασία έγκρισης τύπου σύμφωνα με το περιθωριακό 10 281, μόνο οι διατάξεις του Τμήματος 5 της παρούσης Προσθήκης έχουν εφαρμογή.

220 101-  
220 199

**ΤΜΗΜΑ 2. Ορισμοί**

220 200 Για τους σκοπούς αυτής της Προσθήκης:

- (1) "Όχημα" σημαίνει όχημα με πλαίσιο και κουβούκλιο, ελκυστήρας για επικαθήμενο όχημα ή πλαίσιο συρόμενου οχήματος ή συρόμενο όχημα με αυτοστηριζόμενο αμάξωμα που προορίζονται για τη μεταφορά επικίνδυνων αγαθών
- (2) "Τύπος οχήματος" σημαίνει οχήματα τα οποία δεν διαφέρουν ουσιαστικά ως προς τα κατασκευαστικά χαρακτηριστικά που αναφέρονται σε αυτή την Προσθήκη.

220 201-  
220 299

**ΤΜΗΜΑ 3. Αίτηση έγκρισης τύπου**

- 220 300 Η αίτηση για την έγκριση τύπου ενός τύπου οχήματος ως προς τα συγκεκριμένα κατασκευαστικά χαρακτηριστικά του θα υποβάλλεται από τον κατασκευαστή του οχήματος ή από τον δεόντως εξουσιοδοτημένο αντιπρόσωπό του.
- 220 301 Η αίτηση έγκρισης τύπου θα συνοδεύεται από τα κάτωθι αναφερόμενα έγγραφα εις τριπλούν και από τα ακόλουθα στοιχεία:
- (1) λεπτομερή περιγραφή του τύπου οχήματος σχετικά με τη δομή του, τον κινητήρα (συμπύεσης-ανάφλεξης, θετικής ανάφλεξης), τις διαστάσεις, τη σύνθεση και τα συστατικά υλικά
- (2) τον τύπο οχήματος σε σχέση με τα επικίνδυνα εμπορεύματα που το όχημα προορίζεται να μεταφέρει, δηλ.:

Τύπος EX/II για οχήματα προοριζόμενα για τη μεταφορά εκρηκτικών ως μεταφορικές μονάδες τύπου II (βλέπε περιθωριακό 11 204)

## Προσθήκη Β.2

<b>220 301</b> (συνεχ.)	Τύπος EX/III	για οχήματα προοριζόμενα για τη μεταφορά εκρηκτικών ως μεταφορικές μονάδες τύπου III (βλέπε περιθωριακό 11 204)
	Τύπος FL	για οχήματα προοριζόμενα για τη μεταφορά υγρών με σημείο ανάφλεξης όχι μεγαλύτερο από 61 °C ή εύφλεκτα αέρια, σε σταθερές δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων
	Τύπος OX	για οχήματα προοριζόμενα για τη μεταφορά υλών της κλάσης 5.1, περιθωριακό 2501, είδος 1°(a), σε σταθερές δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων
	Τύπος AT	για οχήματα προοριζόμενα για τη μεταφορά επικίνδυνων εμπορευμάτων σε εμπορευματοκιβώτια-δεξαμενές με χωρητικότητα μεγαλύτερη από 3 000 λίτρα, ή οχήματα εκτός από εκείνα των τύπων EX/II, EX/III, FL ή OX προοριζόμενα για τη μεταφορά επικίνδυνων εμπορευμάτων σε σταθερές δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή συστοιχίες δοχείων

(3) σχέδια του οχήματος και

(4) στοιχεία για:

(a) το μέγιστο τεχνικό βάρος (kg)

(b) τον (τους) τύπο (-ους) αντοχής του συστήματος (-άτων) πεδήσεως.

**220 302** Ένα όχημα αντιπροσωπευτικό του προς έγκριση τύπου θα κατατίθεται στην τεχνική υπηρεσία που είναι υπεύθυνη για τη διενέργεια των δοκιμών έγκρισης.

**220 303** Η αρμόδια αρχή θα εξακριβώνει την ύπαρξη ικανοποιητικών ρυθμίσεων για την εξασφάλιση του αποτελεσματικού ελέγχου ομοιομορφίας της παραγωγής προτού δοθεί η έγκριση τύπου.

**220 304-  
220 399**

#### ΤΜΗΜΑ 4. Έγκριση τύπου

**220 400** Εάν το όχημα που κατατίθεται για έγκριση κατά τα της παρούσης Προσθήκης ικανοποιεί τις διατάξεις του Τμήματος 5 παρακάτω, θα δίνεται έγκριση για αυτόν τον τύπο οχήματος.

**220 401** Για κάθε εγκεκριμένο τύπο θα ορίζεται αριθμός έγκρισης. Τα πρώτα δύο ψηφία του (00 για την Προσθήκη στην παρούσα μορφή της) θα δηλώνουν τη σειρά αναθεωρήσεων που συμπεριλαμβάνει τις πιο πρόσφατες τεχνικές αναθεωρήσεις επί των διατάξεων κατά το χρόνο έκδοσης της έγκρισης. Το ίδιο Κράτος Μέλος δεν μπορεί να ορίσει τον ίδιο αριθμό έγκρισης σε άλλο τύπο οχήματος κατά την έννοια του ανωτέρω περιθωριακού 220 200 (2).

**220 402** Η ειδοποίηση για την έγκριση ή την επέκταση έγκρισης τύπου οχήματος κατά τα της παρούσης Προσθήκης θα ανακοινώνεται στα Κράτη Μέλη μέσω εντύπου κατά το υπόδειγμα που αναπαράγεται στο περιθωριακό 221 000.

**220 403** Σε κάθε όχημα που ανήκει σε τύπο οχήματος εγκεκριμένο κατά την παρούσα Προσθήκη θα προσαρτάται, σε εμφανές και εύκολα προσπελάσιμο μέρος που θα αναφέρεται στο έντυπο έγκρισης, διεθνές σήμα έγκρισης αποτελούμενο από:

## Προσθήκη Β.2

**220 403** (1) έναν κύκλο που περιβάλλει τα γράμματα "ADR" ακολουθούμενα από τον χαρακτηριστικό (συνεχ.) αριθμό του Κράτους που παρέσχε την έγκριση<sup>1/</sup>

(2) ο αριθμός έγκρισης στα δεξιά του κύκλου που προβλέπεται στο (1) και

(3) πρόσθετο σύμβολο που χωρίζεται από τον αριθμό έγκρισης και αποτελούμενο από το σύμβολο που χαρακτηρίζει τον τύπο οχήματος σύμφωνα με το περιθωριακό 220 301(2).

**220 404** Το σήμα έγκρισης θα είναι καθαρά αναγνώσιμο και ανεξίτηλο.

**220 405** Το σήμα έγκρισης θα τοποθετείται κοντά ή επάνω στην πινακίδα δεδομένων του οχήματος που έχει προσαρτηθεί από τον κατασκευαστή.

**220 406-  
220 499**

#### ΤΜΗΜΑ 5. Τεχνικές διατάξεις

**220 500** Αυτοκίνητα οχήματα και συρόμενα οχήματα που προορίζονται για χρήση ως μεταφορικές μονάδες για επικίνδυνα εμπορεύματα, αναλόγως της κατηγορίας και του τύπου τους, θα συμφωνούν με τις ακόλουθες διατάξεις κατά τον παρακάτω πίνακα.

---

<sup>1/</sup> 1 για τη Γερμανία, 2 για τη Γαλλία, 3 για την Ιταλία, 4 για τις Κάτω Χώρες, 5 για τη Σουηδία, 6 για το Βέλγιο, 7 για την Ουγγαρία, 8 για την Τσεχική Δημοκρατία, 9 για την Ισπανία, 10 για την Γιουγκοσλαβία, 11 για το Ηνωμένο Βασίλειο, 12 για την Αυστρία, 13 για το Λουξεμβούργο, 14 για την Ελβετία, 15 (ελεύθερο), 16 για τη Νορβηγία, 17 για τη Φινλανδία, 18 για τη Δανία, 19 για τη Ρουμανία, 20 για την Πολωνία, 21 για την Πορτογαλία, 22 για τη Ρωσική Ομοσπονδία, 23 για την Ελλάδα, 24 (δεσμευμένο), 25 για την Κροατία, 26 για τη Σλοβενία, 27 για τη Σλοβακία, 28 για τη Λευκορωσία, 29 και 30 (δεσμευμένα), 31 για τη Βοσνία Ερζεγοβίνη.

## Προσθήκη Β.2

220 501-  
220 509**Ηλεκτρολογικός εξοπλισμός***Γενικές διατάξεις*

**220 510** Η ηλεκτρολογική εγκατάσταση στο σύνολό της θα ικανοποιεί τις διατάξεις των περιθωριακών 220 511 έως 220 515 σύμφωνα με τον πίνακα του περιθωριακού 220 500.

*Καλώδια*

**220 511** (1) Το μέγεθος των αγωγών θα είναι αρκετά μεγάλο ώστε να αποφεύγεται η υπερθέρμανση. Οι αγωγοί θα είναι επαρκώς μονωμένοι. Όλα τα κυκλώματα θα προστατεύονται με ασφάλειες ή αυτόματους διακόπτες κυκλώματος, εκτός από τα ακόλουθα:

- από τον συσσωρευτή στα συστήματα ψυχρής εκκίνησης και παύσης του κινητήρα
- από τον συσσωρευτή στον εναλλάκτη
- από τον εναλλάκτη στο κιβώτιο της ασφάλειας ή του διακόπτη κυκλώματος
- από τον συσσωρευτή στον εκκινητήρα (μίζα)
- από τον συσσωρευτή στην υποδοχή ελέγχου ισχύος του συστήματος πέδησης αντοχής (βλέπε περιθωριακό 220 522 παρακάτω), εάν το σύστημα αυτό είναι ηλεκτρικό ή ηλεκτρομαγνητικό.

Τα παραπάνω απροστάτευτα κυκλώματα θα είναι κατά το δυνατόν μικρού μήκους.

(2) Τα καλώδια θα προσδένονται με ασφάλεια και θα τοποθετούνται κατά τρόπο ώστε οι αγωγοί να προστατεύονται επαρκώς έναντι μηχανικών και θερμικών καταπονήσεων.

*Κεντρικός διακόπτης συσσωρευτή*

**220 512** (1) Ο διακόπτης για τη διακοπή των ηλεκτρικών κυκλωμάτων θα τοποθετείται όσο το δυνατόν πλησιέστερα στον συσσωρευτή.

(2) Συσκευές άμεσου ή έμμεσου ελέγχου θα εγκαθίστανται, μία στο κουβούκλιο του οδηγού και μία δεύτερη στο εξωτερικό του οχήματος. Θα είναι εύκολα προσπελάσιμες και θα επισημαίνονται ευδιάκριτα. Η συσκευή ελέγχου που τοποθετείται στο κουβούκλιο του οδηγού θα είναι άμεσα προσιτή στον οδηγό από τη θέση του οδηγού. Θα προστατεύεται έναντι μη θελημένης λειτουργίας είτε με την προσθήκη προστατευτικού καλύμματος, ή με τη χρήση διπλής συσκευής ελέγχου κίνησης ή με άλλο κατάλληλο μέσο.

(3) Θα είναι δυνατό το άνοιγμα του διακόπτη ενώ ο κινητήρας λειτουργεί, χωρίς να προκαλείται επικίνδυνη υπερβολική τάση. Η λειτουργία του κινητήρα δεν θα αποτελεί κίνδυνο πυρκαϊάς σε εκρηκτική ατμόσφαιρα· αυτό μπορεί να εξασφαλίζεται χρησιμοποιώντας διακόπτη που έχει περιβλήμα με βαθμό προστασίας IP65 σύμφωνα με την Προδιαγραφή IEC 529.

(4) Οι καλωδιώσεις στον κεντρικό διακόπτη του συσσωρευτή θα έχουν βαθμό προστασίας IP54. Εντούτοις, αυτό δεν έχει εφαρμογή εάν οι συνδέσεις αυτές περιέχονται σε υποδοχή η οποία μπορεί να είναι το κιβώτιο συσσωρευτή. Στην περίπτωση αυτή αρκεί να μονωθούν οι συνδέσεις έναντι βραχυκυκλώματος, παραδείγματος χάριν με πάμα από ελαστικό.

## Προσθήκη Β.2

*Συσσωρευτές*

- 220 513** Οι ακροδέκτες του συσσωρευτή θα είναι ηλεκτρικά μονωμένοι ή καλυμμένοι με το μονωτικό κάλυμμα του κιβωτίου του συσσωρευτή. Εάν οι συσσωρευτές δεν βρίσκονται κάτω από το καπό του κινητήρα, θα τοποθετούνται σε εξαιρεζόμενο κιβώτιο.

*Ταχογράφοι*

- 220 514** Η ηλεκτρική παροχή στον ταχογράφο θα παρέχεται με μπαριέρα ασφαλείας συνδεδεμένη απευθείας στον συσσωρευτή. Τα καλώδια ηλεκτρικής παροχής από και προς τον ταχογράφο, τα οποία παραμένουν ενεργά όταν ο κεντρικός διακόπτης του συσσωρευτή είναι ανοικτός, θα είναι φύσει ασφαλή, κατά τις απαιτήσεις της Ευρωπαϊκής Προδιαγραφής EN 50 020. Ο ταχογράφος και η μπαριέρα ασφαλείας θα ικανοποιούν τις απαιτήσεις του σχετικού ηλεκτρολογικού εξοπλισμού κατά την Ευρωπαϊκή Προδιαγραφή EN 50 020.

*Μόνιμα ενεργές εγκαταστάσεις*

- 220 515** Τα μέρη της ηλεκτρολογικής εγκατάστασης, εκτός από τον ταχογράφο, που παραμένουν ενεργά όταν ο κεντρικός διακόπτης του συσσωρευτή είναι ανοικτός, θα είναι κατάλληλα για χρήση σε επικίνδυνη περιοχή και θα ικανοποιούν τις δέουσες απαιτήσεις της Ευρωπαϊκής Προδιαγραφής EN 50 014 και μίας από τις Ευρωπαϊκές Προδιαγραφές EN 50 015 έως 50 020 ή EN 50 028. Θα ικανοποιούνται οι απαιτήσεις για τη σχετική ομάδα αερίων αναλόγως του μεταφερόμενου προϊόντος.

*Διατάξεις που αφορούν το μέρος της ηλεκτρολογικής εγκατάστασης που βρίσκεται στο πίσω μέρος του κουβουκλίου του οδηγού*

- 220 516** Ολόκληρη η εγκατάσταση θα είναι έτσι σχεδιασμένη, κατασκευασμένη και προστατευμένη ώστε να μην μπορεί να προκαλέσει τυχόν ανάφλεξη ή βραχυκύκλωμα κάτω από κανονικές συνθήκες χρήσης των οχημάτων και ώστε αυτοί οι κίνδυνοι να μπορούν να ελαχιστοποιηθούν σε περίπτωση πρόσκρουσης ή παραμόρφωσης. Ιδιαίτερως:

*(1) Καλώδια*

Τα καλώδια που βρίσκονται πίσω από το κουβούκλιο του οδηγού θα προστατεύονται έναντι πρόσκρουσης, απόξεσης και τριβής κατά την κανονική λειτουργία του οχήματος. Παραδείγματα κατάλληλης προστασίας δίνονται στα σχήματα 1, 2, 3 και 4 παρακάτω. Εντούτοις, τα αισθητήρια καλώδια συσκευών πέδησης με μηχανισμό έναντι στο κλειδώμα δεν χρειάζονται πρόσθετη προστασία.

## Προσθήκη Β.2

**220 516 (2) Φωτισμός**  
(συνεχ.)

Δεν θα χρησιμοποιούνται λαμπτήρες με βιδωτό πόμα.

*Ηλεκτρολογικός μηχανισμός ανύψωσης*

**220 517** Ο ηλεκτρολογικός εξοπλισμός του μηχανισμού ανύψωσης του άξονα φορείου θα εγκαθίσταται έξω από το πλαίσιο του σασί σε σφραγισμένη υποδοχή.

**220 518-**  
**220 519****Εξοπλισμός πέδησης**

*Γενικές διατάξεις*

**220 520** Επιπλέον των ακόλουθων τεχνικών διατάξεων, προς εφαρμογή σύμφωνα με τον πίνακα του περιθωριακού 220 500, αυτοκίνητα οχήματα και συρόμενα οχήματα που προορίζονται για χρήση ως μεταφορικές μονάδες για επικίνδυνα εμπορεύματα θα εκπληρώνουν όλες τις σχετικές τεχνικές απαιτήσεις του Κανονισμού ECE Νο 13 <sup>2/</sup> ή της Οδηγίας 71/320/EEC <sup>2/</sup> των οποίων η τελευταία αναθεωρημένη μορφή έχει εφαρμογή κατά το χρόνο έγκρισης του οχήματος.

*Σύστημα Πέδησης με Μηχανισμό έναντι στο Κλείδωμα*

**220 521** (1) Αυτοκίνητα οχήματα με μέγιστο βάρος που υπερβαίνει τους 16 τόνους, ή εγκεκριμένα για τη έλξη συρόμενου οχήματος με μέγιστο βάρος που υπερβαίνει 10 τόνους, θα είναι εξοπλισμένα με σύστημα πέδησης με μηχανισμό έναντι στο κλείδωμα της κατηγορίας I σύμφωνα με τον Κανονισμό ECE Νο 13 <sup>2/</sup>, Παράρτημα 13, ή την Οδηγία 71/320/EEC <sup>3/</sup>.

(2) Συρόμενα οχήματα με μέγιστο βάρος που υπερβαίνει τους 10 τόνους θα είναι εξοπλισμένα με σύστημα πέδησης με μηχανισμό έναντι στο κλείδωμα της κατηγορίας A σύμφωνα με τον Κανονισμό ECE No. 13 <sup>2/</sup>, Παράρτημα 13, ή την Οδηγία 71/320/EEC <sup>3/</sup>.

(3) Οι ηλεκτρολογικές συνδέσεις μεταξύ ελκόντων οχημάτων και ελκομένων για το σύστημα του συρόμενου οχήματος με μηχανισμό έναντι στο κλείδωμα θα πραγματοποιούνται με συζευκτήρα σύμφωνα με την ISO 7638:1985.

<sup>2/</sup> "Κανονισμός ECE No ...." σημαίνει κανονισμό που δημοσιεύεται ως συμπλήρωμα (στην τελευταία αναθεωρημένη μορφή του) στην Συμφωνία αναφορικά με την υιοθέτηση ομοίμορφων όρων έγκρισης και αμοιβαίας αναγνώρισης έγκρισης για τον εξοπλισμό και τα μέρη αυτοκινήτου οχήματος, η οποία συνήφθη στην Γενεύη την 20ή Μαρτίου 1958.

<sup>3/</sup> Στην τελευταία αναθεωρημένη του μορφή (αρχικά δημοσιευμένο στην Επίσημη Εφημερίδα των Ευρωπαϊκών Κοινοτήτων No. L 202 της 6.9.1971).

## Προσθήκη Β.2

## Σύστημα πέδησης αντοχής

**220 522** (1) Σύστημα πέδησης αντοχής σημαίνει σύστημα προοριζόμενο να σταθεροποιεί την ταχύτητα του οχήματος σε μεγάλο μήκος κατωφέρειας, χωρίς τη χρήση των συστημάτων πέδησης λειτουργίας, δευτερευόντων ή σταθμεύσεως.

(2) Αυτοκίνητα οχήματα με μέγιστο βάρος που υπερβαίνει τους 16 τόνους ή εγκεκριμένα για να έλκουν συρόμενο όχημα με μέγιστο βάρος που υπερβαίνει τους 10 τόνους θα είναι εξοπλισμένα με σύστημα πέδησης αντοχής που τηρεί τις ακόλουθες απαιτήσεις:

- (a) Το σύστημα πέδησης αντοχής μπορεί να είναι μία απλή συσκευή ή συνδυασμός πολλών συσκευιών. Κάθε συσκευή μπορεί να έχει αυτόνομο χειρισμό.
- (b) Και οι τρεις δυνατότητες χειρισμού πέδησης που προβλέπονται στον Κανονισμό ECE N° 13 <sup>4/</sup>, , παράγραφος 2.14 ή στην Οδηγία 71/320/EEC <sup>5/</sup> θα επιτρέπονται, αλλά, στην περίπτωση βλάβης του συστήματος με μηχανισμό έναντι στο κλειδίωμα, οι ενσωματωμένοι ή συνδεδεμένοι επιβραδυντές θα σβήνουν αυτομάτα.
- (c) Η αποτελεσματικότητα του συστήματος πέδησης αντοχής θα ελέγχεται από το σύστημα πέδησης με μηχανισμό έναντι στο κλειδίωμα έτσι ώστε ο άξονας (ή οι άξονες) που φρενάρουν με το σύστημα πέδησης αντοχής να μην μπορούν να μπλοκάρουν από το σύστημα πέδησης αντοχής σε ταχύτητες άνω των 15 km/h. Εντούτοις, η διάταξη αυτή δεν θα έχει εφαρμογή στο μέρος του συστήματος πέδησης που αποτελείται από την φυσική πέδηση του κινητήρα.
- (d) Το σύστημα πέδησης αντοχής θα περιλαμβάνει πολλά επίπεδα λειτουργίας, περιλαμβανομένου ενός χαμηλού επιπέδου κατάλληλου για την αφόρτωτη κατάσταση. Όπου το σύστημα πέδησης αντοχής αυτοκίνητου οχήματος συνίσταται στον κινητήρα του, οι διαφορετικές σχέσεις ταχυτήτων θα λαμβάνονται υπόψη στον ορισμό των διαφορετικών επιπέδων λειτουργίας.
- (e) Η απόδοση του συστήματος πέδησης πρέπει να είναι τέτοια ώστε να ικανοποιεί τις απαιτήσεις του Κανονισμού ECE N° 13 <sup>4/</sup>, Παράρτημα 5 (δοκιμή Τύπου II A), ή των αντίστοιχων διατάξεων της Οδηγίας 71/320/EEC <sup>5/</sup>, με το βάρος έμφορτου οχήματος να συμπεριλαμβάνει το έμφορτο βάρος του αυτοκινούμενου οχήματος και το εγκεκριμένο μέγιστο ελκόμενο βάρος που όμως δεν υπερβαίνει συνολικά τους 44 τόνους.
- (f) Εάν το αυτοκίνητο όχημα δεν ικανοποιεί τις απαιτήσεις απόδοσης για το σύστημα πέδησης αντοχής κατά τα οριζόμενα στο (2) (e) παραπάνω, θα ικανοποιεί τουλάχιστον τις απαιτήσεις του Κανονισμού ECE N° 13 <sup>4/</sup>, Παράρτημα 5, ή των αντίστοιχων διατάξεων της Οδηγίας 71/320/EEC <sup>5/</sup>, και θα περιορίζεται στο να συνδέεται μόνο με συρόμενο όχημα εξοπλισμένο με σύστημα πέδησης αντοχής. Ένα τέτοιο αυτοκίνητο όχημα πρέπει να είναι εξοπλισμένο με συσκευή ελέγχου για το σύστημα πέδησης αντοχής πάνω στο συρόμενο όχημα.

(3) Εάν συρόμενο όχημα είναι εξοπλισμένο με σύστημα πέδησης αντοχής αυτό θα ικανοποιεί τις απαιτήσεις του Κανονισμού ECE N° 13 <sup>4/</sup>, Παράρτημα 5, ή των αντίστοιχων διατάξεων της Οδηγίας 71/320/EEC <sup>5/</sup>, και των διατάξεων των (2) (a) έως (2) (d) παραπάνω.

**220 523-**  
**220 529**

<sup>4/</sup> Βλέπε υποσημείωση 2/.

<sup>5/</sup> Βλέπε υποσημείωση 3/.

## Προσθήκη Β.2

## Αποτροπή κινδύνων πυρκαϊάς

## Γενικές διατάξεις

- 220 530** Οι ακόλουθες τεχνικές διατάξεις θα έχουν εφαρμογή σύμφωνα με τον πίνακα του περιθωριακού 220 500.

## Κουβούκλιο οχήματος

- 220 531** (1) Μόνο υλικό που δεν αναφλέγεται εύκολα θα χρησιμοποιείται στην κατασκευή του κουβουκλίου του οδηγού. Η διάταξη αυτή θα θεωρείται ότι τηρείται εάν, σύμφωνα με τη διαδικασία που καθορίζεται στην προδιαγραφή ISO 3795:1989, δείγματα των ακόλουθων μερών του κουβουκλίου έχουν ρυθμό καύσεως που δεν υπερβαίνει τα 100 mm/min: μαξιλάρια καθισμάτων, πλάτες καθισμάτων, ζώνες ασφαλείας, επιστρωση κορυφής, ανοιγόμενες οροφές, ακουμπιστήρια, όλα τα διακοσμητικά πλαίσια περιλαμβανομένων των πλαισίων στις θύρες, μπροστά, πίσω και στα πλάγια, ράφια διαμερισμάτων, στηρίγματα κεφαλής, καλύμματα δαπέδων, αντιηλιακά γείσα, κουρτίνες, στόρια, καλύμματα φτερών, καλύμματα διαμερίσματος μηχανής, καλύμματα στρωμάτων και οποιαδήποτε άλλα εσωτερικά υλικά, περιλαμβανομένων στοιχείων μαλακού υλικού ενεργοποιούμενων κατά τη σύγκρουση, τα οποία είναι σχεδιασμένα να απορροφούν ενέργεια ερχόμενα σε επαφή με τους επιβαίνοντες σε περίπτωση σύγκρουσης.

(2) Εκτός εάν το κουβούκλιο του οδηγού είναι κατασκευασμένο από υλικά που δεν αναφλέγονται εύκολα, πέτασμα κατασκευασμένο από μέταλλο ή άλλο κατάλληλο υλικό του ίδιου πλάτους με τη δεξαμενή θα τοποθετείται στο πίσω μέρος του κουβουκλίου. Τυχόν παράθυρα στο πίσω μέρος του κουβουκλίου ή στο πέτασμα θα είναι ερμητικά κλειστά και κατασκευασμένα από γυαλί ασφαλείας ανθεκτικό στη φωτιά με πλαίσια ανθεκτικά στη φωτιά. Επιπλέον, θα υπάρχει κενός χώρος όχι μικρότερος από 15 cm μεταξύ της δεξαμενής και του κουβουκλίου ή του πετάσματος.

## Δεξαμενές καυσίμων

- 220 532** Οι δεξαμενές για τον ανεφοδιασμό του κινητήρα του οχήματος θα ικανοποιούν τις ακόλουθες απαιτήσεις:

(1) Οι δεξαμενές καυσίμων θα είναι τοποθετημένες έτσι ώστε να προστατεύονται κατά το δυνατόν έναντι τυχόν σύγκρουσης.

(2) Σε περίπτωση οποιασδήποτε διαρροής, το καύσιμο θα αποστραγγίζεται στο έδαφος χωρίς να έρχεται σε επαφή με θερμά μέρη του οχήματος ή του φορτίου.

(3) Δεξαμενές καυσίμων που περιέχουν βενζίνη θα είναι εξοπλισμένες με αποτελεσματική φλογοπαγίδα στο άνοιγμα πλήρωσης ή με κλείσιμο με το οποίο το άνοιγμα να μπορεί να κρατηθεί ερμητικά σφραγισμένο.

## Κινητήρας

- 220 533** Ο κινητήρας που προωθεί το όχημα θα είναι εξοπλισμένος και τοποθετημένος έτσι ώστε να αποφεύγεται οποιοσδήποτε κίνδυνος για το φορτίο λόγω θέρμανσης ή ανάφλεξης. Στην περίπτωση μεταφοράς εκρηκτικών υλών ή αντικειμένων (τύποι οχήματος EX/II και EX/III) ο κινητήρας θα τοποθετείται μπροστά από το εμπρόσθιο τοίχωμα του αμαξώματος: μπορεί εντούτοις να τοποθετείται κάτω από το αμάξωμα, εφόσον αυτό γίνεται με τρόπο ώστε να αποφεύγεται οποιαδήποτε θέρμανση, έστω και τοπική, του φορτίου.

## Προσθήκη Β.2

*Σύστημα εξάτμισης*

**220 534** Το σύστημα εξάτμισης καθώς και οι σωλήνες εξάτμισης θα είναι κατάλληλα προσανατολισμένοι ή προστατευμένοι ώστε να αποφεύγεται οποιοσδήποτε κίνδυνος για το φορτίο λόγω θέρμανσης ή ανάφλεξης. Μέρη του συστήματος εξάτμισης τοποθετημένα ακριβώς κάτω από την δεξαμενή καυσίμου (ντίτζελ) θα έχουν περιθώριο τουλάχιστον 100 mm ή θα είναι προστατευμένα με θερμικό πέτασμα. Στην περίπτωση μεταφοράς εκρηκτικών υλών ή αντικειμένων (τύποι οχήματος EX/II και EX/III) το σύστημα εξάτμισης θα τοποθετείται μπροστά από το μπροστινό τοίχωμα του αμαξώματος ή χωριστά από το μέρος του οχήματος που μεταφέρει το φορτίο με πέτασμα που αντέχει στη φωτιά και θερμομονωτικό. Σε αυτήν την περίπτωση το στόμιο του σωλήνα εξάτμισης θα είναι προσανατολισμένο προς το έξω μέρος του οχήματος.

*Οχήμα πέδησης αντοχής*

**220 535** Οχήματα εξοπλισμένα με συστήματα πέδησης αντοχής που εκπέμπουν υψηλές θερμοκρασίες τοποθετούμενα πίσω από το οπίσθιο τοίχωμα του κουβουκλίου του οδηγού θα είναι εξοπλισμένα με θερμομονωτικό πέτασμα στερεωμένο με ασφάλεια και τοποθετημένο ανάμεσα σε αυτό το σύστημα και τη δεξαμενή ή το φορτίο ώστε να αποφεύγεται τυχόν θέρμανση, ακόμη και τοπική, του περιβλήματος της δεξαμενής ή του φορτίου.

Επιπλέον, το θερμομονωτικό πέτασμα θα προστατεύει το σύστημα πέδησης έναντι τυχόν εκροής ή διαρροής, έστω και τυχαίας, του φορτίου. Για παράδειγμα, προστασία που περιλαμβάνει πέτασμα με πέτασμα διπλού περιβλήματος θα θεωρείται ικανοποιητική.

*Βοηθητική συσκευή θέρμανσης*

**220 536** Η βοηθητική θέρμανση του κουβουκλίου θα είναι επαρκώς ασφαλής ως προς την πρόληψη πυρκαϊάς και θα τοποθετείται μπροστά από το προστατευτικό τοίχωμα (οπίσθιο τοίχωμα του κουβουκλίου). Η συσκευή θέρμανσης θα τοποθετείται όσο το δυνατόν πιο μπροστά και πιο ψηλά (τουλάχιστον 80 cm πάνω από τη στάθμη εδάφους) και θα είναι εξοπλισμένη με συσκευές που θα αποτρέπουν την επαφή οποιουδήποτε αντικειμένου με τις θερμές επιφάνειες της συσκευής ή των σωλήνα εξάτμισής της. Μόνο συσκευές με μέσο για την ταχεία επανεκκίνηση του εξαερισμού του αέρα συμπίεσης (μέγιστο 20 s) μπορεί να χρησιμοποιούνται.

220 537-

220 539

*Συσκευή περιορισμού ταχύτητας*

**220 540** Αυτοκίνητα οχήματα (ενιαία οχήματα και ελκυστήρες για επικαθήμενα) με μέγιστο βάρος που υπερβαίνει τους 12 τόνους, θα είναι εξοπλισμένα σύμφωνα με το περιθωριακό 10 261 με συσκευή περιορισμού ταχύτητας σύμφωνα με τις διατάξεις του Κανονισμού ECE Νο 89<sup>6/</sup> ή των Οδηγιών 92/6/EEC και 92/24/EEC. Η καθορισμένη ταχύτητα V κατά τα οριζόμενα στην παράγραφο 2.1.2 του Κανονισμού ECE No. 89<sup>6/</sup> δεν θα υπερβαίνει τα 85 km/h.

220 541-

220 599

<sup>6/</sup> Βλέπε υποσημείωση 2/.

## Προσθήκη Β.2

**ΤΜΗΜΑ 6. Τροποποίηση του τύπου οχήματος και επέκταση έγκρισης**

**220 600** Κάθε τροποποίηση του τύπου οχήματος θα ανακοινώνεται στο διοικητικό τμήμα που ενέκρινε τον τύπο οχήματος. Το τμήμα μπορεί τότε:

(1)Είτε να κρίνει ότι οι τροποποιήσεις που έγιναν είναι απίθανο να έχουν αισθητό αρνητικό αποτέλεσμα και ότι σε κάθε περίπτωση το όχημα εξακολουθεί να καλύπτει τις απαιτήσεις, ή

(2)Να απαιτήσει νέα έκθεση δοκιμής από την τεχνική υπηρεσία που είναι υπεύθυνη για την διενέργεια των δοκιμών.

**220 601.** Η επιβεβαίωση ή άρνηση της έγκρισης, με καθορισμό της μεταβολής, θα κοινοποιείται μέσω της διαδικασίας που καθορίζεται στο περιθωριακό 220 402 προς τα Κράτη Μέλη.

**220 602** Η αρμόδια αρχή που εκδίδει επέκταση έγκρισης θα ορίσει αύξοντα αριθμό σε κάθε έντυπο επικοινωνίας που συντάσσεται για τέτοια επέκταση και θα ενημερώνει σχετικά τα άλλα Μέρη μέσω εγγράφου επικοινωνίας σύμφωνα με το υπόδειγμα του περιθωριακού 221 000.

**220 603-  
220 699**

**ΤΜΗΜΑ 7. Ομοιομορφία παραγωγής****Αρχική αξιολόγηση**

**220 700** Η αρχή έγκρισης ενός Κράτους Μέλους θα επαληθεύει - πριν να παράσχει έγκριση τύπου - την ύπαρξη ικανοποιητικών ρυθμίσεων και διαδικασιών για την εξασφάλιση αποτελεσματικού ελέγχου έτσι ώστε τα οχήματα κατά την παραγωγή να είναι σύμφωνα με τον εγκεκριμένο τύπο.

**220 701** Η απαίτηση στο περιθωριακό 220 700 θα εξακριβώνεται προς ικανοποίηση της αρχής που παρέχει έγκριση τύπου αλλά μπορεί επίσης να εξακριβώνεται, εκ μέρους της αρχής που παρέχει έγκριση τύπου, από την αρχή έγκρισης ετέρου Κράτους Μέλους. Σε αυτήν την περίπτωση, η τελευταία αρχή έγκρισης ετοιμάζει δήλωση συμφωνίας διακρίνοντας τις περιοχές και τις εγκαταστάσεις παραγωγής που έχει καλύψει ως σχετικές με το όχημα (τα οχήματα) των οποίων πρόκειται να εγκριθεί ο τύπος.

**220 702** Η αρχή έγκρισης θα δέχεται επίσης την εγγραφή του κατασκευαστή στην εναρμονισμένη προδιαγραφή ISO 9002 (το πλαίσιο της οποίας καλύπτει το όχημα ή τα οχήματα προς έγκριση) ή ισοδύναμη προδιαγραφή έγκρισης ως ικανοποιούσα τις απαιτήσεις του περιθωριακού 220 700. Ο κατασκευαστής θα παρέχει στοιχεία για την εγγραφή και θα αναλαμβάνει να ενημερώνει την αρχή έγκρισης για τυχόν αναθεωρήσεις της ισχύος ή του πλαισίου της.

**220 703** Κατά τη λήψη αίτησης από την αρχή άλλου Κράτους Μέλους η αρχή έγκρισης θα στέλνει πάραυτα τη δήλωση συμφωνίας που αναφέρεται στην τελευταία πρόταση του περιθωριακού 220 701 ή να ενημερώσει ότι δεν είναι σε θέση να παράσχει τέτοια δήλωση.

**220 704-  
220 709**

**Ομοιομορφία παραγωγής**

**220 710** Κάθε όχημα που εγκρίνεται σύμφωνα με την παρούσα Προσθήκη θα κατασκευάζεται έτσι ώστε να συμφωνεί με τον τύπο που εγκρίνεται τηρώντας τις διατάξεις που αναφέρονται στο Τμήμα 5 παραπάνω.

## Προσθήκη Β.2

**220 711** Η αρχή έγκρισης ενός Κράτους Μέλους που δίνει έγκριση τύπου σύμφωνα με την παρούσα Προσθήκη θα επαληθεύει την ύπαρξη επαρκών ρυθμίσεων και εγγράφων σχεδίων ελέγχου, προς συμφωνία με τον κατασκευαστή για κάθε έγκριση, για τη διεξαγωγή σε καθορισμένα διαλείμματα των δοκιμών αυτών ή των σχετικών ελέγχων που είναι αναγκαίοι για την εξακρίβωση της συνεχούς συμφωνίας με τον εγκεκριμένο τύπο, περιλαμβάνοντας ειδικά, όπου έχει εφαρμογή, δοκιμές που αναφέρονται στην παρούσα Προσθήκη.

**220 712** Ο κάτοχος της έγκρισης ειδικά:

(1) Θα εξασφαλίζει την ύπαρξη διαδικασιών για αποτελεσματικό έλεγχο της συμφωνίας των οχημάτων προς την έγκριση τύπου

(2) Θα έχει πρόσβαση στον εξοπλισμό δοκιμής που είναι απαραίτητος για τον έλεγχο της συμφωνίας προς κάθε εγκεκριμένο τύπο

(3) Θα εξασφαλίζει ότι τα στοιχεία των αποτελεσμάτων της δοκιμής καταγράφονται και ότι τα επισυναπτόμενα έγγραφα παραμένουν διαθέσιμα για περίοδο που θα καθορίζεται σε συμφωνία με την αρχή έγκρισης. Η περίοδος αυτή δεν θα υπερβαίνει τα 10 έτη

(4) Θα αναλύει τα αποτελέσματα κάθε τύπου δοκιμής, με σκοπό να εξακριβώσει και να εξασφαλίσει τη σταθερότητα των χαρακτηριστικών των οχημάτων, αφήνοντας περιθώριο για διακύμανση της βιομηχανικής παραγωγής

(5) Θα εξασφαλίζει ότι για κάθε τύπο οχήματος, θα διενεργούνται τουλάχιστον οι έλεγχοι και οι δοκιμές που προβλέπονται στην παρούσα Προσθήκη

(6) Θα εξασφαλίζει ότι οποιοδήποτε σύνολο δειγμάτων ή δοκιμών παρέχει ενδείξεις ασυμφωνίας προς τον εν λόγω τύπο δοκιμής θα οδηγεί σε περαιτέρω δειγματοληψία και δοκιμή. Όλα τα αναγκαία μέτρα θα λαμβάνονται για να αποκαταστήσουν την ομοιομορφία της αντίστοιχης παραγωγής.

**220 713** Η αρχή που έχει παράσχει έγκριση τύπου μπορεί σε οποιοδήποτε χρόνο να επαληθεύσει τις μεθόδους ελέγχου ομοιομορφίας που εφαρμόζονται σε κάθε εγκατάσταση παραγωγής. Η κανονική συχνότητα αυτών των επαληθεύσεων θα είναι συνεπής προς τις ρυθμίσεις (εάν υπάρχουν) που έχουν γίνει αποδεκτές κατά τα περιθωριακά 220 701 ή 220 702 της παρούσης Προσθήκης και θα είναι τέτοια ώστε να εξασφαλίζει ότι οι σχετικοί έλεγχοι θεωρούνται επί περίοδο αντίστοιχη του κλίματος εμπιστοσύνης που έχει επιβάλλει η αρχή έγκρισης.

(1) Σε κάθε επιθεώρηση, τα αρχεία δοκιμής και τα αρχεία παραγωγής θα είναι διαθέσιμα στον επισκέπτη επιθεωρητή.

(2) Όπου η φύση της δοκιμής το επιτρέπει, ο επιθεωρητής μπορεί να επιλέγει δείγματα τυχαίως για δοκιμή στο εργαστήριο του κατασκευαστή ή υπό της Τεχνικής Υπηρεσίας κατά το παρακάτω Τμήμα 9. Ο ελάχιστος αριθμός δειγμάτων μπορεί να καθορίζεται σύμφωνα με τα αποτελέσματα της επαληθεύσης από τον ίδιο τον κατασκευαστή.

(3) Όπου το επίπεδο ελέγχου φαίνεται να μην είναι ικανοποιητικό, ή όποτε κρίνεται αναγκαίο να επαληθευτεί η εγκυρότητα των δοκιμών που διενεργούνται σε εφαρμογή του (2) παραπάνω, ο επιθεωρητής θα επιλέγει δείγματα προς αποστολή στην Τεχνική Υπηρεσία η οποία διεξάγει τις δοκιμές έγκρισης τύπου.

(4) Η αρχή έγκρισης μπορεί να διενεργεί οποιοδήποτε έλεγχο ή δοκιμή προβλέπεται σε αυτήν την Προσθήκη.

(5) Σε περιπτώσεις όπου εξάγονται μη ικανοποιητικά αποτελέσματα κατά μία επιθεώρηση, η αρχή έγκρισης θα εξασφαλίζει τη λήψη όλων των αναγκαίων μέτρων για την αποκατάσταση της ομοιομορφίας της παραγωγής το ταχύτερο δυνατόν.

Προσθήκη Β.2

220 714-  
220 719

**Ποινές για την μη ομοιομορφία της παραγωγής**

**220 720** Η έγκριση που παρέχεται ως προς έναν τύπο οχήματος κατά την παρούσα Προσθήκη μπορεί να αποσύρεται εάν οι διατάξεις που αναφέρονται στο Τμήμα 5 παραπάνω δεν τηρούνται.

**220 721** Εάν ένα Κράτος Μέλος αποσύρει έγκριση που έχει παράσχει νωρίτερα, θα ειδοποιεί αμέσως σχετικά τα λοιπά Συμβαλλόμενα Μέρη μέσω εντύπου επικοινωνίας σύμφωνα με το υπόδειγμα του περιθωριακού 221 000.

220 722-  
220 799

**ΤΜΗΜΑ 8. Οριστική διακοπή παραγωγής**

**220 800** Εάν ο κάτοχος της έγκρισης παύσει εντελώς την κατασκευή ενός τύπου οχήματος εγκεκριμένου σύμφωνα με αυτήν την Προσθήκη, θα ενημερώνει σχετικά την αρχή που παρέσχε την έγκριση. Μόλις λάβει τη σχετική κοινοποίηση, η αρχή αυτή θα ενημερώνει σχετικά τα λοιπά Μέρη μέσω εντύπου επικοινωνίας σύμφωνα με το υπόδειγμα στο περιθωριακό 221 000.

## ΠΡΟΣΘΗΚΗ Β.3

ΠΙΣΤΟΠΟΙΗΤΙΚΟ ΕΓΚΡΙΣΗΣ ΓΙΑ ΟΧΗΜΑΤΑ  
ΠΟΥ ΜΕΤΑΦΕΡΟΥΝ ΟΡΙΣΜΕΝΑ ΕΠΙΚΙΝΔΥΝΑ ΕΜΠΟΡΕΥΜΑΤΑ

(βλέπε περιθωριακό 10 282)

230 000 **ΣΗΜΕΙΩΣΗ:** Οι διαστάσεις του πιστοποιητικού θα είναι 210 x 297 mm (μέγεθος A 4). Θα χρησιμοποιούνται τόσο η εμπρός όσο και η πίσω όψη. Το χρώμα θα είναι λευκό, με διαγώνια λωρίδα χρώματος ροζ.

ΠΙΣΤΟΠΟΙΗΤΙΚΟ ΕΓΚΡΙΣΗΣ ΓΙΑ ΟΧΗΜΑΤΑ ΠΟΥ ΜΕΤΑΦΕΡΟΥΝ ΟΡΙΣΜΕΝΑ  
ΕΠΙΚΙΝΔΥΝΑ ΕΜΠΟΡΕΥΜΑΤΑ

1. Αριθμός Πιστοποιητικού.

βεβαιώνει ότι το όχημα που αναφέρεται παρακάτω ικανοποιεί τους όρους που προβλέπονται από την Ευρωπαϊκή Συμφωνία για τη Διεθνή Μεταφορά Επικίνδυνων Εμπορευμάτων Οδικώς (ADR) για την αποδοχή της για τη διεθνή μεταφορά επικίνδυνων εμπορευμάτων οδικώς.

2. Κατασκευαστής και τύπος οχήματος .....

3. Αριθμός εγγραφής (εάν υπάρχει) και αριθμός πλαισίου .....

4. Επωνυμία και επιχειρηματική διεύθυνση του μεταφορέα, του χειριστή ή του ιδιοκτήτη .....

5. Το όχημα που αναφέρεται παραπάνω έχει υποβληθεί στις επιθεωρήσεις που προβλέπονται στην ADR, Παράρτημα Β, περιθωριακά 10 282/10 283 <sup>1/</sup> και εκπληρώνει τους όρους που απαιτούνται για την αποδοχή του για τη διεθνή μεταφορά οδικώς επικίνδυνων εμπορευμάτων των ακόλουθων κλάσεων, αριθμών ειδών και γραμμμάτων (όπου χρειάζεται θα δίνονται τα ονόματα των υλών ή ο χαρακτηριστικός αριθμός της ύλης):

-----

## ΠΡΟΣΘΗΚΗ Β.5

## 250 000 Πίνακας υλών και αριθμοί αναγνωρίσεως

(1) Ο αριθμός αναγνωρίσεως κινδύνου αποτελείται από δύο ή τρία ψηφία: Γενικά οι αριθμοί δείχνουν τους παρακάτω κινδύνους:

- |   |  |
|---|--|
| 2 | Εκπομπή αερίου λόγω πύεσεως ή χημικής αντίδρασης                     |
| 3 | Το εύφλεκτο των υγρών (ατμών) και αερίων των αυτοθερμαινόμενων υγρών |
| 4 | Το εύφλεκτο των στερεών των αυτοθερμαινόμενων στερεών                |
| 5 | Οξειδωτική (εντατικοποίηση πυρός) επίδραση                           |
| 6 | Τοξικότητα ή κίνδυνος μόλυνσης                                       |
| 7 | Ραδιενέργεια   |
| 8 | Διαβρωτικότητα   |
| 9 | Κίνδυνος αφνίδιας βίαιης αντίδρασης.                                 |

**ΣΗΜΕΙΩΣΗ:** Ο κίνδυνος για αφνίδια σφοδρή αντίδραση μέσα στα πλαίσια του νοήματος της εικόνας 9 περιλαμβάνει την πιθανότητα που προκύπτει από την φύση της ύλης, για κίνδυνο έκρηξης, αντίδρασης διάσπασης και πολυμερισμού που ακολουθεί την απελευθέρωση σημαντικής θερμότητας ή εύφλεκτων ή/και τοξικών αερίων.

Ο διπλασιασμός ψηφίου δείχνει εντατικοποίηση αυτού του συγκριμένου κινδύνου.

Όπου ο κίνδυνος που σχετίζεται με μία ύλη μπορεί ικανοποιητικά να καταδειχθεί με ένα μόνο ψηφίο, αυτό ακολουθείται από μηδέν.

Οι παρακάτω συνδυασμοί ψηφίων, εντούτοις, έχουν ειδική έννοια: 22, 323, 333, 362, 382, 423, 44, 446, 462, 482, 539, 606, 623, 642, 823, 842 και 90, βλέπε (2) παρακάτω.

Αν ένας αριθμός αναγνωρίσεως κινδύνου έχει μπροστά το γράμμα "X", αυτό δείχνει ότι η ύλη θα αντιδράσει επικίνδυνα με το νερό. Γι' αυτές τις ύλες, το νερό θα χρησιμοποιείται μόνο με έγκριση από τους ειδικούς.

(2) Οι αριθμοί αναγνωρίσεως κινδύνου που αναφέρονται στην παράγραφο (3) έχουν τις παρακάτω έννοιες:

- |     |   |
|-----|---|
| 20  | αδρανές αέριο   |
| 22  | καταψυγμένο αέριο   |
| 223 | καταψυγμένο εύφλεκτο αέριο  |
| 225 | καταψυγμένο οξειδωτικό (που εντατικοποιεί τη φωτιά) αέριο               |
| 23  | εύφλεκτο αέριο  |
| 236 | εύφλεκτο αέριο, τοξικό  |
| 239 | εύφλεκτο αέριο, το οποίο μπορεί ξαφνικά να οδηγήσει σε σφοδρή αντίδραση |
| 25  | οξειδωτικό (εντατικό της φωτιάς) αέριο                                  |
| 26  | τοξικό αέριο  |

## Προσθήκη Β.5

250 000 (συνεχ.)	265	τοξικό αέριο, οξειδωτικό (εντατικό της φωτιάς)
	266	πολύ τοξικό αέριο
	268	τοξικό αέριο, διαβρωτικό
	286	διαβρωτικό αέριο, τοξικό
	30	εύφλεκτο υγρό (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C, συμπεριλαμβανομένων) ή εύφλεκτο υγρό ή στερεό σε λυωμένη κατάσταση με σημείο αναφλέξεως άνω των 61 °C, θερμαινόμενο σε μία θερμοκρασία ίση με ή άνω του σημείου αναφλέξεώς του, ή αυτο-θερμαινόμενο υγρό
	323	εύφλεκτο υγρό το οποίο αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	X323	εύφλεκτο υγρό το οποίο αντιδρά επικίνδυνα με το νερό, αναδύοντας εύφλεκτα αέρια <sup>2/</sup>
	33	πολύ εύφλεκτο υγρό (σημείο αναφλέξεως κάτω από 23 °C)
	333	πυροφορικό υγρό
	X333	πυροφορικό υγρό, που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	336	πολύ εύφλεκτο υγρό, τοξικό
	338	πολύ εύφλεκτο υγρό, διαβρωτικό
	X338	πολύ εύφλεκτο υγρό, διαβρωτικό, που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	339	πολύ εύφλεκτο υγρό που μπορεί ξαφνικά να οδηγήσει σε σφοδρή αντίδραση
	36	εύφλεκτο υγρό (σημείο αναφλέξεως ανάμεσα στους 23 °C και 61 °C συμπεριλαμβανομένων), ελαφρά τοξικό, ή αυτοθερμαινόμενο τοξικό υγρό
	362	εύφλεκτο τοξικό υγρό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	X362	εύφλεκτο τοξικό υγρό, που αντιδρά επικίνδυνα με το νερό, αναδύοντας εύφλεκτα αέρια <sup>2/</sup>
	38	εύφλεκτο υγρό (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C, συμπεριλαμβανομένων), διαβρωτικό
	382	εύφλεκτο υγρό, διαβρωτικό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	X382	εύφλεκτο υγρό, διαβρωτικό, που αντιδρά επικίνδυνα με το νερό, αναδύοντας εύφλεκτα αέρια <sup>2/</sup>
	39	εύφλεκτο υγρό, το οποίο μπορεί να οδηγήσει αιφνίδια σε σφοδρή αντίδραση
	40	εύφλεκτο ή αυτοθερμαινόμενο στερεό
	423	στερεό που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	X423	εύφλεκτο στερεό που αντιδρά επικίνδυνα με το νερό, αναδύοντας εύφλεκτα αέρια <sup>2/</sup>
	44	εύφλεκτο στερεό, σε λυωμένη κατάσταση σε υψηλή θερμοκρασία
	446	εύφλεκτο στερεό, τοξικό, σε λυωμένη κατάσταση σε υψηλή θερμοκρασία
	46	εύφλεκτο ή αυτοθερμαινόμενο στερεό, τοξικό
	462	τοξικό στερεό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	48	εύφλεκτο ή αυτοθερμαινόμενο στερεό, διαβρωτικό
	482	διαβρωτικό στερεό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια

<sup>2/</sup> Το νερό δεν θα χρησιμοποιείται εκτός εάν εγκριθεί από τους ειδικούς.

## Προσθήκη Β.5

250 000 (συνεχ.)	50 539	οξειδωτική (εντείνουσα τη φωτιά) ύλη εύφλεκτο οργανικό υπεροξειδίο
	55	πολύ οξειδωτική (εντείνουσα τη φωτιά) ύλη
	556	πολύ οξειδωτική (εντείνουσα τη φωτιά) ύλη, τοξική
	558	πολύ οξειδωτική (εντείνουσα τη φωτιά) ύλη, διαβρωτική
	559	πολύ οξειδωτική (εντείνουσα τη φωτιά) ύλη που μπορεί ξαφνικά να οδηγήσει σε σφοδρή αντίδραση
	56	οξειδωτική ύλη (εντείνουσα τη φωτιά), τοξική
	568	οξειδωτική ύλη (εντείνουσα τη φωτιά), τοξική, διαβρωτική
	58	οξειδωτική ύλη (εντείνουσα τη φωτιά), διαβρωτική
	59	οξειδωτική ύλη (εντείνουσα τη φωτιά), που μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	60	τοξική ή ελαφρά τοξική ύλη
	606	μολυσματική ύλη
	623	τοξικό υγρό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	63	τοξική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων)
	638	τοξική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων), διαβρωτική
	639	τοξική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων) η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	64	τοξικό στερεό, εύφλεκτο ή αυτοθερμαινόμενο
	642	τοξικό στερεό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	65	τοξική ύλη, οξειδωτική (εντείνουσα τη φωτιά)
	66	πολύ τοξική ύλη
	663	πολύ τοξική ύλη, εύφλεκτη (σημείο αναφλέξεως όχι υπεράνω των 61 °C)
	664	πολύ τοξικό στερεό, εύφλεκτο ή αυτοθερμαινόμενο
	665	πολύ τοξική ύλη, οξειδωτική (εντείνουσα τη φωτιά)
	668	πολύ τοξική ύλη, διαβρωτική
	669	πολύ τοξική ύλη, η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	68	τοξική ύλη, διαβρωτική
	69	τοξική ή ελαφρά τοξική ύλη, η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	70	ραδιενεργής ύλη
	72	ραδιενεργή αέρια
	723	ραδιενεργή αέρια, εύφλεκτα
	73	ραδιενεργή υγρά, εύφλεκτα (σημείο ανάφλεξης όχι υπεράνω των 61 °C)
	74	ραδιενεργή στερεά, εύφλεκτα
	75	ραδιενεργής ύλη, οξειδωτική (εντείνουσα τη φωτιά)
	76	ραδιενεργής ύλη, τοξική
	78	ραδιενεργής ύλη, διαβρωτική

*\*/ Το νερό δεν θα χρησιμοποιείται εκτός εάν εγκριθεί από τους ειδικούς.*

## Προσθήκη Β.5

250 000 (συνεχ.)	80	διαβρωτική ή ελαφρά διαβρωτική ύλη
	X80	διαβρωτική ή ελαφρά διαβρωτική ύλη, που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	823	διαβρωτικό υγρό που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	83	διαβρωτική ή ελαφρά διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων)
	X83	διαβρωτική ή ελαφρά διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων), που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	836	διαβρωτική ή ελαφρά διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων), τοξική
	839	διαβρωτική ή ελαφρά διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων) η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	X839	διαβρωτική ή ελαφρά διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων), η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση και η οποία αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	84	διαβρωτικό στερεό, εύφλεκτο ή αυτοθερμαινόμενο
	842	διαβρωτικό στερεό, που αντιδρά με το νερό, αναδύοντας εύφλεκτα αέρια
	85	διαβρωτική ή ελαφρά διαβρωτική ύλη, οξειδωτική (εντείνουσα τη φωτιά)
	856	διαβρωτική ή ελαφρά διαβρωτική ύλη, οξειδωτική (εντείνουσα τη φωτιά) και τοξική
	86	διαβρωτική ή ελαφρά διαβρωτική ύλη, τοξική
	88	πολύ διαβρωτική ύλη
	X88	πολύ διαβρωτική ύλη, που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	883	πολύ διαβρωτική ύλη, εύφλεκτη (σημείο αναφλέξεως μεταξύ 23 °C και 61 °C συμπεριλαμβανομένων)
	884	πολύ διαβρωτικό στερεό, εύφλεκτο ή αυτοθερμαινόμενο
	885	πολύ διαβρωτική ύλη, οξειδωτική (εντείνουσα τη φωτιά)
	886	πολύ διαβρωτική ύλη, τοξικό
	X886	πολύ διαβρωτική ύλη, τοξικό, που αντιδρά επικίνδυνα με το νερό <sup>2/</sup>
	89	διαβρωτική ή ελαφρά διαβρωτική ύλη, η οποία μπορεί να οδηγήσει ξαφνικά σε σφοδρή αντίδραση
	90	περιβαλλοντικά επικίνδυνη ύλη, διάφορες επικίνδυνες ύλες

(3) Οι αριθμοί αναγνώρισης που αναφέρονται στο περιθωριακό 10 500 αναγράφονται λεπτομερώς στους παρακάτω Πίνακες I, II και III.

**NOTE 1:** Οι αριθμοί αναγνώρισης που θα εμφανίζονται στις πορτοκαλίες πλάκες πρέπει να αναζητηθούν πρώτα στον πίνακα I. Αν στην περίπτωση υλών των Κλάσεων 3, 4.1, 4.2, 4.3, 5.1, 5.2, 6.1, 6.2, 7, 8 και 9 η ονομασία της ύλης που πρόκειται να μεταφερθεί ή η συλλογική επικεφαλίδα που την καλύπτει δεν αναφέρεται στον Πίνακα I, ο αριθμός αναγνώρισης θα ληφθεί από τον Πίνακα II.

**NOTE 2:** Ο Πίνακας III περιέχει όλες τις εγγραφές των Πινάκων I και II ταξινομημένες με βάση τον αριθμό αναγνώρισης της ύλης.

<sup>2/</sup> Το νερό δεν θα χρησιμοποιείται εκτός εάν εγκριθεί από τους ειδικούς.

## Πίνακας Ι

Υλεις αναγραφόμενες με τη χημική τους ονομασία ή υπό συλλογικές επικεφαλίδες στις οποίες δίνεται συγκριμένος "αριθμός αναγνώρισεως ύλης" (στήλη β). [Για διαλύματα και μείγματα υλών, (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης το περιθωριακό 2002 (8) και (9)].

Ο παρών πίνακας περιλαμβάνει επίσης ύλες που δεν εμφανίζονται στους πίνακες Κλάσης υλών, αλλά οι οποίες όμως εμπίπτουν στις Κλάσεις και τους αριθμούς ειδών που αναγράφονται στη στήλη (ε).

**ΣΗΜΕΙΩΣΗ:** Για ύλες των Κλάσεων 3, 4.1, 4.2, 4.3, 5.1, 6.1, 6.2, 7, 8 και 9 που δεν περιλαμβάνονται στον παρόντα πίνακα, βλέπε τον Πίνακα ΙΙ. Οι ύλες αναγράφονται κατά αλφαβητική σειρά.

Ονομασία ύλης (a)	Χαρακτηριστικός αριθμός ύλης (Κάτω μέρος) (b)	Χαρακτηριστικός αριθμός κινδύνου (Άνω μέρος) (c)	Ετικέτα (d)	Αριθμός Κλάσης και είδους (e)

## Πίνακας ΙΙ

Κατάλογος συλλογικών επικεφαλίδων ή εγγραφών ε.α.ο. οι οποίες δεν αναγράφονται κατά αλφαβητική σειρά, ή οι οποίες δεν κατατάσσονται σε κάποια συλλογική επικεφαλίδα του Πίνακα Ι.

Ο Πίνακας αυτός περιλαμβάνει δύο είδη συλλογικών επικεφαλίδων ή εγγραφών ε.α.ο.:

- ειδικές συλλογικές επικεφαλίδες ή εγγραφές ε.α.ο. που εφαρμόζονται σε ομάδες χημικών ενώσεων του ίδιου τύπου,
- γενικές συλλογικές επικεφαλίδες ή εγγραφές ε.α.ο. που εφαρμόζονται σε ομάδες υλών που παρουσιάζουν όμοιους πρωτεύοντες και δευτερεύοντες κινδύνους.

Υλεις θα κατατάσσονται σε κάποια γενική συλλογική επικεφαλίδα ή εγγραφή ε.α.ο. μόνο εάν δεν είναι μπορούν να καταταχθούν σε κάποια ειδική συλλογική επικεφαλίδα ή ε.α.ο.

**ΣΗΜΕΙΩΣΗ:**

Ο Πίνακας αυτός ισχύει μόνο για όλες που δεν περιλαμβάνονται στον Πίνακα Ι.

Ομάδα υλών (a)	Χαρακτηριστικός αριθμός ύλης (Κάτω μέρος) (b)	Χαρακτηριστικός αριθμός κινδύνου (Άνω μέρος) (c)	Ετικέτα (d)	Αριθμός κλάσης και είδους (e)

## Πίνακας ΙΙΙ

Αριθμητικός κατάλογος - αυτός ο πίνακας περιέχει όλες τις εγγραφές των πινάκων Ι και ΙΙ κατά σειρά αριθμού αναγνώρισης ύλης

Χαρακτηριστικός αριθμός ύλης (Κάτω μέρος) (a)	Ονομασία ύλης (b)	Χαρακτηριστικός αριθμός κινδύνου (Άνω μέρος) (c)	Ετικέτα (d)	Αριθμός Κλάσης και είδους (e)
1002	Αέρας, συμπιεσμένος	20	2	2, 2°(a)
1003	Αέρας, βαθιάς κατάψυξης	225	2+05	2, 8°(a)
1005	Άμμωνία	268	6.1	2, 3°(af)
1006	Αργό, πεπιεσμένο	20	2	2, 1°(a)
1008	Τριφθοριούχο Βόριο	26	6.1	2, 1°(af)
1009	Βρωμοτριφθορομεθάνιο (R 13 B1)	20	2	2, 5°(a)
1010	1,3-Βουταδιέριο	239	3	2, 3°(c)
1010	Μείγματα 1,3-βουταδιενίου και υδρογονανθράκων	239	3	2, 4°(c)
1010	1,2-Βουταδιέριο	239	3	2, 3°(c)
1011	Βουτάνιο, τεχνικά καθαρό	23	3	2, 3°(b)
1012	1-Βουτυλέριο (1-Βουτέριο)	23	3	2, 3°(b)
1012	cis-2-Βουτυλέριο (cis-2-Βουτέριο)	23	3	2, 3°(b)
1012	trans-2-Βουτυλέριο (trans-2-Βουτέριο)	23	3	2, 3°(b)
1013	Διοξείδιο του άνθρακα	20	2	2, 5°(a)
1014	Διοξείδιο του άνθρακα περιέχον όχι λιγότερο από 1% και όχι περισσότερο από 10% οξυγόνο κατά βάρος	20	2	2, 6°(a)
1016	Μονοξείδιο του άνθρακα	236	6.1+3	2, 1°(bt)
1017	Χλώριο	266	6.1+8	2, 3°(af)
1018	Χλωριδιφθορομεθάνιο (R 22)	20	2	2, 3°(a)
1020	Χλωροπενταφθοροαιθάνιο (R 115)	20	2	2, 3°(a)
1021	1-Χλώρο-1,2,2,2-τετραφθοροαιθάνιο (R 124)	20	2	2, 3°(a)
1022	Χλωροτριφθορομεθάνιο (R 13)	20	2	2, 5°(a)
1027	Κυκλοπροπάνιο	23	3	2, 3°(b)
1028	Διχλωροδιφθορομεθάνιο (R 12)	20	2	2, 3°(a)

250 000  
(συνεχ.)

## Προσθήκη Β.5

Χαρακτηριστικός αριθμός ύλης (Κάτω μέρος) (a)	Όνομασία ύλης (b)	Χαρακτηριστικός αριθμός κινδύνου (Άνω μέρος) (c)	Ετικέτα (d)	Αριθμός Κλάσης και είδους (e)

## Κλάση 8

**2801** 2357 κυκλοξευλαμίνη, 2619 βενζυλοδιμεθυλαμίνη,  
 (συνεχ.) 2685 N,N-δισουλαιθυλενοδιαμίνη,  
2734 αμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο. ή  
2734 πολυαμίνες, υγρές, διαβρωτικές, εύφλεκτες, ε.α.ο.

55° Στερεές οργανικές βασικές ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.,
- (b) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.,
- (c) 3263 διαβρωτικά στερεά, βασικά, οργανικά, ε.α.ο.

56° Υγρές οργανικές βασικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.,
- (b) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.,
- (c) 3267 διαβρωτικά υγρά, βασικά, οργανικά, ε.α.ο.

## C. Άλλες διαβρωτικές ύλες

61° Διαλύματα χλωριωδών και υποχλωριωδών αλάτων:

- (b) 1791 διάλυμα υποχλωριώδους αλάτος με όχι λιγότερο από 16 % διαθέσιμο χλώριο,  
1908 διάλυμα χλωριώδους αλάτος, με όχι λιγότερο από 16 % διαθέσιμο χλώριο,
- (c) 1791 διάλυμα υποχλωριώδους αλάτος με περισσότερο από 5 % αλλά λιγότερο από 16 % διαθέσιμο χλώριο, 1908 διάλυμα χλωριώδους αλάτος, με περισσότερο από 5 % αλλά λιγότερο από 16 % διαθέσιμο χλώριο.

**ΣΗΜΕΙΩΣΗ 1:** Διαλύματα χλωριωδών και υποχλωριωδών αλάτων με όχι περισσότερο από 5 % διαθέσιμο χλώριο δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Στερεά χλωριώδη άλατα και υποχλωριώδη άλατα είναι ύλες της κλάσης 5.1 (βλέπε περιθωριακό 2501, 14°, 15° και 29°).

62° Χλωροφαινολικά και φαινολικά άλατα:

- (c) 2904 χλωροφαινολικά άλατα, υγρά ή 2904 φαινολικά άλατα, υγρά, 2905 χλωροφαινολικά άλατα,  
στερεά ή 2905 φαινολικά άλατα, στερεά.

63° Διαλύματα φορμαλδεΐδης:

- (c) 2209 διάλυμα φορμαλδεΐδης με όχι λιγότερο από 25 % φορμαλδεΐδη.

**ΣΗΜΕΙΩΣΗ 1:** 1198 διαλύματα φορμαλδεΐδης, εύφλεκτα είναι ύλες της κλάσης 3 [βλέπε περιθωριακό 2301, 33° (c)].

## Κλάση 8

**2801 ΣΗΜΕΙΩΣΗ 2:** Διαλύματα φορμαλδεΐδης, μη-εόφλεκτα, με λιγότερο από 25 % (συνεχ.) φορμαλδεΐδη δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

64° Χλωροφορμικά και χλωροθειοφορμικά άλατα:

- (a) 1739 γλωροφορμικός βενζυλεστεράς,
- (b) 2826 χλωροθειοφορμικός αιθυλεστεράς.

**ΣΗΜΕΙΩΣΗ:** Χλωροφορμικά άλατα που έχουν κυρίαρχα τοξικές ιδιότητες είναι όλες της κλάσης 6.1 (βλέπε περιθωριακό 2601, 10°, 17°, 27° και 28°).

65° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1759 διαβρωτικά στερεά, ε.α.ο.,
- (b) 1770 διφαινυλομεθυλοβρωμίδιο,  
1759 διαβρωτικά στερεά, ε.α.ο.,  
3147 βαφές, στερεές, διαβρωτικές, ε.α.ο. ή 3147 ενδιάμεσα βαφών, στερεά, διαβρωτικά, ε.α.ο.,  
3244 στερεά που περιέχουν διαβρωτικά υγρά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Μείγματα στερεών όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας και διαβρωτικά υγρά μπορούν να μεταφέρονται υπό τον αριθμό 3244, χωρίς να υπόκεινται στα κριτήρια ταξινόμησης του περιθωριακού 2800 (3), υπό την προϋπόθεση ότι δεν υπάρχει ελεύθερο υγρό ορατό την ώρα που η ύλη φορτώνεται ή την ώρα που η μονάδα μεταφοράς κλείνεται. Κάθε συσκευασία θα πρέπει να αντιστοιχεί σε έναν τύπο σχεδιασμού που έχει περάσει τον έλεγχο στεγανότητας για το επίπεδο της ομάδας (b).

- (c) 2803 γάλλιο,  
1759 διαβρωτικά στερεά, ε.α.ο.,  
3147 βαφές, στερεές, διαβρωτικές, ε.α.ο. ή 3147 ενδιάμεσα βαφών, στερεά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται στο 2803 γάλλιο [βλέπε περιθωριακό 2807 (4)].

66° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

- (a) 1760 διαβρωτικά υγρά, ε.α.ο.,  
1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο.,
- (b) 2226 βενζοτριγλωρίδιο (τριχλωρομεθυλοβενζόλιο),  
2705 1-πεντόλη (3-μεθυλο-2-πεντενο-4-ιν-1-όλη), 3066 χρώμα (συμπεριλαμβανομένων χρώματος, λάκας, σμάλτου, βαφής, γομαλάκας, βερνικιού, λούστρου, υγρού πληρωτικού μέσου και υγρής βάσης λάκας) ή 3066 υλικά σχετιζόμενα με χρώμα συμπεριλαμβανομένων ενόσεων λέπτυνσης ή μείωσης του χρώματος,  
1760 διαβρωτικά υγρά, ε.α.ο.,  
1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο.,  
2801 βαφές, υγρές, διαβρωτικές, ε.α.ο. ή 2801 ενδιάμεσα βαφών, υγρά, διαβρωτικά, ε.α.ο.,

## Κλάση 8

2801  
(συνεχ.)

- (c) 2809 υδράργυρος, 3066 χρώμα (συμπεριλαμβανομένων χρώματος, λάκας, σφάλτου, βαφής, γομαλάκας, βερνικιού, λούστρου, υγρού πληρωτικού μέσου και υγρής βάσης λάκας) ή 3066 υλικά σχετιζόμενα με χρώμα συμπεριλαμβανομένων ενώσεων λεπτότητας ή μείωσης του χρώματος, 1760 διαβρωτικά υγρά, ε.α.ο., 1903 απολυμαντικά, υγρά, διαβρωτικά, ε.α.ο., 2801 βαφές, υγρές, διαβρωτικές, ε.α.ο. ή 2801 ενδιάμεσα βαφών, υγρά, διαβρωτικά, ε.α.ο.

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται στον 2809 υδράργυρο [βλέπε περιθωριακό 2807 (4)].

**ΣΗΜΕΙΩΣΗ 2:** Οποιαδήποτε ύλη αυτής της Οδηγίας που αναφέρεται με συγκεκριμένη ονομασία υπό άλλα είδη δεν μπορεί να μεταφέρεται υπό τις καταχωρήσεις για 3066 χρώμα ή 3066 υλικά σχετιζόμενα με χρώμα.

Υλες μεταφερόμενες υπό αυτές τις καταχωρήσεις μπορούν να περιέχουν 20% ή λιγότερο νιτροκυταρίνη υπό την προϋπόθεση η νιτροκυταρίνη να περιέχει όχι περισσότερο από 12.6% άζωτο.

- 67° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα), εύφλεκτες, που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 2921 διαβρωτικά στερεά, εύφλεκτα, ε.α.ο.,
- (b) 2921 διαβρωτικά στερεά, εύφλεκτα, ε.α.ο.
- 68° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα), εύφλεκτες, με σημείο βρασμού μεγαλύτερο από 35 °C, που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 2920 διαβρωτικά υγρά, εύφλεκτα, ε.α.ο.,
- (b) 2920 διαβρωτικά υγρά, εύφλεκτα, ε.α.ο.
- 69° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, αυτοθερμαινόμενες, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3095 διαβρωτικά στερεά, αυτοθερμαινόμενα, ε.α.ο.,
- (b) 3095 διαβρωτικά στερεά, αυτοθερμαινόμενα, ε.α.ο.
- 70° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, αυτοθερμαινόμενες, (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3301 διαβρωτικά υγρά, αυτοθερμαινόμενα, ε.α.ο.,
- (b) 3301 διαβρωτικά υγρά, αυτοθερμαινόμενα, ε.α.ο.
- 71° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:
- (a) 3096 διαβρωτικά στερεά, ενεργά με το νερό, ε.α.ο.,

## Κλάση 8

2801  
(συνεχ.)(b) 3096 διαβρωτικά στερεά, ενεργά με το νερό, ε.α.ο.*ΣΗΜΕΙΩΣΗ: Ο όρος "Ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.*

72° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών (όπως παρασκευάσματα και απόβλητα) που, σε επαφή με το νερό, εκλύουν εύφλεκτα αέρια και που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3094 διαβρωτικά υγρά, ενεργά με το νερό, ε.α.ο.(b) 3094 διαβρωτικά υγρά, ενεργά με το νερό, ε.α.ο.*ΣΗΜΕΙΩΣΗ: Ο όρος "ενεργή με το νερό" δηλώνει μία ύλη που, σε επαφή με το νερό, εκλύει εύφλεκτα αέρια.*

73° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, οξειδωτικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3084 διαβρωτικά στερεά, οξειδωτικά, ε.α.ο.(b) 3084 διαβρωτικά στερεά, οξειδωτικά, ε.α.ο.

74° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, οξειδωτικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 3093 διαβρωτικά υγρά, οξειδωτικά, ε.α.ο.(b) 3093 διαβρωτικά υγρά, οξειδωτικά, ε.α.ο.

75° Στερεές διαβρωτικές ύλες και μείγματα αυτών των υλών, τοξικές (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.(b) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.(c) 2923 διαβρωτικά στερεά, τοξικά, ε.α.ο.

76° Υγρές διαβρωτικές ύλες και διαλύματα και μείγματα αυτών των υλών, τοξικές, (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν σε άλλα συγκεντρωτικά κεφάλαια:

(a) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.(b) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.(c) 2922 διαβρωτικά υγρά, τοξικά, ε.α.ο.

## Κλάση 8

2801 D. Είδη που περιέχουν διαβρωτικές ύλες  
(συνεχ.)

## 81° Μπαταρίες:

- (c) 2794 μπαταρίες, υγρές, γεμισμένες με οξύ, ηλεκτρικής συσσώρευσης,  
2795 μπαταρίες, υγρές, γεμισμένες με άλκαλι, ηλεκτρικής συσσώρευσης,  
2800 μπαταρίες, υγρές, χωρίς διαρροή, ηλεκτρικής συσσώρευσης,  
3028 μπαταρίες, ξηρές που περιέχουν υδροξείδιο του καλίου στερεό, ηλεκτρικής συσσώρευσης.

**ΣΗΜΕΙΩΣΗ 1:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτά τα είδη [βλέπε περιθωριακό 2807 (5)]

**ΣΗΜΕΙΩΣΗ 2:** Μπαταρίες (χαρακτηριστικός αριθμός 2800) μπορούν να θεωρούνται ότι είναι χωρίς διαρροή υπό την προϋπόθεση ότι είναι ικανές να αντέξουν τους διαφορικούς ελέγχους δόνησης και πίεσης που δίνονται παρακάτω, χωρίς διαρροή υγρών μπαταρίας.

**Έλεγχος δόνησης:** Η μπαταρία συνδέεται άκαμπτα στην πλατφόρμα μίας μηχανής δόνησης και εφαρμόζεται μία απλή αρμονική κίνηση με πλάτος 0.8 mm (1.6 mm μέγιστη συνολική διαδρομή). Η συχνότητα μεταβάλλεται με ρυθμό 1 Hz/min μεταξύ των ορίων 10 Hz έως 55 Hz. Όλο το εύρος συχνότητας και η επιστροφή διατρέχεται σε  $95 \pm 5$  λεπτά για κάθε θέση (διεύθυνση δόνησης) της μπαταρίας. Η μπαταρία ελέγχεται σε τρεις αμοιβαία κάθετες θέσεις (ώστε να συμπεριληφθεί έλεγχος με ανοίγματα πλήρωσης και εξαεριστήρες, εάν υπάρχουν, σε ανεστραμμένη θέση) για ίσες χρονικές περιόδους.

**Διαφορικός έλεγχος πίεσης:** Μετά από τον έλεγχο δόνησης, η μπαταρία αποθηκεύεται για έξι ώρες στους  $24 \pm 4$  °C ενώ υπόκειται σε διαφορική πίεση τουλάχιστον 88 kPa. Η μπαταρία ελέγχεται σε τρεις αμοιβαία κάθετες θέσεις (ώστε να συμπεριληφθεί έλεγχος με ανοίγματα πλήρωσης και εξαεριστήρες, εάν υπάρχουν, σε ανεστραμμένη θέση) για τουλάχιστον έξι ώρες σε κάθε θέση.

## 82° Άλλα είδη που περιέχουν διαβρωτικές ύλες:

- (b) 1774 φορτία πυροσβεστήρων, διαβρωτικά υγρά, 2028 βόμβες, καπνογόνες, μη-εκρηκτικές με διαβρωτικό υγρό, χωρίς πυροκροτικό μηχανισμό.

## E. Κενές συσκευασίες

- 91° Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά γύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστων, καθώς και κενά οχήματα για μεταφορά γύμα και κενά μικρά εμπορευματοκιβώτια για μεταφορά γύμα, ακαθάριστα, που περιείχαν ύλες της κλάσης 8.

2801a Ούτε οι διατάξεις αυτής της κλάσης που περιέχονται σε αυτό το Παράρτημα, ούτε εκείνες που περιέχονται στο παράρτημα Β εφαρμόζονται στα:

- (1) Ύλες των 1° έως 5°, 7° έως 13°, 16°, 17°, 31° έως 47°, 51° έως 56° και 61° έως 76°, μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις:

- (a) Ύλες ταξινομημένες στο (a) κάθε είδους:

Υγρά: όχι περισσότερο από 100 ml ανά εσωτερική συσκευασία και όχι περισσότερο από 400 ml ανά κόλο,

## Κλάση 8

2801a  
(συνεχ.)

Στερεά: όχι περισσότερο από 500 g ανά εσωτερική συσκευασία και όχι περισσότερο από 2 kg ανά κόλο.

(b) Υγρές ταξινομημένες στο (b) κάθε είδους:

Υγρά: όχι περισσότερο από 1 λίτρο ανά εσωτερική συσκευασία και όχι περισσότερο από 4 λίτρα ανά κόλο,

Στερεά: όχι περισσότερο από 3 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 12 kg ανά κόλο.

(c) Υγρές ταξινομημένες στο (c) κάθε είδους:

Υγρά: όχι περισσότερο από 3 λίτρα ανά εσωτερική συσκευασία και όχι περισσότερο από 12 λίτρα ανά κόλο,

Στερεά: όχι περισσότερο από 6 kg ανά εσωτερική συσκευασία και όχι περισσότερο από 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες που ικανοποιούν τουλάχιστον τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να τηρούνται.

(2) Μπαταρίες χωρίς διαρροή με χαρακτηριστικό αριθμό 2800 της 81° εάν σε θερμοκρασία 55 °C, ο υλεκτρολύτης δεν θα ρέει από ένα ραγισμένο ή σπασμένο κιβώτιο και δεν υπάρχει ελεύθερο υγρό για να ρέει και εάν όταν είναι συσκευασμένες για μεταφορά, οι πόλοι είναι προστατευμένοι από βραχυκυκλώματα.

(3) Κατασκευασμένα είδη ή όργανα που περιέχουν όχι περισσότερο από 1 kg υδράργυρο της 66° (c).

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

2802

(1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στα περιθωριακά 2803 έως 2808.

(2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.

(3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2800 (3) (b) και 3511 (2) ή 3611 (2) αντίστοιχα, θα πρέπει να χρησιμοποιούνται τα παρακάτω:

- συσκευασίες της ομάδας συσκευασίας I, μαρκαρισμένες με το γράμμα "X", για τις εξαιρετικά διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (a) κάθε είδους,
- συσκευασίες της ομάδας συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (b) κάθε είδους,

## Κλάση 8

- 2802** - συσκευασίες της ομάδας συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή (συνεχ.) "X", ή IBC της ομάδας συσκευασίας III ή II, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις ελαφρώς διαβρωτικές ύλες που είναι ταξινομημένες υπό το γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 8 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα Β.

**2. Ειδικές συνθήκες για συσκευασία ορισμένων υλών**

- 2803** Υδροφθόριο, άνυδρο και διάλυμα υδροφθορικού οξέος που περιέχει περισσότερο από 85 % υδροφθόριο της 6<sup>ο</sup> θα πρέπει να συσκευάζονται σε δοχεία πίεσης κατασκευασμένα από ανθρακίχο χάλυβα ή κατάλληλο κράμα χάλυβα. Θα πρέπει να επιτρέπονται τα παρακάτω δοχεία πίεσης:

- (a) κύλινδροι με χωρητικότητα όχι μεγαλύτερη από 150 λίτρα,
- (b) δοχεία με χωρητικότητα όχι μικρότερη από 100 λίτρα και όχι μεγαλύτερη από 1,000 λίτρα (για παράδειγμα, κυλινδρικά δοχεία εφοδιασμένα με κυλιόμενα τσέρκια ή δοχεία τοποθετημένα πάνω σε δοκούς).

Τα δοχεία πίεσης θα πρέπει να ικανοποιούν τις σχετικές απαιτήσεις της κλάσης 2 (βλέπε περιθωριακά 2211, 2213 (1) και (2), 2215, 2216 και 2218).

Το πάχος τοιχωμάτων των δοχείων πίεσης δεν θα πρέπει να είναι μικρότερο από 3 mm.

Πριν χρησιμοποιηθούν για πρώτη φορά, τα δοχεία πίεσης θα πρέπει να υπόκεινται σε έλεγχο υδραυλικής πίεσης σε πίεση όχι μικρότερη από 1 MPa (10 bar) πίεση πιεζομέτρου. Ο έλεγχος πίεσης θα πρέπει να επαναλαμβάνεται κάθε οκτώ χρόνια και θα πρέπει να συνοδεύεται από μία εσωτερική επιθεώρηση των δοχείων πίεσης και έναν έλεγχο των εξαρτημάτων τους. Επιπλέον, η αντίσταση των δοχείων πίεσης στη διάβρωση θα πρέπει να ελέγχεται με κατάλληλα όργανα (π.χ. με υπερήχους), και η κατάσταση των εξαρτημάτων να επιβεβαιώνεται, κάθε δύο χρόνια.

Οι έλεγχοι και επιθεωρήσεις θα πρέπει να διεξάγονται υπό την επίβλεψη ενός εμπειρογνώμονα εγκεκριμένου από την αρμόδια αρχή.

Το μέγιστο βάρος του περιεχομένου ανά λίτρο χωρητικότητας για υδροφθόριο, άνυδρο ή διάλυμα υδροφθορικού οξέος δεν θα πρέπει να υπερβαίνει τα 0.84 kg.

- 2804** (1) Βρώμιο και διάλυμα βρωμίου της 14<sup>ο</sup> θα πρέπει να συσκευάζονται σε γυάλινες εσωτερικές συσκευασίες, που περιέχουν όχι περισσότερο από 2.5 λίτρα κάθε μία, ή σε εσωτερικές συσκευασίες φθοριούχου πολυβινυλιδενίου (PVDF) που περιέχουν όχι περισσότερο από 15 λίτρα κάθε μία, που θα πρέπει να τοποθετούνται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538. Οι συνδυασμένες συσκευασίες θα πρέπει να ελέγχονται και εγκρίνονται σε συμφωνία με την προσθήκη A.5 για την ομάδα συσκευασίας I.

(2) Βρώμιο που περιέχει λιγότερο από 0.005 % νερό, ή μεταξύ 0.005 % και 0.2 % νερό, υπό την προϋπόθεση ότι στην τελευταία περίπτωση λαμβάνονται μέτρα για την αποφυγή διάβρωσης της επένδυσης των δοχείων, μπορεί επίσης να μεταφέρεται σε δοχεία που ικανοποιούν τις παρακάτω συνθήκες:

- (a) τα δοχεία θα πρέπει να είναι κατασκευασμένα από χάλυβα και εξοπλισμένα με στεγανή επένδυση κατασκευασμένη από μόλυβδο ή από κάποιο άλλο υλικό που παρέχει ισοδύναμη προστασία και με ερμητικό πώμα. Δοχεία κατασκευασμένα από μέταλλο μονέλ ή νικέλιο, ή με νικέλινη επένδυση, θα πρέπει επίσης να επιτρέπονται,
- (b) η χωρητικότητα των δοχείων δεν θα πρέπει να υπερβαίνει τα 450 λίτρα,

## Κλάση 8

2804  
(συνεχ.)

- (c) τα δοχεία δεν θα πρέπει να γεμίζονται περισσότερο από το 92 % της χωρητικότητας τους ή περισσότερο από 2.86 kg ανά λίτρο χωρητικότητας,
- (d) τα δοχεία θα πρέπει να είναι οξυγονοκολλημένα και σχεδιασμένα για υπολογιζόμενη πίεση όχι μικρότερη από 2.1 MPa (21 bar) πίεση πιεζομέτρου. Τα υλικά και η εργασία θα πρέπει κατά τα άλλα να ικανοποιούν τις σχετικές απαιτήσεις της κλάσης 2 [βλέπε περιθωριακό 2211 (1)]. Ο αρχικός έλεγχος μη-επενδεδυμένων χαλύβδινων δοχείων θα πρέπει να υπόκειται στις διατάξεις της κλάσης 2 [βλέπε περιθωριακά 2215 (1) και 2216 (1)],
- (e) τα πώματα θα πρέπει να προεξέχουν όσο το λιγότερο δυνατόν από το δοχείο και να είναι εφοδιασμένα με προστατευτικά καλύμματα. Τα πώματα και τα καλύμματα θα πρέπει να είναι εφοδιασμένα με φλάντζες κατασκευασμένες από υλικό όχι ικανό να προσβληθεί από το βρώμιο. Τα πώματα θα πρέπει να είναι στο πιο πάνω μέρος των δοχείων με τέτοιο τρόπο ώστε να μην μπορούν σε καμία περίπτωση να είναι σε μόνιμη επαφή με την υγρή φάση,
- (f) τα δοχεία θα πρέπει να είναι εφοδιασμένα με εξαρτήματα που θα τους επιτρέπουν να στέκονται σταθερά όρθια και με εξαρτήματα ανύψωσης (δακτυλίου, στεφάνες κ.λπ.) στην κορυφή, που θα πρέπει να ελέγχονται σε φορτίο διπλάσιο από το φορτίο εργασίας.

(3) Πριν τεθούν σε υπηρεσία, δοχεία σε συμφωνία με το (2) παραπάνω θα πρέπει να υπόκεινται σε έλεγχο στεγανότητας σε πίεση τουλάχιστον 200 kPa (2 bar) πίεση πιεζομέτρου. Ο έλεγχος στεγανότητας θα πρέπει να επαναλαμβάνεται κάθε δύο χρόνια και θα πρέπει να συνοδεύεται από μία εσωτερική επιθεώρηση του δοχείου και έλεγχο του απόβαρου του. Ο έλεγχος και η επιθεώρηση θα πρέπει να διεξάγονται υπό την επίβλεψη ενός εμπειρογνώμονα εγκεκριμένου από την αρμόδια αρχή.

(4) Δοχεία σε συμφωνία με το (2) θα πρέπει να φέρουν, με καθαρά ευανάγνωστους και διαρκείας χαρακτήρες:

- την ονομασία του κατασκευαστή ή την μάρκα κατασκευής και τον αριθμό του δοχείου,
- τη λέξη "Βρώμιο",
- απόβαρο του δοχείου και το επιτρεπτό μέγιστο βάρος του γεμισμένου δοχείου,
- ημερομηνία (μήνα, χρόνο) του αρχικού ελέγχου και του τελευταίου περιοδικού ελέγχου,
- σφραγίδα του εμπειρογνώμονα που διεξήγαγε τους ελέγχους και τις επιθεωρήσεις.

2805

(1) Ύλες ταξινομημένες στο (a) των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπατόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια μη-μετακινούμενης κεφαλής χωρητικότητας όχι μεγαλύτερης από 60 λίτρα ή πλαστικά μπατόνια μη-μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή

## Κλάση 8

- 2805** (f) συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από γυαλί, πλαστικό ή μέταλλο σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539.

**ΣΗΜΕΙΩΣΗ 1** στο (d): Η επιτρεπτή περίοδος χρήσης για συσκευασίες που προορίζονται για τη μεταφορά νιτρικού οξέος της 2°(α) και διάλυμα υδροφθορικού οξέος θα πρέπει να είναι δύο χρόνια από την ημερομηνία κατασκευής τους.

**ΣΗΜΕΙΩΣΗ 2** στα (f) και (g): Οι εσωτερικές συσκευασίες ή τα δοχεία από γυαλί δεν θα πρέπει να επιτρέπονται για φθορίδια της 7°(α), 8°(α) ή 33°(α).

(2) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορούν επίσης να συσκευάζονται σε:

- (a) βαρέλια μετακινούμενης κεφαλής σύμφωνα με τα περιθωριακά 3520 για 3521 για αλουμίνιο, 3523 για κόντρα-πλακέ, 3525 για φύλλο ή 3526 για πλαστικό υλικό, ή σε μπιτόνια μετακινούμενης σύμφωνα με τα περιθωριακά 3522 για χάλυβα ή 3526 για εάν είναι αναγκαίο με έναν ή περισσότερους εσωτερικούς σάκους, ή
- (b) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, με έναν περισσότερους αδιαπέραστους εσωτερικούς σάκους.

**2806** (1) Ύλες ταξινομημένες στο (b) των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργιλος) σύμφωνα με το περιθωριακό 3539.

**ΣΗΜΕΙΩΣΗ 1** στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται σε βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3553, 3554 και 3560).

**ΣΗΜΕΙΩΣΗ 2** στο (d): Η επιτρεπτή περίοδος χρήσης για συσκευασίες που προορίζονται για τη μεταφορά νιτρικού οξέος που περιέχει περισσότερο από 55% καθαρό οξύ της 2° (b) και διάλυμα υδροφθορικού οξέος της 7° (b) θα πρέπει να είναι δύο χρόνια από την ημερομηνία κατασκευής τους.

**ΣΗΜΕΙΩΣΗ 3** στα (f) και (g): Εσωτερικές συσκευασίες ή δοχεία από γυαλί δεν θα πρέπει να επιτρέπονται για φθορίδια των 7° (b), 8° (b), 9° (b), 10° (b) ή 33° (b).

## Κλάση 8

**2806** (2) Υγες ταξινομημένες στο (b) των διαφόρων ειδών που έχουν τάση ατμών στους 50 °C όχι (συνεχ.) μεγαλύτερη από 110 kPa (1.10 bar) μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορεί επίσης να συσκευάζονται σε:

- (a) βαρέλια σύμφωνα με τα περιθωριακά 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους διαπεράστους εσωτερικούς σάκους, ή
- (b) αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένο πλαστικό υλικό, 3535 για πλαστικό φιλμ ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή οι σάκοι είναι ασφαλισμένοι πάνω σε παλέτες, ή
- (c) σύνθετα IBC με πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627, ή
- (d) εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13H1, 13L1 και 13M1 και υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

(4) Είδη της 82° θα πρέπει να συσκευάζονται ως εξής:

- (a) φορτία πυροσβεστήρων, διαβρωτικού υγρού, σε ξύλινα κιβώτια σύμφωνα με τα περιθωριακά 3527, 3528 ή 3529, ή κιβώτια από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3530, ή κιβώτια τεταμένου πλαστικού τύπου 4H1 σύμφωνα με το περιθωριακό 3531.
- (b) βόμβες, καπνογόνες, μη-εκρηκτικές με διαβρωτικό υγρό, χωρίς πυροκροτικό μηχανισμό, μονωμένες με προστατευτικό υλικό σε κιβώτια, σωλήνες ή χωρισμένα τμήματα είτε σε ξύλινα κιβώτια σύμφωνα με τα περιθωριακά 3527, 3528 ή 3529, είτε σε χαλύβδινα κιβώτια του τύπου 4A σύμφωνα με το περιθωριακό 3532.

**2807** (1) Υγες ταξινομημένες στο (c) εκτός από γάλλιο της 65° (c) και υδράργυρο της 66° (c), των διαφόρων ειδών θα πρέπει να συσκευάζονται σε:

- (a) χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
- (b) αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
- (c) χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
- (d) πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
- (e) σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργυλος) σύμφωνα με το περιθωριακό 3539, ή
- (h) ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540.

## Κλάση 8

**2807 ΣΗΜΕΙΩΣΗ** στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια, (συνεχ.) μπιτόνια και ελαφρού περιτοπώματος μεταλλικές συσκευασίες μετακινούμενης κεφαλής για ιζήδες ύλες με ιζήδες μεγαλύτερο από 200 mm<sup>3</sup>/s στους 23 °C και για στερεές ύλες (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560).

(2) Ύλες ταξινομημένες στο (c) εκτός από γάλλιο της 65° (c) και υδράργυρο της 66° (c), των διαφόρων ειδών που έχουν τάση ατμών στους 50 °C όχι μεγαλύτερη από 110 kPa (1.10 bar) μπορούν επίσης να συσκευάζονται σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, IBC άκαμπτου πλαστικού σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

(3) Στερεές ύλες κατά την έννοια του περιθωριακού 2800 (5) μπορούν επίσης να συσκευάζονται:

- (a) σε βαρέλια σύμφωνα με τα περιθωριακά 3523 για κόντρα-πλακέ, ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους διαπεραστούς εσωτερικούς σάκου, ή
- (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικό υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά ή 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, ή
- (c) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13H1, 13L1 και 13M1 ή σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625 ή σε IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627.

(4) (a) Γάλλιο της 65° (c) και υδράργυρος της 66° (c) θα πρέπει να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538. Αυτές οι συνδυασμένες συσκευασίες μπορούν να συνίστανται από γυαλί, πορσελάνη, ψαμμάργιλο ή πλαστικές εσωτερικές συσκευασίες, μέγιστης καθαρής ποσότητας 10 kg. Μπορούν να χρησιμοποιούνται οι παρακάτω εξωτερικές συσκευασίες:

κιβώτια από φυσικό ξύλο σύμφωνα με το περιθωριακό 3527, κιβώτια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3528, κιβώτια από ανασυσταμένο ξύλο σύμφωνα με το περιθωριακό 3529, κιβώτια από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3530, πλαστικά κιβώτια σύμφωνα με το περιθωριακό 3531 χαλύβδινα βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3520, χαλύβδινα μπιτόνια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3522, βαρέλια από κόντρα-πλακέ σύμφωνα με το περιθωριακό 3523, βαρέλια από φάιμπερ σύμφωνα με το περιθωριακό 3525, ή σε πλαστικά βαρέλια μετακινούμενης κεφαλής σύμφωνα με το περιθωριακό 3526.

(b) Υδράργυρος μπορεί επίσης να συσκευάζεται σε οξυγονοκολλημένες χαλύβδινες φιάλες με εσωτερικούς θολωτούς πάτους ως μεμονωμένες συσκευασίες. Το πόμα θα πρέπει να είναι ένας κοχλίας με κωνικό σπείρωμα και το άνοιγμα δεν θα πρέπει να υπερβαίνει τα 20 mm.

(5) (a) Είδη της 81°, εκτός από μπαταρίες, υγρές, χωρίς διαρροή, θα πρέπει να δένονται με αδρανές προστατευτικό υλικό ή με έναν ισοδύναμο τρόπο σε ξύλινα κιβώτια ή σε κιβώτια από άκαμπτο πλαστικό ή σε ξύλινο δικτυωτό κιβώτιο. Οι μπαταρίες θα πρέπει να μονώνονται έναντι βραχυκυκλώματος.

(b) Μπαταρίες του τύπου χωρίς διαρροή (χαρακτηριστικός αριθμός 2800) θα πρέπει να προστατεύονται έναντι βραχυκυκλωμάτων και θα πρέπει να συσκευάζονται με ασφάλεια σε γερές εξωτερικές συσκευασίες.

## Κλάση 8

- 2807** *ΣΗΜΕΙΩΣΗ:* Μπαταρίες χωρίς διαρροή που είναι μέρος αναπόσπαστο και αναγκαίο για τη λειτουργία μηχανικού ή ηλεκτρονικού εξαρτήματος, θα πρέπει να δένονται με ασφάλεια στη θήκη μπαταρίας στο εξάρτημα και να προστατεύονται με τέτοιο τρόπο για την αποφυγή φθοράς και βραχυκυκλώματος.
- (c) Είδη της 81° μπορούν να μεταφέρονται σε παλέτες. Θα πρέπει να στοιβάζονται και να ασφαρίζονται επαρκώς σε δέτες διαχωριζόμενους από ένα στρώμα μη-αγώγιμου υλικού. Οι πόλοι της μπαταρίας δεν θα πρέπει, σε οποιαδήποτε περίπτωση, να στηρίζουν το βάρος άλλων στοιχείων που έχουν τοποθετηθεί από πάνω. Οι μπαταρίες θα πρέπει να απομονώνονται με τέτοιο τρόπο ώστε να αποφεύγονται βραχυκυκλώματα. Κάθε μπαταρία δεν χρειάζεται να είναι μαρκαρισμένη και επισημασμένη εάν το φορτίο της παλέτας φέρει ένα μαρκάρισμα και μία ετικέτα κινδύνου.
- 2808** Συσκευασίες, συμπεριλαμβανομένων IBC, που περιέχουν 1791 διάλυμα υποχλωριώδους άλατος της 61° θα πρέπει να είναι εφοδιασμένες με εξαεριστήρια σύμφωνα με τα περιθωριακά 3500 (8) ή 3601 (6) αντίστοιχα.
- 2809** Τετηγμένος οξυβρωμιούχος φωσφόρος της 15° μπορεί να μεταφέρεται μόνον σε οχήματα-δεξαμενές (βλέπε Προσθήκη B.1a) ή σε εμπορευματοκιβώτια-δεξαμενές (βλέπε Προσθήκη B.1b).
- 2810**
- 3. Μικτή συσκευασία**
- 2811** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.
- (2) Ύλες διαφορετικών ειδών αυτής της κλάσης σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπορεύματα όχι υποκειμένα στις διατάξεις αυτής της Οδηγίας [βλέπε περιθωριακό 2800 (8)], σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.
- (3) Ύλες της 4° δεν θα πρέπει να συσκευάζονται μαζί με άλλα εμπορεύματα, εκτός από ύλες της 3° της κλάσης 5.1; περιθωριακό 2501. Ύλες των 6° και 14° δεν θα πρέπει να συσκευάζονται μαζί με άλλα εμπορεύματα.
- (4) Ύλες ταξινομημένες στο (a) των διαφόρων ειδών δεν θα πρέπει να συσκευάζονται μαζί με ύλες και είδη των κλάσεων 1 και 5.2 και υλικά της κλάσης 7.
- (5) Εκτός εάν αλλιώς ειδικά ορίζεται, υγρές ύλες ταξινομημένες στο (a) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες από 0.5 λίτρο ανά εσωτερική συσκευασία και 1 λίτρο ανά κόλο και ύλες ταξινομημένες στο (b) ή (c) των διαφόρων ειδών, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, από 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με ύλες ή είδη άλλων Κλάσεων, υπό την προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για τις ύλες και τα είδη αυτών των Κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας [βλέπε περιθωριακό 2800 (8)], υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.
- (6) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:
- ανάφλεξη και/ή εκπομπή σημαντικής θερμότητας,
  - εκπομπή εύφλεκτων και/ή τοξικών αερίων,
  - σχηματισμός διαβρωτικών υγρών,
  - σχηματισμός ασταθών υλών.

## Κλάση 8

- 2811** (7) Η μικτή συσκευασία όξινων υλών με βασικές ύλες σε ένα κόλο δεν θα πρέπει να επιτρέπεται εάν οι δύο ύλες είναι συσκευασμένες σε εύθραυστες συσκευασίες. (συνεχ.)
- (8) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2802 θα πρέπει να ισχύουν.
- (9) Εάν χρησιμοποιούνται ξύλινα κιβώτια ή κιβώτια από φύλλο φάιμπερ, ένα κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

4. *Μαρκάρισμα και ετικέτες κινδύνου στα κόλα***2812. Μαρκάρισμα**

- (1) Κάθε κόλο θα πρέπει να είναι καθαρά μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που θα καταχωρείται στο έγγραφο μεταφοράς, μετά από τα γράμματα "UN".

**Ετικέτες κινδύνου**

- (2) Κόλα που περιέχουν ύλες ή είδη της κλάσης 8 θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 8.
- (3) Κόλα που περιέχουν ύλες των 32° (b) 2., 33° (a), 35° (b) 2., 37°, 54°, 64° (b) και 68° θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.
- (4) Κόλα που περιέχουν ύλες των 44° (a) και 45° (b) 2. θα πρέπει επιπλέον να φέρουν ετικέτες σύμφωνα με τα υποδείγματα Αριθμ. 3 και 6.1.
- (5) Κόλα που περιέχουν ύλες της 67° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.1.
- (6) Κόλα που περιέχουν ύλες των 69° και 70° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.2.
- (7) Κόλα που περιέχουν ύλες των 71° και 72° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 4.3.
- (8) Κόλα που περιέχουν ύλες των 3° (a), 4°, 73° και 74° θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 05.
- (9) Κόλα που περιέχουν ύλες της 2° (a) 2. θα πρέπει επιπλέον να φέρουν ετικέτες σύμφωνα με το υπόδειγματα Αριθμ. 05 και 6.1.
- (10) Κόλα που περιέχουν ύλες που αναφέρονται παρακάτω θα πρέπει επιπλέον να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 6.1:

Αριθμός είδους	Χαρακτηριστικός αριθμός ύλης	Ύλη
1° (a)	1831	Θειικό οξύ, ατμίζον (oleum)
6°		Όλες οι ύλες
7°		Όλες ύλες
9° (b)	1811	Όξινο διφθοριούχο κάλιο (διφθοριούχο κάλιο)

Αριθμός είδους	Χαρακτηριστικός αριθμός ύλης	Υλη
10° (b)	1732	Πενταφθοριούχο αντιμόνιο
12° (a)	1809	Τριχλωριούχος φωσφόρος
	2879	Οξυχλωριούχο σελήνιο
14°		Όλες οι ύλες
44° (b)		Όλες οι ύλες
45° (b) 1. και (c)	2818	Διάλυμα πολυθειούχου αμμωνίου
53° (b) και (c)	1761	Διάλυμα κυπριαιθυλενοδιαμίνης
75°		Όλες οι ύλες
76°		Όλες οι ύλες

(11) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(12) Κόλα που περιέχουν υγρά σε δοχεία, τα πώματα των οποίων δεν είναι ορατά από έξω, καθώς και κόλα που περιέχουν εξαεριζόμενα δοχεία ή εξαεριζόμενα δοχεία χωρίς εξωτερική συσκευασία, θα πρέπει επιπλέον να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

## 2813

**B. Στοιχεία στο έγγραφο μεταφοράς**

2814 Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς ύλης και με μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2801.

Εάν η ύλη δεν αναφέρεται με συγκεκριμένη ονομασία αλλά είναι καταγεγραμμένη σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από τη χημική ή τεχνική ονομασία.<sup>3/</sup>

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "8, 1°(a), ADR".

Για τη μεταφορά αποβλήτων [βλέπε περιθωριακό 2000 (5)] η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα, που περιέχουν ..." και το(τα) συστατικό(ά) που έχει(έχουν) χρησιμοποιηθεί για την ταξινόμηση των αποβλήτων στο περιθωριακό 2002 (8) θα καταχωρείται(ονται) με τη(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα που περιέχουν 1824 διάλυμα υδροξειδίου του νατρίου, 8, 42°(b) ADR".

<sup>3/</sup> Η τεχνική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν το σκοπό.

## Κλάση 8

**2814** (συνεχ.) Για τη μεταφορά διαλυμάτων ή μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά υποκείμενα σ' αυτήν την Οδηγία, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κυρίως συμβάλλουν στον κίνδυνο ή τους κινδύνους του διαλύματος και του μείγματος. Για τη μεταφορά διαλυμάτων και μειγμάτων που περιέχουν μόνον ένα συστατικό υποκείμενο στις διατάξεις αυτής της Οδηγίας, οι λέξεις "διάλυμα" ή "μείγμα" θα πρέπει να προστίθενται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Όταν μία στερεή ύλη παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει να συμπληρώνεται από τη λέξη "τετηγμένο", εκτός εάν ήδη συμπεριλαμβάνεται στην ονομασία.

Εάν ένα διάλυμα ή μείγμα με συγκεκριμένη ονομασία ή που περιέχει μία ύλη με συγκεκριμένη ονομασία δεν υπόκειται στις συνθήκες αυτής της κλάσης, σε συμφωνία με το περιθωριακό 2800 (5), ο αποστολέας μπορεί να εγγράψει στο έγγραφο μεταφοράς: "Όχι Εμπορεύματα της κλάσης 8".

2815-  
2821

## C. Κενές συσκευασίες

- 2822** (1) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 91° θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και με τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.
- (2) Ακαθάριστες κενές συσκευασίες, συμπεριλαμβανομένων κενών IBC, της 91° θα πρέπει να φέρουν τις ίδιες επικέτες κινδύνου σαν να ήταν γεμάτες.
- (3) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στο 91°, π.χ. "Κενές συσκευασίες, 8, 91°, ADR".

Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών, κενών εμπορευματοκιβωτίων-δεξαμενών και κενών μικρών εμπορευματοκιβωτίων για μεταφορά χύμα, ακαθάρσιων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 1830 Θεϊκό οξύ, 1° (b)".

2823-  
2824

## D. Μεταβατικά μέτρα

- 2825** Υλεις της κλάσης 8 μπορούν να μεταφέρονται μέχρι τις 30 Ιουνίου 1995 σε συμφωνία με τις απαιτήσεις για την Κλάση 8 που εφαρμόζεται μέχρι τις 31 Δεκεμβρίου 1994. Το έγγραφο μεταφοράς θα πρέπει, σε τέτοιες περιπτώσεις, να φέρει την επιγραφή "Μεταφορά σε συμφωνία με την ADR που ισχύει πριν την 1 Ιανουαρίου 1995".

2826-  
2899

**ΚΛΑΣΗ 9. ΔΙΑΦΟΡΕΣ ΕΠΙΚΙΝΔΥΝΕΣ ΥΛΕΣ ΚΑΙ ΕΙΔΗ****1. Κατάλογος υλών**

**2900** Το κεφάλαιο της κλάσης 9 καλύπτει ύλες και είδη που, κατά τη διάρκεια της μεταφοράς, παρουσιάζουν έναν κίνδυνο που δεν καλύπτεται από τα κεφάλαια άλλων κλάσεων. Εκείνες οι ύλες και τα είδη που αναφέρονται στο περιθωριακό 2901 υπόκεινται στις συνθήκες που τίθενται στα περιθωριακά 2901 έως 2920 και στις διατάξεις αυτού του παραρτήματος και του παραρτήματος Β. Θεωρούνται τότε ως ύλες και είδη αυτής της Οδηγίας<sup>1/</sup>.

Υλες της κλάσης 9 που αναφέρονται στα διάφορα είδη του περιθωριακού 2901 θα πρέπει να καταχωρούνται σε μία από τις παρακάτω ομάδες που χαρακτηρίζονται από το γράμμα (b) ή (c) σύμφωνα με το βαθμό κινδύνου τους:

γράμμα (b) - επικίνδυνες ύλες

γράμμα (c) - ύλες που παρουσιάζουν έναν μικρότερο κίνδυνο.

**ΣΗΜΕΙΩΣΗ:** Για την ταξινόμηση διαλυμάτων και μεγμάτων (όπως παρασκευάσματα και απόβλητα), βλέπε επίσης περιθωριακό 2002 (8).

**2901** A. Ύλες που, σε περίπτωση εισπνοής ως λεπτή σκόνη, μπορούν να θέσουν σε κίνδυνο την υγεία

1° Αμιάντος και μείγματα που περιέχουν αμιάντο, όπως:

(b) 2212 Μπλε αμιάντος (κροκιδολίτης), 2212 καφέ αμιάντος (αμοσίτης ή μυσορίτης),

(c) 2590 Λευκός αμιάντος (χρυσοσίτη, ακτινολίτης, ανθοφυλίτης ή τρεμολίτης)

**ΣΗΜΕΙΩΣΗ:** Τάλης που περιέχει τρεμολίτη και/ή ακτινολίτη είναι ύλη της 1° (c), Αριθμ. 2590.

B. Ύλες και συσκευές που σε περίπτωση φωτιάς μπορούν να σχηματίσουν διοξίνες

2° Πολυχλωρωμένα και πολυαλογονωμένα διφαινόλια (PCBs) και τερφαινόλια (PCTs) και μείγματα που περιέχουν αυτές τις ύλες:

(b) 2315 πολυχλωρωμένα διφαινόλια, 3151 πολυαλογονωμένα διφαινόλια, υγρά ή 3151 πολυαλογονωμένα τερφαινόλια, υγρά, 3152 πολυαλογονωμένα διφαινόλια, στερεά ή 3152 πολυαλογονωμένα τερφαινόλια, στερεά.

**ΣΗΜΕΙΩΣΗ:** Μείγματα με περιεκτικότητα σε PCB ή PCT όχι μεγαλύτερη από 50 mg/kg δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

3° Συσκευές όπως μετασχηματιστές, πυκνωτές και συσκευές που περιέχουν ύλες της 2° (b) ή μείγματα αυτών.

<sup>1/</sup> Για τις ποσότητες υλών ή ειδών του περιθωριακού 2901 που δεν υπόκεινται στις διατάξεις για αυτήν την κλάση που περιέχονται είτε σε αυτό το Παράρτημα είτε στο παράρτημα Β, βλέπε περιθωριακό 2901a.

## Κλάση 9

## 2901 C. Υλεις που παράγουν εύφλεκτο ατμό

(συνεχ.)

4° Διαστελλόμενα πολυμερή που περιέχουν εύφλεκτα υγρά με σημείο ανάφλεξης όχι μεγαλύτερο από 55 °C.

(c) 2211 πολυμερικές κλίνες, διαστελλόμενες, που παράγουν εύφλεκτο ατμό.

## D. Μπαταρίες λιθίου

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σε αυτά τα είδη (βλέπε περιθωριακό 2906).

5° 3090 μπαταρίες λιθίου, 3091 μπαταρίες λιθίου που περιέχονται σε εξαρτήματα

**ΣΗΜΕΙΩΣΗ 1:** Κάθε στοιχείο δεν θα πρέπει να περιέχει περισσότερο από 12 g λίθιο. Η ποσότητα λιθίου που περιέχεται σε κάθε μπαταρία δεν θα πρέπει να είναι μεγαλύτερη από 500 g.

Με την έγκριση της αρμόδιας αρχής της χώρας προέλευσης, η ποσότητα λιθίου σε κάθε στοιχείο μπορεί να αυξηθεί σε 60 g και ένα κύλλο μπορεί να περιέχει έως 2500 g λίθιο. Η αρμόδια αρχή θα πρέπει να προσδιορίζει τις συνθήκες μεταφοράς καθώς και τον τύπο και τη διάρκεια του ελέγχου.

**ΣΗΜΕΙΩΣΗ 2:** Στοιχεία και μπαταρίες θα πρέπει να είναι εφοδιασμένα με ένα αποτελεσματικό μέσο πρόληψης των εξωτερικών βραχυκυκλωμάτων. Κάθε στοιχείο και μπαταρία θα πρέπει να έχει ενσωματωμένη μία συσκευή εξερισμού ασφαλείας ή να είναι σχεδιασμένο με τέτοιο τρόπο ώστε να προλαμβάνεται η βίαιη θραύση υπό κανονικές συνθήκες μεταφοράς. Μπαταρίες που περιέχουν στοιχεία ή σειρά στοιχείων συνδεδεμένων παράλληλα θα πρέπει να είναι εφοδιασμένες με διόδους για την αποφυγή αντίστροφης ροής ρεύματος. Μπαταρίες που περιέχονται σε εξαρτήματα θα πρέπει να προστατεύονται έναντι βραχυκυκλωμάτων και να κρατούνται με ασφάλεια στη θέση τους.

**ΣΗΜΕΙΩΣΗ 3:** Τα στοιχεία και οι μπαταρίες θα πρέπει να είναι έτσι σχεδιασμένα και κατασκευασμένα ώστε να είναι ικανά να ικανοποιούν τους παρακάτω ελέγχους:

**Έλεγχος 1:** το στοιχείο ή η μπαταρία θα πρέπει να υπόκεινται σε έλεγχο θερμικής σταθερότητας στους 75 °C για 48 ώρες και να μην εμφανίζουν εμφανή παραμόρφωση, διαρροή ή εσωτερική θέρμανση.

Αυτός ο έλεγχος θα πρέπει να εκτελείται σε τουλάχιστον 10 στοιχεία και μία μπαταρία από κάθε τύπο λαμβανόμενο από την παραγωγή κάθε εβδομάδα.

**Έλεγχος 2:** ως αποτέλεσμα σκόπμου βραχυκυκλώματος, το στοιχείο ή η μπαταρία θα πρέπει να καθίσταται αδρανές, κατά προτίμηση χωρίς εξερισμό (μέσω της χρήσης εσωτερικών συσκευών ασφαλείας). Εάν λαμβάνει χώρα εξερισμός, μία ανοιχτή φλόγα θα πρέπει να εφαρμόζεται στις αναθυμιάσεις του εξερισμού για να αποδειχθεί ότι δεν υπάρχει εκρηκτική κατάσταση.

Αυτός ο έλεγχος θα πρέπει να εκτελείται σε τουλάχιστον τρία στοιχεία και μία μπαταρία από κάθε τύπο λαμβανόμενο από την παραγωγή κάθε εβδομάδα.

**ΣΗΜΕΙΩΣΗ 4:** Στοιχεία που έχουν αποφορτιστεί στο βαθμό που η τάση ανοιχτού κυκλώματος να είναι μικρότερη από δύο volts ή ίση με τα δύο τρίτα της τάσης του μη-αποφορτισμένου στοιχείου, όποια τιμή από τις δύο είναι μικρότερη, ή μπαταρίες που περιέχουν ένα ή περισσότερα τέτοια στοιχεία δεν θα γίνονται δεκτά για μεταφορά.

## Κλάση 9

2901  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ 5:** Στοιχεία από μπαταρίες που περιέχονται σε εξαρτήματα δεν θα πρέπει να είναι ικανά να αποφορτίζονται κατά τη διάρκεια της μεταφοράς στο βαθμό που η τάση ανοιχτού κυκλώματος να πέφτει κάτω από 2 volts ή τα δύο τρίτα της τάσης του μη-αποφορτισμένου στοιχείου, όποια τιμή από τις δύο είναι μικρότερη.

**ΣΗΜΕΙΩΣΗ 6:** Είδη της 5<sup>ο</sup> που δεν ικανοποιούν αυτές τις συνθήκες δεν θα γίνονται δεκτά για μεταφορά.

## Ε. Σωστικά μέσα

**ΣΗΜΕΙΩΣΗ:** Ειδικές συνθήκες συσκευασίας εφαρμόζονται σ' αυτά τα είδη (βλέπε περιθωριακό 2907).

6<sup>ο</sup> 2990 σωστικά μέσα αυτοδιογκούμενα, όπως γλίστρες εκκένωσης αεροσκαφών και εξαρτήσεις επιβίωσης αεροσκαφών.

**ΣΗΜΕΙΩΣΗ:** Αυτά τα μέσα παρουσιάζουν έναν κίνδυνο εάν η αυτοδιογκούμενη συσκευή ενεργοποιηθεί κατά τη διάρκεια της μεταφοράς και μπορεί επίσης να περιλαμβάνει μία ή περισσότερες από τις παρακάτω ύλες ή είδη αυτής της Οδηγίας ως εξαρτήματα:

συσκευές σηματοδότησης της κλάσης 1, όπως καπνογόνες και φωτιστικές βολίδες σηματοδότησης:

μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2,

εύφλεκτες ύλες των κλάσεων 3 ή 4.1,

οργανικά υπεροξειδία της κλάσης 5.2, ως συστατικά επισκευαστικών εξαρτήσεων,

μπαταρίες ηλεκτρικής συσώρευσης της κλάσης 8.

7<sup>ο</sup> 3072 σωστικά μέσα όχι αυτοδιογκούμενα, που περιλαμβάνουν μία ή περισσότερες από τις παρακάτω ύλες ή είδη της ADR ως εξαρτήματα:

συσκευές σηματοδότησης της κλάσης 1, όπως καπνογόνες ή φωτιστικές βολίδες σηματοδότησης,

μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2,

εύφλεκτες ύλες των κλάσεων 3 ή 4.1,

οργανικά υπεροξειδία της κλάσης 5.2, ως συστατικά επισκευαστικών εξαρτημάτων,

μπαταρίες ηλεκτρικής συσώρευσης ή διαβρωτικά στερεά της κλάσης 8.

8<sup>ο</sup> Μέρη μηχανοκίνητων οχημάτων

3268 συσκευές φουσκώματος αερόσακκων ή 3268 θάλαμοι αερόσακκων ή προ-εντατές ζωνών ασφαλείας ή 3268 θάλαμοι ζωνών ασφαλείας

3268

**ΣΗΜΕΙΩΣΗ 1:** Αυτό το είδος εφαρμόζεται στα είδη που μπορούν να ταξινομηθούν στην Κλάση 1 σε συμφωνία με το περιθωριακό 2100 (2) (b), που χρησιμοποιούνται ως σωστικοί αερόσακκοι ή ζώνες ασφαλείας των οχημάτων, όταν μεταφέρονται ως συστατικά μέρη και όταν οι 'συσκευές φουσκώματος αερόσακκων', 'προ-εντατές ζωνών ασφαλείας', 'θάλαμοι αερόσακκων' ή 'θάλαμοι ζωνών ασφαλείας' συσκευασμένα όπως για μεταφορά έχουν ελεγχθεί σε συμφωνία με τη σειρά ελέγχου 6 (c) του τμήματος I των Ελέγχων και Κριτηρίων των

## Κλάση 9

2901  
(συνεχ.)

Υποδείξων για τη Μεταφορά Επικίνδυνων Εμπορευμάτων,<sup>2/</sup> χωρίς έκρηξη της συσκευής, χωρίς θρυμματισμό των περιβλημάτων της συσκευής και χωρίς προβολή επικίνδυνης ή θερμικής επίδρασης, που θα δυσχέρανε σημαντικά τις προσπάθειες πυρόσβεσης ή αντίδρασης σε άλλες καταστάσεις κινδύνου στην άμεσα κοντινή περιοχή.

**ΣΗΜΕΙΩΣΗ 2:** Τέτοιοι αερόσακκοι ή ζώνες ασφαλείας που εγκαθίστανται σε οχήματα ή σε πλήρη μέρη οχημάτων όπως άξονες τιμονιού, φύλλα πόρτας κ.λπ. δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας.

## F. Περιβαλλοντικά επικίνδυνες ύλες

**ΣΗΜΕΙΩΣΗ:** Η καταχώρηση μίας ύλης στην 11<sup>ο</sup> ή 12<sup>ο</sup> θα πρέπει να είναι όπως υποδεικνύεται στην προσθήκη Α.3, μέρος G, περιθωριακά 3390 έως 3396.

- 11<sup>ο</sup> Υγρές ύλες ρυπογόνες για το θαλάσσιο περιβάλλον και διαλύματα και μείγματα τέτοιων υλών (όπως παρασκευάσματα και απόβλητα), που δεν μπορούν να ταξινομηθούν στις άλλες κλάσεις, ή στα είδη 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup> αυτής της κλάσης.

(c) 3082 Περιβαλλοντικά επικίνδυνη ύλη, υγρή, ε.α.ο., όπως:

πολυ (3-6) αιθοξυλική αλκοόλη C<sub>6</sub>-C<sub>17</sub> (δευτεροταγής)

πολυ (1-3) αιθοξυλική αλκοόλη C<sub>12</sub>-C<sub>15</sub>

πολυ (1-6) αιθοξυλική αλκοόλη C<sub>13</sub>-C<sub>15</sub>

alfa-cypermethrin

φθαλικό βουτυλοβενζύλιο

χλωρωμένες παραφίνες (C<sub>10</sub>-C<sub>13</sub>)

1-χλωροοκτάνιο

φωσφορικό κρεζυλοδιφαινύλιο

cyfluthrin

ακρυλικός δεκυλεστεράς

φθαλικό δι-η-βουτύλιο

1, 6-διχλωροεξάνιο

διϊσοπροπυλοβενζόλια

ακρυλικός ισοδεκυλεστεράς

φωσφορικός ισοδεκυλοδιφαινύλιο

νιτρικό ισοκτύλιο

malathion

resmethrin

φωσφορικά τριαρύλια

φωσφορικά τρικρεζύλια

τριαιθυλοβενζόλιο

φωσφορικό τριξυλενύλιο

- 12<sup>ο</sup> Στερεές ύλες ρυπογόνες για το θαλάσσιο περιβάλλον και μείγματα τέτοιων υλών (όπως παρασκευάσματα και απόβλητα) που δεν μπορούν να ταξινομηθούν στις άλλες κλάσεις, ή στα είδη 1<sup>ο</sup> έως 8<sup>ο</sup>, 13<sup>ο</sup> και 14<sup>ο</sup> αυτής της κλάσης.

<sup>2/</sup> Υποδείξεις για τη Μεταφορά Επικίνδυνων Εμπορευμάτων, Έλεγχοι και Κριτήρια (Δεύτερη έκδοση), δημοσιευμένες από τον Οργανισμό Ηνωμένων Εθνών υπό το σύμβολο ST/SG/AC.10/11/Rev.1.

## Κλάση 9

2901  
(συνεχ.)(c) 3077 Περιβαλλοντικά επικίνδυνη ύλη, στερεή, ε.α.ο., όπως:

χλωροεξιδίνη  
 χλωριωμένες παραφίνες (C<sub>10</sub>-C<sub>13</sub>)  
 p-δυχλωροβενζόλιο  
 διφαινύλιο  
 διφαινυλαιθέρας  
 οξείδιο fenbutadīn  
 χλωριούχος υδράργυρος (καλομέλας)  
 φωσφορικός τριβουτυλοκασσίτερος  
 βρωμιούχος ψευδάργυρος

13° Γενετικά τροποποιημένοι μικρο-οργανισμοί.

**ΣΗΜΕΙΩΣΗ 1:** Γενετικά τροποποιημένοι μικρο-οργανισμοί είναι μικρο-οργανισμοί στους οποίους το γενετικό υλικό έχει σκόπιμα μεταβληθεί με τεχνικά μέσα ή με τέτοια μέσα που δεν μπορούν να συμβούν φυσικά.

**ΣΗΜΕΙΩΣΗ 2:** Γενετικά τροποποιημένοι μικρο-οργανισμοί που είναι μολυσματικοί είναι ύλες της κλάσης 6.2 (βλέπε περιθωριακό 2651, είδη 1° έως 3°, χαρακτηριστικοί αριθμοί 2814 και 2900).

**ΣΗΜΕΙΩΣΗ 3:** Γενετικά τροποποιημένοι μικρο-οργανισμοί κατά την έννοια αυτού του είδους είναι εκείνοι που δεν είναι επικίνδυνοι για ανθρώπους και ζώα, αλλά που θα μπορούσαν να μεταβάλουν ζώα, φυτά, μικροβιολογικές ύλες και οικοσυστήματα με τέτοιον τρόπο που δεν μπορεί να συμβεί φυσικά.

(b) 3245 Γενετικά τροποποιημένοι μικρο-οργανισμοί

**ΣΗΜΕΙΩΣΗ 1:** Γενετικά τροποποιημένοι μικρο-οργανισμοί που έχουν λάβει συγκατάθεση για σκόπιμη απελευθέρωση στο περιβάλλον, <sup>3/</sup> δεν υπόκεινται στις διατάξεις αυτής της κλάσης αυτής της Οδηγίας.

**ΣΗΜΕΙΩΣΗ 2:** Για το σκοπό των απαιτήσεων συσκευασίας του περιθωριακού 2903, ύλες και μείγματα υλών θεωρούνται ότι είναι στερεά εάν δεν περιέχουν ελεύθερο υγρό σε θερμοκρασία χαμηλότερη από 45 °C.

**ΣΗΜΕΙΩΣΗ 3:** Ζωντανά σπονδυλωτά ή ασπόνδυλα ζώα δεν θα πρέπει να χρησιμοποιούνται για τη μεταφορά υλών ταξινομημένων υπό αυτό το είδος εκτός εάν η ύλη δεν μπορεί να μεταφερθεί με άλλον τρόπο.

14° Γενετικά τροποποιημένοι οργανισμοί

**ΣΗΜΕΙΩΣΗ:** Γενετικά τροποποιημένοι οργανισμοί, για τους οποίους είναι γνωστό ή υπάρχει η υποψία ότι είναι επικίνδυνοι για το περιβάλλον θα πρέπει να μεταφέρονται σε συμφωνία με τις συνθήκες που ορίζονται από την αρμόδια αρχή της χώρας προέλευσης.

G. Κενές συσκευασίες

**ΣΗΜΕΙΩΣΗ 1:** Κενές συσκευασίες με υπολείμματα από το προηγούμενο περιεχόμενο τους κολλημένα στο εξωτερικό δεν θα γίνονται δεκτά για μεταφορά.

<sup>3/</sup> Βλέπε ειδικά το Μέρος C της Οδηγίας 90/220/EEC (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας, Αριθμ. L 117, της 8 Μαΐου 1990, σελ. 18-20), που εκθέτει τις διαδικασίες εξουσιοδότησης για της Ευρωπαϊκή Κοινότητα.

## Κλάση 9

2901  
(συνεχ.)**ΣΗΜΕΙΩΣΗ 2:** Ακαθάριστα κενά δοχεία συγκράτησης για συσκευές της 3<sup>ο</sup> δεν θα γίνονται δεκτά για μεταφορά.

21<sup>ο</sup> Κενές συσκευασίες, συμπεριλαμβανομένων κενών ενδιάμεσων εμπορευματοκιβωτίων για μεταφορά χύμα (IBC), κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών, ακαθάριστες, που περιείχαν ύλες της 1<sup>ο</sup> ή 2<sup>ο</sup> της κλάσης 9.

2901a (1) Ύλες ταξινομημένες στο (b) ή (c) των 1<sup>ο</sup>, 2<sup>ο</sup>, 4<sup>ο</sup> και 11<sup>ο</sup> έως 13<sup>ο</sup> μεταφερόμενες σε συμφωνία με τις παρακάτω διατάξεις δεν υπόκεινται στις διατάξεις για αυτήν την κλάση που περιέχεται σε αυτό το Παράρτημα ή στο παράρτημα B:

- (a) Ύλες ταξινομημένες υπό το γράμμα (b) κάθε είδους:  
υγρά, έως 500 ml ανά εσωτερική συσκευασία και έως 2 λίτρα ανά κόλο,  
στερεά, έως 1 kg ανά εσωτερική συσκευασία και έως 4 kg ανά κόλο.
- (b) Ύλες ταξινομημένες υπό το γράμμα (c) κάθε είδους:  
υγρά, έως 3 λίτρα ανά εσωτερική συσκευασία και έως 12 λίτρα ανά κόλο:  
στερεά, έως 6 kg ανά εσωτερική συσκευασία και έως 24 kg ανά κόλο.

Αυτές οι ποσότητες υλών θα πρέπει να μεταφέρονται σε συνδυασμένες συσκευασίες σύμφωνα τουλάχιστον με τις συνθήκες του περιθωριακού 3538.

Οι "Γενικές συνθήκες συσκευασίας" του περιθωριακού 3500 (1), (2) και (5) έως (7) θα πρέπει να ισχύουν.

(2) Οι παρακάτω ύλες και είδη της 1<sup>ο</sup> είναι επιπλέον υποκείμενες στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το παράρτημα και στο παράρτημα B:

- (a) αμιάντος έτσι εμβαπτισμένος ή τοποθετημένος σε ένα φυσικό ή τεχνητό δεσμευτικό υλικό (όπως τσιμέντο, πλαστικό, άσφαλτος, ρητίνες ή ορυκτό μέταλλευμα) ώστε να μην μπορεί να σημειωθεί διαφυγή επικίνδυνων ποσοτήτων αναπνεύσιμων ινών αμιάντου κατά τη διάρκεια της μεταφοράς,
- (b) τελικά προϊόντα που περιέχουν αμιάντο όταν είναι έτσι συσκευασμένα ώστε να μην μπορεί να σημειωθεί διαφυγή επικίνδυνων ποσοτήτων αναπνεύσιμων ινών αμιάντου κατά τη διάρκεια της μεταφοράς.

(3) Συσκευές της 3<sup>ο</sup> που περιέχουν υγρά της 2<sup>ο</sup> (b), έως 500 ml ανά συσκευή και έως 2 λίτρα ανά κόλο, δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα ή στο παράρτημα B. Οι συσκευές θα πρέπει, όμως, να συσκευάζονται σε συμφωνία με το περιθωριακό 2905 (1) (a).

(4) Μπαταρίες λιθίου της 5<sup>ο</sup> σύμφωνα με τις παρακάτω διατάξεις και εξαρτήματα που περιέχουν μόνον τέτοιες μπαταρίες, δεν υπόκεινται στις διατάξεις για αυτήν την Κλάση που περιέχονται σε αυτό το Παράρτημα και στο παράρτημα B:

- (a) κάθε στοιχείο με υγρή κάθοδο περιέχει όχι περισσότερο από 0.5 g λίθιο ή κράμα λιθίου και κάθε στοιχείο με στερεή κάθοδο περιέχει όχι περισσότερο από 1 g λίθιο ή κράμα λιθίου,

## Κλάση 9

2901a  
(συνεχ.)

- (b) κάθε μπαταρία με στερεή κάθοδο περιέχει όχι περισσότερο από μία συνολική ποσότητα 2 g λίθιο ή κράμα λιθίου και κάθε μπαταρία με υγρή κάθοδο περιέχει όχι περισσότερο από μία συνολική ποσότητα 1 g λίθιο ή κράμα λιθίου,
- (c) κάθε στοιχείο ή μπαταρία που περιέχει υγρή κάθοδο είναι ερμητικά σφραγισμένο,
- (d) τα στοιχεία είναι διαχωρισμένα έτσι ώστε να αποφεύγονται βραχυκυκλώματα,
- (e) οι μπαταρίες είναι διαχωρισμένες έτσι ώστε να αποφεύγονται βραχυκυκλώματα και είναι συσκευασμένες σε γερές συσκευασίες, εκτός από όταν είναι εγκαταστημένες σε ηλεκτρονικές συσκευές,
- (f) εάν μία μπαταρία υγρής καθόδου περιέχει περισσότερο από 0.5 g λίθιο ή κράμα λιθίου, ή μία μπαταρία στερεής καθόδου περιέχει περισσότερο από 1 g λίθιο ή κράμα λιθίου, δεν περιέχει υγρό ή αέριο που θεωρείται επικίνδυνο εκτός εάν το υγρό ή το αέριο, εάν είναι ελεύθερο, θα ήταν πλήρως απορροφημένο ή εξουδετερωμένο από άλλα υλικά στη μπαταρία.

## 2. Διατάξεις

## A. Κόλα

## 1. Γενικές συνθήκες συσκευασίας

- 2902 (1) Οι συσκευασίες θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.5, εκτός εάν ειδικές συνθήκες για τη συσκευασία ορισμένων υλών καθορίζονται στο τμήμα A.2.
- (2) Τα ενδιάμεσα εμπορευματοκιβώτια για μεταφορά χύμα (IBC) θα πρέπει να ικανοποιούν τις συνθήκες της προσθήκης A.6.
- (3) Σε συμφωνία με τις διατάξεις των περιθωριακών 2900 και 3511 (2) ή 3611 (2) θα πρέπει να χρησιμοποιούνται τα παρακάτω:

συσκευασίες των ομάδων συσκευασίας II ή I, μαρκαρισμένες με το γράμμα "Y" ή "X", ή IBC της ομάδας συσκευασίας II, μαρκαρισμένα με το γράμμα "Y", για τις επικίνδυνες ύλες που είναι ταξινομημένες υπό το γράμμα (b) κάθε είδους,

συσκευασίες των ομάδων συσκευασίας III, II ή I, μαρκαρισμένες με το γράμμα "Z", "Y" ή "X", ή IBC, μαρκαρισμένα με το γράμμα "Z" ή "Y", για τις λιγότερο επικίνδυνες ύλες που είναι ταξινομημένες υπό το γράμμα (c) κάθε είδους.

**ΣΗΜΕΙΩΣΗ:** Για τη μεταφορά υλών της κλάσης 9 σε οχήματα-δεξαμενές, αποσυναρμολογούμενες δεξαμενές ή εμπορευματοκιβώτια-δεξαμενές και για τη μεταφορά χύμα στερεών αυτής της κλάσης, βλέπε Παράρτημα B.

## 2. Ειδικές συνθήκες συσκευασίας

- 2903 (1) Υλεις ταξινομημένες στο (b) των διαφόρων ειδών του περιθωριακού 2901 θα πρέπει να συσκευάζονται:
- (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) σε πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή

## Κλάση 9

2903  
(συνεχ.)

- (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
- (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
- (g) σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC με ένα άκαμπτο πλαστικό εσωτερικό δοχείο σύμφωνα με το περιθωριακό 3625.

*ΣΗΜΕΙΩΣΗ στα (a), (b), (c) και (d): Απλοποιημένες συνθήκες εφαρμόζονται στα βαρέλια και μπιτόνια μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mm<sup>2</sup>/s στους 23 °C (βλέπε περιθωριακά 3512, 3553, 3554 και 3560) και για στερεά.*

- (2) Στερεές ύλες με σημείο τήξης μεγαλύτερο από 45 °C μπορούν επίσης να συσκευάζονται:
  - (a) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, υπό την προϋπόθεση ότι τα εμπορεύματα αποστέλλονται ως πλήρες φορτίο ή οι σάκοι είναι ασφαλισμένοι πάνω σε παλέτες, ή
  - (c) σε σύνθετα IBC με εύκαμπτο πλαστικό εσωτερικό-δοχείο σύμφωνα με το περιθωριακό 3625, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627, ή
  - (d) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623 με εξαίρεση τα IBC των τύπων 13L1 και 13M1, υπό την προϋπόθεση ότι τα εμπορεύματα μεταφέρονται ως πλήρες φορτίο ή τα εύκαμπτα IBC είναι φορτωμένα πάνω σε παλέτες.

2904

- (1) Ύλες ταξινομημένες στο (c) των διαφόρων ειδών του περιθωριακού 2901 θα πρέπει να συσκευάζονται:
  - (a) σε χαλύβδινα βαρέλια σύμφωνα με το περιθωριακό 3520, ή
  - (b) σε αλουμινένια βαρέλια σύμφωνα με το περιθωριακό 3521, ή
  - (c) σε χαλύβδινα μπιτόνια σύμφωνα με το περιθωριακό 3522, ή
  - (d) σε πλαστικά βαρέλια ή πλαστικά μπιτόνια σύμφωνα με το περιθωριακό 3526, ή
  - (e) σε σύνθετες συσκευασίες (από πλαστικό υλικό) σύμφωνα με το περιθωριακό 3537, ή
  - (f) σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538, ή
  - (g) σε σύνθετες συσκευασίες (γυαλί, πορσελάνη ή ψαμμάργγλος) σύμφωνα με το περιθωριακό 3539, ή
  - (h) σε ελαφρού περιτυπώματος μεταλλικές συσκευασίες σύμφωνα με το περιθωριακό 3540, ή
  - (i) σε μεταλλικά IBC σύμφωνα με το περιθωριακό 3622, άκαμπτα πλαστικά IBC σύμφωνα με το περιθωριακό 3624 ή σύνθετα IBC σύμφωνα με το περιθωριακό 3625.

## Κλάση 9

**2904**  
(συνεχ.)

**ΣΗΜΕΙΩΣΗ** στα (a), (b), (c), (d) και (h): Απλοποιημένες συνθήκες εφαρμόζονται σε βαρέλια, μπιτόνια και ελαφρού περιτοπώματος μεταλλικές συσκευασίες μετακινούμενης κεφαλής για ιξώδεις ύλες με ιξώδες μεγαλύτερο από 200 mPa·s στους 23 °C (βλέπε περιθωριακά 3512, 3552 έως 3554 και 3560) και για στερεά.

- (2) Στερεές ύλες με σημείο τήξης μεγαλύτερο από 45 °C μπορούν επίσης να συσκευάζονται:
- (a) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ ή 3525 για φύλλο φάιμπερ, εάν είναι αναγκαίο με έναν ή περισσότερους αδιαπέραστους εσωτερικούς σάκους, ή
  - (b) σε αδιάβροχους σάκους σύμφωνα με τα περιθωριακά 3533 για υλικά υφαντουργίας, 3534 για πλεγμένα πλαστικά υλικά, 3535 για πλαστικά φιλμ ή 3536 για αδιάβροχο χαρτί, ή
  - (c) σε εύκαμπτα IBC σύμφωνα με το περιθωριακό 3623, IBC από φύλλο φάιμπερ σύμφωνα με το περιθωριακό 3626 ή ξύλινα IBC σύμφωνα με το περιθωριακό 3627.

**ΣΗΜΕΙΩΣΗ:** IBC σύμφωνα με το περιθωριακό 3626 που περιέχουν ύλες της 4° (c) και μεταφέρονται ως πλήρες φορτίο χρειάζεται μόνον να ικανοποιούν τις απαιτήσεις του περιθωριακού 3621 (1) έως (3), (5) και (6).

- (3) Ύλες της 4° (c) μπορούν επίσης να συσκευάζονται σε σφιστά κλεισμένες στεγανές συσκευασίες που χρειάζεται μόνον να ικανοποιούν τις συνθήκες του περιθωριακού 3500 (1), (2) και (5) έως (7).
- (4) Είδη της 8° (c) θα πρέπει να συσκευάζονται σε συνδυασμένες συσκευασίες σύμφωνα με το περιθωριακό 3538 και με έναν τύπο σχεδιασμού ελεγχόμενο και εγκεκριμένο για την ομάδα συσκευασίας III.

**2905**

- (1) Συσκευές της 3° θα πρέπει να συσκευάζονται:

- (a) σε στεγανές συσκευασίες, ή
- (b) σε στεγανά εμπορευματοκιβώτια.

(2) Συσκευές της 3° μπορούν επίσης να μεταφέρονται σε στεγανά δοχεία (δοχεία συγκράτησης) που πρέπει να είναι ικανά να κρατήσουν, επιπλέον των συσκευών, τουλάχιστον 1.25 φορές τις ύλες της 2° (b) που βρίσκονται στις συσκευές. Πρέπει να υπάρχει επαρκές αδρανές υλικό στα δοχεία για να απορροφά τουλάχιστον 1.1 φορές τις ύλες της 2° (b) που περιέχονται στις συσκευές. Οι συσκευές και τα δοχεία θα πρέπει να είναι έτσι σχεδιασμένα ώστε να αποφεύγεται οποιαδήποτε διαρροή υγρού υπό κανονικές συνθήκες μεταφοράς.

**2906**

- (1) Είδη της 5° θα πρέπει να συσκευάζονται σε:

- (a) κιβώτια σύμφωνα με το περιθωριακό 3527 για φυσικό ξύλο, 3528 για κόντρα-πλακέ ή 3530 για φύλλο φάιμπερ, ή
- (b) σε βαρέλια σύμφωνα με το περιθωριακό 3523 για κόντρα-πλακέ, 3525 για φάιμπερ ή 3526 για πλαστικό, μετακινούμενης κεφαλής, ή
- (c) σε συνδυασμένες συσκευασίες με εσωτερικές συσκευασίες από φύλλο φάιμπερ και εξωτερικές συσκευασίες από χάλυβα ή αλουμίνιο σύμφωνα με το περιθωριακό 3538. Οι εσωτερικές συσκευασίες θα πρέπει να είναι διαχωρισμένες η μία από την άλλη και από τις εσωτερικές επιφάνειες των εξωτερικών συσκευασιών με τη χρήση μη-εύφλεκτου προστατευτικού υλικού με τουλάχιστον 25 mm πάχος.

## Κλάση 9

**2906** (συνεχ.) Οι συνδυασμένες συσκευασίες θα πρέπει να συμφωνούν με έναν τύπο σχεδιασμού που είναι ελεγμένος και εγκεκριμένος, σε συμφωνία με την προσθήκη Α.5, για την ομάδα συσκευασίας II. Καμία ξεχωριστή συσκευασία ή εσωτερική συσκευασία μίας συνδυασμένης συσκευασίας δεν θα πρέπει να περιέχει περισσότερο από 500 g λίθιο (βλέπε, όμως, περιθωριακό 2901, 5°, Σημείωση 1).

(2) Μπαταρίες λιθίου της 5° θα πρέπει να συσκευάζονται και να στοιβάζονται με ασφάλεια έτσι ώστε να αποφεύγεται η μετακίνηση που θα μπορούσε να οδηγήσει σε βραχυκυκλώματα.

(3) Εξαρτήματα που περιέχουν μπαταρίες λιθίου της 5° θα πρέπει να ασφαρίζονται έναντι μετακίνησης μέσα στη συσκευασία και να είναι έτσι συσκευασμένα ώστε να αποφεύγεται η τυχαία λειτουργία κατά τη διάρκεια της μεταφοράς.

**2907** (1) Σωστικά μέσα της 6° θα πρέπει να συσκευάζονται, μεμονωμένα, σε γερές εξωτερικές συσκευασίες.

(2) Ύλες και είδη αυτής της Οδηγίας που περιέχονται σε σωστικά μέσα της 6° ή 7° ως εξαρτήματα θα πρέπει να συσκευάζονται σε εσωτερικές συσκευασίες. Αυτές οι εσωτερικές συσκευασίες θα πρέπει να στοιβάζονται έτσι ώστε να αποφεύγεται οποιαδήποτε μετακίνηση μέσα στα μέσα.

(3) Μη-εύφλεκτα, μη-τοξικά αέρια της κλάσης 2 θα πρέπει να περιέχονται σε κυλίνδρους σύμφωνα με το περιθωριακό 2202 που μπορούν να συνδεθούν με το σωστικό μέσο.

(4) Συσκευές σηματοδότησης της κλάσης 1 θα πρέπει να συσκευάζονται σε πλαστικές ή από φύλλο φάιμπερ εσωτερικές συσκευασίες.

(5) Σπίρτα που ανάβουν παντού της κλάσης 4.1 (περιθωριακό 2401, 2° (c), Αριθμ. 1331) θα πρέπει να συσκευάζονται σε εσωτερικές συσκευασίες για την αποφυγή οποιασδήποτε μετακίνησης.

**2908** (1) Εάν ύλες της 13° μεταφέρονται σε βαθιά κατεψυγμένο άζωτο, οι εσωτερικές συσκευασίες θα πρέπει να είναι σύμφωνες με τις διατάξεις αυτής της κλάσης και τα δοχεία για το άζωτο θα πρέπει να ικανοποιούν τις διατάξεις της κλάσης 2.

(2) Ζωντανά ζώα σε συμφωνία με την 13°, ΣΗΜΕΙΩΣΗ 3, θα πρέπει να συσκευάζονται, μαρκάρονται, περιγράφονται και μεταφέρονται σε συμφωνία με τους σχετικούς κανονισμούς για τη μεταφορά ζώων<sup>4/</sup>.

**2909-  
2910**

### 3. Μικτή συσκευασία

**2911** (1) Ύλες που καλύπτονται από τον ίδιο αριθμό είδους μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

(2) Ύλες διαφορετικών ειδών της κλάσης 9 εκτός από ύλες της 13°, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί και/ή με εμπροσθέντα όχι υποκείμενα στις διατάξεις αυτής της Οδηγίας, σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538.

**2911** (συνεχ.) (3) Ύλες της κλάσης 9 εκτός από ύλες της 13°, σε ποσότητες όχι μεγαλύτερες, ανά εσωτερική συσκευασία, 3 λίτρα για υγρά και/ή 5 kg για στερεά, μπορούν να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με ύλες ή είδη άλλων κλάσεων, υπό την

<sup>4/</sup> Τέτοιοι κανονισμοί περιέχονται π.χ., στην Οδηγία 91/628/EEC (Επίσημη Εφημερίδα της Ευρωπαϊκής Κοινότητας Αριθμ. L340 της 11 Δεκεμβρίου 1992, σ.17) και στις Υποδείξεις του Συμβουλίου της Ευρώπης (Υπουργική Επιτροπή) για τη μεταφορά ορισμένων ειδών ζώων.

## Κλάση 9

προϋπόθεση ότι μικτή συσκευασία επιτρέπεται επίσης για τις ύλες και τα είδη αυτών των κλάσεων και/ή με εμπορεύματα που δεν υπόκεινται στις διατάξεις αυτής της Οδηγίας, υπό την προϋπόθεση ότι δεν αντιδρούν επικίνδυνα μεταξύ τους.

- (4) Οι παρακάτω θεωρούνται επικίνδυνες αντιδράσεις:
- (a) ανάφλεξη και/ή εκπομπή σημαντικής θερμότητας,
  - (b) εκπομπή εύφλεκτων και/ή τοξικών αερίων,
  - (c) σχηματισμός διαβρωτικών υγρών,
  - (d) σχηματισμός ασταθών υλών.
- (5) Υλεις της 13° δεν θα πρέπει να συσκευάζονται μαζί σε μία συνδυασμένη συσκευασία σύμφωνα με το περιθωριακό 3538 με άλλα εμπορεύματα. Αυτό δεν θα πρέπει να εφαρμόζεται σε ύλες προστιθέμενες ως ψυκτικά μέσα, π.χ. πάγος, ξηρός πάγος ή βαθιά κατεψυγμένο υγρό άζωτο.
- (6) Οι διατάξεις των περιθωριακών 2001 (7), 2002 (6) και (7) και 2902 θα πρέπει να ισχύουν.
- (7) Εάν χρησιμοποιούνται ξύλινα ή από φύλλο φάιμπερ κιβώτια, κάθε κόλο δεν θα πρέπει να ζυγίζει περισσότερο από 100 kg.

#### 4. *Μαρκάρισμα και ετικέτες κινδύνου στα κόλα (βλέπε Προσθήκη Α.9)*

##### *Μαρκάρισμα*

- 2912 (1) Κάθε κόλο θα πρέπει να είναι καθαρά και με τρόπο διαρκείας μαρκαρισμένη με τον χαρακτηριστικό αριθμό των εμπορευμάτων που εγγράφεται στο έγγραφο μεταφοράς, μετά από τα γράμματα 'UN'.
- (2) Συσκευασίες που περιέχουν ύλες της 4° (c) θα πρέπει να φέρουν το παρακάτω μαρκάρισμα: "Διατηρείται μακριά από οποιαδήποτε πηγή ανάφλεξης". Αυτό το μαρκάρισμα θα πρέπει να είναι σε μία επίσημη γλώσσα της χώρας αποστολής και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά, εκτός εάν οποιεσδήποτε συμφωνίες μεταξύ των ενδιαφερόμενων για τη μεταφορά χωρών, ορίζουν διαφορετικά.

##### *Ετικέτες κινδύνου*

- (3) Κόλα που περιέχουν ύλες ή είδη αυτής της κλάσης, με εξαίρεση τις ύλες της 4° (c), θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9.
- (4) Κόλα που περιέχουν ύλες της 2° (b) με σημείο ανάφλεξης έως και 61 °C θα πρέπει, επιπλέον, να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 3.
- (5) Κόλα που περιέχουν είδη της 6° ή 7° δεν θα πρέπει να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 9 εκτός εάν το είδος είναι πλήρως κλεισμένο από συσκευασία, ξύλινο δικτυωτό κιβώτιο ή άλλο μέσο που παρεμποδίζει τον άμεσο προσδιορισμό του είδους.
- (6) Νέα κόλα που περιέχουν ύλες της 13° μεταφερόμενες σε βαθιά κατεψυγμένο άζωτο θα πρέπει επίσης να φέρουν ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 2.

## Κλάση 9

2912 (7) Κόλα που περιέχουν εύθραυστα δοχεία όχι ορατά από έξω θα πρέπει να φέρουν σε δύο (συνεχ.) αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 12.

(8) Κόλα που περιέχουν υγρά σε δοχεία τα πάματα των οποίων δεν είναι ορατά από έξω θα πρέπει να φέρουν σε δύο αντίθετες πλευρές ετικέτα σύμφωνα με το υπόδειγμα Αριθμ. 11.

2913

## B. Στοιχεία στο έγγραφο μεταφοράς

2914 (1) Η περιγραφή των εμπορευμάτων στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με έναν από τους χαρακτηριστικούς αριθμούς - εκτός για ύλες της 14<sup>ο</sup> - και μία από τις ονομασίες που υπογραμμίζονται στο περιθωριακό 2901. Εάν η ύλη δεν αναφέρεται με ονομασία, αλλά είναι καταγεγραμμένη σε μία ε.α.ο. καταχώρηση, η περιγραφή των εμπορευμάτων θα πρέπει να συνίσταται από τον χαρακτηριστικό αριθμό και τον χαρακτηρισμό ε.α.ο., ακολουθούμενο από την χημική ή τεχνική <sup>5/</sup> ονομασία της ύλης, ή για ύλες της 13<sup>ο</sup>, από τη βιολογική ονομασία 5/ της ύλης.

Η περιγραφή των εμπορευμάτων θα πρέπει να ακολουθείται από στοιχεία της κλάσης, τον αριθμό είδους, εάν εφαρμόζεται, το γράμμα, και τα αρχικά "ADR" (ή "RID"), π.χ. "9, 1<sup>ο</sup> (b), ADR".

Για τη μεταφορά αποβλήτων (βλέπε περιθωριακό 2000 (5)), η περιγραφή των εμπορευμάτων θα πρέπει να είναι: "Απόβλητα, που περιέχουν ..." και το συστατικό(ά) που χρησιμοποιείται(ούνται) για την ταξινόμηση των αποβλήτων υπό το περιθωριακό 2002 (8) θα καταχωρείται(ζονται) με την(τις) χημική(ές) ονομασία(ες) του(ς), π.χ. "Απόβλητα που περιέχουν 2212 καφέ αμίαντο, 9,1<sup>ο</sup> (b), ADR".

Για τη μεταφορά διαλυμάτων και μειγμάτων (όπως παρασκευάσματα και απόβλητα) που περιέχουν διάφορα συστατικά που υπόκεινται στις διατάξεις αυτής της Οδηγίας, δεν θα είναι γενικά αναγκαίο να αναφέρονται περισσότερα από δύο συστατικά που κατά κύριο λόγο συμβάλουν στον κίνδυνο ή τους κινδύνους των διαλυμάτων και των μειγμάτων.

Για τη μεταφορά διαλυμάτων και μειγμάτων που περιέχουν μόνον ένα συστατικό που υπόκειται στις διατάξεις αυτής της Οδηγίας, οι λέξεις 'διάλυμα' ή 'μείγμα' θα πρέπει να προστίθεται ως μέρος της ονομασίας στο έγγραφο μεταφοράς [βλέπε περιθωριακό 2002 (8)].

Όταν μία στερεή ύλη παραδίδεται για μεταφορά στην τετηγμένη κατάσταση, η περιγραφή των εμπορευμάτων θα πρέπει να συμπληρώνεται από τη λέξη 'τετηγμένο', εκτός εάν ήδη συμπεριλαμβάνεται στην ονομασία.

Για τη μεταφορά εύκολα αλλοιούμενων υλών της 13<sup>ο</sup> κατάλληλες πληροφορίες θα πρέπει να δίνονται, π.χ.: 'Ψύξη στους +2<sup>ο</sup>/+4 °C' ή 'Μεταφέρεται σε κατεψυγμένη κατάσταση' ή 'Να μην καταψύχεται'.

(2) Για τη μεταφορά ειδών της 5<sup>ο</sup> με την έγκριση της αρμόδιας αρχής (βλέπε Σημείωση 1 στο περιθωριακό 2901, 5<sup>ο</sup>), ένα αντίγραφο της έγκρισης με τις συνθήκες μεταφοράς θα πρέπει να επισυνάπτεται στο έγγραφο μεταφοράς. Αυτή η έγκριση θα πρέπει να συντάσσεται σε μία επίσημη γλώσσα της χώρας αποστολής και επίσης, εάν εκείνη η γλώσσα δεν είναι αγγλικά, γαλλικά ή γερμανικά, στα αγγλικά, γαλλικά ή γερμανικά, εκτός εάν οποιεσδήποτε συμφωνίες μεταξύ των ενδιαφερόμενων για τη μεταφορά χωρών ορίζουν διαφορετικά.

<sup>5/</sup> Η τεχνική ή βιολογική ονομασία θα πρέπει να είναι μία ονομασία που ήδη χρησιμοποιείται σε επιστημονικά και τεχνικά εγχειρίδια, περιοδικά και κείμενα. Εμπορικές ονομασίες δεν θα πρέπει να χρησιμοποιούνται για αυτόν τον σκοπό. Στην περίπτωση παραποικτίων, η ονομασία που θα εγγραφεί θα πρέπει να είναι εκείνη που δίνεται στο Πρότυπο ISO 1750: 1981 εάν αναφέρεται.

## Κλάση 9

2915-  
2920

## C. Κενές συσκευασίες

- 2921 (1) Εάν οι κενές συσκευασίες συμπεριλαμβανομένων IBC, ακαθάριστων, της 21<sup>ο</sup> είναι σάκοι, αυτές θα πρέπει να τοποθετούνται σε κιβώτια ή αδιάβροχους σάκους για την αποφυγή οποιασδήποτε διαρροής της ύλης.
- (2) Άλλες κενές συσκευασίες συμπεριλαμβανομένων IBC, ακαθάριστων, της 21<sup>ο</sup> θα πρέπει να είναι κλεισμένες με τον ίδιο τρόπο και να παρουσιάζουν τον ίδιο βαθμό στεγανότητας σαν να ήταν γεμάτες.
- (3) Κενές συσκευασίες, ακαθάριστες, της 21<sup>ο</sup> θα πρέπει να φέρουν τις ίδιες ετικέτες κινδύνου σαν να ήταν γεμάτες.
- (4) Η περιγραφή στο έγγραφο μεταφοράς θα πρέπει να συμφωνεί με μία από τις ονομασίες που υπογραμμίζονται στην 21<sup>ο</sup>, π.χ. "Κενή συσκευασία, 9, 21<sup>ο</sup>, ADR". Στην περίπτωση κενών οχημάτων-δεξαμενών, κενών αποσυναρμολογούμενων δεξαμενών και κενών εμπορευματοκιβωτίων-δεξαμενών ακαθάριστων, αυτή η περιγραφή θα πρέπει να συμπληρώνεται από την προσθήκη των λέξεων "Τελευταίο φορτίο" μαζί με την ονομασία και τον αριθμό είδους των εμπορευμάτων που φορτώθηκαν τελευταία, π.χ. "Τελευταίο φορτίο: 2212 καφέ αμιάντος, 1<sup>ο</sup> (b)".

**ΠΡΟΣΘΗΚΗ Β.6**

**ΠΙΣΤΟΠΟΙΗΤΙΚΟ ΕΚΠΑΙΔΕΥΣΕΩΣ ΟΔΗΓΟΥ  
ΣΥΜΦΩΝΑ ΜΕ ΤΟ ΠΕΡΙΘΩΡΙΑΚΟ 10 315 (1)**

(Βλέπε Περιθωριακό 10 381)

**260 000** Το πιστοποιητικό ικανότητας για οδηγούς οχημάτων που μεταφέρουν επικίνδυνα εμπορεύματα, που εκδίδεται σύμφωνα με τις οδηγίες του περιθωριακού 10 315 θα αναπαράγεται με βάση το σχήμα του υποδείγματος που ακολουθεί. Συνίσταται το σχήμα να είναι το ίδιο με την Ευρωπαϊκή εθνική άδεια οδήγησης, δηλαδή A7 (7A x 105 mm) ή ένα διπλό φύλλο που να μπορεί να διπλωθεί σ' αυτό το σχήμα.

(Για το υπόδειγμα του πιστοποιητικού βλέπε στην επόμενη σελίδα)
